The Nation

NEW YORK, THURSDAY, JULY 6, 1911.

The Week

Caught badly the other day by the deadly parallel, Senator Cummins was forced to make use of the ancient argument that times have changed. In 1904, the advantages enjoyed by the farmers under protection were mythical; to-day these advantages are substantial. But that is precisely the motive actuating those wicked "interests" whom it has been Senator Cummins's mission in life to bait. The advantages of protection are so unusually "substantial" that the American Woollen Company positively hates to give them up. Times, indeed, have changed since 1904, but in a sense different from Senator Cummins's contention. In 1904, it was safe to hunt popularity by girding at the tariff, for few people imagined that the day of reckoning would come so soon or so completely. In 1904 the doctrine of the Republican monopoly of virtue and efficiency was still in full power; if relief was to come, it must come through us, the Republican insurgents. To-day a miraculously revived Democratic party is giving the insurgents a larger and prompter dose of tariff reform than they had bargained for. Herein is the sad change from 1904: an aroused people determined that an iniquitous state of things shall be done away with, no matter whose ox is gored in the process, and a party, other than the Republican, that is quite ready to undertake the job.

It can scarcely be said that last Friday's special report on the Steel Trust, by the Commissioner of Corporations at Washington, is the violent attack which some of the correspondents had hinted it would be. It is a thorough and highly interesting examination of the ten years of the company, with especial reference to questions of capitalization, tangible assets, and trade domination. It finds, what was pretty clearly known beforehand—what, indeed, the Stock Exchange recognized by cutting down the market valuation of the stock from $785,000,000 in 1901 to $350,000,000 in 1904—that the concern was prodigiously overcapitalized at its organization in 1901; but it also finds that in subsequent years the company brought its actual property nearer in value to its nominal capitalization by investing annual profits in the plant instead of in dividends on the watered portion of the capital.

Mr. Smith lays particular stress on the fact that this prudent policy was abandoned after 1908, and dividends were resumed at a previously unheard-of rate; but he points out that, even in 1910, some 24 per cent. of the company's nominal capitalization was water. The fact that the Steel Trust has been able to earn a 12 per cent. profit on its whole investment—which the market has been accustomed to describe as proof that still higher dividends are warranted—is interpreted by Mr. Smith as a serious public problem in itself, because it infers the pursuance of a policy in prices such as to yield abnormal profits. For, the report points out, a 12 per cent. profit on one industrial enterprise out of many in a given trade may be nothing extraordinary; that would be offset by smaller rates of profit among its various competitors. But such a profit for a company which controls one-half of an industry is a very different question. The Steel Corporation, it is shown, does not to-day hold in its own hands so large a proportion of the country's steel output as it did in 1901; but it still does 50 per cent. of the total business, which is only 10 per cent. less than when it entered the field. It also holds about 75 per cent. of the ore supply on which the steel industry is at present based—a fact in which, the report concludes, are involved the largest problems of ultimate public interest.

Whatever may be the outcome of the indictments found by the Federal Grand Jury of New York, against eighty-four individuals, representing thirty-five steel and wire companies, the action taken will stand as a clear warning that violations of the Anti-Trust law by arrangements clearly directed toward illicit suppression of competition are personally dangerous to those who engage in them. That some inkling of this fact had entered into the reflections of the men in the wire combination some time ago is evidenced by the fact that most of the arrangements appear to have been discontinued as far back as 1909 or the early part of 1910. Doubtless much will be made of this circumstance by way of defence; but on its face it looks quite as much like a confession of guilt as like a manifestation of innocent purpose. If the law was deliberately violated at a time when such violation seemed immune from punishment, and the violation ceased when the danger attending it became apparent, that can hardly be regarded as entitling the persons so acting to a clean bill of health. But, whatever may be true as to the past, the new life and energy that the law is now manifesting must at least make such pleas imporsible in the future.

A thorough investigation of the business of express companies by the Interstate Commerce Commission has been inevitable ever since Congress explicitly conferred upon that body the needed jurisdiction. Inquiry naturally precedes regulation, and it is noteworthy that the Commission has ordered one that will go to the bottom. Only the malicious will see in the sweeping reduction of rates just filed by the express companies an attitude recalling that of Davy Crockett's coon. They must know that there will be shooting later, even if they do a little preliminary coming down. And they will see fully as much significance, it is probable, in the announcement Monday morning that President Taft is heartily for the establishment of a general parcels post, and will again urge it upon Congress next December.

Whatever else has been proved in the course of the new Lorimer investigation, Senator Kenyon is justified in remarking that somebody has been proved guilty of pretty stiff perjury. Such flat contradictions in the testimony respecting conversations of which the detail of time and place was minutely given are seldom met with. When witnesses swear so divergently, the question of motive always enters in trying to determine which ones are telling the truth, and in this case there can be lit-

Digitized by Google

tle doubt where resides the strong interest to twist or falsify evidence. To what Mr. Hines had to say about President Taft's active interest in procuring the election of Lorimer, little weight is to be attached. The witness was avowedly speaking only from hearsay, and the whole matter might easily have been distorted as it came to him. No doubt, the President expressed the hope that the Illinois Republicans would break the deadlock in the Legislature and choose *some* Senator, and this might readily have been perverted by those who were scheming to elect Lorimer into the statement that Mr. Taft favored their man. His official denial that he did is sufficient to dispose of that story, even if one could imagine the President to be so innocent as ever to have thought the success of Lorimer desirable.

The Chicago *Evening Post* accuses the present city administration of conspiring to suppress the epoch-making report of the Vice Commission concerning which we have written before this. Mayor Carter Harrison has openly expressed his disapproval of the Commission's methods and findings. When he assumed office the Commission was discharged. Since then it has been found impossible to procure the small appropriation necessary to give to the report the proper publicity. There are not enough copies to supply one out of ten applicants. The Chicago Aldermen were seized at first with a great fear lest the report should fall into the hands of the young and innocent. Subsequently, by a remarkable bit of logical manœuvring, they arrived at the conclusion that the public must be made acquainted with the names and addresses brought together by the Vice Commission in a register of ill-fame, but, in the published report, referred to only in key numbers. The key itself is locked up in a vault in the possession of the members of the Commission. The finance committee of the Aldermen has demanded that the State's Attorney be put in possession of the key in order that he may proceed legally against the persons named. Actually, the newspaper quoted declares, the intention is to create a temporary furore in the midst of which attention may be withdrawn from the fact that the value of the report is not in the specific cases it cites, but in the changes it recommends.

The reply of the president and trustees of Amherst to the memorial of the class of 1885 shows that the ideas advocated in the memorial have been adopted for the college so far as the present conditions of education make this practicable. There will henceforth be no separate curriculum leading to the degree of bachelor of science, but all students will be required to present four years of preparation in Latin or Greek, or both. In the freshman and sophomore years one of these languages is obligatory, together with a certain amount of science work. This, as the trustees state, puts Amherst "definitely on the basis of a modified classical course." Though the new curriculum recognizes, and rightly recognizes, the necessity of orienting the student in the great field of scientific knowledge, it takes account of the fact, which experience is every day forcing upon attention, that no course has yet been found to take the place of the classics in disciplining and in broadening the mind. The trustees regret that Greek cannot be made a required study, for the good reason that few preparatory schools teach it. "But the college," they add, "believes in Greek, believes in its value for discipline, for the culture and for the wide horizon opened to the student by knowledge of the vital past on which the literature, the institutions, the life of to-day, are founded, and without which they cannot be fully understood."

In this question of Greek Amherst College finds itself brought up against a radical difficulty which must sooner or later be faced and solved. The schools are more and more shaping their courses for the great mass of boys and girls who must enter practical life at an early age and who must therefore look for immediate results. Under such conditions Latin is retained with difficulty; Greek goes utterly by the board. Meanwhile the few who aim at a higher education are discouraged or actually prevented from beginning Greek. To meet this difficulty the trustees of Amherst have adopted what may be called a policy of persuasion. They propose to have in residence for a part of every year a Greek scholar of the first rank, who will deliver lectures and offer special courses. Furthermore, a number of honorary scholarships in Greek will be established. In its probable influence both on other small colleges and on those preparatory schools that are with difficulty withstanding the current, this action of Amherst will be salutary and may have far-reaching results.

If anything looked at first sight impossible it was the doing away with the inveterate barbarities of our Independence Day. They were intrenched in custom, supported by "interests" of one kind and another, and might be said to be lodged in human nature itself. We often hear scoffing about "reforms against nature," but none could seem more clearly of that kind than the abolition of the noisy and dangerous Fourth of venerable tradition. It is rapidly going, however, and will soon be gone, with both health and patriotism the better for its disappearance. And as we look back on the record of its gradual displacement, the work appears to have been easier than anybody could have dreamed. There have been none of those organized protests of an outraged generation which were to be expected.

The exit of capital from a country where it is threatened to one where it will be safe seems now to have become automatic. When Lloyd George's first budget spread alarm among conservative Englishmen, recites a well-known London correspondent, stories were current of fleeting millions. The correspondent asked a wealthy ex-American whether he thought them true. "I know of one that is true," came the reply. "Within the last three months, I have remitted to New York a million and a half sterling which, but for Mr. Lloyd George's budget, I should have invested here." "May I say so?" inquired the startled correspondent. "Repeat it to whom you will. I care not who knows it." It would make a pretty race, if one could only actually see it, the millions sent out of New York State on account of the inheritance tax laws, and the millions rushing in to escape Lloyd George. There should be some way of establishing a sort of international clearing-house for the benefit of affrighted or resentful capitalists on both sides of the water.

Baba Bharita's fling at our civilization from the safe position of a cabin in a departing steamer is not the first sign

Digitized by Google

that the long-enduring East is beginning to turn. The Hindu philosopher is quoted as having said something about "Western heathens" who would do better to spend their $20,000,000 mission money at home. He even calls our Ten Commandments "nothing but childish prattle." All this, however, we could endure, as provoked by a strong sense of Western superiority, and as constituting, therefore, an acknowledgment of it. But he said one thing that cannot be taken so lightly. "Civilized people," in his view, "do not need to be told that they shall not steal." This remark was made merely as a comment upon the childishness of the Decalogue, but its point reaches farther than that. Will the day never come when returning North Pole discoverers will omit to tell their wondering countrymen of the naïve honesty of the stupid dwellers within the Arctic Circle? Must we always read that the American Indians began to find a guard for their property necessary only after the white man came upon the scene? It would appear that, contrary to the optimistic observation of the Swami, it is civilized people who, above all others, do need to be told that they shall not steal.

To turn from the picture of Lord Roberts greeting an old acquaintance among the Indian troops present at the Coronation, to the account of the Imperial Conference, is to get a vivid idea of one of the incongruities of empire, or at least of the British Empire. In London all subjects of the Crown are on a common footing. Indeed, it sometimes seems that the more remote they are in appearance and custom, the more welcome they are, but this may be an impression derived from a surfeit of colored plates representing Coronation processions. The tone of the Conference, however, was unmistakable. The Earl of Crewe's gentle suggestion that it was possible for the Dominion governments, working within the limits which they laid down for the admission of immigrants, to make the entrance of Hindus more easy and pleasant than it has been, was met by a general dissent from the Premiers of New Zealand, Canada, Australia, and South Africa. They were all anxious to do nothing to impair the spirit of loyalty in the native populations of India, but they insisted also upon the disturbance of economic conditions that resulted the moment Asiatic labor was allowed to come into competition with white labor, a disturbance which, if allowed to go on, Sir Wilfrid Laurier declared, might seriously jeopardize the harmony of the Empire. And Sir Joseph Ward, after a description of the menace afforded to the great British shipping companies by the Lascars, came out flatly for the policy of "every color going back to its own zone." What will "every color" think and say of the advantages of the Empire when it gets there?

Extensive plans for building improvement and beautification in Rome are being developed in connection with the proposed reorganization of finances in the Italian capital. Rome has for years staggered under the heavy debt—as money goes in Italy—of thirty million dollars for a community of six hundred thousand people. The Government has now consented to come to the rescue of the embarrassed municipality, and a bill defining the terms of the agreement between state and municipality is being discussed. The Government is not to interfere directly in the management of municipal affairs, and will content itself with a partial financial censorship. The city cedes to the state a number of sites for public buildings, and the Government proposes to erect at least four department buildings, a court of accounts, an institute of artistic industry, and additions to existing museums and picture galleries. The city, in turn, obligates itself to spend the sum of twenty-five million dollars on elementary and secondary schools, markets, and sanitation. The bill is not a party measure. On all hands there seems to be recognition of the fact that her position as capital of the kingdom has meant for Rome a higher standard of living than she is in a position to pay for out of her own resources.

The scattered and fragmentary reports that have reached us of the progress of the Parliamentary elections in Austria neglect to mention the fact that this is the second contest under the system of universal suffrage. The results of the first election on the new franchise seemed to promise for a time the disappearance of racial party strife in the Reichsrath. The two most powerful parties were the Socialists, with above eighty votes, and the anti-Semitic Christian Socialists, with a strength almost equal to that of the Socialists. Here were two popular parties which cut across racial lines and based themselves on economic or social principles largely. But the present election has brought a reaffirmation of the old racial particularism. The Socialists seem to have suffered a considerable reduction in numbers, while the Christian Socialists, in spite of a notable victory here and there, appear to have been decimated. Evidently it was the great personal influence of the late Dr. Lueger that kept the petty merchant class of Vienna to its alliance with the Clerical forces in the rural districts. The Socialists will still be the most powerful single group in the Diet. The return of the German Liberal group in increased strength may provoke a revival of violent parliamentary tactics on the part of the Slav representatives.

The latest Australian census, in registering a population of 4,449,495, indicates an increase of about 18 per cent. above the census of ten years ago. For a pioneer land this is not a very impressive ratio of growth. The Continental United States added, during the last ten years, nearly 21 per cent. to its population of seventy-six millions. Canada's increase during the decade from 1901 to 1911 will be double the Australian ratio, the indicated growth being nearly 38 per cent. Allowance, however, must be made in the case of Australia for the fact that immigration thither has played a much smaller part than in either the United States or Canada. New South Wales, for example, has been recording an annual excess of only twelve thousand immigrants above emigrants. The same rate, for the Commonwealth as a whole, would show a total gain from immigration of only three hundred thousand for the last ten years. Geographical distance has, of course, much to do with determining immigration. But a very important factor, too, has been the purposely restrictive policy pursued by the Australians. Their aim has been not merely to make the continent a "white" Australia, but to people it with the choicest breed of whites. The Australians have never been enthusiastic in welcoming Great Britain's overflow population where overflow has been synonymous with outcast.

OBSTRUCTION IN THE SENATE.

The proceedings, or failure to proceed, of the Senate thus far in the extra session of Congress are described by the Washington correspondents as "loafing" or "killing time." But they are now rapidly coming to the point where they kill patience as well, and seriously injure the repute of the Senate. For what the country is beginning to see in that "most august assembly on earth" is not leisurely debate or mere Senatorial dawdling, but outright obstruction. The nature of it was clearly indicated on June 27 when the Chairman of the Finance Committee asked for unanimous consent that a vote on the Reciprocity bill should be taken on July 24—four weeks away. Senator La Follette promptly objected. Other motions were that the Farmers' Free List should be put to vote on July 26, and the Wool bill on July 27. Senator Smoot objected. Under the rules of the Senate, nothing more could be done. One man, merely with his *sic volo, sic jubeo*, could disable the majority—and in this instance it is admitted to be a large majority—from expediting the public business.

This goes far beyond demanding a reasonable time for debate or for offering amendments. It amounts to an exhibition of stark power by an individual Senator to thwart the demonstrated will of the body to which he belongs. Could there be a more glaring example of that "defect in procedure," in the Senate, of which Congressman McCall speaks in his recent book on "The Business of Congress"? He states the matter none too strongly when he writes: "Violence is done to the foundation principle of our government by putting it in the power of a single member to bring about a paralysis of all legislative functions and to prevent indefinitely the other ninety-one members, and the House of Representatives as well, from transacting the business of the country." Many Senators, it is well known, find the powerlessness of the majority, under the rules, to be exceedingly galling as well as mischievous. During the present session Mr. Root introduced a resolution, which was referred to the Committee on Rules, providing for a way in which the will of the majority could be made to prevail. No one, however, expects anything to be done at present. All business-like Senators deplore the existing chaos, but few profess to see any way of bringing order out of it.

This apparent sense of helplessness indicates the unique nature of obstruction in the Senate. It is privileged and immune beyond any form of parliamentary obstruction ever attempted anywhere else. As Mr. McCall remarks, when dealing with the general subject of abuse of the rules in order to prevent the majority from having its way, the inevitable result of systematic obstruction is to force the adoption of more stringent rules for the purpose of crushing it. That was the history of Irish obstruction in the House of Commons. Mr. Parnell carried it to a high pitch of perfection. He almost made the business of the Empire stand still. But his brilliant success was the undoing of obstruction. Speaker Brand made a revolutionary decision, and presently the rules were changed so that the majority could bring pending measures to a vote. First came the innovation of "closure"—what we call the previous question, which the Senate once had but now has not—then closure by compartments, and latterly what is known as "kangaroo closure," by which amendments can be jumped over at the pleasure of the majority. A similar closing in upon obstructive tactics has marked the evolution of the procedure of the House of Representatives. Those who in that body set out to defeat the will of the majority by taking technical advantage of the rules, speedily found the rules changed so as to shut them in an ever narrower circle. The history of obstruction has been everywhere the devising of measures to put down obstruction—everywhere, that is, save in the Senate of the United States. Why this extraordinary exception?

The real reason lies, we think, in the fact that Senatorial obstruction is only one form of Senatorial privilege. Refusing to permit a bill to come to a vote is not the only thing that an individual Senator may do. He can lift his sole hand and prevent an appointment to office distasteful to him. He can go to a chairman of a committee and demand it as a right that a given bill be strangled, or reported out. Obstruction in the Senate is only another form of that courtesy of the Senate in the name of which so many crimes are committed. And the correct explanation of the strange reluctance of the Senate to make its rules of business truly business-like appears to lie in the dread lest other individual privileges be struck down along with that of blockading the proceedings. Senators indeed groan when a Carter gets up to talk a River and Harbor bill to death, or a Bailey announces that he will not permit a certain bill to be voted upon, but they know that such Senatorial arrogance is off the same piece as the assertion of a right to control the patronage, and they are afraid to give up the one lest the other be taken from them.

Yet this whole question is one which the Senate will ultimately have to take up. We presume that the Reciprocity bill will in the end be somehow got to a vote, after La Follette and the others have bestowed all their tediousness upon the empty chairs of members and the idlers in the galleries. But the latent possibilities of unchecked obstruction are too serious to be ignored. Business only by unanimous consent can, indeed, be satisfactorily transacted between gentlemen, but that it can no longer be in the Senate is an assertion which can fearlessly be made, no matter how painful the inference may seem.

MURPHYIZING NEW YORK STATE.

Mr. Thomas M. Osborne's letter to the Democratic League, written from Berlin on June 3, fell happily for publication. At the very moment when Mr. Osborne's denunciation of the ignorance and imbecility and unscrupulousness of Murphy-controlled legislators was given to the press, the people had before them the spectacle of a Levy carrying out the boss's orders and jamming through a vicious elections bill, of a Grady running amuck at the Clearing House, and a Cuvillier boasting that the Governor would have to sign the iniquitous Tammany bills since otherwise none of his own measures would be passed. In a word, Osborne attacked the pretensions of Murphy to set up as leader of the Democratic party in this State just when that "leadership" looked most like the rush of swine down a steep place into the sea.

It is high time such a note of protest and defiance were uttered. Mr. Osborne puts the case with great force, but his words are only those of truth and sober-

Digitized by Google

ness. It is not Murphy as bestriding Tammany that the Democrats of New York State are called upon to resist. That is primarily the affair of the city and of the political party dominant in it. If they choose meekly to place their necks under Murphy's heel, the rest of the State can only wonder at them and pity them; it cannot rescue them or put manhood into them. But Democrats of the interior counties can and should fight unyieldingly against the extension of Murphy control and the Murphy blight over the party organizations throughout the State. That is the enemy; that is the peril. Every Democrat who can remember or has read the history of his party in New York, knows that it has had life and hope in it only when a body of up-State Democrats could be depended upon to put a ring in the Tammany snout. Tilden won his great repute by flinging himself upon the Democrats outside of the county of New York, and bearding John Kelly. Cleveland took quiet satisfaction in the fact that never in his long political career had he been inside of Tammany Hall; and it is certain that he never could have been the successful Governor he was, or filled his party with new vitality and promise, had he truckled to Croker. Now, Gov. Dix was bred in this political tradition. He is an up-State Democrat. Why should he think it possible for himself, we will not say, to succeed, but to retain his self-respect, and to discharge his duty to his party, by following any other course than that of Tilden and Cleveland?

On the naked issue of permitting Murphy to pose as State leader, there is little doubt that Mr. Dix would agree with Mr. Osborne. But the mischief is being done apparently without the Governor's perceiving it. He seems to have made up his mind to the necessity of "doing business" with Murphy. Gov. Dix strongly desires certain legislation, to a part of which his party is solemnly pledged, but to get it enacted he thinks that he needs the aid of Murphy, and is therefore ready to make bargains with the Tammany boss as he notoriously did in the appointment of Cohalan. But the man who is going to sup with the devil needs a long spoon, and Mr. Dix's is not nearly long enough for him to think of sitting at table with Murphy. The boss will get all the dainty viands; the Governor will simply burn his mouth. Every day is showing this to be the correct prophecy; and the Governor is more and more plainly having it demonstrated to him that there is no safety but in fighting. Recently he has been vetoing a considerable number of bills, most of them such as politicians desire—bills to create new offices and to increase salaries. The favorable comment which the Governor has thereby won should be a hint and encouragement to him to take the plunge entire and let his party and the people of the State know that in him the efforts of Tammany to seize everything in sight and project its malign shadow over the whole State will meet with resolute opposition.

But whoever leads or refuses to lead, it is a matter of life and death for New York Democrats to resist the attempted domination of Murphy. That mere party expediency dictates this, it is a commonplace to say. Murphy in the saddle as recognized State leader would mean 100,000 empty saddles in the Democratic ranks, and would wipe New York off the Democratic map. But this is to put the matter on a low ground. It is not the political consequences of a Murphyized New York that should alarm us so much as the humiliation and disgrace of the thing itself. For here is a man who cannot speak or write, who is not known to have a single political conviction, whose associations are low and whose methods smell of corruption, yet who by subterranean manœuvrings mingled with sheer effrontery sets out to put himself alongside Clinton and Silas Wright and Van Buren and Marcy and Tilden and Cleveland! The impudence of it all is nearly as great as its insult to the intelligence of the State. But we are now getting at Albany such a sample of what Murphy leadership would mean in the way of outrages upon decency and unspeakable greed and even attacks upon the soundness of our most important banking institutions that a revolt is certain. Sooner or later, up-State Democrats will openly declare that Murphy cannot snatch control of New York except over their dead bodies; for they know well that if he succeeds in doing it the party will lie dead.

THE TROUBLE IN MOROCCO.

A good deal of the fury with which the European press has thrown itself upon the latest development in Morocco may be explained as a form of reaction from the Coronation festivities at London. Here has Britannia been holding the centre of the stage for weeks, and the might of the British Empire has been intoned, and England's King has reviewed the fleet which upholds the overlordship of the seas. It is natural that just when the tumult and the shouting dies away, an incident like the sending of a German warship to a Moroccan port should be seized upon as a dramatic reminder of other empires and other ambitions than Britain's. There is no need to minimize the meaning of the incident. Probably, Morocco is about to furnish another period of international tension and negotiation. The one fact that stands out is that Germany has dispatched a small gunboat for the protection of its interests in a Moroccan port that is not included among the eight seacoast towns which the Algeciras Conference placed under an international police force.

When the Algeciras conference gave to Spain and France authority in the Moroccan coast towns, it was to be foreseen that an opportunity for the exercise of this authority would not be very long in coming. It came with the outbreak at Casablanca in July, 1907. The protracted French campaign in the Chaouia region brought about the semblance of pacification, but the French forces were not withdrawn. Spain, emulating her co-partner in the preservation of peace in Morocco, began in 1908 operations among the Riff tribesmen, and only by a supreme effort escaped disaster at Melilla. Neither power had as yet directed its intentions toward the interior of the country, and the eye of the most vigilant enemy could detect no strain in the Algeciras agreement. As a matter of fact in February, 1909, France and Germany signed an agreement with regard to Morocco, in which the latter recognized that France had special political interests in Morocco and that these were bound up with the maintenance of order within the Empire. On condition that the integrity and independence of the Empire were respected and the open door preserved, Germany bound herself to throw

Digitized by Google

no obstacles in the way of France's legitimate policies in Morocco and to demand no special commercial privileges for her own subjects.

The question is whether Germany's present action is in violation of the agreement in 1909. East of the Rhine this would be denied. In the first place, as we have pointed out, the port of Agadir is not among the eight ports in which France and Spain have the duty of maintaining order. The dispatch of the Panther there may have been a necessary precaution. In the second place, if the action at Agadir is intended as a warning to France and Spain, and principally the former, the German contention would be that the integrity and independence of the Moroccan empire are endangered by the presence of a powerful French force at Fez and the elaborate plans for the military occupation of the principal cities. France now has in Morocco a force larger than the English army of occupation in Egypt. Nor is Germany the only nation whose distrust has been aroused. The Spanish Government has helped to bring about the present tense situation by its own undisguised fear and jealousy of French policy. With a Spanish army taking possession of Larache and Tetuan as a reply to the French entry into Fez, it would really seem as if the final breakup of Morocco were at hand. To argue, as is done in France, that Germany has encouraged Spain's aggressive tactics in order that an opportunity might be created for her own intervention, is really to endow German diplomacy with undue finesse and malice. Spain's action may be explained simply as an instance of the madness that seizes upon the nations when a process of land-grabbing seems to be under way.

To talk of war over Morocco at the present time is idle. What is apparently bound to come is a recasting of existing agreements concerning Morocco. In these agreements are contained the basis and material for much discussion. France, for instance, can argue that her course ever since Algeciras has been absolutely proper. She intervened at Casablanca to preserve order, and pressed no further into the interior than the establishment of a zone of safety necessitated. Only when the breakdown of the Sultan's authority imperilled the lives of her citizens at Fez did France send an army to the capital. More than that, it has been admitted by all the Powers explicity and implicitly that it is for France to take the lead in the preservation of order within the Empire.

Such would be the case for France. To this the German reply would be that it is not what France has done, but what she may be preparing to do, that will repay study. To keep French intervention from passing into permanent French occupation is now Germany's purpose, or at least to obtain, in return for a French protectorate, generous concessions for her own subjects.

THE COMMON STOCK OF WIT.

Mr. Howells in his Easy Chair has a number of things to say about American humor. Like others, he is wondering who will fill, or partly fill, "the void which now aches from the vast absence of Mark Twain." He considers favorably Mr. Holman Day, author of "The Skipper and the Skipped," because "he knows the intensity, almost to feminine shrillness, of the New England rustics whom he deals with." But Mr. Howells is not quite certain of his choice, and adds, "unless, indeed, Mr. Irving Bacheller, in his new departure of 'Keeping Up with Lizzie,' is going to dispute it." Mr. Dooley is placed outside the competition for the reason that "he is distinctively a philosophical observer." Picking the successor of Mark Twain, Mr. Howells naturally admits, is the right of the public at large, not of a critic, and no doubt for that reason he did not wish to seem too serious in his judgments. Yet one might have hoped to find, even in informal speculation, an analysis of American humor and—since Mr. Howells runs back in his survey to European writers of the sixteenth century—the trend of humor sketched with some precision. He has been content, however, to give merely offhand opinions: "The joking in Rabelais is not only filthy, it is atrocious." "The humaner humor of Cervantes . . . is still . . . abominably unfeeling." "Much of the humor of Shakespeare is cruel, so cruel that Mark Twain used to say that when it did not bore him it offended him past endurance." One generalization of a more sweeping nature is risked—that humor, with the years, has grown more kindly.

This point, if true, is surely worth making. It would be pleasant to believe that as civilization has advanced, laughter, a fundamental instinct, has lost its sting. We fear that the statement is true only in part. People no doubt are no longer tickled, as were the Elizabethans, by the antics of insanity, nor perhaps at the sight of a victim, like Marlowe's Bajazet, caged and tormented. But many of the old brutalities remain. There is still gleeful derision for a fat or ugly-looking woman on the stage, who has, in fact, become a well-recognized type, bearing the technical name of "lemon." Grim humor—for better or worse—is not yet dead, nor will be until the impulse of hilarity is greatly chastened. Samson making firebrands of foxes' tails, Don Quixote slaughtering sheep mistakenly for famous warriors, Malvolio in the process of treatment for asininity, still bring laughter, however the tender-hearted moralist may protest. Besides, to make good his thesis, Mr. Howells should have proved that wit of the gentler, airier sort did not exist alongside of the boisterous. He should have shown reason why Addison's smiling censures and Rosalind's tantalizing are not as gracious as the witticisms of the present day.

If any great change has in reality come over our laughter we may perhaps get the clue to it by asking why Mark Twain should have been bored with much of Shakespeare's humor. His remarks imply that he meant in this instance the more strictly intellectual kind—the play on words and the elaborate formal logic of foolishness. Says Touchstone to Audrey: "I am here with thee and thy goats, as the most capricious poet, honest Ovid, was among the Goths." Little wonder that the point seemed remote to Mark Twain! The first demand of laughter is understanding, and here the change in pronunciation has robbed the pun of "goats" and "Goths" of any zest it may have had, while "capricious," too, has lost its etymological color. It is perfectly true that appreciation of this side of Shakespeare is confined to scholars—to the rest it sounds wofully academic and unfamiliar. Admitting this, however, is far from implying that the manner and method of wit have greatly altered. Mark Twain himself had a huge liking

Digitized by Google

for verbal comedies. What fun he had making a literal re-translation into English of a French version of his "Jumping Frog"; and putting into German order English sentences! So, too, a more recent writer wishes us to think it funny that to drive a car in France one must procure a license to "circulate." This is typical of much present-day humor—phrasing in which the drolleries come from words used slightly out of tune. As for the formal logic of nonsense, it, too, is holding its own. To take the most spectacular examples of it, Mr. Shaw and Mr. Chesterton get their effects most of the time from doing seriously what Shakespeare's fools did waggishly—applying the most rigorous logic to situations in which mankind is content to use common sense.

But if the manner and method of wit are much what they have always been, the material of wit, at least in our own country, has been undergoing a curious change. That is to say, where in former years there were jokes for high and for low, for North and South, East and West, to-day the same joke serves almost equally well the entire land. The wit of Lowell, save perhaps in the "Biglow Papers," works upon material extremely confined in its appeal. Mark Twain, especially, broadened it to the attitudes of the typical, alert, hard-headed American, as defined first of all by the contrast with Europeans. Recent conditions have carried on enormously his initiative. Increase in travel, the growing facilities of the press and the stage, the uniformity of our educational systems, have tended to render one section of the country in many ways very much like any other. Already New York's thrust at Chicago is an almost exhausted echo, and even the Southern colonel is scarcely any more a type. Plays given in New York are seen the same year in San Francisco; the "best-sellers" in Boston are read in about the same proportion in Richmond; the language of "fandom" is of one dialect. In a word, there is at present a much greater common stock of knowledge and custom in this country than was the case even so recently as Mark Twain's middle years. And the humorists, like George Ade and Mr. Dooley and all others who have any chance of being acclaimed Mark Twain's successors, are dealing in it. A note of philosophy they sometimes strike; of delicacy or out-of-the-way learning they know little, nor wish to know, since neither is typical of the common stock.

BOETHIUS AND THE MEDIÆVAL MIND.

The Middle Ages are receiving a fair share of attention just now. The present year sees the publication of three important works which every student of that fascinating period will at once acclaim as fulfilling admirably three special needs. The latest volume in Traube's "Vorlesungen und Abhandlungen" has been recently reviewed in these columns; touching on various aspects of mediæval Latin studies, it inspires the investigator to fresh subjects for research and equips him with the necessary information as to what has been done. Manitius adds to Müller's "Handbuch der klassischen Altertumswissenschaft" part i of a long-expected book on "Die Geschichte der lateinischen Literatur des Mittelalters"; with its formal treatment of the lives and works of the Latin authors of the Middle Ages and with its careful bibliographies, it will prove an indispensable thesaurus for reference. The volumes now before me, by Mr. Taylor,* differ widely from these other works. Dispensing with scientific apparatus, though including a certain amount of bibliographical information, he is as comprehensive in his scope as Manitius, and as penetrating in his insight as Traube; he would present the whole story of thought and emotion as manifested in mediæval literature. Mr. Taylor comes well equipped to his task, which he has already approached in his books on "Ancient Ideals" and "The Classical Heritage of the Middle Ages."

I.

The supreme mediæval achievement, according to Mr. Taylor, was "the vital appropriation and emotional humanizing of patristic Christianity." But patristic Christianity cannot be understood without a glance at the Greek philosophy and the Latin culture that helped to form it. Mr. Taylor examines the varieties of antique and patristic material accumulated in the sixth century, adds thereto the elements contributed by Celt and Teuton, plants these potent seeds in the somewhat arid field of the Carolingian period, and watches them develop, in the twelfth and thirteenth centuries, into the full flowers of thought and emotion:

> Various phases of the mediæval spirit [he declares] were to unfold only too diversely with popes, kings, and knights, monks, nuns, and heretics, satirists, troubadours, and minnesingers; in emotional yearnings and intellectual ideals; in the literature of love and the literature of its suppression; in mistress-worship, and the worship of the Virgin and the passion-flooded Christ of Canticles. Sublimely will this spirit show itself in the resistless apotheosis of symbolism, and in art and poetry giving utterance to the mediæval conception of order and beauty. Others of its phases will be evinced in the striving of earnest souls for spiritual certitude; in the scholastic structure and accomplishment; in the ways in which men felt the spell of the classics; and everywhere and universally in the mediæval conflict between life's fulness and the insistency of the soul's salvation.

This promise, made early in the work, is amply fulfilled. It would take too long to enumerate the different topics covered; with one exception, the liturgical drama, no matter of importance has been neglected. The effect is somewhat marred by a certain unsteadiness of treatment. Beginning with a definite problem, which for the most part advances in orderly fashion toward its goal, Mr. Taylor seems at times to have forgotten his purpose and gives instead biographical details and lengthy summaries; for the moment he is writing a handbook of mediæval Latin literature. Perhaps this information is necessary; it is so presented, however, that instead of a correlated series of essays on the mediæval mind, we have, considering the book as a whole, a kind of *Speculum Medii Ævi*. That may be an appropriate way to treat the Middle Ages, but it is not what we expected at the start.

But this occasional defect in treatment is far outweighed by the positive merits of the book. The writer has read for himself in many authors and subjects; he presents his observations in a cogent and attractive fashion, with dashes of humor now and then, and with no little eloquence. His most admirable quality is the real historical spirit, not that mechanical evolutionism which resolves entities into their *Quellen*, but that deeper interest in development which springs from sympathy with other times and other traditions. Extremely sympathetic and discriminating are the characterizations of men so diverse as Roger Bacon and Hugo of St. Victor, Abelard and St. Bernard, Petrus Damiani and Gerbert, Francis of Assisi and Thomas Aquinas, while some of the minor personages, such as Alfanus of Monte Cassino and Fulbert of Chartres, mere names as usually treated, stand out with admirable distinctness. The writer makes novel and suggestive reflections on many of the larger issues, such as the relations between Christianity and Neo-Platonism, the real and the ideal elements in chivalry, the development of Roman law, the intensifying of human emotion through the very process of directing the soul to objects divine. Above all, the much

**The Mediæval Mind:* A History of Thought and Emotion in the Middle Ages. By Henry Osborn Taylor. In two volumes. New York: The Macmillan Co. $5.

Digitized by Google

maligned philosophy of the schoolmen is treated with extraordinary skill. The keynote to the book is sympathy, combined at times with a touch of kindly Horatian satire—a mood naturally cultivated in one who has centuries of human foibles to observe.

II.

Though in complete accord with the main tendencies of this book, I must take issue with the author on two important matters: his estimate of the Carolingian renaissance, and his estimate of Boethius. The first of these need not detain us. Though the services of Charlemagne and his associates are, I believe, distinctly underrated by Mr. Taylor, though he does scant justice to a humanist like Servatus Lupus, the question is one of emphasis; he might have painted the age of Charlemagne with the brighter colors it deserves, and still maintained his thesis that it was an age of crude beginnings, as compared with the fruition of mediæval culture in the twelfth and thirteenth centuries.

The other matter needs more debate. Mr. Taylor assigns to Boethius an extremely humble position. His task is that of "translation, comment, and compendium, and of reëxpression with temperamental change of emphasis." Augustine is the last creative force in the patristic period. "A dark refashioner, indeed, will Gregory the Great appear, while Boethius, Cassidorus, Isidore, are sheer transmitters, or intermediaries, the last-named worthy destined to be the most popular of them all, through his unerring faculty of selecting for his compilations the foolish and the flat." Waiving the last statement, which is, however, not true and which does not reflect the spirit of Mr. Taylor's general estimate of the Middle Ages, let us see if we may not relieve Boethius from the humiliation imposed upon him here. Mr. Taylor later admits that he was at least "the most important single source of early mediæval education," and in a still later passage speaks with enthusiasm of the "Consolatio Philosophiæ"; but his final rating of Boethius is that of a "sheer transmitter." Since the awakening of the historical spirit in the Renaissance, scholars have found more than one difficult problem in the life and the works of Boethius. Was he Christian or Pagan? What did he contribute, in either case, to the intellectual movements of his day? Hypercritical investigators in the last century, finding nothing but Paganism in the "Consolatio," debarred Boethius from Christianity; analytical tracers of sources reduced the originality of his thought to a minimum. Mr. Taylor, who for once has not appealed for an answer to the mediæval mind, agrees essentially with both of these verdicts.

It is true that Boethius "spent his best years in the translation and adaptation of logical treatises," but that does not prove that he was capable of nothing else. Boethius was not above forty-five when he died ("young Boethius," as Mr. Taylor calls him later), and his life had been that of an active statesman. The career of Cicero invites comparison. Cicero from the start was interested in philosophy, and even as early as the period of his Verrine orations had some thought of turning from politics and law to a life of leisure and philosophic study. He carried out this programme later, not altogether voluntarily, but he had written no works on philosophy till he was more than fifty. Boethius's translations and commentaries correspond to Cicero's wide reading in the philosophers. In either case, there was a period of long and thorough preparation. We can only speculate on what Boethius might have done had he been suffered, like Cassiodorus, to spend his latter days in quiet. He had planned, after interpreting Plato and Aristotle, to show that the two masters were, despite appearances, in essential harmony; and such an effort calls for higher powers than those of a "sheer transmitter." Boethius suddenly found the life of peace, perforce, in the gloom of the dungeon; in a moment he came to himself, the thoughts that he had been conning for years rose easily to expression, as in Cicero's case. But the "Consolation of Philosophy" is far more original than any of the philosophical writings of Cicero.

Boethius's last work reveals its writer as a man of broad sympathies and critical acumen. In an age when Pagan philosophy had been merging more and more in the mystic and the absurd, he reverted with unerring instinct to the sure fountain-head of ancient thought—to Aristotle, Socrates, and Plato. Though registered in manuals of philosophy with the Neo-Platonists, he is utterly detached from them. He may have included a few unessential features of Neo-Platonism in his system, but they fade into insignificance when compared with that system as a whole, or with the amount of Neo-Platonism which St. Augustine had absorbed. The more we study philosophical tendencies in Boethius's times and the centuries just preceding, the more will the originality of his attitude shine out: he turns his back on the whole school of Plotinus. It cannot be, then, that his programme of reconciling Plato and Aristotle is merely a sign of "the shallow eclectic spirit of the closing Pagan times"; there is no loose tolerance, for instance, in his treatment of the Post-Socratic schools. Again he suggests Cicero, who also, though accepting the broad views of the New Academy, sought to find there, whenever he could, the original doctrines of Plato and Aristotle. Incidentally, Boethius had studied Cicero with care, and though he shows no trace of Neo-Academic scepticism, the liberal humanism of Cicero has seasoned his thought and his very style; it is a wholesome antidote to the magic and the formlessness of Neo-Platonism.

III.

Thus drawing inspiration from the pure well of ancient thought, Boethius devised a system which is not quite like any that preceded, and set it forth in a work which is a novelty among literary types. Though Martianus Capella had pointed the way in his curious treatise, Boethius was the first to combine the mingled prose and verse of Menippean satire with the philosophic dialogue. The subject is both old and new. One ranges it at first with the "Consolations" of antiquity, such as those of Crantor and Cicero and Seneca, and also with the encomia of philosophy, the λόγοι προτρεπτικοί of Aristotle and Cicero; but these considerations are caught up in something higher. In essence, the work is a theodicy, a justification of the ways of God to man; and to justify God, human reason solves, as best it may, the enigmas of evil and freedom. This theological element marks sharply the difference between the philosophy of Boethius and that of any of his Pagan masters. He wove his work of strands that Plato and Aristotle and Cicero had provided; they would have detected nothing alien in the woof. But the pattern itself is new. Boethius's philosophy contains one article that no Platonist or Neo-Platonist, Peripatetic or Stoic, would have accepted, namely, a clear-cut belief in personal monotheism. The nearest approach in antiquity is Cicero's interpretation of Platonic and Stoic theology, but it is only an approach. Boethius's system would slip neatly into Christian doctrine as formulated in his day; that was the dogma controlling him, as the Neo-Academic theory of probability controlled Cicero. Mr. Taylor approaches the truth in declaring:

> In the "De Consolatione" of Boethius, the antique pagan thought, softened with human sympathy, and in need of such comfort and assurance as was offered by the Faith, is found occupied with questions (like that of free-will) prominent in Christianity. The book presented meditations which were so consonant with Christian views that its Christian readers, from Alfred to Dante, mistook them for Christian sentiments.

It strikes me that mediæval readers were not bad judges of what concorded with Christian doctrine. They did not fail either to point out those few instances in which the philosopher had given his argument a coloring too Pagan. A few such slips are inevitable; one may find them in St. Augustine.

The "Consolatio Philosophiæ," then, as Mr. Taylor apparently admits, is not seriously in contradiction with Christian theology. But, he might ask, is it likely that a Christian thinker, who

Digitized by Google

ought, by definition, to have been interested first and foremost in the patristic scheme of salvation, would dare take such relish in mere literature and philosophy? Only a study of Christian humanism can answer this question. The subject needs fresh treatment; I can touch on only a few points here. From the kindly tolerance of Minucius Felix, which echoes that of St. Paul, to the philosophic inclusiveness of Boethius, there are many types and shadings of humanism, nowhere more profusely or more interestingly exhibited than in the fourth century. Jerome and Augustine, who began life either actually or virtually as Pagans, reacted against Paganism with undue but not unnatural severity after they had seen the light; later on, they worked out something like a harmony of the old culture and the new. This harmony is clearer still in the temperament of the poet Prudentius, whom Bentley called the Maro and the Flaccus of the Christians; and there are no disturbing elements in the blithe, Gallic Christianity of the humanist Ausonius. In estimating the attitude of the Church to Pagan culture, Mr. Taylor and others set up a rigid definition of proper Christian feeling, and finding outside of the definition a genial soul like Ausonius, put him without the pale as well; for he must have been a Pagan at heart. But instead of thus disposing of Ausonius, we should rather enlarge the definition. There were some merely nominal Christians in that age; Claudian was one. Asceticism, however, was not the only accepted mode of Christian living; the Church had a place for humanism, too. Ausonius does not differ essentially from his countryman, Apollinaris Sidonius, of the next century; and it would be rash to call Sidonius a Pagan at heart. By the reign of Theoderich, the times were ripe for a still more liberal attitude to antiquity on the part of those whose creed was most clearly defined. The bulwark of the Catholic faith in Italy in the early sixth century was manned by a noble company of old Romans whose forefathers had been leaders in the Pagan reaction in the days of Julian. It was natural for them to turn with sympathy to the past. Chief among them was Boethius.

Turning now to the other side of the problem, we need not have the slightest doubt of Boethius's Christianity. I will not raise other aspects of this old dispute, but point simply to the fact that he is the author of four, perhaps five, letters on theological topics, which attest his adherence to Catholicism. "If he wrote them," declares Mr. Taylor, "he did but make polite obeisance to the ruling intellectual preoccupation of the time." But there is no such note of courteous condescension in these works. Boethius has his fill of contempt for the profane crowd; he can sit in a corner with *gran dispitto*, while ecc'esiastical asses accept blithely what they do not understand; he refrains from comment, not caring to be reckoned *sanus inter insanos*. But the question at issue, the divergent heresies of Eutyches and Nestorius, appeals to him profoundly. He ponders the matter and submits his answer to those that know, to Symmachus and to John the Deacon, later Pope; he is humble enough with them. As this happened in 512, or perhaps a year or two later, the letter is not a youthful affair. The chief interest in the remaining letters is the doctrine of the Trinity. If the first of these was written toward the close of Boethius's life, as seems not improbable, so far from recording the author's "polite obeisance," it may even have served as a political broadside and called down on its author the wrath of the Arian Theoderich.

IV.

Most striking is the method of these treatises. Boethius brings to bear upon the problem of theology the whole apparatus of Aristotelian logic; here are the first-fruits of his years of translation and comment. Many of the Fathers, both Latin and Greek, were familiar with ancient philosophy, and the Church formulated important articles of the Faith with its help; but nothing so deliberately technical had appeared before; this handful of letters marks an epoch. Boethius is credited by Mr. Taylor, and by every one else who writes on this subject, with supplying to the schoolmen of the earlier period in his translations of the logical works of Aristotle the chief material of their thought. But, besides this, he gave them in his *Opuscula Sacra* an admirable model of method. Prantl, the eminent authority on the history of logic in the Middle Ages, estimated the nature of these tractates correctly in calling them an offshoot of early mediæval scholasticism, but he could not know, as has become clear since, that they are by Boethius himself. Relations are thus reversed. The tractates do not illustrate early mediæval thought: they inspired it. Mediæval theologians did not regard them as *jeux d'esprit*. John the Scot, the one eminent genius of his age, wrote a commentary on them; his example was followed by others, particularly by Abelard's friend, another bold thinker, Gilbert de la Porrée; and even after the new Aristotle in the thirteenth century had quite eclipsed the earlier translations, the greatest of all the scholastics, St. Thomas Aquinas, found a worthy subject for exegesis in the "De Trinitate" of Boethius. Doubtless he recognized part of his own procedure there. For besides applying Aristotle to theology, Boethius defines as clearly as St. Thomas himself the separate spheres of human philosophizing and Christian revelation:

> If these arguments of mine are right and *ex fide* [he says at the end of the second tractate], I beg you inform me so. Or, if haply you differ in any point, examine the aforesaid matter the more carefully, and if you can, unite faith and reason.

Considered in these aspects, Boethius deserves to be called, as some students have called him, the first of the scholastics.

But there is another service, quite as important, which Boethius rendered to the Middle Ages. If Jerome and Augustine bequeathed the patristic doctrine of salvation, he gave them in his "Consolatio Philosophiæ," as we have seen, a token of a more urbane and tolerant humanism, a large utterance of the human reason which did not contradict the revelations known to faith; and mediæval literature as well as mediæval thought profited by this admirable exemplar. To the ancient humanism they had, of course, direct access in the classics, but Boethius taught them to combine Paganism and Christianity emotionally, even as he had appropriated the ancient philosophy for Christian thought. The supreme achievement of the Middle Ages, to repeat Mr. Taylor's words, was the vital appropriation and emotional harmonizing of patristic Christianity; but the meaning of patristic Christianity must be broad enough to include Boethius. We cannot know the full extent to which he determined the course of mediæval thinking until the numerous commentaries written in the ninth century on him and on other important Romans are made accessible and studied. When this material lies before us, we can better trace the history of both humanism and philosophy in that period and better appreciate the notable attainments of John the Scot. Pondering what we know, we must recognize not only the intellectual accumulations of Boethius, but his genius, as stimulating forces in the growth of the mediæval mind.

But the temperament of Boethius is not a simple affair, and Mr. Taylor is not alone in judging as he does. I have set forth a different view, and other readers may well differ on other points; for the book incites thought. None will question its high qualities, or fail to be grateful to the author for his profound and sympathetic study of the Middle Ages.

NEWS FOR BIBLIOPHILES.

For twenty-two years William Jaggard, a bibliographer whose work is well known in the two ten-year Indexes to "Book Prices Current," has been bringing together material for a comprehensive Shakespeare Bibliography. The book, a quarto of 750 pages, printed in double columns, is now in the hands of subscribers. The beginning of the work was the preparation in 1890 of a catalogue (never print-

Digitized by Google

ed) of the Shakespeareana belonging to George Guy Greville, Earl of Warwick, and preserved at Warwick Castle, where, in Halliwell-Phillips's day, were to be found "all known manuscript copies of Shakespeare's plays written before the close of the seventeenth century." This, one of the oldest collections of Shakespeareana in England, has, Mr. Jaggard states, recently "passed into the private library of an American collector." The book is dedicated to the compiler's ancestor, William Jaggard, the probable editor (he thinks) of the First Folio, which came from William Jaggard's press in 1623. Owing to his death on the eve of publication, it is his son's name which appears upon the title-page of the book, the imprint of which reads, "Printed by Isaac Jaggard and Ed. Blount."

There are upwards of thirty-six thousand distinct entries and references. Details are given of every known issue of Shakespeare's writings, of every pamphlet, volume, or collection of Shakespearean comment, of every contemporary allusion to the dramatist or his productions, of each autograph, "genuine or forged," and of all engraved Shakespeare portraits. Incorporated are some thousands of extracts and illustrative notes. The word Shakespeare is, throughout the work, abbreviated to "Sh-", Shakespeare's to "Sh-'s," and, in some cases, Shakespeareana to "Sh-ana." This condensation may have been necessary to keep down the bulk of the book, but a few extra pages added to the volume would have been preferable.

The most interesting portion of the Bibliography is the account of Shakespeare's own works. The separate pieces are first given, arranged in alphabetical order, the spurious and doubtful plays in the same alphabet. The preliminary note to each play gives the entry in the Stationers' Register, and sometimes other general information. Then follow the chronological list of editions of the separate play, collations of the earlier editions being given and one or more libraries possessing examples indicated. Had it been possible to locate all known copies of the rarer and more valuable editions it would have added to the interest of the Bibliography. The only American libraries referred to seem to be the Boston Public and the New York Public. Prices paid at auction are given in some cases, but American auction records are ignored. For example, under "The Merchant of Venice," 1637, the note is, "In May, 1907, a copy sold for £40," although the record price is $1,300, paid for the Lenox Library duplicate copy at Anderson's, in May, 1906. The nine quartos, with forged dates, printed by Thomas Pavier in 1619, are entered under their proper date of printing, not under the date on the title-page.

Early manuscript copies of the plays are also described, and, although these are few in number, they are of great interest. The most important is the manuscript of "King Henry the Fourth," the two parts condensed into one, fifty-five leaves, transcribed about 1610. This is "the sole contemporary manuscript of any of Shakespeare's literary productions known to survive." Discovered in 1844, it passed into the Earl of Warwick's collection, and was printed by the Shakespeare Society in 1845. Manuscripts of "Julius Cæsar" and "The Merry Wives of Windsor" written about 1660 are the next earliest. Both of these are also in the Warwick Castle Collection.

The long-lost first edition of "Titus Andronicus" of 1594, described by Langbaine in 1691, but not again seen till December, 1904, when a copy was found in a Swedish country cottage by the librarian of Lund University, is described as having been sold "to a well-known American collector for £2,000 in February, 1905." This is stated to be the record sum paid for a separate Shakespeare piece. The same sum was paid in 1907 (presumably by the same American collector) for one of the three known copies of the first edition of "The Passionate Pilgrim" (1599).

The section describing the known autographs of Shakespeare is an interesting portion of the book. Mr. Jaggard says: "Six indubitably genuine autographs of Shakespeare exist. They are attached respectively to the Mountjoy deposition, 1612-13; Blackfriars deed of conveyance, 1612-13; Blackfriars mortgage document, 1612-13; and his will, 1615-16. In every other asserted instance of genuineness more evidence is needed before the attributed signatures can be finally accepted or rejected." Among the "supposed" Shakespeare autographs which he notes, two are in the United States, North's "Plutarch," 1603, with a signature, in the Boston Public Library, and the Folio of 1632 owned by C. F. Gunther of Chicago, which has, pasted in, a reputed Shakespeare signature on a slip cut from a document.

Many interesting and little-known facts are found in the notes. For example, that the publisher's price for the First Folio was one pound is shown by a memorandum on a letter from William Cartwright to Edward Alleyn, preserved at Dulwich College. This memorandum, which is dated November 30, 1623, the very week of publication, runs: "Paid a sover-in for Shaksper's booke of Plaies." Another manuscript entry at Dulwich shows that Edward Alleyn paid five pence for the "Sonnets" of 1609: "A book of Shaksper Sonnets, 5d." This first edition of the "Sonnets" is now one of the most valuable of books. From an inscription on the title-page of the Steevens-Daniel-Griswold-Church-Huntington copy, we know that Narcissus Luttrell paid one shilling for that copy. This was, perhaps, seventy-five years after publication, and the book may have become rare. At the Steevens sale in 1800 the book brought £3 19s.; Mr. Griswold paid £225 15s. for it at the Daniel sale in 1864; Mr. Church paid $5,000 for the same copy about 1890, and it would now, probably, bring three times that sum.

Mr. Jaggard seems to have got confused over the two editions of Francis Meres's "Palladis Tamia," the book which contains the earliest printed list of Shakespeare's writings, and the most important of all contemporary references to him and his work. "Palladis Tamia, Wit's Treasury Being the Second Part of Wit's Commonwealth" (1598), is properly entered under Meres (Francis). The second edition, published in 1634, with altered title, "Wit's Commonwealth, the Second Part," and (in some copies) with an engraved title, "Wit's Academy," dated 1636, is not entered here; but there is this note:

"Wit's commonwealth" (or "Wit's academy"), of which the above work purports to be the continuation, was written by John Bodenham (*q. v.*).

On turning to Bodenham, we find two entries, "Wit's Academy," 1634, and "Witt's Academy," 1636, and the note, "Originally appeared as part i of Francis Meres' 'Wit's treasury,' 1598 (*q. v.*)." The actual work by Bodenham (or edited by him) is not recorded at all. It appeared in 1598, with the title, "Politeuphuia, Wit's Commonwealth."

Correspondence

LEGAL ETHICS AND PRACTICE.

TO THE EDITOR OF THE NATION:

SIR: The story is not a new one: An Irishman was passing through a cemetery and stopped to read an epitaph which said that "Here lies Addison B. Witherspoon, a good lawyer, and an honest man."

"What are you looking at that Witherspoon monument so long for, Pat?" inquired his wife.

"I was wondering," said Pat, "what the honest guy done that they chucked him in the same grave with Witherspoon!"

We laugh at the story, of course, although we don't believe that all lawyers are dishonest. Still, what shall we say when the Code of Professional Ethics issued by the American Bar Association—the highest authority of American lawyers—lays down a rule like this:

A lawyer may undertake with propriety the defence of a person accused of crime, although he knows or believes him guilty, and having undertaken it, he is bound by all fair and honorable means to present such defence as the law of the land permits, to the end that no person may be deprived of life or liberty but by due process of law.

What can an honest lawyer say in defence of a man indicted for a crime which the lawyer knows or believes him to have committed? He may contend that the offence charged is not a "crime." There are indictments for offences on the border line of crime; such, for instance, as the discharge of a gun and the killing of a person thereby. Possibly the man shot with a perfectly justifiable purpose. In such a case an honest lawyer may reasonably contend that no crime was committed. Or he may contend that the man on trial is insane and irresponsible, and he may do so honestly. But in neither of these cases is he defending a man known to be guilty. The Code undoubtedly has in view the man who intentionally and maliciously murders or robs or bribes. On the other hand, if this same lawyer should purposely send the police along the wrong road, and thus aid a fleeing criminal to escape, he would not only not be regarded as honest, but he would be indicted and punished as accessory after the fact.

If a lawyer allows a witness to swear in a civil case to statements known by the lawyer to be false, he may be disbarred—in the event he is found out. If his client perjures himself to escape the punishment of his crime, and the lawyer knows it, is he honest—if not found out?

A Roman Governor asked, some two thousand years ago, "What is truth?" and did not get an answer. To-day the public asks, "What is honesty?" and the answer is—

Digitized by Google

in so far, at least, as lawyers are concerned—"Honesty in a criminal lawyer is getting away with it." Which reminds me of the little Sunday school girl who, when asked to explain what a lie is, said: "A lie is an abomination unto the Lord, and a very present help in time of trouble."

But legal peculiarities are not confined to the lawyers and their code of ethics. The court also has them. A woman striker of commanding presence, but attired in the homely garb of a cloakmaker, is arrested for inciting a mob to riot. She is hustled off to the police station in a patrol wagon and dragged before the desk sergeant. He is about to order her cast into a cell when, from the folds of her cheap dress, she produces a jewelled card case and presents a handsomely engraved visiting card, bearing the name of a social leader. The desk sergeant is dumfounded. Instinctively he shrinks and shrivels. When he recovers sufficiently to speak, it is to utter very humble apologies and to make excuses. He turns on the unfortunate policeman who made the arrest, and berates him soundly for his blunder. Then there is hurried and nervous effort made to relieve the distinguished prisoner of the embarrassment to which the arrest has subjected her. An elegant automobile is sent for, and she is shown into it with more apologies, and, accompanied by one of the finest, is driven to her home. The police give out columns of interviews deploring the unfortunate mistake, promising that it will not occur again.

Hear what Judge John Gibbons, for thirty years an occupant of the Chicago bench, has to say:

> Our criminal law and the practice of many of our courts savors of ancient times when the law and its enforcement was a farce.
>
> The upper courts often reverse decisions of the criminal courts on trivial technicalities that don't exist any longer in England, where they were originally drawn from, and where they were in force during the feudal times when justice and the law were an empty show.

With little or no change, the judge's opinion, as given above, might cover the civil law as well. It would be most refreshing to read some learned jurist's honest opinion touching some of the civil laws obtaining to-day in almost every section of the country—if not in all of them.

THE SIZE OF THE WORKING-VOCABULARY.

To the Editor of The Nation:

Sir: Few unsupported assertions, I believe, persist with so little questioning as the one which maintains that the working vocabulary of most people is limited to a few hundred words. For the past two or three decades many books on the English language, English composition, and public speaking have "estimated" the workingman's vocabulary at five or six hundred words, and the college student's at one thousand or twelve hundred. In a public address only a year ago an officer in one of our larger universities declared that "the average senior" in that institution "did not employ more than eight hundred or a thousand words in all the writing and speaking involved in the various activities of his life." Early last autumn six members of our freshman course in English in Wabash College volunteered to make a study of their own vocabularies, and while my chief purpose in directing this study was to learn definitely what classes of words a freshman has at his command, the mere number proved to be so different from the traditional estimates that I feel justified in offering this note.

The methods we employed were quite simple. Each student carried small cards with him at all times and endeavored to catch all the words which he used in ordinary speech and writing. From time to time he filed the words alphabetically. Some of the men, when they felt that their general efforts had been reasonably thorough, made a more intensive study by means of convenient divisions of their lives into downtown, college, home, morning, day, night, and the like, in order that they might not omit words which are extremely familiar to almost every one. Others sought to gather up these very familiar words by going over their alphabetical lists and supplying the obvious omissions.

It was difficult to determine what classes of words should be excluded, but a desire to avoid all possible repetition led us to throw out the following: (1) All words which were merely inflected forms of other words included in the list; (2) numbers, both cardinal and ordinal; (3) pronouns and demonstratives; (4) nouns used only as proper nouns; (5) extremely technical terms; (6) all except one word from each group of words obviously related in their origin; (7) all negatives in *un-* and *in-* except where only the negative form of the word exists, or where the positive is rare, as in *unkempt, uncouth, unwittingly;* (8) all words in *re-* and *dis-* where the meaning could be readily gathered from the definitions of the root word and the prefix.

After these classes had been excluded and each student had been questioned carefully for the purpose of leading him to ascertain whether he had included words which the laws of association had brought in from his reading vocabulary, the totals were as follows: 2,970, 3,190, 3,920, 4,510, 4,550, 4,560.

Even a hasty glance at these lists convinces one that they are incomplete rather than overcomplete. All the words recorded seem to hold their places legitimately, while on the other hand familiar words have been overlooked. For example, in going through the A's in three lists, I observed that the following words had not been included: Aeroplane, agriculture, almighty, almost, along, ambition, analysis, ancestor, ankle, ant, apology, architect, arm, autumn, avenue, avoid, awake, away, awkward, and axe.

The students who have been making this study are, I am quite sure, representative of our freshman class. They vary in age from seventeen to twenty-one years; three of them were brought up in the country and three in small cities; some of them have read much, others little; and their classroom records for the first term of the year ranged from the highest to the lowest. Moreover, the words themselves reveal a rather striking diversity of experience. They are in no respect unusual, save that one list shows a marked influence of a very early reading of Dickens, but they represent all the variety of interest which one would expect to find in a group of young men who are beginning their college course.

SCHOLARSHIP OF IDEAS.

To the Editor of The Nation:

Sir: In an editorial entitled "Scholarship of Ideas" in the issue of May 11, as well as in other contributions to the *Nation*, you have, as it seems to me, justly criticised certain pedantic tendencies of modern scholarship. But in most of the criticisms of the "scientific method" in graduate study I find a tacit assumption that the narrowness of a specific subject is synonymous with narrow interests and knowledge on the part of the investigator. This seems unwarranted. The aim of the "scientific method" is quite the opposite of narrowness. A doctor's dissertation entitled "The First Hour of the Session of the States-General on May 5, 1789," may deal with a very small period of time, but it just as certainly demands a wide and thorough knowledge of history for its proper treatment. Or, a student may confine himself to the study of the "verb or the adjective on a certain page of Montaigne"; but does not this implicate the appreciation of Montaigne and an intensive study of the verb elsewhere in literature? The scientific method assuredly emphasizes exactness and detail, but how can it possibly be incompatible with "breadth," "imagination," or "ideas"? The procedure of such a method seems based upon a recognition of the limitation of the human mind very much as the landscape artist draws with regard to the limitation of the human eye. It is necessary for the student to see the material from *one* point of view in order that his picture may be clear and unconfused.

Fayette, Mo., June 19.

SPECIALISM.

To the Editor of The Nation:

Sir: As a graduate student in a leading American university I have read with sympathetic interest the letter on "L'Esprit de la nouvelle Sorbonne" in your issue of June 15. The name of the institution in question I withhold, as I do my own name, because the following notes are mere records of a curious, warped notion in our educational system, and because I set them down in no spirit of malice whatsoever.

A not grossly unfair definition of certain departments of graduate study would be "The Search after the Minute without caring about the value of the Result so long as it *is* minute." This might be illustrated in various ways, but two will suffice.

The director of the Old French seminary sets students to work searching through thousands of pages of low Latin in the endeavor to find early examples of the use and form of certain words. A month's work of this sort may yield ten examples, or none. The only equipment needed is a busy forefinger and eyelids which will stay open. Brains are quite superfluous, and, indeed, if employed would quickly turn to dust. If an historian actually *reading* these *Monumenta* (which our students do not) happens to find an early example of such and such a word, let him note it down; let him even publish it if he has the proper philological enthusiasm.

Digitized by Google

Another instance: A great scholar offered last year an introductory course in Gothic. He began very properly with the phonology of the vowels, and at the end of the year he had reached O. There had been not a lecture on the consonants, and as for morphology and syntax, or such a thing as reading the language, they had not been spoken of.

Such cases might be multiplied almost indefinitely. I am minded of an epigram I once read and copied, on Anglo-Saxon:

This is the basis of the language. True!
Pray delve into it if it pleases you.
I want not dust and bones, dry, old, and bare,
But Poetry's fragrant breath and wind-blown hair!

A little conversation recently published in the newspapers is also apt. Jones: "So he's a specialist. What is his specialty?" Smith: "The nostrils." Jones: "Which nostril?" EX LIBRIS.

June 17.

CHRISTOPHER DOCK'S RULES.

TO THE EDITOR OF THE NATION:

SIR: A recent examination of Die Schulordnungen des Grossherzogtums Hessen (Monumenta Germaniæ Pædagogica, Vol. 33) discloses the fact that the "Hundert nöthige Sitten-Regeln für Kinder," reprinted from the *Geistliches Magazien* a few years ago as the work of Christopher Dock, America's pioneer writer on education, ("The Life and Works of Christopher Dock," J. B. Lippincott Company, 1908), were really drawn up by J. Rambach, professor of theology at Giessen, and, perhaps, the earliest German university lecturer on education. They constitute a section of his "Erbauliches Handbüchlein für Kinder," published in 1734. This suggests that the "Christliche Lebens-Regeln" ascribed to Dock may have a similar origin, especially as this is the title of section vi of Rambach's Handbüchlein.

LEWIS F. ANDERSON.

Literature

MARGARET FULLER.

Margaret Fuller and Goethe. By Frederick Augustus Braun. New York: Henry Holt & Co. $1.35 net.

Margaret Fuller, as every one knows, was intimately associated with the New England transcendentalists, attended their club, edited their literary organ, the *Dial*, and has long been recognized as one of their leaders. Dr. Braun attempts, however, to sustain the thesis that Margaret Fuller was not a transcendentalist, but a disciple of Goethe. This contention should obviously involve a careful and impartial comparison of her ideas and character with those of Goethe on the one hand, and with those of at least one admitted and typical transcendentalist on the other. We regret to say that such a comparison has not been made.

In the first place, Dr. Braun appears much more concerned to "make out a case" than to see and present the object as it really is. This is evident, for example, in his constant suppression of Margaret Fuller's solid and frequent adverse comment on Goethe. Secondly, he is animated by a desire to magnify the influence of German thought in New England. This intention appears in his tediously reiterated refrain, "especially German," and in his suppression of the classical, French, and English sources of the transcendental movement. Thirdly, he is himself an enthusiastic and, unlike his heroine, an entirely uncritical admirer of Goethe, whose name, sometimes hyphenated with that of Schiller—"higher ethical principles of Goethe-Schiller"—he pronounces with the rapture and unction of the devotee. Fourthly, he writes of Emerson, whom he seems to accept as the typical transcendentalist, as if but vaguely acquainted with either Emerson's works or character. Thus he persistently couples Margaret Fuller with Goethe and distinguishes her from Emerson by traits and ideas which are perfectly clear and explicit in Emerson.

We are acquainted with no definition of New England transcendentalism which excludes Margaret Fuller, and do not believe that any can be made. Derived from the same Puritan stock, subjected to the same influences as the other transcendentalists, she comes under every article of the rather florid definition formulated by W. H. Channing, and accepted by Dr. Braun himself as the best to be found—"a pilgrimage from the idolatrous world of creeds and rituals to the temple of the Living God in the soul," "a putting to silence of traditions and formulas that the Sacred Oracle might be heard through intuitions of the single-eyed and pure-hearted," a belief in "perpetual inspiration, the miraculous power of will, and a birthright to universal good." Dr. Braun accepts this characterization, but immediately, in a desperate endeavor to distinguish transcendentalism from the "Goethean doctrine," plunges into a perfect thicket of misrepresentations, contradictions, and false distinctions.

"Transcendentalism," he says, "is by nature deeply Christian *in the traditional sense*" (our italics)—a flat contradiction both of the definition and of the fact. The human instincts, he admits, are regarded as divine by both transcendentalist [Is this deeply Christian "in the traditional sense"?] and Goethean—"with this difference, however: that in the Goethean doctrine they are that which the individual *must ultimately* turn to for the highest laws of his inner being." This distinction utterly fails to distinguish; yet he rides it gallantly through the flimsy labyrinth of his central chapter on Religion and Philosophy to the conclusion, in which he says that Margaret Fuller "saw the difference between their convictions and hers clearly, and rejected their doctrines." "Like Goethe and Schiller," he continues, "she believed that out of our own inner being, out of the inner heart and self, are determined the highest laws for individual growth and action, and not from any principle or law that may be imposed upon us by anything outside of our being, whether religion or philosophy." Oh, Dr. Braun, this is not where Goethe and the transcendentalists differ; this is where they agree! We beg you to read, let us say, Emerson on "Self-Reliance":

> Nothing is at last sacred but the integrity of our own mind.—What have I to do with the sacredness of traditions, if I live wholly from within?—If I am the devil's child, I will live then from the devil. No law can be sacred to me but that of my nature.

Dr. Braun's ignorance or misrepresentation of transcendentalism is equalled by his misrepresentation of Margaret Fuller's attitude toward Goethe. That she was a great admirer of Goethe and greatly indebted to him is obvious to any one who is acquainted with her works. That she rejected the New England transcendentalists, however, and became the devout and whole-hearted apostle of Goethe painted by Dr. Braun, is very wide of the mark. On the contrary, her attitude toward the German poet was on the whole typically "transcendental." Now it was typically transcendental to sit at no man's feet forever. As Emerson says, "The soul is impatient of masters, and eager for change.—We touch and go, and sip the foam of many lives.—We cloy of the honey of each peculiar greatness. Every hero becomes a bore at last." At one time Emerson himself could read nothing but Goethe, at another time Montaigne, etc. The New England transcendentalists, unlike the Scotch prophet, their cousin, across the seas, were characterized by an intellectual *Wanderlust;* they were but fickle hero-worshippers, spiritual soldiers of fortune, seekers for the gold that lies under the end of the rainbow.

Exactly this trait has been noted in Margaret Fuller. "Margaret said she could keep up no intimacy with books. She loved a book dearly for a while; but as soon as she began to look out a nice morocco cover for her favorite, she was sure to take a disgust to it, to outgrow it. . . . That had even been the case with Shakespeare! For several years he was her very life; then she gave him up." ("Margaret and Her Friends," C. H. Dall.) Margaret Fuller herself declared that it was Emerson who first made her understand the meaning of an inward life, and that it would require a volume to exhaust the theme. Dr. Braun seems to think it conclusive evidence of her complete discipleship to Goethe that she calls him her "parent." But Margaret, like her associates, bestowed the honor of father-

Digitized by Google

hood on many heroes. Thus of Milton, "He is one of the fathers of this age, of that new idea which agitates the sleep of Europe. . . . . But the Father is still far beyond the understanding of his child." Wordsworth she called her "beloved friend and venerated teacher." Mme. de Staël, Alfieri, and Shelley at times claim her allegiance. Southey steeps her "to the lips in enjoyment." Of Rousseau she writes: "Every onward movement of the age, every downward step into the solemn depths of my own soul, recalls thy oracles, O Jean Jacques!"

The decisive point is, of course, her direct criticism of Goethe. Dr. Braun represents her as a defender and champion of Goethe in contrast with the transcendentalists, who, he says, exhibited toward him the moral asperity and Puritanical rigor which lurked beneath their doctrines. At this crisis, Dr. Braun becomes particularly subtle in his distinctions. "Emerson," he asserts, "was preëminently a thinker. He placed his greatest emphasis upon the intellect. . . . His was chiefly a life of thought. . . . All this was true despite [*sic*] his intellectuality and dissent from all traditional, formal church creeds. He seldom came into genuine heart-to-heart touch with his fellow beings or experienced any real glow of the emotional nature. This fact explains the severe criticisms which he now and then hurled against Goethe."

To be perfectly candid, it does nothing of the sort, though this is a kind of nonsense which the pious Goetheans are very fertile in. The commonsense criticism directed by the New Englanders against Goethe was aimed at the sexual immorality of his life. As Emerson wrote to Carlyle: "The Puritan in me accepts no apology for bad morals in such as *he*." But Emerson said also —and here he was expressing the typical transcendental criticism—that he wished the Duke had cut off the poet's head before he retired "from the municipal incense to 'arrange tastefully his gifts and medals.'" By this he meant that Goethe had lost his transcendental aspiration, that he had surrendered his genius in return for the adulation of Weimar, that he had degenerated from the heights of his youthful ardor into a rather meanly contented connoisseur of talent.

Emerson's position as here outlined is quite precisely that taken by Margaret Fuller. She declared that Goethe's life had fallen far below the level of the higher tendency in the best of his writings. Her essay on "Menzel's View of Goethe," which Dr. Braun calls "her masterly defence," is rather a critical attempt to show why and how Goethe with his great gifts failed of the highest attainment. Margaret Fuller writes as follows:

> Men should be true, wise, beautiful, pure, and aspiring. This man was true and wise, capable of all things. Because he did not in one short life complete his circle, can we afford to lose him from sight? Can we, in a world where so few men have in any degree redeemed their inheritance, neglect a nature so rich and so manifestly progressive?

He did not in one short life complete his circle, says Margaret. No, he fell short, in her sense, of *beauty*, *purity*, and *aspiration*. There speaks the New England woman, the transcendentalist, and the critic. Dr. Braun, who strives throughout as much as in him lies to delete the evidence of her critical sense, omits in quoting this passage the vital declaration that Goethe did not complete his circle.

Goethe was the man for his time and place, says Margaret, and, "historically considered," needs no apology, but a complete man in the highest sense he was not. Like Emerson, she regrets his compromise with their serene highnesses at Weimar, his acquiescence in the ways of the world. He has grown wise, indeed, but not in divine wisdom; "He might have been a priest; he is only a sage." Dr. Braun says at the close of his book: "We have seen how she accepted Goethe's religious and philosophical teachings almost in their entirety." It is well to place beside that her own comment on her "parent" in "her masterly defence": "This office of a judge, who is of purer eyes than to behold iniquity, and of a sacred oracle to whom other men may go to ask when they should choose a friend, when face a foe, this great genius does not adequately fulfil." Like Emerson, she sees in him the great recorder of human life rather than the inspired and inspiring guide. At the crisis of his life, she declares, he chose "an outward peace rather than an inward joy." "He does not warm, he does not inspire me. In his certainty is no bliss, in his hope no love, in his faith no glow." "Pardon him, World, that he was so worldly. Do not wonder, Heart, that he was so heartless." He has, to be sure, the perseverance of men; what she desires is the perseverance of the saints. She compares "the loophole redemption of sagacity" represented by Goethe very unfavorably with the "grandly humble reliance of old Catholicism" as represented by Dante. This does not sound to us like the ardor of a disciple.

These are only a few of the passages which Dr. Braun could not use in sustaining his paradoxical thesis. It seems worth while to print them, because, as he points out, Margaret Fuller's works are mainly out of print and frequently hard to obtain. The viciously manipulated and expurgated though extensive selections from her criticisms which he presents give entirely erroneous impressions of all parties concerned. If such scholarship as this proceeds from "the higher ethical principles of Goethe-Schiller," let us have no more of them!

CURRENT FICTION.

The Job Secretary: An Impression. By Mrs. Wilfrid Ward. New York: Longmans, Green & Co.

Tales of the writing person are increasingly common in England. Here they are rarer, whether because we take our authors less seriously or for some other reason. The Frank Norbury of this story has points of refreshing novelty. He is not the struggling, starving, hysterical would-be author commonly affected by the current novelist, nor, though not seldom treading on dangerous ground, does he share the moral irresponsibility of that favorite ladies' hero. At the beginning of the action, we find him possessed of a comfortable income, a pleasant worldly wife, and a reputation for fine literary workmanship. He is, we need hardly say, a Briton and a novelist. In the middle of a book he has been deprived of his secretary, and has secured from an agent a substitute or "job secretary." He at once perceives her to be a remarkable person—useless technically as an amanuensis, but delightful and valuable in unforeseen ways. Her criticisms of his work are of the utmost service to him, and her personality insensibly becomes the model for his heroine. And then, of course, she turns out to be somebody of social importance—the wife, in fact, of a titled diplomat. She has run away from her husband because she has perceived that they were no longer to each other, etc. When he appears on the scene as an intimate friend of Norbury's, we are reasonably sure what the issue is to be. However, it is sufficiently postponed, and the postponement is attended with a sufficient number of purely emotional and intellectual complications, to make the game worth the candle, as fiction. Mrs. Ward deals gracefully and ingeniously with her somewhat slender material.

The Golden Silence. By C. N. and A. M. Williamson. New York: Doubleday, Page & Co.

A novel from the Williamsons without an automobile running through its pages is unthinkable. In the present case, however, the automobile is quite secondary, a mere convenience to convey the hero into the Golden Silence of the desert, that he may rescue the heroine. The latter is a remarkable creature, indeed. She is a young American girl, who, while acquiring an education in an Indiana boarding school, learns to speak Arabic fluently—without recourse even to a correspondence school—and to dance so wonderfully that, when she leaves

Digitized by Google

school, she dances her way into fame at once. But it is not a case of art for art's sake with her; she dances merely to obtain money enough to rescue her beautiful sister from the clutches of an Arab, to whom she was lawfully married in Paris when the adoring heroine was young. How this rescue is accomplished is the story of "The Golden Silence." The sister is found immured in an oasis of the great desert, her husband having changed his identity by the process of apparently dying in a fire in Constantinople and then becoming the masked Mahdi to whom all Africa and Islam look for freedom from the domination of the Christians.

There is excitement galore, including a mid-desert battle, in which two gentlemen in Highland costume achieve wonders and the masked prophet is fatally wounded, mixed in with romance enough to suit the most romantic. The tale moves quickly, and for those who like the conventional picture of the Christian-hating Mohammedan and who ask for plenty of excitement without much regard for probabilities, the book is to be recommended.

The Unknown God. By B. L. Putnam Weale. New York: Dodd, Mead & Co.

The author of "Indiscreet Letters from Peking," "The Forbidden Boundary," and "The Re-shaping of the Far East," here applies his special knowledge of Chinese conditions to a presentation in the form of fiction of the missionary problem in China. The chief actor is Paul Hancock, a young Church of England parson, with private means, who becomes the fourth member of a struggling Chinese mission. The other three members are an ineffectual saint, his wings clipped by circumstance; his wife, who remains a mystery; and the villain, a secret drunkard, who virtually appropriates the wife, and practically ousts the saint from his dubious glory as head of the mission. Near by and more or less antagonistic are a Baptist mission and a Roman Catholic mission. The Roman Catholics apparently have the best of it, if standing in the community counts. The Baptists (American) possess great riches and a foolish administration. Their head, who has lived fifty years in China without approaching comprehension of the Oriental mind, has infringed upon an age-long custom, and so brought about the ruin of the project which he officially leads. It is, to be sure, an Occidental will which precipitates matters. The wealthy commissioner, who is secretly a Mohammedan and is involved in amorous competition with the young Anglican, is hard to believe in. The Anglican wins: hence the Baptist mission, to which the lady is attached, falls a prey to native vengeance. Anglican saves lady in the eleventh hour: there is more than a touch of melodrama in the latter half of the narrative. But all this, as may have been hinted, is incidental or ornamental. The book is primarily a tract, deploring the dissidence among Christians which more than anything else blocks the spreading of Christianity among nations which possess a consistent body of belief. Apart from factional differences of creed among themselves, the missionaries appear to the Chinese simply as "foreign men of foreign color living in foreign houses in foreign ways, and stridently determined to proclaim that Christianity necessarily meant a pseudo-European culture, which conflicted with the ideals of the country." Not that Mr. Weale believes the cause of Christianity hopeless in the far East. On the contrary, he believes that "the clean, actual supernatural nature of the Christian belief, the dogma, has nothing which is not eminently palatable to and refreshing to the Eastern mind. . . . It seemed a supreme irony to bring it back to these men of the East, in a hackneyed and stereotyped form, full of a primitive methodism which bore no relation to its original poetic conception." In short, Mr. Weale thinks, with most unsectarian students of the missionary problem, that the advancement of Christianity in the Orient depends upon a free adaptation to Oriental needs of the essentials of the faith as contrasted with its incidents.

A Kingdom of Dreams. By J. J. Bell. New York: Cassell & Co.

This is a summer-weight story of mystery, villany, and love: the mystery is mildly entertaining, the villany is of a rather tame character, and the love is perfectly regular and smooth in its course. A young man has passed out of the gates of a prison. He has not a friend in the world and no plan but suicide. He is followed at a distance by a beautiful veiled young lady and an elderly man in a motor brougham. She slips an envelope into the hand of the young man and disappears. The envelope sends him travelling about England in luxury, his every want anticipated, and directions given him by mysteriously invisible agents. He arrives finally at an isolated but luxuriously equipped estate overlooking the sea, and guarded jealously from the outside world by a high wall and lynx-eyed sentries. Here he is the enforced guest of the beautiful young lady and the elderly man of the mysterious motor brougham. Neither the young man nor the reader gets the least hint of the mystery behind the kindness. The puzzle deepens when it develops that the kind host is really entertaining the young man in order to deprive him of a fortune of £1,000,000, of which the young man knows nothing. With the fortune in his hands the host is planning to found a kingdom in the heart of Africa which is to regenerate the world spiritually. It would be cruel to the story to reveal the solution of the mystery, since the only quality which holds the reader to the book is a certain degree of suspense.

NIPPON.

A History of Japan. Vol. I. From the Origins to the Arrival of the Portuguese in 1542 A. D. By James Murdoch. Published by the Asiatic Society of Japan. Yokohama: Kelly & Walsh.

In this, the second volume which has appeared in the series of three projected volumes (Vol. II was issued in 1903), Mr. Murdoch carries the history down to the year 1542. He deals with legendary Japan, making critical use of Chinese, Korean, and Japanese sources; with Old Yamato, the nucleus of the future empire; with the great reforms of 645 A. D., and later, when the Japan that then existed adopted Chinese civilization, with the suddenness and vigor with which she accepted Occidental civilization in 1868. He sketches the lives and works of the Emperors from 662 to 850 A. D., who were personal and active rulers, some of the later ones being scholars. In the tenth century Buddhism had virtually won over the court and government, and the way was paved for the rise of that great house of Fujiwara which for centuries overshadowed the throne and furnished the wives of the Mikados; until, indeed, in the twelfth century, the ex-soldiers of the house of Taira snatched away the power from their civil rivals.

One's judgment of the value of Mr. Murdoch's colossal work must be conditioned by one's own view of Japanese history. What were the elements in the ethnic movements during the twenty alleged centuries here brought under review? Was there any real nation in Japan before the twelfth century, or only a nucleus of civilization, with vast areas of wild territory and unassimilated tribes of various ethnic origins? What were the physical, economic, and political problems, to say nothing of those which were religious and cultural? What was the actual grade of civilization at the dawn of letters, when documents were possible? How much allowance must be made for native writers because of their extremely insular and almost ridiculously subjective views? Is it even now safe for natives to speak with academic freedom concerning the very dogmas on which Mikadoism and the whole governmental structure rest?

In our view, Mr. Murdoch's discussion of ethnography and origins is decidedly weak, especially his estimate of the relative proportion of Ainu and Yamato men in the development of Nippon, and his use of the results of the archæology of Japan and Korea and of the Kojiki and

Digitized by Google

Nihongi. The traditional views of Japanese orthodoxy—of savages on the one band and gods on the other—have been too largely followed. Mr. Murdoch's presentation of the whole question of the Ainu substratum of population, of the military campaigns for their subjugation, and the civil methods for their assimilation is too much in accord with the theological traditions of a people who long considered that their emperors were deities and whose dogmatism, fostered by the Government even to-day, oversteps both justice and the written constitution to enforce orthodoxy. Mr. Murdoch ventures the hypothesis (p. 233) that the Eta, who formed a large part of the pariah class of feudal Japan, sprang from transplanted communities of Ainu, or "barbarian prisoners of war."

A notable defect in this great work is an almost total absence of discussion of the great cultural influences, art and religion, which have had so much to do with the making of the Japanese temperament and character. We say character, for it is yet the weakness of Japanese ethical education that it recognizes artistic refinement and moral status as virtually one and the same. The court life in Kyoto, during the Middle Ages, was almost wholly unmoral, even when refinement was carried to an almost incredible point. This is seen, not only in the "Genji Monogotari" ("Romance of Prince Genji and his Amours"), the preëminent classic of the language, but in the mediæval belles-lettres, in which conscience and ethics seem to have little or no place. Even to-day in the Japan of Meiji, there is an avowed determination to identify morals and good manners. The writer should also have described the influence of certain mediæval Japanese teachers of neo-Buddhism, who, by their personal efforts in travel and controversy not only saved the intellect of Japan from stagnation, but aided vastly in giving the conglomerate of races in Japan nationality through religious unity.

Nevertheless, not to give a wrong impression, it is delightful to find on so many pages evidences of acute and penetrating insight, joined with narrative skill. The differences between the sects are finely shown, as, for example (p. 45), why the hardy soldier-samurai in the thirteenth century took to the robust and stern virility of the Zen doctrines and practices, while despising the effeminate literary accomplishment of both the court nobles and scholars in the more purely ecclesiastical sects. Referring to Lessing's "Laokoon," the author suggests the close relation of the Nara statue of Great Buddha to Japan's first burst of artistic splendor. In another illuminating comparison, he says (p. 485):

> It must never for a moment be forgotten that the peculiar genius of Japan is analogous to that of the Normans. It originates little, but it seizes upon the original ideas of other people, or nations, or races, and not so much adopts them as adapts them to suit the peculiar, and not infrequently the merely temporary, exigencies of the social and political fabric of the empire.

It is the similarity of Japanese events and personalities with those among mankind everywhere that wins the attention either of scholars or of the ordinary reader, and just here the author excels. This volume, with its full index, colored maps, wealth of suggestions, fascinating narrative, and bold grasp of difficult themes, stands at the head of all works thus far produced upon the early and mediæval history of Japan.

Across South America. By Hiram Bingham. Boston: Houghton Mifflin Co. $3.50 net.

This book is a noteworthy addition to the growing literature about our near, but too-little-known neighbors. It is also well-timed. The situation in Mexico has aroused an interest which should lead to a desire on the part of Americans for a better understanding of the workings of the Latin-American mind generally.

The particular section of South America described by Professor Bingham is the old Spanish trade-route from Lima, south to the famous silver mines of Potosí, Bolivia, and southeast to Buenos Aires. He has dwelt with predilection on that wonderful old city in Bolivia, almost totally unknown to us, for over a century the largest city in the Western Hemisphere, and, "at the beginning of the seventeenth century, when New York and Boston were still undreamed of—already a large and extremely wealthy city." "Two billion ounces of silver is the record of its output, and the tale is not yet told." The word "Potosí" has become a common noun in colloquial Spanish, and the reviewer has heard one person or another referred to as a Potosí of wealth or a Potosí of moral excellences.

In its general outlines, the book is on the order of the immemorial works of travel from the "Voiage and Travaile" of Sir John Maundeville down to Humboldt's "Travels to the Equinoctial Regions of America." It is a completed log-book or diary, displaying an unlimited intellectual curiosity. Perhaps its salient characteristic is its judicious tone. The comments are those of a trained observer and thinker who has freed himself of prejudice. To many, the last chapter, on Certain South American Traits, will seem the most original and the likeliest to bear fruit. In it, Professor Bingham shows how similar our judgments of Latin-Americans are to Dickens's misguided criticisms, half a century ago, of us. "The South American has a racial right to look at such customs differently. But if some of his personal habits are unpleasant, and even disgusting from our point of view, there is no question that we irritate him as much as he does us." In the pages from which this quotation is taken, the author has specified, without making any direct applications himself, the precise reasons for much of our commercial failure in Latin-America, for much of the antagonism to Americanization in Cuba and the Philippines, and for the disastrously frequent recall of our government officials in Porto Rico.

For the sociologist and the educator, "Across South America" is full of useful hints. Charles Reade's description of the dungeon for solitary confinement may be compared with this unemotional account of the jail at La Paz, Bolivia: "For our satisfaction, the jailer unlocked the door of one cell, six feet high, three feet wide, and eighteen *inches* deep. As the door opened, the occupant of the cell tumbled out onto the floor." Concerning some of the educational conditions in South America, nothing much more favorable can be said. "Near-by is the 'University' (of Potosí) where second-rate secondary instruction is given to poor little boys who sit on damp adobe seats in badly-lighted, foul-smelling rooms." Though this state of affairs is not exceptional, it must not be taken as typical. Education in the Argentine Republic, Bolivia, and other South American countries has recently taken a great stride forward. To our credit be it said, American teachers are in demand.

In spite of trolley-cars, moving-picture shows, and cocktails, the romance of South America persists. Revolutions still occur. The waters of Lake Titicaca are so cold that "none of the Indians who live on its banks and navigate their crazy *balsas* over its surface have ever learned to swim." A cataract is mentioned which has a "clear fall of over one thousand feet." At the banquet given to Professor Bingham and his companion at Andahuaylas, "'ice cream,' made of snow brought from the Nevada of Chillihua on the backs of llamas, was on the menu." To appreciate the grandeur of the South American mountains, one should read the chapters devoted to the Climb to Choqquequirau.

That the work has serious defects, even for a book of travel, cannot be denied. Grammatical errors are not infrequent: the construction is at times loose, and the massing of details might have been accomplished with much better effect. Portions of the story are rather naïve. The propriety of speaking of *Bolivianos* and *Argentinos* may be questioned. Such forms, when used by Americans, connote a certain amount of depreciation. A few proper names show affected spelling. For example, Dawson's "The South American Republics"—a

Digitized by Google

standard work—gives *Olañeta*, whereas Professor Bingham has *Ollaneta;* Dawson has *Vilapugio*, and Professor Bingham uses *Vilcapujio*.

Minutes of the Executive Council of the Province of New York: Administration of Francis Lovelace, 1668-1673. Vols. I and II. Minutes and Collateral and Illustrative Documents. Edited by Victor Hugo Paltsits, State Historian. Published by the State of New York.

New York was the only one of the colonies of the seventeenth century that did not have at the outset a representative assembly. The charter to the Duke of York was the only charter that did not provide for the coöperation of the popular element in legislation. Consequently for nearly twenty years after 1664 the affairs of the province were administered by the executive alone; and as the gathering of an assembly under Dongan in 1683 proved to be abortive, it was not until 1691 that the New York system conformed to that of the other colonies.

The minutes of the Governor and council begin with the administration of Francis Lovelace, 1668-1673. Nicolls, the first Governor, had an advisory council during his period of office, but no minutes for that period exist, and there is no evidence to show that any were kept. The essential features of Nicolls's executive control must be gathered from the miscellaneous entries and documents of the time and from the records of the Court of Assizes, which performed functions similar to those noted in the later council minutes. Even for Lovelace's administration the minutes are frequently very meagre and the allusions often obscure, so that the inclusion of elaborate annotations and a large number of illustrative and supplemental documents is necessary in order to elucidate the text.

The records and documents which Mr. Paltsits has printed concern the history of New York at a very early period. Besides the city of Manhattan, the village of New Harlem, the passage of "Spiting Devill," and the lands of the "Youncker," Van der Donck, beyond, the province included Staten Island, Bedloe's Island, the Dutch towns of Esopus, Hurley, and Marbletown, the northern settlements of Albany, "Renslaer-Wijck," and "Schanechtide," the Westchester manors, the Dutch towns at the western end of Long Island, the New England towns farther to the eastward, and the islands of Martha's Vineyard and Nantucket, and also Newcastle on the west bank of the Delaware. All these territories the council governed with a firm hand, issuing licenses, proclamations, instructions to subordinate commissions, granting land and settling disputes about possession, controlling military affairs, dealing with the Indians, and determining the relations with the Dutch inhabitants. Its powers were regal, and, except for the regulation of certain prudential matters, the towns had but little independence. The Dutch made no protest, but we may not wonder that the New England towns frequently objected to so vigorous a control, unlike that to which they had been accustomed before the advent of the English in New York. No collection of documents hitherto printed has shown so clearly the extent of the powers exercised by the executive authority in New York, or has so amply demonstrated that these powers were wielded without prejudice and with considerable liberality.

Mr. Paltsits had planned to continue his work by the issue in the same manner of the succeeding minutes. From 1673 the series was fairly continuous, barring a few gaps, and from 1691, when the council became a legislative as well as an executive body, both legislative and executive minutes and collateral documents existed to 1776. He proposed to collate the text with the different sets of manuscripts in this country and in London and to add such supplemental material as was necessary. He believed, as he says in his preface, that the State of New York could not have done itself greater honor "than to encourage the persistent prosecution of a work so important for students and so desirable to rehabilitate her administrative history during the entire English colonial period."

But the fire of March 29 brought this scheme to an untimely end. Ninety per cent. of the documents upon which Mr. Paltsits depended in the New York State Library were destroyed. The loss of the council minutes, except for the earlier period, is not irremediable, as duplicates after 1686 exist in London, but the material for collateral reference and for annotations is largely gone. At best a continuation would be a slender stream as compared with the fulness and richness of the present instalment. The student will regret the termination of a series so auspiciously begun, especially because of the thoroughness, care, and accuracy with which the texts here printed have been edited.

The Land of Teck and its Neighborhood. By S. Baring-Gould. New York: John Lane Co. $3.50 net.

This is a work of timely interest, directing the attention of readers to the ancestry of the English Queen and to the little country which has been the seat of her family and the scene of events recorded in the history of the old German Empire. Moreover the book is written in so entertaining a style that it is likely to divert the stream of Coronation visitors away from the beaten track of their conventional German tour to this unexploited spot known to the native as the "Schwäbische" or the "Rauhe Alb."

The Dukes of Teck lorded over most of the castles crowning the rugged crags of the "Rauhe Alb" and frowning down upon possible foes. "In the Middle Ages," says the author, "not even a bishop, if slapped on one cheek, turned the other to his adversary, but doubled his fist and hit back again." The passage refers to a militant prelate of the family, but there is reason to believe that all of its members shared the fighting spirit of their time. The first historical ancestor was a Berthold von Zähringen, of the family of that name that owned possessions in Switzerland and Baden. But in the fourteenth century his descendants were forced to divide their inheritance, one taking one-half of the castle of Teck and one-half of the town of Kirchheim, his heirs in turn selling their share to the Duke of Austria, who pawned it to the Duke of Würtemberg. "Conceive a castle with commanders in it pertaining to two powers and a town divided between two potentates," is the comment of the author. In 1391, Frederick IV disposed of his share of Teck and Kirchheim to the possessor of the other half, and two years later pawned the rest of his possessions to the Duke of Würtemberg. When the last of the ancient Dukes of Teck died of the plague at Basle in 1439, his coat of arms was broken over his body. But his sister had married into the Swabian ducal house, and in 1493 the Emperor Maximilian accorded the title and arms of the Dukes of Teck to the Duke of Würtemberg already in possession of the land of Teck. The author follows the career of the various branches of the family through the romance of the Middle Ages, the social and religious upheavals of the period of the Reformation, the Napoleonic disturbances, and the dismemberment of the old German Empire to the present time; and an interesting chapter of European history it proves to be.

By grouping his chronicles of the Teck family about the places more or less intimately connected with it, the author has cleverly relieved his book of a monotony inevitable in a continuous record of the kind. His sense of humor interlards the serious historical narrative with amusing episodes of a legendary or anecdotal character. The introduction of the people of Gutenberg to the potato, the original story of the fiddler of Gmünd, conventionalized in the poem by Kerner, the tale of the midnight dance in the convent of Kirchheim, and many other *intermezzi* are highly enjoyable. His knowledge of popular tales and superstitions is amazing. The story of Hohenzollern, with its detailed account of the famous White Lady, shows the noted folklorist in his favorite occupation of threading the labyrinth of legendary beliefs. A reference

Digitized by Google

to the Swabian poet Schubart is open to discussion. The author says, on page 187, that Schubart was imprisoned on the Hohenasperg for having published the statement that Maria Theresa had had a paralytic stroke. German histories of literature make his offence a malicious doggerel aimed at Duke Karl of Würtemberg, the founder of the Karlsschule which figures largely in the lives of Schiller and is the scene of Heinrich Laube's play, "Die Karlsschüler."

Notes

The Century Co. has in preparation, for issue in the early autumn, a new and revised edition of the Century Dictionary, Cyclopedia and Atlas, on which editors and publishers have been engaged for more than three years. The new edition will contain a number of additional features, including insets of illustrations, many of them in color, and the Atlas and Cyclopedia of Names will contain the figures of the United States census of 1910.

Mrs. Humphry Ward has returned in her new book, entitled "The Case of Richard Meynell," which will be issued by Doubleday, Page & Co., to the characters of "Robert Elsmere."

The same house announces "Joey the Dreamer," by Henry Oyen, and "The Taming of John Blunt," by Alfred Ollivant.

The Putnams are about to issue "The Truth of Religion," by Rudolf Eucken, and, for the Cambridge University Press: Vol. I of "The Philosophical Works of Descartes," translated by Elizabeth S. Haldane; "The Book of Exodus," with introduction and notes by the Rev. S. R. Driver; "The Book of Numbers," edited by A. H. McNeile, D.D.; "The General Epistle of James," and "The Epistle of Paul the Apostle to the Hebrews," edited by Arthur Carr, and "Third Reading Book of Elementary Arabic," prepared by Reynold A. Nicholson.

The Manchester University Press publishes a facsimile in two volumes of the Ellesmere Chaucer.

Fragments of the "Meliambi," of the cynic Cercidas, pieces of an unidentified satyric drama, and some Homeric scholia are included in part viii of the "Oxyrhynchus Papyri," which is just coming out.

In the list of coronation honors we note that Sidney Lee and Prof. Walter Raleigh are made knights.

An attempt is made by Professor Dove of Berlin in *Petermann's Mitteilungen* for May to awaken an interest in what he terms medicinal geography, which he bases on the significance of the geographical elements for the various functions of the human body. Other subjects treated are the recent French expedition for the study of the commercial and scientific conditions of the native fisheries on the west coast of Africa, and the exploration of the Celebes by an expedition sent by the Royal Geographical Society of the Netherlands. The larger part of the military section is taken up with a discussion by Capt. Moraht of the condition of the United States in the Pacific, especially in relation to the Panama Canal and the revolution in Mexico. He emphasises the weak position of this country from its lack of harbors in comparison with that of Japan, which is rich in them. The chief significance of the canal is maintained to be military, its commercial importance having been greatly exaggerated. No reference is made to the influence of the canal upon the commerce of the Pacific States of South America. Among the maps are one of Magdalena Bay and an excellent one of the new boundary settled by treaty last August between the Congo State and German East Africa.

The title of H. Belloc's latest neat little volume of essays is "On Something" (Dutton). We have perused it carefully in order to discover on what; and we recommend the curious reader to do likewise.

Since Mrs. T. P. O'Connor, as the wife of a famous Parliamentary wit, has known familiarly many of the most interesting Englishmen of our day, one opens her autobiography, "I Myself," recently published by Brentano's, with whetted expectations. As a matter of fact, except for recollections of a Southern girlhood and some vivid intimations of Parnell's personality, there is not much to be got out of the book. It is mildly entertaining, but the author's amiability completely levels out necessary distinctions. Everybody is a dear fellow or a dear woman as the case may be; one longs for an unkind illuminating phrase and it never comes. Naturally, the book preserves some good anecdotes, of which one concerning John Bright is characteristic. He was being entertained by a snobbish hostess, the wife of a fellow M. P. She planned a direct snub for her guest, saying during a pause in the talk:

"Mr. Bright, this rug, I understand, was made by you, and I am very dissatisfied with it. I have only had it a short time and it is very shabby and badly made."

"Is it?" said Mr. Bright, getting up deliberately from the table and taking a silver candelabrum which he put down upon the floor, and, getting on his knees, closely examined the carpet. "You are quite right," he said, blithely getting up. "It is a bad carpet, and I will order my firm to send you another in its place," and then he calmly resumed his political conversation and the dinner went on.

Perhaps the pleasantest part of the book is the account of gay doings in Texas and Washington just after the war. Within twenty-four hours the author, then Miss Paschal, danced three cotillions, of which two were achieved in Annapolis and the third in Washington. This should be set down to the credit of a vanishing species—the American girl.

"Cities of Southern Italy," by Augustus J. C. Hare, is offered by Dutton in a new edition revised by St. Clair Baddeley. The considerable literary merits and general good sense of this handbook need no emphasis. For the traveller who cannot use the elaborate German guides this is on the whole the best in the field, but as compared with Baedeker's handbooks it is deficient in material information, and far from up to date. The frescoes in Sta. Maria Donna Regina, Naples, have lately been identified as works of Pietro Cavallini. They are the most important fourteenth-century paintings south of Rome. Since the installation of the funicular at Capri the donkey is no more a necessity. The beggars have ceased to be importunate about Amalfi. The delectable possibilities of a stay at Ravello and the excellence of its inns should have been mentioned, and also the really thrilling excursion to the mountain hamlet of Agerola. Such venial defects do not greatly lessen the value of this book with its wealth of historical and classical allusion. It belongs in the pocket that does not contain the Baedeker or Gsell-Fels. In another edition the numerous Latin quotations should be accompanied by translations.

E. A. Brayley Hodgetts, the author of "The House of Hohenzollern: Two Centuries of Berlin Court Life" (Dutton), may be credited with a sincere desire to contribute something toward cementing the friendship of England and Germany. He was born in Berlin, where his father "was engaged in teaching the young Prussian naval cadet seamanship"; is old enough to have had "his cheeks pinched by the famous Field-Marshal von Wrangel"; and in the pursuit of business in London since then has found time to read, not too discriminatingly, some historical books, biographies, and memoirs, from which he has extracted the substance of his volume of gossip about what he terms "the social history of Prussia." Serious writers, like Carlyle, Droysen, and Treitschke, as well as the spiteful Margravine Wilhelmina of Bayreuth, the lying Pöllnitz, and, to come down to more recent times, the more or less sensational actress and autobiographer Karoline Bauer, and the amusing Louis Schneider, court-reader of King Frederick William IV and Emperor William—all these are fish for the author's net. But his philosophy of life is all his own, though we can imagine many a typical clubman, over his cigar and after-dinner cup of coffee, delivering himself to his languid companions of some such wisdom as the following:

The King [Frederick William I] frequently discovered the harmless duplicity practised against him, and generally, with few exceptions, treated his family very much as the German paterfamilias treats them to-day; indeed, there is but little difference in nationalities. In all countries the wife and family consider the master of the house as their slave and their enemy, an inhuman master who supplies them with the wherewithal to provide their needs, who has to be humored and fed, but should never be trusted or confided in, or even shown any real affection.

An opportunity for Americans to learn at first-hand what one of the recently immigrating races thinks of them is furnished by a little book known as the "Greek-American Guide" (S. G. Canoutas). This is published annually. Its purpose is to give Greek immigrants, actual and prospective, such information in regard to life in the United States as will fit them for successful residence here, and to serve as a means of promoting a better understanding and coöperation between these newcomers and the older residents of the country. It is published mainly in the modern Greek language, though there are short articles in English on the Greeks in the United States and the Greek Kingdom. Probably the part which will most interest the ordinary American reader is the chapter on American life. Many of the comments are decidedly naïve, but at the same time penetrating, as the following typical passages will show. The description of the American saloons closes with these words: "In each saloon there is a special room with a separate entrance for women (Ladies' Entrance). But the females going into these establishments are ordi-

Digitized by Google

narily anything but ladies." Inasmuch as so large a proportion of the Greeks in this country go into the candy business the paragraph on candy kitchens is of especial interest. "In no other part of the world are so many sweets consumed as in America. In all the cities and villages candy kitchens abound. . . . The great abuse of sweets which Americans, and above all American women, practise, occasions the destruction of the teeth. Accordingly dentists abound, and make more money than the confectioners. You will hardly find an American man or woman without 'gold teeth.' 'Gold teeth' are the fashion in America." The book on the whole is carefully and conscientiously compiled, and ought to be of real service in accomplishing its purpose. That it is in no sense designed to encourage immigration may be inferred from the paragraph entitled "What do the immigrants gain?" After admitting that there are a few of the older immigrants who, after years of hard labor, have succeeded in obtaining a competence, the writer concludes, "But they are few, and the whole must not be judged by a small part. The newer immigrants, with a few exceptions, gain nothing at all, or at most gain very little, and that by severe economy and excessive labor." The American reader who is versed in classic Greek will have no great difficulty in reading the book, particularly if he has at hand a modern Greek dictionary.

The third volume of the "Sacred Books of the Buddhists" (Henry Frowde, Oxford University Press) contains the second part of the "Dialogues of the Buddha" (from the "Dîgha Nikâya"), translated by T. W. and C. A. F. Rhys Davids, Prof. Rhys Davids being ably seconded in his work by Mrs. Rhys Davids, who is his colleague as "special lecturer in philosophy." No indication is given as to the amount of work done by each of the translators. The preceding volume contained a few more dialogues than the present one, which includes the "Suttantas" numbered fourteen to twenty-three. The translators' brief introduction to each dialogue is historically valuable. The most important one is, perhaps, that prefixed to the "Book of the Great Decease," where it is shown that the Vinaya may not have borrowed from the Dîgha, and that details about the first Church Council given in the Vinaya cannot be trusted; though it does not follow that the council is an historical figment. Mythologically important also is the attempt to prove that Sakka is not Indra, that they are "quite different conceptions" (p. 297). The present reviewer regards this theory as exaggerated rather than incorrect; perhaps it would have been stated better without the "quite." One charm of the dialogues of the Buddha is that they are readable, always instructive, often amusing, and this charm is preserved in the translation. To touch Buddhism before it became the hybrid system Christians find so interesting (because the system has borrowed much and developed into something like Christianity), to go back to what Buddha said and thought, leaving out the farrago of later schoolmen, one should read the Dialogues. It is like studying Christianity in Kant to study Buddhism in the lucubrations of the idealists who make what is called "Buddhism" to-day, only it is far worse; for Buddha as "God" and man with "soul" are without any place in primitive Buddhism. It is, of course, "interesting" to see modern Buddhism approach the conceptions of Christian metaphysicians; and it is quite touching to find man's "soul" and even a "trinity" in Buddhism; but those who study Buddhism should start with Buddha and his talks, as those who study Christianity begin with the New Testament.

The second English edition of "Gesenius's Hebrew Grammar" (Frowde) is translated by A. E. Cowley and revised after the twenty-eighth German edition. This last German edition is in several respects an advance on its predecessors: the history of the language is brought up to date, obsolete references are omitted, and references to better authorities added, and a considerable number of remarks and corrections are inserted, suggested by criticisms of the preceding edition or by recently published works. Though these changes are not all certainly justifiable, they are in the main an improvement. The new English edition adds other remarks and improves the indexes. Gesenius's Grammar has a notable history. It is now nearly a hundred years since the first edition appeared (1813), and in this time the volume has been worked over by several generations of scholars, so that as a text-book it may be said to be virtually complete. It does not pretend to be an historical grammar, nor does it take the place of the works of Böttcher, Olshausen, Stade, Bartn, König, and others; but its convenient arrangement and its wealth of illustrative passages make it the best help in the study of our Masoretic Hebrew text. The new English edition, though it contains more matter than the first edition, is kept, by closer printing, within the same number of pages.

Svenska Vitterhetssamfundet, which was founded in 1907 for the purpose of issuing the works of Swedish standard authors in "scientifically satisfactory editions," has brought out two numbers, or parts: a portion of *Then Swänska Argus*, a periodical issued during the years 1732-1734 by Olof von Dalin, and patterned on Addison's *Spectator;* and a portion of K. G. af Leopold's collected works, containing odes, cantatas, and didactic poems. It is planned that two or three parts shall be issued every year; the text to be constructed by a comparative study of existing variants and to be accompanied by notes and introductions. The two parts so far issued contain only the texts; the typography is excellent.

Prof. Felix Solmsen, who was killed recently by falling from a train, had been professor of Indo-Germanic languages at Bonn since 1897, and was but forty-five years of age. He wrote "Inscriptiones Græcæ Selectæ," and "Beiträge zur griechischen Wortforschung."

Gen. Clement Anselm Evans, formerly commander-in-chief of the United Confederate Veterans, died last Sunday at his home in Atlanta, Ga., aged seventy-eight. He took part in many of the most famous battles of the civil war, and was a close friend of Stonewall Jackson and Lee. After the war he entered the ministry of the Methodist Episcopal Church. He was the author of "The Military History of Georgia," and edited "Confederate Military History," in twelve volumes.

Science

Essentials of Biology. By George William Hunter. New York: American Book Co. $1.25.

Laboratory Manual in Biology. By Richard W. Sharpe. The same. 75 cents.

Our older readers understand by the term biology that science which treats of the general features common to plant and animal life, and they are aware that its principles are inculcated by a study of types carefully selected from the two kingdoms. But perhaps such readers do not know that under the stress of modern pedagogy, the term biology has taken on a much greater range, and now receives within its hospitable borders such subjects as "foods and dietaries," "health and disease," and "civic hygiene."

This extension of range, whether judicious or not, has proceeded very naturally, on account of certain conditions in our modern schools. In the first place, it is not always easy to procure teachers of sufficiently wide training to give sound instruction in biological methods, and, secondly, in our cities it is difficult sometimes to obtain the right sort of material for illustration. These embarrassments have led to the preparation of handbooks in which the task of teaching is made easier for the instructor, and the lack of material is practically met by giving greater emphasis to function and habit, and rather less to form and structure. Logically, such a process of adaptation ends by crowding a great mass of information into a small compass. As a rule, the handbooks are well-constructed compilations which are not likely to lead any student far astray, but they contain so much matter and endeavor to cover so much ground that they have departed widely from the sound method of studying a few types. The books before us, which have been prepared by colleagues in the De Witt Clinton High School, New York city, are of this sort. They have evidently received in their preparation a great amount of assiduous editorial care. But they impress one as being altogether too encyclopedic. They strive to give instruction in the general principles of biology, and then to supplement this instruction by an immense mass of information on a too wide range of topics. The subject is biology and applied biology, and the latter topic is made to touch or comprise a good deal which one does not look for in a school textbook. We may cite a few of these subjects which struck us with surprise: "A Study of Some Medical Frauds," among which are mentioned the "bracers," "headache and neuralgia cures," "catarrh and other cures," "miracle workers," "specialist humbugs," "scavengers." Again, we find a good deal about the important agency of

Digitized by Google

insects in infection, the hookworm and its ravages, "sweeping and dusting," "health creeds." Most of the engravings, with the exception of the diagrams, are excellent. Many of the diagrams, however, are not in keeping with the general typographical character.

Drama and Music

"The Treason and Death of Benedict Arnold" (Moffat, Yard & Co.) is described by the author, John Jay Chapman, as a play for a Greek theatre. He possibly recognizes the truth that, for technical and other reasons, it is most unlikely to find representation upon the English-speaking stage. As a matter of fact, except for its introduction of a chorus and its fatalistic tone, it has little of the antique either in its form or spirit. For the theatre, indeed, even with the orchestral accompaniment for which it is partly designed, it is entirely unfitted by its mystical and fantastic character, its lack of action, and, except in the closing passages, of human interest. On the purely literary side it is a work of considerable imagination and power, although of very unequal quality. The scheme of it is ingenious and original. The scene is an angle of the river at West Point, where Father Hudson, a most unsophisticated river-god, who has learned nothing through the ages of the ways of white men, witnesses on the shore below him the inception of the treason of Benedict Arnold. In his perturbation he summons the spirits of his clouds and waters, and these, acting as a chorus, instruct and exhort him—concerning the inevitability of fate, the virtue of pain, and the wisdom of patience and resignation—as the skeleton drama proceeds at his feet. By the aid of mystical invocations, he is enabled to watch the struggle between the spirit of Treason and the soul of the embittered Arnold, to see the latter elated by the hope of success, wrecked in failure, and, twenty years later, dying, broken-hearted and repentant. The play is nothing and the plea, if it be intended as a plea, in extenuation of Arnold's crime and folly, can avail little; but the contending passions in the breast of the fallen patriot and warrior are described with notable vigor and insight, while the closing scene in which Arnold, with a moral vision clarified by imminent death, brushes aside the loving sophistries of his wife, and mournfully insists upon the one damning fact of his treachery, is written with dignity and pathos. His donning of his old American uniform to die in, with the faint hope that it may conciliate the shade of Washington in the dark beyond, is a felicitous touch. The piece is written partly in blank pentameter verse, partly in a variety of shorter metres, and partly in prose, some of which is colloquial and some noble, especially the sentences allotted to the choruses, which are almost biblical in their sonority and pithy simplicity. There are true poetic fancy and feeling in some of the natural imagery. It is a pity that the ability displayed in the work was not employed to more practical purpose.

James K. Hackett will be seen next season in a dramatization by Louis Evans Shipman of David Graham Phillips's last story, "The Grain of Dust." Later in the season he will produce dramatizations of Arthur B. Reeves's "Craig Kennedy," George Graham Rice's "My Adventures with Your Money," and Charles Belmont Davis's "The Octopus."

William Faversham has procured two new plays for next season. One of them is by Edward Knoblauch, author of "The Faun," and the other is by Edward Sheldon.

The new piece produced last week at the Haymarket Theatre, London, is acknowledged by Herbert Trench to be an early Sardou. It remains for the diligent and curious student to discover the original, a task which, in the case of so well known an author, should present few difficulties. The adaptation bore the title of "In the Balance," a name in every respect much superior to "The Last Tryst," originally chosen. The "clou" of the story is a murder supposed to have been committed prior to the rising of the curtain, and the great scène-à-faire is the cross-examination in the last act of the witnesses in the judge's room adjoining the court, when the truth comes out, and the supposed criminal is proved to be an innocent man. In the rôle of the heroine, who, although cognizant of the identity of the real culprit, is forced to maintain silence on the subject, Alexandra Carlisle had an unusually powerful part.

George Alexander has just acquired the rights in Paul Bourget's powerful play, "Le Tribun," originally produced at the Paris Vaudeville three months ago. In the principal part Lucien Guitry achieved a brilliant success. Portal is a man of immense force of character, who has made his way to the top of the tree by sheer strength and ability. At a critical moment in his career he discovers that he has been betrayed by his son at the instigation of a worthless woman with whom the youth is passionately in love. Rarely has a situation more poignant or more strenuous been met with on the modern stage than that which springs from the meeting of father and son after the truth has been made known to the former. In this instance Bourget took for his motto, "L'Unité sociale est la famille et non l'individu," and it is upon that principle that Portal acts throughout. The translation of the piece is to be made by Morton Fullerton, Paris correspondent of the *Times*, who, very prudently, has determined to keep the action in France.

"Dombey and Son," the first play in the Dickens Centenary Festival, was not liked by the London critics.

English critics are enthusiastic over the performances of the Irish players at the Court Theatre, in London. Says one:

Here we find no pandering to conventional sentiment, no repetition of stock types and hackneyed situations, no monotonous insistence on one aspect of sex or one section of society. The authors of these works have no class preferences; they do not confine themselves to the theme of love; they contrive somehow to suggest "atmosphere," whether their scenes are laid in mean streets or country villages; they secure idiosyncrasy for their characters, whatever their rank in life, so that to hear them talk is to know them as individuals; they get hold of live subjects, and work out their ideas on dramatic lines that are logical and sincere. Moreover, in each case the playwright's name is new to London, just as the topic he handles is fresh and of immediate significance.

Coronation honors included a knighthood for George Alexander.

The Philharmonic Orchestra, which was founded in 1842 and has had for conductors, among others, Theodore Thomas, Anton Seidl, Wassily Safonoff, and Gustav Mahler, will give, besides the usual entertainments in New York city and Brooklyn, a series of twenty-five concerts in other cities during the coming season. The concert-master will be Henry P. Schmitt. A concert-master is not simply the leader of the violins; he must also be able, in case of the conductor's illness, to take his place, as Spiering did in the case of Mahler last season. Mr. Schmitt, who is a native of New York city, has had ample experience in this direction. For two years, while he was in Leipzig, he had opportunity to study the ways of Brahms, Rubinstein, Tchaikovsky, Max Bruch, Strauss, and Nikisch, by playing under them. On his return to the United States he was engaged by Anton Seidl both for the Metropolitan Opera House and the Seidl Orchestra. In 1892 he was appointed assistant conductor, and in 1894 concert-master, positions held until Seidl's death, in 1898. After Seidl's death he conducted the Seidl Orchestra's concerts for two years, both in town and on tours. Subsequently he served as concert-master under Paur and other conductors. For a score of years he has been a prominent member of the Philharmonic, and next season he will also appear as one of its soloists.

For the third season of home-made grand opera in Boston, Mr. Russell is preparing to give his patrons more variety and novelty than they have had heretofore. There will be some Wagner operas, in which Lillian Nordica will appear, with Weingartner as conductor. France will contribute not only "Pelléas et Mélisande," "Samson et Dalila," and "The Tales of Hoffmann," but some new works by Aubert and Laparra. Aubert's opera, entitled "Forêt bleue," is an attempt to treat musically a French fairy tale as Humperdinck treated German fairy tales in "Hänsel and Gretel" and "Königskinder," which latter opera is also promised by Mr. Russell. Laparra, who has been repeatedly in America, will come over to conduct performances of his opera, "La Habanera." Among the baritones to be heard with the Boston company are Renaud, Amato, and Scotti.

The Cincinnati Conservatory of Music has greatly strengthened its faculty by adding to it Edgar Stillman Kelley. He will take charge of the theoretical department, conducting classes in theory, counterpoint, fugue, musical analysis, and composition, and in all this work will have the assistance of Mrs. Kelley, who has collaborated with her husband for years. Mr. Kelley holds a composition fellowship at Western College, Oxford, O. Among his best-known compositions are the incidental music to "Ben Hur," the opera "Puritania," the Chinese Suite, and some songs. During the last few years he has written in Berlin several pieces of chamber music which were warmly praised by the German critics.

The State of Missouri offers a prize of $500 for the best musical setting of a poem on that State written by Mrs. Lizzie Chambers Hull, who got the same sum for it. The poem and directions to competitors

Digitized by Google

may be obtained of Prof. W. H. Pommer, University of Missouri, Columbia, Mo.

Berliners were expected during the past season to patronize the enormous number of 1,093 concerts and above 800 operatic performances at three houses. The greatest number of concerts (205) occurred in November. On some days there were ten and even twelve concerts. Singers gave 328 recitals; pianists, 240; orchestras, 173; violinists, 64. Among the conductors who gave orchestral concerts there were 17 from other cities. Chamber music was represented by 125 trio and quartet concerts. Vienna had only 439 concerts last season, and Munich had 374.

Felix Mottl, director of the Royal Opera at Munich, died suddenly in that city on Sunday, at the age of fifty-four. He was born at Unter St. Veit, near Vienna. As a boy his rich soprano voice admitted him to the preparatory school of the Imperial Court Chapel. Later he entered the Vienna Conservatory and won its most distinguished prizes. He first attracted general notice as the conductor of the Richard Wagner Verein of the same city. In 1876 at the Bayreuth Festival performances of Wagner's "Ring" he was stage conductor. In 1881 he became conductor of the Ducal Opera House at Karlsruhe, holding that post until 1903. He visited this country and here directed "Parsifal" and other German works. He was the author of the operas: "Agnes Bernauer," "Ramin," "Fürst und Sänger," "Eberstein," and "Pan im Busch"; of a string quartet, and of many songs.

Art

G. Griffin Lewis's new work on Oriental rugs will be issued by Lippincott in the early autumn.

The fifth and sixth volumes of the "Allgemeines Lexikon der Bildenden Künstler" are promised by Dr. Thieme for this year. The fifth volume, which will extend from "Brewer" to "Carlingen," is far advanced.

A summer session of the School of American Archæology will be held in Santa Fé and at the ruins of Pajarito Park, near by, from August 1 to 25 inclusive, at which lectures will be given by the regular staff of the school on the distribution and culture of the peoples in the southwestern part of the United States and northern Mexico in pre-Spanish times; on the development of design in ancient Pueblo art; on the Indian cultures of the Southwest, and on the native languages and methods of recording and studying them. In connection with these courses there will be excursions to such important sites as Pecos, Puye, and Tyuonyi, where lectures will be given at the ruins, and to neighboring Indian Pueblos for lectures and observations on the houses, house life, industries, social organization, ceremonies, and environmental conditions of the Indians of Rio Grande valley.

"Sacred Symbols in Art" (Putnam), by Elizabeth E. Goldsmith is convenient in form and arrangement, has fifty-three illustrations, alphabetical lists of saints and symbols, a variorum of picture titles in five languages, and will nicely meet the needs of the average art-loving tourist. It has the usual defects of such compilations. For a second edition certain suggestions may be made. In the chapter on the Holy Virgin, the familiar subject The Virgin with St. Anne is not mentioned. The important term, a Majesty, is not defined. The treatment of the immaculate conception is defective, and the interesting fifteenth century type represented by a fine Francia at Lucca is ignored. The Virgin of Pity, covering believers with her mantle, is not noted under that heading. More serious omission, the metaphors from the Song of Songs, "inclosed garden, sealed fountain, rose of Sharon, tower of David," etc., which were so fruitful of symbolism concerning the Virgin, will be sought in vain. The definition of a Sacra Conversazione, on page 133, is misleading. Under the symbolism of Christ the eucharistic significance of the early Christian fish symbol should have been noted, also the probable reason for the number of the Magi. In spite of these slips, the book is sensibly conceived and will be useful.

In the *Illustrated London News* for June 3, D. G. Hogarth has given an interesting report of the discoveries made at Boghaz-Keui, in North Cappadocia, which has now been definitely identified as the capital of the ancient empire of the Hittites. As is well known, the Hittites have been a subject of dispute with archæologists ever since the middle of the last century, when the decipherment of hieroglyphic and cuneiform records revealed the fact that these people had once filled an important place in West Asian history. Their responsibility for the series of monuments discovered during the last forty years all over North Syria and Asia Minor, as well as in North Cappadocia, which was first proposed by Professor Sayce, was questiined by others. It was argued that this presupposed a great Hittite empire, which, if it had existed, could not have been forgotten by history. The existence of this empire has now been proved by the excavations carried on under the direction of Hugo Winckler. Ruins of a large palace, or rather two palaces of different periods, one built over the other, were unearthed, and remains were found of royal archives, written in cuneiform script, partly in the Babylonian, partly in an unknown language. The first kind was easily deciphered, but the other is only gradually surrendering its secret. From the tablets thus far read it is now known that this great empire of the Hittites, or Hatti, as they call themselves, had its home in Cappadocia, and gradually grew by conquest to large proportions. The first expansion seems to have been as early as about 1800 B. C., when the Hatti raided Babylon and upset what is called its First Dynasty. But their career of organized conquest did not begin till nearly three centuries later, when King Subbilulu, whom the Egyptians called Sapararu, came to the throne. When he died in the time of Amenophis IV of Egypt, he was over-lord of West Asia, from the Black Sea to the Orontes and from the Tigris to the Ægean. Under the reign of Mutallu came an encounter with Egypt. A battle was fought between him and Rameses II at Kadesh, immortalized for us by the narrative of a court poet on a wall at Karnak. Rameses seems to have prevailed so far that he stopped any further advance of the Hatti toward his own borders; but he recognized in them a power equal to his own. Altogether, we now know of eight Hittite kings. About 1250 B. C., the empire began to lose power. The Syrian possessions were finally broken up in the eighth century by Assyria, whose pressure, together with that of the Northern Muski, was probably also responsible for the dwindling of the remaining parts of the empire. When the Greeks, the chief transmitters of ancient history, came to the coasts of Asia Minor, the Hittites had already completely fallen into the background. Further excavations on the site of Boghaz-Keui are to be carried on as soon as Dr. Winckler recovers from the serious illness which has prevented his return to work since 1907.

The deaths are announced of three French artists, Gustave Delhumeau, a portrait painter; Madame MacNab, widow of Alexandre MacNab, and Maurice Lefebvre, sculptor and son of Jules Lefebvre.

We note the death of the historical painter, Prof. Hermann Schaper, aged fifty-seven, who is remembered for his work in the town halls of Hanover and Göttingen, and elsewhere.

Paul de Longpré, the famous painter of flowers, died at his home in Hollywood, Cal., just a week ago. He was born in Lyons, France, in 1855. He was brought up in Paris, and as a child showed talent as a painter of flowers on fans. In 1876, for the first time, a picture of his was exhibited in the Salon. What money he had he lost by the failure of a Paris bank, and he came to New York in 1890, hoping to recover his fortunes. In 1896 he held his first exhibition of flower paintings in this country at the American Art Galleries, and held similar annual exhibitions up to a year ago. In 1899 he removed to Los Angeles, and in 1901 built a residence at Hollywood, Los Angeles County, surrounded by three acres of flower gardens.

Finance

THE TAMMANY BILLS ON BANKING.

The bill proposed in the State Senate last week by the somewhat notorious "Tom" Grady, Tammany member from this city, and attacking the New York Clearing House's special requirements of reserve from member institutions, amends the banking law by providing that no State banking institution shall be a member of any organization requiring it "to conform its management or business to any requirement not specified and embraced in this chapter." In "that chapter" is now contained Grady's recent law allowing State banks and trust companies to keep their reserve in State or city bonds instead of cash.

This latest of the so-called "Grady bills" is the immediate outcome of a special report on the Clearing House by the new State Superintendent of Banking, called for by previous resolution of Grady, and submitted last week to the Legislature. The resolution in question was the sequel to a silly and mischiev-

Digitized by Google

ous bill, proposed by the same individual, passed by the Legislature, and signed by the Governor, which provided that State banks and trust companies might dispense with cash reserves against all demand deposits which were secured by pledge of New York State or city bonds. That law, had the banking institutions availed themselves of it, would have been distinctly dangerous, because it contravened almost all the purposes for which bank reserves are established.

Bonds of the sort cannot be used to meet a run of depositors, cannot be employed at a time of panic to procure cash instantaneously, and provide a wholly untrustworthy safeguard against over-expansion of credit. The bill was commonly supposed to have been inspired by Wall Street firms with New York city bonds to sell, who would naturally have welcomed an artificial demand. Be this as it may, it was at once discovered that banking institutions had no idea of availing themselves of the opportunity. In New York city, the rule of the Clearing House, which stipulates the cash reserve to be held by member institutions, would of itself have prevented such weakening of the safeguards for depositors. This is apparently why Grady proposed his resolution for the Banking Department to investigate the Clearing House.

Superintendent Van Tuyl's response is scarcely what should have been expected from his office. He expounded the principles of a clearing house, explained its special requirements from members, and admitted that institutions which have acceded to its demand for larger reserves than the State law requires did so voluntarily. But the Superintendent proceeded to indulge in certain criticism which appears to be founded in complete misapprehension. Premising that a "State institution completely solvent by every test of the Banking Department" might be barred from Clearing House membership for refusing to conform to Clearing House stipulations, he concluded that "it would seem clear that we owe some protection" to such institutions—the proof of which is that "the New York Clearing House is the hub of the financial system" and that its members hold "a notable percentage, not only of bank deposits of the State, but of the nation."

Now, the simplest mind must detect the utter futility of this reasoning. It is precisely because the Clearing House is the "hub of the financial system," and precisely because its member institutions hold the ultimate bank reserve fund of the nation, that its stringent rules have been imposed requiring a uniform percentage of cash reserve by members. Mr. Van Tuyl might have served a considerably more useful public purpose had he told the Legislature why these rules were adopted; what the bitter experience was, in generations past, which made their adoption necessary; how they are related to the safeguarding of the public's bank deposit fund, and what happened, only three and a half years ago, to depositors of institutions in Greater New York which did not conform to the Clearing House provisions, but to which, to use Mr. Van Tuyl's own language, the State "in a qualified sense gives a certificate of character by permitting them to continue to do business."

The first response to Grady's pending bill against the Clearing House was a meeting, last Friday, of the State institutions in the Clearing House, at which meeting it was unanimously declared that the measure "would, if it became a law, discourage and destroy the earnest efforts of conservative bankers in this city, more effectively to produce safe and conservative banking conditions in the city of New York and the country at large, and largely to remedy the evils which have in the past resulted in bank failures and consequent loss and ruin to many people."

Such was the somewhat curious situation created by the latest Tammany effort at "banking legislation." But even before this action by the banks, the matter had already begun to resemble a chapter from "Alice in Wonderland," or an act from a Gilbert and Sullivan operetta, rather than an incident of sober legislation. The lawgivers kindly offer to banks the opportunity to dispense with the awkward stipulations of the cash reserve and to use interest-bearing city bonds instead. The banks reply that they do not want the special dispensation.

The lawgivers then discover that the banks are coerced in the matter by the Clearing House, which must be forced to lower its own requirements from members. But the banks rejoin that they heartily approve of those requirements, that they submit to them voluntarily and regard them as indispensable, and they give, to the learned author of what may be called the Bill to Cripple the Clearing House Association, some elementary information as to what such associations have to do. This leaves the action of the piece suspended, except for Senator Grady at the footlights, shaking his fist at the highwaymen of Cedar Street. But even this has just a touch of humor; for, waiving the somewhat amusing aspect of that particular term of reproach on the lips of Grady, the immediate sequel is that the highwaymen's victims publicly insist on retaining their old relations with their oppressors, and explain in detail why.

If this legislative opera bouffe were all that the incident has involved, it might be dismissed as one would dismiss a debate in the Legislature of Hayti or Liberia. Unfortunately, the affair has touched other reputations than those of the author of the "banking bills" and his admiring colleagues. The timid Governor of the State, who signed the bill for dispensing with cash reserves against deposits, has to bear his share in the discredit. The new State banking superintendent, who gravely reported to this Legislature that the Clearing House may cause a run on banks if it makes any special stipulations on membership, and that therefore the State "owes some protection" to institutions which do not see fit to conform to the rules which Clearing House banks impose upon themselves, will have to do some hard work hereafter to retrieve his own reputation for knowledge of banking history or for every-day common sense.

Supposing this Anti-Clearing-House law to pass; what then? The Clearing House might continue its requirements of a 25 per cent. cash reserve from member State banks, and of a 15 per cent. cash reserve and 10 per cent. balance in bank from member trust companies. The seventeen State banks and the seventeen trust companies now in the New York Clearing House would then have to withdraw, leaving the thirty-two national banks alone to enjoy the facilities of clearing checks. But the Clearing House might also conceivably amend its requirements to conform to the law; it did that in 1882, when the silver majority in Congress, angry at the exclusion of silver currency from Clearing House settlements between banks, forbade any national bank to belong to any such institution where silver was thus excluded.

Now the Clearing House had adopted its policy to prevent its exchanges being swamped with the silver of the Bland law. Had it not done so, there was danger of an expulsion of the gold in New York bank vaults, and the consequent forcing of the banks to draw on the Treasury reserve through legal tenders, when gold exports were in progress. Nevertheless, the Clearing House formally rescinded its silver rule. What happened? Absolutely nothing; for every member institution knew that its own interests were at stake, and, therefore, went on using gold and legal tenders for its Clearing House payments as before.

Very possibly the matter may not get thus far in 1911; for Grady's latest bill may fail, or the Governor may pluck up courage enough to listen to somebody but Tammany heelers. Perhaps, also, even Tammany may grow a little doubtful over provoking too much public discussion—first, as to who would be injured by breaking down the safeguards laboriously built up around bank deposits; secondly, as to who has got any personal benefit from this stubborn scheme to force the banks to buy New York city bonds. The second of these considerations contains what is known as "political dynamite" for the next State electoral campaign.

ESSAYS

By the REV. HENRY IGNATIUS DUDLEY RYDER. Edited by FRANCIS BACCHUS, of the Oratory, Birmingham. With a frontispiece. 8vo. pp. xvi+322. $2.50 *net.*

Longmans, Green, & Co. New York

LIBRARY RESEARCH

Researches made in Boston and Harvard Libraries. Ancient and modern languages. Translation, revision of manuscripts, etc.

MISS M. H. BUCKINGHAM,
96 Chestnut Street, Boston, Mass.

AMERICANS: An Impression
By Alexander Francis.

Not too heavy—not too light
Vacation Reading

Max Pemberton's New Novel

WHITE MOTLEY

The art of flying and the art of love; the dreadful hazards of an Alpine flight, and the dangers of a perilous love-affair;—these are the thrilling themes of this dare-devil tale of adventure in the air and on land.

Cloth, 12mo. Frontispiece. $1.30 net.

QUICKSANDS

A NOVEL

By Fannie Heaslip Lea

A novel of fine artistry, presenting a recurring problem—a wife out of love with her husband and deep in love with another. How she contrives to save something of honor and happiness from shipwreck is the theme of this engrossing story.

12mo. Illustrated. $1.30 net.

STURGIS & WALTON CO.
31-33 E. 27th St., New York

THE OPEN COURT PUBLISHING COMPANY

Publishers and Importers of Standard Works of Science, Philosophy and the History of Religion, Ancient and Modern

Founded in 1887 by E. C. Hegeler, for the purpose of establishing religion upon a scientific basis.

The Open Court Publishing Co.
623-633 Wabash Ave. CHICAGO, ILL.

WILLIAM THE SILENT

1533-1584

Prince of Orange, Count of Nassau, in the Revolt of the Netherlands.

By Ruth Putnam, author of "Charles the Bold," "A Mediaeval Princess (Jacqueline of Holland)," etc.

No. 45—Heroes of the Nations.

Cr. 8vo. Illustrated. Cloth, $1.50 *Net. Half Leather,* $1.75 *net.*

Miss Putnam's biography presents William the Silent in his human aspects, with human inconsistencies and shortcomings, as well as the qualities that give him a just claim to rank as a hero.

Send for New Illustrated Catalogue.

The Nation

NEW YORK, THURSDAY, JULY 13, 1911.

The Week

President Taft was well within the truth in his reference to the fur seal treaty signed at Washington last Friday. That England, Russia, Japan, and the United States have at last composed the acute differences that have existed among them upon this subject for forty years is indeed cause for general satisfaction. It not only ends the disgraceful killing of the seals, but, as the President indicates, forecasts the adoption of useful game laws for the open ocean. An especially significant statement is that the treaty would not have been signed upon its own merits, great as these are, but that the diplomats in charge of it felt compelled to bow to the growing sentiment for international arbitration. Be this as it may, the agreement itself is an indication of the rapid advance in this regard in recent years. The treaty seems admirably adapted for the conservation of a fast-disappearing resource. The old common-law limitation of three miles from shore is abolished, and no fur seals are to be killed in the North Pacific Ocean, including the seas of Bering, Okhotsk, Kamtchatka, and Japan. Provision is made for the maintenance of a patrol of the seal waters by representatives of all the nations concerned. The agreement is to hold for fifteen years, and as long thereafter as no one of the Governments denounces it.

The President's promise to urge Congress to establish a complete parcels post is another sign of the eagerness of both parties to placate the farmer. If only the dwellers in the cities and their suburbs were to be thought of, we could pull along as we do at present. The service of the larger city shops runs out through the whole suburban region, and there is always a swarm of local expresses radiating from populous centres. In the country all this is different. Whatever a farmer buys he must get home for himself. The rural telephone may have brought him within ordering distance of more than one town, but if he wants to get what he telephones for, he must hitch up a horse and wagon and go after it. Now, when he sees that the rural postman who brings him his daily paper drives up to his door with nothing in his wagon but a small mail bag, he would be a very unintelligent farmer if he did not reason that this same postman might just as well bring him his small parcels, too. When Mr. Meyer as Postmaster-General pointed out that such rural parcels post service would make the rural free delivery pay for itself, he provided an argument which the farmers are repeating in ever-growing chorus.

The people of New York have been treated to an experience which it is safe to say has no parallel in the history of democratic or representative government. A city of vast population and enormous wealth, the chief city of a great democratic nation and the second city of the world, was to have its entire scheme of government rewritten, and nobody in authority had publicly stated what was the purpose of the move, who was responsible for the character of the work as a whole, or how its details were being managed. It was not pretended that there was any public demand which the new charter was designed to satisfy. The people of the city had hardly more part in the making of it than the people of Timbuctoo. It was concocted in secret by a committee at Albany, with the aid of a paid expert; and when these cooks had got the dish ready, it was to be passed upon by the Legislature as a matter of form, without the faintest possibility of real examination. If anything even remotely resembling this proceeding, taken as a whole, is to be found in the history of government, we should be glad to be informed of it. Fortunately, Gov. Dix has at last let it be known that he will not approve the new charter, concocted and crowded through in this way. There is much newspaper speculation about his possible motives, and we hear ingenious stories about his having been drawn into an intrigue of Murphy's against Mayor Gaynor, and what not. But why delve so deep for reasons which lie on the surface? The proposal which the Governor has headed off was outrageous, and there is no need to go further.

The Chicago *Tribune's* annual compilation of Fourth of July accident statistics shows the smallest number of deaths, with three exceptions, and the fewest accidents, without any exception, since the figures began to be gathered in 1899. The largest number of fatalities occurred in 1908, when there were 72. The next year they were ten less, last year they fell to 44, and this year they were 39. The accidents this year amounted to 1,358, which is more than a thousand under any year since 1901. About half of them, as usual, are credited to "fireworks," with "firearms" and "gunpowder" responsible for 200 each. The heyday of the unsafe and insane Fourth was the period from 1903 to 1909, when the accidents were regularly 50 per cent. higher than in previous years, with the exception of 1900, which rivals the later period. Upon each of these seven Fourths the fatalities were more than fifty, and the accidents, with the exception of 1908, were above three thousand. The fire loss this year amounted to about $350,000, as against nearly $600,000 last year and $725,000 two years ago. With these exceptions, however, it is the largest ever recorded, the figures having averaged only about $100,000 prior to 1907. The accident roll will not be complete until August, when the figures of deaths from lockjaw become available, but a basis for calculation is found in the fact that these reports have usually tripled the number reported in July. The thing that stands out in the entire calculation is that two sane Fourths—observed in but a part of the country—have reduced the number of deaths by nearly 40 per cent. and of accidents by above one-half.

It is just a year ago that the town of Newark, Ohio, disgraced itself by lynching a young man for defending himself from assault while serving warrants upon notorious violators of the County Option law. The community has done much to atone for that day. Three of the leaders in the lynching are now in the Ohio penitentiary, two for twenty-year terms and one for fifteen. Two or three others, who were hardly more than boys, have been sentenced to terms in the Reformatory institution at Mansfield, and several cases are still pending.

Digitized by Google

The sheriff of the county resigned his office rather than face a hearing before Gov. Harmon, and has dropped into complete obscurity, fortunate to have escaped indictment for criminal complicity. The Mayor of Newark was driven from office and went to California. From there, it is reported that he wrote a letter to the Governor asking to be appointed to some office, since he was out of work. Recently he returned to Newark and has announced his intention to run for Mayor again this autumn, but has met with nothing but indignation and ridicule. Meanwhile, the Supreme Court of Ohio has decided that some fifty places where liquor was illegally sold more or less secretly, about the time when the lynching occurred, are liable for the $1,000 saloon tax. This decision will make property owners a little more careful about what goes on in their buildings. But the final test of the thoroughness of Newark's reformation will come in November, when a new city administration is to be chosen.

The primer is to become more powerful than ever if the Women's Trade Union League of Chicago has its way. Heretofore, those who have prepared this handy little volume have limited themselves to such assertions as: "This is a bear" and "The fox is a cunning animal." Now it is proposed that, for foreigners at least, these statements shall give place to the more vital declarations: "I am a member of a trade union," and "I am working in a union shop and receive $10 a week." The pictures, instead of representing animals, trees, and landscapes, will be of shops, stores, and factories, all filled with wage-earners displaying union buttons. This plan of teaching the young idea, not only how to shoot, but in what direction to aim, is so laudable that the only wonder is why it has not been conceived sooner and why it is not carried farther. No textbook for aliens should be regarded as complete without such useful expressions as: "For whom shall I vote?" "I voted for you." "What office do I get?" "I prefer one without an examination."

To Joseph Conrad has been granted a pension of £100 out of the British civil list. If, as the usual custom is, the award has been made on the ground of need, the incident throws a curious light on the rewards of literary labor in England. Joseph Conrad's case is not analogous to that of William Butler Yeats, for instance, who is the recipient of a similar pension. Yeats is a poet and a pioneer in the upbuilding of an Irish literature and drama, and it is notorious that neither poetry nor pioneering pays. Conrad is a purveyor of the article that everybody cries for—fiction; his name occurs constantly in lists of England's half-dozen leading writers. As a stylist he has been placed very near the top, and not in the sense that Meredith and Henry James are stylists. Conrad is the master of a language which has distinction without being particularly recondite. He is constantly spoken of as a popular author. That he should stand in need of a government subsidy would be almost incredible if it were not for the striking difference between the pursuit of literature in this country and that in England. With us a man makes his mark and grows wealthy, or fails and stops writing books. A long list of publications is *prima facie* evidence of prosperity. In England it is nothing of the kind. It is comparatively easy there to get a publisher for books that do not sell, or sell very little.

Although the compilation of the figures of the Canadian census is not yet complete, it is pretty certain that they will show a great gain in the French population. Out of a total of perhaps 8,000,000, the French are expected to number at least 2,000,000. Such growth from the 60,000 under the flag of France in Canada in 1760! And in this reckoning no account is taken of the French-Canadian emigration to the United States. It is estimated that in the whole of North America there must be fully 3,000,000 of French-Canadian descent. It is not surprising, then, to find Prof. Henri Lemay, in the *Revue Canadienne*, predicting that a century hence there will be at least 40,000,000 French Canadians in all of North America, and that Canada will be much more French than English. If this be put down as an exaggeration, there is at least enough truth in it to show why Canadian politicians think it wise to be very considerate of the French vote.

Rumors of revolution in Cuba need not be taken very seriously; but unhappily the evidence is too strong to be disregarded that political conditions in the island auger badly for the future. A member of the Cuban Congress openly charges that President Gomez is personally corrupt, and declares that he can prove that the chief of state, from being without means at the beginning of his term, has dishonestly amassed a large fortune while in office. This might be thought mere partisan slander, were it not so generally believed in Cuba to be at least partly true. Gomez had stated that he should not seek reëlection; but latterly his friends began to talk of running him again. This led to such violent protests—some of them made to Gomez's face—that he found it wise to reaffirm his purpose to quit the Presidency. If reports may be believed, he will also quit Cuba, after the bad fashion of the South American "kings in exile," leaving the Cuban Republic to struggle on as best it may to recover from the bad effects of his tenure of power.

An air of insincerity has pervaded the debates and manœuvres in the English Parliament concerning the Veto bill. In the Lords the Opposition have adopted certain amendments. But are they really intended to improve the measure? And if they were to be accepted by the Government, would the Conservatives then acquiesce in the main principle of the bill without more ado? Nobody seems to know. The Tory peers themselves display great uneasiness and uncertainty respecting the policy of their leaders. The latter do not strike out boldly for rejection of the bill, but temporize and play for position. On the other hand, the Government are equally hesitant. They say they will not for a moment agree to the amendments voted by the Lords, yet they display no enthusiasm at all for either of the two other courses which alone are possible—a new general election or the creation of 500 new peers. It is thus a kind of political unreality into which both parties have fallen. They are apparently being driven to extremes, though the weightiest men on either side do not wish to go there. The whole unhappy situation reminds us once more how great a misfortune it was that the conference committee of last year, composed of the leaders of the two parties, failed to come to an agreement.

Digitized by Google

The latest dispatches, however, seem to indicate that a way out of the muddle may be found. It is stated that the Government would make no objection to an amendment offered by Lord Newton, providing that no further step be taken in curtailing the power of the Lords without a referendum to the people. The force of this lies in the fear, to which Professor Dicey and others have given voice, that if the Lords consent to have their veto overridden after two years, the next thing will be a bill to cut down their time of grace to a year or even six months. If the Liberals now acquiesce in the amendment making this impossible, it will leave their own measure intact, but will offer the Conservatives an excuse for retreating. The latter can say that they at least saved something, and that appears to be their main anxiety. To be sure, the *Saturday Review* sneers at this compromise, as being, in effect, an agreement to concede to your opponents all that they ask, provided that they ask no more at present; but while this is formally correct, it may be said that Lord Newton's amendment does, after all, mean a substantial compromise. In the present embarrassment of the Tories any compromise may seem good enough until after an election in which they hope to win power and set about repealing the whole bill, while reforming the House of Lords according to their own ideas.

Scarcely had the outcry in Germany over the Catholic anti-Modernist oath begun to die away, when Protestant church authorities made a display of what appears to be a similar reactionary spirit. At the end of last month, a Prussian clergyman, Pastor Jatho, was declared by the ecclesiastical council of the province to have been guilty of heretical teaching, and was forbidden to exercise any clerical functions whatever. The precise nature of his heresy does not appear, but there has been a great protest from many within the Evangelical Church at what they call a violation of the spiritual liberty of the clergy. Herr Jatho has been in the ministry for thirty years, and bore an excellent repute. The Cologne *Zeitung* speaks of him as a man who spends his time from morning till night in doing good, and who had the affection of his parishioners in a remarkable degree. So great is the indignation at the sentence against him that a "Jatho Fund" is being raised, partly to provide for his needs, and partly to carry the matter further and see if he cannot be restored to his church. It should seem strange if German Protestants were to tolerate a *Modernisten-Eid* of their own; yet one remembers that Archbishop Whately once declared that there was really little difference in the spirit of intolerance whether found among Protestants or Catholics.

Reports of monarchist activity in Portugal need to be heavily discounted. Royalist energy has hitherto manifested itself more conspicuously in the press bureau than in the field. The magnificent and precise sum of $410,000 that has been contributed by Brazilian monarchists toward the overthrow of the republic is probably as mythical as the army of invasion that is gathering in Spain for an attack on Oporto. There are, indeed, royalist refugees in Northern Spain, but the Government at Madrid has been energetic in repressing armed preparations against Portugal. Such danger as exists for the Lisbon Government consists in mutiny among the soldiers or sailors. But while some small disorders of the kind are possible, it is hard to imagine that either the army or the navy will turn against the Government they were chiefly instrumental in setting up. The outlook, therefore, is not ominous for the Provisional Government. One reassuring fact is found in the recognition of the Portuguese Republic by our own Government. This took place on June 19, the same day on which the newly elected Constituent Parliament assembled. Into the hands of this assembly the Provisional Government resigned its powers, and by it was requested to resume the functions of government until further orders.

The situation in Albania, in spite of recent alarmist reports, is probably not so serious as it was a few weeks ago, when the tribesmen were engaged in hostilities. The Turkish Government is pretty sure to profit by the results of its disingenuous conduct toward the Albanians after the uprising of last year. In the armistice concluded last December, the mountaineers were promised a complete amnesty, the appointment of native magistrates, compensation for arms delivered and houses destroyed, and partial exemption from military duty. The Albanians lived up to the agreement by turning over their arms to the Turkish authorities, on whose part no attempt has been made to put the treaty into effect. Hence the present uprising and strained situation on the frontier of Montenegro, whose people have been extending succor to their kinsmen across the border. Now, against the representations of the Powers, King Nicholas has decided to mobilize. But the move may be interpreted as an attempt at influencing the course of negotiations between the rebels and the Turkish rulers. Russian influence looms up behind Montenegro, but, on the other hand, Germany has made it plain that her sympathy is with the Government at Constantinople.

India finds herself facing a new menace, and from an unsuspected quarter. Ten years ago there was only one point at which the Chinese Empire really touched India. All the rest was separated from China by a hundred tribes which formed the "buffer" that the English authorities encouraged. But now Tibet, from being a mere Chinese possession, has become a vice-royalty, and Chinese troops have been posted all along the southern side of the former "buffer" states. In the indignant words of the Calcutta *Englishman:* "The Chinese, in short, have grabbed country that was certainly not theirs, and which we have neglected to occupy and administer simply for the reason that we preferred that a stretch of uncivilized states should lie between us and the problems that contact with China would certainly raise." Pity that Peking did not know of this self-denying policy on the part of its powerful neighbor! But its only answer now has been to promote the leader on the border from Frontier Commissioner to Viceroy of Sechuan, "where," laments the *Englishman,* "he will be able to do more mischief from the British point of view." Most disheartening of all has been the attitude of the Chinese of Rangoon and Lower Burma, whom the English had considered to be loyal British citizens, but who have surprised their superiors by showing that they regard themselves as Chinese citizens "and full of burning zeal for the Celestial Empire."

AMERICA AND INTERNATIONAL LAW.

The position taken by the United States in regard to several points in international law has been much discussed of late in England. On Monday of last week, for example, when the House of Commons voted approval of the Declaration of London, the Foreign Secretary, Sir Edward Grey, dwelt at length upon the significance of the American attitude respecting that international agreement. Dealing as it does with the right of capture at sea in time of war, it makes a decided approach to the doctrine which the United States has upheld for more than sixty years—namely, that private property should not be made a prize at sea any more than on land. The argument of Sir Edward Grey was that the deep interest which the United States had taken in the establishment of an international prize-court, and our support of the Declaration of London as a means to that end, showed that this country could not believe that its sea-borne commerce would be interfered with in case of war. This as against those bitter English critics of the Declaration who took the opposite view. It is gratifying to have such a recognition of the humane and effective part played by the United States in modifying the old and harsher rule, and in bringing other nations to accept in good measure the doctrine which we so long maintained, virtually alone.

The case is different, however, when we turn to another question having to do with international law, on which, too, the United States occupies an isolated position. We mean the doctrine of "the most favored nation." This has been under sharp discussion recently, not only in England, where the pendency of the Canadian agreement gives it special point, but also in France and Germany. The matter was brought up in the House of Lords, where Lord Selborne asked if the Government were prepared to admit the American interpretation of most-favored-nation clauses in treaties. The official spokesman for the Ministry declared that Great Britain had never assented to the view of the United States on that point. Vigorous letters to the press by Harold Cox and Thomas Gibson Bowles have drawn attention to the singularity and difficulty of the American contention. Not long since the *Frankfurter Zeitung* devoted an article to the same subject. In the course of it the attempt was made to show that Secretary Knox, at the time of the negotiations with Germany last year relating to duties under the Payne tariff, had tacitly abandoned the American position. On February 5, 1910, Dr. Delbrück, speaking for the Government in the Reichstag, declared that the State Department at Washington had "explicitly declared" that it was prepared to grant Germany the "most-favored-nation treatment." But this must have referred only to the case in hand—that is, the question of tariff rates. The Frankfort newspaper is surely not justified in inferring that the United States will, by parity of reasoning, concede at once to German imports what it is making ready, by special agreement, to concede to Canadian.

We speak of the "historic" position of the United States on this point as if that were enough to justify it completely. But views may be very ancient and at the same time very perverse and embarrassing. It may, indeed, be said that no hardship is imposed by us upon other nations, since they all understand perfectly what our diplomatic contentions and our judicial decisions have been. They know that our view of the business is strictly that of *quid pro quo;* special favor for special favor, with no outsider entitled to ask something unless he has given something. But such considerations do not go to the root of the matter. It is easy to say that American Secretaries of State, from John Quincy Adams down, have consistently held to the American interpretation of most-favored-nation treaties, and that our courts have sustained it. The real question is whether we ought ever to have taken that position, and whether we ought not to begin to think of abandoning it, and adjusting ourselves to the opinion of all the world except the United States.

When no great moral or political principle is involved, the nation that finds itself differing, in a mere matter of international comity and understanding of treaties, from all others, should ask whether it is not probably wrong. This is especially the case when we are in the presence of a powerful movement to unify international practice. The United States is helping on that movement in many ways, but in the matter referred to stands entirely aloof. The result is a considerable amount of awkwardness in international relations, together with apparent shifts to which we are driven in defiance of the seemingly plain language of treaties. Thus the terms of our treaty with England appear to be entirely explicit:

> No higher or other duties shall be imposed on the importation into the United States of any articles the growth produce or manufacture of His Britannic Majesty's territories in Europe than are or shall be payable on the like articles being the growth produce or manufacture of any other foreign country.

But we instantly contend, by reasoning which other nations may justly call far too ingenious, that this promise has nothing to do with special agreements which we may find it commercially convenient to devise. We know that England does not so interpret her obligation under that same treaty. Nor does any other country so read its duty under similar compacts. The United States calmly says, "Oh, you know, I never did take that view of it." But this, we submit, is scarcely a sufficient defence. No nation can compel us to change our position—though it would be interesting to know what the Hague Tribunal would say of the American doctrine, if it were to be submitted to that body—but we ought to ask ourselves whether it would not be more friendly and reasonable to make ready to give up in due time our private and isolated view and conform to that held by all international jurists except our own.

POETRY AND COMMON SENSE.

A recent volume of translations from French verse written by Belgians is of more than ordinary interest. Like the people among whom it came into being, this poetry has a composite look, reflecting literary tendencies and methods of several countries and presenting little that can be called exclusively its own. Now it seems under the spell of France, now of Germany, and again of Holland or Norway. Of alliance with English poetry, on the other hand, there is scarcely a vestige. If ever a type of poetry may be thought of as Continental, as opposed to English, the present collection is an excellent example of such. It does in any case fix the attention upon a certain few traits which one is likely to find in the poetry of almost any Continental country and which have never taken root in the poetry of Eng-

Digitized by Google

land and America. It would be interesting if one could explain their relative absence from English poetry by a distinctive Anglo-Saxon characteristic—an imperative common sense.

Verhaeren, one of the contributors to the collection, has been presumptuously called the greatest of French poets. The point of present interest is that his reputation has been made by a realism of a very un-English sort. Even in its drama and fiction England has lagged behind other countries in this respect, but especially in its poetry. It has never relished unblinking accuracy in setting forth the relations of the sexes. Frank utterances in "Don Juan" seem to English critics blotches of bad taste and bad art. To turn to America, Walt Whitman's similar experiments found favor chiefly on the Continent. The usual explanation is that such restraint is prompted by a finer morality. Probably it would be truer to say that it comes from the poet's common sense, a fellow-feeling with his readers. Continental poets to a much greater extent than English have been tempted to follow out an idea or situation to the logical end. For Verhaeren, as for many German and Dutch predecessors, poetry should have greater privilege than even painting or sculpture. With remarkable precision and detail he catches the rough unrestrained scenes of inn life which the pictures especially of Teniers and Jan Steen so often celebrated. Like them, he glories in the vitality and capacity for enjoyment in his subjects; and with the added suggestiveness of language, he runs into outspoken erotic subtleties. Of Verhaeren it has been remarked that he, along with many other Continentals, dares write what by himself he would scarcely think. The English and American way is the reverse.

Another difference is brought out by the following translation of Maeterlinck's "Lassitude":

These kisses know no longer where to rest,
For blind and cold the eyes were they caressed;
Henceforth asleep in splendid reverie they
Watch dreamily, as in the grass dogs may,
The gray horizon-herded sheep-folk graze
Upon the turf the moon's dishevelled rays,
Kissed by the sun, dark as their life is dark;
Indifferent, without an envious spark
For pleasure's roses under them unclosing;
And this long, green, ununderstood reposing.

Not that English poetry has ever been opposed to personification. Again the difference is one of degree. Qualities and impersonal things have from early times enjoyed an instant's life and personality in English poets, but only sporadically and generally under foreign influence does one find their human existence prolonged. Dante and Petrarch, with a child-like, unbarriered fancy, could send their sighs with elaborate instructions to wait upon a mistress. And Heine lived in a world fully peopled by love's paraphernalia. To Englishmen and Americans the carrying of the device to the extreme appears sentimental; for them a lake in the moonlight may, for the nonce, wear a woman's smile; but the moment that it is addressed as a woman, the conceit tumbles into bathos. The Anglo-Saxon masses are too literal not to draw back from personification prolonged; so are their poets.

Symbolism is the third device in respect to which English and Continental practice differs. André Fontainas is the most notable advocate of it in Belgium. Like Mallarmé and others of the school in France, he is constantly awake to double meanings. A fleck of color on the horizon, a cloud in the sky, a stray cow, each is big with a second self. If for the reader, under the spell of poetry, they took on the same meanings, there could be no quarrel. But in many cases the symbolism becomes flighty, incoherent, unintelligible, and reflects but that haphazard outer fringe of consciousness which sensitive persons possess but cannot communicate. The excess to which Fontainas carries the device results from his preoccupation with it, while the reader is forgot. Accepting symbolism as desirable, his instinct is to follow it out to the bitter end. It expresses his most transitory feelings; why should he tone it down to the pitch of ordinary mortals? English poetry has only in the rarest instances been so afflicted. Some of Shelley's works may be open to the charge, notably the "Epipsychidion," a poem or two of Rossetti's, and an equal amount of Poe—who in this sort of verse, significantly enough, first got recognition on the Continent; but it would be hard to multiply the examples.

Common sense implies a somewhat literal outlook which might seem to pair ill with poetry. The answer is not only the vast body of superb English poetry, but the fact that even theoretically they ought to thrive together. The great range of suggestive power lying in the very nature of poetry needs a watchful control of its elements and a nice balance among them. Imagination is not at its best when it entirely releases its hold on tangible facts. One secret of Milton's strength, as of Tennyson's, is that in neither did poetic conceits often become heady; each transforms the universe, but what results is still recognizable by the layman.

SUCCESS AND LUCK.

A Paris newspaper has been asking eminent Frenchmen to state what they think the influence of chance is upon success in life. Many of them have amiably responded, the topic being obviously one of those admirable midsummer themes on which one man's opinion is as good as another's, and which can be discussed till cooler weather comes without arriving at a sure basis of judgment. The replies, indeed, vary according to the taste and temperament of the several authorities invoked. Some of them rate luck very high; others put it wholly out of the reckoning. The composer Massenet gave a cynical turn to the discussion by avowing that, for his part, he believed absolutely that good fortune was the determining element in the success—of others.

Only one of these intellectual Frenchmen appeared to have a definite theory concerning the place to be assigned to chance in the case of marked individual achievement. This was Professor Richet of the Academy of Medicine, and he, doctor-like, was prepared to reduce the whole matter to a formula. Success, he declares, is due to the combination of intelligence, energy, and luck. The proportions in which they should be mingled are: 60 per cent. of intelligence, 10 of hard work, and 30 of chance. Yet Professor Richet evidently takes these figures to multiply with, instead of merely adding them, since he declares that if any one factor is missing the result will be nil. That is to say, 40 per cent. of intelligence with, suppose, 5 of luck but no industry at all will not yield even a half-way success. All this is very like solemn fooling, as Professor Richet himself is at least partly aware, since he quietly remarks that whether you have intelligence or not is itself largely a matter of chance. "There is no worse stroke of bad luck than to be born a fool."

Digitized by Google

In the other opinions printed we discover the same uncertainty and fluctuation that one would find in the views of any dozen men who might be interrogated anywhere. At one moment, opportunity seems the only thing; at the next, the dynamic force of the individual apparently accounts for everything. This whole region of inquiry is evidently better fitted for the moralist or the rhetorician than the scientist. The question wraps up in itself too many indeterminates and variables. It is like trying to make two of Emerson's essays fit into each other. He writes of "Power," and we seem to see the naked energy of the individual carving the world as he wills. He turns to treat of "Fate," and man appears to be merely an atom of dust, the sport of cosmic forces. There is truth in either extreme, and either may be rhetorically emphasized to make the impression sought at the moment; but how to hold the two in accurate balance, how in any given instance to say just what is the part played by luck and what by skilled effort, is so far beyond the wit of philosophers that we may safely conclude it to be also beyond the power of newspaper interviews.

If the test were made one of individual consciousness, we think that some of the most successful men would be willing to admit—to themselves, at least—that they have owed very much to good fortune. However comfortable a conceit they may have of their own powers, or however they may plume themselves on their intellect and energy, they cannot fail to see many points in their career, as they look back upon it, where everything seemed to turn upon a cast of the dice. If the particular opportunity which they seized had not presented itself, or the opening of which they took advantage had been denied, they may indeed flatter themselves that they would surely have found some other vent for their talents, but it would be impossible for them to say just what. In the very act of saying, as they must in honesty, that they had their chance and took it, they concede the influence in their lives of the unforeseeable and incalculable. But those words are only polysyllables for luck.

M. Jules Lemaitre affects to believe that there is no such thing in life as chance. It is all a figment of the imagination. "What we call luck," he says, "is the belief in some equalizing power; an idea born of the innate instinct of justice in man." What he appears to mean is that the common mind is averse to admitting that one man, no matter how shining a success he may have won, can be inherently so superior to his fellow. So we say that one has luck and the other had not. That is supposed to be comforting to the latter. Certainly in political life we often see that idea intrude. We heard a great deal of "Roosevelt luck"; we are beginning to hear much of "Wilson luck." It is in this way that some would seek, as M. Lemaitre says, to "equalize" their unrecognized abilities with those of men conspicuously successful. But this is really to go over to the position of the pious lady who said to her old pastor, apropos of a man who had suddenly leaped into large fame, based upon useful public activities: "And to think what humble instruments the Lord chooses to accomplish so great a work!" To her replied the sagacious clergyman: "Far be it from me to put any limits to the power of the Lord, but Mr. —— is a very remarkable man!"

PATRIOTIC SONGS OF INDIA.

BARODA, India, May 20.

When the white man first came to India he found the people of this country extremely deficient in one particular—they had no patriotism. Indeed, the babel of vernaculars lacked a simple, single word to express this sentiment, bungling phrases being required to voice the emotion. One result of contact with the Occident has been the development of this feeling in Indians. The dialects now possess specially coined terms, while the word "patriotism" is on the lips of every English-educated person in the Peninsula. Fifty years ago bards sprang up who sang sonorously of patriotism, though after a while their songs fell into disuse. In the last few years, however, the people have turned to these singers again, for their souls have been touched by unrest.

Of all the patriotic ballads which the new spirit has revived, the most popular is Bankim Chander Chatterjee's "Bandé Mataram" ("Hail Mother"). It first saw the light of day in a book written in Bengali, "Ananda Math" by name, which was published more than a generation ago. At that time the Bengalis were not ready for it, and for years it lay unappreciated and unsung. But in 1905, when Lord Curzon carried through the unpopular measure of partitioning Bengal, "Hail Mother" was at once taken up as the national war-cry. The Bengalis went crazy over it, and the title of the song became a popular phrase of salutation. It still holds its empire over the hearts of the Bengalis, and, to a limited extent, over those of other Indians. During 1906 and 1907, when the agitation against the dismemberment of Bengal was most bitter, when the Hindu terrorist was just appearing, and when no one knew just how far nihilism had burrowed its way into Indian society, this lay caused some anxiety to the rulers. But, as is apparent from the following free translation, there is nothing inflammatory in the words, which are sung to plaintive, minor music:

I bow to thee, Mother,
Thou who art rich in streams, fruit, and cool southern breezes,
Whose fields are green with harvests,
Whose nights are a-glitter with the sheen of silvery moonlight,
Who art decorated with blossoming trees,
Whose smile is radiant,
Whose voice is musical and whose words are like sparkling jewels,
Who fulfillest desires.
Thou who dost strike terror with thy babel of millions of voices,
And with the sharp swords of thy countless arms,
Who dares to call thee helpless?
Thou who dost wield the strength of a multitude and repel hosts of enemies,
Thou who art the saviour of thy people,
To thee I bow.
Thou art wisdom, thou art religion,
Thou art the heart, the very core of our heart,
Thou art the life-breath of our bodies,
Thou art the strength of our arms,
Thou art the piety of our hearts.
In temple after temple we set up thine image.
Thou art the Goddess *Durga*, holding the ten weapons in thy hands;
Thou art *Lakshmi* (the Goddess of Fortune), residing in lotus lakes;
Thou art *Sarasvati* (the Goddess of Learning);
To thee I bow.
I bow to thee, *Lakshmi*, the pure, the handsome, the smiling, the sincere, the bejewelled, the Mother.

Just as it comes natural to the German to call his country the *Vaterland*, so it is natural for the Hindu to regard his native peninsula as the Motherland. Indeed, he virtually looks upon it as his mother. The subtle meaning of this is lost upon foreigners who do not comprehend the feeling that an Indian cherishes for the woman who gave him birth. The mother is the most idolized person in the land. Therefore when the Hindu typifies his country as such, he literally means that he gives his country the highest affection of which he is capable. Of all the patriotic songs which aim to express this sentiment, probably the most beautiful is one composed by Rabindranath Tagore, who is perhaps the greatest living Bengali poet to-day. The English rendering necessarily takes away some of its charm, yet

Digitized by Google

leaves enough to show the writer's potent imagination:

Thou who dost charm the heart of all the world,
Thou land gleaming with the golden glory of the sun,
Thou mother of our fathers and mothers,
The soles of whose feet are washed by the waters of the blue sea,
Whose green skirts are fluttered by the breeze,
Whose forehead, the Himalayas, is kissed by the skies,
Who wearest the diamond diadem of the snows;
It was in thy firmament that the first day dawned,
It was in thy hermitages that the first hymns were sung.
Words of wisdom, religion, poetry, history, first
Were preached in thy forest temples.
Thou art blessed, the eternal dispenser of good.
Thou dost distribute food from land to land.
The Ganges and the Jumna are the milk of mercy flowing from thy breasts.

India is still a conglomeration of races refusing to realize their community of interests, and utterly lacking in cohesion: but the poet has commenced to dream of unity. This note of union is especially to be detected in the patriotic songs. Mrs. Sarala Devi Ghosal Choudhrani, B.A., made an attempt, in 1901, to compose a song in which she linked together the different provinces and combined the watchwords of the various races and creeds—the *Har, Har, Har* and *Hari Moraré* of the Hindus; *Dadar Hormuz* of the Parsis; *Allah-o-Akbar* of the Mohammedans; *Jai Jehovah* of the Indian Christians; and *Sat Sri Akal* of the Sikhs. As yet such a union is only a figment of the poetic imagination:

O my muse, recall the glory of past days and sing of Hindustan.
O my muse, stir the soul of this large audience, and sing of Hindustan.

Sing of that name which sounds our strength and wealth and fame.
Bengal, Behar, United Provinces, Orissa,
Madras, Maharashtra, Gujerat, Nepal, the Punjab, Rajputana,
Hindu, Parsi, Jain, Christian, Sikh, Mussulman,
All sing, in all the dialects of India,
"Namo Hindustan!" (I bow to Hindustan)
Har, Har, Har! Hindustan!
Dadar Hormuz Hindustan!
"Namo Hindustan!"

O my muse, kill the spirit of disunion,
And sing the song of unity.
O my muse, be the giver of great strength of body, mind, and soul.
Hari Moraré Hindustan! *Jai Jehovah* Hindustan! *Sat Sri Akal* Hindustan!
"Namo Hindustan!"
O my muse, inspirer of all men, sing the new tune.
O my muse, weld together a mighty nation, sing the new song.
Lift up the flag of activity,
Sound the trumpet of duty,
And rouse all hearts.

This was sung by the composer, on the first day of the Indian National Congress, in December, 1901. The chorus was chanted by 400 volunteers. After the second stanza was sung, every person in the huge pavilion joined in the refrain. Such a scene was never before witnessed at that gathering.

Religion being the paramount force in India, and schisms and creeds being the agents that keep the various factions warring among themselves, some patriotic poets are endeavoring to make a god of Hindustan for all Indians to worship—a faith to which all the people may subscribe. One of the most charming of these efforts is an invocation put into the mouth of an ascetic in a pageant which showed the magnificence of the rajas and emperors of the old days of Ind, and was performed at the recent exhibition at Allahabad. It ran:

O God! The Nameless under many names!
O Thou, the Formless under many forms!
The Silent, who art heard in many voices!
Through all the pores of Being take my prayer!
Be favorable to this ancient land,
This Motherland of saints and holy men,
This land of hallowed hills and sacred streams,
Of sombre forests and sun-flooded plains;
This glory of the immemorial East,
Whose dwelling is the splendor of the Sun;
Our Motherland, our home, our India!
May all her many peoples live together
Honoring one another, quietly!
Bring her the peace that kings cannot bequeath,
The happiness that cometh not by wealth!
Each in his own way, yet let each for all
Work and let work, live and be good to life.
So let the self of each be India's self,
And India each man's creed, and each man's race be India, India, India.

In another song we find the poet dedicating himself to the service of the mother:

To your cause I devote my body.
To your cause I devote my life.
For your sorrow my eyes shed tears.
This harp will sing your songs.
Though these arms are weak and incapable,
Yet they will do your work;
Though this sword is dark with rust,
It will cut off thy bonds.
O Mother, even though my blood avail you nothing,
Yet I can shed it to wipe off the least stain on your name,
Or to allay the least of your sorrows.
O Mother, though there is no force in this music of mine,
Who knows but some child of thine may awake,
By hearing these melodies!

Some of the patriotic odes of the last generation were very plaintive. Here is one composed by Rabindranath Tagore that throbs with sorrow:

Who is it that constantly approaches and retires,
With eyes overflowing with tears?
Who is looking toward us with vain hopes?
She is my Mother! She is my Mother!
In the dark house what sad-faced one has prepared the meals for us?
Whose is the food that no longer is pleasant to our palates?
It is our Mother's! It is our poor Mother's!

There is an undertone of shame in the following short stanza, written thirty years ago by Hem Chander Bannerji:

Bugle, sound this tune!
"In this world every race is free,
All are alert with the pride of their honor.
Only India is asleep."

The songs written during the last few years show a marked difference. In the new lays there is a note of jubilance and hope. The following was composed in 1903; the poetess fancies that India's face, which once was fair like that of the Goddess Durga, the possessor of ten hands, and the all-powerful ruler of the ten regions, has become black and terrifying like that of Kali, who is supposed to wear a garland of skulls. She writes:

I bow to thee, I bow to thee, Mother India!
Who allayest the sorrows of all,
Beneficent, good, a saviour,
Whose face has become darkened and terrifying, like the countenance of Kali,
Through sadness at the afflictions of India!
The darkness of cycles now has vanished,
Oh, thou lotus-complexioned Mother, smile,
The earth once more is beautiful with the light of hope and a heart rejuvenated.
The ship of time is bringing to us a cargo of new life,
Smile, oh lotus-complexioned one.
Knowledge has come, prosperity and valor will follow.
We shall see thee once more the happy ruler of the ten regions.
Oh Mother, thou who art armed with daggers and swords,
Thou who wearest a garland of skulls,
The wounds of thy insults shall be healed.

Bengali, of all Indian vernaculars, seems to be the most replete with patriotic songs, though the other dialects are beginning to be enriched in the same way. Kavi Narmadashanker Lalshanker has left several stirring odes in Gujerati, the following, written about 1865, being a fair specimen of his art:

Let my countrymen awaken.
Let them ask for their rights and privileges.
If my countrymen have any spark of humanity left in them
They will surely demand the rights that are theirs as human beings.
Even brutes do not fail to take revenge on those who give them pain.
In this world the ideas of property, personality, and self-respect are necessary;
Those who do not ask for their dues violate the laws of nature—
Let them not be afraid of powers that be,
Let them not sleep supinely with folded hands.
Children have to ask for what they want, even from their mother,
Why not then ask for rights which mean and cunning people try to ignore?
Kings have waged wars for their rights, and men have lost their lives in the struggle for rights.
It is a sign of manliness to stand up and demand our dues.

Digitized by Google

A certain number of the songs, being interpreted by the British as seditious, have been proscribed. All printed copies have been seized and the circulation or singing of them is made a penal offence. Most of those that have been placed under the ban are indeed as lurid as revolutionary songs in any language. They depict the English as draining the life-blood of Hindustan and shipping it to England to feed and fatten their people, while the Indians themselves are left a weakened, emasculated race, a prey to constant famine; and they call upon the people to free themselves. We may cite a few lines from a Punjabi song to show this sentiment:

> The foreigners are looting Hindustan,
> Combine to save it from being looted.
> Come, let us go to the battlefield,
> Get our heads cut off
> (But) kill (the Englishman).
> Be not afraid of naked swords.

It is easy to understand that no Government, in self-defence, could permit such sedition to fan the flames of its own destruction.

Correspondence

RABELAIS AND MORE'S "UTOPIA."

TO THE EDITOR OF THE NATION:

SIR: In the review of "The French Renaissance in England" in your issue of June 1, the reviewer speaks of the prominence Mr. Sidney Lee gives to "two recent discoveries," and writes of the second, "He works out the suggestion made by Professor Lefranc that Rabelais adapted a part of More's 'Utopia.'" On page 74 of his book Mr. Lee terms "the evidence of familiarity with More's book which Rabelais offers" "a new fact in the comparative study of French and English literature"; and says, "Rabelais's island of Utopia, with 'the great city of the Amaurots,' comes straight from More's romance. The names are of More's invention." A foot-note on this asserts: "Prof. Abel Lefranc, in 'Les Navigations de Pantagruel: étude sur la géographie rabelaisienne' (Paris, 1905), while pursuing a different line of inquiry, was the first to call attention to Rabelais's indebtedness to More's 'Utopia.'"

But that Rabelais took these names from the "Utopia" has long been known, and is stated in both French and English books that date much earlier than 1905. On page 345 of the first volume of Burgaud des Marets and Rathery's edition of Rabelais's works (Paris, 1857), for instance, this note is given where "Utopie" first occurs in the text:

> L'Utopie, république imaginaire, dont le vrai nom des Amaurotes (du grec ἀμαυρὸς, obscur) est la capitale, sert de titre au roman politique de Th. More, publié en latin; Louvain, 1516; Paris, 1516, 1517, et traduit en français par Z. Leblond, Paris, 1550. In-8.

But this is by no means all that is unsatisfactory in Mr. Lee's statements concerning the "Utopia." In view of the fact that in his life of More in the Dictionary of National Biography he stated that "Hythloday . . . is a wholly fictitious personage," it is surprising that he now writes, "It was while More was engaged on diplomatic business at Antwerp, where French was the language of official circles, it was while he was talking in French with a Portuguese sailor who had voyaged to America, that More's alert imagination conceived his new ideal of society." If this rests on anything other than More's statements in the beginning of his book, where, as Mr. Lee well says in the work just cited, "a reader may easily be puzzled to detect where the fact ends and the fiction begins," the authority should have been cited, for some one certainly has made a "new discovery." But if, on the other hand, the only authority for it is the "Utopia" itself, there is nothing there to indicate that More conversed with Hythloday in French. What indications there are point rather to the use of Latin, the *lingua franca* among scholars at that time: for Giles on introducing Hythloday at once corrects More's error in taking him for an ordinary sailor, and explains that he is a philosophical traveller "et latinæ linguæ non indoctus"; and when Giles later says, "Mihi visum est non ut servias regibus, sed ut inservias," Hythloday responds, with a paronomasia that would not exist had they been talking French, "Hoc est una syllaba plus quam servias."

But these are comparatively venial sins. Mr. Lee has a thesis to support, and in contrasting the welcome that the "Utopia" received abroad, and especially in France, with what he is pleased to term "the cold neglect of the book at home," he does so by nothing less than *suppressio veri*. His statements are, in general, true; but they are far from being the whole truth; and the inferences from them given or suggested are decidedly misleading. From his pages one could conclude only that it was merely the lack of English interest in its subject-matter that prevented More's writing the whole of his book in England and publishing it there, and that the only reason why it was not at once translated into English and given to "the unscholarly world" was that "England . . . set small store by the stirring humanist revelation which her own son offered her."

That "the greater part" of the "Utopia" "was penned in a foreign country" is explained easily and naturally by the fact that at home More had little opportunity to write (*teste* his letter to Giles), and in Antwerp, during the break in the negotiations with the Flemish ambassadors, little opportunity to do anything else. And, in the words of Morley, "'Utopia' was not printed in England during the reign of Henry VIII, and could not be, for its satire was too direct to be misunderstood, even when it mocked English policy with ironical praise for doing what it failed to do." More had narrowly escaped imprisonment or execution by Henry VII, and naturally did all he could to lessen the risk of incurring the displeasure of his son. The first English translation did not appear until four years after Henry VIII's death, and even then the translator considered its publication a "bolde and rash enterpryse," tried to shift the responsibility for it to another, and dedicated it to Cecil, who had been his schoolfellow, "partly that under the sauffe conduct of his protection it might the better be defended." "France," says Mr. Lee, in reference to the French translation, "efficiently relieved More's 'Utopia' of the risk of oblivion to which English blindness exposed it," but, as Robynson's translation followed Leblond's by but a year, and was entirely independent of it, the "risk of oblivion" does not seem to have been very great. And if the publication of a French translation in 1550 shows warm appreciation, how is it that the publication of an English one but a year later indicates "cold neglect"?

That no commendation by an English scholar is among those printed with the first edition of the "Utopia" admits of an explanation much more probable than that Colet, Linacre, and Grocyn found nothing praiseworthy in a book that was a fruit of their teachings and the work of their intimate friend: viz., that they did not see it before its publication, and hence had no opportunity of adding their commendations. In the letter that accompanied it, More apologizes to Giles for sending him the manuscript so much later than he had reason to expect it, and explains the cause of the long delay; he has been so busy since his return that he could devote to it "onelye that tyme whyche I steale from slepe and meate." Under such circumstances, it is not likely that he would add still further to the delay by circulating what he had written among his English friends before sending it to Antwerp. But that Giles, on the other hand, should submit the manuscript to More's Flemish friends before sending it to the printer, was virtually imposed by More himself: "I wyll as touchinge the edition or publishing of the booke," he wrote, "followe the counsell and advise of my frendes, and specially yours." Giles and four or five others, all residents of Antwerp, Louvain, or the vicinity, emphasized their favorable advice by having printed with the book letters or verses encomiastic of it and its author. But this does not go far towards proving "the cold neglect of the book at home."

Finally, Mr. Lee writes:

> Nor was English, the native language of the author, the first vernacular into which the work was translated. It was a French version which first popularized More's speculations. . . . The anonymous French translator of 1549, and the Parisian bookseller, Charles Angelier, who in 1550 circulated More's Latin in modern speech, may be credited with giving the unscholarly world the first opportunity of studying at first hand More's social and political gospel.

This is nothing less than astounding; for, as is shown in the life of More previously cited, Mr. Lee knows that the French translation was preceded *twenty-six years* by a German and two years by an Italian! Apparently, the reviewer's warning that from "the excesses in which this sort of study may involve one," "he is not entirely free" is nearer the mark than his statement that in the book "there is a splendid union of scholarly precision and revolutionary deduction."

WM. DALLAM ARMES.

A LECTURE OF SUMNER'S.

TO THE EDITOR OF THE NATION:

SIR: Through your courtesy I should like to appeal to your readers in behalf of the Yale Press and myself for an elusive bit of information. In a volume to be issued in

Digitized by Google

the autumn, entitled "War and Other Essays," by the late Prof. William Graham Sumner, occurs an essay-lecture on "War." Professor Sumner, some four or five years ago, spoke to me of having recently delivered this lecture; and my indistinct remembrance is that he said he had been "out to Buffalo." It is desirable that we should know the date and place of delivery of this lecture, and we have not as yet been able to discover either. This is not the famous "Conquest of the United States by Spain," but is of a more general nature, dealing with the causes and results of war. Any one of your readers who can furnish us with the information desired would confer a favor upon us by addressing the undersigned, who is editing the collection. ALBERT G. KELLER.

No. 55 Huntington St., New Haven, Conn., July 3.

PROFESSOR BERGSON'S PRINCIPLE.

TO THE EDITOR OF THE NATION:

SIR: Is it possible that the reviewer of "Matter and Memory" and "Creative Evolution," in the *Nation* of June 29, has failed to understand Professor Bergson's principle of duration?

Professor Bergson does not say we can think real time. He says the opposite ("Creative Evolution," p. 46):

We do not think real time. But we live it because life transcends intellect.

Because motion is indivisible, thus permitting the flight of the Eleatic arrow, does it follow that we cannot get our sensible experiences in drops? The life of each of us is a continuous duration, a becoming, not a collection of static intervals. And yet, when we use our life for action, when we examine into it, we make cross-cuts in the becoming: we speak of our infancy, our youth, or any of our characteristics as if each were a real, divisible part of our personality.

It is unnecessary to quote Professor James to show that our sensible experiences appear to us in drops. Is not the fact that they do so a central part of the Bergsonian philosophy? Professor Bergson says ("Creative Evolution," p. 301):

The primal function of perception is precisely to grasp a series of elementary changes under the form of a quality or of a simple state, by a work of condensation.

And again ("Creative Evolution," pp. 272, 3):

Preoccupied before everything else with the necessities of action, the intellect, like the senses, is limited to taking at intervals views that are instantaneous, and by that very fact immobile, of the becoming of matter. . . . We pluck out of duration those moments that interest us and that we have gathered along its course. These alone we retain. And we are right in so doing while action only is in question.

In "Matter and Memory" (p. 234), Professor Bergson explains that the orientation of our consciousness toward action appears to be the fundamental law of our psychical life.

If these facts were not so, how could we be those "centres of action," those "centres of indetermination" which comprise one of the pivotal points of Professor Bergson's philosophy? No contradiction of Professor Bergson is apparent in Professor James's assertion that there is quantitative discreteness in the change of our sensible experiences. If our sensible experiences were not thus conditioned, how could matter become isolable for us and prepared for our actions?

Your reviewer says Professor Bergson's doctrine of the creative character of the evolutionary process can be "more or less" dissociated from the *durée réelle*, and he predicts that thus it is likely to influence the general view of our generation. How there can be any dissociation at all, without utterly destroying Bergson's point of view, it is difficult to see. The two appear to be inseparable. It seems obvious that Professor Bergson so regards them. In his "Creative Evolution" (p. 162) he speaks of "true continuity, real mobility, reciprocal penetration—in a word, that creative evolution which is life."

Is your reviewer right in attributing the popularity of Professor Bergson to his "obscurities," to the "ineffable" nature of his philosophy? Is not his influence due rather to his banishment of philosophic mysticism, of the dominance of intellectualism from life? Does not his vogue owe its prevalence to the fact that he gives us authority to call a rose in our garden a rose, and not a fortuitous concatenation of atoms, nor a mental perception, nor a part of the self-projected vision of an Absolute? Is not the spirit of these words ("Matter and Memory," pp. 277-8) at the bottom of the growing influence of the great Frenchman's doctrine?—

That there are in a sense multiple objects, that one man is distinct from another man, tree from tree, stone from stone, is an indisputable fact; for each of these beings, each of these things, has characteristic properties and obeys a determined law of evolution.

TONIC FOR TREES.

TO THE EDITOR OF THE NATION:

SIR: I used to transform the appearance of dog's-bane and rose-leaves until they looked very much like coleus plants, with beautiful, mottled foliage. It was done by adding bicarbonate of soda to the water in which the flowers were placed. But why the chemical acted in this way upon the veins, not upon the blossom, I could never ascertain. Old gardeners, desiring to create some abnormal growth, had a way of "feeding the plant" some liquid stimulant, which was taken into the circulation through a puncture in the vine. In this way has arisen what is known as the "injection treatment for trees," which is very nearly analogous to hypodermic medical treatment. The first attempts were directed entirely to efforts to increase the fruitfulness of plants, but apparently subsidiary causes interfered in so many ways that no definite knowledge was obtained. Then the idea was directed to various forms of diseased plant life, though in Europe, at least, scientists concluded that the system was of little practical use. Later our own agricultural stations experimented with solutions of formaldehyde of varying strength, from one-half part to one part to five hundred, but it was stated that the resistance of trees to injury is extremely variable, and great care must be used. Various fungicide solutions have been injected, but usually with quite unsatisfactory results; even a solution of copper sulphate (1 part to 2,000 of water) has been injurious to some forms of plant life when put directly into the circulation.

The conclusions drawn from these experiments so far seem to prove that the variations in plant life are so great that anything in the nature of a specific remedy cannot be discovered; and, as we do not understand nervous action in the plant world, it is almost safe to say the experiments will be abandoned. Heredity and environment must always be carefully considered in any system which seeks to combine organic and inorganic substances, or to destroy the toxic principles of disease by the toxic principle of some other substance.

SCIENTIFIC MANAGEMENT.

TO THE EDITOR OF THE NATION:

SIR: As the correspondence in your columns on scientific management shows that people are interested in the subject, you may care to print the following transcript from the Rules on the Rice Plantation of P. C. Weston, South Carolina, published in 1857 in *DeBow's Review:*

A task is as much work as the meanest full hand can do in nine hours working industriously. The driver is each morning to point out to each hand his task, and this task is never to be increased and no work is to be done over task except under urgent necessity, which overwork is to be reported to the proprietor, who will pay for it. No negro is to be put to a task which he cannot finish with considerable ease. It is a bad plan to punish for not finishing task; it is subversive of discipline to leave tasks unfinished, and contrary to justice to punish for what cannot be done. In nothing does a good manager so much excel a bad as in being able to discern what a hand is capable of doing and in never attempting to make him do more.

The full report from which this is taken, as well as many other overseers' reports giving the prevailing attitude of Southern employers to the management of the hands on their plantations, is to be found in the first volume of the "Documentary History of American Industrial Society," recently reviewed in your columns.

PHILIP P. CHASÉ.

Milton, Mass., July 6.

UNCLE TOM'S CABIN IN THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: As a Northern woman in charge of a public library in the South, it has interested me to observe the steady, spontaneous demand of the public for "Uncle Tom's Cabin." The younger generation is largely responsible for its circulation, though older people also ask for it. A countryman read the book recently, saying that he had been trying to get it for years. Comments on the book have been rare, but this man volunteered the information that there was nothing in the book untrue, adding, "I have always lived in the South; I know."

The present generation reads it with little of the prejudice impossible for their elders to lay aside sixty years ago, and a truer understanding of the author's motives is possible, though probably its appeal to young people lies in the fact that they regard it as a "good story." LIBRARIAN.

Literature

ON THE TIGRIS AND EUPHRATES.

Amurath to Amurath. By Gertrude Lowthian Bell. New York: E. P. Dutton & Co. With map and 234 illustrations. $5 net.

Seldom does there come to the weary reviewer a book of Eastern travel bearing the clear stamp of abiding value. Such was Kinglake's "Eothen"; such Burton's "Pilgrimage" and Doughty's "Arabia Deserta." Travel-books abound, but literature in travel is of the rarest. Into such a class this book must fall. It has the highest scientific value; but it has also charm; life has passed into it from its writer, and by that life it lives and the things of which it tells move before us. Yet there is more here than simple vitality. Miss Bell has the gift of language, and, from time to time, for all the vivid simplicity of her pictures, she rises to a grave magnificence of style. Thus for her in those lands through which she passed "the reverberation of ancient fame sounds more richly in the ears than the voice of modern achievement. The banks of the Euphrates echo with ghostly alarums; the Mesopotamian deserts are full of the rumor of phantom armies" (p. viii). And so her pages are haunted with the advance of the fated army of Julian and the retreat of the so differently fated Ten Thousand Greeks; with the expeditions of the Assyrians and the raids of now nameless Arab tribes; with the Sasanian fall and the Moslem golden age. The ghosts of dead empires dogged her steps while the air around her was electric with the birth of a new era. For her journey fell between February and July, 1909, and it was at Tekrit on the Tigris, the birthplace of Saladin, that she heard of the counter-revolution; it was from the guns of Mosul proclaiming Reshad Sultan that she heard of the capture of Constantinople; and her way through the mountains from the monasteries of Tur Abdin to the world again at Cæsarea was sown thick with vague rumors of the Cilician massacres.

And there is yet another magic at work in these pages. The Semite has always brooded on the mystery of the following and vanishing generations and of the unchanging and eternal earth. More, he has felt the appalling contrast between the fragile life of man and the serene steadfastness of the buildings man can rear. In the desert such great stone or brick structures are as the eternal hills. Commonest, too, of all the motifs of Arabic poetry is the deserted abiding-place. And when it is no mere cleared and trenched camping-ground, but the castle and palace of a forgotten race, the nerve of imagination is touched and the life of man in its transitoriness flashes out. The words of Ecclesiastes are paralleled by many a desert singer and recur again and again in the Koran of Mohammed himself. Thus in the Koran (xxii, 44), there is the great passage concerning the city, whose people have perished while its roofs abide—"and how many a well lies abandoned and how many a lofty palace"—which so troubled the Arabic geographers and eventually found its way into the Arabian Nights as rightly of the land of romance. And the noble couplet of Lebid, "We are worn away, but unworn are the stars that rise; and the mountains remain after us and the great works which we leave," is of the very spirit of the desert. It was with due right then that Miss Bell prefixed this couplet to her volume, for her journey led her to many such silent monuments of vanished races.

She left Aleppo on February 3, 1909, and plunged at once into the new Turkey. Travelling alone with a caravan of trusted servants and evidently speaking the language easily, though not so secure in literary Arabic, she gives at every turn vivid little descriptions, scraps of conversations, estimates and snatches at truth on the situation and the races in it, their capabilities and disabilities. Turks, Syrians, Arabs, Kurds, Armenians, Yezidis, all are brought before us. Bishops and governors, Arab sheikhs, and Turkish kadis, soldiers, and muleteers, begs and peasants, all talk themselves frankly out; while Fattuh, the leader of her caravan, an Aleppine of infinite resource and practical wisdom, is a constant background and chorus, an indefinite eliciter of humor, if himself not humorous. Of many things is the talk; but chiefly of a mysterious new thing called *hurriya*, "freedom." It is a word of genuinely Arabic origin and formation. Philologically, one might think that it could mean only one thing and that what it does mean; but it could not have raised more doubts and caused more questions if it had been a borrowed word of the foreignest. The Bedouins, it is true, are free, wild asses of the desert, with no yoke on their necks; but all evidently felt that this new thing could be no such utter individualism. And if there is a binding unity and an obedience in it, obedience to whom or what? Obedience to an absolute ruler whom they needs must obey; obedience to a religious or social code as old as the hills and stark with tradition they could understand; but obedience to a self-created and imposed law was too hard a saying.

And so the government was still a higher power, to be thought of as though something elemental, quite apart from the people. The sense of a common responsibility was, and is, still to come. Miss Bell found no real understanding why the delegates had been sent to Parliament, or that they were responsible in any sense to their constituents. The spies were gone, it is true; restrictions had fallen away; passports could be got without delay or bribes. But justice, if anything, had suffered from the shock. All men's minds were uncertain, and officials, through caution of the future, were slow to act. Naturally it would be for the local branch committees to see to this—to educate the people in citizenship and to keep the officials keyed up. Miss Bell was left dubious of the extent and weight of their influence. It evidently varied greatly in different places, and the secret inner executive reporting to the central committee at Constantinople, much as the spies had reported to Abd al-Hamid, was of very uncertain value. What the people everywhere wanted was a strong hand in the executive, military if need be, and a government which they themselves knew. And Miss Bell herself testifies that wherever order had been kept during the Terror—for that exactly was what the reaction had brought—it had been due to a strong governor. Government, the popular voice would continue, is of the Turks; they understand politics and brought the Constitution; for all such things the Arabs are useless.

And thus is raised the great question of decentralization, almost the only point at question between the *Ahrar*, the so-called Liberals, and the committee. That decentralization of some kind will come is certain. It is definitely written into the Constitution, and so multifarious a conglomerate as Turkey can only in the end issue in some confederated or federated system. But the very variety commands patience until some other unifying force shall have been developed than the deadly one of religion, and until the outlying provinces are in some degree brought level with European Turkey. Thus Miss Bell writes in words that all who know the Moslem East will echo:

> Cruel and bloody as Ottoman rule has shown itself upon these remote frontiers, it is better than the untrammelled mastery of Arab beg or Kurdish agha, and if the half-exterminated Christian sects, the persecuted Yezidis, the wretched fellahin of every creed, who sow in terror crops which they may never reap, are to win protection and prosperity, it is to the Turk that they must look. He, and he only, can control the warring races of his empire, and when he has learnt to use his power impartially and with rectitude, peace will follow (p. 247).

And, again, here is a tribute to what the Young Turks, in spite of everything, have accomplished:

> Thus it is through all the Asiatic provinces, and the further I went the more convinced did I become that European Turkey is the head and brains of the empire, and that if the difficult task of reform is to be carried out in Asia, it can only be done from western Turkey. I believe that this

Digitized by Google

has been recognized in Constantinople, for the provincial governors appointed under the new régime have been almost invariably well chosen (p. 73).

Meanwhile, what of the hostile elements, partly jealous races—Turks, Arabs, Kurds, etc.—and partly warring religions? The picture is an unhappy one. All round the desert, there abides the standing irritation between the fellahin and the Bedu—the farmer and the nomad. When the rains fail and the desert is dry, the tribes move—they can nought else—and seek their food in the sown lands. If the government is strong, they may be beaten back; but the fierce necessities of life are hard to turn. Similarly, the Kurds in the northern mountains watch to drive their prey from the upland valleys and the fertile lowlands. Behind it all is the secular conflict of Turk and Arab, with contempt and conscious pride of race and conquest on each side. And still further back and deeper lodged lie, between Moslem and Christian, fear, distrust, and panic of massacre. Some of Miss Bell's most telling pages go to make clear this final antithesis. On the Christian side are centuries of too well founded fear. Among Orientals, ever swayed by suggestion, the madness of the crowd may sweep in a moment all restraint away—humanity, neighborhood, friendship, are nothing in the day of slaughter. And so, too, on the subject race there often falls a helpless panic, inconceivable to us to whom, when face to face with certain death, there would come a lust of dying with arms of any kind in our hands. On the Moslem side also, hard as it is for us to realize it, there is fear, the fear of our Southern States where the negroes outnumber the whites. Let there be wild talk among the negroes anywhere in these States, with purchasing and hoarding of arms, and scenes approximating to those at Adana might not be very far off. All would depend on those in authority. And so says Miss Bell, of Turkey:

> I believe that no great massacre has taken place in Turkey without the encouragement of the central authority, or a passivity which amounts to connivance on the part of the local officials; a strong Vali backed by an enlightened government would keep peace in the most fanatical province of the empire (p. 353).

So the moral is that the Christian races must learn not to play politics and quarrel among themselves, but to work honestly and fairly for the country which is now theirs, and especially to bear their part in the burden of military service. That, more than anything else, will weld the empire together.

But all this leaves untouched the side of her book which for Miss Bell was probably of most consequence. She is an archæologist, trained under Sir William Ramsay, of wide interests, and especially in the architecturally dim period from the Sasanian fall through the Caliphate. So, with metre tape and rod, and, above all, with her camera, she went down the Euphrates from Carchemish, now on one bank, now on the other, as ruins summoned her, to Hit. Then came a sweep through the desert with her great discovery, the lonely and abandoned palace of Ukheidir, as her farthest southing, seven hours southwest from Kerbela. Then Babil to Baghdad and up the Tigris to Mosul; thence zig-zag through the mountains of Assyria and Tur Abdin to Diyarbekr; then by Kharput, Malatiya, Aziziyeh and Cæsarea to Konia. Everywhere she planned and photographed, and the first fruits of her labors are here in many architectural descriptions and in 234 photographs and ground-plans. Of the places and routes more largely dealt with are Rakkah, the mysterious of many names and sites; the Parthian station of Isidorus of Charax from Rakkah to Hit; and, above all, Ukheidir. This palace-fortress—Lakhmid, Umayyad, Abbasid, who yet can certainly tell?—is put before us in all its amplitude and wealth, architecturally and imaginatively. Architecturally Sasanian, its fit place is in the world of imagination with Irem of the Pillars and the City of Brass. In its ruined halls, where the song of Ibn ar-Rashid is now chanted, we listen rather for echoes of the lay of Lebid or the lament of Adi ibn Zaid. Under its arches the life of the Lakhmids and Ghassanids, between the desert and Persia and Byzantium, at last becomes real to us, and a world which for even the early Moslems had become a legend is created anew. And yet one other thing seems very clear. This "Little Green Place," for so its name means, can have been no such arid waste as now. It furnishes another fragment of evidence for the drying of these lands, whether by pulsatory or progressive change. Next in detail of treatment comes Samarra, whence Ibn Tulun got his mosque and minaret. Under its ruined vaults we can reconstruct the Baghdadian palaces of Harun ar-Rashid and move amid the scenes of the earliest Arabian Nights. With Mosul we enter Christian country, and early churches claimed Miss Bell's attention; and so she went through the Mountain of the Monks and on to Diyarbekr.

All this is a suggestion only of the multiform interest of the book. Much must be passed over, and especially the more intimate life. There is the story of Fattuh and his friend the thief, and of his experiences with the Evil Eye. The prayer for rain, too, at Mezreh, in which men of every faith joined under their common need. Miss Bell does not notice that this is the one occasion when the Moslem canon law prescribes such united action. Even the domestic animals must join in it, as we read in Joel and Jonah. Here, too, is probably the first record of an Arabic ode to an automobile—a veritable *qasida* of the old pre-Moslem unchanging type and sung with the same cries from the listeners, "It is the truth! It is the truth!" that greeted the great old odes at the Fair of Ukaz. Details, of course, are subject to criticism. "Muhammad el-Abdullah" (p. 126) is a very strange name, and (p. 14) the Memluk heraldic bearings might have been recognized after Artin Pasha's labors on them. The pot-hooks are polo sticks and the cup shows the office of cup-bearer. The passage on p. 56 about the mosque being *mu'allaq* on *'amud* is far from clear, and the Naqibs whom Miss Bell met at Baghdad and Mosul (pp. 195, 251) must have been the officials in charge of the registers of Sherifs in these two places. But such details cannot touch in the least the great value of such a book as this.

CURRENT FICTION.

The Miller of Old Church. By Ellen Glasgow. New York: Doubleday, Page & Co.

In Miss Glasgow's forward-looking thought the vigorous life of the New South is reflected. She relegates the negro to the background, where he appears merely as an indispensable feature of the picturesque Virginia landscape, and consigns the "dilapidated aristocrat" to a place of secondary importance. Most of her people are of the self-respecting agricultural class that has arisen out of the ignominious "pore white trash" of antebellum days. This has been a movement actually spectacular in its swiftness and its promise; and, by conveying a sense of the larger romance, Miss Glasgow amply compensates for a plot of somewhat conventional design. In the relations of the two households, the Gays and the Revercombs, the condescensions on the one hand, the hostility on the other, we read the whole story of antagonism between the families of the plantation owner and the small farmer. One is tempted to expatiate at length on the typal perfections of the Revercomb group, covering in four generations the whole psychology and most of the history of their entire class—the patiently tended grandparents, childishly greedy and quarrelsome in their dotage; the mother, harsh and devoted; the silent Abner, meeting depredations upon his womankind with summary vengeance; Archie, lazy ranger with dog and gun; and, lastly, the stalwart miller, embodying all the crude virtues of his class, its vigor, its energy, its independence, its intolerant idealism, its powers of resistance and endurance.

No less admirable is the portrayal of the cultivated Gays, survivors of a social order whose standards no longer prevail. No one has heretofore let in the clear cold light of common

Digitized by Google

sense upon the status of the Southern woman under the old régime, and surely no one but a modern artist could have painted the slow martyrdom of poor Miss Kesiah, to whom nature had denied both beauty and "the liver of a lady" ("the difference between the liver of a lady and that of another person was that one required no exercise and the other did"), and whose artistic predilections had been sternly repressed as unbecoming in "a Virginia lady."

People of Popham. By Mary C. E. Wemyss. Boston: Houghton Mifflin Co.

Obviously of the type of "Cranford," this tale betrays here and there the too familiar modern note of cleverness which was utterly foreign to Mrs. Gaskell. Yet Mrs. Wemyss possesses a fund of genuine and infectious humor, especially in her portrayal of children, who seem to have stepped directly out of nature. The conclusion supplied by little Pat Howard to an unfinished proverb assigned by his governess is worth quoting: "People who live in glass houses—should undress in the dark." The author shows a literary sense of phrase, too, in such comments as that upon the "terrible facial stiffness which comes from the social smile." And the letter which the village doctor's wife pens to a hostess whose dinner, given the previous evening, has disagreed with the worthy physician, is inimitable.

Indeed, there is not a little to commend in the painting of rustic manners and motives. Christian Hope, the heroine, though not the most beautiful woman in the book, is a keen observer and sympathetic listener who will probably win the hearts of a good many readers. Lady Victoria Popham is a diverting type of leading person of the community; and the Howards, husband, wife, and children, are unconquerable optimists who add appreciably to the total effect. The plot is for the most part, as it should be, rather slight. That it should have been marred by the illogical and almost absurd romantic breathlessness of the final pages is a pity.

The Red Lantern. By Edith Wherry. New York: John Lane Co.

The Boxer uprising of 1900, in China, is the theme of this not uninteresting narrative. The heroine, Mahlee, Goddess of the Red Lantern Light, is a Eurasian, daughter of an English nobleman and an obscure Chinese woman of Peking. Her struggle between East and West in her own temperament is often well depicted; and the scene in which she confronts her father and white half-sister is genuinely dramatic. Sam Wang, also Eurasian, and a leader in the uprising, is a grotesque figure not wholly convincing, whose passion for the goddess is finally thwarted by death at the hands of his own followers. Andrew Handel, an ascetic missionary from Vermont, all but declared his love for the same goddess, when, as he was about to raise her hand to his lips, "a strong shaft of moonlight struck the long fingers which lay in his; and he saw their yellow gleam." In short, there are several thrills in store for the emotional reader. Scorned by her white lover, Mahlee turns from the Ark of the Covenant Mission to avenge the insult to her race by becoming a Jeanne d'Arc of the Boxers. The not unimpressive tragedy of her end may be left to the curiosity of the reader.

The Chinese atmosphere of the story seems to be faithfully conveyed, and constitutes a considerable part of its appeal. There is too much half-successful melodrama, however, which is not entirely redeemed by the strength of the conclusion.

The House in the Hedge. By Ralph Henry Barbour. New York: Moffat, Yard & Co.

Early in the book, the winsome heroine of this little story climbs a tree. Up in the tree is a platform where Marjorie likes to read. From that exalted though rustic station she can look across the hedge that otherwise conceals the house recently rented by a mysterious stranger. The windows are open but curtained, and through the curtains comes the voice of a man entreating Marjorie to climb the tree every day and speak to him. He is reduced to asking this favor by an automobile accident, which has turned Reed Harrington, Harvard football player, poloist, oarsman, and what-not, into a recumbent figure, paralyzed below the shoulders. So Marjorie continues to climb her tree and to engage in conversation with the voice, until the invalid's shame of his helplessness passes away. Thereafter Marjorie and Harrington converse, not as through a lace curtain darkly, but face to face. Toward the end there is a successful operation, of course, and happiness comes, postponed for a few pages, by a rather foolish bit of pistol-play. The simple, straightforward narrative with its touch of school-girl slang and humor is really well done.

MEDIÆVAL STORIES AND STORY-BOOKS.

Catalogue of Romances in the Department of Manuscripts in the British Museum. Vol. III. By J. A. Herbert, assistant in the Department of Manuscripts. Crown 8vo, pp. xii, 730. Printed by order of the Trustees. London, 1910.

One would not expect to find in a catalogue of mediæval manuscripts, mostly Latin, a mine of entertaining fiction, and yet the volume before us contains literally thousands (there are above eight thousand separate articles, a considerable number of which are repeated) of edifying stories, many of which are still in circulation. We use the term edifying, as well as entertaining, for this great mass of stories owes its origin, almost exclusively, to the desire of mediæval preachers to interest and edify their congregations. The use of illustrative stories in sermons, while not unknown earlier, did not become general until the foundation in the thirteenth century of the Franciscan and Dominican orders profoundly changed the character of preaching. It is said of the founder of the Ordo Prædicantium, "Abundabat exemplis, quibus ad amorem Christi seculive contemtum audientium animi flecterentur"; and almost all who were prominent in the use of *exempla* or illustrative stories in their own sermons or by collecting them for the use of others were Dominicans. A most important exception was Jacques de Vitry, bishop of Acre, preacher of the crusade of 1217, and historian of the Orient. He was the first to employ systematically in his *sermones vulgares* (sermons addressed to all sorts and conditions of men) illustrative stories. These stories, or to give them their technical name, *exempla*, were collected separately for the use of other preachers, and similar collections were later made in alphabetical form, arranged by topics. With the invention of printing, the older manuscript collections were replaced by such printed collections as the "Speculum Exemplorum," Herolt's "Promptuarium," the "Scala Celi" of Johannes Gobius, etc. Sometimes the *exempla* are given in their simplicity, sometimes they are accompanied by a moralization. Of the latter class the "Gesta Romanorum," still a most interesting and precious work, is the best specimen.

One hundred and nine manuscripts are described and analyzed in Mr. Herbert's "Catalogue." The large majority of these contain collections of Latin *exempla*. Some are in verse, such as William of Waddington's "Manuel des Péchés" (French), and its English translation by Robert of Brunne, both published by the Roxburghe Club. There are also English metrical homilies, containing illustrative stories, some of which have been edited by Horstmann. In French is the collection known as "Vie des anciens Pères," which has been only partly published, and a collection of two hundred and twenty-nine *exempla* arranged alphabetically, and mostly taken from the "Alphabetum Narrationum." More interesting is the translation in the Northumbrian dialect of the "Alphabetum Narrationum" usually attributed to Etienne de Besançon, but shown by the author of the "Catalogue" to be more properly ascribed to Arnold of Liège (1308). The English translation has recently been published by the Early English Text Society, and is one of the

Digitized by Google

most interesting and valuable of the great collections. A considerable number of other manuscripts have been printed, either fully or in part, such as the "Exempla of Jacques de Vitry" (by Professor Crane for the English Folk-Lore Society), the "Tractatus de Abundantia Exemplorum" (Ulm, 1480), and Etienne de Bourbon's "Liber de Septem Donis" (by Lecoy de La Marche for the Société de l'Histoire de France). Cæsar of Heisterbach's "Dialogus Miraculorum" (by Strange, Cologne, 1851), Bromyard's "Summa Prædicantium," and Herolt's "Promptuarium Exemplorum" have been printed frequently. The Italian collection of moralized tales in MS. Add. 22557 has been printed by Ulrich in the *Romania*, Vol. XII (1884), and the "Gesta Romanorum," of which fourteen manuscripts in Latin, two in English, and one in German are here analyzed, is, of course, easily accessible in print. This is also the case with the important fables and stories of Odo of Cheriton, edited by Oesterley and Hervieux.

There is left, however, an enormous mass of inedited material of the greatest interest and value to the student of mediæval fiction. We may call attention especially to the MS. Add. 11284, containing the "Speculum Laicorum," usually ascribed to John of Hoveden, the chaplain of Queen Eleanor, mother of Edward I. The manuscript is often cited as the Thoms MS., as it once belonged to that distinguished antiquary and bears his signature. The work consists of a collection of passages from the Scripture and the Fathers, arranged alphabetically according to subjects in eighty-seven chapters, and illustrated by nearly six hundred short tales, apologues, and fables. The greater part of these stories are from the usual sources. The remainder, Mr. Herbert says, "belong to the category of 'temporum præteritorum ac modernorum eventus,' which our author had probably learnt at hearsay. In the great majority of these the scene is laid in England, generally in some specified locality, as Kent, Winchelsea, Berwick, Eynsham, etc. (especially the first-named, which occurs frequently). Two of the anecdotes relate to traits in Henry III's character; five others are narrated as having occurred during his reign; and others contain marks of time which assign them to the same period." Our space will not allow us to mention other collections, and the above must suffice to show the value and interest of mediæval *exempla*. It remains to say a few words about the work of the author of this catalogue.

In the first place, the range of this third volume is narrow and technical compared with that of the first two volumes, which contained, among others, romances belonging to the great cycles of antiquity, those concerning Arthur and Charlemagne, northern and eastern legends and tales, Æsopic fables, visions of heaven and hell, miracles of the Virgin, etc. A multitude of difficult questions were discussed and solved by the responsible author, the late H. L. D. Ward (a name dear to hosts of scholars in this country and abroad), who had the able assistance of J. A. Herbert, the author of the present volume. In the case of this third volume, there were relatively few questions to settle, but an enormous amount of labor and erudition was necessary for the analyses of the manuscripts and the annotation of the separate stories. This task Mr. Herbert has accomplished in a way to earn the gratitude of all students of mediæval fiction. In addition, he has contributed valuable information about Odo of Cheriton, the "Gesta Romanorum," the authorship of the "Alphabetum Narrationum," etc.

William Lloyd Garrison. By Lindsay Swift. (American Crisis Biographies.) Philadelphia: George W. Jacobs & Co. $1.25 net.

Biographies of men like Garrison, unlike those of statesmen, soldiers, or men of letters, must often be approached by the thoughtful student with somewhat of apprehension. However deep may have been the impression made by moral leaders or reformers upon their own times, one cannot be sure that the story of their careers will retain interest for succeeding generations. The moral problems of one age are not those of another, nor is their full significance usually comprehended by those who wrestle with them; and there is danger lest, as their conditions are examined with more precision and at longer range, a critical evaluation may weaken, if indeed it does not go far to destroy, appreciation of what once passed for moral fervor. To orient one's mind in a social situation whose chief ethical problem, in the form in which it presented itself at the moment, has been definitively solved, and then to describe that situation with truthfulness, sympathy, and detachment, is as hard a task as the historian is likely to essay.

There is no better illustration in American history of what has just been said than the course of the abolition movement under Garrison. The story of the emancipation of a race from servitude, linked as it is with the story of the greatest of all wars, will never, we may be sure, lose its spectacular interest, however often it may be told. But for a generation which, though it has never seen a slave, has nevertheless come to acquiesce in a policy of widespread race discrimination and subjection, the moral enthusiasm with which the struggle for emancipation was waged may well come to seem crude, remote, and even repellent. Here is a movement which, as many students now affect to see it, flouted history in affirming the natural equality of whites and blacks, ignored the economic advantages of slave labor under Southern agricultural conditions, and attacked indiscriminately all who opposed its programme of reform. Here is a leader whose courteous manners, consecrated zeal, and admitted intellectual powers were matched by fanatical intolerance and bitter speech; who seemed at times to love violence as much as he always hated ease; who fell an easy victim to the latest "ism," and quarrelled with the church as radically as with the state; who refused to vote or to join a party; and who, after denouncing in unmeasured terms the Constitution of the United States, publicly burned that instrument and advocated disunion. Clearly, we do not do this sort of thing to-day, partly because we think it rather bad manners, partly because it is not so easy as it once was to be a martyr. Why, then, should the story continue to be told, and each time with an attempt at still more accuracy and completeness? Why not leave a dead past to bury its dead?

We are disposed to think that Mr. Swift, in the volume which is the implied answer to such a question, has met the difficult conditions of his problem with a very high degree of success. His book does not, indeed, add greatly to our knowledge of the facts of Garrison's life, nor does it pretend to do so. Working, as he has been obliged to work, in small compass, he has frankly based his biography upon well-known and easily available material, and has leaned hard, as all must, upon the monumental "Story" by Garrison's sons. This is not to say that he has followed his authorities slavishly, or contented himself with rephrasing time-honored and conventional opinions. There is abundant evidence that he has studied his subject carefully and intelligently, and that his conclusions, however much they may accord with those of previous workers in the same field, have not been taken second-hand from any one.

The merits of Mr. Swift's book lie, first, in the orderly and instructive setting forth of the main events of Garrison's career. Considered simply as a piece of biography, it is highly creditable workmanship. There is enough of the general history to show the connection, and enough of personal detail to show the man. If there has been in the background of his mind an ideal Garrison, there is no evidence that it is an ideal different from that which a straightforward and thoughtful narrative would be certain to reveal. Beyond these excellencies, however, fairly to be looked for in the work of a diligent student and practised writer, is the rarer quality of intelligent and sympathetic appreciation. More successful-

Digitized by Google

ly, we think, than almost any historian who has dealt with the abolition movement, Mr. Swift has outlined in true perspective the moral foundations of Garrison's course. Perhaps slavery would have disappeared in this country, in course of time, as a result of the operation of social, political, and economic causes beyond the control of any one man; but it in fact disappeared when it did chiefly because William Lloyd Garrison and his followers stirred the conscience of the nation to the depths, and made the continuance of the institution seem a crime. Mr. Swift has not allowed the glamour of this moral revolution to distort his critical judgment. He sees clearly, and with courteous frankness exposes, the weaknesses and mistakes of Garrison and his adherents, and gives full credit to the men who reaped where Garrison had sown. But he sees with equal clearness, and sympathetically describes, the moral conquest of public opinion which it was the distinctive work of the abolition agitation to achieve. In an age which, like the present, is fond of attributing pretty much all progress either to knowledge or to organization, it is refreshing to come upon a book which, like this, tells once more the story of a social revolution whose greatest instrument was persistent moral appeal.

The Intellectuals: An Experiment in Irish Club Life. By Canon Sheehan, D.D. New York: Longmans, Green & Co. $1.50 net.

"Did you ever read 'The Autocrat of the Breakfast-Table'?" asks Doctor Holden in one of the opening pages of this book. "Of course," answers young Father Dillon.

The Autocrat is well known to Canon Sheehan, who has frankly taken him for his model in this instance. His plan is more formal than that of Dr. Holmes. His interlocutors are not assembled in the casual fashion of the breakfast-table group. The intellectuals are "a society of select people, who meet together for amusement, instruction, and edification," and call themselves with old-fashioned self-consciousness the *Sunetoi*. The founder and moderator is young Father Dillon. The other members are the aforementioned physician and his wife, a banker and bankeress (the banker being a confessed Philistine), a Dublin professor, a young English poet and an old Irish one (but one "life" away from a title), an Irish girl-graduate and a Scotch bluestocking, and one or two others. Attempt is made to give the Protestants a fair representation. The society meets at regular intervals at the houses of the members, who are all supposed to contribute to the entertainment. The enterprise is rather obsolescent than novel, or would be in New England. But the imaginary conversations which form the real substance of the book have a good deal of freshness and variety. Here Canon Sheehan has fairly struck the note of the Autocrat. His good humor, his flexibility of mood, the range of his themes, all serve to recall, with no sense of feeble imitation, those Beacon Street symposia of famous memory. Even the bits of verse are not lacking which so pleasantly punctuate the discourses of the Autocrat. Literary and moral questions have an important place in these discussions; but it is natural that the burning themes for Canon Sheehan have to do with the Ireland—the Catholic Ireland—of today. The striking thing is that, with this frank preoccupation, he succeeds in presenting so many different points of view, and in leaving them as points of view. He offers no panacea for the ills of old Ireland, advances no arguments (in his own person) for the confusion of Protestantism. A certain "love-interest" somewhat perfunctorily introduced might have been dispensed with: Canon Sheehan is less fortunate in his touches of romance than the Autocrat.

History of Taxation in Iowa. By John E. Brindley. Iowa City: The State Historical Society of Iowa.

In these two volumes of the Iowa Economic History Series Professor Brindley has given the most careful and valuable study yet made of the tax system of an American State. Part i deals with the general property tax, and is noteworthy for the emphasis placed upon methods of administration. From 1838 to 1857 the forces of centralization and decentralization contended for the mastery, victory resting sometimes with the advocates of township assessment and sometimes with those of county assessment; while the Code of 1851 vested substantial authority in a State Board of Equalization. But from 1857 to 1873 the pendulum swung steadily toward administrative decentralization, with the result that the city and township assessors were finally left in possession of all effective power in the assessment of property. Whatever the shortcomings of the general property tax may be—and in Iowa they seem to have been as numerous and serious as elsewhere—it is evident that no system of direct taxation could have been expected to work well under the chaotic conditions attending the purely local system of administration. Professor Brindley's work would be noteworthy, if for no other reason, for his firm grasp and clear presentation of this vital fact, which is one that has been ignored almost invariably by American students of State and local taxation.

Part ii deals exhaustively with special problems in taxation, such as the taxation of banks, insurance companies, express, telegraph, and telephone companies, inheritance and poll taxes, exemptions, tax limitations, the assessment of money and credits, and the tax-ferret system. Part iii treats with equal care the subject of railway taxation. These topics are handled with great wealth of detail and frequently by the comparative method. Iowa has encountered all the difficulties, legal, political, and economic, that have attended the best efforts of other States. Particularly instructive is Professor Brindley's discussion of the taxation of railways. In 1872, as a result of a coalition between the farmers and the railways, a law was enacted by which the roads have ever since been assessed by the State, and the valuations so determined have been distributed among the counties on a mileage basis, and then taxed at the local rates like the property of individuals. The result has been that terminal values have been distributed among rural taxing districts, greatly to the detriment of the cities; and that on the terminal values thus distributed the railways have paid local taxes at the rate of $2.50 to $3 per $100, instead of city rates, which are frequently $8 or $9 per $100. Thus it comes about that to an important terminal city is allotted an assessed valuation of $31,297 for its railway property, while the adjoining township receives a valuation of $95,182.

In considering remedies for the notorious evils of the present system of taxation, Professor Brindley avoids the hasty and superficial conclusions which a decade ago found such favor among tax reformers. He shows that the proposal to effect a complete separation of the sources of State and local revenues, entirely ignores the fundamental evil of existing methods, viz., complete decentralization of assessment machinery; and that State control of local assessments is the true remedy for the conditions which the advocates of separation desire to change. He recognizes also that in most of our States it is useless to propose the exemption of personal property from all taxation, and that the present tax on personalty is not likely to be abandoned until practicable substitutes are found. Such substitutes, he thinks, may be found in business or rental taxes, and in the imposition of a uniform tax, at the rate of three or four mills on the dollar, upon intangible property. In the taxation of railways, he favors *ad valorem* assessment by the State, with a proper apportionment of local and non-local values. It is interesting to note that last spring the Iowa Legislature adopted the suggestion that a uniform tax at a moderate rate should be imposed upon intangible wealth; and also authorized the appointment of a special tax commission to investigate the entire subject of taxation and prepare further measures of reform. In this work, the

Digitized by Google

commission cannot fail to derive the greatest assistance from Professor Brindley's exhaustive, able, and eminently judicious work.

Scotch Irish Pioneers in Ulster and America. By Charles Knowles Bolton. Boston: Bacon & Brown. $2 net.

Though the Scotch-Irish constituted the second most important element composing our population at the end of the colonial period, no treatise has ever been written presenting the extent of their settlement and summing up their influence in American history. Such treatment as has been attempted hitherto is either partial and local or, if on a larger scale, is lacking in depth and thoroughness. Mr. Bolton here adds one more to the works of the former type, dealing only with the forerunners and carrying his account but little beyond the period of the great migration, 1718. His work is chiefly biographical and genealogical and is written in a fashion to attract but few readers. Nevertheless, it is based on considerable independent research, and in all that it says of the origin of the movement is deserving of appreciation and respect.

Mr. Bolton is interested in four phases of his subject: the conditions prevailing in Ulster County, Ireland, from which one or more members from nearly every family came to America; the occasional emigrants, generally ministers, who came over before 1718; the migration to New England and the scattering of the newcomers in the frontier districts of Massachusetts, New Hampshire, and Maine; and lastly the migration to the Middle and Southern colonies, chiefly to Philadelphia and Charleston. The general estimate he has given of the conditions prevailing in Ulster County is admirable and his account of the topographical features and the religious, social, and economic life constitutes a distinct departure from all previous modes of treatment. The details of the migration and later settlements are fairly well handled, though sometimes not as clearly as they ought to be. Furthermore, Mr. Bolton is manifestly more interested in New England than he is in the South, despite the fact that for every one who landed in Boston a dozen set foot in Newcastle, Philadelphia, and Charleston, and despite the further fact that in the South the Scotch-Irish exercised greater influence in governmental and religious life than they did in New England.

For the general reader, the most interesting and suggestive chapter is that on Scotch-Irish character. These people were compacted of the sternness of the Covenanter and the wit and humor of the Irish. They were softened by the century's residence in the favoring environment of Donegal, Londonderry, Tyrone, and Antrim. They cared little for culture and knowledge and were destined to play but little part in literature, art, science, business, philanthropy, and music. They did nothing to beautify themselves, their homes, or their communities. They were pioneers and State builders; their law was utility and their philosophy pragmatism. They belonged to the frontier and, in all the colonies where they settled, they eventually found their way into the back country. If they remained in the cities, they became tradesmen, chiefly tailors. In the history of America, they stand for energy, resources, and endurance. They were earnest and ambitious. Deprived of political rights in their old home, they seized eagerly the opportunities that the new world offered. They became leaders in government, debaters in assembly, and, as a rule, vigorous upholders of American independence against the rule of the mother country. They were conspicuous in adventure, defiant in revolution, and brave in war. Tenacious in their theological views, they became equally stubborn in their adherence to political dogmas, and whether it was the wilderness or the catechism or the government that opposed them, they fought with the same determination against all. The names of Stark, Knox, McClellan, Asa Gray, Greeley, and Motley of the northern family stand beside those of Rutledge, Calhoun, Jackson, and McKinley of the southern group, as witnesses to the leading part which the Scotch-Irish have played in the history of American achievement.

Notes

Henry Holt & Co. have just contracted with Professors Trent and Erskine of Columbia for a volume on "Great Writers of America," in the Home University Library.

In October the same house will publish "Language Lessons for Intermediate Grades," as Book I in the series Progressive Studies in English, edited by Miss Alma Blount and Prof. C. S. Northup; Book II, "An Elementary English Grammar," has already appeared.

Mrs. Frances Hodgson Burnett's novel, "The Secret Garden," will be issued from the press of Stokes, August 25. The following month Stokes will bring out Robert Hichens's "The Fruitful Vine," and "Pandora's Box," by John A. Mitchell, author of "Amos Judd."

In the list of announcements of Doubleday, Page & Co. are found: "The Boss of Wind River," by A. M. Chisholm; "The Life and Letters of Moses Coit Tyler," by his daughter, Jessica Tyler Austen, and the reminiscences of Gen. Basil W. Duke.

The Titmarsh Club, to celebrate the centenary of Thackeray's birth, is holding an exhibition in Charterhouse. Manuscripts, letters, drawings, and portraits of the writer have been lent by members of Trackeray's family, Lady Ritchie and Denis Thackeray, and by Pierpont Morgan, Walter Spencer, Sir Frederick Macmillan, Mrs. G. M. Smith (widow of Thackeray's publisher), the Reform Club, and others.

With the "Biographia Literaria" of Coleridge there appeared, in 1847, a supplement which had been begun by Henry Nelson Coleridge and was finished after his death by his widow, Sara Coleridge, the poet's daughter. Henry Nelson Coleridge had intended to include in this supplement the principal letters of the poet then known, together with comments on his intellectual development, and the first part of the supplement is in fact shaped in that way. Arthur Turnbull has now carried out this design, from which Sara Coleridge departed in her section of the supplement. The result is two agreeable volumes in Bohn's Library (New York: Macmillan), published under the title of "Biographia Epistolaris." Mr. Turnbull prints the original supplement intact, but enlarges it by the insertion at the due chronological points of further letters of Coleridge with editorial comment and narration. As the new parts are marked off by square brackets, no confusion of authorship occurs, although the junction of the styles and opinions of three editors gives a curious unevenness to the work. Of the 747 letters of Coleridge which have hitherto appeared in print Mr. Turnbull includes 219, the others being omitted for copyright reasons. Altogether the two volumes present a pretty fair view of Coleridge on his lower intellectual level, with here and there a note of deep personal interest or high speculation. We cannot much commend the editor's own writing. In fact, one rather gasps at such a sentence as this from the Preface: "Coleridge, in his letters, has written his own life, for his life, after all, was a life of thought, and his finest thoughts and his most ambitious aspirations are given expression to in his letters to his numerous friends." Nor is Mr. Turnbull's judgment always more impeccable than his English. It is, for instance, a little disconcerting to find in the first volume (p. 235) Coleridge's fragmentary productiveness charged to his transcendental genius, and then in the second volume (p. 138) to find it attributed to an enlarged heart: "This physical defect was the cause of all Coleridge's inability to execute his own ambitious schemes." The Index, we must add, is deficient.

Carl Lorenz's "Tom L. Johnson" (Barnes) is a sketch of the late Mayor of Cleveland. Its one virtue is its candor. "Truth, half-truth, and untruth were sometimes matters of expediency with him," says the Introduction, and later pages declare that "Whatever he did, he did not because of a great love for his fellowmen, but because he was ambitious to stand above the common politician of the day": "The old Johnson nature that liked a straight course and went a crooked way loomed up." There is only too much justification for these expressions. Otherwise, the book is disappointing. We get a view at close range of a powerful, impetuous, strife-loving personality, with the American business man's lack of appreciation of the finer things, but the view is unsteady. The writer fails to give due space to some of the turning-points in a career which he apparently knows thoroughly; he is also irritating at times in his phrasing or his observations.

There are plenty of books by literary

Digitized by Google

gentlemen become laborers, but few as good as Joseph Husband's "A Year in a Coal Mine" (Houghton Mifflin). Mr. Husband had the great advantage of working for a legitimate purpose, that of learning the business, without ulterior humanitarian or literary intentions. His story is compact and vivid. It describes the workmen and their toil in a soft-coal mine in Illinois. What is especially interesting to a lay reader is the sense Mr. Husband gives of that remarkable system of artificial respiration by which a coal mine is kept in being. One gets the miner's feeling for the air as a precious fluid, and a most tractable one. It is directed where the engineer will, dammed, secreted, diverted below according to the needs of imperilled workmen. Absorbing too, is the account of the fight against fire in the mine, of work effected in the poisonous reek by means of the oxygen helmet, of various ingenious attacks upon the smouldering enemy. In the end the fire won, and the mine was abandoned, but there never was a better fight than that which Mr. Husband describes. This is a most informing little book, written with the force born of knowledge and simplicity.

In "A Shepherd's Life" (Dutton) W. H. Hudson has tried to recall older conditions on Salisbury Plain. He has lived with the Wiltshire villagers, and has recorded the recollections of old men and women. In general he harks back to the days before agriculture and army manœuvres, when the horned Wiltshire sheep with the few requisite dogs and shepherds held the downs, and seeks to revive that patriarchal time with its few and chiefly physical values. An ancient shepherd, Isaac Bawcombe, is the representative of vanishing pastoralism. Mr. Hudson departs from Bawcombe upon impressionistic excursions of his own, and naturalizes at large among the birds, dogs, and foxes; but ever returns to his hero. Among the tall fellows of Isaac Bawcombe's youth was Jo the carrier. On one occasion his eight donkeys were caught trespassing in a hay meadow:

> The enraged farmer took them to the village pound and locked them up, but in the morning the donkeys and Joe with them had vanished, and the whole village wondered how he had done it. The stone wall of the pound was four feet and a half high, and the iron gate was locked, yet he had lifted the donkeys up and put them over, and had loaded them, and gone before any one was up.

Mr. Hudson, who when his theme warrants it can be tropical enough, here is persistently demure and restrained. Anybody who is able to sift the wheat from the chaff of Wordsworth's "Excursion," will like "A Shepherd's Life." Those who find such a task beyond their powers or inclination might as well be warned off once for all. Mr. Hudson has achieved a new style as puzzling in its way as the manner of certain dons. Is it highly distinguished? or is it merely dull? or is it compact of supersubtle intelligence assuming the safe disguise of an expression from which sentiment has been carefully eradicated? Here are niceties in which the gentle reader surely is as competent as your reviewer. The book is of good English make, and is pleasantly illustrated with outline vignettes by Bernard C. Gotch.

"Ancient, Curious, and Famous Wills" (Little, Brown), by Virgil M. Harris, is a dignified scrap-book of somewhat miscellaneous material. There are the texts of a number of wills, and summaries of, or statements concerning, many other wills. There is a large amount of anecdote, gossip, and comment; and a part of the book is devoted to wills figuring in literature and the drama. A statement of the plot of "The Thunderbolt" illustrates the wide extent of the author's inquiry. The testamentary efforts of Plato and of Mrs. Eddy enjoy considerable space, while the wills of James Smithson, Collis P. Huntington, and Amos R. Eno together command fewer than twenty lines. Among the "curious" wills is, rather appropriately, that of David J. Brewer, "late chief justice of the United States." In many instances the editor refers to judicial decisions, but apparently in no instance does he give a citation of the authority. The wide range of idiosyncrasies in testators is amply illustrated but there may well be some doubt as to the usefulness of the volume.

Several recent essays of Adolf Harnack, in his debate with Rudolph Sohm on the origin of the church as a legal society and the nature of ecclesiastical law, are made accessible to the English reader in a volume of the Crown Theological Library, entitled "The Constitution and Law of the Church in the First Two Centuries"; they are translated by F. L. Pogson and H. D. A. Major (Putnam). Sohm's theory, as advanced in his epoch-making "Kirchenrecht" in 1892, is that the New Testament Ecclesia was not an organization of any sort, either local or general, but a spiritual fellowship; that a legal constitution is opposed to the nature of the church, and that when the notion of ecclesiastical law was introduced Christianity was transformed into Catholicism. Harnack submits this thesis to searching criticism, maintaining that Sohm is correct in his affirmations, but wrong in his denials. He discusses at length the first indicatibns of organization in the primitive Christian communities, with their various ordinances and officers, paying special attention to the rise of the episcopate and a specific ecclesiastical priesthood. While Harnack is at pains to state his opponent's views accurately, one who would do full justice to Sohm should read the more sympathetic appreciation of Walter Lowrie in "The Church and Its Organization in Primitive Times," published a few years ago. Another recent translation from the German is the third volume of Pfleiderer's "Primitive Christianity," by W. Montgomery (Putnam). The period treated is the same, but Pfleiderer's work is a general history, dealing with literary and doctrinal questions as well as those of organization.

Prof. A. S. Mackenzie's "The Evolution of Literature" (Crowell) is, as the title suggests, a somewhat ambitious work. "Is there no possible way," asks the author, "whereby the art of the critic may be rendered a little more objective? Can literary criticism not attain to the dignity of even a semblance of science? It may if we endeavor to broaden and deepen our conception of literature. It is such a purpose that regulates the hope and the scope of the pages that follow." The professor takes the daring position that the evolution of literature is closely connected with the evolution of society, and he undertakes to display the mutually dependent developments proceeding together. Belonging to that grandiose division of minds which in former days used to write histories of the world, he does not confine himself to any one *genre* or nation, but presents a view of mankind and its literature from pole to pole and from the dawn to the dusk of consciousness. First, he considers "primitive" literature in Africa, Oceania, Asia, and America, with special reference to rhythm, dance, drama, lyric, narration; next, "barbaric" literature in Africa, Oceania, Asia, America; then, "autocratic" literature; finally, the ultimate culmination of primitive shout and barbaric yawp under the pressure of modern civilization in "democratic" literature. It cannot be said that the whole process takes place visibly before the reader's eyes. The professor skims along over "autocratic" and "democratic" literature like Camilla o'er the unbending corn; for he is bent upon the formulation of the "provisional laws" of literary evolution. These are three, and, he says, "are believed to be new." In the interest of a scientific literary criticism we reproduce them here: "I. The Law of Progress may be stated thus: *Under similar conditions the average literary advance in a given community is directly proportional to the width and depth of man's attainment of consciousness of self and of the world.* II. The Law of Initiative may be stated thus: *Every step in literary progress is initiated by individuals, whose success is measured by their own mental individuality and by the readiness of the community to receive as well as to perpetuate the new discovery in form or content.* III. The Law of Responsiveness may be stated thus: *Other conditions being equal, literary form and content vary directly with the orientation of mental responsiveness in a given community.*" Professor MacKenzie, thinking these laws "may be more luminous to some readers" in the shape of formulas, expresses them also thus:

$$A=S+W$$
$$P=I+C$$
$$L=R\pm O$$

For the meaning of the symbols we refer the reader to page 415. With a Newtonian underpinning of this character, we do not think that literary criticism need longer be complained of as without "even a semblance of science."

The Colonial Society of Massachusetts continues its output of substantial publications in the issue of the twelfth volume of its Transactions, covering the year 1908-1909. It announces the early appearance of two more volumes, one nearing completion and the other largely in type. The activities of this distinguished society stand in striking contrast to the apathy of some of our local historical associations. Inevitably, in the search for local data, such a society tends to magnify local history and to serve up much that is rather antiquarian than historical, but, in the main, the standard of its papers is high. The present volume may almost be characterized as a Harvard number, since no less than six articles relate directly or indirectly to the history of that institution, and, in addition, an account is given of the inauguration of President Lowell. Andrew McFarland Davis's contribution on John Harvard, and his supplemental paper on "Hints of Contemporary Life in the Writings of Thomas Shepard," are delightful. In the latter instance Mr. Davis might have gained a hint or two

Digitized by Google

from Shepard's letter to Hugh Peter of December 27, 1645, conspicuously printed not many years ago. Scarcely less valuable are Horace Everett Ware's papers on "Winthrop's Course Across the Atlantic" and "A Forgotten Prime Meridian," the second of which, as distinctly mathematical rather than historical, may be in honor of the late Simon Newcomb, whose picture forms the frontispiece to the volume. On the other hand, Simeon E. Baldwin's paper on Springfield seems to be but a rethreshing of old straw, while the articles of John Taggart Blodgett on "The Mayflower Compact" and Merton Dexter on "Plymouth and Jamestown" are on a lower plane of originality and scholarship. One item is certain to puzzle the historian. On page 190 we learn that James B. Ayer "read some notes, covering the period from 1764 to 1785, concerning Harvard College, taken during a recent visit to London from the records of the New England Company." What "New England Company" was in existence at that time? It is a matter of regret that the notes thus read were not printed in full, that their source might be identified.

Students of ballot and election laws will welcome the monograph of Arthur C. Ladington on "American Ballot Laws, 1889-1910," published as a bulletin of the State Department of Education (No. 488). The monograph contains an historical survey of ballot-law legislation for the past twenty years, together with a comparative tabular digest of ballot laws of the forty-six States and the Territories of Arizona and New Mexico in force last November. It is divided into several parts, as follows: (1.) A chronological survey (1888-1910) of every law enacted and every constitutional amendment proposed by the Legislature. (2.) A classification and summary presenting in tabular arrangement the principal changes in the form of ballot in the several States since 1888. (3.) A summary for each State, under various heads, of the principal features of their ballot laws as they stood on November 8, 1910. The subdivisions cover constitutional provisions, type of ballot, the arrangement of names on the ballot, methods of voting "split" and "straight" tickets, methods of placing names on the ballots, and details of the provisions for voting and counting the ballots.

A "Latin Grammar," by H. E. Burton of Dartmouth College (Silver, Burdett & Co.), is an intelligent attempt to set forth the essential facts of the Latin language for the use of intelligent students. The details necessary for graduate study are omitted, but everything of value for school or college teaching is included. In arrangement the book differs greatly from current grammars. The customary chapter on Formation of Words has been broken up, and the formation of nouns is treated at the beginning of the chapter on noun inflection, the formation of verbs at the beginning of the chapter on verbs. While much may be said for this innovation, it tends to distract the attention of the younger student from the vital matter of paradigm study. In the arrangement of the syntax Professor Burton contents himself with plain statements of fact. If he has theories as to the development of constructions from earlier types, he shows little indication of them in his presentation. While he adopts Professor Hale's volitive subjunctive, he retains the potential subjunctive in spite of Professor Elmer. On the other hand, he does not make of syntax a lexical treatment of particles as did Lane, nor does he arrange his topics according to the elements in a developed sentence as did Gildersleeve. The case syntax follows the order of the cases, the verb syntax the order of the moods. In general the author is chary of coining new terms or including new categories. But the useless ablative of the road finds place, and the ablative of extent of time has the dignity of a separate heading. The treatment of the syntax is fresh, straightforward, and clear; no subtleties of expression or vagaries of interpretation disturb the comprehension. Least successful is the author in handling the dative case, where he shows himself a modified localist, while in regard to the other cases he leans to the grammatical theory. The treatment of conditional sentences is particularly good, while in the matter of temporal sentences he shows weakness, especially in *cum* with the indicative, and *antequam* and *priusquam*. In the introductory chapter on Sounds, we find the latest results as to vowel length, though the author is conservative as to word-division and accentuation. Very few errors are to be found. In the paradigm of the verb we meet with the incorrect form *amatus esse*, although correct examples are given in the syntax § 948, and a glance at Priscian would have saved him from the blunder. The parts of speech are nowhere defined, and so the doubtful distinction between noun and substantive is avoided; but in the syntax, we have a whole chapter devoted to Substantive Clauses, without any definition of the word substantive. The translations of the examples are good, but lack the distinction of the translations of Gildersleeve or Lane. But, speaking generally, the grammar is an extremely capable and satisfactory work and deserves cordial recognition, while the typography is excellent and adds greatly to the good impression which the book produces.

Edward Dicey, the English author and journalist, is dead at the age of seventy-nine. He took honors at Cambridge in both the mathematical and classical tripos; was called to the bar in 1875, and during his career as a barrister spent much of his leisure in literary work. For a short time he was editor of the London *Daily Telegraph*, and from 1870 to 1889 of the *Observer*, in which he strongly urged the annexation of Egypt by the English. Mr. Dicey was the author of "Rome in 1860," "Cavour, a Memoir," "Six Months in the Federal States," "The Schleswig-Holstein War," "Battlefields of 1866," "A Month in Russia During the Marriage of the Czarewitch," "The Morning Land," "England and Egypt," "Victor Emmanuel," "Bulgaria, the Peasant State," "The Story of the Khedivate," and "The Egypt of the Future."

The death is reported from London of Samuel Henry Jeyes, a journalist, and author of translations from Juvenal and of volumes on the Marquis of Salisbury, Mr. Chamberlain, and Lord Rosebery.

Ulric de Fonvielle, who died recently at the age of seventy-eight, was a man of varied activities. He began as a painter, but soon turned to journalism. He took part in our own civil war, and fought in Italy on the side of Garibaldi. He accompanied Victor Noir to the interview with Prince Pierre Bonaparte when Noir was shot. He was in the Franco-Prussian war, and though condemned to death by the Commune, obtained refuge at the house of Sardou. Later he returned to journalism and painting. He was the author of "Souvenirs d'une chemise rouge," published in 1861.

Prof. Otto Gilbert, director of the university library of Halle, who is dead at the age of seventy-one, had written a number of books on classical subjects, among them: "Rom und Karthago," "Griechische Götterlehre," and "Die meteorologischen Theorien des griechischen Altertums."

Science

BURBANK'S IMPROVED FRUITS.

A picture of John Burroughs sampling the "Patagonia" strawberry in its originator's garden at Santa Rosa, Cal., is in Luther Burbank's latest bulletin. In this berry Mr. Burroughs discovered "a wonderful pineapple flavor" and pronounced it the most delicious strawberry he had ever tasted. It is said to be an exceptionally good keeper, and can be freely eaten by those with whom the common acid strawberries disagree. It is the result of a full quarter of a century's patient experiments on the part of the most ingenious and successful of all hybridizers. For twenty years Mr. Burbank had, as he frankly admits, tried in vain to improve on the finest berries in the market. Knowing that all our best strawberries have descended wholly or in part from one of the Chilian varieties, he got one of his collectors in Chili, five years ago, to send him seeds of wild strawberries from the Cordillera and from the Coast regions. Among the plants which grew from these seeds he found some that promised to be of great value when crossed with the best American and European strains. With his usual Edisonian patience, he experimented until "among the very numerous seedlings under test was found this unique berry, which was at once recognized as the grand prize."

In this little genealogical tale we have an excellent illustration of that "judgment as to what will likely be good and what bad" which, in the words of Professor Bailey, is "the very core of plant-breeding," and in which "Burbank excels." His bulletins give many similar instances; and in view of the fact that his rivals and others belittle his labors, it is proper that he should plead his own cause. His bulletins call attention to some of the results of his methods as compared with those of other plant-breeders. Here, for instance, is a fact for his detractors: "Nearly 95 per cent. of the new plums introduced since 1890, now catalogued as standards, originated on my own farms, although near-

Digitized by Google

ly four times as many new varieties have been introduced by other dealers. Most of the introductions of others are not now generally even listed." The Burbank plum, which was introduced less than twenty years ago, is now perhaps more widely known than any other plum, the world over; but, he says, "hundreds of better plums have since been produced on my experiment farms." The Burbank potato is now the universal standard in the Pacific Coast States, and is gradually taking the lead in the Middle West. The new Burbank cherry is sold at high prices in Eastern markets. Altogether, there are already above a hundred valuable new plants, fruits, and flowers, "every one of which has proved better than those known before in some new quality, in some soils and climates. All do not thrive everywhere. Please name one good fruit or nut that does."

The last two sentences are directed at those of Burbank's critics who triumphantly point to cases of failure of his new products in this or that locality. Judgment has to be used; "certain varieties which are a success in one locality may be, and often are, a complete failure a few miles distant, or near by on a different soil or at a different elevation." The Burbank Crimson Winter Rhubarb has been offered by unprincipled dealers in the cold Northern States, though they must know that it cannot prove successful there. For this new type Mr. Burbank makes the claim that it is the most valuable vegetable introduced during the last quarter of a century. So many fortunes have been made with it in California and Florida that it has been named "The Mortgage Lifter." The chief forester of the Government of South Africa reports that at Cape Town, where all other rhubarbs had been a failure for two centuries, the Burbank Crimson Winter variety turned out a complete success. Yet Mr. Burbank now has a still further improved variety, the Giant, which excels the original Crimson Winter Rhubarb "at least 400 per cent."

"It is amazing what opposition one has in experimenting, and the ignorance there is to contend with," writes an English appreciator of this American's remarkable horticultural achievements. Yet Luther Burbank declares that the greatest inconvenience or injustice he has met is not misunderstanding, prejudice, envy, jealousy, or ingratitude, but the fact that purchasers are so often deceived by unscrupulous dealers who, misusing his name, foist upon the public green carnations, hardy bananas, blue roses, seedless watermelons, and a thousand other things, including United States Government thorny cactus for the Burbank Thornless. On this point Mr. Burbank writes with feeling. Fourteen years ago the first scientific experiments for the improvement of cactus plants were instituted on his farms. Eight years later, when the long and costly labor was crowned with success, the United States Department of Agriculture spent $10,000 in searching the world for a cactus of great agricultural and horticultural value like those already produced on his farm, but the result was a failure; the "spineless cactus" sent out by the Department of Agriculture is not spineless, not safe to handle or feed to stock, and the fruit is small and poor.

Nine years ago Prof. L. H. Bailey of Cornell wrote of Mr. Burbank: "He secures his livelihood from the new varieties he sells to seedsmen and nurserymen, but his experiments are so extensive and he tries so many things for the mere zest of it, that he does not make money"; and he suggested that some philanthropist could "render a good service to mankind if he would endow this experimental garden and allow its proprietor to devote his whole energy to research." A few years later the Carnegie Institute undertook that service, but the alliance did not last long. Mr. Burbank now writes that "after having been under 'capture' for the avowed purpose of 'the benefit of science' for five years by the Carnegie Institution of Washington, five years of care, leanness, hampering restrictions, and unprofitable conditions, and having dictated to and corrected for their botanists several thousand pages, it is a most gracious relief to return to a life free from the red tape of institutional restrictions, to a life of active freedom." At present, he adds, he has reorganized his whole business and promises to give to the world more good fruits and flowers from time to time. This he will doubtless do.

Acting as agents of the Cambridge University Press, the Putnams announce: "Aerial Locomotion," by E. H. Harper and Allan Ferguson, with introduction by G. H. Bryan, and "Ticks—A Monograph of the Ixodoidea," part ii, by George H. F. Nuttall.

Longmans, Green & Co. have in the press for early publication "Monographs on Topics of Modern Mathematics," edited by J. W. A. Young; "Big-Game Shooting in Upper Burma," by Major G. P. Evans, Indian Army, and "The Monkey Folk of South Africa," by F. W. Fitzsimons.

Prof. William Magie's "Principles of Physics," and "A Laboratory Outline of Organic Chemistry," by Prof. Lauder William Jones, are in the hands of the Century Co.

Alfred Rehder and Charles Sprague Sargent of the Arnold Arboretum are issuing through the Riverside Press, Cambridge, "The Bradley Bibliography," five volumes, in an edition limited to five hundred copies. It is advertised as "a guide to the literature of woody plants, including books and articles in the proceedings of learned societies, and in scientific and popular journals, published in all languages to the end of the nineteenth century."

Gardeners, professional as well as amateur, who did not procure Allen French's "The Book of Vegetables" when it first appeared, four years ago, will do well to do so now under the new title of "How to Grow Vegetables" (Macmillan). No other book quite takes its place as a practical guide. At a glance one can refresh one's memory by reading the instructions therein given for the planting or culture of any vegetable, from asparagus to zit-kwa, just before starting for the garden. The yield of a garden can be doubled by following the directions here given regarding seed and soil, fertilizers, pests, and diseases. The author is skeptical as to his ability to teach the American farmer to add variety to his very limited list of poorly-grown garden truck; he appeals more to vegetable gardeners who do their work for the fun as well as the profit of it. The best vegetables in our country are, in his opinion, grown in the thousands of small home gardens that surround our cities. But the owners of these gardens also are still somewhat limited by national habit and local knowledge; they need to know something about such European delicacies as the globe artichoke, celeriac, cardoon, sea-kale, chard, endive, and Mr. French supplies the necessary information. He errs in saying that of the two varieties of endive the curled is more tender than the broad-leaved, for surely the tenderest, crispest of all salads is the escarolle, which has been making its way into our markets within the last five or six years. He is also hardly fair to the seedsmen in quoting some "wise man" who said, with reference to the novelties offered every year, that the value of a variety is inversely as the space given to it in the dealer's catalogue. That was true years ago; but at the present time the best seedsmen have trial grounds in which they carefully test new varieties before recommending them to their customers.

The second of the handy little volumes of the "History of Chemistry" (Putnam), by Sir Edward Thorpe, has another value than that implied by its name. Since it covers the period from 1850 to 1910, during which discovery has been most rapid and the modern theories of chemistry have been built up, it affords a rare opportunity for one who has not studied chemistry for some years to catch up with the progress of the science. Here, for instance, is the story of the radio-active elements told very clearly and definitely in eight small pages, with a portrait of Marie Sklodowska Curie thrown in. Last December, when Professor Van 't Hoff received the Nobel prize, and again when, three months later, he died, the newspaper reader was doubtless mildly stirred up by curiosity as to who he was and what he had done to make him famous. Here, in twelve pages, is an explanation of Van 't Hoff's hypothesis of stereo-isomerism and its importance as a guide to research. In the chapter on physical chemistry we see the face of Svante Arrhenius of Stockholm, now lecturing at Yale.

A rather comprehensive treatment of stresses in stationary structures by graphical methods has been undertaken by William L. Cathcart and J. I. Chaffee in a text called "Elements of Graphical Statics" (Van Nostrand). The authors state that, as

Digitized by Google

most books on the subject are designed for civil engineers, they have prepared the present work for students of mechanical and marine engineering. With the exception of chapters on friction and shafting, there is not much to differentiate it from other texts. However that may be, the book is satisfactory in its scope. With respect to the action of wind pressure on roofs, attention should be called to the work of Professor Nipher, which seems to have been overlooked.

"Three-Phase Transmission" (Van Nostrand), by W. Brew, discusses the practical problems of installing and maintaining this method of electrical transmission. No attempt is made to give the theory of these currents; it is rather the notes taken from the experience of the writer, who was the chief expert-assistant of the Dublin Corporation Electricity Supply.

The death is reported from London of G. Johnstone Stoney, the Irish scientist, who was born in 1826. He was assistant in astronomy to the late Earl of Rosse in 1848, professor of natural philosophy in Queen's University, Ireland, and secretary of this institution from 1857 until its dissolution in 1882. He was foreign member of the New York Academy of Sciences and of the American Philosophical Society. He wrote "Memoirs on the Physical Constitution of the Sun and the Stars," on the atmospheres of planets and satellites, on the internal motions of gases, on telescopic and microscopic vision, etc.

Drama and Music

ANOTHER STAGE EXPERIMENT.

For its first experiment, the Chicago Theatre Society, which was recently organized under the presidency of Hamlin Garland, announces a season of "joyous" drama. The phrase is a happy one, possibly even more so than the user of it was aware. For to Mr. Garland the principal function of the "joyous" drama would be to wean the American people away from the puerilities of the musical "show." But the comedy of character and manners can do something more than to supply a substitute for "The Prince and the Pippin." It can be made the instrument for educating public taste and the public's judgment to the highest forms of the drama. Reformers of the theatre too often make the mistake of leaping from the musical-comedy level to the Ibsen level, and thus supply an opening for scornful girding at the "highbrows." What reformers too often fail to perceive is that there can be truth and art in the lightest of comedies; and that truth in art is what the American theatre needs most. As a people we dislike, on the stage, what is truthful and what is disagreeable. When you give us Ibsen, you give us both. What the Chicago experiment seems to be on the point of doing is to omit the disagreeable treatment for the present. It is a counsel of wisdom.

It will be more difficult to draw up a répertoire of "joyous" drama than it is to talk about one. In the list of plays already announced for production we find several that do not quite bubble with the joy of life. It is hard to think of Becque's "Les Corbeaux" as jocund, or Brieux's "Robe rouge," or Synge, or even Moody's "Faith Healer." On the other hand, there is partial reassurance in Augustus Thomas, Pinero (if he be taken in his lighter moods), Shaw (if he be taken in his more responsible moods), Yeats, and Barker. The managers of the Chicago enterprise would do well to draw on Augustus Thomas rather than on Pinero as qualified above, on Pinero rather than on Shaw, on Shaw rather than on Barker, according to a scale which it should not be impossible to determine. This is said with full consciousness of the fact that our sequence of names is probably in inverse order to the men's standing as serious dramatists and critics of life. But it is precisely because we are afraid of the richer fare that we give Augustus Thomas the preference over Pinero and Shaw. In Thomas you will find enough of the common faults of our stage to attract the crowd, and enough of truth and art to whet the appetite for solider fare. So many attempts at educating the public have failed through neglect of the fundamental quality in education —patience.

Our greatest need for the present is not to be educated in the subtleties of the human soul and human conduct, but to be rescued from the posturings and the melodramatics that travesty the broadest facts of human conduct. Of what use is it that our more ambitious playwrights go in for photographic realism, if, in the midst of it all, we are suddenly to be projected into the atmosphere of Robert W. Chambers and George Barr McCutcheon? Of what use is the most painstaking reproduction of an East Side street scene, if you people that scene with men and women whose psychology is of a kind associated with Mr. James Montgomery Flagg? It should be a punishable crime for dramatic critics to write, as so many of them so often do, that "in spite of excessive recourse to the long arm of coincidence, the play has the merit" of this, that, and the other thing to a degree sufficient to justify the manager in taking your money. It is the overoiled arm of coincidence that typifies the vice of our drama. From seeing people happen to be in places where they have no right to be, and turn out to be what they have no right to be, one gets easily accustomed to seeing them perform unnatural heroics, take unnatural postures, and exhibit unnatural virtues and vices. Many plays succeed because they are "dainty," "sweet," and "clean." No one would grudge them their success if to these qualities they added a touch of truth and life. But too often the "charming" play is as false in its mechanism as the would-be realistic play. Our serious plays suffer from an excess of melodrama. Most of our light plays suffer from an excess of what we think is "life" but is not.

Here, then, is the chance for the "joyous" drama. If it can only free us from the belief that when we enter a theatre we have left the probabilities of life and character behind, it will have done the work that lies closest to its hand. There is no insistence here on the intellectual drama, nor even on the drama that settles the same questions of the day that the newspapers settle every day. The captains of industry and stock-exchange villains and honest young district attorneys who have latterly invaded the stage illustrate admirably that debasement of standards which we have described as melodramatics. Multi-millionaires and Trusts and private secretaries and stenographers are undeniably real things, and the audience consequently takes it for granted that the play must be a realistic play. But if the captain of industry displays the intelligence of a rabbit, if the good young business man reveals the virtues of an Ivanhoe, and the heroine who frustrates the captain of industry reveals chiefly a fascinating smile and a touch of hysterics—it is from that species of the "drama of life" that the "joyous" drama can deliver us. Give us comedy of the lightest, if you will, but a comedy of human beings and not of lay-figures.

Miss Charlotte Porter, now sole editor of the Folio Shakespeare (Crowell) has added the two parts of "Henry the Fourth," in two volumes. Of the convenience, accuracy, and comprehensiveness of this edition we need not again speak. In the Introduction to the second part Miss Porter takes strong exception to the recent attempt of Alfred W. Pollard to show that the manuscript of the play was "obtained from the chamberlain's men with their full authority," and that the Quarto edition of 1600 is, therefore, the authentic text. Without going into the details of the discussion, we can at least agree with Miss Porter that the best method of presenting the play in its antique form is to reproduce the Folio text exactly, while giving the various Quarto readings in footnotes.

"Brought Home," a four-act drama of American life, dealing with the subject of local option in the Middle West, and written by Henry M. Blossom, jr., has been accepted by Cohan and Harris, and will be produced in the early autumn.

Franklin Fyles, for many years the dramatic editor and critic of the New York *Sun*, died last week in his sixty-fourth year. He wrote one book on the stage, called "The Theatre and Its People," several collections of short stories, and a number of plays, the best known being "The Girl I Left Behind Me," in collaboration with David Belasco. Two other pieces also had profitable runs,

Digitized by Google

"The Governor of Kentucky" and "Cumberland '61."

Mowbray Morris, who died recently at the age of sixty-three, is best remembered as a dramatic critic, a position which he held for several years on the London *Times*. He published a volume called "Essays in Theatrical Criticism."

Hawthorne's best story has again been set to music, this time by Charles F. Carlson, dean of the University of Denver College of Music, under the title of "Hester, or The Scarlet Letter." It is soon to be published. A second opera by the same composer is entitled "Phelias." Andreas Dippel has seen it and has promised to "keep it in mind for the near future for production." Mr. Carlson's third opera is to be on a subject by Longfellow. Of this the first act was finished last month.

August Spanuth estimates that ambitious musicians spent over a quarter of a million dollars last season for the privilege of giving concerts in Berlin. He regrets that it is not possible to print the total earnings side by side with the total losses, to scare off the ever-swelling throngs of aspirants to fame.

Parisians paid only $102,000 last season for the Colonne, Lamoureux, and Conservatoire concerts, those being the three leading orchestral associations in their city. The Grand Opéra took in $618,500, the Opéra-Comique $535,000. These figures are absolutely trustworthy, being verified by the poor-law authorities, whose inspectors audit all amusement accounts, appropriating 10 per cent. of the gross receipts.

Lillian Nordica begins a Canadian concert tour on September 26.

Waldon Fawcett remarks that many of the best of the Indian songs have been composed by the women. Why cannot the same be said about white women and music? If Mr. Fawcett is not mistaken, the question would make an interesting subject of anthropological and psychological discussion.

For the first time in years Italy's leading opera house, the Scala of Milan, closed with a surplus instead of the usual large deficit. The principal operas performed were "Siegfried," "Simone Boccanegra," "Il Matrimonio Segreto," "Romeo and Juliet," and "The Rose Cavalier." It is surprising that the Italians, who never cared for the melodious Mozart, are always among the first to produce the latest opera of the anti-melodious Johann Strauss.

Wassily Safonoff ended his season by conducting a concert in Turin, and then left for his summer home in the Caucasus, via Constantinople, Odessa, and the Black Sea. He calculates that he has been heard during the past season by audiences aggregating 75,000 hearers. His next season is already booked up to March. It opens in October at Copenhagen, and includes twenty-four concerts in Scandinavia, St. Petersburg, Kief, Warsaw, London, and Rome. He will also play the piano part in eight chamber-music concerts of Beethoven's 'cello and piano sonatas, for which he will prepare himself during his ten weeks' vacation in the Caucasian mountains.

When Josef Stransky takes up the leadership of the New York Philharmonic Orchestra next autumn, he will produce for the first time in America a new symphony by Anton Dvorák—a posthumous work. A close friendship is said to have existed for several years between Dvorák and the Bohemian conductor, in whose career he took a special interest, and when several manuscripts were discovered the executors of the Dvorák estate turned them over to Stransky for editing. These compositions, now being published in Germany, include two symphonies, two overtures ("Dramatic" and "Tragic"), an orchestral rhapsody, as well as a quartet in A major for strings, and a quintet.

Art

"The Royal Copenhagen Porcelain: Its History and Development from the Eighteenth Century to the Present Day," by A. Hayden, is to be issued by Fisher Unwin.

The Danish court painter, Prof. L. Tuxen, who was commissioned to paint pictures of the Diamond Jubilee and the coronation of 1902, has once again been engaged.

The Prix du Salon has this year been awarded to Lucien Jonas for two pictures at the Salon des Artistes Français: the portrait of Henri Harpignies and Les Médecins: la Consultation.

According to the London *Athenæum* Rembrandt's house at Amsterdam in the Jodenbreestraat, which was sold, with all its art treasures, in 1656, when the artist was declared bankrupt, is to be restored. The official inventory of that year fortunately survives, giving exact information as to the disposition of the rooms. The exterior of the house remains much as it was of old.

Interesting discoveries have been made in Rome, under the Church of St. Crisogono, in the Trastevere district, where excavations have for some time been carried on under the direction of Professor Marucchi, the Christian archæologist. The church is said to have been founded by Pope Sylvester, in the fourth century, but was rebuilt first in 731, and later in the seventeenth century. The excavations brought to light some time ago a primitive basilica, with remains of the subterranean "confession" of the church, containing the altar, under which the martyrs were buried. It has now been discovered that the church, like so many early Christian places of worship, was included in an ancient Roman house, which was adapted for ecclesiastical uses, and decorated with paintings, including portraits of various Popes, belonging probably to the eighth or ninth century A. D. There was also found, next to the apse, a large hall, dating apparently from the twelfth century, the walls of which were painted with floral decorations, portraits, and heraldic designs. Two large sarcophagi were also unearthed, one plain, the other richly carved with a representation of the Good Shepherd in the style of the fifth century.

In "The Materials of the Painter's Craft" (Lippincott) Dr. A. P. Laurie carries the story of pigments and vehicles from the earliest times to the beginning of the eighteenth century. What he has to say about mural painting in classical times is repeated in the main from his recent book on that subject and will be provocative of discussion. That the Romans knew how to paint on the damp plaster is certain; in fact, so obvious an expedient is never likely to have been wholly ignored, but that the Pompeian and Roman wall paintings are in any exact sense frescoes has yet to be proved. Dr. Laurie imagines a gradual process extending over several days, the wall meanwhile being kept sufficiently moist through the thickness of the various layers of superimposed wet plaster. Experiment has proved this method practicable, and it seems worth the attention of decorators, but the methods of the Pompeian painters hardly bear this explanation. It appears that the general tone of the wall was painted in fresco, but this surface seems to have been polished subsequently with wax. Upon this ground the figure painting is usually executed, often with heavy impasts. Such a condition of things is hardly compatible with fresco even in Dr. Laurie's very broad use of the term. No painter, we feel, will doubt that the actual figure subjects in the Pompeian villas were done on a dry wall with a viscous medium, in some form of tempera or encaustic. The literary evidence on the subject, especially that of Vitruvius, is ambiguous, because we can never be sure whether artists' methods or decorators' are being described. The whole matter in short remains conjectural, and the secrets of the ancients are still inviolate in spite of much more or less ingenious speculation.

In discussing mediæval painting Dr. Laurie traverses anew the ground so ably covered by Eastlake, with whom he differs chiefly in regard to the legendary vehicle of the Van Eycks. The amber varnish, of which Eastlake made so much, Dr. Laurie regards as mythical. It is, in the first place, a poor vehicle, next difficult to obtain, and finally amber is and was readily confused with other hard resins. For the preservation of colors Dr. Laurie has found certain balsams, especially Venice turpentine, remarkably efficacious. He has no doubt, for example, that the extraordinary greens of the early Flemish masters can have been preserved only by some such medium. To Eastlake's view that the Van Eycks used mainly oil, subsequently adding a little varnish, sharp exception is taken. Such a procedure would never yield a homogeneous and durable pigment. Berger's view that the Van Eycks used an emulsion of egg with fatted oil or balsam is borne out by Dr. Laurie's experiments. By using Canada balsam emulsified with egg he has repeated the characteristic colors of the Van Eycks, and the colors have stood drastic tests for permanency. The recipe for a picture to last five hundred years may be of interest. It is to prime a panel—all canvases make for mutability—with glue and gypsum, after Cennino Cennini's method, then paint with colors ground in a mixture of two parts of linseed oil to one of copal varnish, overlaying the paint as little as possible and always proceeding from light to dark. It is obvious, as Dr. Laurie admits, that modern artists would hardly use so heavy a vehicle or bind themselves to so orderly a technique. Only the Pre-Raphaelites have taken such pains. Still this book should prove suggestive to painters, to the few at least who respect their craft. A kind of instinct has kept some scanty remnant of fine craftsmanship alive among us, but many of the most imaginative paintings of recent times have vir-

Digitized by Google

tually perished within the life of their creators. This book is well illustrated. The plates, of which several are colored, include microscopic enlargements of "crackle." We hope Dr. Laurie will continue his researches to the present day.

Finance

AUTUMN CROPS.

The financial outlook is always clouded at this period. The nation is tossed between hope and fear with reference to the crops, and usually the money market has a somewhat dubious cast. Last year both the crops and the money market were the occasion of no small amount of apprehension, particularly the latter. Yet as a whole our harvests were abundant, and money proved to be in sufficient supply. Seldom if ever has a bad situation been rectified so quickly as in the summer of 1910. Disaster was averted, but general industry was left with impaired stamina. Hope was virtually abandoned that the autumn and winter of 1910 would witness a return to bustling activity: we should have to look to the autumn of 1911 for a rehabilitation of industry.

Yet the outlook is by no means clear to-day. Certain contingencies that worried us last July have failed to present themselves this year, but others that were then quite generally overlooked have come into view. The puzzling question with most persons is now to find the determining factor in the situation confronting us. That, however, is not an easy task. The only thing really certain at this time is that the money situation is better than in July, 1910. Still, the easy rates that have prevailed for so many months have failed to stimulate industry. There is a comfortable belief that the material interests of the nation will not be adversely affected in the autumn and winter by a money stringency, but there is no general confidence that a sufficiency of money at that time will greatly increase the activities of mill and shop.

This summer rumor appears to have outdone itself in connection with the crops. Predictions of record harvests have been offset by predictions of extraordinary damage. At the moment it would be futile to generalize from what purports to be the crop news, other than to say that it is quite possible that we shall need something more than even record harvests to impart vigor to the financial and industrial situation. Ordinarily, a large agricultural yield coincident with easy money would mean extensive trading in general commodities and securities. But it is now commonly believed that other aids will be necessary this year.

The present ease of money has a significance which is too frequently overlooked. Money is easy because it cannot be employed as freely as it was so long as commodities and labor remain at their present quotations. The whole people are down closer to the necessaries of life than they have been for many a year, closer possibly than at any time since 1896. Bank reserves have been high enough in recent months to admit of a much larger production of commodities than has taken place, but the task has been to find a market for enlarged production. It is no longer stoutly contended, as was the case a few months ago, that only greater confidence is required. It is not a question of confidence at all, but of purchasing power. The absence of that quality is what has made the present situation.

Merchants and manufacturers have pretty generally recognized that fact, and, what is equally important, the banks also have recognized it. Producers and middlemen cannot at this time give free rein to their misguided judgment; should they be so disposed, they would quickly find themselves curbed by their banks, which for months past have deliberately refused to lend their influence to further enlargement of over-production. It may be said of producers generally that they have not lacked courage in the past twelvemonth. They have, in many instances, knowingly produced more than they could sell, their raw material and labor costing them more than the price they could expect to get when the finished product was offered for consumption. Their hope has been that eventually prices would work up to their level, but this hope has met with disappointment. It has been difficult to effect a rise in retail prices. "Bargains" have sold freely enough in the department stores, but the great public have refused to pay for such things as shoes and textiles prices commensurate with those for raw hides and cotton and wool.

The chasm between consumer and producer has been widening rather than narrowing, and it is not at all clear that big harvests this year, assuming that there are big harvests, will change this tendency. Big harvests, of course, are always a blessing, but the blessing may conceivably be of a negative character—preventing a worse embarrassment than the present.

Here it is proper to mention one of the most important contingencies now confronting us. The past year has seen a great liquidation of securities, and a very considerable liquidation of certain commodities. But there has been no pronounced liquidation of labor. Labor is, if anything, a little higher rather than a little lower. There has, needless to say, been a curtailment in the use of labor. This curtailment was rendered necessary by the exigencies of the situation: manufacturers, for example, could not pay labor its unit price and buy so many units as formerly. This connotes several very important facts. If this policy is continued much longer the working classes will be at the end of the resources which they have accumulated in the past to tide them over such periods as the present, in which event poor harvests this autumn would be truly calamitous.

To have everybody at work at wages which insure the necessaries and many of the comforts of life, is the remedy for the present situation. But everybody has not been at work of late months, and many that have been have not been employed at anything like full time. It begins to look as if it might be impossible to achieve full employment except by a reduction in the price of labor. The contingency is not altogether pleasant. The wonder to many is that labor has so long been successful in preventing a reduction; this, however, is explained by the fact that, owing to the industrial prosperity of the past decade, the average workman was able to increase his accumulations for a rainy day, the presumption being that the treasuries of the labor organizations were also strengthened. Still, the mass of mankind are never any too far from want, and the last year must have imposed a heavy strain on them.

It may perhaps be rash to postulate liquidation of labor as a *sine qua non*, but it is certainly a fact that there is at present a strong tendency so to do. And there is also growing up a feeling that liquidation must ensue in real estate also. A year ago there was a great deal of talk about inflation in Western farm values; to-day the talk is chiefly of city real estate. All along the line of production and distribution charges have been rising, until the final consumer, who in every case pays the bill, is fairly staggering under his load.

Such a presentation of the facts of the situation might have been deemed academic two years ago. To-day, however, we are delving into the fundamentals to find a way out of our protracted industrial depression; and one of our discoveries is that we have created an industrial plant too large, and, more particularly, too expensive in opera-

Financial.

tion, for the purchasing power of the nation. The process of readjusting the cost of real estate, of labor, and of raw materials to the pocketbooks of final consumers has yet to be undertaken. While at the moment there is no good reason for predicting a change for the worse in the financial situation, it is hard to discover ground for any real improvement short of such liquidation as has been instanced above.

BOOKS OF THE WEEK.

Aeschylus. Agamemnon. Greek text with English verse translation. Frowde.
Astronomical Observatory of Harvard College. Annals. Vol. LXVIII. Part ii. Cambridge.
Baum, L. F. The Daring Twins: a Story for Young Folk. Chicago: Reilly & Britton. $1 net.
Bell, C. W. The Good Old Days. Chicago: McClurg. 50 cents net.
Black and White (Anonymous). Philadelphia: Literary Bureau.
Blackwood, A. The Human Chord. Macmillan. $1.50.
Bunyan's Pilgrim's Progress. Edited by J. H. Gardiner. Holt.
Burns. Poems Published in 1786. Frowde.
Carden, R. W. The Life of Giorgio Vasari. Holt.

The Nation

NEW YORK, THURSDAY, JULY 20, 1911.

The Week

Mr. Bryan's Presidential choice for 1912 is either Mr. Folk, or Gov. Wilson, or Speaker Clark, or Hoke Smith, or Gov. Marshall, or Gov. Dix, or Gov. Shafroth, or Gov. Foss, or Senator Culberson, or Congressman Jones, or Judge Clark. Disclaiming any personal inclination to one man more than another in the long roll we have cited, the former wielder of Democratic destinies nevertheless lets it be known, by omission, that there is one Democrat of whom he does not approve. The omitted Governor may perhaps reconcile himself to Mr. Bryan's interdict in consideration of the excellent advertising it brings him. Perhaps he may even be in the mood to congratulate Mr. Bryan on the extraordinary improvement in the condition of the Democratic party, as indicated by the fact that it now has a dozen men who would make a good President, where formerly it had but one.

Gov. Marshall of Indiana seems to have yielded to the persistent suggestions of his friends to become a candidate for the Presidency. It is necessary to say "seems," because of the political shrewdness of his advisers, who fear anything "spectacular" or "premature." But an interview has appeared which apparently settles the matter. The process of enrolling him as a candidate was the usual one. First it was impressed upon him that it was his duty to the State, the party, and every one in general to stand. Then it was impressed upon the Hoosier Democracy that inasmuch as the Governor was willing to stand, it was the duty of every member of the party to support him. His chances in the convention would seem of the brightest. All the other candidates, we learn, have already developed elements of weakness. There is a widespread belief, say the gentlemen from Indiana, that if Gov. Harmon were nominated, he could not be elected, and a prevalent impression that if Gov. Wilson were elected, he would destroy the party. But Gov. Marshall would at once be responsive to the popular will and free from radical tendencies. Best of all, so stout a friend of Gov. Wilson as Senator Martine admits that Marshall's name would look well along with Wilson's. The nomination for the Vice-Presidency at least seems almost within his grasp.

The Lorimer inquiry is still proceeding on the familiar line, but it must be acknowledged that there is a certain richness about the testimony that tends to compensate for its monotony. If Hines never raised a corruption fund to elect Lorimer, it is astonishing how many people are laboring under the hallucination that he or his friends boasted that he had done so, or else are willing to swear to a lie to that effect. In Monday's testimony, William Burgess, a business man of Duluth, flatly declared that C. F. Wiehe, an associate of Hines, stated that he had himself subscribed $10,000 to the corruption fund. If these sworn assertions are not all lies, the amount of naïve satisfaction that was taken by the Hines people in their pretty little transaction in legislative votes is the most curious part of the whole matter; and we are inclined to think that it is upon the theory that no man would be so simple as to tell strangers of such exploits, rather than upon any direct impeachment of the witnesses, that the defence will rest its hope of breaking the force of the story. But there is another theory which, unfortunately, seems to fit the situation quite as well—the theory that vote-buying in the Illinois Legislature had become so much of a normal affair that a man of easy-going nature, and inclined to garrulous boastfulness, would think nothing of bragging about it.

In his brief statement of what has been done by the House of Representatives in the present session, Chairman Underwood takes occasion to define just what the reformation of the House rules—the first thing achieved in order of time—really means. "We have taken away from the Speaker," he says, "the veto power and control over legislation which he had for years, and organized the House along democratic lines. The rules now enable a Representative to secure favorable action on a measure when he has a majority of the House with him." Upon no subject have those that sneer at all attempts at reform been more contemptuous than upon the efforts to overthrow the despotic rule of the Speaker. They were absolutely sure that nothing of the kind could be done, and that if the silly Democrats got into power, they would either follow in the footsteps of Cannon or bring on chaos. Well, neither of these things has happened. The Speaker's power has been reduced to normal bounds, a method of organization that had been confidently declared to be impossible has proved perfectly workable, and the majority in the House has acted with a degree of harmony and effectiveness which had long been unknown to the Democratic party and to which even the Republican party has been for some years a stranger.

No grounds exist for supposing that the House will refuse to concur in the Senate amendment to the Campaign Publicity bill, limiting the expenditure of a candidate for the United States Senate to $10,000 and of a candidate for the House of Representatives to $5,000. In no case is the candidate's outlay to exceed 10 cents for every vote cast. Applying, as the Senate bill does, to primary elections as well as general elections, the fixed limitation removes one of the most frequently urged objections to direct nominations, namely, that their high cost puts office only within the reach of very wealthy men. Of the principle embodied in the bill little need be said at this late day. Only seven votes were recorded against it in the Senate, and these came from the South, whose peculiar conditions make her over-sensitive to the local implications of a general law. The skeptic may argue that under a greatly strengthened publicity bill it will still be possible for a Lorimer to make his way into the Senate; there are ways of transferring financial responsibility. But everything is possible; the point is that the way of the devil can be made harder.

Whatever the merits of the particular resolution offered by Congressman Sulzer for an investigation of the Immigration Service, two things stand out quite

Digitized by Google

plainly and beyond challenge. Both Secretary Nagel and Commissioner Williams, in the very act of repelling the charges of maladministration, give impressive evidence of the need of improvement. They deny emphatically all charges of inhumanity or of overstraining of the law, but their statements bear witness to the crying necessity for introducing more humane conditions. Commissioner Williams declares that he has found it impossible to get from Congress more than one-half or one-third of the money he has requested for the provision of proper accommodations for the crowds of immigrants. Secretary Nagel backs up the Commissioner; and he also tells—as to another aspect of the matter—of the pitiful cases in which the claims of humanity have absolutely forced him to violate the law, not, of course, by overstraining, but by relaxing, its provisions. Would it not be a good plan for Mr. Sulzer to take hold of the matter from another standpoint—to get Congress not so much to inquire into the past as to take steps for the proper treatment of these evils in the future?

The Public Utilities bill signed by Gov. Baldwin was not put through without vigorous effort. Corporation influences which have long been very powerful in Connecticut were active and persistent in efforts to reduce the bill to comparative unimportance, but these efforts were frustrated by hard work and vigilance on the part of a number of legislators faithful to the public interests. The story of the affair was not altogether unlike that of the corporation legislation passed by the New Hampshire Legislature in its recent session. Efficient control of public-service corporations by State commissions has now become an established feature of American practice, and any State that has not provided it will soon be looked upon as distinctly behind the times. The wonder is, indeed, that the country did not wake up long ago to the vital necessity of such a piece of governmental mechanism.

Of the Fourth of July speeches which have been brought to our attention, that of the Governor of South Carolina is conspicuous for its vicious incendiarism. Addressing two great audiences of mill workers in Spartanburg County on Independence Day, Col. Cole L. Blease added to the bad reputation which he had already acquired. As reported in the Spartanburg *Herald*, he dealt with the race question in the most brutal and lawless fashion. He declared openly that he approved of lynching, and added that the negroes of South Carolina knew that he would not send troops to prevent their being lynched. His tirade against the negroes—whom he referred to as "apes and baboons"—he wound up by saying that if an inferior race got in the way of the Caucasians, "a little gunpowder and a few buckshot are often the most effective remedy." Such unblushing advocacy of murder is, however, only in line with some of the Governor's other notions about law and order. He has been freely criticised for his lavish use of the pardoning power, but he defended it and asserted that "there are a lot of good men in the penitentiary—men of as good families as yours or mine—who ought to be out." Gov. Blease also made himself responsible for the view that "when a man got into a quarrel and drew a pistol and killed his antagonist, he ought not to be judged too severely." Such ruffianly sentiments, coming from a man set for the enforcement of the laws, carry their own condemnation. They are, in fact, execrated by the leading newspapers of South Carolina; and it appears to be certain that Gov. Blease will soon have run his course and passed from the public contempt.

It is not yet time to write New England's epitaph. Like the old England, the new is often spoken of as having reached the zenith of its prosperity, although in both cases there is not only not a decline, but an actual increase, in both population and products. Reports of decadence, in the one case as in the other, are due in part to discussion among the persons immediately concerned, who are consequently not in a position to blame outsiders for taking them at their face value. The fact in the two cases is that there has been a relative decline in importance, but this no more means the beginning of the end for them than the want of supremacy signifies the same thing for countries and States that have always been behind. As early as 1820, as Frederic Austin Ogg points out in the *Independent*, Webster lamented that "our New England prosperity and importance are passing away." Relatively, they were. But nearly a century has gone by since then, and New England is still with us. What is more, the days when, owing to the great migration to the West and the small immigration from foreign countries, the population of these States was almost stationary, have also passed, and the increase in population is now rather more than normal.

Even in agriculture, in which we incline to think that the situation is summed up in the phrase "abandoned farm," there is decided advance. Interestingly enough, this is due in a measure to the summer residents who have invaded the region for its good as well as their own. One man, for instance, rented a farm of forty acres, with an excellent house and the usual improvements, for the sum of $30 a year. Two years later it was supplying the wants of his family and a surplus of $600 a year. To-day, says Mr. Ogg, every farm adjoining this one is in an unprecedentedly high state of productivity. "The trouble with the New England farmer," says the dean of a Western agricultural college, "is that he is timid, afraid to try new methods and machinery, afraid to plant a large acreage." But it is manufacture and commerce that must dominate in New England. In the former she has two enormous advantages over the rest of the country—in her wealth of water-power and of efficient labor. Her great disadvantage is her dependence upon outside sources for raw materials, but attention to improvements in transportation will prevent this from becoming an insuperable obstacle. Between 1895 and 1905 the manufactures of Massachusetts increased in value 50 per cent. In commerce, Boston has recovered second place from New Orleans, and her foreign trade increased 9 per cent. in the year 1906-7. It is premature, to put it mildly, to speak of the passing of New England.

The final report to Parliament of the Royal Commission on the relations of human and animal tuberculosis seems to dispose conclusively of the famous declaration of Dr. Koch, made ten years ago, with as near an approach to positiveness as so careful a scientist could permit himself, that the transmission of bovine tuberculosis to man is either

Digitized by Google

impossible, or, if it occurs at all, occurs so very rarely that it is not advisable to take any measures against it. The Royal Commission finds, as a result of a long and most painstaking investigation, that bovine tuberculosis can be transmittedto man, and that, in point of fact, out of twenty-eight cases of tuberculosis of the lungs investigated, two were caused by bovine tubercle bacilli. The Commission accordingly recommends that existing regulations for the prevention of the use of meat or milk from tuberculous cattle be thoroughly enforced, and indeed strengthened.

The Americanization of the world has now reached Wisconsin, and no less an authority than a former Governor declares that in all, or nearly all, parts of the State the English language is well understood. Formerly it was necessary for the political organizations to send German speakers into many sections of the State, and so little attention was paid to the teaching of English in the parochial schools that it was not worth putting into statistics. The new condition did not come about without a struggle. There was long and vigorous opposition to the Bennett law, which made English compulsory in the schools, and the Governor was urged to ignore it. He was compelled to call the attention of one delegation of clergymen to the fact that he had taken an oath to enforce the laws. To-day, however, English is taught everywhere, and in some of the parochial schools the teaching is in English entirely. The sentiment toward the law has changed as people have seen the advantages their children possess in being able to use the language of the rest of the country.

Criticism seems almost unanimous in finding the secret of Mark Twain's greatness in the fact that he was a great American. An analysis of Mark Twain's estate shows that he was American in more senses than one. We refer, in particular, to the fact that he left behind a large amount of worthless company securities. Probably very few men worth half a million dollars have not fallen victim, in some degree, to the lure of speculation. But there is a flavor about the unsalable securities the great humorist left behind that is quite different from the ordinary "wildcat" mining or railway paper. Mark Twain's shares were in the Plasmon Milk Company, in the Koy-io Company, in the International Spiral Pin Company. This is not speculation. This is to abide in the golden dreamlands of Colonel Sellers, where there were always millions in the most fantastic of projects.

In reading the news from Mexico allowance should be made for the activities of the anti-Maderist news agencies. Evicted monarchs have a way of leaving these press-bureaus behind them, and Diaz is probably no exception. Having made proper allowance for exaggeration, we may readily acknowledge that the situation in Mexico has not yet completely adjusted itself, and recognize at the same time that this was to be expected. Revolutions need time to quiet down as well as to boil up, and the aftermath of a revolution, when the fighting tension is relaxed, is always disenchanting. The deplorable fighting at Puebla and elsewhere might or might not have been prevented if the proper man had been in authority at Mexico City. In any case, we are entitled to check off the loss of life at Puebla against the record of the Diaz régime, which may have functioned with greater quiet and dispatch, but functioned cruelly and remorselessly.

Le Temps, by far the best-informed of French newspapers in foreign affairs, refuses to grow excited over the Agadir incident. It argues that between the Moroccan question in 1905 and in 1911 there is a vast difference. Germany's challenge to France in the former year was avowedly concerned not with Morocco but with the general international situation. The Kaiser's Government was irritated at the chain of alliances which France was forging for Teutonic "isolation," and seized upon the Moroccan situation as a pretext for sounding a solemn warning. In 1911 no such strained situation exists in international relations. The various national alliances and understandings are on a recognized basis. Thus Germany has no axe to grind in Europe, and none, apparently, in Asia. The hypothesis that she really wants a coaling station in Morocco is dismissed as ridiculous. Germany's true purpose, the *Temps* believes, is to bring about a resumption of friendly "conversations" which M. Pichon began two years ago and the Monis Ministry allowed to drop. It was a hint after the German fashion, but no more than a hint. Whether this explanation contains the whole truth or not, the French attitude in the Agadir incident has been marked by admirable restraint.

The behavior of the Spanish Government in Morocco suggests nothing so much as the diplomatic methods that prevail in the novels of Mr. E. Phillips Oppenheim. Here is a Government which only two years ago had a very bitter reminder of what are the perils of colonial adventure, plunging ahead in Morocco as if there were no powerful republican party at home ready to take advantage of the first serious reverse to the Spanish arms. More puzzling still, here is the hitherto firm and faithful friend of the French people, engaged in a policy of apparently open provocation toward France. The height of bitter feeling in France has been aroused, not by Germany's conduct in the Agadir affair, but by the conduct of Spain, whose tactics have supplied Germany with an excuse for intervention. It may be that the Spanish Government has decided that the partition of Morocco is at hand and that it will grab as much as it can against that eventuality. But in face of all the attendant risks we have enumerated, this would be a most extraordinary policy, especially when we consider that Spain can gain more by France's friendship than in any other way.

The renewal of the Anglo-Japanese treaty, with the proviso that neither party to the compact is to be called upon to take the field against a nation with which it has concluded a general treaty of arbitration, opens up many interesting points of view. The one that most immediately concerns us is that the bugaboo of Japanese invasion will be laid to rest for a good many years to come. Japan attacking us single-handed and, by implication, against the wishes of its ally is a possibility which even to Capt. Hobson and Mr. John Temple Graves cannot but seem remote. In the future politics of the Far East, diplomacy will now have to make all its calculations on the axiom that among the three Powers, Great Britain, the United States, and Japan, or between any two of them, armed conflict is out of the question.

THE CONGRESSIONAL APPORTIONMENT.

The House leaders are reported to have set their heart strongly upon the passage of the bill for reapportioning Congressional representation on the basis of the last census. Mr. Underwood has even asserted that the House will not consent to adjourn unless the Senate agrees to pass this bill. Implied in this position is also the view that the Senate ought not in any way to modify the measure as sent up by the House. The contention is tacitly made that it is exclusively a function of the House of Representatives to determine how many Representatives there shall be. It is said that inasmuch as the last House, which was Republican, decided upon the same number, 443, as found favor with the present Democratic House, there is nothing for Senators to do but acquiesce without a word or vote in opposition.

To this contention it is impossible to agree. We admit that precedent for many years has appeared to leave the question of the Federal ratio wholly to the House. After the Census of 1840, it is true, the Senate objected to the plan of apportionment hit upon by the House, and brought about a change in it; but, if we are correctly informed, ever since that debate the decisions of the House have been concurred in by the Senate very much as a matter of form. But this record of tame acquiescence does not in the least destroy the Senate's Constitutional privilege in the premises, or set aside what may be its public duty. It will never do to set up the doctrine that a Congressional apportionment is as solely the business of the House as the selection of its doorkeepers.

Legally, the case really needs no argument. The Senate has the power to approve, reject, or amend any bill that comes to it from the House. If it can do this even with money bills, it certainly can with an apportionment bill. And it is absurd to maintain that so important a matter as deciding what shall be the membership of the House, and so of the Electoral College, is not of great public concern, and so of legitimate concern to the Senate. It is to be hoped, therefore, that Senators so minded will debate the whole question freely. If they can show that a mistake has been made by the House, they owe it to themselves and to the country to do so.

There is the more reason for such a course in the Senate in the fact that the plan of apportionment was not debated on its merits when it passed the House. This was true last year as this, and the reason is plain. The apportionment adopted had no underlying principle except one—if it can be called a principle—that the representation of no State shall be cut down. That was frankly admitted as the controlling consideration with those who framed the bill, and the very admission shows that the measure was, in fact, log-rolled. That is to say, no plan however excellent, supported by no matter what arguments of public policy, had a chance of getting the requisite number of votes unless it left the representation from each State at least as large as it is at present. Indeed, in the last Congress the Republican leaders of the House favored a bill keeping the membership nearly stationary, and sought to get it approved, but were voted down in their own caucus. A similar fate would no doubt have befallen any effort of the kind this year. So that what we have offered to us is simply the principle that no State shall ever lose a Representative. But it is preposterous to affirm that the Federal ratio should be determined solely upon that basis. The whole question of the most efficient size of the House is involved, and ought not to be pushed aside merely because enough Representatives combine to save any single man from displacement, and thereby to settle it that every ten years the House shall automatically be made larger. If the Senate meekly and silently assents to that position, it will be abdicating its own functions. At least let us have the matter discussed as one of large principle, and not simply disposed of on the plea that no other scheme of apportionment can be got through the House. That would be to make logic and sound views of government give way to a mere log-rolling arrangement.

Senators who object to letting the apportionment be determined by mere numerical preponderance in the House, will, of course, be accused of "playing politics." It will be said that they wish to shove the bill over till next year so that two or three Democratic Legislatures that would now have the work of redistricting to do might be replaced by Republican bodies. This motive may enter, no doubt, but it will not be openly avowed, and any Senators who may speak on the main question will address themselves to the fundamentals involved. Such a debate might easily be most instructive, and the Senate has no reason to shirk it. We suppose the probability to be that the whole matter will go over till next year, but in that case there would be at least this gain: the House would have learned that the Senate would not accept offhand and without inquiry any form of Congressional apportionment that the House might choose to send over.

THE LAWYER AND THE NATION.

Gov. Wilson's address before the Kentucky Bar Association last week touched on none of the questions with which his presumptive candidacy for the Democratic nomination for the Presidency is associated in the public mind. Although its title was "The Lawyer in Politics," there was no hint of initiative, referendum, or recall, nothing about commission government or direct primaries or popular election of Senators, nothing even—except, perhaps, by general implication—about the Anti-Trust law or its enforcement as a criminal statute making guilt personal. Indeed, the address was not a discussion of current political questions, but rather a homily on the public duties and responsibilities of the legal profession in a republic like ours, "where the rules of law have always been the chief instruments of contest and regulation, of liberty and efficient organization, and the chief means of lifting society from one stage to the next of its slow development." Nor, on this broad theme, did Mr. Wilson have anything new to offer. The two aspects of it which he made prominent are aspects which have been constantly present to the thoughts of those who have dealt with this subject in recent years. It is to the lawyers that we must look for help in effecting that reform of legal procedure which everybody now recognizes as an urgent need of the nation; and it is upon lawyers that we must chiefly rely for effective dealing with those great problems of corporation and industrial control which lie at the heart of the economic organization of society in our time.

Upon the first of these questions, Gov.

Digitized by Google

Wilson makes the excellent suggestion that if the bar association of some one State were to devote itself with real determination and persistence to the task of a thoroughgoing reform of judicial procedure, it would "insure a universal reconsideration of the matter from one end of the country to the other," and would thus do an invaluable service to the whole nation. The story of the advances made in many matters of the highest moment, within the past few decades, bears out the practical force of the suggestion. The multitude and diversity of our methods of law and government, which go with our State system, have many drawbacks; but they have a great advantage in that a good example need only be set in one State in order to have an excellent chance of spreading throughout the Union. The models set by Wisconsin and New York in dealing with the public-service-corporation question are rapidly being followed in all parts of the country; the experiment of commission government for cities was taken up with surprising promptness —considering its novel character—in scores of other places after a beginning had been made in Galveston; the juvenile court has quickly become a national institution in the same way; and surely if any one State were to institute a truly efficient reform in its methods of legal procedure, emulation would be swift to show itself in a matter to whose grave importance public attention has by this time been so effectively drawn, especially as regards the processes of criminal justice. When the President of the United States can refer to the contrast in this regard between England and our own country as "startling and humiliating to any son of America who has pride in his fellow-countrymen as a law-abiding and law-enforcing people," surely the response of public sentiment to a genuine effort to remove the reproach would be hearty and unmistakable.

On the broader question of the relation of the legal profession to the development of great public policies, the situation is of a far less simple character. Here the question is less one of concerted action than of individuual effort and influence. Gov. Wilson does well, doubtless, to exhort the lawyers to cultivate broad-mindedness and patriotic endeavors; to think of themselves as citizens first and hired advocates only secondarily; and to express a pious hope that some State bar association may make up its mind to devote itself with "determination and indomitable perseverance" to the promotion of "those policies which will bring regeneration to the business of the country," the solving of the modern problems of life with their "infinite complexities." But we confess that this notion of a concerted attack upon the questions of Trusts and monopolies, of employees' claims and employers' duties, of taxation and property rights, does not strike us as in the least degree promising. The lawyers of the country have an extraordinary opportunity, and there lies upon them an extraordinary duty, in all this field; but it is an opportunity and a duty which should appeal to them individually, not collectively. Light and leading in these matters are to be expected from a few men of superior ability and exceptional devotion, not primarily from the co-operative efforts of a great association.

In this, as in some other highly important matters, our country suffers incalculably from the remorseless absorption of its best intellects and strongest personalities in the routine of business. There are to-day in the legal profession scores of men of the highest powers, the most abundant knowledge and experience, who keep their nose to the grindstone of ordinary professional practice simply because everybody else does so, and who would find, even from the point of view of personal ambition, infinitely greater satisfaction in efforts directed toward great public objects. When the call of public duty comes in a familiar form, it often meets with ready response from such men. Mr. Hughes did not hesitate to take upon himself the tremendous burdens of a task not inherently congenial to him when circumstances accidentally pointed to him as the necessary man for the Governorship. Great labors are continually being undertaken, without hope of reward, by busy lawyers, when some public task has to be performed for which they are drafted by reason of their special qualification. But what a magnificent opening there is for the man who is an acknowledged master of all the complexities of corporation law and business, who is still in the prime of his powers, and who should set up for himself the ambition of becoming a leader of enlightened thought on these absorbing questions, a mighty influence in the shaping of public policy, an instrument ready to the hand of the State or the Federal Government in the execution of such policy. A single man of commanding powers, with this as the distinctly conceived object of his professional ambition, might achieve what parties and conventions wear themselves out in vain efforts to accomplish.

THE BRITISH CRISIS.

The Constitutional situation in England is hastening rapidly to a crisis—a crisis more acute than seemed probable a few days ago. Lord Newton's amendment to the veto bill, which provided that no bill for the further limitation of the legislative powers of the House of Lords should be introduced until after another general election, met with no support from either side; so that the two parties in the House of Lords, at the close of the report stage of the bill, faced each other in an attitude of irreconcilable opposition. Lord Morley, representing the Liberal Government, stood for the bill as it passed the Commons, without concession either substantial or sentimental, while Lord Lansdowne insisted on the important amendments which had been offered on behalf of the Conservatives.

Within a few days, the Lords will be face to face with the necessity of making a final decision on the crucial question whether they shall meekly bow their heads to the storm or defy the elements to do the worst. The choice they will have to make is of much the same nature as that which was before them when the Lloyd George budget was presented. That was a bitter pill for them to swallow; but they were warned by all their wisest advisers that they were running most imminent risk of being compelled to drain a cup far more bitter if they rejected that. They chose to run the risk; and the consequence has come very near to proving fatal. Whether it shall prove altogether fatal or not depends, in all probability, upon the question whether they once more make the mistake of hazarding their fortunes upon a contest in which the odds against them are desperate. If they should reject the bill when it is again returned to them by the Commons, they can do so only in the hope of a double event turning out in

Digitized by Google

their favor, when the chances as to each half of the event are in the highest degree adverse. Their defiance of the decree registered against them as the result of the last general election—and of the inflexible determination of the existing Government—can result in reversing that decree only if the King shall refuse to create the new peers that Mr. Asquith will unquestionably demand, and if, in addition to this, the new general election that will necessarily follow shall bring in a Conservative majority. The first supposition there is good reason to regard as highly improbable; but, granted that the King should take it upon himself to deny the means necessary to carry out the will of the majority of the Commons in the very issue upon which the last election was instituted, the prospect of anything but a decisive defeat at the polls seems too slight to be seriously thought of.

Nor can it be said that in making a last stand for their ancient rights, in the spirit of a forlorn hope, the Lords would at least be dying gloriously for a cause which was lost in any event. It is true that the veto bill goes so far toward destroying the standing of the House of Lords as a political power that there is a strong temptation to feel that the little that will be left is not worth saving; but it is precisely the stanchest defenders of the British Constitution as it has been who will refuse to take this view. In the most desperate situation, the part of true courage may be to save the remnants of the army by an orderly retreat, rather than invite complete destruction by a brilliant but futile display of gallantry. If the Lords yield, they will be shorn of all power over legislation except that of a mild suspensory veto; but they will still be in a position to appeal to national sentiment, still in a position, in one way or another, to take advantage of a reaction in their favor. If they resist, and are swamped by the creation of hundreds of new peers, they will at once cease to be that which, in the imagination of the nation, they have hitherto been. And if their resistance should have the result not of causing the creation of new peers, but of bringing on a general election and a crushing defeat, who can say how far the new legislation would go toward not merely mending, but ending, the House of Lords?

In the remarkable series of editorial articles in which the London *Spectator* has been urging, with extraordinary force and impressiveness, the policy of a sagacious acceptance of the inevitable, chief stress is laid on the referendum as the means of restoring in the future that balance of the British Constitution which it sees no hope of preserving in the present. To an American reader, few things could be more interesting than the contrast between the light in which the referendum appears to the British conservative casting about for a means of preserving the ancient tradition of his government and that in which it is regarded by the American progressive bent on wiping out the abuses of ours. The referendum is championed by American opponents of the existing economic order as an instrument for preventing corrupting influences in the Legislature from standing between the people and the immediate execution of their will; it is advocated by English supporters of the rights of property as a barrier to the hasty institution of radical changes by the representatives of the popular majority of the moment. The referendum is advocated in England not as an every-day corrective of legislative sins and errors, but as the ultimate appeal in a grave conflict of fundamental interests. Whether it is capable of truly fulfilling that function is a broad and difficult question. But the feeling that prompts the advocacy of it is the feeling that without it England will be face to face with the untried possibilities of government by a single chamber, unchecked by the restraints of a written Constitution and freed almost entirely from those more subtle bonds which reverence for an unwritten Constitution has hitherto maintained. To bow to the storm, to bide their time, to build up a new vitality with the aid of the referendum—such is the programme which is suggested to the Lords in their time of trial; it remains to be seen whether they will adopt it or stake what is left of their past upon one more cast of the dice.

RULING THE LESSER BREEDS.

The appointment of Lord Kitchener to be British agent in Egypt in succession to the late Sir Eldon Gorst will be received with immense satisfaction by the pillars of British imperialism. The necessity for putting a "strong man" in charge of the Egyptian Government has long been apparent to those students of the Orient who have taken their point of view from the works of Rudyard Kipling and pursued their observations in the pleasant company of British administrators and army officers. Sir Eldon Gorst's mild and tolerant rule was breeding anarchy. The hour called for a strong man.

Now that the strong man has appeared in the shape of Lord Kitchener, it would not be amiss to inquire into the fitness of this type of man for the difficult work of governing a tropical people in this the second decade of the twentieth century. There is no question here of moral issues or other sentimental issues, but of that Efficiency which in the strong man is supposed to compensate for the absence of qualities otherwise desirable. India serves as a good example because during the last decade India had the good fortune to have her destinies shaped, not by one strong man, but by two. One was Lord Kitchener in his post as commander-in-chief of the British forces in the peninsula. The other was the late Viceroy, Lord Curzon. A great deal of the strong man's energy is always used up in shoving other strong men out of his way. And that is what happened in India. Lord Curzon, during his second term, fell afoul of Lord Kitchener, and in the end was compelled to resign. The spectacle of the two highest members of the Government engaged in bitter hostilities could not be said to have increased British prestige in the eyes of the Indian natives; but that is a comparatively unimportant matter. The point is that Lord Kitchener had his own views about the reorganization of the Indian army and was allowed to carry them out.

We do not recall by how many times Lord Kitchener's reforms were supposed to have multiplied the efficiency of the Indian army; but the multiple was a large one. It may be that the Northwest frontier was rendered quite impregnable against that Russian invasion which never has been and never will be within the realm of probability. What is certain is that the native Indian army to-day is permeated with anti-English feeling and with rank sedition. Native soldiers are continually being arrested for conspiring against the Government, and there have been repeated symptoms, here and there, of a condition of af-

Digitized by Google

fairs that bordered closely on mutiny. The Unionist press at home has roundly declared that disloyalty is more widespread among the native troops to-day than at any time since the Sepoy rebellion; which forms one kind of testimonial to the efficiency of Lord Kitchener's methods in India.

Of the efficiency of that other strong man, Lord Curzon, there is still more striking evidence. The present unrest in India, which undoubtedly constitutes a very serious problem for its English masters, may be explained in part as a result of Japan's triumph over Russia. The whole Orient caught the reverberations of that historic shock. But there are very few people to deny the fact that what gave life and body to Indian discontent was the partition of the province of Bengal, which Lord Curzon made his pet measure, against the best opinion in India. To the Bengalis this was a partial destruction of their fatherland; in any case, this notoriously unmilitary race has been thrown into a state of violent sedition. The Bengalis are also a quick-witted race, and have easily mastered the tools of modern revolutionism, the inflammatory proclamation and the bomb. If we are to judge strong men by their achievements, it should be written of Lord Curzon that he found India peaceful and left it aflame.

Compared with this record in India, what is there to be said against the administration of Sir Eldon Gorst, who was so conspicuously not a strong man that it nearly broke Mr. Theodore Roosevelt's heart? Under the Gorst administration there has been a good deal of nationalist agitation, of newspaper warfare, of student manifestations, and just one lamentable case of assassination; India by this time has had fully half a dozen. And because no mailed-fist policies were brought to bear in Egypt, the movement there has fallen back into safe channels, and Lord Kitchener will succeed to a peaceful heritage. The movement has not died out, because civilization has not died out. It would be idle to suppose that the tide of progress can be kept back in any country where men think and read and observe. To expect the Hindu or the Egyptian forever to bow obsequiously to the foreign Sahib or Sidi, forever to be content with having everything done for him and doing nothing for himself, is to court folly and disaster. England has a choice between a policy of repression and a policy of wise concession and political education.

For, in the last resort, no white Power that rules over Eastern races can escape this dilemma: Either the people you govern prospers under your rule or it does not. If it does not, there is no excuse, of course, for remaining where you are. If it does prosper, there is no power in the world that can permanently withstand the upward pressure of a people in whom national pride must keep pace with national efficiency. Imperialist opinion speaks with fear and contempt of the dangerous educated Babu. Is England prepared to suppress schools, books, and newspapers in India and Egypt?

WHY THACKERAY WEARS WELL.

In most of what is written about the Thackeray centenary there is evident a sort of personal affection unwonted in such celebrations. It appears to be not so much a mighty shade that is commemorated as an intimate friend that is greeted. Many literary centenaries are observed in a perfunctory spirit. We do the thing because it is expected of us, yet without much heartiness. But somehow Thackeray's personality has so projected itself across the forty-eight years since his death that he still seems very human and very near; and the articles and addresses concerning him in this his hundredth birth-year have an air of spontaneity and zest, such as one seldom meets on like occasions. It would appear as if thousands of people were simply glad of the chance to express once more their sense of grateful obligation to him and their persistent feeling of admiring affection for him.

Thackeray has unquestionably fared well in the lapsing years. His appeal was never of the widest, but it was always deep, and in some ways seems even to be deepening. That he had good carrying quality is attested by the things we have spoken of, and also by the steady interest in his writings and in all that relates to his private life. Though no formal biography of him has been produced, as he wished that none should be, a vast amount of reminiscence and anecdote concerning him, with a large body of his letters, has been published, and in all of it he has been singularly fortunate. Whimsicalities have been revealed, but no meannesses. His friendships were stanch, and his love for his daughters unaffected and almost a form of piety with him. Nothing that has leaped to light has given any friend of his cause to blush; and the whole texture of his life and activity, as we now know it so fully, appears singularly fine. It is hardly an exaggeration to say that his personality stands before us to-day as engaging as it was when he was a part of this breathing world.

If we ask what it is in his writings that has made them wear so well, the attention is first caught, of course, by that great preservative, style. Thackeray's English has often been praised, not always perhaps with entire discretion; but as frequently happens with conventional laudation, a certain reaction is provoked. Irritated people will echo Dr. Johnson's phrase: "I would rather praise him than read him." It is good discipline, however, even if it were not a perpetual delight, to turn to his best pages and consider what a command he had of form. We speak not now of such a linguistic *tour de force* as "Esmond," which left Lowell wondering, albeit with a grain of malicious satisfaction when he could catch Thackeray tripping over a minor point in Queen Anne English. We have rather in mind the flexible and perfectly adequate instrument of language which he ordinarily employed—so direct, so simple, without anything finessing or fantastic about it, worlds removed from journalese, but capable of rendering every idea with the utmost clearness, and conveying emotion without rant and pathos without slobbering. Thackeray's style alone would help us to understand why he can be read with fascination after fifty years.

But his subjects, too, and the range of his treatment explain his survival as almost a contemporary writer. When at the age of thirty-six he flashed his masterpiece upon the world, the discerning saw upon what a broad canvas his preliminary work had been imperceptibly preparing him to paint, and with what power. It has been said that Thackeray could throw everything else overboard and live on by "Vanity Fair" alone. Yet the penetration and the humor and the scorn for baseness and the

Digitized by Google

sure sense for the dramatic which he displayed in that book, were adumbrated long before it and shone in other volumes long after it. For he had the privilege of genius in not only giving his age a new standpoint and a new literary method, but in continuing to illustrate and to enforce his way of looking at life in connection with a great sweep of human characters. He gives us large pictures and takes us to full-length dramas. If it be asserted that his strength lay in dealing with people of the middle class, their follies and their aspirations, it must not be forgotten that he knew how to sail boldly for the coasts of Bohemia, and that the lash of his satire struck upward in the social order as well as downward. Lord Rosebery has said, with a certain air of class chagrin, that the sight of a coronet made Thackeray run amuck with a scourge; though he admits that the particular specimens flagellated well deserved their punishment. But this really speaks of the sturdy democracy which Thackeray carried into letters as well as exemplified in life, and which was not so facile or popular a quality in mid-Victorian days.

Happily, it is no longer necessary to take up the tedious charge that Thackeray was a gloomy cynic. If nothing else had made that preposterous, what his daughter has given us about the man himself would have forever driven it from sane criticism. To have called him a sentimentalist would have been nearer the truth—always meaning a sincere and controlled sentiment, a manly feeling for what is sweet and tender in life. Where he let himself go in familiar talk with his readers, as he perhaps did most freely and completely in his "Roundabout Papers," we at once perceive a simplicity of attitude, a delicate appreciation, a deep sense of humility and love of justice which mark as surely as wit and scorn the writer who lives again in lives made better by his presence.

NEWS FOR BIBLIOPHILES.

No poet's verse ever mounted higher than that wonderful flight with which "The Dunciad" concludes, says Thackeray in his "English Humourists"; and after quoting the lines:

> She comes! she comes! the sable throne behold,
> etc.,

he continues:

In these astonishing lines Pope reaches, I think, to the very greatest height which his sublime art has attained, and shows himself the equal of all poets of all times. It is the brightest ardor, the loftiest assertion of truth, the most generous wisdom illustrated by the noblest poetic figure, and spoken in words the aptest, grandest, and most harmonious. . . . It is Truth, the champion, shining and intrepid, and fronting the great world-tyrant with armies of slaves at his back.

The beauty and imagination of the lines I believe all of us will recognize, though I think most of us will feel at liberty to doubt the wisdom and truth of the prediction that the sway of an "uncreating" Dulness will bury knowledge in the "universal darkness" of ignorance. Pope himself admired the lines so much that when he repeated them his voice faltered. "And well it might, sir, for they are noble lines!" quoth Dr. Johnson, who, too, was fond of repeating them in "his forcible melodious manner."

The well-known care with which Pope wrote and polished his verses led me to examine the growth of this passage. There were three distinct stages of development.

"The Dunciad" was first given to the public in 1728; it appeared in pamphlet form, with a preface, but with few and meagre notes. Publication had been carefully prepared for, and popularity was immediate. Seven or eight editions, counting both surreptitious and authoritative ones, were called for, but no acknowledgment of Pope's authorship was made until about the seventh. The poem was in three books, and contained a total of 920 lines. The lines that concluded book iii were the germ from which was to spring the passage now so much admired:

> Then, when these signs declare the mighty Year,
> When the dull Stars roll round, and re-appear;
> *Let there be darkness!* (the dread pow'r shall say)
> All shall be darkness, as it ne'er were Day;
> To their first Chaos Wit's vain works shall fall,
> And universal Dulness* cover all!
>
> No more the Monarch could such raptures bear;
> He wak'd, and all the Vision mix'd with air.

In the next year the poem reappeared, enlarged to a total of 1,014 lines, and accompanied by a mass of notes and mock-critical apparatus. Popularity showed no sign of waning, and the number of "editions," or variants, extended to eight or ten—the bibliographers have not been able to determine the matter. Of the eighty-four additional lines, sixty appeared in book iii. The lines just quoted were altered so as to read in the quarto:

> Signs following signs lead on the Mighty Year;
> See! the dull stars roll round and re-appear.
> She comes! the Cloud-compelling Pow'r, behold!
> With Night Primæval, and with Chaos old.
> Lo! the great Anarch's ancient reign restor'd,
> Light dies before her uncreating word:
> As one by one, at dread Medæa's strain,
> The sick'ning Stars fade off the a'thereal plain;
> As Argus' eyes, by Hermes wand oppress,
> Clos'd one by one to everlasting rest;
> Thus at her felt approach, and secret might,
> Art after Art goes out, and all is Night.
> See sculking Truth in her old cavern lye,
> Secur'd by mountains of heap'd casuistry:
> Philosophy, that touch'd the Heavens before,
> Shrinks to her hidden cause, and is no more:
> See Physic beg the Stagyrite's defence!
> See Metaphysic call for aid on Sence!
> See Mystery to Mathematicks fly!
> In vain! they gaze, turn giddy, rave, and die.
> Thy hand great Dulness! lets the curtain fall,
> And universal Darkness covers all.
>
> Enough! enough! the raptur'd Monarch cries;
> And thro' the Ivory Gate the Vision flies.

*Warburton in his edition of 1751 quotes these lines, putting Darkness in place of Dulness; but the two 1728 editions I have give Dulness.

In the first octavo, published by Lawton Gilliver (1729), and in subsequent editions, some of the errors were corrected, and the "covers" of line 356 was altered to "buries." In the third period of active interest in "The Dunciad," 1735-36, most of the editorial energy went into the revision of the notes. The concluding passage of book iii was continued with no material alteration, and so it remained till the middle of the year 1742.

Meantime, a number of lines had grown under the poet's hands, without taking shape as a definite poem. He decided to revise these, to add others, and to publish the whole as a continuation of "The Dunciad." In March, 1742, there appeared "The New Dunciad: As it was found in the Year 1741." The poem in the first edition, in quarto, contained 618 lines; it was republished in rapidly succeeding quartos and octavos, growing to 620 lines in the later editions. Still later it was joined to its predecessor, and called book iv.

Somewhere toward midsummer, in an edition of Pope's "Works" in small octavo, "The Dunciad" was issued in this fuller form as Volume III, part i (the first three books), and Volume III, part ii (the fourth book), each a separate volume. Of the second, Volume III, part ii, I have five variants published by Dodsley & Cooper. In two copies book iv contains 618 lines; in two others, 620 lines; and in the fifth, 650 lines (by an error in numbering; there are really 648 lines). The fifth variant appeared later than the other four, probably in the latter half of July. Its greater length is explained by the fact that it concludes with an early draft of the passage praised by Thackeray. It is the earliest "edition" to show the passage shifted from the end of book iii to the end of book iv, and to show it almost as it was finally to stand. The lines are as follows:

> In vain, in vain—the all-composing Hour
> Resistless falls: The Muse obeys the Pow'r.
> The Gloom rolls on, the sable Throne behold
> Of Night Primæval, and of Chaos old!
> Before them Fancy's gilded clouds decay,
> And all her varying Rain-bows die away.
> Wit shoots in vain its momentary fires,
> The meteor drops, and in a flash expires.
> As one by one, at dread Medæa's strain,
> The sick'ning stars fade off th' ethereal plain;
> As Argus' eyes by Hermes' wand oppress,
> Clos'd one by one to everlasting rest;
> Thus at her felt approach, and secret might,
> Art after art goes out, and all is Night.
> See skulking Truth to her old Cavern fled,
> Mountains of Casuistry heap'd o'er her head!
> Philosophy, that lean'd on Heav'n before,
> Shrinks to her second cause, and is no more.
> Physic of Metaphysic begs defence,
> And Metaphysic calls for aid on Sense;
> See Mystery to Mathematics fly!
> In vain! they gaze, turn giddy, rave, and die.
> Religion blushing veils her sacred fires,
> And unawares Morality expires.
> Nor public Flame, nor private, dares to shine;
> Nor human Spark is left, nor Glimpse divine.
> Lo! thy dread Empire, Chaos! is restor'd;
> Light dies before thy uncreating word:
> Thy hand, great Anarch! lets the curtain fall;
> And Universal Dulness buries All.

But the end, though near, was not just yet. Pope had long borne a grudge against Colley Cibber, the famous actor of the generation, a successful playwright, and anything but a dunce. Hence, at Twit'nam, a campaign was planned for snuffing out this sparkle as thoroughly as had been done for the rush-lights of Grub Street. Pope's guardian angel nodded, and in the luckless moment the poet decided to alter the whole. "Dunciad,"

Digitized by Google

substituting a new hero for the old one. Cibber should supplant Theobald, and become himself monarch of the realm of Dulness.

Pope's weapon, however, proved a boomerang. He harmed his enemy less than he damaged his poem. But the changes necessary for the new design affected the concluding passage little. When, after thirteen months, the poem appeared in October, 1743, four of the lines had been altered. Line 629, the one with which Thackeray begins his quotation, had become:

She comes! she comes! the sable Throne behold.

Lines 631-32 now read:

Before her, Fancy's gilded clouds decay,
And all its varying Rain-bows die away.

And the last line:

And universal Darkness buries All.

The development of the passage affords an example of Pope's revision of his lines at the suggestion of a friend, and an illustration, too, of his incapacity in philosophy. Warburton, friend, counsellor, and champion of the poet in his later years, and long his editor and annotator, makes this note in his edition of "The Dunciad" in 1751:

Ver. 643. in the former Edd. it stood thus,

Philosophy, that reach'd the Heav'ns before,
Shrinks to her hidden cause, and is no more.

And this was intended as a censure of the Newtonian philosophy. For the poet had been misled by the prejudices of foreigners, as if that philosophy had recurred to the *occult qualities of Aristotle*. . . . When I hinted to him how he had been imposed upon, he changed the lines with great pleasure into a compliment (as they now stand) on that divine genius, and a satire on the folly by which he himself had been misled.

The change of the old line 348,

Secur'd by mountains of heap'd casuistry,

to the new 642,

Mountains of Casuistry heap'd o'er her head,

was a particularly felicitous bit of revision. It is worthy of note, too, as an instance of the hovering of an author's mind, that in line 656 the poet reverted, in 1742, to the Dulness of the 1728 verses, only to change it to Darkness in 1743.

THE QUESTION OF GREEK.

TO THE EDITOR OF THE NATION:

SIR: In a recent editorial note you say that "in this question of Greek, Amherst College finds itself brought up against a radical difficulty which must sooner or later be faced and solved. The point is whether this Christian age and generation can be dominated by the literature of a pagan age and nation. In other words, is it at all likely or is it proper that a literature which is pagan in its forms and ideals should be the only possible literature from which our youth can get their proper ideals of life and of culture? If there is anything in modern Christian ideals, then certainly the modern literatures imbued with Christian ideals, fostered in a Christian atmosphere, must be the proper kind of literature for the schools of this Christian age. This is undoubtedly what the movement away from the ancient literatures means, however much the movement may at times appear to be influenced by practical and material needs.

We are in great sympathy with Amherst College in its effort for a higher order of scholarship; for literary and scientific scholarship of great thoroughness. No doubt the scholarship of our institutions is suffering from certain weaknesses and lacks in earnestness and deep application. This, is, however, to be accounted for not by the substitution of the so-called modern subjects for those of the pagan languages and their literatures. It exists because colleges have gone astray on clubs and sports and so-called student interests, which destroy all true academic life whether in modern literatures or in science. Here applied science and mathematics have somewhat of an advantage, because men working in these lines have usually a pretty definite object in view, and are not so likely to be led astray as are the students who have not yet settled down to a definite course. This produces the appearance that all literary work and true education in culture and refinement are set aside for applied science.

At this point it may be observed that the pursuit of science is just as unselfish as is that of literature. In fact, there is quite as thorough an application to study for the sake of study in our professional schools as in our literary colleges. No doubt there is in this country, as in other countries, a tendency to hurry over fundamentals and to go on to the so-called practical, or at any rate to a kind of finish, however imperfect. This is true of mathematics and science and modern languages and their literatures as it is true of Latin and Greek. But we are beginning to see that students must master fundamentals thoroughly before they can be promoted to more advanced work, whatever that may be, either in the way of literary or scientific study. This is one thing, but it is quite another thing to assume that thoroughness is only reached by going back to the study of pagan literature. In this respect, Amherst College is retrogressive and will never succeed. It is of vastly more importance to us and to our students to know what the English, the Germans, and the French are now doing than what the Greeks and the Romans did in the past. These nations possess a civilization—a Christian civilization—far in advance of that possessed by the ancient nations. They will therefore almost wholly supply in the near future the material for all literary education in our schools and colleges and no amount of lecture courses can turn the course of events from the modern to the ancient literatures.

JEFFERSON E. KERSHNER.

Lancaster, Pa., July 12.

LEGAL ETHICS.

TO THE EDITOR OF THE NATION:

SIR: The question whether an advocate should defend a person for a crime of which he knows or believes him to be guilty, is one which has been agitated for at least two centuries. The letter on it in your issue of July 6 from a Western gentleman I deem worthy of an answer. While I was personally opposed to the rule which was adopted by the American Bar Association on this subject, the general sentiment in favor of a code of ethics seemed to be so strong that it was felt its advocates should have a chance to present it to the Bar. My belief is that it would be much better to let many of the ethical rules which have been adopted rest as a species of common law to be interpreted by the best and prevailing sense of the profession.

At the outset, it is necessary to define clearly what is meant by a "knowledge or belief" of the guilt of the accused person. If the lawyer has personal knowledge of the crime, if he is present at, or sees, its commission, he is a witness, the same as any layman, and consequently would, for obvious reasons, be disqualified from acting as an advocate. He may also derive his knowledge of a crime from a voluntary confession made by his client. His mouth is closed even if he should wish to speak, because the law prevents him from disclosing information communicated to him in his professional capacity.

Should he continue to act as the advocate in such a case? Nothing can be gained by an endeavor to answer such hypothetical or supposititious questions. They depend largely upon the peculiar circumstances of each case, and must be conscientiously determined by the lawyer when they arise. It may be that there is a full, technical case against the accused, without his confession—which fact might influence the lawyer as to one course of conduct. On the other hand, there might be a defect in the technical proof against the defendant, which the confession would supply. Should the lawyer advise his client to plead guilty? Suppose he gave such advice and the client refused to follow it. I repeat that each case must be determined as it arises, in view of its peculiar circumstances.

What is generally meant when the question is asked if a lawyer should defend a person accused of crime whom he "knows or believes" to be guilty is, that such knowledge or belief is derived from sources which are open to everybody. No important criminal act is committed which is not quickly communicated to the public, and about which the community and lawyers in common do not promptly form an opinion. With an opinion of guilt derived from such sources of knowledge and belief, is a lawyer justified in defending the culprit?

I think there can be no grave doubt as to his complete right to do so. The court certainly can assign counsel to defend cases in which prisoners have none; and their duty, as officers of the court, would compel them to obey such orders. The right of the lawyer to defend persons accused of crime rests upon broad and well-grounded principles. There must necessarily exist in every community governed by law exact and clear definitions of crimes, as well as certain forms and rules for the trial of offenders. These are indispensable conditions to an intelligent and humane administration of criminal jurisprudence. A person accused of crime is entitled to demand that each and all of these conditions shall be satisfied before he is convicted.

While there is no doubt that, at times, the application and enforcement of these forms of criminal procedure prevent the conviction and punishment of guilty persons, yet upon their continuance and stability depends the very existence of social organization.

Digitized by Google

A lawyer's right and duty are to demand that his client, charged with crime, shall be proceeded against in a legal and orderly manner, notwithstanding his own moral conviction of guilt. If the elements constituting the crime charged are lacking; if the forms of the law are not complied with, it is his duty to urge and demand the acquittal of his client. In doing this, he performs a double duty—one to the community, in preserving and upholding the forms of the law, and the other to his client.

No finer exhibition of his real duty to the State can be imagined than the position of the lawyer under such circumstances. The judge upon the bench is no more an officer than a lawyer. They differ only in their respective duties, and no judge could advocate the conviction of an accused where the legal proofs were deficient, simply because he had a moral belief that he was guilty.

I do not place the right of the lawyer to defend a client whom he believes to be guilty upon the ground that he cannot know that his client is guilty until his guilt has been officially and finally declared by the court and jury, because he often, in a sense, has a moral conviction of the guilt of his client, which he has derived through the ordinary channels of information. I put it upon the ground that he is an officer of the law, and that it is his duty to see that the forms of the law are carried out, irrespectively of knowledge or moral conviction.

The argument that the lawyer cannot know of the guilt of his client until he has been officially condemned, might be used with equal force by an accessory after the fact. Why could not every accessory after the fact declare, with the same reason as the lawyer, that he could not know a crime had been committed because the person whom he had assisted had not been adjudged judicially guilty?

An accessory after the fact is a person who knows a felony to have been committed, and who relieves, comforts, or assists the felon. And so strict is the law, where a felony is actually complete, in order to do effectual justice, that the nearest relations are not suffered to aid or relieve one another. If the parent assists his child, or the child the parent, if the brother receives the brother, the master his servant, or the servant his master, or even if the husband receives his wife, either of whom has committed a felony, the receiver becomes an accessory after the fact. A married woman, however, does not come within this rule, because she is presumed to act under the coercion of her husband.

We see, therefore, for the maintenance of society, with what strictness and severity the hand of the law is uplifted against those who aid, or shelter, or assist criminals to escape their just and necessary punishment. But this doctrine could not be extended to include the lawyer who defends those charged with crime, else the whole system of criminal law would be absolutely demolished.

If these views be correct, it should seem to follow that the lawyer's duty to defend a person in those cases where he has a belief, or a moral conviction, of the guilt of his clients, is clear. And the community cannot suffer, if he simply confines his efforts to demanding that the forms and rules of the law be carried out.

"STARRING" THE PLAY.

TO THE EDITOR OF THE NATION:

SIR: Your editorial on our Chicago Theatre Society is most admirable and states quite clearly our general position. It is our plan to present the most unconventional and truthful comedy obtainable, but it is not easy to make up a programme. The plays we want are often not in the market, and others are so closely associated with the names of certain "stars" that their production by a repertory company such as ours is not advisable. The list which you mention is only tentative, but in so far as it expresses a preference for character drama, it is representative of our first season. Shaw, Barker, Synge, Pinero, Thomas, are of this classification, and while using Ibsen, you will observe, we take one of his most poetical pieces, and from "Giocoso" a "comedy." If we should add a few classical plays they would also be comedies, like Goldoni's "Fan," Molière's "Upstart Gentleman," or Goldsmith's "Good-Natured Man."

Personally (and as the secretary of the society) I am more profoundly concerned with the question of how this organization can be of use to the American dramatist who wishes to write character plays without the "arm of coincidence." I hope we may be able to draw forth plays written from the heart, irrespective of the demands of a "star," and irrespective of the question of "the long run." We do not intend to read scenarios, but we do welcome finished plays that are written as a fine novel is written, closely, logically, and with pleasure in the writing.

It may be that we are mistaken, but we believe there are plays of this character already written (and, perhaps, thrice refused by managers who must consider their "stars"), and that a repertory stage would furnish a hearing for such pieces. It may be that we are being cheated of plays which would be a credit to our literature and a joy to the theatre-goer Anyhow, that is my own belief. It cannot be true that we are so lacking in observation and invention as to be obliged to borrow all of our high-class comedy from the old world.

It is the intention of the Chicago Theatre Society to star the play and to honor the dramatist and to aid (in our small way, as the repertory theatres of England have done in their larger way) the development of a vivid, interesting, and native drama—plays which shall each be original and not imitative. I am aware that this will sound ambitious to some of your readers, and presumptuous to others, but I cannot agree, however deep my patriotic feeling, when I am told that "we are keeping our dramatic end up." We are, indeed, producing "money-makers" and "best sellers," but that does not always mean excellence of writing or originality of invention—if it did, there would be no need of a repertory theatre.

HAMLIN GARLAND.
Secretary Chicago Theatre Society.

A HINDU ON THE BIBLE.

TO THE EDITOR OF THE NATION:

SIR: Your reference in the *Nation* for July 6 to Baba Bharita's fling at the Ten Commandments as "nothing but childish prattle," leads me to call attention to a different estimate of our Bible by one of his countrymen, Sir Narayan Chandavarkar, B.A., LL.B., judge of the High Court, Bombay, and vice-chancellor of the University of Bombay. In an article in the *Times of India*, April 1, he said:

I have a faith and it is this. To understand clearly the best that is in our Hindu Scriptures, to enter fully into the spirit of their grand ideals and teachings, we must have the help of the Bible. A grand book is this—the Authorized Version of the English Bible. . . . At the same time let us not forget another translation of the Bible—the translation made by an English lady, mother of a pious son. Asked which of the different published translations of the Bible—Jerome's Vulgate, Luther's German Bible, the Authorized Version, and the Revised Version—this son preferred, he replied: "I prefer my mother's translation." "What is that?" The boy answered: "My mother has translated the Bible and translated it straight, too. Her every day life is a translation of God's word."

JAMES M. HUBBARD.

A READING IN BYRON.

TO THE EDITOR OF THE NATION:

SIR: The word "strike," in "Don Juan," III, cili, about which Mr. Chew inquires (*Nation*, June 29), is, perhaps, from the famous saying of Themistocles: "Strike, but hear me." If we take the phrase "a pictured image" to be a thrust at Mariolatry, the exclamation follows naturally enough.

FRED NEWTON SCOTT.

University of Michigan, July 3.

HAYM SALOMON.

TO THE EDITOR OF THE NATION:

SIR: In a letter printed in the *Nation* of June 29, Mr. Worthington C. Ford exclaims against the discovery of Haym Salomon as a hero of the Revolution. In John Fiske's "The Dutch and Quaker Settlements," Volume II, he will find the following passage:

The name of Haym Salomon, a very wealthy Polish Jew, deserves to be coupled with that of Robert Morris for the financial aid which he extended to Congress during the War of Independence. Mr. Salomon advanced to the United States nearly $700,000, not a cent of which was ever repaid.

E. SCHRADER.

Macklin, Sask., July 8.

UNITED STATES CUSTOMS.

TO THE EDITOR OF THE NATION:

SIR: In your issue of June 29 you say: "In levying an income tax, for example, it would be a most vicious plan to exempt incomes below $2,000, say, and then in cases of incomes above that amount to tax the whole income." Manifestly the same principle does not obtain in the United States customs. Last July I crossed the Mexican border into the United States from Tia Juana. The customs regulations allow a citizen to bring back with him from Mexico goods to the liberal amount of one dollar. I purchased a *serape* for $1.72, upon which

Digitized by Google

I paid 40 per cent. *ad valorem* and 33 cents a pound for the two pounds of wool it was supposed to contain, a total import tax of $1.36, even the generous exemption of one dollar not being allowed. I sometimes wonder whether I was "done" by the collector or by this great and glorious government.

Literature

RUSSELL OF THE "TIMES."

The Life of Sir William Howard Russell, C.V.O., LL.D., the First Special Correspondent. By John Black Atkins. With portraits and illustrations. In two volumes. New York: E. P. Dutton & Co. $10 net.

In the early summer of 1854 William Howard Russell, *Times* correspondent with the Crimean army, wrote privately from Varna to his chief, Delane:

> Part of one division . . . has got no tents. There is no beef for the men for the last three days, only mutton, which the doctors say will bring on dysentery. Just imagine this: the sappers and miners sent out to Bajuk to survey do so in full dress, as their undress clothes were not ready when they left. Am I to tell these things, or hold my tongue?

The question was merely rhetorical. Russell had no idea of holding his tongue. For months and all through the dreadful winter before Sebastopol Russell exposed the suffering of an army that without proper food, clothing, or hospital service was rapidly melting away. Such letters hit great folk both in the field and in the War Office, and it looked as if the rash young Irishman were writing the ground from under his feet. Remember that he had no status. Clothed in some odd semblance of a sutler's uniform, housed by tolerance outside the camps, without right of access to headquarters or privilege of drawing rations, the *Times* correspondent was regarded merely as a camp follower with the additional disability of being cordially hated by most of the officers high in command. Even to hold that position required nerves of iron, to improve it all the adroitness of one of the most accomplished gentlemen of his race and time. Gradually the regimental officers learned what the men had readily grasped from the outset that this big jolly critic of the army was really pleading their cause. Russell's various tents and huts on the Crimean plateau became so many centres of good fellowship, and incidentally of news. Then, although he was always tediously writing about blankets and greatcoats and tents and rations, he had also become the faithful recorder of the Alma and Inkermann, of Balaklava and the storming of the Redan. So in the face of bitter opposition amounting sometimes to persecution Russell made his position good. Parliament and the country confirmed his criticism by turning out Lord Aberdeen's Ministry, the army admitted that he had saved it from virtual annihilation, a verdict ratified by all historians of the Crimean War.

Russell's antecedents hardly account for such an achievement, though the mixture of Protestant and Catholic Irish blood in his veins must count for something. A fox-hunting and thriftless grandfather had taught the orphaned lad the valuable accomplishments of tilting his glass and singing his song. From Trinity College, Dublin, he gained the education of a gentleman, but oddly enough, made no lasting friendships at this time. While hesitating as to his profession, in his twenty-first year, 1841, there came to him the opportunity of reporting the Irish elections for the *Times*. He grasped at the chance, and proceeded not to the balloting place, but, remembering it was an Irish election, to the hospital, whence he wrote a vivid letter that was the subject of a leader. His services during these stormy elections commended him to the office, and when Russell went to London, ostensibly to read law, a place was made for him in that nursery of talent, the Press Gallery of Parliament. For a dozen years Russell sold his pen as he might, styling himself frankly a "mercenary." For the *Times* he reported Daniel O'Connell's trial, and after a trying journey back with his letter had the chagrin of telling the verdict to a bystander, supposedly a colleague, before the very door of the *Times* office. It was, in fact, an astute reporter of the *Morning Herald* which naturally got the "beat." Through all his career Russell occasionally committed glaring blunders of this type. It was a necessary part of what Charles Lever called his "Irishry." For a time the *Morning Chronicle* and the *Daily News* engaged his pen, but he always returned to his first master, the *Times*. For a brief space in 1850 he accompanied the Schlesswig-Holstein army in the revolt against Denmark, but his few letters from the field gave small indication of the Russell that was to be. In fact, his work was of the most general sort. Now he reported the potato famine in Ireland, now followed Kossuth; witnessed the funeral of the Duke of Wellington or the trial of the famous murderer Rush. Meanwhile his young wife had borne him two daughters, and he had become a member of those two convivial companies that Thackeray had gathered round himself in the Garrick and the Fielding clubs. Russell had become a man about town, with the corresponding expenses, and in 1853, being thirty-three years old, he ruefully sets down in his diary the fact that his income from the *Times*, together with his Dublin and Brussels correspondence, comes to barely £600 a year. It was at this time that Delane made him a handsome offer to go with the Guards to Malta, assuring him that it was a question only of a winter holiday, and that he should be back soon to his law practice. What began as a winter holiday is now written indelibly into the military history of England. Russell, who had left as an agreeable novice in Thackeray's set, returned from the Crimea one of the most famous men of the day, with every journalistic and social door ajar for him.

For a matter of two years, Dr. Russell—his own college gave him an LL.D. in 1855—served the *Times* in various capacities, reporting the coronation of the Czar Alexander II and revisiting the Crimea, but, in the main, repleted a shrinking family budget by lecturing. In the nearly forty years of active service remaining to him, he was somewhat under the disadvantage of seeming to repeat his Crimean exploits on a smaller scale. And yet to many readers, and we think to all journalists, his correspondence from India during the mutiny will seem the high-water mark of special correspondence and of Russell's career. Never were such opportunities, and never were they better used. Whereas Lord Raglan, in the Crimea, had never exchanged a word with the *Times* correspondent, Sir Colin Campbell offered him a permanent place at his table—a privilege prudently declined—and made the following remarkable compact:

> You shall know everything that is going on. You shall know all my reports and get every information that I have myself, on the condition that you do not mention it in camp or let it be known in any way, except in your letters to England.

What the Commander-in-Chief for India thought of Russell personally and of the frequent charge that the Crimean letters had given aid to the enemy is sufficiently implied in this incident.

Havelock and the epic days of the first reliefs had already passed before Russell came to India. His task was less the reporting of campaigns than the ascertainment of facts of national feeling. In especial, he studied the policy of reprisals and the legends of mutilation of European victims of massacre. Here he did much to recall to reason and humanity a public opinion frenzied beyond belief. In his *Times* correspondence, and more strikingly in two private letters to Delane, he exposed with statesmanlike clearness the permanent difficulties of the Indian situation. Scorn of the darker skin was the original and enduring evil. The English official, for the native a terribly expensive luxury, soon forgets "the principles of his life, the rules of his religion, and the feelings of his civilization; he regards rebellion or insurrection not as a political offence, but as a blasphemy or sac-

Digitized by Google

rilege of ineffable magnitude committed against the Deity, whom he vicariously and imperfectly represents." Again Russell points out the danger of disregarding native customs and sentiments. We have disarmed the country, he writes, "but against the silent, steady action of the antipathy of nearly two hundred millions of people, once fairly excited, no power can stand." These two confidential letters to Delane contain a complete moral summary of the Indian question, and are as applicable to-day as they were when written fifty years ago. Russell went back to England determined to quit the field. He had spent himself too freely, and on sailing he wrote to an Indian friend,

> I go home to a sick wife, carrying from India no very pleasant memories, a damaged reputation, great popular enmity—the only Englishman, I believe, who ever left India poorer than when he came into it—with nothing to cheer me save the conviction that I did my duty according to the light that was vouchsafed to me.

Delane tried to send him to the Italian war, suggesting that for recuperation Lombardy was next best to Switzerland. Refusing, Russell tried his hand at leader-writing for the *Thunderer*, an ungrateful task, at which he succeeded but fairly well. One divines in his autobiographical notes the armed truce that exists in every newspaper office between the men of news and the men of views; how subtly their relations are tinctured with affection, admiration, and profound mutual mistrust. And naturally, since nobody so well knows the fallibility of news as he who daily converts it into opinion, whereas no one so clearly perceives the shifts and dodges of the manufacture of opinion as the confederate newswriter. It was Thackeray who warned Russell: "Don't wrap yourself up in *Times* foolscap . . . Try work for yourself." Circumstances never quite permitted Russell to do that. Yet when, in 1850, he founded the *Army and Navy Gazette*, an enterprise which occupied him for a matter of forty years, it looked like a divorce from the *Times*. The failing health of his wife again was a strong argument for keeping to London. But after a year, during which he was a contributing reviewer under Delane's stern tutelage, the *Times* reënlisted its famous correspondent and sent him to study conditions in the apparently disintegrating United States. If any serious correspondent were asked to tell his most habitual and deepest grief, he would certainly answer, "The gross misinterpretation in the editorial office of news laboriously gathered in the field." Russell in America was to drink this cup to the dregs. His letters from the South showed plainly the moral, physical, and functional weakness of the Confederate cause. His letters from Washington revealed the fundamental rightness and strength of the Union forces under momentary panic and reverse, but as these clear and persuasive letters were printing the *Times* actually passed from a fairly neutral to a doggedly pro-Southern position. So far as Russell was concerned, the whole American adventure was ill-omened. His honest account of the rout at Bull Run made him generally odious, an indiscreet dispatch to "Sam" Ward, after the Trent affair, made his position untenable. One can hardly pardon that "Irishry" which banished from American soil at the outset of the civil war the one pen in the world that was most likely to record the struggle with breadth, fairness, and vividness. Imagine Russell at Antietam and Gettysburg, and one may faintly realize the cost of that jocose dispatch to "Uncle Sam" Ward. Upon it the grim Delane made the fitting comment: "Remember that of all the weaknesses poor mankind is cursed with, good nature is the most dangerous." The *Times* soothed Russell's chagrin by alloting him a life pension, and he wrote proudly in his diary after Appomatox: "Had the *Times* followed my advice, how different our position would be—not only that of the leading journal, but of England. If ever I did state service, it was in my letters from America."

He was yet to see three wars. In the brief Austro-Prussian campaign he joined the staff of the unfortunate Benedek just after Sadowa and witnessed the second defeat of Olmütz. His praise of the Prussian needle-gun was quoted in Parliamentary debates. During the Franco-Prussian war, he enjoyed unique privileges at the German headquarters, acquired the confidence of the Crown Prince, Friedrich, and had the distinction of breaking even with Bismarck on an issue of veracity. The final act of the tragedy at Versailles and the investiture of the Emperor were recorded by Russell. His prominence at this time engaged the satirical vein of Matthew Arnold, who in the "Arminius Letters" describes "Dr. Russell of the *Times*" preparing to mount his war horse: "You know the sort of thing—he has described it himself over and over again. Bismarck at his horse's head, the Crown Prince holding his stirrup, and the old King of Prussia hoisting Russell into the saddle." It was the first time that a newspaper correspondent had incurred such ridicule, and the last time, perhaps, that the facts fairly justified the burlesque. In his sixtieth year, Russell again took the field with Sir Garnett Wolseley in the Zulu war. The *Times* had declined the services of the veteran correspondent and the *Telegraph* jumped at the chance. Russell characteristically became a keen critic of the conduct of the troops, and a champion of the South African blacks. The Imperialistic way of reckoning without the subject races always revolted him, alike for its impiety and its political folly.

But aside from his editorship of the *Army and Navy Gazette*, Russell had for some time been drifting away from militant journalism. When, in 1875, he became a member of the Prince of Wales's household for the Indian trip, Russell's colleagues generally professed to regard the act as a derogation. In fact Russell's long association with "the Prince of Wales set" may seem to require an apology. Yet it is hard to believe either that the hero of the Crimea finished as a snob, or that any of his more critical colleagues would have regarded a royal invitation as less than a command. Of the affection entertained for him by the Prince and his intimates, the letters published by Russell's biographer leave no doubt. In candor any blame or any defence of Russell as a favorite of Prince Albert Edward, implies a preliminary criticism of the "Prince of Wales set." That is a theme to attract an old-fashioned historian with a penchant for portraiture, but as yet the materials are not available nor the fitting hour struck. It is enough to say that what Russell did most Englishmen in his position would have been more than delighted to do. A widower of sociable parts gradually withdrawing from the most exacting of literary employments might have done much worse than become *raconteur* at large for a circle that whatever its defects knew very well when it was being amused.

By a distinguished second marriage in 1883, Russell confirmed the social triumphs he had won single-handed. His own university had made him a doctor after the Crimea, but it was not till 1893 that he was honored with knighthood. Official England forgot very slowly the worst scoring it had ever received. He lingered on, a genial and venerable apparition, until 1907, dying in his eighty-seventh year.

We have omitted certain minor activities that fall between literature and press agency. Russell wrote a novel, a belated imitation of Lever's rollicking vein; visited the nitrate fields of Chili, crossed the Atlantic on a cable steamer, toured the Canadian West. Books in every case resulted, and his bibliography, including pamphlets, runs to eighteen numbers. These *parerga* are significant, because they show how little war correspondence can be a career and suggest the enforced, desultory intervals of that militant occupation. John Black Atkins, himself a special correspondent of high repute, has gone most elaborately into all the details of Russell's avocations, using skilfully diaries and the fragments of an autobiography. For this fulness he apologizes on the ground that Russell's private correspondence with the *Times* constitutes a unique record of the relations of a

Digitized by Google

correspondent in the field with the home office. Whether any one but a journalist will fully appreciate this display is doubtful. An initiate cannot fail to enjoy the revelation of what may be called the temperamental element under the apparent objectivity of the *Times*. Here is Delane, a martinet, to be sure, but with many of the caprices and most of the prejudices of the educated Briton. Against Russell's admonitions from the field, he fails to see how the French can lose. Mowbray Morris, too, is delightfully considerate of his erratic correspondent. The whole office clearly regarded Russell as an *enfant terrible*, felt that he needed their loyalty and accorded it unstintedly. And to the credit of the *Times*, it should be recorded that for a generation, its greatest correspondent was unhampered though generally in disagreement with the editorial policy. The whole intimate correspondence suggests once more most vividly how much the normal condition of an influential newspaper office is that of an armed truce.

The master quality of Russell's mind was unmistakably sympathy for oppressed or neglected people. It is as if something had rubbed off in contact with his old foe, Daniel O'Connell. Whether it was the British private shivering or starving in the Crimea, the black slave in the American South, the Hindu overtaxed for the maintenance of a hated rule, the Zulu suddenly deprived of his customs and his King, Russell's sympathy flew to the rescue of the under dog, and his ridicule was ever ready for the growing superstition that Britain had been invested by God himself with a universal vicegerency over tinted helpless races. On the literary side, Russell had the modicum of rhetoric that befitted his calling. The vigor of strong feeling and keen vision his style seldom lacks, but he never sought or attained that surplus eloquence which has been the aim of much recent journalism. He launched but one phrase that has lived. It is the "thin red line" of Highlanders at Balaklava that held the Russian cavalry, and Russell proceeded to weaken his phrase by adding "tipped with steel." No stylist could have let this stand. Before Russell was an old man the telegraph had revolutionized and demoralized war correspondence. Over and over again, during the Franco-Prussian war, Archibald Forbes, writing for the *Daily News*, beat the *Times*. The case seemed unaccountable until Russell learned that it was merely a new dodge which was unhappily to become a precedent. Forbes got, in confidence, early notice of the plans of battles, and stored his home office with advance information as to positions and probable movements. Thus the marvellous dispatches of the *News* were chiefly an ingenious manner of prophecy. People little realize how much news "from the spot" is really *ante eventum*, nor yet how destructive of real journalism such competitive window-dressing has come to be. Nor is it generally understood how far the cheapening of the quality of news is due to the telegraph. From the Crimea Russell sent just one telegraphic dispatch, a brief note of the fall of Sebastopol, and when he complained of the difficulties of writing at the front, the office told him to take his time. It is safe to say that such advice rarely comes from any newspaper office to-day. The quantitative demand is imperative, and quality has to take care of itself. Russell frequently remarked that, as he had been the first, so he would be the last war correspondent. Battles, he felt, had outgrown the possibilities of record by a single intelligence. "The front" had become the least favorable point for observation. The hurry of telegraphic reporting made any worthy or deliberate record impossible. By and large this view is true. So far as following the strategy of the great Manchurian battles was concerned, an editor at New York or London was in a much better position than a correspondent in the trenches before Mukden. The exceptional conditions of the Nile campaign gave Steevens his opportunity for writing something that was literature without quite ceasing to become news; the skirmishing before Santiago elicited a certain amount of perfervid writing that may or may not have been literature, but certainly was not news in the broader military sense. In fact, the high-powered rifle and consequent extension of the terrain have reduced the possibilities of war correspondence to an ingenious impressionism frankly based on the most fragmentary observation. Mr. Atkins, who well knows the game, is satisfied that a reform is necessary. His suggestion is no less radical than to deny the telegraph to newspaper correspondents, and let the public have only such official dispatches as the home authorities give out. Such a course would put an end to an immense pretence, and would relieve the serious correspondent of conditions that almost force him into abject charlatanry.

It is interesting to remark in conclusion that Russell went unwillingly on nearly all his important missions. The glamour that is shed about his profession did not exist for him. A firm sense of duty drew him into what, superficially considered, looked like so many gorgeous adventures. In his character was an Aristotelian and most fascinating blend of opposites. To the volatility of the Irishman he added the Briton's sturdy desire for truth. He prophetically saw the folly of British Russophobia and Gallophobia, and yet mishandled his own personal controversies with boyish nonchalance. With the ease of the convivial worldling he combined a dose of the *sæva indignatio* of the reformer. In a fine sense he was all things to all men, and yet very much himself. Of the Victorian mood, which preëminently was that of mediation of apparently incompatible excellencies, he is a superbly typical example. Through a long life he managed to carry the principles of a Liberal alongside the instincts of a Tory, and that seems almost the recipe for a lovable and livable nature.

CURRENT FICTION.

The Corner of Harley Street. Boston: Houghton Mifflin Co.

The anonymous writer of these thirty letters belongs to the tribe of E. V. Lucas in his gentle reflectiveness, his literary good breeding, and his humane attitude. But he goes deeper than that other delightful writer in touching on a score of life's real problems rather than on its pleasantnesses and pleasantries. He figures as a doctor writing familiarly to old friends and young, to son and daughter and cousin and aunt. A slender thread of story appears in some of the letters; in all a clear reflection of the persons addressed. But the real and rare charm of the book is the doctor himself, with his grasp of the soul of things. He is an experienced physician who believes in God, in man, in boys and girls, in trout-fishing and cricket, in pictures, if not too abandoned to technique; in novels, if not too flimsy. To read his letters is almost to feel a premium laid on needing advice, so wise and genial are his counsels and affections. Did one know him, he might well become, as Henry James said of Lowell as a public speaker, "a convenience which tended to multiply occasions." To be admonished by Dr. Peter Harding, always premising a taste for leisurely, even discursive, admonition, would amply repay dilemma. It is not to be inferred that advice is all the book. The self-revelation of a charming personality, as full of humor as of sagacity, is brought about. The reader makes a new friend and is left with the not too often vouchsafed sense of an hour spent in the best company.

Dawn O'Hara: The Girl Who Laughed. By Edna Ferber. New York: Frederick A. Stokes Co.

Sprightly is the word for this tale of the adventures of a newspaper woman. Dawn is, to be sure, a far less inane young person than the colored frontispiece declares her, but her humor (and she is determined to be humorous) is of the "smarty" type—a little tiresome in the long run, unless to the ear of extreme youth. She is an Irish-American girl, who, at twenty, is making a living with her little "human interest" stories in the office of a bustling New

Digitized by Google

York newspaper. There she meets and marries a brilliant and dissolute newspaper writer named Peter Orme. He smokes expensive gold-tipped cigarettes, and has strange smouldering eyes, and easily wins the fair Dawn, who admires such things. But he is on the road to the gutter before he marries her, and presently drinks himself into Bedlam. Remains Dawn O'Hara Orme, alone but not free. For years she supports herself and her wreck of a husband. Finally she breaks down. Here is the natural turning-point: she falls into the hands of a great nerve-specialist, an imported German, and finds in him a second and kindlier fate. But there are excursions and alarums before the happy issue is permitted. Orme turns up, more or less cured, and the author is constrained to smash him up in a motor car in order to get him permanently out of the way. But the story will appeal to the reader or not according as he has stomach for the immitigable sprightliness of the girl who laughed.

Down Our Street: A Provincial Comedy. By J. E. Buckrose. New York: G. P. Putnam's Sons.

The word comedy for once escapes being taken in vain, in the sub-title of this delightful book. It is a Cranford sort of book, though it is not to be numbered among the countless imitations of that blameless classic. Its unconquerable Mrs. Bean reminds one vaguely of our Mrs. Wiggs of recent memory. But she is a richer, ampler figure. The atmosphere in which she moves is blander if less bracing than that of the Cabbage Patch. Cranford is certainly not very far away from Our Street. It is, speaking brutally, a street of middle-class shabby gentility. Its little society is a mass of petty impostures. It has its snobs and its gossips, its mean ways of going about its small business. But it has its generosities and its magnanimities also:

> Two rows of dull houses—some grimy trees—
> That's all the eye of the stranger sees,
> But the heart that goes there is sure to meet
> Love, Pity, and Happiness down our street.

So reads the motto of the book, on title-page and cover; and the promise it makes is fulfilled—more than fulfilled, since the writer's prose is vastly superior to her verse. Confessedly, this is a work of sentiment, but the verge of sentimentality is never passed.

The two leading figures are Sophia Watson, a girl in the first flush of healthy youth, and Mrs. Bean, incorrigibly young, in spite of small means and sizable causes for worry. Mr. Bean "travels in butter," and with a passion for solvency is always on the edge of debt. He is an outwardly matter-of-fact husband, with a deep underlying devotion for his wife and children. But Mrs. Bean is the great soul, the only dweller on Our Street who is not swayed by convention. Consequently she is made use of and more or less sniffed at by her conventional neighbors. Not until her life is threatened does the street understand her importance. Indeed, with all her absurdities, she is the life of the neighborhood, a queen in her own right, a rare and original figure in current fiction. We extend our homage.

PROBLEMS OF THE NEW TESTAMENT.

Introduction to the Literature of the New Testament. By James Moffatt. New York: Charles Scribner's Sons. $2.50.

The eminent Scottish divine, to whom the editor of the International Theological Library has assigned the task of doing for the literature of the New Testament what Canon Driver has done with notable success for the literature of the Old Testament, brings to his theme a trained literary sense, an accurate knowledge of the life and literature of the period in which the documents now known as the New Testament arose, and an astonishingly wide acquaintance with the opinion of other scholars. Freed from the necessity of considering the canon and text, he devotes the space thus saved to historical tables illustrating the setting of Jewish, Christian, and pagan literature from the Septuagint to Ambrose and Theodore; and to a remarkably interesting Prolegomena in which among other things are discussed the influence upon the New Testament of Jewish literature, canonical and other, and some of the literary forms, such as the diatribe, homily, pastoral, letter, and apocalypse. After the Prolegomena, come five chapters: (1) The Correspondence of Paul; (2) The Historical Literature (in which the problems of the Synoptic Gospels and Acts are treated); (3) Homilies and Pastorals (including First Peter and Jude and Second Peter, Ephesians and Pastorals, Hebrews and James, Second and Third John); (4) The Apocalypse of John; (5) The Fourth Gospel, a Johannine Tract (First John), and the Johannine Tradition.

The conclusions reached agree in the main with those of Holtzmann, Jülicher, McGiffert, and Bacon, as the following brief summary will indicate: From the ancient canon of fourteen epistles of Paul not only are Hebrews and Pastorals excluded, but also Ephesians. The epistle to the Hebrews is a homily in epistolary form written to a household church of Gentile Christians in Rome during the reign of Domitian. In agreeing with Origen that the author is unknown, Dr. Moffatt foregoes "reluctantly the romance which the hypothesis [of Harnack and Harris, that Prisca is the author] would introduce into the primitive Christian tradition." Concerning the Pastoral Epistles he concludes that, although in their present form they are not earlier than the days of Trajan, there may be traces of Pauline notes in Second Timothy and Titus. The exclusion of Ephesians from the Pauline corpus (like the stout defence of the North-Galatian theory) comes as a surprise. Although the turns of thought characteristic of the religious experience of Paul are used in Ephesians with an accuracy of touch which was impossible for the author of the Pastorals to copy; and although the literary relation of Ephesians to Colossians creates less difficulty than that of Second to First Thessalonians (both of which in this volume are held to be Pauline); nevertheless, Dr. Moffatt regards the Epistle to the Ephesians, or, rather, homily in epistolary form, as a "Catholicized version of Colossians" written in the eighties to Gentile Christians, or, as he puts it elsewhere, "as a set of variations played by a master hand upon one or two themes suggested by Colossians." While it is true, as he avers, that the "synoptic problem is enough to show that the deliberate employment of a source was not incompatible with original work on the part of an early Christian writer," it is also to be remembered that the personality of the author, let us say, of the Third Gospel and Acts (who to Dr. Moffatt is Luke the beloved physician) is as different from the personalities behind the sources which he incorporates as the personality of the author of Ephesians is like that of Colossians. With due allowance here and there in Ephesians for traces of later ecclesiastical recension, it will appear to many, as to McGiffert and Bacon, that it is not simply a master hand that plays in Ephesians, but the master hand of Paul.

In his presentation of the Synoptic Problem, the Scottish divine steers a canny course through the waters of recent investigation; and though he accepts the prevailing opinion that the canonical Mark virtually as we have it now and Q (a collection mainly of utterances of Jesus almost identical with the Logia of Matthew, of which Papias speaks) are the two chief literary sources employed by the first and third Evangelists, he looks with suspicion upon the attempts to define with precision the order and extent of Q (some sixteen reconstructions are analyzed), or of the Petrine material in Mark. Furthermore, he is convinced that oral tradition is an important factor in the solution of the problem, and is unwilling to concede that the early verses of Mark betray a knowledge of Q, as if Q had a monopoly of the sayings of Jesus; or that, to explain the special material in Luke, it is necessary to postulate with

Digitized by Google

B. Weiss a single literary document accessible to Luke only. As to the dates, he concurs with the majority of scholars in holding that while the sources of the Synoptics are Palestinian and, in part, contemporary with Paul, the Gospels themselves are Gentile products, Mark being written about 70 A. D., Matthew before 90, and Luke somewhat later than Matthew, but before Acts, which last, since it shows acquaintance with Josephus, belongs at the end of the first century.

Passing by the conclusion that Peter with the help of Silvanus wrote First Peter, but that Jude and Second Peter and James are second century documents, we come to the last chapter, the Johannine Writings. In his findings at this point, Dr. Moffatt is essentially at one with recent German and New Haven tendency in affirming that Papias is correctly interpreted as implying that John the son of Zebedee was never in Ephesus and that consequently Irenæus has mistaken the only Ephesian John we know, the Presbyter, for the Galilean fisherman. Since, however, the Johannine writings betray an Ephesian origin, and since the name John of the Apocalypse, like the Hermas of the Shepherd, is not fictitious (as is usually true of Jewish and Christian apocalypses), it is easy to assign the Revelation of John to the Presbyter, and Second and Third John as well; for in both these notes "the presbyter" is mentioned. Literary criticism, however, makes it necessary to ascribe the tract known as First John to another author, and the Fourth Gospel, which is an interpretation of the life of Christ influenced by ideas drawn from Paul, Philo, and Stoicism, but not devoid of historical value, to still another author. Dr. Moffatt endeavors to establish some connection between the Gospel and First Epistle by the hypothesis that the author of the latter in the early second century edited the Gospel and added chapter xxi; and still further helps tradition by admitting the probability that John the beloved disciple may have been the original authority for some of the special traditions of the Gospel, both as to sayings and, to a lesser extent, deeds of Jesus.

In this extraordinarily learned work, Dr. Moffatt has given a compendium of more or less recent opinion which is without rival in any language, and at the same time has succeeded in indicating with fair-mindedness what conclusions of modern critical scholarship are entitled to be regarded as either certain or probable. In this respect, the student for whom our author writes has at his disposal an indispensable treatise. The defect, if there is a defect, lies not in scholarship, for that is sound and comprehensive, not in judgment, for that is well-poised and wonderfully convincing, but in the realm of pedagogy. It is difficult to escape the impression that many a student, in searching for the author's positive positions, will be bewildered by the constant reference to the opinions of others, and will grow impatient now and then because the author, instead of supplying the evidence in detail from the sources, states his own conclusions rather summarily, referring the student to literature not always easily accessible to him. This defect, if it is a defect, does not prevent the reviewer from commending the work as the best in English from the critical point of view. It is indeed an independent Holtzmann in English, revised and brought up to date.

The History of Trade Unionism. By Sidney and Beatrice Webb. New York: Longmans, Green & Co. $2.60 net.

This work, which was first published in 1894, has reached its tenth edition in 1911. No attempt has been made to bring the history down to the present day, a new introductory chapter of fifty-one pages embodying most of the fresh matter which the authors have seen fit to present. About half of this new chapter is given to a discussion of the Lords' decision in the Osborne case in 1909. Osborne, a member of the Amalgamated Society of Railway Servants, was sustained in his effort to restrain that trade union from making a levy on its members, and from using any of its funds, for the purpose of supporting the Labor party or paying members of Parliament. This judgment is denounced by the authors of "Trade Unionism," who strive by arguments not lacking in shrewdness to prove it a *reductio ad absurdum*.

The seriousness of the Osborne decision, from the point of view of existing trade unionism, lends an importance to this new edition quite apart from that which attaches to the reprint of a work whose value has been widely recognized for many years. The judgment of the House of Lords, declare the Webbs, virtually tore up what had, since 1871, been universally understood to be the legal constitution of a trade union. "It is not commonly realized—certainly the six judges did not realize—how extensive and how varied are the actually existing operations of trade unions that are now rendered illegal." The Law Lords have decided that all trade unions must now be deemed corporate bodies, formed under statute, thereby bringing them under the principle of English law, that a body corporate, created under statute, cannot lawfully do anything outside the purposes for which the statute has incorporated it. Briefly, trade unionism has run up against the doctrine of *ultra vires* with a resounding crash, the result being a bad wreckage of its hopes. The expectation of the Webbs is that Parliament will come to the rescue of the trade unions, though they do not venture to predict what form the legislation will take. Their hope is, however, that opportunity will be taken to put the whole position of trade unionism on a satisfactory basis—to do, in fact, for trade unions what the Companies Act did for joint stock companies.

The last half of their new introductory chapter is concerned with facts and figures relative to the growth of trade unions, and with a discussion of some of the later problems that have confronted the unions. It is sufficient to add that all who have made the acquaintance of this work in its earlier editions will find themselves repaid for the study they may give to this 1911 edition.

A Paradise in Portugal. By Mark Sale. New York: Baker & Taylor Co. $1 net.

Students of social pathology may be interested in these autobiographical divulgements. The author, a woman who writes under a pen name, belongs to a class which is more numerous and more clearly differentiated in England than in the United States—the leisure class of narrowly limited means. This species of economic parasite, while exhibiting in a high degree all those delicate qualities of mind and heart that are the product of refinement and cultivation, retains no more than a vestige of the basic instinct of self-preservation. It knows but one way of meeting financial difficulty, namely to cut down expenses, and will die in blessed martyrdom rather than work with its hands. Such, with the added disability of poor health, are "The Philosopher" and his wife who were driven, by the loss of their modest competence, to seek an asylum in rural Portugal. Here where the problem of subsistence is reduced to its lowest terms, they figure that they "can live a couple of years" on their remnant of this world's goods, with a fair measure of tranquility and æsthetic satisfaction. "Our daily needs were of the simplest; and for occupation, The Philosopher painted, while I wrote," explains the guileless chronicler. In her opening chapters, the marvellous cheapness of food, rent, and service, the picturesque features of native life and scenery, and the mildly salubrious climate of the region are felicitously celebrated. Her appreciation of new landscapes and southern weather-moods is worthy of the "world-citizen" she claims to be; her vocabulary, however, remains that of the English exile.

> A most fair land! A land of pines and oaks and eucalyptus; of an infinite wealth of bracken, golden gorse and purple heather; of tiny fields of tall, green, ribbony maize; of lowly homesteads, nestling in the very heart of nature; of gorges, of streamlets, and crags of warm red earth, where mica glitters among the stones.

The avowed desire to "take the read-

Digitized by Google

er into my confidence" is indulged to the fullest extent; even the details of a carefully worked out vegetarian dietary are disclosed. In spite of this Thoreau-like combination of topics, occasional references to "our Walden" seem peculiarly inapt, that epithet being scarcely applicable to any ménage that does not rest on a sound economic basis. The shrewd Yankee calculation that balanced a minimum of productive labor by a Spartan frugality has certainly nothing in common with the spurious economy that combines a minimum of present comfort with the prospect of ultimate privation.

Later in the book, there is some turning over of extremely temperate opinions on political theory, religion, and the woman question; and other passages of more original interest are contributed from memory and introspection. The approaching end of the allotted two years is faced with suppressed uneasiness, and the evil case thus plainly stated:

> Unfitted by temperament, by health, by custom, to barter and wrangle and fight in the world's market-place, there is no possibility left for people such as we when money is gone . . . Better . . . to pass out in silence now, rather than to linger on, losing courage, dignity, independence—perhaps, even coming to accept a grudging charity.

The publication of the book encourages us to hope that these two gentle souls may yet be finding existence supportable. At the same time, we are bound to confess that we emerged from the enervating atmosphere of this "Paradise" with a renewed respect for hard heads and horny hands. Any banality about the dignity of labor would be positively refreshing after contact with a spiritual flabbiness that can contemplate letting life itself go by default and justify its quiescence in the names of Philosophy and Art. Moreover, we fear that the pathos of the spectacle is apt to be lost upon readers in America, where, as a last resort, one might even scratch a living out of the soil without sacrifice of "courage, dignity, or independence."

Ferdinand Lassalle. By George Brandes. New York: The Macmillan Co. $2 net.

It is thirty years since this work first appeared in book form, and thirty-seven since its publication in instalments began in the *Nineteenth Century*. It might seem, therefore, a work of supererogation to make extended comment on it at this time. Yet a generation is a long time in this crowded age of humanity, as is attested by the fact that Lassalle is now but a name to a vast majority of the class of which he posed as advocate, and even to the larger part of those who bring a fairly ripened intellect to bear upon social and economic problems. His work unquestionably lives after him, but a knowledge of the personality from which his great and lasting influence sprang, is, it is safe to assert, confined to relatively few.

And yet it was a personality of which the civilized world cannot afford to-day to be ignorant. The belief, so prevalent a quarter of a century ago, that no problem of real importance to the human race can properly be solved except by an appeal from metaphysics to history has lost some of its hold in these latter days. If this new edition of Mr. Brandes's "Ferdinand Lassalle" counteracts this tendency in any measure, the world will be indebted to him and to his publishers.

Lassalle's motives were hotly debated during his life, and even Mr. Brandes, who, while not blind to the man's faults, has nevertheless a genuine admiration for his spirit, does not succeed wholly in persuading us that fundamentally he rings true. It is hard to find for the bundle of contradictions of which he was mentally and morally compounded, the unqualified respect one instinctively feels for the calm, philosophic, and dispassionate temperament of Rodbertus, or for the inexorable intellect and flawless courage of Karl Marx. Lassalle, to a far greater extent than either Rodbertus or Marx, represented the spectacular in the agitation for social betterment of the mid-nineteenth century. That he was a person of great determination is beyond doubt; but whether that determination was exercised primarily in the interest of Ferdinand Lassalle or of the proletariat is a question which, for not a few, still remains unanswered.

It has been rather inaptly declared that Marx, with "Das Kapital," furnished Socialism its Bible. Never, however, was there a Bible more difficult to be understood: it is not for ordinary minds. Lassalle's words, on the contrary, were words of wit, if not always of wisdom. His mind was equal to the hardest intellectual effort, but his speech easily took on grandiosity and pomposity, and he was one who, if we may attach importance to a sly hint of Bismarck's, delighted in nothing more than to hear himself talk.

And yet Marx, who preached economic revolution with a courage that commands our respect, with historic insight that has always excited admiration, with economic subtlety that has ranked him with the best of thinkers, and whose preaching drove him into exile, failed of the substantial results achieved by the too often bombastic exhortations of that other splendidly endowed Jew, Lassalle. The International was a fiasco, but the Social Democratic movement in Germany, which owes its political bent to Lassalle's fiery sentences, has wrought astonishing changes in the economic and political life of the Fatherland.

Lassalle's qualities have fascinated Mr. Brandes, as they fascinated Heine and Humboldt and George Meredith. The strong appeal which the man, as man, makes to him is evident at every turn. As we read his eulogy, for his book is best described by that term, we may reserve judgment, but we are bound to admit that he charms us by the graces of his style, and stimulates us by the generosity of his spirit.

Notes

There is about to appear from the Oxford University Press "Frederick James Furnivall: A Volume of Personal Record." It contains a biography by J. J. Munro, together with contributions by various friends, including Henry Bradley, Stopford Brooke, E. Dowden, Beatrice Harraden, Anthony Hope, Henry Arthur Jones, W. P. Ker, Sir Sidney Lee, Sir James Murray, W. Poel, A. W. Pollard, G. H. Radford, W. W. Skeat, Mrs. Stopes, R. Whiteing, A. Brandl, J Schick, A Feuillerat, C. Chiarini, R. Dyboski, E. Flügel, J. M. Manly, and F. M. Padelford. The proceeds of the volume are to go to the Furnivall Sculling Club.

Admiral Alfred T. Mahan has completed his new work on "Naval Strategetics," which will be published in the autumn by Little, Brown & Co.

A. F. Calvert has added "Valencia and Murcia" to his Spanish Series, published by John Lane Co. The plates in this volume number 288.

In the preface to his translation of "The Iliad of Homer" (Baker & Taylor) A. G. Lewis confesses that the task has occupied the leisure time of more than twelve years. The blank verse which Mr. Lewis has chosen for his version shows evident care, and the result, as a whole, is respectable, but, much as we should like to commend so pious a work, we cannot say it is more than respectable. In turning the pages we have found no better passage, though we have met with many worse, than the scene at the end of the eighth book, on which Tennyson tried his hand. We transcribe it as a favorable specimen of Mr. Lewis's work:

> So, high in hope, all night the warriors sate
> In ranks, with many a watch-fire kindled round.
> As when about the radiant moon in heav'n
> The stars gleam forth resplendent, when deep calm
> Has stilled the wind, and every look-out place,
> Headland, and wooded vale, in light appears;
> When from the clouds bursts forth the boundless sky,
> And all the stars are seen, to fill with joy
> The shepherd's bosom; numberless as they
> 'Twixt fleet and Xanthus' wave the watchfires gleamed
> Kindled by Ilium's braves before their walls.
> A thousand fires were glowing on the plain;
> In each fire's glow sate fifty armèd braves;
> While by the chariots stood the steeds, and cropped
> Corn and white barley till the fair-throned day.

To their series of historical narratives of adventure and discovery told for boys, Scribners have added "Trails of the Pathfinders," by George Bird Grinnell. Wherever possible, the journals of the explorers themselves are quoted, apparently in an endeavor to give the old flavor. Alexander Henry

Digitized by Google

(Older and Younger), Alexander Mackenzie, Lewis and Clark, Pike and Fremont, are treated at greatest length.

The sentimental title of "From Memory's Shrine: The Reminiscences of Carmen Sylvia [H. M. Queen Elisabeth of Rumania]" (Lippincott), translated from the German, by Her Majesty's desire, by her former secretary, Edith Hopkirk, is not belied by the character of its contents. It consists of a series of chapters dealing with dead friends and relatives of the royal author, who, by her manner of writing, evokes the image of an elderly woman, clad in heavy mourning, walking among the graves of those she loved, and laying a cluster of immortelles upon each. There is something excessively intimate and *familiale* in this gushing outpouring of private emotion which offends scarcely less, though in another way, than those piquant memoirs of royal and other personages which Her Majesty stigmatizes, in a brief introduction to the present volume, as "but a superior sort of gossip —when they are not, that is to say, simply gossip of a despicable kind!" "No mysteries," she goes on to say, "will be here unveiled, no scandalous secrets dragged to light. I do not propose to draw back the curtain from before the picture gallery within whose sacred precincts I have until now allowed no other footsteps than my own to stray, so that all who will may render homage with me to the moral and intellectual value of the lives these portraits strive to commemorate." The bourgeois ideal does not, on the whole, mix well with the monarchical notion. Hence, although we may approve and commend the spectacle of domestic virtue and felicity in royal households, there is something smug, fatuous, and philistine in their celebration in such chapters as those on Grandmama, Two Old Retainers, A Group of Humble Friends, My Tutors, and My Brother Otto. The reason is, perhaps, that, in such records, so much importance seems tacitly attached to the mere social scale of the picture as a means of rendering worthy of note what is essentially insignificant. Extraordinary art would alone serve to render these rather self-conscious reminiscences of the slightest interest, and that the writer certainly does not possess; while only in one or two instances, as when she is dealing with Clara Schumann, Bernays, and Bunsen, are the figures evoked in themselves of sufficient personal distinction to raise the record of the associations of one-half a century above the level of the complete commonplace.

In "Ups and Downs of a Wandering Life" (Appleton) there is a chapter called Casual Stories, a caption which might properly be applied to the entire volume. Walter Seymour, the author of these rambling recollections, left his Pall Mall Club and spent several years in Argentina, Paraguay, and Venezuela. His two letters written from Paraguay in 1873, describing the unfortunate attempt to settle an English colony there, are interesting and instructive. So is his account of Oom Paul's method of keeping the English from controlling the Delagoa Bay Railroad. But by far the larger part of the book is filled with tiresome personal anecdotes of a gay "old buffer," most of whose friends "died much too soon."

The tenth volume of "The Catholic Encyclopedia" (Robert Appleton), edited by Charles G. Herbermann and others, contains the usual number of important articles. Among them we have noticed particularly those on the Mass, an elaborate historical and theological argument from the orthodox Catholic point of view; on Mexico, very full and beautifully illustrated; on Miracles, a mere apologetic essay; on Missions, an interesting and useful account of Catholic Missions the world over; and on Monasticism, a careful and instructive treatment of the whole subject. The article on Cardinal Newman is sympathetic and not without discrimination, though over-laudatory in parts, as writers on Newman are apt to be. The article on Modernism naturally excites particular interest. The subject is a delicate one for such a work, but it should seem that the writer might have treated it in less polemic fashion without incurring the suspicion of heresy. The following definition of Modernism sufficiently indicates his attitude: "In this way then we may define Modernism as the critique of our supernatural knowledge according to the false postulates of contemporary philosophy." The insertion of the word *false*, adding nothing whatever to the elucidation of the subject, is unfortunate, and shows how little effort was made to treat objectively this most interesting of contemporary movements within Catholicism.

The Medicean Society of London (P. H. Lee Warner) has added to the Bibliotheca Riccardiana a volume containing the poems of Catullus, Tibullus, and Propertius. The text, from the standard Oxford editions of Ellis, Postgate, and Phillimore, respectively, is printed without any helps for the laggard in Latin, except an index of proper names; the book is, indeed, for the gentleman, if we may accept the old definition of a gentleman as one who knows his classics, and for the bibliophile. The paper is of the best linen (there are also a few copies on vellum), and the typography is clear and firm, with initials in pale blue. One lover of a clean page may record here the pleasure with which he read the golden first elegy of Tibullus and the exquisite third of Propertius in this fair new setting.

Two essays by G. Lowes Dickinson originally printed in the *Hibbert Journal*, together with the Ingersoll Lecture delivered at Harvard in 1909 and published in the *Atlantic Monthly*, are issued by Houghton Mifflin Co. in a slight volume called "Religion and Immortality." Mr. Dickinson is by no means at his best in this field, but his style has the usual mark of grace and suavity.

With the twelfth volume John Bassett Moore brings to an end his compilation of the "Works of James Buchanan" (Lippincott). This volume contains Buchanan's interesting but unconvincing defence of his own administration, first published in 1866, and now valuable only as the statement of the opinions of a man who had identified himself with a policy which had become hopelessly out of touch with constitutional development. A not very discriminating address on Buchanan by W. N. Hensel, hardly worthy of such permanent form, the unfinished autobiography, completed by a rather light and unimportant note by his nephew, James Buchanan Henry, and a very full and satisfactory index round out the volume. Buchanan's prominence as a politician and a diplomat deserved some recognition, and the editor has performed his task most thoroughly. Indeed, he has overweighted his subject by including much of very slight importance, whether judged by its personal or public value, and the twelve volumes could easily have been compressed into six. Buchanan was not a good writer, his speeches have a stump flavor, and his more formal addresses in Congress are too tinged by partisanship to be read intelligently apart from their context. As a letter-writer he is a distinct disappointment, but his diplomatic papers indicate his best qualities. He will be judged by his Presidency, and the more interesting earlier years passed in politics and in the foreign service will not receive the attention they deserve. This arises from his being only one of many of the same political type, who grew up under Jackson, who played their parts with that following, and who have been judged unequal to the responsibilities laid upon them. To no other of the group, however, has such a compliment been paid as is implied in these dozen stately volumes, prepared under such excellent editorship.

"The History of Parliamentary Taxation in England" (Moffat, Yard), by Shepard A. Morgan, is the second volume in the series of David A. Wells Prize Essays, published by the department of political science of Williams College. It is a study of parliamentary control over taxation in England, and is confined pretty strictly to the two subjects, Who or what the taxing authority was, and Whether the tax was laid in accordance with it. The practical workings of the tax laws, therefore, receive but little attention; and the book is of interest to the student of political history rather than to the student of finance. In Saxon times, Mr. Morgan shows that Danegeld was levied with the assent of the Witan, such assent being more or less formal according to the strength of the King. With the Normans came a period of almost arbitrary taxation by the King until Magna Carta, after which the custom of parliamentary grants was gradually established. Mr. Morgan discusses intelligently and interestingly the long struggle which ended with the Bill of Rights in 1689, but adds substantially nothing to our knowledge of the subject. He has utilized, with suitable acknowledgment, the best authorities; and, if he has not gone beyond them, has at least written a convenient work of reference. The theory of Germanic origins, with which the first chapter begins, fortunately does not affect Mr. Morgan's subsequent treatment of historical facts.

"Siren Land" (Dutton), by Norman Douglas, is devoted to Capri and the Sorrentine peninsula, and suggests deceptively the average descriptive book of travel. As a matter of fact Mr. Douglas has lived into his theme as travellers cannot do. He knows foot by foot the clefts and pinnacles of the land of the Sirens, has lived among the peasants, taken their folklore from their lips, and read their history in the local archives. Thus his book is in a paradoxical degree both erudite and temperamental. Mr. Douglas contrives to be archæologist, folklorist, historian, *flaneur*, and fantastic inviter of his own soul. In all these rôles he is terse, vigorous, a hater of mere phrases, and a shunner of nonsense. Upon

Digitized by Google

his reader he makes considerable demands. The book is written from an agile and well-stored mind, and presupposes a cultured public. Among the chapters none is more excellent than that which describes the bodily and spiritual stresses of Suor Serafina, an uncanonized saint, who lived in Capri only two centuries ago. Mr. Douglas's suggestion that Suor Serafina modelled her spiritual experiences on those of Saint Theresa is very interesting, giving a new hint in morbid psychology. A certain fine scornfulness in the book nowhere appears more effectively than in the study of the Emperor Tiberius, and his ancient maligners. Of pure description there is little; that is left sensibly to excellent illustrations. But always there is a blend of scenic, personal, historical, and legendary interests, which an alert reader will find as savory as it is unusual.

Charles Macomb Flandrau's endeavor in the booklet of essays called "Prejudices" (Appleton) seems to be to call a spade a spade, and the work suffers somewhat from the literalness of the procedure. Some Dogs, Parents and Children, In the Undertaker's Shop, Holidays, Writers, Servants, are characteristic subjects. The work is of oddly uneven texture. Quite admirable in a sordid way is the sketch Wanderlust, the story of two derelicts in Mexico. We liked the essay on servants, especially that admirable Parisian waiter "whose only function it was 'to pacify the guests.'"

Although dressed as a waiter, he never actually waited. He, instead, drifted about from table to table engaging one in conversation, soothing the complainers, lulling the impatient. He was tall and thin, with a long, intelligent nose. Balzac would have immortalized him. He had a genius for tiding over the irritation of red-faced men in a hurry. When he saw one that had almost reached the point of explosion, he would saunter up to the table and begin to talk. In a few seconds the impatient, red-faced man would be proclaiming his opinion on some burning question of the day, and before he had finished, his belated order would be served.

Excellent, too, is the reminiscence of a kindergarten, "Mrs. White's," where prevailed a dreadful professional cheerfulness, and, withal, a disgustful enthusiasm for what was esteemed to be "nature." Like the letter which Mr. Flandrau quotes to prove that Newport society is better than its repute, Mr. Flandrau is good in spots.

The "Third Annual Report of Reforms and Progress in Korea" (1909-10), compiled by the government-general of Chosen (the most ancient and most recent name of the new peninsular province of Japan), dated Seul, December, 1910, and well illustrated, is now at hand. The excellent map shows the railways, completed or in process of construction, lighthouses, mines, navigation routes, sites of battlefields, and other data which reveal the vast change that has come over the once hermit kingdom. Under seventeen heads, exclusive of copious appendices, tables, and illustrations, the work of reconstructing out of chaos and misrule a modern state is described in detail. Police in steam launches deal with pirates. The military operations in 1909 required the death of eleven Japanese soldiers and 3,001 Koreans. The natives wounded, captured, or surrendered numbered 3,021, the last being now employed on road-making. The payment of taxes in money, instead of in kind, abolishes much local corruption and stimulates traffic and the creation of banks. Afforestation, the reclaiming of waste lands, scientific agriculture, public sanitation, and manual training seem to be making notable progress. Of hospitals—unknown in former days—there were 149. The census shows a total of 12,934,282 souls. The text and English translation of the Amalgamation Convention of August 29, 1910, may be found in the *Revue de Droit Internationale* of Tokio for December, 1910. The mediatizing of the Korean princes and seventy-five peers cost Japan fifteen million dollars. Military conscription will be delayed for ten years. From the "Résumé Statistique de l'Empire du Japan" for 1911, it is seen that Japan has now a population of over sixty-five millions, with an area of 260,748 square miles, or 250 persons to the square mile, which is less than that in several of the countries of Europe.

The "Gerarchia Cattolica," the official year-book of the Vatican, reports that at present the hierarchy of the Catholic Church consists of 50 cardinals, 13 patriarchs, 297 archbishops, 1,257 bishops, 22 exempt abbies. The same year-book also states that this hierarchy holds sway over 285,912,838 Catholics. Of these, 182,437,522 live in Europe, with 177,385,844 belonging to the Latin and 5,051,678 to the Greek Rite. Asia has 5,422,641 Roman Catholics, 4,559,865 belonging to the Latin and 862,776 to the Greek Rite; Africa has 2,681,740 Roman Catholics, all but forty thousand belonging to the Latin Rite; America has 86,996,513, all but 345,000 of the Latin Rite; and Australia, 8,374,422, all of the Latin Rite.

According to official statistics, the eight universities of Austria-Hungary had during the past semester a total attendance of 28,662 students. Of these Vienna alone had 9,736, or more than one-third, the tendency being to flock to this city, as the students of Germany do to Berlin and those of France to Paris. Next came Lemberg, with 4,824; the Czech University of Prague, with 4,432; Cracow, with 3,308; Graz, with 2,063; the German University of Prague, with 1,844; Innsbruck, with 1,288; and Czernowitz, with 1,167. The distribution according to faculties was as follows: Theology, 1,500; law, 13,050; medicine, 5,319; and philosophy, 8,793. The number of women students was 1,036, of whom 949 were regular "Hörerinnen," while the rest were "Hospitantinnen." None of these women followed theology or law.

Science

Foods and Their Adulteration. By Harvey W. Wiley. Philadelphia: P. Blakiston's Son & Co. $4 net.

The National Pure Food law of 1907 was, perhaps, the most important hygienic measure ever passed in this country, putting us in some respects above European nations in regard to legislative steps in connection with food supply. Toward this reform, no one contributed so large a share as Dr. Wiley. Many are the successful tilts he has had with those who, to save trouble or expense, have supplied the markets with injurious or unpalatable foodstuffs; and even in cases where other experts have disagreed with him, the public has chosen to follow his advice, refusing to buy what he disapproves of; benzoate of soda, for instance, being no longer generally tolerated as a preservative of fish, meats, and canned fruits, as it was before he denounced it as harmful and unnecessary.

In the same year that the Pure Food law was passed, there appeared the first edition of Dr. Wiley's "Foods and Their Adulteration," the value of which to all who wish to preserve or recover their health cannot be exaggerated. The best medical opinion is to the effect that most of the minor ailments of mankind and many of the major ones have their origin in a disordered digestion, due to the amazing ignorance of most persons as regards the things they eat. Dr. Wiley's book gives, in untechnical language, a vast amount of useful, interesting, and appetizing information about all kinds of meats and meat products—fresh, canned, refrigerated, or otherwise preserved; about poultry, eggs, and game birds; fish foods, oysters, clams, terrapin; milk, butter, and cheeses; cereals, vegetables, fungi, condiments, and fruits; oils, fats, and nuts; sugar, syrup, honey, and confectionery. The origin and history of each important article are briefly stated, the methods of manufacture are described, the chemical and dietary aspects noted, the standard of purity indicated, and the common adulterations pointed out and denounced. It is, therefore, a book that should be in every household, for daily reference; a book indispensable to intelligent caterers and private buyers of foods, as well as to cooks; a volume that should be adopted as the principal text-book in those schools of domestic science which are multiplying and growing so rapidly.

It is also a book for those manufacturers and dealers who are sensible enough to understand that in the long run it is much less profitable to deceive the consumer, legally or illegally, than it is to give him always what is best for his health and gastronomic enjoyment and consequently makes him eager to buy the same article again. "In the end the true, the ethical, and the just in these practices will prevail," as Dr. Wiley puts it. England has firms that have made millions by following that maxim. Therefore, instead of antagonizing Dr. Wiley for denouncing "the crime committed against mankind in the debasement, adulteration, and sophistication of food articles," the makers, preservers, and purveyors of foods would show more commercial sense if they carefully studied his book and avoided what he disapproves of. While the Pure Food Law has brought about a salutary change, much still remains to be done ere the consumer is adequate-

Digitized by Google

ly protected; how much, is made manifest in this volume.

Until about thirty years ago meats were usually preserved with salt, sugar, vinegar, or wood-smoke. The mischief began when it was found that they could be preserved with certain chemical germicides, in a much shorter time and at a very greatly reduced expense. Consequently this method gained a great vogue, "not as a means of benefiting the consumer, but as a means of enriching the packer and dealer." Some of these chemicals are now forbidden, but that does not mean they are not used on the sly, while others are still tolerated by law. Fortunately, Dr. Wiley, besides being a chemical detective, is also an epicure. He emphasizes the fact (which his opponents shrewdly try to keep in the background) that even when certain methods of cold storage or of preserving foods with chemical germicides are not directly injurious, they are so indirectly by destroying the flavor of the food, making it unpalatable; which is a matter of extreme importance, not merely because it mars the pleasures of the table, but because unpalatable food does not stimulate the digestive glands to proper activity. Nothing is more likely to surprise the average reader of this book than the frequency with which the author calls attention to the fact that the value of this or that food is condimental rather than nutritive; and in all these cases the destroying of the flavor is, of course, particularly objectionable. Oysters are a conspicuous instance. The process of "floating" (soaking them in fresh water) is strongly denounced by Dr. Wiley as a species of adulteration, because it is "fatal to the flavor and palatability of the product."

The second edition, recently issued, omits some of the appendices that were considered no longer necessary, but includes, in lieu, about a hundred pages of new material, besides bringing all the chapters up to date, statistically and otherwise. The chapters on infants' and invalids' foods have been expanded, and an entirely new part is devoted to a description of simple tests for adulterations which any intelligent housewife may make in case of suspected viands. Among the features which will help to popularize the new edition are discussions of prominent topics of the day, such as the question whether the drinking of sour milk prolongs life. Repeated reference is made to the fact that the author is at work on a companion volume to the present manual, devoted to beverages.

E. Protheroe's "Natural History of the World" (Dutton) accomplishes the difficult task of giving a general survey of the animal kingdom in one handy volume. Contrary to the prevalent fashion in these evolutionary days, Mr. Protheroe sensibly begins his treatise with the highest forms and works downward. To do this is to start with forms of living interest to the reader. From the nature of his large plan, Mr. Protheroe makes an occasional trifling error. It would have been well if he had submitted the various grand divisions of his manuscript to specialists. In one important respect, however, he is well grounded. His scheme of classification seems to be generally correct and contemporary; and not only that, it is sufficiently Anglicized to be useful to the lay reader. The table of contents in itself should be of the greatest value. It is pleasing to find that the author has taken much pains to bring his work down to date. He includes among the most important mammalia of the world such rarities as the okapi, takin, tree-kangaroo, Grevy zebra, Prjevalsky horse, and markhor. In dealing with the insects, however, the author might well have paid his respects to the gypsy moth and the brown-tail, two species that the inhabitants of New England know to their sorrow, and of which other Americans live in constant fear. The illustrations are numerous, but mostly are poor. In every work of this kind, the pictures are, or should be, of equal importance with the text. It is indeed a skilful pen that in half a page of print can convey an impression of the form of any living creature that will even half way equal a good picture of a typical example of the species. There are twenty-four colored plates from drawings, some of which would have been the better for a critical overlooking previous to publication. Of the 291 half-tone pictures, made from photographs, many are poor, and some are absolutely worthless. For example, the sloth bear is a great, shapeless blur; the Malay bear is almost useless; the aye-aye is an annoyance; the ruffed lemurs are very incomplete; the head of the grizzly bear is bad; and the chacma is without excuse. On the other hand, a number of the colored plates of mammals are excellent. In fairness, though, it should be said that thin paper, which was necessary to make 564 pages wieldy, is a poor medium for half-tone pictures.

The need long felt of a brief manual setting forth the physical geography of the Holy Land and sketching Biblical history upon the background of geography, has been adequately met by a skilled teacher and observant traveller, Charles F. Kent, in his "Biblical Geography and History" (Scribner). With a mind alert to the requirements of students, he has concentrated attention upon the essential, and has told his story with movement. Excellent maps, appendixes, including a selected bibliography and a list of accessible slides for the purpose of illustration, and an index add to the general usefulness of the book.

Preliminary steps of a promising character have been taken for the establishment of a Vulcan Institute in Naples, by the well-known authority in this department of research, Immanuel Friedländer, who has given 100,000 francs for the necessary buildings and equipments, and for ten years will give 10,000 francs annually to maintain the institution. One purpose is to take regular measurements of the temperature of the gases and to observe their phenomena, as well as the registration of the local earthquakes in Mt. Vesuvius.

Drama and Music

Howard V. Sutherland describes his four-act comedy, "The Woman Who Could" (Desmond FitzGerald), as a play with a purpose, that purpose being a dramatic illustration of the responsibility of foolish, luxurious, reckless, and selfish women for many of the most flagrant evils with which modern society is afflicted. The theme is somewhat trite and obvious, but he exhibits so much sincerity and common sense in his discussion of it that his ignorance of theatrical necessity is a source of regret. Unfortunately something more than honest intent, familiarity with the chosen subject, and a certain amount of literary facility, is needed to make a good play. Mr. Sutherland's comedy is smartly written, contains the germ of an effective story, and is crammed with indisputable truths and excellent maxims, but, except at brief intervals, it is essentially undramatic. The personages, most of the time, are engaged in debates, which, if they bear some relation to the action, are not of it and retard rather than further it. In itself the dialogue, as a rule, is bright and significant, but it is not practicable stage talk. Nor are the characters, although they are clearly conceived, lifelike in their conduct. They would be more credible in the pages of a novel than in the glare of the footlights. As for the story, that is spoiled by the transparent clumsiness of its sentimental ending, which is not only exceedingly improbable, but is subversive of the moral which it was the professed object of the piece to convey. The foolish wife, who treacherously and secretly imperils her husband's fortune in a speculative deal in order that she may gain social advancement, is, after a brief period of anxiety and repentance, rewarded by the fullest success of her inexcusable investment. It is true that she is supposed to profit by the lesson, and that she and her feminine associate in folly resolve to be model wives and mothers hereafter, but this profession imparts no strength to an utterly futile and conventional development.

On August 11 the New Theatre of London, under the direction of William Poel, will give Coleridge's translation of Schiller's "Death of Wallenstein," with some scenes from the "Piccolomini."

The Coburn Players will begin their third appearance at Columbia University in connection with the department of English in the grove at the university on July 25, and will continue the rest of the week, with a matinée on Saturday. The plays will be given in the following order: Tuesday evening, July 25, "Much Ado About Nothing"; Wednesday evening, the "Electra" of Euripides, translation by Gilbert Murray; Thursday evening, "Taming of the Shrew"; Friday evening, "Macbeth"; Saturday matinée, "As You Like It"; Saturday evening, "The Canterbury Pilgrims," by Percy MacKaye.

Particulars have now been issued of the Shakespeare summer season organized by the governors of the Shakespeare Memorial at Stratford-upon-Avon, under the direction of F. R. Benson. The season will last four weeks—from Saturday, July 22, to Saturday, August 19. The repertory will consist of the following plays: "A Midsummer Night's

Digitized by Google

Dream," "The Merchant of Venice," "As You Like It," "The Taming of the Shrew," "The Tempest," "King Henry V," "King Richard II," "Romeo and Juliet," and "Hamlet." The interesting thing about the performances of "Hamlet" is that Mr. Benson and his company will give the complete play, as they did at the Lyceum Theatre some twelve years ago; and these performances, which are to be given on Friday, July 28; Tuesday, August 1; Friday, August 11, and Thursday, August 17, will begin at six o'clock in the afternoon. Whenever possible the afternoon performances will be given in the open air.

The plays are not to be the only undertaking of this summer season, which is adapted for the needs and conveniences of those whose work prevents them from attending the spring festival, and primarily perhaps those interested or employed in education. On the opening day of the season, Saturday, July 22, Mme. Osterberg's students will give a display of physical culture exercises; on Tuesday, July 25, Mrs. Roger Watts will lecture on Ju-jitsu, with a demonstration; on Tuesday, August 1, Professor Cramb will lecture on "Tragic Thought and Tragic Drama," and other lectures will be announced later. On Monday, August 7, comes a twelve hours' entertainment, a flower show, with sports, a water carnival, and a masque, "The Merry Haymakers," to be performed by children from Lancashire.

Covent Garden will in all probability be the theatre at which Sophocles's "Œdipus Rex" will be produced for Martin Harvey. As the result of negotiations by Mr. Harvey on the one side and Frank Rendle of Covent Garden on the other, the production of the tragedy at that theatre is assured virtually for next January. Alterations within the theatre for the presentation of the play, in which between 500 and 600 people are to take part, have been agreed on, the most important of these being the raising of the floor to the level of the stage and the erection upon this of an arena for the movements of the actors.

Mr. Harvey has two English versions of "Œdipus Rex" to choose from, one a translation by Prof. Gilbert Murray, the other a translation by W. L. Courtney from a French version. Both have been licensed by the Lord Chamberlain. Mr. Harvey, if the proposals for Covent Garden are ratified, will have "Œdipus Rex" produced for him by Professor Reinhardt, whose name has already been made familiar to London playgoers by the beautiful and artistic "Sumurûn." In Berlin, the play, with 600 performers, was produced in a circus, and was a great success. Crowds packed the circus from floor to ceiling at every performance, and an average of £1,500 was the nightly return, the audience numbering from 3,000 to 4,000 people. Negotiations are about concluded for Professor Reinhardt to produce the tragedy in Paris in the autumn and in New York in the spring.

Josef Stransky, the new conductor of the New York Philharmonic Society, is at Prague, where he is preparing the programmes for the coming season, and will arrive early in October in time to conduct an extended series of rehearsals before the opening concerts. The Philharmonic season will begin November 2 and 3 (Thursday evening and Friday afternoon) with the Russian violinist Zimbalist as soloist—his first appearance in this country.

Two Russians, Safonoff and Rachmaninoff, are among the musicians already engaged to help celebrate the one hundredth season of the London Philharmonic Society. Nikisch will be a third, and nine Englishmen have been invited to compose and conduct new works. The first of the concerts will be conducted by Mengelberg on November 7, with Rachmaninoff as soloist. The last concert will be devoted largely to Beethoven's ninth symphony. This was originally written at the invitation of the London Philharmonic, which offered him $250 therefor, on the condition that the symphony should be its exclusive property for eighteen months. When the MS. arrived it bore the following inscription: "Grosse Symphonie geschrieben für die Philharmonische Gesellschaft in London von Ludwig van Beethoven." Subsequently, for reasons obscure, he dedicated the symphony to the King of Prussia and allowed it to be first performed in Vienna. Nevertheless, the London Philharmonic treasures the MS. score as its most valued possession.

The last number of the leading German periodical, *Die Musik*, which appears in magazine form twice a month in Berlin, is a special "Gustav Mahler Heft," devoting fifty pages to that great composer and conductor. His biographer, Paul Stephan, tells of his years of childhood and study. Richard Specht gives his reasons for calling Mahler the greatest artist of our time, the best conductor since Wagner. Ernst Decsey tells of the hours he spent with Mahler and the topics they discussed. Emil Gutmann describes his methods as an organizer, and his songs are discussed by Georg Göhler. In a "Review of Reviews" the opinions of leading critics are briefly summed up, and an extremely valuable Mahler bibliography of nine pages is contributed by Otto Keller. There are also portraits, caricatures, facsimiles, and a reprint of his song, "Ich ging mit Lust durch einen grünen Wald."

Seventy-five thousand persons attended the organ recitals given during the last season in the Great Hall of the College of the City of New York by Samuel A. Baldwin, head of the department of music. The number of these recitals was fifty-nine. The programmes have been reprinted in a pamphlet which may be highly commended to other organists. Brief descriptive notes are included.

Art

In the fourth volume, "Florentine Masters of the Fifteenth Century," of Langton Douglas's edition of Crowe and Cavalcaselle's "A History of Painting in Italy" (Scribner importation), the name of G. de Nicola appears as assistant editor, and the publisher, John Murray, promises a prompt preparation of the two remaining volumes. In the Quattrocento, Mr. Douglas reaches his chosen field and strikes a better editorial gait. The polemical element which was so offensive in the earlier volumes is, if not absent, at least kept within bounds. The editor, too, is more brief and businesslike in this volume, and less inclined to spread his personal opinions at large. What is lacking is sense of proportion and accuracy. For example, if the charming personality reconstructed by Mr. Berenson and genially called Amico di Sandro is worthy of only a foot-note, Jacopo del Sellaio is surely not worthy of an especial appendix of more than two pages, but if Sellaio were raised to this prominence, at least the work should be made complete. In accordance with the system followed by the original editors, all the attributions to Sellaio should have been registered and discussed. Our own judgment is that a footnote would have sufficed. Certain characteristic inaccuracies of the editor reveal themselves clearly in his appendix on Pesello and Pesellino. Within three pages we have the ugly errors Laudino for Landino, and Charity for Chastity. There is no mention of Wernher Weisbach's authoritative monograph on Pesellino, nor of the Madonna by that master in the Metropolitan Museum. In the description of the Petrarchan Triumphs in Mrs. John L. Gardner's collection, the Triumph of Time is omitted. These are small matters but significant. In the life of Verrocchio, which has swelled from nine pages, in the Hutton three-volume reprint, to more than thirteen, Miss Crutwell's convenient book is ignored, and nothing is said of the Lichtenstein portrait which many critics have ascribed to Verrocchio. The insignificant artist Giovannibattista Utili is mentioned in a footnote, p. 248, without, however, the exact reference to Ricci's article, and the name Utili does not appear in the index. Again these are trifles, but it is precisely for trifles that one usually consults such a work as Crowe and Cavalcaselle. In the main, Mr. Douglas's part has been that of footnote retouches to the original work. In the case of such a life as that of Filippo Lippi, where the authors were about as wrong as possible, this produces curious results. In general, both as regards criticism proper and expertise in the narrow sense, these chapters on the Florentine painters were the weakest portion of the original work, and any attempt to bring it up to date must perforce be unsatisfactory. All that may properly be asked of an editor in such a case is accuracy and objectivity, qualities which Mr. Douglas seems to be very gradually acquiring and which we hope he will command in fuller measure in the remaining two volumes.

In the five short years of Sixtus V's reign (1585-1590) he established what was to be the semblance of modern Rome. Aided by his architect, Domenico Fontana, Sixtus V set four obelisks in the squares, built the Lateran palace and arranged its piazza, built the Vatican library, completed the dome of St. Peter's, encased Sta. Maria Maggiore in its primly classic marbles and added to it two chapels, put the Dioscuri of the Quirinal in their present position and provided a square worthy of them, brought the Piazza della Colonna into its present disposition, improved the Piazza del Popolo, and planned the Piazza Navona. By the highway that begins with the Via Sistina he linked together the Pincian, Quirinal, and Viminal, and so prepared the way for the upper city. Such characteristic monuments as the Quattro Fontane, midway in this new thoroughfare, were his creation. Prosper Bresciano's ill-fated Fountain of

Digitized by Google

Moses, near by, commemorates the bringing of Rome's most abundant water supply, the Acqua Felice, again to the city over the old aqueduct. Enough has been said to show that visible Papal Rome is largely the creation of Sixtus V. It was he who laid down the lines that were developed through the two succeeding centuries. If Rome never fully yielded to the exuberance of the baroque it was because he and Fontana had willed otherwise. The life of this restless pontiff, the foe alike of dirt and of the Barbary pirates and the local brigands, the zealot of order and of the Palladian orders, might well attract an historian of literary parts, and Dr. J. A. F. Orbaan in the monograph "Sixtine Rome" (The Baker & Taylor Company) has been more than adequate to his theme. He writes with full knowledge that has not impaired his zest, and has reinforced his narrative with illustrations from photographs, frescoes, and old prints, singularly well chosen. His frankly avowed hero worship keeps a subhumorous detachment, and he does not attempt to palliate such vandalism as the destruction of the Septizonium. As a starting point for the study of that Rome which is neither an archæological survival nor a parliamentary project, Dr. Orbaan's book may be warmly recommended.

In the June number of *Die Kunst für Alle*, Prof. Paul Clemen of Bonn University has an interesting study, profusely illustrated, on the life work of George Grey Barnard, whom he calls "the greatest force among the American sculptors of to-day." While the essay contains admirable characterizations of Barnard's earlier works, such as the Two Natures or The Hewer, it is naturally above all concerned with the extraordinary groups designed for the main portal of the Pennsylvania State Capitol at Harrisburg. In them, Professor Clemen thinks, Mr. Barnard has achieved something superlatively great and something truly characteristic of the striving of American life. He does not deny that there is an element of forced wilfulness in Barnard's manner; he admits that the artist in him is often thwarted by the preacher; he recognizes the defects of his pictorial grouping, of his baroque backgrounds of grottoes, flowers, and birds. But he insists that all in all this Harrisburg array of sculptures is one of the most stupendous achievements of our age: "There is something of a Walt Whitman in this sculptor singing hymns to the naked beauty of radiant human bodies." Professor Clemen protests against the comparison of Barnard's work with Greek art of the age of Pheidias. Whether his own likening it to the art of Pergamon is more fortunate, may be doubted. It seems surprising that a man of Professor Clemen's independence and originality of style should condescend to the absurd neo-German fashion of speaking of an artist's life work as his "œuvre."

The last addition to the Methuen "Classics of Art" (Scribner importation) is "Tintoretto," by Evelyn March Phillipps. As a routine performance the work is not badly done, and the author has skilfully excerpted most of the relevant critical literature. Her own critical contribution is of the slightest. In fact, the chief merit of this well-printed and fully illustrated book is to bring before the greater public some of those remarkable tempera drawings by Tintoretto which have been recently discovered and acquired by the British Museum. One of Kenyon Cox's essays would have furnished interesting evidence of the employment of maquettes by Tintoretto. By an evident oversight in the documentary appendix Boschini (doc. viii) becomes an eighteenth-century authority and Palma Vecchio (doc. xii) appears as a witness to a paper signed fifty years after his death. These are pardonable trifles which will not mislead a scholarly reader, but it is no trifle to write about a painter of Tintoretto's kidney in our author's tone of gentle mediocrity.

From Dresden is reported the death of the historical painter, Heinrich J. M. F. Hofmann, in his eighty-eighth year. For a number of years he was professor in the Dresden Academy. His scenes from the New Testament are to be found in many German galleries.

Finance

PRICES AND PURCHASING POWER.

In the summer of 1897 the stock market began to discount the real recovery from the panic of 1893. Substantially as long a time has elapsed since the panic of 1907, yet it is hard to find those who profess to look for anything like a genuine stock market movement in the immediate future. About the most that any one will admit is that the market holds its own in rather remarkable fashion in face of dulness, gloomy crop talk, and the like. The panic of 1893 was one of our worst financial crashes, and was followed by four of the most adverse years in our history. And yet it almost looks as if in four years we had made less real progress in removing the débris of 1907 than was made after 1893.

It is not hard to discover the reason, or, more properly, the reasons. In the first place, we had not the means eighteen years ago for letting ourselves down easily that we have had in recent years. The phrase "mobilization of finance" had not been invented, nor the thing it stands for. The last ten or twelve years have brought about a much more effective coördination of the banking resources of the nation, and immediate and full liquidation of securities and commodities is not such an inevitable accompaniment of a financial crisis. In 1893 the securities and commodities markets were forced to recognize the logic of events. To-day we refuse to recognize the meaning of 1907, and consequently have delayed to do the one thing that must be done before we can find ourselves again on the way to maximum industrial activity. Until we grasp the fact that the cost of living is out of proportion to the purchasing power of the nation, we are quite likely to whistle in vain for a new wind of prosperity. Contrast the course of prices since 1907 with that witnessed after 1893. Commodities dropped abruptly in the early nineties. Government figures show that the relative retail prices of food throughout the United States were 104.1 in 1893, 100.3 in 1894, 98.2 in 1895, and 95.8 in 1896. Stated relatively, the wholesale price of raw and manufactured commodities dropped steadily from 105.6 in 1893 to 89.7 in 1897. Nothing like this happened after 1907. Prices, instead of falling, went materially higher, especially those for food. The last year has brought partial relief—the money pressure of 1910, conjoined with the fact that the masses could not meet the cost of living as then established, being the cause of considerable liquidation in foodstuffs. Yet when everything is said, the general cost of living remains astonishingly high. The purchasing power of the nation has meanwhile fallen.

There was never a clearer situation. But it is often easier to see a defect than to remedy it. It might almost seem that it was criminal negligence on the part of our captains of industry to keep on turning out commodities of all sorts at maximum prices in the last four years. A good deal is to be said for them, however. The industrial plant of this nation represents billions of capital, and its owners have every inducement to keep it in operation, even when profits are near the vanishing point. A mill deteriorates rapidly when idle, and the effective working force which has been built up through a period of years is quickly scattered.

Of course, producers of commodities have not in general fixed prices at the level of the last four years for the pure love of the thing. They have had to ask high prices in order to get out whole. The cost of production has advanced rapidly of late years. To say nothing of the cost of obtaining capital, producers have suffered from the public extravagance of the past decade, which has heightened their taxes, from the excessive high price of raw materials, and from the strong advance in the cost of labor. At this point attention may be called to another element in the high retail quotations of the last few years—the increased cost of distribution. Middlemen's expenditures have, of course, not stood still; and as for the retailer, he has made his shop more and more imposing, he has steadily improved the packing of the goods he sells, and has greatly enlarged the radius of his free delivery, all of which expense he must get back in his charge to the final consumer.

Still, it is a fact that prices are too high for purchasing power, and it is conceivable that the period of readjustment is not far distant. It must be remembered that the investment of capital represented by American industrial plants is large in comparison with that

Digitized by Google

of European industry, making it of prime importance to our mills to operate as near their maximum capacity as possible. It will make this point clearer, perhaps, if attention is called to the situation of our American cotton mills. American mills, as a rule, are capitalized per spindle considerably in excess of British mills, frequently almost 100 per cent. more. Though our exports of cotton goods are small in comparison with Great Britain's, we have 29,189,000 spindles, against her 53,859,000. In other words, we have a good deal more cotton mill machinery in this country than our own needs call for, and it is capitalized at relatively high figures. For a very considerable part of the annual product of American mills foreign markets must be found, if textile conditions are to be kept on a sound basis here. But that is just what the high prices which our manufacturers have been obliged to make have prevented. By far the greatest purchaser of our cotton cloths is China—China, in fact, may be called the safeguard of our cotton textile industry. Nothing is more interesting than to study the fluctuations from year to year in our cotton goods exports to the Celestial Kingdom. In the calendar year 1907, a year of high prices, China bought, roughly, 38,500,000 yards of cloth from us; in 1908 she took 79,600,000; in 1909 she jumped to 154,400,000; in 1910 she fell to 65,500,000.

It is obvious what this means. With our high industrial capitalizations and an industrial plant very considerably in excess of our own need, we are bound to be seriously affected by a high cost of production. Facts, as Agassiz used to say, are stubborn things. During the last three or four years we have tried as hard as possible to hide the facts of our industrial situation from our eyes, but such a policy cannot be kept up forever. The simple fact is, there is not sufficient prosperity throughout the world to-day to admit of anything like the full product of American industry at maximum prices. The problem now confronting us is to put prices on a rational basis with as little disturbance as possible.

THE GLEAM

$1.35 net; by mail, $1.45

*** Circular on Application.

". . . the autobiography of a soul—a record of the development of the spiritual instinct from its dawn in a child of six to its fruition in a woman of forty-seven. . . . Told with sincerity and simplicity, with a childlike frankness, and at the same time great reticence in all matters except those of the spirit, and also with an astonishing lack of what is commonly called egotism. . . . Those interested in psychic experiences will find matter here that piques and holds the interest, and that larger body intent upon some way of escape out of the limitations of daily living and the difficulties and disorder of daily thinking will find 'The Gleam' practically helpful and illuminating."

THE NATION

Some Neglected Factors in Evolution

An Essay in Constructive Biology.

By HENRY M. BERNARD, M.A., Cantab., F.Z.S.

Edited by MATILDA BERNARD.

8vo. *With 47 Illustrations.* $3.00 *net. By mail* $3.25.

Mr. Bernard discusses some of the most prominent theories of modern biology, e. g., the cell-colony theory and the Darwinian theory of variation, and shows that they are inadequate to account for all the phenomena of life. No one has yet suggested, as Mr. Bernard does, that there is a more elementary biological unit of structure which explains the difficulties presented by the cell and throws light upon the structure of protoplasm in general.

The Nation

NEW YORK, THURSDAY, JULY 27, 1911.

The Week

The reciprocity victory in the Senate has so long been fully assured that the expression of the President's sentiments on the subject are more interesting than the announcement of the vote. His statement displays the extraordinary frankness which he has so often before exhibited; indeed, at one point it goes beyond mere candor and assumes a character of chivalrous generosity. We cannot recall another instance of a man in his position making the kind of acknowledgment of the merits of the party opposed to his own which President Taft says he feels called upon to make because otherwise he should be "wanting in straightforward speaking." He not merely acknowledges the obvious fact that without the steadfast coöperation of the Democrats the achievement of reciprocity would have been impossible; but he sets it down in plain black and white that they resisted all temptations to "play politics"—*i. e.*, to get credit for a pro-reciprocity record while creating a situation which would have resulted in a failure of reciprocity, with the burden of that failure on the President's shoulders. "They followed," says the President, "the dictates of a higher policy." All praise to the Democratic leaders who have earned this encomium for their party; and all praise to President Taft for his ungrudging and unqualified bestowal of it.

The President remarks that the bill was a non-partisan measure only "in a sense," because "the Republicans who voted for it probably did so on one economic theory and the Democrats who voted for it on another." This is certainly true if the Republicans who followed Mr. Taft's lead in their votes went with him also in their thoughts. The President is simply the continuator of a movement within the Republican party which goes back at least to the days of Mr. Blaine, and which found expression in the last public utterance of President McKinley. It is summed up in the designation of reciprocity as "the hand-maiden of protection." Blaine felt this so strongly that he looked upon the failure of Congress to recognize the hand-maiden as a portent of the imminent fall of the mistress; McKinley was later in coming to this view, but his Buffalo speech just before the assassination clearly foreshadowed his intention to urge it upon the country. And yet we are far from feeling sure that it will prove, in the long run, a correct view. Upon the supposition, indeed, that it is a mistaken view, the Democrats have been acting—and this doubtless Mr. Taft had in mind in the remark above quoted. Mr. Underwood and the House majority under his lead desire reciprocity with Canada not only as a thing desirable in itself, but even more because they feel that it will prove to be a wedge driven into the protective system as a whole. They see no reason to think that the country will be long content with the removal of burdens upon trade in one direction, when equally potent reasons exist for obtaining similar relief all round the map. But it does not follow that the Republicans who voted for reciprocity were wrong from their own point of view. The fact is, standpattism had become impossible; it was necessary to yield somewhere, and it is quite possible that the place where the yielding was calculated to be least threatening to the high-tariff structure was just the place Mr. Taft chose—reciprocity with Canada.

President Taft and Secretary Knox did well to assure the Cubans that Mr. Stimson's visit to the island does not mean annexation or intervention. That by this action Mr. Taft again strengthens the hands of President Gomez was as unavoidable as it is unfortunate. The opponents of the present corrupt régime have been alleging that if Gomez continued his present methods, or should be reëlected, intervention would inevitably follow. We are inclined to think that they are substantially correct; that a continuance of the Gomez régime would be so intolerable as to cause a revolt, and that intervention would again become necessary. It is idle to blink the fact that conditions are very bad in Cuba. The President is openly charged with peculation and grafting, and retorts upon his enemies by offering to let them examine his bank accounts—as if that would be convincing. The truth is that Gomez has no one's respect save that of those who profit by being of his *entourage*.

Careful reading of the decisions handed down Monday by the Interstate Commerce Commission on the long and short-haul cases leads to the conclusion that the real basis of complaint lies in the suppression by the railways of water competition. "A shipper," Commissioner Lane says, "finds it difficult to reconcile himself to paying $500 a car for the transportation of a carload of merchandise to his own city when that same carload will be carried from the same point of origin through his city to a point 500 miles beyond for $300." The cheaper rate, it is explained, was made primarily to meet water competition. But the question is then asked: "Has there been real competition between rail and water carriers, and what has been its effect?" According to Commissioner Lane, as the result of a bitter struggle between the railways and independent steamship lines lasting for twenty-five years, "one water route after another has been rendered innocuous. . . . After the railroad lines had killed off the San Francisco merchants' steamship line, losing thereby several million dollars, they came to an agreement with their Eastern connections as to a new basis of divisions and a new scheme of rate-making." Since the new system of rate-making has been applied, "rates which are said to be less than reasonable because compelled by ocean competition are made from points where we can find no such competition." In the meantime, according to Commissioner Lane, "the rate to-day from the Missouri River to the Pacific Coast is 90 cents higher first class, 85 cents second class, 80 cents third class, than it was nearly twenty-five years ago." The railways are ordered to readjust their long and short-haul rates now for the reason that the all-rail lines "must soon meet a competition by water more intense than any that they have heretofore suffered, for within three years another route, one more important, searching, and determinative in its effect upon railroad rates than any other, will be

Digitized by Google

opened—a route all-water by way of the Panama Canal."

The fight over the reorganization of the Pennsylvania Democracy resulted in a split at the meeting of the State Central Committee at Harrisburg, where two conventions met and elected rival State chairmen. The "'reorganizers," or anti-Guffey faction, virtually ratified the recent action of the Committee of Seven, which deposed Col. Guffey as national committeeman. The outcome of the split is likely to be a resort to the courts. But this is the least important result to be expected. What the Democratic party of Pennsylvania needs is leadership which looks after the party instead of after the leaders. This is especially true in Philadelphia, but it is not to be denied that Col. Guffey's liberality in financing campaigns has been of immense influence in keeping him at the head of the party in the State. If a split will arouse the voters to take a proper interest in their primaries, it will have been well worth while for its effect upon the *morale* of the party. Nobody knows just how much the Democrats of Pennsylvania could do under the right leadership. Meanwhile, the interesting fact stands out that the two factions agreed in endorsing Woodrow Wilson for President, and promised him the sixty-eight delegates from Pennsylvania.

Gov. Colquitt's prediction that Texas would give a majority of 100,000 against the prohibition amendment to the State Constitution is only something like 95,000 out of the way. The interest in the contest is vividly shown by the large vote polled, the 475,000 mark having been exceeded but once, in the Presidential election of 1896. The prohibition wave that has been sweeping over the South was halted in Florida last November; but, even though the figures from Texas show only a small majority against the amendment, they will be taken as a forecast of victory at the next contest. The character of this whole movement for State-wide prohibition in the South is not so revolutionary as at first sight appears, since large areas of these States have long been under prohibition, through the operation of county or some other form of local option. This fact, however, points strongly toward the ultimate success of the State-wide propaganda in such a State as Texas. There can be little doubt that the South of today wants prohibition. Whether Maine is going to continue her Constitutional disbarment of the manufacture and sale of intoxicants will be determined in September. It is pointed out that annulment of this article will not necessarily mean repeal of the statutory provisions against the traffic, but it will certainly indicate a change in public sentiment that would put them in peril.

The centre of population in the United States moved westward a distance of thirty-one miles during the last decade. According to calculations made by the geographer of the Census Bureau, this interesting, if imaginary, nucleus is situated 4½ miles south of Unionville, Monroe County, Indiana. For three decades that proud distinction has now fallen to Indiana, which is certain to retain the trophy for another ten years, since Unionville, at a rough estimate, must be at least seventy-five miles from the Wabash. The location of the population centres at each previous census has been as follows:

Census years.	Westward movement in miles.
1790—23 miles east of Baltimore, Md.	
1800—18 miles west of Baltimore, Md...	41
1810—40 miles northwest by west of Washington, D. C.	36
1820—16 miles north of Woodstock, Va..	50
1830—19 miles west-southwest of Moorefield, in the present State of West Virginia	39
1840—16 miles south of Clarksburg, in the present State of West Virginia..	55
1850—23 miles southeast of Parkersburg, in the present State of West Virginia	55
1860—20 miles south of Chillicothe, O..	81
1870—48 miles east by north of Cincinnati, O.	42
1880—8 miles west by south of Cincinnati, O.	58
1890—20 miles east of Columbus, Ind.....	48
1900—6 miles southeast of Columbus, Ind.	14

The Sugar Trust joins the Steel Trust in testifying that there is an excellent cure for dropsy. Neither corporation has the slightest objection to admitting, under oath, that when it first began doing business a decade ago there may have been a good deal of water in its system; ahem, yes, it recalls now that there *was* a good deal of water. But it is equally confident that the water has all been squeezed out and that the bondholders and stockholders nowadays revel in a delightful state of desiccation. It may be academic to speculate on what has been, but one cannot help trying to picture just what this anti-dropsy process could have been. The Steel Trust tapped itself into health by investing accumulated profits. The Sugar Trust probably pursued similar drainage methods, supplemented by such secret transfusion from the United States Treasury as the Custom House people have laid bare. In any case the squeezing-out process must have been carried on at the expense of the ultimate consumer and the original stockholder. This fact may well be kept in mind for reference whenever the Trusts are tempted to expatiate upon their new-born virtue.

The importance of the Universal Races Congress which opened in London on Wednesday of this week cannot be overestimated. It is the first time that representatives of the various races have come together on one platform to discuss their future relations on a scientific basis and in the spirit of mutual self-respect. The contraction of the world through the development of new means of communication has made it plain that already the East and the West are cheek by jowl. If the world is going to act on Mr. Kipling's theory that the East and West must always be twain, the world is laying up for itself an infinite amount of trouble, friction, and ill-feeling. This week's Congress is planned to combat just that sort of thing, and to spread information about the mental attitude and aspirations of the various races, the lack of which is responsible for most of today's misunderstandings. Significant, too, is the purpose of this Congress to discuss these relationships in the "light of the modern conscience." The conscience of past times construed its duties toward races of other colors as a call to rob, steal, murder, and rape—one has only to go back to that Christian expedition of 1900 to the relief of Peking for confirmation of this. The steadily rising power of the Orientals is plainest proof that this sort of thing must stop; that the doom of imperialistic control of the "lesser breeds" is sealed.

The tumultuous and surprising scenes in the House of Commons show nothing as to the ultimate strength of the last-

Digitized by Google

ditch men in the Unionist party, but it does testify to one thing as to which there had been a want of clear evidence. Again and again, during the development of the Constitutional crisis now drawing to its climax, observers and journalists have been struck with the apparent absence of any feeling in the nation at all commensurate in intensity or volume with the momentous character of the impending change. The obstreperous protests of the last-ditchers go far to show that there has been vastly more feeling on the subject than has appeared on the surface. English members of Parliament do not howl down a Prime Minister in the House of Commons simply because they feel like making a row, or even because their own personal sentiments are offended by his position. Their act is unquestionably a reflection of a state of feeling shared by a large proportion of those whose suffrages they represent.

It must be evident, however, to every responsible leader in the Unionist councils that the party can afford very little of this sort of thing. Of all parties, the Conservative is that which can least afford to present to the country the spectacle of falling back on noise and lawlessness to accomplish that which it had failed to compass by a Constitutional appeal to the electorate. To emulate the Irish Nationalists, in refusal either to acknowledge the sanctions of majority government or to observe the proprieties of Parliamentary conduct, would be a sorry and ridiculous rôle for those whose paramount claim to public support lies in their identification with the preservation of the great tradition of British government. They had their chance, and failed to rise to its possibilities; it is for them now to turn to the future with the resolution of men who acknowledge defeat, but neither admit nor court destruction. They are the second party in the State—a second party to-day which may be the first party to-morrow. To act as though they had no future would be the real surrender.

The presentation of details, as distinguished from mere general averages, of vital statistics, is worth while every now and then. Other things being equal, of course the lower the death rate the better the health conditions; but other things are frequently enormously unequal. In the first place, communities differ widely in having rapidly growing or comparatively stationary populations; and the more rapidly growing population (again, other things being equal) gives a lower death rate on the face of things, although the actual mean length of life is the same. And, secondly, the distribution of ages is very different in different communities. This last consideration is suggested with great vividness by such figures as those of the British Registrar-General, a summary of which, for the first quarter of the present year, was recently given in *Science*. From these it appears that the death rate in England and Wales for persons between the ages of 1 and 65 was only 8.7 per 1,000, while for the whole population it was 15.4 per 1,000. The contrast would, of course, have been still greater if 2 and 60 had been taken as the limiting ages, instead of 1 and 65.

Aside from the statistical interest of these British figures, they present that particular feature of human interest which one has come to expect as almost a matter of course in modern mortality data, and which is as gratifying as it is habitual. The deaths among children under one year of age were, for the quarter in question, at the rate of 115 per 1,000 per annum, which is 15 per 1,000 less than the average rate for the corresponding quarter of the preceding ten years. Those who are striving to eradicate the causes of avoidable infant mortality have a right to feel that, now for many years, and in probably every civilized country, their efforts have resulted in a degree of constant and marked success such as seldom attends on humanitarian effort. In New York, this improvement goes steadily on. If we turn back to the figures of 1890, confining ourselves to Manhattan and the Bronx, which then constituted the whole city, we find the infantile death rate (children under one year) to have averaged, in successive five-year periods, 227, 191, 169, 154. Thus, in the quinquennial period 1906-10, the death rate among New York children was less by almost exactly one-third than in the period 1891-5.

The prospect is that an arbitration treaty with France will be signed at about the same time as the treaty with Great Britain. Actually, the agreement with France encounters no such obstacle as the British treaty is bound to encounter from the considerable body of opinion in this country that is hostile to the English Government. It may be easy enough to discount the value of the arrangement with France on the ground that no imaginable cause of serious quarrel between the two nations exists. A treaty with France may have less present importance than one with Germany and Japan. But the essence of the matter is that the two nations, in concluding a treaty of arbitration, thereby express their hope and desire that the friendship now existing shall never be broken. It is preferring prevention to cure. Any untoward incident arising between this country and France under present conditions might or might not lead to trouble. An untoward incident arising after the conclusion of an arbitration treaty loses from the beginning half its capacity to do mischief.

When a famine occurs in China, our foreign mission and other agencies bestir themselves, collect money, buy grain, send it to the districts where it is needed, and then we hear no more of that particular famine. We know, nevertheless, that there will be others, as there have been with disheartening regularity for fifteen hundred years. It is therefore encouraging to read of an awakening of the sense of responsibility in connection with such occurrences among Chinese officials, who are reported to have engaged in the work of relief in the last famine with unusual readiness. Their change of attitude in this respect is due, apparently, to the force of outside public opinion, to which they are becoming increasingly sensitive. One governor, indeed, refused to allow supplies to pass through his province, but he seems to stand in unenviable loneliness. What is really required, however, is not merely a willingness to facilitate distribution of alms, but comprehensive systems of public works, including the dredging of rivers, the building of bridges, the draining of low lands, and the banking of lakes. The cost of such undertakings would be enormous, but what may be achieved is shown by the Punjab of India, converted from the poorest province to one of the richest by just such far-sighted, ungrudging expenditure.

THE WILEY IMBROGLIO.

It has come to look pretty clear that the real problem before the President in connection with the Wiley affair is how to let it drop with the least amount of disturbance and inconvenience. This does not imply that he will decide the matter without looking into its merits. His decision will not be made until he has personally examined the record. But it requires neither a gift of divination nor a preternatural command of legal intricacies to predict with a great degree of confidence that the recommendation made by the personnel board of the Department of Agriculture, and approved by Attorney-General Wickersham, will not be followed by Mr. Taft. Every day that has passed since that recommendation was made has furthered the belief that the punishment proposed is utterly disproportionate to the alleged offence—even supposing that offence to have been of precisely the character asserted; and has deepened the impression that the President is as well aware of this as anybody else. The Washington news, in papers of all opinions, has been steadily pointing in the direction of a smoothing over of the affair—not for Dr. Wiley, but for Mr. Wickersham.

Before the matter goes further, and the initial stages of it become hazy in the public mind, it is well to recall just what Attorney-General Wickersham did in the case. The personnel board of the Department of Agriculture had found that in the arrangement made by Dr. Wiley with Professor Rusby, an eminent pharmacological expert, the terms of a law limiting the compensation of experts employed by the Agricultural Department were violated. It was not alleged by anybody that Professor Rusby had been overpaid for his work; it was not alleged by anybody that Dr. Wiley's object in procuring his services was anything but that of getting the best possible results for the government. The charge was simply that the law made $4,000 a year the maximum pay for an expert, which, it had been decided, meant not more than $11 a day, and that Dr. Wiley had made an arrangement for an annual compensation of $1,600 to Professor Rusby, in such a way as to result in his getting a *per diem* compensation greater than this obviously inadequate amount. Now, nobody would have complained if Mr. Wickersham had informed the President that this was a violation of the law. Nobody would have found fault with him if he had expressed his opinion that such violation was a serious matter. But when he went outside his province as a lawyer and told the President that in his judgment this disregard of a peculiar regulation, in so small a matter, and without the slightest suspicion of bad motive, was reason for approving a recommendation calling for the resignation of a faithful and exceptionally able public servant, he invited just such criticism as that to which he has been subjected.

In deprecation of such criticism, the curious excuse is now offered that Mr. Wickersham's report was not intended to be made public, but was designed solely for the President's private information and guidance. This may be a good point for Mr. Taft himself to fall back upon, but it is difficult to see how it can do anything for Mr. Wickersham. If the report was one for the President's private ear, the President might, to be sure, throw it into the waste-paper basket; but that cannot have been the purpose for which it was originally destined. So far as in him lay, Mr. Wickersham backed up the personnel board's recommendation; and it is impossible to see wherein there is any less demerit in the advice to do an act of injustice because the advice was given in secret. To most minds, we fancy, that is an aggravation of such an offence, not an extenuation. And it is impossible not to recall the fact that in the unhappy muddle over the Lawler memorandum in the Ballinger case, in which Mr. Wickersham bore a conspicuous part, a bungling policy of secrecy was responsible for the worst of the trouble.

There is another analogy between the present affair and that of the Ballinger-Cunningham-Pinchot difficulty. In this case, as in that, the subject presents two phases; in this case, as in that, everything depends upon maintaining a sense of proportion between these phases. There is the view of the mere lawyer and the mere disciplinarian; there is the view of the man responsible for large and difficult affairs. It is not necessary to ignore the requirements of law or even the exactions of red tape in order to do justice to the larger things. But it is one thing to insist that even the most zealous and well-intentioned of officers must obey the law; it is quite another thing to permit the enemies that are constantly made by such officers to seize upon little errors, or technicalities, or violations even of official etiquette, as a means of getting them out of the way. Such work as that of fighting land thieves or food adulterators demands enthusiastic zeal and inexhaustible energy; if you are going to make the situation impossible for a man who has these qualities unless he combines with them an immaculate record upon every technical point, you might as well surrender at once to the land-grabbers and the adulterators. And it is because the plain people understand this that they insist upon having any such affair as the Ballinger case or the Wiley case uncovered from top to bottom. Any attempt to confine it within narrow or technical bounds is sure to fail.

THE MOROCCAN DIFFICULTY.

In face of a situation like that which at present involves Germany, France, and Great Britain in Morocco, the trained European diplomat suffers largely from the same disadvantage as the remote observer on this side of the Atlantic. Everybody finds it hard to get accustomed to the tone of German diplomacy. Whether Germany is determined to go to war or whether she has not the slightest intention to do so, she has a way of putting things that rasps the nerves of the nations. The bear who killed his master in driving the flies from his face might have evinced the same innocent surprise that German diplomats and the German press frequently display on the aftermath of an international crisis. It is the same innocent wonder which the Kaiser used to evince after his most startling speeches. Are you really frightened because we rattle the sabre and growl? Why, we only meant that we should like to talk things over with you in a neighborly fashion. Germany's bitter complaint is that she is constantly misunderstood.

That is the situation to-day. Things in Morocco may be very serious, or the cause of the trouble may not be Morocco at all. There is no telling from the German attitude in the matter. As a matter of fact, different interpretations

Digitized by Google

of that attitude have been made. So competent an authority on foreign politics as the Paris *Temps* believes that the Kaiser's purpose is simply to force the French Government into being friendly. Two years ago the French and the German Foreign Office were in amicable communication. A treaty concerning Morocco had been concluded which was regarded as putting matters on a lasting basis, and as opening the way to a readjustment of Franco-German relations elsewhere on a permanent and friendly footing. Parliamentary politics in France brought about a rupture of negotiations. Other than domestic causes were probably at work. The German policy in the matter of the seizure of Bosnia-Herzegovina by Austria naturally bred irritation in France. Russia's partial recuperation from her Manchurian experiences may have stiffened the attitude of her French ally. In any case, negotiations between Paris and Berlin did come to a stop, and Germany, to show her dissatisfaction, went to Agadir.

This is a view of the matter that can be defended by Germany's procedure in the past, and one that is quite reconcilable with the tone and substance of Lloyd George's warning. In 1905 Germany used Morocco as a means, first, of testing the friendship between France and Great Britain, and secondly, of protesting against the policy of isolation which she thought was being put into play against her. The test was successful in both respects. England stood manfully by the French Government. But the French Government in turn was not willing to face war in support of M. Delcassé's anti-German policy. Delcassé had to go. It can be no mere coincidence that this second challenge over Morocco should come at a moment when M. Delcassé is once more a Cabinet Minister. He is not the official Minister of Foreign Affairs, but there can be little doubt that his hand is felt in shaping France's foreign policy. England has done now what she did in 1905; she has pledged her support in unmistakable terms to the French Government. Whether the year 1905 shall repeat itself completely and M. Delcassé be sent once more into retirement, is probably one of the questions the French Government is now called upon to answer.

The situation would be really serious if we were absolutely sure that Germany, as has been rumored, has made a demand for a huge slice of French territory in the Congo as compensation for Morocco. Such a demand, insisted upon, would mean that Africa was no longer used as a pawn in European politics, but that the Kaiser had picked out France's African empire for his own. It has been Germany's grievance that very few vacant spaces of the earth have been left for her enjoyment. Until the day of reckoning with England shall come, the jingo appetite may be calling for satisfaction elsewhere; and undoubtedly France looked like easier game.

BULL RUN AFTER FIFTY YEARS.

Mr. Kenyon Cox has recently made the assertion that American historical subjects are particularly unfitted for pictorial treatment. But if the time comes when America shall have produced a great painter of military subjects, he will find in the first battle of Bull Run—fought just fifty years ago—a wealth of color and of picturesqueness with which to portray his representation of a nation of peace springing to arms. It was not only that the uniforms were striking, varied, and often bizarre, lacking wholly the deadly uniformity of the later days of the civil war. The ardor was high; the patriotic spirit of self-devotion even to death was stamped on thousands of young and resolute faces; precisely as it was on that of Mr. Cox's distinguished father when he took the field with his brigade in the West a week later. The camp followers, from the Congressmen down, who had come from Washington to see the easy Federal victory; the innocent inhabitants of the neighborhood, too surprised by the unwonted spectacle to seek safety in flight; and then the great beauty of much of the battlefield itself, particularly the Henry farm—what better material and setting could there be for the curtain-raiser of a fearful national drama? The painter who cannot turn back in his mind to Manassas, July 21, 1861, and feel thrilled and stirred by that spectacle of a citizen soldiery with the fate of the nation on its shoulders, lacks much, particularly the imagination to visualize an heroic history.

Half a century after Bull Run the facts about it are clearly understood. There are still echoes of the controversy between Gen. McDowell and Gen. Patterson on the Federal side, and between Beauregard and Johnston on the other. But the historians are united in drawing the picture of a combat which, in a sense, stirred this nation more than any other in the long years of warfare that followed. It was the first conflict of any magnitude; it was fought almost within hearing of the Federal capital, and it was the rudest kind of an awakening to those who, North and South, believed that the war was to be merely a summer's episode, an easy march from Washington to Richmond, or *vice versa*.

More than that, Bull Run was a dreadful shock to Northern pride. If in the South it confirmed the belief of non-military circles that one Southerner could whip two Yankees, in Yankee-land it was the first of a series of poultices to be applied to the inflamed pride of country—to that absurd and insular belief that Americans were kings among men and the rest nowhere. Naturally, victims had to be found, and there were two at hand, "Bull Run" Russell and the gifted, gallant, and able Irvin McDowell. Gen. Sherman has borne testimony to McDowell's ability by saying that Bull Run was "one of the best-planned battles of the war, but one of the worst fought." For the bad fighting McDowell was not responsible; he had begged for more time to drill his green soldiers, and they could not have been expected to do better. Indeed, but for Gen. Patterson's blunder, the flight must have been on the other side and in the other direction. As for "Bull Run" Russell, true to his high traditions of journalism, he but described the rout as he saw it, and the correctness of his version has since been confirmed by other and American observers. The torrent of abuse showered upon him was merely the venting of feelings of grief, anger, and wounded pride. There was no time then to inquire calmly into the truth.

The misfortune of McDowell was of serious moment to the nation, for it led to the calling to the chief command of George B. McClellan, certainly one of the costliest of generals. But whether the Union itself ought not to regard the defeat of Bull Run as a blessing and not a disaster is after this lapse of time much discussed by the Union veterans who assembled on the battlefield to listen to President Taft. Had early success come to Northern arms the question of the freedom of an enslaved race

Digitized by Google

must have been pushed into the background. The Emancipation Proclamation was forwarded, and not held back, by every Union defeat. There would certainly not have been that prompt recognition of the import of what was going on had the defeat not caused men to take serious account of the hour, and there might have been more serious defeats later. For no rout at Bull Run would have conquered the Confederacy any more than it conquered the North. The martial spirit of the South was fully awakened, and the battle gave it, besides victory, heroes to worship—Jackson, who there received his *sobriquet* of "Stonewall"; Beauregard and Johnston, men of rare ability, brought to the front, like Lee, at the very beginning; while the Northern army, politician-ridden, had a frightful punishment to undergo before there came to the front Grant, Meade, Sherman, Sheridan, and the other successful commanders.

To-day the battlefield is strangely little affected by time, for one so near a nation's capital. Others further away are national parks, spotted with monuments, mostly atrocious in taste and art. Some columns have been reared at Manassas. Indeed, the first monument built after the war, one erected to their comrades by soldiers before they were mustered out, still stands. But, surely, no monuments are needed to give the first Bull Run its own enduring fame. Even if no painter comes to portray it, the nation's fancy must ever regard it with something of the feeling it has for Lexington and Concord. For thither came men straight from the ploughshare; the weapons of peace were but hardly transformed into those of war, and the country hung breathless on the outcome of the day.

BOOKS AND POLITICIANS.

The political crisis in England is having its particular woes for publishers and booksellers. After the paralysis of business caused by the Coronation festivities, their hopes for a period of quiet are disturbed by prophecies of political excitement which will again submerge interest in books. Nor is this the extent of the grievance of the British literary world against the political. While Coronation honors fill six newspaper columns, the literary distinctions among them are contained in as many lines. All this is saddening, and one can only hope for better days, in which the supply of masterpieces will be such as to render crises less formidable, and the humblest writer, already invested with knighthood, will await with confidence the bestowal of the Order of Merit, admission to the Privy Council, and decoration with the Garter. There is a great fall in these unbookish times from that cultivated age when the path of preferment could be opened for an Addison by a poem that the world has willingly let die. But if our English cousins are not so fortunate as to be still living in the spacious times of mighty Anne, neither is there occasion for despair. Latin, and even Greek, are still heard in brief quotations in Parliament, while the continued familiarity of many of its members with the classics of their own literature would strike the normal member of Congress as almost uncanny.

Even in this country, indeed, the separation between literature and politics has never been quite complete. Motley and Lowell raised the esteem in which their countrymen were held abroad, John Hay had more than one volume to his credit, and, in our own time, Senator Lodge, Booth Tarkington, and Mr. Roosevelt have bravely kept up the connection. Nevertheless, for the most part not only has participation of writers in politics been lacking, and *vice versa*, but also that informal association between the two sets of men that gives such charm to English books of reminiscences. With us, Church and State have been hardly more rigidly held apart than these two interests. Politicians, and even statesmen, have usually looked with more or less good-humored contempt upon makers of books, when they have deigned to look at them at all, and their attitude has been reflected with a deepening of scorn by those whose power lay in their pens. What the politician thinks of the writer is shown by his reluctance to welcome the literary man's advice or assistance. What the writer thinks of the politician he has made plain in political novels, in which the man of politics is almost uniformly depicted as hopelessly sordid.

It is not this, however, that constitutes the painful distinction between us and some less democratic countries. Even in England the Lord Morleys are not numerous, and Disraeli the novelist is far outshone by Disraeli the party leader. We cannot blame our House of Representatives for not boasting a larger proportion of members who have dabbled in literature. Let it be freely granted that the two fields lie so far apart that success in one of them is almost incompatible with success in the other, despite a lurking suspicion that the lower levels of literature need not be forever above the reach of our most conspicuous statesmen. The thing that stands out is the downright ignorance of the men who direct our politics of the work of those other men, chiefly of other times and other nations than our own. The increasing proportion of college men in politics would promise more in this direction if it did not coincide with an abandonment of interest in books on the part of college authorities as well as of matriculants. It is not that we long to come upon *disjecta membra* of Aristotle or Plato, Virgil or Milton, lying in uneasy strangeness in the wilderness of the *Congressional Record*. We are not desirous of perusing something analogous to the rectorial addresses which are at once effect and cause of the familiarity of British statesmen with matters unrelated to politics, although such familiarity among certain of our statesmen would automatically raise the level of Chautauqua oratory in a considerable measure.

A closer acquaintance between books and politicians is desirable, not so much for the sake of what the politicians would get from the books—although this would be quite worth any trouble it might put them to—as for what such an acquaintance would signify. The vital thing here is not the number of books, nor even the degree of familiarity with them, but simply the love of them. It is as hard to love a good book without being in some measure like it as for a camel to do what no camel ever yet did. This is why we do not feel proud of our politicians' ignorance of literature. The ignorance is a minor defect. But what it indicates in reference to their mental fibre is not minor at all. Consider the case of Tom L. Johnson, a man who made a deep impression upon his fellow-citizens. Typical of his kind in other respects, he was not less so in the narrowness of his intellectual range. That the multitudes that followed him and held up his hands did not feel this want

Digitized by Google

merely widens the range of the indictment. The evil effect of the indifference to letters on the part of such men is particularly noteworthy because, more especially in a democracy, they are regarded as in a peculiar way the embodiment of the possibilities of the country. The literary leaven of the ubiquitous and speech-making politician would go far toward leavening the whole lump. Only, he must first be leavened himself.

THACKERAY AND OUR OWN TIMES.

I.

The author of the "Book of Snobs" would have derived a great deal of amusement and a handful of moral reflections from the tone adopted by the younger literary men of to-day in framing their estimates of the author of "Vanity Fair." The dominant note is querulous. Critics are frequently out of humor because they are frequently compelled to praise what they dislike. But in the present instance the critics are irritated because they feel themselves under the compulsion not to like Thackeray when at heart they do. We can see, of course, why the present-day successors of Arthur Pendennis and George Warrington should feel compelled to dislike Thackeray. The man was an Early Victorian; need we say anything more? In Early Victorian days life was a puppet-show, and men sat about on horsehair furniture discussing hollow moralities. In Early Victorian days young women bent over embroidery frames, blushed upon the slightest provocation, clung to their lovers as the vine does to the oak, languished, had vapors, read discreetly, wrote discreetly, and fainted discreetly, though not, perhaps, in coils. In Early Victorian days, young women simpered, old women gossiped, old gentlemen indulged in smug hypocrisies, young gentlemen sang sentimental ditties, and no one outside of the agricultural classes called a spade a spade. To-day we have any number of names for a spade, each uglier than the original, and not the worst of them makes our young persons faint. Literature to-day centres about the unquiet woman. Is it any wonder that the advanced critic should be angry with the man who not only gave Amelia Sedley to the world, but who actually was fond of her, and said so? The same man, it is true, gave us Becky Sharp; and that suggests a common difficulty with the Early Victorians. As a class it is easy to brush them away. Individually their writers had a knack of anticipating the things we are doing to-day, and of doing those things, after their own fashion, very well indeed. The situation is a perplexing one, and what is a modern critic to say under the circumstances?

Under the circumstances, the modern critic says a great many foolish things together with a great many unconsciously true things; the result being a delightful mass of inconsistency. Under the circumstances, the London *Nation* is driven to find fault with Thackeray because "no artist was ever more absolutely the mind and voice of his age, and none was so little conscious of the limitations under which he worked." This is startling censure in an age that cherishes poets because they are the unconscious bearers of strange messages. And how frequently have we been called upon to admire the scalawag whom a higher power has made the unconscious mind and voice of his age. The same journalistic pen that produced this arraignment of Thackeray in the *Nation* has very probably written again and again of Shakespeare that he is for all posterity because he wrote for Elizabethan apprentice boys and yokels. In the case of Thackeray it is a misdemeanor that he should have written for Early Victorians, and that he should have deduced his views on life from the life he saw. "Oh, that the gracious powers would send me an old aunt, a maiden aunt, an aunt with a lozenge on her carriage and a front of light, coffee-colored hair," prayed Thackeray on one occasion. "How my Julia and I would make her comfortable." Oh, that the powers might send me this sort of critic, the aspiring young writer might pray; a critic who shall damn me for being absolutely the mind and voice of my age, who shall accuse me of having the power to make men, fifty years after my death, breathe "the intolerably stuffy air" of the drawing rooms I describe, to make them suffocate with me when I suffocate, to make them admire the puppets I admire, and laugh at the antics I laugh at. How I would cherish such a critic; how I would send him free copies of my book; how my wife should invite him to our bungalow for the week-end; how my daughter should play Parsifal for him on the mechanical piano. Sweet, sweet vision! Foolish, foolish dream!

II.

They cannot forgive Thackeray his century. He was an Early Victorian, and the qualities which in the writer of any other age would be dismissed as trivial or irrelevant assume in an Early Victorian enormous proportions. The *Saturday Review* feels the period painfully. "Art for art's sake," it says, "has been a reality since the cave man sketched the mastodon. But to the Early Victorian outlook it was anything but that. Balzac he [Thackeray] declared 'unfit for the salon. Dumas to be about 'as genteel as a courier,' and Victor Hugo 'profoundly immoral and absurd'; the nudity of Etty's Nymph he pronounced 'unfit for appearance among respectable people,' the contemplation of Greek art—and he had some of the best to look at—left him 'in a state of unpleasant wonderment and perplexity.' For a man who wrote great books, he was curiously interested in inessentials."

For the critic of a writer of great books this critic is curiously interested in inessentials. What has art for art's sake to do with the author's personal outlook and tastes? The only proper question you can put to him is whether his men and women are alive. Thackeray might have been fond of taking his soup after his meat instead of before, and yet have given us Rebecca Sharp and Thomas Newcome. Becky and the Colonel are none the less vital because Thackeray did not hold our present views with regard to the nude in art. As long as the puppets amuse you what business have you peeping behind the curtain to see whether the performer has a beard or takes beer with his luncheon? This same *Saturday Review* critic would never have ventured to pick a quarrel with Rebecca West or Nora of the "Doll's House" because Ibsen disliked children and music and flowers. Let us be bold, but let us also be fair. Let us guard against the animus which one critic betrays when he blurts out that many people will be pleased to have a new edition of Thackeray with his "small world of indestructible existences—even if a fondness for other methods may have made them disinclined to repeat the pleasure of reading him." These are remarkable words in the mouth of a priest of art for art's sake, who would have the truth and the whole naked truth. It amounts to this: "You have created a number of 'indestructible existences,' you have portrayed Truth and given pleasure in doing so. But I don't like the way you went about it." That is apparently the difficulty with Thackeray. He tells the truth, but somehow it is not naked enough for our modern tastes.

One favorite way of expressing the sharp differentiation which the modern spirit draws between itself and the spirit of the Early Victorians, is to say that the Early Victorians loved phrases and that we to-day deal in grim realities. The distinction is clear cut and untrue. The Victorians loved phrases and circumlocution, but we, when we fall into the habit of sneering at Early Victorian smugness, stuffiness, and cant, are ourselves pitifully guilty of phrase-making. "He saw in his Victorian dolls," says one commentator, "formed and shaped and disfigured by the mental corsets of the period, the eternal feminine." This is typical of our phrase-mongering. When we speak of the women of fifty years ago we must say dolls and puppets, we must mention embroidery-frames and anti-macassars, wax-work under glass, Friendship's Garlands, and Rogers groups. Does it occur to the thoughtful critic that under these tem-

Digitized by Google

porary surfaces very real men and women must have lived in the age of Victoria and Albert? Yes, the truth does occur occasionally to the honest and thoughtful critic. The writer from whom I have just quoted is constrained to follow up his sentence about corseted dolls with a sentence that reads like a worse reproach, but is really an anchor dropped to windward. "His Amelia Sedley," it says, "was for him Woman; and if anything else was Woman it was Becky Sharp." But isn't that very much better already? Why not go on? If anything else was Woman to Thackeray it was Laura Pendennis; and if anything else was Woman to him it was Ethel Newcome; and if anything else it was Beatrix, and Rachel Lady Castlewood, and the Countess of Kew, and Blanche Amory, and Miss Crawley, and Mrs. Bute Crawley, and Sophia Alethea Hobson Newcome. We miss in the procession the figures of Thomas Hardy's Tess and Sue, of Anna Karenina, of Hedda Gabler, of Paula Tanqueray, and others of the modern, undisfigured, and uncorseted sisterhood. But not even in the presence of these women who are very real to him, can the modern critic call Thackeray's women dolls and puppets, without falling a victim to the cant phrase. There is no need of entering here on an elaborate defence of the Early Victorian age, that stuffy, suffocating age which witnessed the year 1848 and the triumph of European democracy. In that stuffy Victorian atmosphere Darwin devised the foundations of modern science, and Spencer created a stupendous philosophical system, and Cobden rebuilt English commerce. We in this country caught the manner of the English Victorians. Our women, too, embroidered and fainted. And yet American womanhood in that period rose to a height of idealism and courage and efficiency that no period since then has rivalled. Then were laid the foundations of the woman's movement, and women did their full share in lighting the fires of a great war in order to emancipate a race.

No, the Victorian men and women did live, though evidently Life then did not have the pungent, Bohemian meaning it has since acquired. "We read our Thackeray distracted and indignant," says one modern militant. "It is the world of the forties and the fifties described by a man who believed that it would endure, who believed, indeed, that it always had endured." But he did so, oh gentle critic, in the sense that he believed certain human passions and human reactions would always endure and had always endured. Thackeray did not believe that side-whiskers and crinolines and Wellington boots would endure. In those days, little boys when writing to their fathers addressed them as "Beloved Parent"; our little boys to-day probably write "Dear Pop." But we venture to believe that the splendor and the pathos and the tragedy that marked Thomas Newcome's love for his son Clive have not become impossible during the last fifty years. The things that Thackeray thought permanent he has indicated plainly enough. "What stories are new? All types of all characters march through all fables; tremblers and boasters; victims and bullies; dupes and knaves; long-eared Neddies giving themselves leonine airs; Tartuffes wearing virtuous clothing; lovers and their trials, their blindness, their folly, and constancy. With the very first page of the human story do not love, and lies, too, begin? So the tales were told ages before Æsop; and asses under lions' manes roared in Hebrew; and sly foxes flattered in Etruscan; and wolves in sheep's clothing gnashed their teeth in Sanskrit, no doubt." If our commentator is really exasperated by the contradiction he finds "between the Book of Life and the Annals of Early Victorian England," it really seems as if he should have to wait for a new and completely revised edition of the Book of Life.

III.

Like Thackeray the Victorian, Thackeray the writer is the sad victim of much hackneyed faultfinding. It is the proper thing to say of Thackeray that he moralizes. It is also the proper thing to say of him that he pictured only the narrow little world he saw. The two indictments are mutually destructive, but both are nevertheless the proper thing to say. It is the proper thing to say of Thackeray that he was a sentimentalist, and it is the proper thing to say that he was a cynic. The two characteristics are, on the face of it, mutually exclusive, but they are the correct things to say of Thackeray. Every critic of modern sympathies speaks of Thackeray's puppets, but every critic also points out at least one character or one book that is not puppet-work, but palpitating life. When you draw up a list of everything the various modern commentators like, you find that modern criticism finds nearly every character in Thackeray vital and indestructible; nevertheless the proper thing to say of Thackeray's characters as a whole is that they are puppets. This may not be quite consistent, but possibly consistency, too, is an Early Victorian virtue.

And the irony of this all is that we cannot even claim the credit of having invented the labels we apply to the man. Thackeray himself gave them to us. If he had not spoken, on the first page of "Vanity Fair," of his puppets, probably no modern critic would ever have had the courage to call them that. If he had not been in the habit of referring to himself expressly as a sentimentalist, a cynic, a Manager of the Performance, we should not now be babbling these phrases about him *ad nauseam*. With all our shrewd wisdom we moderns are fearfully naïve and very apt to take a man at his own estimation. And Thackeray professed not to take himself seriously. He did not announce that he was at work upon a Comédie Humaine. He did not, like Zola, proclaim a new literary method and proceed forthwith to build up an entire microcosm. He did not set to work after the dreadfully serious manner of our serious younger novelists to transcribe Life. We know how even the most honest of book-reviewers must work hard to escape the ready-made opinions supplied in publishers' advance notices. Thackeray was his own press-agent, puff-writer, interviewer, and reviewer. "The famous little Becky puppet," he tells us, "has been pronounced to be uncommonly flexible in the joints and lively on the wire; the Amelia doll, though it has had a smaller circle of admirers, has yet been carved and dressed with the greatest care by the artist." So critics have taken the man's word for it.

Could he really have meant all that he said in depreciation of himself? Was the ironist and cynic poking fun at us all this time? Was the Manager of the Performance peeping through a hole in the curtain and laughing at the critics whom he had fooled with his clever press-notices? Now and then the modern critic shows signs of suspecting the Manager's game. No, this is not a puppet world, he will admit; this is a real world, only it is a narrow little Early Victorian world. They call Thackeray narrow and grow angry with him, though they have no fault to find with the modern young novelist who picks out a little corner of a little country and plies his camera assiduously. Early Victorian or what not, to what extent does our present-day literature see life more clearly or more honestly than Thackeray did?

IV.

"Modern" is a difficult word to play with, for the reason that it means just what it says. The term is purely chronological, and not at all descriptive. The modern spirit is the spirit of recent years, and the only way to distinguish it is to say that it is opposed to the spirit of things that are not recent. The modern spirit is, as a matter of fact, proud of its faults and its inconsistencies; of these it has quite enough. It describes itself as a spirit of discontent, of ferment, and of ceaseless quest. But above all things, it is complex, which is to say, it sometimes does not quite know its own mind. The modern spirit embraces the hedonistic anarchism of Ibsen and the Christian anarchism of Tolstoy. In H. G. Wells it means the reorganization of society in a rigid Socialistic spirit, and it means also a standard of individual morality that

Digitized by Google

would be pretty sure to play the mischief with any social system. In Mr. Galsworthy it means humanitarian reform of the kind Dickens and Charles Reade advocated, and a poetic mysticism that has no care at all for progress and reforms. The modern spirit is on the side of the downtrodden masses and still yearns toward the ideal of the Superman. It puts emotion above intellect, temperament above character, yet loves to think of itself as scientific. Take the modern, intelligent young woman. She will admire, with a wonderful catholicity, Björnson's snow-white idylls and Wedekind's disgusting impudences. She will sigh with Mélisande and gasp with Salome, respond alike to the sensuousness of the Arab dance and to Parsifal, aspire toward the freedom of the pagan world and pursue vegetarianism out of horror of taking animal life. She will blend into one emotional confusion her sympathies for the working-girl, for woman's emancipation, for Japanese art, for the State endowment of motherhood, for Echagaray, for Whitman, for school-feeding, for trade-unions, for revolution, for the Greek costume, for aviation, for the nineteenth century B. C., and a few things besides. Whether such a concrete modern young woman as I have described is to be found outside of the books I don't know; I doubt it. But neither was there in Thackeray's time any one young person who fainted, embroidered, simpered, clung, etc., after the fashion we have made into a formula. In any case, I know that there are modern critics who study life through literature; and through their writing runs the same conflicting note, a vast Christian humanitarianism and a great longing for moral individualism. In their specific field of literary theory they are torn between the feeling that literature should be actual, purposive, progressive, combative, and the formula of art for art's sake.

Tested by this modern formula of art for art's sake, the moderns do not come off best against the Victorians. The greater part of Meredith, Hardy, Ibsen, Maeterlinck, D'Annunzio, Shaw, Wells, Galsworthy, Brieux, Hauptmann, Sudermann—all the great names in the modern catalogue—is thesis literature. The thesis may be an isolated problem or an entire life-philosophy. But rarely in these men is the character-painting so superior to the theme as with the Victorians. Which of them has written as completely about People as Thackeray did? The profoundest of the moderns may have depicted Life better than he did, but not living beings. In subtle psychologizing we have surpassed the Victorians; but psychological schemes are not men and women. When Meredith was a Victorian he drew living people like Richard Feverel and Nevil Beauchamp. When he grew modern he drew a puzzle picture entitled Sir Willoughby Patterne. Even in Hardy, who, among all the moderns, has most of the creative gift of the Victorians, the theme obtrudes.

I have tried conscientiously to find out why we of to-day should feel it our bounden duty to be disgruntled with Thackeray, and I can find only that at the bottom of the quarrel is simply a difference of mannerism and formula. Our honest critic said as much when he declared that "a fondness for other methods" makes us incapable of deriving from Thackeray the pleasure which as a great artist he should give us. We want the truth, but we want it proved to us in our own way. Well, that may be just enough. Only, if it comes to a question of standards and formulæ, our own have no higher sanctity than those of the Victorians. Imagine how a modern author would treat Sir Pitt Crawley of Great Gaunt Street and Queen's Crawley, Hants. Here is as fine an example of the satyr as the heart of the most modern realist could desire. Thackeray has not sentimentalized him; has not fallen into mealy-mouthedness; has displayed little respect for Mrs. Grundy. Yet what would the present-day writer do? It is easy to imagine how he would go at the business, the splendid emphasis on physiological detail, the detailed depictment of rampant animalism, the frank brutality, the use of medical terminology, the care to leave nothing to the imagination. I haven't the least doubt there are a dozen writers to-day who could make Sir Pitt a dozen times more disgusting than Thackeray made him. Whether he would be made more real is another story.

V.

But the most striking instance of how different our manner is from that of Thackeray's contemporaries is connected with the strange case of Amelia Sedley. Now, Amelia was a good woman, and to-day we are not interested in her kind. I do not mean to be unfair. I know there is a fine moral fervor in the way we work to extend the meaning of a good woman so as to include Thomas Hardy's Tess and Dostoievsky's Sonia. To do so is, of course, a special pleading rather than art; but let that pass. We are engaged to-day in proving that strength in woman, as in man, is better than passive goodness. This, too, smacks of special pleading rather than of art; but let that, too, pass. We are engaged to-day in ridding the world of the parasitic woman. That again is missionary work rather than art; but we will not press the point. Only this point must be remembered: because we are more interested to-day in restless women than in quiet women; we are not by that very fact any nearer to reality. Interest in the unquiet woman is not altogether a modern trait. They wrote about temperamental ladies in Greek, and chanted proverbs about her in Hebrew, and probably made epigrams about her in Etruscan. Thackeray himself has contributed more than one portrait to the gallery of bad women. But the great offence in the creator of Becky Sharp is that he sinned against the light; he could draw bad women, and he was fond of Amelia Sedley. Perhaps we might have forgiven him his doting fondness for Amelia if he had failed to do—what we moderns seem unable to accomplish—make this good woman interesting.

In the long run we shall be compelled to forgive Thackeray for being interested in Amelia Sedley, as we forgive Dickens for his Agnes, Balzac for his Eugénie, and Turgenieff for his Lisa. The type holds great temptations for the very greatest artists. It is not hard to see why. Consider the good woman. She loves, in the way poets have always longed for love, eternally. She suffers, in the way heroes strive to suffer, quietly. She has the strength of conquest and the higher strength of sacrifice. She knows temptation, but beats it down. She meets disillusion, and her smile yet remains. She does not challenge the moralities, but she wages fierce battles and wins silent triumphs between the kitchen and the cradle. She is Nature, because she embodies struggle beneath a surface of serenity. Her type in 1911, there should seem to be good reason for believing, is not extinct. Thackeray apparently proceeded on the assumption that some time would pass before the type would be extinct.

SIMEON STRUNSKY.

Correspondence

THE REAL MEDUSA.

TO THE EDITOR OF THE NATION:

SIR: The discovery of some archaic pedimental sculptures in the excavations at the Doric temple of Apollo (or Artemis?) at Corcyra in Corfu, in which the Gorgon Medusa, with her offspring, is the central theme, has suggested the timeliness of this preliminary announcement of certain conclusions I have reached in a study of the Medusa myth, which will soon be published in detail.

The universal belief among scholars as well as with the general public is that Medusa was for the Greeks an evil demon, a frightful bogey, and German specialists have seen in her the personification of the storm-demons, of thunder and lightning. Her snakes, the open mouth, gnashing teeth, and extended tongue, so common in archaic art, are all supposed to be features imagined in order to inspire horror. The horrible mask is supposed to have been first imagined, and then a body, a myth, and a bogey-slaying hero were invented.

My own conclusions are so different in almost every particular that I have some hesitation in announcing them without full

Digitized by Google

proof, which is all that I can do in this letter. The central idea of the Medusa was, in reality, for the Greeks, a great embodiment of fertility and fertilizing force, which, after being connected in early times with the great Mother Goddess, in her various forms and names, became associated at a later date, but still in prehistoric times, with the Sun and Apollo. When the main stress was thus shifted and the central idea, instead of being productivity with a solar connection, became solar force with its productive effects, there was gradually introduced into the Gorgon idea the element of the destructive as well as the productive energy of the Sun. Medusa became the carrier of the Sun, the solar caryatid, and this explains the kneeling posture and raised arms of many of her early figures, as well as the wings. This became embodied in the archaic age in some of the traits that gave the Gorgon a demonic aspect.

The idea of a subordinate deity or spirit, embodying the material force or energy of a more spiritual deity, was one of the theories adopted by the early Greeks from Egypt. The god Bes stands to the greater Sun God Horus in exactly the same relationship that I conceive Medusa to have stood to the primitive Artemis as Earth Goddess, and later to Apollo as Sun God. But this subordinate phase was not her first. The earliest phase is illustrated by the Cretan Nature Goddess of the Minoan age, who seems to have been worshipped in the triple form of Lion and Mountain Goddess (earth surface), Serpent Goddess (chthonic), and Bird Goddess (air). The Gorgon was connected especially with the Snake hypostasis, as appears from the later (Doric) gorgoneia of Cretan temples. Hence originated the snakes as the Gorgon's girdle, in her hands, and, in the decapitation scene, the two snakes drinking her blood. In this aspect Medusa became an *alias* of Demeter. She was not only a chthonic spirit, but a spirit of the fertile earth surface. In this aspect of the Mother Goddess, so prominent in the so-called Cybele and Persian Artemis types, the goddess is subduing the animal creation, birds and beasts, especially lions and water-birds, whom she holds by neck or tail or has as attendants. This type, at first unwinged, became winged under Oriental influences, especially Assyrian and Hittite. Now, the earliest separate plastic types of the Gorgon, perhaps as early as the eighth century B. C., and later, represent her as filling the same functions toward the animal creation as the Mother Goddess, Artemis or Cybele. She also subdues or holds or is accompanied by the same wild animals and birds. One of the latest embodiments of this type is precisely the pedimental sculptures of Corcyra mentioned at the beginning of this letter. Here Medusa is flanked by two large lions which mark her as the Great Mother Goddess, the alias of Cybele or Artemis, and between her and them are inserted, in much smaller size, her two offspring, Pegasus on her right and Chrysaor on her left. She reaches out her arms on both sides to embrace them, and they stand in the shadow of her great wings, Pegasus leaping up to her shoulder and Chrysaor, an athletic and heroic but small figure, stepping toward her though facing the spectator. Contrary, then, to the myth as Hesiod gives it, and far earlier and pre-Olympian, is this idea of the living Goddess with her two children in place of their birth at her decapitation. The hostile Perseus Saga of the Olympians is disregarded. In the Corcyra pediment, then, is a seventh-century embodiment of the primitive myth and I cannot but express the opinion that in it Chrysaor, the God with the golden sword, is Apollo. We are familiar with Chrysaoros as the epithet of Apollo. I have found other proofs that Apollo as Sun God was considered the son of Medusa. The later association of the two was merely another instance of the Hellenic subordination to the male of the previously dominant female.

The connection with Poseidon and the horse, embodied in the Perseus saga, goes back to a primitive connection between the Gorgon idea and the horse, in which Medusa is at first plain horse and then Centauress acting as beast-subduing Mother Goddess, and, finally, as Centauress being decapitated by Perseus, a legend popular in Bœotia, and one of the proofs of the Demeter connection. The very early votive offerings found in the shrine of Artemis Orthia at Sparta, some of them as early as the eighth century, where the horses outnumber all other emblems, and where the Gorgon is extremely and ritualistically prominent, show the general application of this double relation of the Gorgon and the horse to the primitive Artemis.

In the organization of the Olympian system the Gorgon idea was appropriated from the primitive nature myths; but in the same way as male deities were then set at the head of the cosmic system in place of the old supreme nature goddesses, and Zeus and Apollo succeeded the Great Mother in Crete, for example, so the Perseus saga was Achæan, or Dorian, and originated as a poetic rendering of this shifting of sex supremacy. The decapitation of the Gorgon was purely a ritual act; it marked the subjugation of the forces of nature to Zeus and his system. The resurrected Gorgon was subject to his will just as the resurrected Python at Delphi was subject to Apollo. The ægis and its gorgoneion stood for the atmospheric forces at the command of Zeus; the sun and the atmospheric conditions it produces; the clouds; the rain; the thunder and lightning. Strange to say, all Greek scholars have read into the Homeric descriptions of the Gorgon's head and the ægis ideas of horror that are largely fanciful or unnecessary. With Apolline supremacy spreading throughout the Hellenic world, the Gorgon, associated at Delphi with the Omphalos (guarded by Gorgons in Euripides's "Ion") and at Delos with the earliest statue of Apollo (by Iphicartides) became a common Dorian as well as Ionian symbol. She appears on numerous archaic coins of Greek cities as an alternate for or in connection with the head of Apollo. Henceforth she is the emblem both of Apollo and Artemis, and this will account for her later association with the moon. She became the protector of cities (Athens, Argos, Tegea), and an *alias* of Athene, with whose myth the Gorgon myth has so much in common that one can almost believe in a common original.

The simple idea of productive force, having become, as I have said, complicated through the new solar connection with the destructive and desiccating power of the sun's heat in the dog-days, gave rise to a sub-myth, which is reported by Diodorus in a passage of which no use has been made, though it is so illuminating. He makes the gorgoneion, as a terrifying monster, start in Phrygia on a devastating career, first southward across Asia Minor and Syria, then eastward to India, and then westward across Egypt and Libya to the home of the Gorgon in the farthest west at the setting sun, burning up the earth as she passes. It is the prototype of the Phaethon myth, and clearly symbolic of Medusa as the destructive sun; that the starting point is Phrygia, original home of the Mother Goddess cult, is significant.

As a representation of the opposite aspect, the fertilizing power of the sun, I will cite merely one very famous work, the Tazza Farnese, that wonderful sardonyx cup by an Alexandrian artist, which has on one side the allegorical scene of the Fertility of Egypt, and on the other, covering the same field, the Medusa head.

The fact that, as soon as Greek art was sufficiently master of its technique to create a type of ideal female beauty, it created in the early fifth century the type of beautiful Gorgon, and that from this time forward Greek art consistently represented Medusa as *beautiful*, does not seem to have conveyed any meaning to modern archæologists who have persisted in their ascription to her of nothing but horror and ugliness. A glance at the gems in Furtwängler's "Antike Gemmen" should have been sufficient to explode this fallacy. Yet the fact of her double nature ought to have been clear from the legend that the blood of Gorgon had the double and opposite properties of both curing and killing! I desire particularly to emphasize the fact that the intense type of the Alexandrian age which replaced the calm broad beauty of the Gorgon of the fifth and fourth centuries has been entirely misunderstood by modern critics. This new facial expressiveness has been dubbed "pathetic" and has been supposed to express the sufferings of Medusa. This supposed pathos is expressed in the contraction and overhanging of the brow, the accentuation of lines about the eyes, and their wide-open lids. Now, the real object of the sculptors in creating the new type was to express not suffering, but the forceful expulsion of the sun-rays from the eyes. It is observed commonly in heads of Helios and some late heads of Apollo, and finds its literary explanation in the legend reported by Apollonius Rhodius that all children of the Sun could be recognized by the rays that darted to a great distance from their eyes. There is good reason for connecting the tumbled and abundant hair with the clouds gathered by the sun, the wings and perhaps the snakes in the hair with the lightning, the open mouth with the thunder.

In this connection it is important to note that in the archaic type of Medusa, those elements that seem most horrible (and they were not by any means always used), and the surest indications of the artist's intention to portray her as an evil demon, are in reality nothing of the kind. They were due to the inadequacy of art at that time to convey in any better way the ideas of elemental force and activity which were ascribed to Medusa. The open mouth, hanging tongue, and bared teeth were nothing but an artistic convention for the thundering voice of Medusa. The one or two large snakes associated so often with her were chthonic emblems, and symbols of fertility

Digitized by Google

and resurgence, as well as emblems of the righteous dead, the *agathodemons*. There certainly was anything but an association of horror with these snakes, attributes of so many of the gods. Then, again, the serpents in the hair and around the head are so arranged in many archaic examples as to prove that they stood for the rays of the sun, and for nothing else; just the substitutes for those hundred dazzling gold tassels of the Homeric ægis that struck with wonder when shaken in the sunlight. In this corona of snakes, sometimes proceeding from a gold sun-nimbus that surrounds the Medusa head, the snakes are connected not with the head, but with the solar aureole, and radiate evenly from the entire circle! The medallion in which Medusa heads are so commonly enclosed is another form of the complete solar disk. To show the breadth and certainty of this solar connection, I shall add merely the fact that quite irrespective of any discussion as to the much-vexing relationship of Apollo and Helios, there can be no more question as to the reality of the connection between Medusa and Helios than of that between Medusa and Apollo. Of this I have many proofs, but will mention only one well established fact. The symbol of Sicily, recognized since Homer as the sacred land of the Sun, is the *triquetrum*, also the symbol of Lykia, the early centre of Apollo cult. Now, in Sicilian coinage, beginning with Agathocles (*c.* 315 B. C.) the *triquetrum* is given with a Medusa head in the centre, together with sheaves of wheat, and in one case the connection is emphasized by the addition of a bust of Helios in the ground. The double connection of Medusa is here given, with both Helios and fertility, and Sicily was noted for its fertility. To bring this down to Roman times I may mention an official consecration of Medusa as the emblem of fertility. It is a coin of Septimius Severus, with the legend *Providentia*, where the emblem is the Medusa head, whereas the common figure for this is a woman with a horn of plenty. Many hundreds of Hellenistic and Roman monuments can be cited in which Apolline emblems, solar and fertility ideas, horns of plenty, fruits and garlands and grain, are associated with Medusa. In fact, there is a virtually unbroken tradition from Minoan times, over a period of more than fifteen centuries, which presents Medusa as a great nature-force, evolving and varying as mythological points of view changed, and as the types of gods were developed. She throws light on the personalities and relationships of many gods; of the old Mother Goddess, of Cybele, Artemis, Demeter, and Erynis; of Zeus, Athena, Poseidon, Apollo, and Helios, and even of Nikê. It would not be impossible that she should give an accrued importance to Apollo as the predecessor of Dionysus and Orpheus, as god of the hereafter and the blessed Hyperboreans, as guide in the expiations and purifications that lead to the Elysian Fields. Medusa really stands out as what her name implies, the "Ruler" of the universe in so far as blind natural force is concerned, guided by the gods. She is no more an evil demon than Apollo.

THACKERAY AND "PETER WILKINS."

TO THE EDITOR OF THE NATION:

SIR: In "Henry Esmond" (book iii, chapter 4), Beatrix, after an allusion to Desdemona's death, says:

"And I want no such ending. I intend to live to be a hundred, and to go to ten thousand routs and balls, and to play cards every night of my life till the year eighteen hundred. And I like to be the first of my company, sir; and I like flattery and compliments, and you give me none; and I like to be made to laugh, sir, and who's to laugh at *your* dismal face, I should like to know? And I like a coach-and-six or a coach-and-eight; and I like diamonds, and a new gown every week; and people to say, 'That's the Duchess. How well her Grace looks! Make way for Madame l'Ambassadrice d'Angleterre. Call her Excellency's people'—that's what I like. And as for you, you want a woman to bring your slippers and cap, and to sit at your feet, and cry, 'O caro! O bravo!' while you read your Shakespeares and Miltons and stuff. Mamma would have been the wife for you, had you been a little older, though you look ten years older than she does—you do, you glum-faced, blue-bearded little old man! you might have sat, like Darby and Joan, and flattered each other; and billed and cooed like a pair of old pigeons on a perch. I want my wings, and to use them, sir."

And she spread out her beautiful arms, as if indeed she could fly off like the pretty "Gawrie" whom the man in the story was enamoured of.

"And what will your Peter Wilkins say to your flight?" says Esmond, who never admired this fair creature more than when she rebelled and laughed at him.

"A duchess knows her place," says she with a laugh.

Thackeray took great pains to be accurate both as to local and historical color, yet in spite of his care there is a curious anachronism in this reference to "Peter Wilkins." In 1712, the date at which the action in "Esmond" is supposed to occur, the author of "Peter Wilkins" was a youth of seventeen, and his famous book was not published until 1750 or 1751. The introduction and dedication are signed R. P., but the identity of the authority was not suggested until 1802, and not established until 1835, when the original agreement for the sale of the copyright was bought by Mr. James Crossley, F.S.A. Paltock died in 1767. His book has elicited the admiration of Coleridge, Southey, Scott, Lamb, and Leigh Hunt, and it is worthy of all their appreciation.

A CHRISTIAN EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent from Lancaster who deplores the study of Greek and Latin because their literature was not founded on Christian ideals challenges comparison with the caliph of Alexandrian Library fame. "To know what the English, the Germans, and the French are now doing" (*vide* Kipling and Bernard Shaw, Zola and Anatole France, Haeckel and Nordau) is more valuable as training for the young than to waste time with such old fogies as Æschylus, Thucydides, or Demosthenes. The golden age of Carnegie and Mrs. Eddy has nothing to learn from the golden age of Pericles. Your correspondent who holds a brief for science as well as for Christianity should explain to what extent such non-Christian subjects as chemistry, physics, economics, or engineering can be permitted to crowd the literature of the modern Christian nations for whom the ancients must make way.

ASSYRIAN HISTORY.

A History of Sumer and Akkad. By Leonard W. King. With map and illustrations. New York: Frederick A. Stokes Co. $4.80 net.

Following close upon the earlier history of Babylonia in the new edition of Eduard Meyer's "Geschichte des Altertums," comes the elaborate treatment of the subject by Mr. King of the British Museum. The present volume is the first of four which are intended to cover the entire range of Babylonian-Assyrian history. The work will undoubtedly take its place as the standard authority on the subject, replacing earlier ones, and distinguished from Meyer's learned and brilliant exposition by its greater detail. The appearance of King's volume illustrates, on the one hand, the growth of the material during the past two decades for the study of the earlier periods of Euphratean civilization, and on the other the progress made in the interpretation of Sumerian texts, which constitute our main source for these periods. While much remains to be done before scholars will be able to read Sumerian inscriptions with the same ease and facility as those written in Babylonian, yet sufficient advance has been made to inspire confidence in the interpretations now proposed. The chief difficulties still encountered in the treatment of the earlier periods of Babylonian-Assyrian history arise from the many gaps which must be left to further excavations to fill out, and from the uncertainty still prevailing in regard to the chronology prior to 2000 B. C., while in the case of the history of the northern extension of Euphratean civilization known as Assyria, the uncertainty begins when we try to pass beyond 1500 B. C.

The general tendency of recent Assyriological scholarship has been to reduce the high dates which it was customary about a decade ago to assign to certain rulers of the south. The lower dates now assumed have been brought about chiefly by the discovery of some additional "synchronisms" between rulers of various districts of the south. Mr King himself has had a large share in these discoveries, and it is to him that we owe the more generally accepted fact that the so-called first and second dynasties of Babylonia did not succeed one another, but were in large part contemporaneous. The result has been to bring the date of Hammurabi (or rather

Digitized by Google

Hammurapi, as the name is probably to be read)—the great conqueror and law-giver with whom a new epoch in Babylonian history begins—down to about 1950 B. C.; and this involves carrying down still earlier rulers like Sargon and his son Naram-Sin several centuries even below the correction of one thousand years that was proposed and quite definitely established by a German scholar, Professor Lehmann-Haupt, about ten years ago. We may now say with tolerable certainty that Sargon's date is not earlier than 2600 B. C.; and the possibilities are that his reign is nearer to 2500 B. C. Mr. King's date of 2650 B. C. is certainly too high, for the assumption involved of an interval of 250 years between Sargon and the beginning of the Ur dynasty is hardly warranted. At the excavations at Nippur, the stratum of the days of the Ur dynasty was found immediately above the pavement of Sargon, and, since all indications point to a rather short duration of the kingdom of Agade established by this ruler, an interval of 150 years between Sargon and Ur-Engur, the founder of the Ur dynasty, would appear to be as large as can safely be assumed. With dates of Sargon and Hammurapi fairly well fixed, we are in a much better position to follow the general course of events in the Euphrates Valley. The significance of the conquests of Sargon, who obtained control of the entire Euphrates Valley and extended his dominion outside of these limits, consists in their foreshadowing of the ultimate triumph of the Semites.

What Mr. King has to say in his Introductory chapter on the relationships of the non-Semitic or Sumerian population of the Euphrates Valley to the Semitic settlers reflects on the whole the present view of most scholars. He goes perhaps a trifle too far in asserting that the Sumerian origin of the Babylonian civilization is "no longer in dispute," and that differences of opinion at present centre on the period at which Sumerians and Semites first came into contact. Questions of origins can never, or at all events rarely, be settled to the entire satisfaction of scholars. In the case of the Euphrates civilization a working hypothesis is the best that one can hope for. We are sure of one thing—viz., that at the earliest period to which we can trace back the history of Babylonia, the population was of a mixed character. Since civilization everywhere arises through just such a mixture, the more reasonable conclusion is that the culture of the valley was neither purely Sumerian as King supposes, nor purely Semitic as Halévy and his adherents (who deny the existence of Sumerians and of a Sumerian language) suppose, but Sumero-Akkadian, that is to say, of a mixed character, in which, to be sure, the Sumerian element at first strongly predominated. But it does not follow from this that the Sumerians represent the oldest and original settlers. On the contrary, a number of facts seem to point to the Semites as the first in the field, entering the valley at a remote period from Central Arabia and making permanent settlements, while the Sumerians, coming as conquerors from the mountainous regions to the east and northeast, furnished precisely that stimulus needed to promote the beginnings of a genuine culture. Be that as it may, the conditions presented at the time that historical records become available show the Euphrates Valley divided into a number of districts, each grouped around some city as a centre, and with both Sumerians and Semites in the land. Chief among these centres are Lagash (or Shirpurlc), Nippur, Umma, Uruk, Ur; but such is the dearth of material for the early period that only general glimpses of the course of events can as yet be secured.

Mr. King is to be commended for his reserve in using this material. Instead of indulging in speculations and elaborating theoretical reconstructions on slender threads, he confines himself to a general sketch of Sumerian civilization as resulting from the study of the early works of art, and to an indication of the relationship of these various centres to one another. From designs on votive offerings (chiefly religious in character), on stone, copper, ivory, shell, and the various materials used in the preparation of seal cylinders belonging to this early age, we can as a matter of fact obtain a pretty definite view of the stage of culture reached at about 3000 B. C. We know a good deal of the methods of warfare, of the weapons that were used by Sumerians and Semites, as well as their dress and something of the organization of the armies. Numerous business documents, forming to a large extent official archives of the temples in various centres, reveal the many-sided business activity—loans and sales, farming of lands, dealings in cattle, wines, oil, grain, and various field products—in all of which the temple organization had a share. The seal cylinders show us the modes of worship, the way in which the gods were pictured, the form of the temples, the style of the altars, and other furnishings of the temple; while in addition to this the designs supplement in important particulars our knowledge of the current myths as derived from the literary remains belonging, for the greater part, to the later periods. All this is set forth in an admirable manner by Mr. King, who with a complete mastery of all details skilfully weaves the mass of information to be gleaned into a picture at once fascinating and impressive.

When it comes, however, to filling out the general picture with historical details, the gaps in our knowledge become most painfully apparent. Thanks to extensive excavations conducted by De Sarge and Cros at Teloh—the site of the ancient political centre of Lagash—we can follow the fortunes of this place and its relation to other centres for a period of about one thousand years, but only in a very general way. The rulers of Lagash now appear as victors extending their dominion over a considerable portion of the southern part of the Euphrates Valley, but not able to make much headway towards the north, where the strength of the Semite settlements lay. Periods of triumph are succeeded by reactions in which the rulers are unable to disguise their forced submission to other centres. Leaving aside details which would carry us too far, we can trace a double movement in this earliest period, one toward a combination of the centres of the south, leading eventually to the formation of the empire of Sumer, the other a growing rivalry between the states of the south and those of the north, or, in other words, the struggle of the Sumerians and the Semites for supremacy.

A definite indication foreshadowing the ultimate triumph of the Semites is to be seen in the Semitic names borne by rulers of Kish—for a long time the most formidable rival of Lagash. Lying considerably to the north of Lagash, it was naturally more subject to the influence of the Semitic settlers, who gradually obtained control of it as well as of other centres. Despite the checks that the Semitic advance received, by the year 2500 B. C. an energetic ruler of Agade succeeded in obtaining control of both the northern and southern sections of the Euphrates Valley. With Sargon as the King of Sumer and Akkad a new epoch in the history of the district begins. To be sure, the kingdom established by Sargon and handed down to his son, Naram-Sin, was of short duration, so that within about a century after the latter we find a powerful Sumerian dynasty established at Ur, the five rulers of which (*c.* 2300-2200 B. C.) called themselves "Kings of Sumer and Akkad." But the conflicts between Sumerians and Semites continued almost uninterruptedly, and finally led to the complete eclipse of Sumerian control. Several centuries elapsed, however, before this was brought about; we find rulers of Lagash, though not assuming the title of "King," regaining a considerable degree of autonomy, and we see another Sumerian centre, Isin, rising to power after the downfall of the Ur dynasty.

The centuries following upon Sargon are marked by a striking advance in architectural and general artistic construction. Gudea, one of the *patesis* of Lagash, appears to have been particularly active in this respect, for in addition to his work on the great temple E-Ninnu at Lagash and other sacred

Digitized by Google

structures in that centre, he has left us no less than ten statues of himself, chiselled with remarkable skill out of the hard diorite imported by him from northern Arabia.

With the fall of the Isin dynasty and the rise of rulers distinctly Semitic, who had established their centre in the city of Babylon, the first volume of King's valuable work breaks off. The sixth member of this dynasty was the famous Hammurabi, who completed the work of his predecessors by the complete overthrow of the one serious obstacle still remaining to the Semitic domination of the Euphrates Valley—namely, the district of Elam to the east of Babylonia, which had always proved a troublesome neighbor and at various times, both before and after Hammurapi, had succeeded in gaining a foothold in the valley and, indeed, in controlling its destinies for a while.

The closing chapter is devoted by Mr King to a discussion of "Cultural Influence" of early Babylonia on "Egypt, Asia, and the West," and will be of special value to those interested in the general bearings of Euphratean culture on other ancient centres of civilization. Mr. King here reveals himself as a student and thinker in the best sense of the word. It is one thing to decipher inscriptions, and interpret them, but quite another to discuss satisfactorily the larger and often elusive problems of "influences." One must have, above all, an open mind to change one's views when the discovery of new material calls for this heroic task. So Mr. King was once inclined to ascribe to a supposed Semitic invasion some of the most characteristic traits of Egyptian art, architecture, and religious beliefs and practices, including the embalming practice. But he now modifies his opinion in view of the proof furnished by Dr. Reisner's excavations at Naga-ed Der and other early cemeteries in Upper Egypt, and by those of Naville in Abydos, which show a continuous development of civilization without any break between the Neolithic period and the early dynasties of Egypt. The resemblances between Egyptian and Babylonian civilization must, therefore, be accounted for in some other way. In part, they are due to those natural coincidences for which we must always be prepared, in part to the unquestionably Semitic elements in the earliest population of the Nile district. As in Babylonia, so in Egypt civilization is due to the stimulus exerted by one ethnic element upon another representing a different quality. This mixture, showing itself also in Egyptian speech, produces results in the domain of beliefs and practices as well as in tendencies of art that recall conditions prevailing in the Euphrates Valley. Much simpler is the problem of the mutual influence exerted by Babylonia and the districts lying to the east upon one another; and in an appendix Mr. King calls attention to some of the results of the Pumpelly Expedition in Turkestan (under the auspices of the Carnegie Institution), which point to a much larger centre of "Sumerian" culture extending far into the interior of Asia. The problem is hardly ripe for solution, but there is surely nothing improbable in the supposition that the "Sumerians" represent a chip of a very early civilization—crude, to be sure, in many respects—which spread at one time over a considerable territory.

Mr. King also touches upon the vital question of the extension of Euphratean influence through Western Asia Minor and thence to Crete. Here Syria forms a natural link, and there is no longer any reason to question the early contact of those heterogeneous groups of peoples known as the Hittites with Babylonia. As more and more Hittite sites are explored, the traces of direct Babylonian influences become more pronounced; and Dr. Ward has recently shown by his thorough study of the "Seal Cylinders of Western Asia" (Carnegie Institution, 1910) how in return Hittite views modified Babylonian conceptions of some of the indigenous deities. Without accepting the views of such extremists as Drs. Winckler and Jeremias, who would make all ancient civilization to a large extent mere modifications of Babylonian culture, King makes out a good case also for Babylonian influence in Crete in the introduction of writing on clay by means of a stylus, replacing the older practice of engraving the Minoan pictographs on seal-stones. Until, however, more substantial progress shall have been made in the decipherment of these pictographs, the further specification of this influence must be left in abeyance. Meantime it is of importance to have established, as King has done, that a supposed extension of Sargon's conquest as far as Cyprus turns out to rest upon the error of a scribe, who in a later copy of an account of Sargon's reign wrote "Sea of the West" (*i. e.*, the Mediterranean) instead of "Sea of the East," by which the Persian Gulf was meant. The evidence to be derived from the finding of Babylonian seal cylinders in Cyprus also turns out to belong to a later period than had been supposed—so that for the present the thesis that Euphratean culture made its way into proto-Grecian settlements by means of Syria and Asia Minor, and not by a direct extension from the Mediterranean coast at an early period, remains the most probable.

Scholars and all interested in the story of mankind's past will look forward with interest to the continuation of Mr. King's work, upon the thorough character of which he is to be warmly congratulated and commended. By his previous work, he has prepared himself for a task which no other living scholar—with the single exception of Eduard Meyer—could take up with greater assurance of bringing it to a successful issue.

COUNTRY-HOUSE FICTION.

Jane Oglander. By Mrs. Belloc-Lowndes. New York: Charles Scribner's Sons.

John Verney. By Horace Annesley Vachell. New York: George H. Doran Company.

Master Christopher. By Mrs. Henry de la Pasture (Lady Clifford). New York: E. P. Dutton & Co.

What would the current English novelist do without his country-house and its appurtenances?—its resident squire, its neighboring lords of the manor, its village ladies and curates, its questions of county precedence, its week-end parties and its politics? London now seems to be fairly discredited as a scene. People are understood to go there for the season, and it is of use as a general asylum for distressed persons, or for persons who are in the novelist's way at Dorset Major, or Lower Escombe—or whatever modified spot may be selected for the main action. To London the maiden flees when she finds herself on the brink of hateful marriage; to London fare hero and villain alike when the country becomes too narrow for their several pursuits. But the story only thrives in country air.

Three novels of this type have come to hand almost at the same moment. In "Master Christopher" Mrs. de la Pasture (or Lady Clifford, as the title-page now admonishes us to know her) represents another of her old-fashioned heroines, triumphing over the follies and improprieties of the modern world. May Thorverton is as slender and gentle and shrinking and, so to speak, feminish, as her prototypes. Her make-up is perfect: "How pure and clear was her coloring; how lovely the curve of her short chin and delicately cut rose lips; how finely pencilled the light brown eyebrows that met above the blue starry eyes on the bridge of a straight little nose." This novelist never permits her little heroines to marry young persons of their own generation. But Anthony Denys has a straight profile, and a handsome brow, and silver-tipped curls upon it, and wears an old brown velveteen shooting-coat, and dear little May falls in love with him at first sight. Anthony is the descendant of the owners of Moreleigh Abbey, now in the hands of a race of mill-made upstarts. May is daughter of that lowly clan, but her mother is a cousin of Anthony's. You see the outcome. It is for May's boorish brother to die, and for May to endow Anthony with her hand and his lost inheritance. That all this may not come about too

Digitized by Google

tamely, and that the meek excellences of her maiden may not lack a foil, the novelist gives us a picture of the modern girl, in the person of Erica Clow, daughter of a city knight, and consequently of vulgar spirit. But she has red hair and brains, and succeeds in enlivening the story not a little.

Erica is not really bad, and we gather that she is on the way to regeneration by virtue of marriage with a real aristocrat. The Athena Maule of Mrs. Belloc-Lowndes's tale is a far more dangerous person, a siren, or ghoul, if you will, of no small accomplishment. She is of Greek blood and of marvellous beauty. Years before the present action begins she has been married in Greece by an English archæologist, and has been unfaithful almost from the altar. She still ravages the quiet countryside to which her husband has brought her, with her unholy charms. Her husband is an invalid, and detests her as much as she despises him. With them lives Dick Wantele, a kinsman and partisan of Maule's. Virtually their only guest is Jane Oglander, a ward of Maule's, whom Dick Wantele wishes to marry, and both the Maules are fond of. She is simply a nice girl, though of a more robust type than Lady Clifford admires. General Lingard, though short of middle age, has distinguished himself in Africa, and has returned home to be a lion, and to win the hand of Jane Oglander. Chance then throws him into the clutches of the baleful Athena, and the game is on. The great general conducts himself, it must be owned, very much like a cad, and is really delivered from Athena only by the act of Mr. Maule, who drops poison into that enchantress's sleeping-potion, quite according to the best romantic traditions —only he is not caught.

The action of these two stories is purely domestic: politics are a leading feature in Mr. Vachell's novel. Verney is private secretary to Charles Desmond, party chief and member of the Cabinet. Desmond has a daughter, the beautiful Sheila, whom Verney loves, while she looks upon him as a brother. The story boasts a handsome villain instead of a beautiful adventuress. Of course, his birth is not what it should be. His father, having amassed a huge fortune in trade, is naturally a beast; and his son, though a university man, has inherited the paternal nature and morals. His brilliancy, contrasting with Verney's steadfastness, captivates Sheila. She has a great enthusiasm for the political career, and Scaife is apparently on the direct road to political greatness. He and Verney twice contest the same borough, and Scaife wins both times by a trick. Sheila and Scaife become engaged, but Verney is too much of a lady to tell the girl that Scaife is a cad and a rascal. However, in the end, the worm turns, and Scaife is cast into outer darkness, so far as Sheila is concerned. The English political novel must always be an object of curiosity to the American reader, who, though he may not think himself above politics, does virtually think that they have nothing to do with his private life—or, at the very least, with the private life of his women-folk. This one is told with the quiet force which belongs to all of Mr. Vachell's stories.

MORBID PEDAGOGISM.

Educational Problems. By G. Stanley Hall, Ph.D., LL.D. New York: D. Appleton & Co. 2 vols. $7.50 net.

The material for these two volumes, which are even larger than the two earlier volumes on "Adolescence," has been drawn from the author's seven hundred or more public addresses and several score of magazine articles, and covers a wide variety of topics: the pedagogy of the kindergarten, of music, of history, and the like; the educational value of dancing; religious, moral, and industrial education; the pedagogy of sex; children's lies, child-welfare agencies—in fact, everything pedagogical. Although the chapters as they stand have been newly written and recast, it is doubtful if they would have presented a connected argument even had the printer not interfered with their "obviously proper order." Much of the work suggests a card-catalogue, or outlines of literature furnished by the author's pupils, with a running commentary of his own. The index contains more than 1,800 names. In this welter of name and detail it would be strange not to find some useful information. Nor may we deny that on occasion the author performs a service in collecting the material; nor, again, that his criticisms of existing conditions are generally keen and well aimed, and that his ideas of educational policy, where no sentimental interest is involved, are often good. In particular we may name the long and instructive chapter on Industrial Education. But any confidence that we might have in his judgment is destroyed by the constant high-pressure of enthusiasm, tending frequently toward a maudlin emotionalism, not seldom erotic, which gives the tone of the work and renders the plainest proposition an object of suspicion. And in general it must be said that the deliverances of "expert" pedagogy are not noticeably more significant, or more deserving of authority, than the judgments of intelligent, though unspecialized, common sense.

The author is astonishingly resourceful in vocabulary, but no one acquainted with his previous works will expect him to write English; and for the uninitiated a few examples will suffice: "It [the miraculous] is neither foolishness to be eliminated and no whit less is it dogma or even necessarily fact, but something higher and more vital" (I, p. 179); "Although the plan of Columbia to train shop foremen to be teachers on the one hand, and while the labor unions on the other, might do very much, there will probably always be need for some intermediate institution to link the two" (I, p. 598); "He doubts Westermarck that this has been the chief fashion among primitive men" (I, p. 433). One is not surprised to learn that the work was written "with the printer at my heels," and only the author's statement prevents us from concluding from the state of the text that the printer denied the privilege of proof. But carelessness and slovenly construction are not the only faults. The style, like that of others who preach the failure of the humanities, is over-burdened with Latin derivations, including many originalities of the kind of "revenient," "feralize," "crassify," and "dedivinitize." A favorite word is "evirate." We might therefore hope to be spared the spectacle of an American university president who thinks that *vires* are "real men" (I, 674).

But why speak of form where form is despised? And if it be urged that good form stands for straight and coherent thinking, then still why? No law of contradiction rules the logic of emotionalism. It is thus quite in order that any impressive statement should elsewhere be toned down or neutralized. Nothing is more scornfully resented than the attempt to "intellectualize" the content of life; yet in industrial education, "training in manipulation under the most skilled artisans is not enough; the *intellect must be appealed to*" (the italics are the author's); and "to put thought into life is to idealize existence." Again (I, 6, 409, 424 ff.), race-suicide is alarming, but improbable (I, 673). Juvenile delinquency is grave, but very likely a matter of definition (I, 235). "These are educational Dark Ages" (I, 629), but a century ago the schools were far less efficient along their own line (I, 617), and along other lines things are booming (I, 564-588). The truth is that in the pragmatism of emotionalism the only meaning of a statement is its present thrill. And thus, in his enthusiasm for the teaching of the master-workmen in the trade schools of Munich, who are pedagogically untrained, the author quite unconcernedly gives the whole thing away when he says (I, 589), "Put a few bright boys in their earliest 'teens and a capable man in the forties who knows his business and loves it together, and we have perhaps the best possibilities of teaching and learning"—which is just what we have always thought.

The one clew to unity in the work is furnished by the principle that education must be in accord with nature.

Digitized by Google

This seems harmless enough; for doubtless few would now deny that education must be a development of the nature of the child, whatever revolution of nature this might be conceived to involve. But for the author it means the recapitulation in the child of the development of the race. And here, passing over the fact that the recapitulation theory is largely discredited among zoologists and accepted only with modification by palæontologists, let us note the motive. The race-experience is reproduced in the individual in his emotions. Accordingly, what is implied in the idea of recapitulation is the superiority of the emotional life to the intellectual; or, upon further analysis, the insignificance of the life of individual self-consciousness beside the unconsciousness of nature. "The unconsciousness of the child is rest in God"—thus Froebel. But the supreme occupation of nature lies in reproducing her kind (I, 446). And thus, as any page will suggest, the *Leitmotif* of the "Educational Problems" is that of sex.

Not content with two volumes of "Adolescence," the author offers us here, in the chapters on The Pedagogy of Sex and The Budding Girl ("the bud" is his more affectionate term), 193 pages of sexual detail which are not surpassed even by Krafft-Ebing or Mantegazza for quantity of nastiness and nudity of statement. The facts might be bolted (where they are facts), if they were served without the perfume of tender sentiment, but the combination nauseates. Nor is their relevance always clear. What, for example, is the pedagogic significance of those neurotic "confessions of representative mothers" (I, 530 ff.)? And what "representative mother" could have been induced to reply to the author's *questionnaire*? The purpose of it all, however, besides furnishing us with expert information about the "facts of life," is to set forth the need of a new curriculum, which is to be made up largely of botany, zoölogy, and anthropology, and the main theme of which in all the disciplines shall be the idea of sex. "In the higher pedagogy," we are told, "the altar of this new muse will occupy a very central place."

Nothing more precisely illustrates the author's turn of mind than this proposal to make sex, with all its embellishments and perversions (see I, 479 ff.), the central topic of discourse at a period when suggestibility is highest and self-restraint imperative. And yet there is probably no safer avenue to enlightenment in matters of sex than that offered by the biological sciences—provided always that the "vitalizing personal touch," of which the author is so fond, be carefully restrained. The corrupting power of the "vitalizing personal touch" is well illustrated in the work before us in the mingling of cold fact with heated sentiment, of physiology with pious superstition; and it is precisely this that renders it worthless as a guide to the pedagogy of sex.

At intervals in his recital of abnormalities, the author pauses to wipe away a tear and explain that, "It is painful to write these things." But we beg leave to doubt it. He dwells too long and lovingly upon the theme, too caressingly upon its nastiest aspects; and we are compelled to believe that "bathing in this cosmic ocean" of subconsciousness and sex is altogether to his taste.

Elkanah Settle: His Life and Works. By Frederick Clyde Brown. University of Chicago Press. $1.25 net.

How amazed Dryden would have been could he have known that minute facts about the life and works of his contemned rival, Settle, would after two centuries be industriously gathered, that to satisfy the curiosity of Prince Posterity marriage registers and wills would be examined, and that even some of Doeg's most unimportant letters would be reproduced in facsimile! It is to be feared, however, that the genial founder of English criticism would hardly have understood the purposes which govern this present work. Here we have patient industry compiling facts about Settle's life, including the controversies in which he so contumaciously engaged, summarizing all his plays, and determining the canon of his works. Even as a mere compendium, the book, though useful, is not entirely satisfactory. The bibliography, for example, omits Professor Noyes's remarks on Settle in his editions of Dryden, and lists Gissing's "New Grub Street" without indicating that only in a particular passage thereof can anything appertaining to Settle be found. The date of the translation of Ovid's "Epistles," to which Settle, among more notable writers, contributed, is left uncertain; though the volume (important because containing the first work of Dryden as a translator) appeared unquestionably in 1680. In that year, furthermore, was issued "The Wits Paraphrased," with a parody on Settle's translation unmentioned by Dr. Brown.

Imperfections of this sort would be trifling, if the work aimed at more important objects. It professes indeed to be a "study" of Settle, but the term seems narrowly conceived; for of studious reflection on historical or critical matters there is little. This need not have been the case. Settle—a striking controversialist at the very time when English political satire was rising to its height, a victor over Dryden in a battle of books, and an introducer of exceptionally elaborate scenery—offers many interesting problems to the student of versification, of criticism, or of drama. To elucidate such phases of Settle's activity is, however, impossible without discussing questions of his relationship to previous and contemporary efforts in the same field. To what extent, for example, did the scenic methods of the Jacobean masque or of the drama of Louis XIV affect Settle? Again, what skill in satire, in metaphor, and in metrics made Settle's reply to Dryden rise conspicuously above such rival pieces as Shadwell's "The Medal of John Bayes"? Questions like these Dr. Brown ignores; yet until they are satisfied the peculiar character of Settle's work will remain indistinct. Settle's personality likewise is hazy. The data of his picturesque career are gathered, but from them is created no lively human being, no "Doeg, whom God for mankind's mirth has made"—perhaps for mankind's sympathy as well.

Canada and the Empire. By W. R. Lawson. Edinburgh: William Blackwood & Sons.

Since the turn of the nineteenth century there has been no country that has been more alive with interest for students of politics, and especially of economics, than the Dominion of Canada. Its settled area has been nearly doubled; its population has increased by at least one-third; new industries have come into existence under the stimulus of protection and bounties; and politics are more closely interwoven with trade and commerce and with transport than in any other Anglo-Saxon country. Moreover, while the Dominion extends over half a continent, all this development has been in four or five provinces—that of most interest in three only—and consequently within easy compass for the student of economics. But despite the abundance and availability of material for economic study, it has been left chiefly to Englishmen to undertake it, and Mr. Lawson's "Canada and the Empire" is an important and valuable addition to the books embodying such study.

Of noteworthy value are the chapters on Dominion, provincial, and municipal finance, where on the whole Mr. Lawson's criticism is distinctly favorable. The chapters on immigration and Dominion lands are more outspoken than any book on Canada written by an Englishman since H. R. Whates published his "Canada, The New Nation" in 1906. In view of the fact that the vast area of country between Lake Superior and the Rocky Mountains—the territory out of which Manitoba, Saskatchewan, and Alberta have since been carved—was a free gift by England to Canada at Confederation in 1867, Mr. Lawson is disposed to conclude that for the last ten years, at any rate, British immigrants have not had too liberal treatment. He

Digitized by Google

concedes that some Englishmen who have emigrated have been troubled with an excessive egotism and an inconvenient thirst; also that it was undoubtedly a mistake to send out thousands and thousands of Londoners without making sure beforehand that there were openings for them. But that, Mr. Lawson insists, was the mistake of the Canadians; and he holds that it was scarcely generous for them, when they discovered their error, to turn upon the misplanted Londoners and abuse them as undesirables. His answer to this abuse is a reminder to the Canadians that as regards labor supply they have had some cheap bargains from the old country as well as some bad ones. Mr. Lawson's book will not stimulate immigration from England, for he is positive in his statement that the northwest will soon cease to be a poor man's country, and that brain and muscle are no longer the only requisites for success in farming in Manitoba, Saskatchewan, and Alberta; and he is not more hopeful as regards opportunities in the cities:

> What has been going on for years in the preference of alien to British labor will extend gradually to all the skilled trades and the professions. The ideal Canadian immigrant is the man out of whom most work and the heaviest kind of it can be extracted for a dollar and a half or two dollars a day.

Ever since Canada went on a protectionist basis in 1858, Parliamentarians at Westminster and English writers have been candid in their criticism of Ottawa politicians. Mr. Lawson is no exception. Touching on the land policy, he declares that never in the history of colonization has public land been given away so lavishly as it has been by the Dominion Government. The trail of the politician and the grafter is over it all. Until 1896 the railway builder and the speculator had made most out of the magnificent heritage that the Dominion had received from England. In 1896, with the incoming of the Liberal Government, there was a change of policy. The watchword of the Liberal Government was "Not an acre more for the railways—all for settlers."

But settlers is an elastic term, especially when the definition of it is left to a minister with hosts of political friends and clients. It does not necessarily exclude a good Liberal worker with electioneering gifts and a strong claim on his party; still less does it bar a member of Parliament with a good record for loyal voting and active electioneering. Hence it happened that while quarter sections were thrown open under severe restrictions to the poor homesteaders, large blocks fell into the hands of the clever politicians without any restrictions at all. It was "easy terms" all round for them; pay their own price at their own convenience; generally they were not called upon to pay until they had arranged a sale to some British or American syndicate at 500 per cent. profit or more.

The net result of these and other conditions, as Mr. Lawson sums them up, is that "there is a lot too much politics in Canadian finance"; that "three-fourths of the big fortunes conjured out of land, lumber, and railways have a political taint."

Notes

Harpers announce a new and complete edition of the works of William Dean Howells, in uniform style. There will be illustrations, and to each volume Mr. Howells furnishes a bibliography. The first issue, consisting of six volumes, is now ready. It contains: I, "My Literary Passions" and "Criticism and Fiction"; II, "A Hazard of New Fortunes"; III, "London Films" and "Certain Delightful English Towns"; IV, "Landlord at Lion's Head"; V, "Literary Friends and Acquaintance"; VI, "Literature and Life."

An Alphabetical Index of the nineteen volumes of the *Yale Review* from 1892 to 1911 has been printed. It is arranged in three parts: An Author Index of Articles, A Subject Index of Articles, and An Index of Publications Reviewed.

In a special Riverside Press edition Houghton Mifflin Co. has brought out "Some Family Letters of Thackeray, Together with Recollections by His Kinswoman, Blanche Warre Cornish." Mrs. Warre Cornish was formerly Miss Ritchie, and her Recollections are printed with the approval of Thackeray's daughter, Lady Ritchie.

Hereafter the publications of the University of Chicago Press will be handled in Tokio, Japan, by Z. P. Maruya & Co., as regular agents.

F. R. Harris, who has had access to unpublished documents at Hinchingbroke, has written a "Life of Edward, First Earl of Sandwich, 1652-72," which is announced for publication by John Murray.

The second volume of Monypenny's "Life of Benjamin Disraeli" (Macmillan) will appear next October.

A valuable aid to the critical study of the text of the Bible is the reproduction of the ancient manuscript, the Codex Sinaiticus, preserved in the Imperial Library at St Petersburg. This is being made, by the collotype process, in facsimile from photographs by Professor and Mrs. Kirsopp Lake. The New Testament part, including the epistle of Barnabas and the fragment of the Shepherd of Hermas, was issued last month from the Clarendon Press.

In the green and gilt series of the Oxford University Press there now appears a page-for-page reprint of "The Kilmarnock Burns" of 1786. The text is reproduced literatim, except for three or four obvious typographical corrections, which are duly noted.

In the excellent series of Historical Guides, instituted by the late Grant Allen, and published by Henry Holt & Co., the volume on "Christian Rome," by J. W. and A. M. Cruickshank, has been issued in a second edition, revised.

Those who have read the two volumes of Lady Holland's Journals, edited by Lord Ilchester, will welcome another volume from the same editor, which gives "The Spanish Journal of Elizabeth Lady Holland," omitted in the earlier publication (Longmans, Green & Co.). The substance of the present volume is an account of two journeys in Spain, the first in 1802-5, the second in 1808-9. It cannot be said that either of the trips furnished matter for the journalist as interesting as her earlier travels in Italy before her union with Lord Holland or as her later experience when she was mistress of Holland House. The narrative is rather abrupt and the anecdotes and characterizations somewhat hurried. Yet there is much to interest. The Hollands were travelling as private persons, but their position in the Whig party gave them a kind of official recognition wherever they went, and enabled Lady Holland to see and hear at first hand the scandalous doings at the court of Charles IV in Madrid, where the shameless queen and the iniquitous Godoy (the "P. of P.," prince of the peace, Lady Holland usually calls him) set the pace for a degenerate society. There is a good deal about Hookham Frere, who was then minister to Spain, and who, in Lady Holland's opinion, "was better employed for *his* credit and *ours* as editor and poetaster of the *Anti-Jacobin*." The second part of the journal was written down in the height of the Peninsular war, and, though disjointed, gives a notion of the confused state of affairs under the Junta, with the members of which the Hollands were in close touch. In the appendices are printed a group of letters, and in the preface the editor quotes from a document in the handwriting of Lady Holland, which relates how she concealed her daughter from Sir Godfrey Webster, her first husband, by dressing the child in boy's clothes, and thus smuggling her into Padua. Lord Ilchester has added notes where these were necessary to explain the text. Not the least interesting thing in the volume is a series of brief character sketches at the end of the first section of the Journal. We seem to be transported back more than a hundred years, when we read: "The D. and Dss. [of Medinaceli] are served at table by *gentlemen* on their bended knees. They are both narrow-minded and illiterate, and associate with none of their equals, being constantly surrounded by monks and priests."

An interesting feature of the Eighth International Prison Congress, held at Washington in 1910, was the publication and distribution of four volumes on "Correction and Prevention" (Sage Foundation) in the United States. Dealing respectively with "Prison Reform," "Penal and Reformatory Institutions," "Preventive Agencies and Methods," and "Preventive Treatment of Neglected Children," and including contributions from nearly two score of the leading American authorities on these different subjects, the series gives a clear and comprehensive view of the progress and present status of prison and reformatory methods in this country. Especially valuable are the last two volumes, the work of Prof. Charles R. Henderson, president of the congress and editor-in-chief of the series, and of Dr. Hastings H. Hart. A feature that is particularly pleasing is the entire absence of that boastful quality that

Digitized by Google

too often marks the utterances of Americans, even American scientists, when they have occasion to review our achievements for the edification of Europeans. The books are tastefully illustrated and elaborately indexed.

In his "Wider Use of the School Plant" (Sage Foundation) Clarence Arthur Perry has brought together interesting accounts of the novel uses to which school buildings have been put in different American cities. That the schools may advantageously be employed for evening classes and lectures for adults is now generally admitted. Mr. Perry demonstrates that they may be used successfully out of school hours, also as centres for organized play and physical culture, as headquarters for neighborhood social and political gatherings, and even as convenient locations for day nurseries, dispensaries, and child employment bureaus. As a description of current experiments in broad and enlightened school administration the book is admirable. Its usefulness would be even greater if the author had been willing to draw conclusions in regard to the relative value of these different experiments, but perhaps he was well advised to leave this difficult task to the discriminating reader.

The Calendar of State Papers, Colonial Series, America and West Indies, has reached its fourteenth volume with the issue of the portion relating to the year 1701. Mr. Headlam, the new editor, is making excellent progress with this indispensable work, but at best the advance is slow. In his treatment of his documents he is much more accurate and thorough than was Mr. Sainsbury, and in his prefaces shows none of that grotesque dislike of the colonists exhibited by Mr. Fortescue. The volume now issued is largely concerned with preparations for war and colonial defence, with pirates, with negotiations with the Indians, and with the political complications that arose in nearly every colony as the aftermath of the revolutionary movements of 1689. Mr. Headlam continues to record errors in Doyle's history and to point out the frequent inadequacy of its treatment. As illustrating Doyle's neglect of the opportunities that lay at his very door, Mr. Headlam can call attention to the fact that the official documents, the loss of certain of which Doyle lamented, were lying all the time among the records in the repository in Chancery Lane. In fact, no period of American history is so inadequately represented in printed documents as that which extends from 1695 to the middle of the following century, and there is not a treatise or monograph now written that will not need entire revision eventually, unless the writer has seen in manuscript beforehand the documents that Mr. Headlam is calendering. As Englishmen complain that American writers are unfamiliar with the niceties of English usage, particularly in the matter of titles, so we may complain of English writers that they take no pains to familiarize themselves with the proper spellings of American names. Wycoming (Wyoming), Cascobay, Depeyster, Schaackhook (Scaticook), etc., look strange to American eyes. Unlike his predecessors Mr. Headlam has an eye to language and philology as well as to government and administration. He calls attention in his preface to Bellomont's use of "on the carpet" earlier than any recorded in the Oxford English Dictionary, to Penn's writing "other provinces cut us out," and to the curious word "Corobeness," found in a Maryland document, which, from its context, Dr. Skeat suggests may have arisen from the running together into one word of the "*commonness* of the crime of *robbery*." The explanation seems as extraordinary as the word.

The double section of the "Oxford English Dictionary" (Frowde), running from Scouring to Sedum, is exceptionally barren of long and diverting articles, and at some points seems weak in illustrative material. For the word "scrapper," admitted as slang, and curiously illustrated by a passage from Mr. Riis's "Roosevelt," merely the meaning "a pugilist" is given. In all seriousness, "a person of pugnacious temper" should have been added as a derivative sense. The earliest quotation under "sectionalism" is taken from the Newark *Journal*, July, 1858, as cited by Bartlett. An earlier example may be found in the *Radical Abolitionist*, January, 1857, p. 55: "Strength there, will be loss at the North, and thus a party not obnoxious to the charge of 'sectionalism' may be attained." A more classical instance occurs in Lincoln's Cooper Institute address of 1860, where he speaks of Washington's warning against "sectionalism" in the Farewell Address. Washington, however, does not actually employ the word. "Secessionism" is another "ism" that became conscious of itself at about the same period. Oddly enough, the first case of its use recorded by Mr. Bradley is dated 1898. We note the occurrence of the word forty-two years earlier in a clipping printed in the *Radical Abolitionist*, November, 1856, p. 40: "We do not believe he [Col. Fremont] will have a man in his Cabinet who is tinctured or tainted with abolitionism or secessionism." Mr. Bradley takes his first instance of "seceder" as applied to the Southerners in our civil war from the *Saturday Review*, December 7, 1861. For earlier examples, see the *Principia*, edited by William Goodell: April 27, 1861, p. 604; May 4, 1861, p. 610; May 18, 1861, p. 628. The synonymous "secessionist," apparently a later coinage, is carried back by the help of Bartlett only to 1860, though an examination of contemporary newspapers would probably yield an earlier date. By 1861 the newspapers bristled with the new term; for an example, this from the New York *Times*, June 30 of that year, under the head-line, "Secession Deviltry in Kentucky": "A fight occurred between two Unionists and two Secessionists in Graves County, in which one Secessionist was killed and the other had his arm shot off"—three months after the fall of Fort Sumter. With the outbreak of hostilities, "Secessionist" and "secession" seem—though they are of course not wholly synonymous—to supplant "Disunionist" and "disunion." It is regrettable that some one with access to the periodical files was not set to ferreting out the history of these words, for in the search there would be much historical as well as linguistic edification. For two now delightfully fatuous editorials bearing on this subject we commend to the random reader the issues of *Harper's Weekly* for December 10 and 17, 1859. While the little Abolitionist organs with fiery voice are prophesying war, the imperturbable editor of *Harper's* announces that the serious business of the next Congress will be the banks and the tariff—"*As to disunion, both parties know too much for anything of the kind.*" The features of this number are an account of Mr. Ward in Pekin and chapters of novels by G. W. Curtis and Wilkie Collins. In very small type, under "Domestic Intelligence," the public is informed of the execution of John Brown and the readiness of South Carolina for secession. In the next issue this far-sighted journalist declares that "the disunion party—so far as we are enabled to learn—is no stronger in the South than the radical abolition party in the North. *Both are mere noisy minorities.*" All that is necessary, he thinks, to restore entirely good feeling between North and South is an intelligent interpreter, who shall point out that the teapot tempest is kept stirring by a "parcel of politicians."

The appearance recently of the last volume of the revised edition of "Goethe's Gespräche" (5 vols.; Leipzig: Biedermann; imported by the Bruno Hessling Co., New York) marked the completion of a worthy undertaking, and one that will be of great service to students of Germany's greatest writer. In our notice of the first two volumes (*Nation*, May 12, 1910), outlining the plan and scope of the compilation, attention was called to the probable share of the assistant editors in the work, as the announcement of their actual share was reserved for the preface to the last volume. From this preface it appears that they were all to serve in the capacity of advisers when called upon. Some idea of the amount of work involved may be obtained from the catalogue of sources and the number of items. There are above 3,900 items (the first edition had 1,800), drawn from nearly 600 publications, besides a number of manuscripts, many of which are here printed for the first time. Soret's diary records, hitherto accessible only in the German translation of Burkhardt, are here printed in the original French, from the Weimar manuscript. Having obtained permission to publish this original text, the editor has eliminated certain of Eckermann's conversations based on Soret's accounts.

In the treatment of his sources Biedermann's method is in general sound, though his text is not wholly free from small errors, and his omissions, always indicated by a special sign, cannot be said to have been uniformly well-advised. In a few cases the omitted words contain impressions of Goethe's personality or accounts of his doings, and ought to have been retained for the sake of completeness. His plan of relegating to the notes less important items and such as would interest only specialists may appeal to the reader more forcibly than his judgment as to the relative importance of specific items. But there is room here for difference of opinion. In the commentary he has modified considerably the plan followed by Lyon in the first edition, addressing himself to the less informed reader rather than to the specialist, and transferring biographical notices to the index of proper names. In view of some of these facts it is to be regretted that the editor did not engage the full collaboration of the scholars named on his

Digitized by Google

title page, since the importance of the work would have justified the extra cost of production. The admirable index of printed and manuscript sources, with a specification under each of the items drawn from it, including those scattered through the notes, is followed by a chronological index of the items, with a reference under each to its source, and a few corrections that would ordinarily be found in the list of errata. The next index is that of persons and places, which is followed by one of subjects, and another of Goethe's personality and works. This elaborate and helpful system of indexes, which greatly facilitates the finding of the material on specific topics, was inserted in spite of the admonition of the late Zarncke not to make it too easy to find things, and the editor is to be commended for ignoring such advice. The idea of a full index has been too generally scorned by German authors and editors in the past, and every departure from that attitude is greeted with pleasure on this side of the Atlantic. The new edition of the "Gespräche" is a vast storehouse of material, of varying biographical and critical value, and is indispensable to the study of German literature in general, and of Goethe in particular.

Under the title, "War Paulus Epileptiker? Erwägungen eines Nervenartztes," one of the best nerve specialists in Europe, Professor Seeligmüller of Halle, discusses an old problem, but with new results. The author analyzes carefully all that Paul says in his letters concerning his physical condition, and concludes that his ailments were not of an epileptic character, chiefly because epilepsy is a painless disease. The work, which is in part directed against Dr. H. Krenkel of Dresden, is published by Hinrichs of Leipzig.

In the Imperial Parliament building in Berlin there was recently an exhibition of the pornographic literature, pictures, and the like issued by conscienceless publication houses of Germany. It appears that there are no fewer than fifty-two firms in the Empire that are devoted entirely to the printing of such corrupting trash, and that these have fully 8,000 employees and 30,000 agents. Special interest was aroused by those specimens which were procured from such public institutions as orphan asylums and kindred establishments. The Germans have inaugurated a crusade against this nefarious business.

An unusually valuable *multum in parvo* is the sketch of fifty pages by Professor Ad. Deissmann of Berlin, entitled "Die Urgeschichte des Christentums im Lichte der Sprachforschung" (Tübingen: J. C. B. Mohr). The author shows with marked acumen what light the technical terminology of primitive Christianity—such words as Messiah, Abba, Maranatha, etc.—throw on the origin and development of the Christian system. Naturally the pamphlet is only an outline, but it is exceptionally instructive and suggestive.

Not only has the recent increase in the number of students attending German universities been very great, but this is especially true of the female students, of whom there are now more than as many again as in 1908-9, when they were first admitted to Prussian universities. During the past year they have risen from 2,169 to 2,552. Of these, 2,100 are Germans and the rest (452) foreigners from different countries, including Asia and Australia, of whom nearly the half are Russians and about a third North Americans, while 30 are Austrians and Hungarians. The studies to which the women are now more and more inclined to devote themselves show on their part a strong predilection for branches of learning that will procure them the best positions in life, such as that of the head of a higher educational institution. Thus, during the past year the number selecting philosophy, philology, and history has increased from 1,217 to 1,438; mathematics and natural sciences, from 313 to 423; medicine, once extremely popular, only from 512 to 549, and dentistry from 31 to 38, while cameralistics and agriculture show a diminution from 56 to 55, jurisprudence from 42 to 26, pharmacy from 7 to 4, and evangelical theology from 6 to 4. The French universities had 4,000 female students last year in the following departments: philosophy and philology 2,149, mathematics and natural sciences 453, medicine 1,148, law 150, and pharmacy 54. Of these women 1,773 were foreigners, and in Paris alone 2,121 were matriculated. In France women constitute 12.5 per cent. of the whole body of students, in Germany only 4.4 per cent., of whom nearly a third (695) are in the University of Berlin, 250 in Bonn, 203 in Göttingen, 198 in Munich, 158 in Heidelberg, 155 in Freiburg, 129 in Breslau, 107 in Münster, 91 in Königsberg, 82 in Marburg, 81 in Leipzig, 78 in Greifswald, 69 in Jena, 51 in Kiel, 49 in Halle, 42 in Tübingen, 34 in Strassburg, 33 in Giessen, 28 in Erlangen, 12 in Würzburg, and 6 in Rostock. Besides the matriculates there are 1,212 women who attend lectures as "hearers" without being candidates for an academic degree, making in all 3,764 as compared with 3,395 last year.

Science

The Alaskan glacier researches during the summer of 1910 by the expedition of the National Geographic Society are described by its leader, Prof. Lawrence Martin of the University of Wisconsin, in the *National Geographic Magazine* for June. The studies reveal an unusual activity in the glaciers, but whether the spasmodic advances and retreats are due to climatic or earthquake influences is still an unsolved problem. Though wonderful in size, and especially in height, in some instances they are but "shrunken remnants of their great predecessors." An enthusiastic account of the Victoria Falls of the Zambesi is given by Dr. L. L. Seaman, who predicts that on the completion of the Cape to Cairo Railway to the Congo, a visit to them will be "among the popular pastimes of the day." George Shiras, 3rd, contributes an account of an albino porcupine and a 'coon, of whom he took many flash-light pictures, some of which are reproduced in the magazine. The leading feature, however, is the illustrations of a "geologist's paradise" in the Canadian Rockies, by Charles D. Walcott, secretary of the Smithsonian Institution. The panoramic view, published as a supplement, is remarkable for its exceeding beauty and size. Among the most interesting of the other pictures are those of some crustaceans which he discovered, and which were buried in the mud fifteen to twenty million years ago, and have remained undisturbed.

Doubleday, Page & Co. have issued two new volumes in their Garden Library. In contrast with the English handbooks, which sell so widely in this country, but which, however satisfactory otherwise, are likely to mislead on account of climatic differences, these excellent little manuals are thoroughly suited to American conditions. Both volumes are well made and complete. On account of the scope of its subject, "Vines," by William C. McCollom, is from this very completeness a little crowded. We wish that the author had allowed himself more space for individual species. But the book is sensibly planned and clearly written. A valuable feature is its treatment of the culture of useful vines, from the grape to the cucumber, both indoors and out. The tables summarize the book, and should be of much assistance. "Chrysanthemums," by I. L. Powell, having a narrower subject, is able to treat it more thoroughly. The amateur will find its cultural directions, which are supplemented by good illustrations, quite sufficient for the growing of show specimens, whether single blooms or many-flowered plants. Outdoor culture is discussed under both Southern and Northern conditions. The lists and tables of types and varieties are carefully made.

Somewhat late in the season "Home Vegetable Gardening" (Winston), by F. F. Rockwell, comes to the reviewer's hands. The time is unfortunate. In the late winter, when filled with anticipation of garden success, the reviewer's mood is mild; but with a spring drought, prolonged into July, and with every garden pest or disease harrying the struggling plants, he falls savagely on his prey. What does this writer say about the host of garden troubles? Yet this book, if its fundamental limitation could be accepted, is a good one. To be sure, it has its faults of book-making. In the illustrations a vegetable marrow masquerades as kohlrabi, and the San José scale as the eggs of the tent caterpillar. We are referred to a certain page for a certain picture, only to find it elsewhere. But these surface faults, which will be corrected in a later edition, need not obscure the merits of the book. Mr. Rockwell knows his subject, and his opening chapters, on vegetable gardening preliminaries, are as clear and sensible as we have ever seen. It is only when we find him, in the majority of his pages, hobbled either by a theory or by economy of type, that we realize that he is deliberately putting a restraint on himself. What we object to in this book is its parsimoniousness. It shows the fatal influence of the popular garden magazines; its chapters read like the ordinary article, limited strictly to twelve hundred words, in which only the surface of the subject can be scratched. In the case of the magazines this is of course due to the obvious policy of sacrificing individuality in the volume to variety in the several issues. All personality is planed out of the articles, and as a result the volumes of a garden magazine average the same in brief cycles of two or three years. Whether this policy is wise we are not prepared to say; but surely it need not hold with a book. Yet

Digitized by Google

in his "Home Vegetable Gardening," Mr. Rockwell effaces himself as nearly as possible. He does his best to do what has been done so many times before. It is our good fortune that here and there, when his better nature is too strong, he breaks bounds and gives the good "garden talk" that we long for. Perhaps we aim at higher things than garden publishers or editors believe practical; but we cannot but feel that the literature of this subject, taken in a better sense, is still largely to be written. We wish to make an appeal for it. All such literature is worth while, eventually even to publishers. There is something obscure in this special lack of it. Perhaps the ordinary writer on vegetables, who is nothing if not practical, repelled by the amount of gush written about flowers, has sternly limited himself—for the writer is usually a man—to the common-sense of his subject. In so doing he has failed to consider that while there surely is little sentiment to be extracted from vegetable gardening (as Hawthorne says, we pursue it only in order, like Saturn, to eat our own children), there is plenty of humor in it. Yet except for Warner's "Summer in a Garden," and a passage anent sunrises and squash bugs, buried in a Massachusetts Agricultural Report, the humor—we do not mean the burlesque—of vegetable gardening is almost lacking in print. Now humor is the priceless element which, mingled with common sense, will give life to the future book of essays that vegetable gardeners await. Surely such a book would sell. Certain passages in the present volume give us the idea that Mr. Rockwell could produce it, if only he gave himself scope.

Music

My Life. By Richard Wagner. New York: Dodd, Mead & Co. 2 vols. $8.50 net.

Richard Wagners Briefwechsel mit Breitkopf & Härtel. Leipzig: Breitkopf & Härtel.

The words "Authorized translation from the German" on the title page are the only information given as to the person, or persons, responsible for this English version of Wagner's autobiography. Whoever made it deserves the highest praise, for the work is superlatively well done; so well, indeed, that a person equally familiar with the two languages will find it more agreeable to read the translation than the original. In the German edition there is one paragraph which begins on page 477 and ends on page 487; this the translator took the liberty of breaking up into fourteen paragraphs; and throughout the two volumes he has improved the style by combing out, so to speak, the frequently dishevelled sentences. No liberties are taken with the text, but, simply, Wagner's sentences are, like his paragraphs, frequently subdivided, and the words and clauses rearranged for the sake of lucidity. Wagner was seldom, if ever, slovenly in his compositions, but in his prose writings he is often inelegant, although he could, when in the mood, write pages that Heine or Schopenhauer could not have improved on. The English index, furthermore, is a vast improvement on the German, which covers the names only, and gives figures without specifications, whereas the translator's index includes subjects, and gives sufficient aid to the reader in finding what he desires. Under "Wagner, Richard," which the German index omits altogether, the English presents, in twelve columns, a bird's-eye view of the contents of the whole autobiography, page by page; an invaluable help for those who lack time or inclination to peruse all of these 886 pages. Concerning the contents of these same pages, nothing need be added now to the four-column review of the original printed in the *Nation of* May 25.

There are ten brief references in "My Life" to Breitkopf & Härtel, who have been, for nearly a century, the leading German music publishers. When Wagner was eighteen years old he wrote a note in which he offered to correct proofs for them, or make arrangements for piano forte, at less than the usual rates. Twelve years later he offered them for publication the score of his "Flying Dutchman"; and from that date (1843) to 1874 there was hardly a year in which letters were not exchanged. A few were unfortunately lost; the others, 254 in all, form the first of three volumes which are to contain Wagner's letters to his publishers, as well as their answers. The second volume is to contain the correspondence with B. Schott's Söhne, the third the letters to and from other publishers. They are all edited, with the addition of brief but helpful footnotes, by Wilhelm Altmann, already known for his volume which, as its title ("Richard Wagners Briefe nach Zeitfolge und Inhalt") indicates, contains a chronological record of all of Wagner's letters, so far as known, with brief indications of their contents.

The correspondence with Breitkopf & Härtel includes some of Wagner's most interesting letters. Though primarily business documents, they also throw sidelights on Wagner's artistic career and ideals. They are particularly interesting when he asks for advance payments, and give his reasons for urgent need. Those who have laughed or sneered at him for his borrowing propensities may find in this volume plenty of facts placing him in a more favorable light. He was creating works of art which he felt sure would ultimately enrich publishers, managers, and singers, yet he himself was getting a mere pittance for his hard labors. He was virtually compelled either to borrow and beg, or cease composing "music of the future" and produce ephemeral pot-boilers, like Meyerbeer and others. The details regarding the scant earnings from his operas are pitiful.

In 1843 he offered Breitkopf & Härtel his "Flying Dutchman." They were inclined to accept it, but when he asked for a small honorarium they dropped the matter. He then wrote that since "the most honorable and wealthy music-publishing house in Germany" refused to pay him for his score, he would not offer it to any one else. Confident of ultimate success, he then borrowed money of three of his friends, and thus published "The Flying Dutchman," as well as "Rienzi" and "Tannhäuser," at his own risk. In 1848, in asking Breitkopf & Härtel to relieve him of this responsibility, he proudly reported that he had earned far more than the interest on the investment; he was now willing to let them take over the operas, without asking anything for himself; but this offer came to naught, as did the offer of "Tannhäuser" alone, eleven years later, although in this case, too, he wrote that he did not demand any honorarium for himself. In the meantime he had bought of this firm a piano for 224 Reichstaler, which he was unable to pay. In an eloquent and really pathetic letter, dated April 8, 1851, he next offered his "Lohengrin" (which during the next half-century became the most popular of all German operas) as an equivalent for that debt! This offer was accepted.

It would not be fair to blame Breitkopf & Härtel for their cautiousness in gratifying Wagner's wishes. His works were so slow in making their way to even the German opera-houses (foreign countries ignored them almost entirely) that they had reasons for their attitude. In all their letters they treat him with the greatest courtesy, and most of his demands for advance payment on "Tristan and Isolde" and his orchestral works were granted. They were also far ahead of the critics in appreciating Wagner's importance in the musical world. When the Nibelung Tetralogy was produced in Bayreuth, in 1876, most of the newspapers pronounced it a failure. Yet, twenty years previously, when Wagner hoped to complete these four operas in a few years, and wrote to Breitkopf & Härtel regarding their publication, they answered that "the publication of your 'Nibelungen' is indisputably the most important and honorable undertaking which the present time offers." Yet they were aghast at his demand of $7,500 for the publishing rights of "Rheingold," "Walküre," "Siegfried," and "Götterdämmerung"! Being particularly eager for money at the time, he reduced his terms to virtually one-half that sum, whereupon they were inclined to close the bargain; but at the last moment they repented. They had read the poems, and had concluded that they

Digitized by Google

could not be practicably set to music. Wagner invited them to Zürich to hear Liszt play "Rheingold" and "Walküre" with the composer to indicate the vocal parts; but in vain. Ultimately, these "Ring" operas went to B. Schott's Sons.

Arthur Farwell's new "Hymn to Liberty," of which he wrote both words and music, was sung on the Fourth of July on the steps of the New York City Hall, following Mayor Gaynor's address, by a selected mixed chorus from the German singing societies of New York, under the direction of Mr. Albeke. Ten thousand copies of the hymn had been distributed among the crowd. It was also on the same day played by five bands in different parts of the city. It was worthy of this compliment, being far above the average of patriotic composition, and having a tangible melody and harmonies that, without being difficult, are not too obvious. The three stanzas of the hymn bear respectively the following titles: "The Birth of Liberty," "America," and "Prophecy."

Boston still harbors some of the most prominent American composers, and occasionally one or another pauses in his efforts to uplift his own community and undertakes a peregrination westward or to some other point of the compass. And thus it came to pass last month that the Berkeley (Cal.) Musical Association gave a reception to Arthur Foote. A programme of his compositions had been prepared, and its numbers were interpreted by several of the most prominent local artists. William Edwin Chamberlain sang a group of Foote's songs: "In Picardi," "Once at the Angelus," "I'm Wearin' Awa'," "Loch Lomond." Another group, sung by Miss Caroline Halstead, included "The Night Has a Thousand Eyes," "A Ditty," "Irish Folk Song," "If Love Were What the Rose Is." Chamber music was represented by Foote's sonata for violin and piano, opus 20, and Ballade, opus 69, for the same instruments. These were played by Miss Elsie Sherman and Mrs. Marie Wilson Stoney.

Walter Damrosch will open the season of his Symphony Orchestra on October 27 and 29, with a Liszt programme (including the "Faust" symphony, with Harold Bauer as soloist), in commemoration of the centenary of Liszt's birth. Among the concerts to be given by this organization at the Century (formerly the New) Theatre, are a Friday "educational" series, designed for advanced students and lovers of symphonic music. The programmes will be devoted entirely to masterworks. An explanatory discourse of twenty minutes by Mr. Damrosch will precede each concert. The dates of the eight Friday afternoon concerts are October 27, November 10, December 8, January 5, 19, February 2, March 1, 22. The sixteen Sunday afternoon concerts will be given on October 29, November 5, 12, 19, December 3, 10, 31, January 7, 21, 28, February 4, 11, March 3, 10, 17, 24.

The late Gustav Mahler was one of the judges who were to award the $2,000 prize offered by the Vienna Gesellschaft der Musikfreunde for a choral composition suitable for its centenary celebration in December, 1912. In his place has been appointed Julius Korngold, the musical critic of the *Neue Freie Presse*, whose thirteen-year-old son, Erich, is writing dissonances which make Strauss's seem mild and innocuous.

Mascagni is to be musical director of the Costanzi in Rome next season. He will conduct Puccini's "Tosca," "Bohême," and "Manon," three of Verdi's operas, Wagner's "Meistersinger," and two of his own operas, "Iris" and "Ratcliffe."

Art

In the autumn the Century Co. will issue Charles H. Caffin's "Story of French Painting." It will be a companion volume to the author's histories of "Dutch Painting" and "Spanish Painting."

In our notice, July 6, of Elizabeth E. Goldsmith's "Sacred Symbols in Art" (Putnam) this statement occurs: "The metaphors from the Song of Songs, 'inclosed garden, sealed fountain, rose of Sharon, tower of David,' etc., which were so fruitful of symbolism concerning the Virgin, will be sought in vain." This is a regrettable oversight on the part of the reviewer, as these metaphors, with many others, are given on pages 86-88 of the book.

To imagine a more complacently futile book than "How to Understand Sculpture," by Margaret Thomas (Bell-Macmillan), would be difficult. Its accuracy may be judged by the ascription of one of the Dioscuri of the Quirinal to Pheidias, or by the statement that "the largest collection of ancient Greek sculpture is in the Vatican," or, again, by the hint that *"cire perdu* is still much practised in Belgium." The taste of the performance may be divined by the dictum that "In the composition of figure or group right angles are disagreeable," or from the statement that in the Capitoline Venus "art has reached its extreme limit." Such books should not be published.

An interesting and characteristic example of the manner in which rare works of art are often undervalued and sold for a mere bagatelle is the following recent occurrence. In Moscow a poorly clad girl brought to the market-place for old wares a couple of portraits, for which she asked two rubles, or about $1.50. The dealer in second-hand articles examined them, but refused to give for them more than fifty copecks, or one-fourth of this price. The girl declared that they were good oil paintings and took them to an art-expert, who decided that they were original portraits of the celebrated poet Puschkin, who died in 1837. On both portraits was inscribed the statement that they were not copies, but had been taken from life. The girl was then advised to show them to the officials of the Archæological Institute, who, after a careful examination, pronounced them to be genuine. It was also ascertained that she had come into possession of them by inheritance without any knowledge of their origin and real worth. At the suggestion of the archæologists, the Princess Tenischer of Smolensk purchased them for her museum for 20,000 rubles, or about $15,000.

The long-announced official catalogue of art in Italy is about to begin with "Aosta," by Pietro Toesca. We have received a prospectus which shows that the "Catalogo delle cose d'arte e di antichità d'Italia" will surpass any similar government publication. The size is small folio, there are to be numerous cuts in the text and in plates, and, besides the succinct description, the bibliography of each object is recorded. The scheme of this great work includes some eight thousand communes. Comm. Corrado Ricci, director-general of fine arts, to whose energy the initiation of this great work is chiefly due, reports in an introductory letter addressed to the minister of public education that the lists for Verona, Padua, Monza, Piacenza, Parma, Ravenna, Fiesole, Pisa, Urbino, Offida, Terni, Città della Pieve, Tivoli, Terracina, and Monreale are ready. The section on Pisa, by Roberto Papini, is in the press. The foreign price is reckoned at 50 centesimi the folio of eight pages. Foreign subscriptions are received at the publisher's, E. Calzone, Rome, or at any international bookseller's, at the rate of 2.50 lire for each section of forty pages.

The second part of "The Herkomers" (Macmillan), by Sir Hubert von Herkomer, misses the definiteness, vivacity, and personal tang of the first volume. Sir Hubert's reminiscences become vague; opinion and comment of no very original sort replace fact. Much of the volume is given up to a disquisition on portrait painting. The operetta which the author not merely composed but orchestrated is duly celebrated. On the other hand, his inventions in reproductive processes, which for the sake of the record should be adequately described in a book of this sort, are passed with bare mention. When Sir Hubert held the Slade professorship at Oxford he introduced the novelty of painting portraits while he explained the performance to the audience. He heard Ruskin's last Oxford lecture, and felt that the sage played egregiously to the gallery. In building Sir Hubert's country house at Bushey his father, his uncle, and he himself collaborated, and he regards the result as one of his most characteristic and successful works of art, which may well be so. Our American architect, Richardson, designed the elevations. On the whole, this sequel must be called a disappointment. What is amiss with it need not be stated, but will appear unmistakably in an extract which describes the author's feelings on first seeing the Italians. He found them frivolous and lacking in deeper sentiment. No one trained in "the England of the later Victorian period" could be contented with Italy. For later Victorianism demanded

That truth in art should be enhanced by sentiment, and that sentiment should be made vital by truth. But for the expression of that truth I needed a people who felt deeply; a people on whom life, in its manifold struggles, left its impress on face and demeanor. This I found in the two peoples whom I almost exclusively represented in my art, the English and the Bavarian. . . . But in that southern race I missed just those qualities which so often stirred my mind to artistic energy. . . . Mankind . . . must mean the embodiment of emotion, which separates him from all other living creatures, and the page upon which man's emotions are written is his face, etc.

Charles Walter Stetson, artist, has died in Rome, Italy, aged fifty-two. He went to Rome about ten years ago, where he made his home. He was born at Tiverton, R. I. In 1878, two years after leaving the Providence High School, he began exhibiting in

Digitized by Google

Providence. Exhibitions of his work were made at the Pennsylvania Academy of the Fine Arts, Philadelphia; the Art Museum in Boston and the Boston Art Club, the Water Color Society and the Art Institute of Chicago, the Pan-American Exposition, the New Gallery in London and the exposition of the Belle Arti e Cultori in Rome in 1905. He also executed several etchings, examples of which are in the Boston Museum.

Finance

WALL STREET AND INDUSTRY.

The present situation is quite as interesting as that of a year ago, though far less spectacular. It is almost twelve months to a day since the definite turn of the tide in 1910. Last July was a period of unsettlement in financial markets, culminating on the 25th in demoralization. On that date nearly every active stock on the list dropped to the lowest record of the year. On the 27th prices were buoyant on reports that an international syndicate had relieved the Pearson syndicate of heavy holdings of Rock Island, Lehigh Valley, Wabash, Missouri Pacific, and Denver. The next day, on definite confirmation of these reports, there was a still larger advance, followed by a general upward tendency through August. August 29 was memorable for its advance in cotton to 20 cents, the highest quotation since 1873. As things became settled in Wall Street general business began to slow up, the lessened activity becoming quite noticeable in September.

Twelve months have wrought a substantial recovery in Wall Street quotations. General industry, however, has failed to respond. The hope exists, of course, that Wall Street is only a short distance ahead of the mercantile world in a return to genuine activity, but this hope is not held by everybody. Doubtless the stock-market recovery has been due in large measure to the growing stagnation of general industry. During the last part of 1910 and the first half of 1911 there was an unusually pronounced tendency on the part of the banks to curtail their time loans and to multiply their call loans. In other words, for the better part of the last twelve months industrial expansion has been discouraged and Wall Street activity has been fostered, not, of course, from any settled purpose to discriminate against the one in the interest of the other, but wholly in accordance with the law that if capital cannot be advantageously employed in one way, it must seek employment in other ways.

There is no good reason for believing that "the public" have traded freely in stocks since the great break in prices in 1910, and that the Wall Street recovery inevitably implies complete rejuvenation of the financial and industrial situation in the very near future. More probably the easy call money has enabled large professional interests to put the market where they would like to see it on paper; the real test of the situation will come with any attempt on their part to convert their profits to cash. The professional character of the market is shown quite clearly by the strong upward tendency of savings bank deposits in certain parts of the country where investment buying is usually very pronounced.

With general business as it is, and with so considerable a portion of the wage earners of the country in receipt of diminished returns, it is a tolerably safe assumption that the rise in savings-bank deposits during the past year represents in no small measure the withdrawal of money from the stock market by persons in more than moderate circumstances. It is a popular impression that the savings bank is the poor man's depository. While this is a fact, it is also a fact that institutions of this class are freely used by persons of large means. We should be surprised if we knew how many directors' fees, dividend checks, and the like were deposited here in the course of a year, pending employment in the stock market, in foreign travel, and in the purchase of luxuries. No doubt all these causes have operated to increase deposits this year, and not least of all the first.

On the whole, it cannot be reasonably inferred that the comparative strength of the stock market in recent months points inevitably to a speedy revival of general industry. So far as general trade is concerned, there are still a number of perplexing problems. Unquestionably there is going on at present a readjustment of commodity prices to meet the diminished purchasing power not only of the United States but of the entire world. In Europe, as well as in America, the cost of production has been advancing for some years, while the hours of labor have been curtailed. On their earning side wage earners have made no doubt a considerable advance. But their gain has been reflected in an excessive cost of living on the part of consumers generally, and wage earners themselves have at last begun to feel the pinch acutely on account of their enforced idleness. The Far East, which has become an enormous consumer of Western commodities, is feeling the hardship of the enhanced cost of living fully as keenly as Europe and America. It looks as if lately conditions had begun to rectify themselves.

The past year has been a flourishing period for industry in Europe, but during the last three months there have been evidences of a declining tendency in general prices. The same tendency has been noticed on this side of the Atlatic, though it does not appear to have accelerated the movement of commodities greatly. How much farther the price decline will have to be carried in order to accomplish this end remains to be seen. Recently there have been some drastic cuts in cotton fabrics, in several cases to figures said to represent not more than 10 cents a pound for raw cotton. To any one familiar with the cotton manufacturing industry this is a most significant occurrence. On the very eve of these reductions standard cotton goods were offered at prices implying a cost of more than 15 cents a pound for the raw cotton. Briefly, the new cotton crop, estimated by some of the best judges at not far from 16,000,000 bales, has in the last week or so, with remarkable suddenness and effectiveness, begun to make its influence felt in both the raw material and finished product markets. The presumption, of course, is that the readjustment of cotton and cotton goods quotations has not as yet by any means run its course.

The situation in cotton and its products, though more spectacular than that in other industries, is symptomatic. Wool has had a more gradual decline, and is to-day strikingly below the figures at the height of the boom. Early in the year the market for heavyweight wool fabrics was in the hands of relatively few large manufacturers, who procured their dominance by price concessions. Lately the lightweight season has been opening in a manner wholly disappointing to the mills, which appear determined to keep themselves in operation even at the sacrifice of profits. There are also signs of a rehabilitation of industry at certain points on the Pacific Coast, due to more active buying of real estate consequent upon reductions in prices, and to large shipments of lumber as a result of lowered quotations. Enough willingness to shade prices is noticed throughout the country to create the presumption that the logic of events has at last been grasped.

Still, even if this is a fact, the outlook remains far from clear. The price which the final consumer pays for a commodity is the product of all the costs which evolve the commodity from its raw material to its finished state. In order that a general price reduction

may proceed along the line of least resistance, with a maximum amount of good to consumers and a minimum amount of harm to producers, it is necessary that all these costs should decline synchronously and proportionately. But this very seldom happens: a drop in the level of prices is apt to mean industrial dislocations. Another contingency is this: it is admitted that the banks have in recent weeks put their money freely into time loans—too freely, it is said by some—and there is a chance that when the crop demand for funds arises in earnest, the existing volume of call loans will have to be curtailed materially. This naturally raises a question as to the course of the stock market this autumn.

JUST PUBLISHED

A HISTORY OF PUBLIC PERMANENT COMMON SCHOOL FUNDS IN THE UNITED STATES 1795-1905

By Prof. FLETCHER HARPER SWIFT of the University of Minnesota.

493 pp., 8vo. $3.75 *net*. By mail $3.93.

A historical study in Economics and Education.

Part one presents a broad survey of the origin, management, loss and effects of permanent school funds. Part two gives a summary account of the funds in each state. The book throws much light upon the history of school support and the rise of free schools. Many valuable tables appear in Appendix A. Not the least valuable features of the book are its very complete Index and Bibliography.

Henry Holt & Co. 34 W. 33d St., N. Y.

SEEING EUROPE BY AUTOMOBILE

By LEE MERIWETHER

12*mo*, 425 *pages*, 32 *illustrations*, *end papers*, *map*, *index*. $2.00 *net*; *postage*, 16 *cents*

An entertaining and serviceable book for the motorist in Europe, full of information about handling a car in Europe. Describes a trip of 5,080 miles in hundred days.

By the author of "A Tramp Trip Abroad."

The Baker & Taylor Co., 33 E. 17th St., N.Y.

REPUBLICAN TRADITION IN EUROPE

(The Lowell Lectures, 1910)

By HERBERT A. L. FISHER.

New College, Oxford

8vo. $2.50 *net*.

Uniform with Ferrero's "Characters and Events of Roman History."

"Mr. Fisher has written a *brilliant book*. His work is not unworthy to be compared with Mr. Bryce's *Holy Roman Empire* in width of view, in vigor and penetration, and in felicity of expression. His work is based upon a store of rich and varied learning, and it is the only book which gives anything like a coherent account of 'an ideal which inspired some of the noblest literature of antiquity,' lay dormant in the life and thought of the Middle Ages, and exercised an important influence upon the history of modern Europe."—*London Spectator*.

MARRIAGE, TOTEMISM AND RELIGION

By LORD AVEBURY, F.R.S., D.C.L., LL.D.

Crown 8vo. pp. x+243. $1.25 *net*.

A reply to the arguments brought forward against the author's conclusions respecting the origin of civilization and the primitive condition of man, as expressed in his earlier work, a cheaper re-issue of which, with a new preface, has recently appeared at $2.50.

Longmans, Green, & Co., New York

THE NERVOUS LIFE

By **G. E. Partridge**, Ph.D.

12mo. Cloth. $1.00 net.

Bad nerves are our national disease.

To preserve good nerves and cure nervous disorders are the aims of this practical, yet scientific, book, which tells the nervous man—especially the hard-worked man of sedentary ways—how, specifically, to order his life, how to eat, drink, sleep, and exercise, in order to keep or recover his physical well-being.

The Nation

NEW YORK, THURSDAY, AUGUST 3, 1911.

The Week

The House Democrats have once more shown exemplary good sense in agreeing to the Senate's amendments to the publicity bill, and without even holding a conference. So drastic were these amendments that many Senators hoped that the House would decline to accept them. Particularly was this the case with the Southerners who opposed the restrictions affecting primary contests. But the gains for the party by accepting this legislation were so great that these and all other adverse considerations were waived. As a result, a far-reaching enactment to prevent corruption at elections goes on the statute-books. It is not, of course, as thoroughgoing as the English corrupt practices act, but it is a far greater advance than any one had dared hope for a couple of years ago. More than that, it ought to end promptly such scandals as the outright purchase of seats in the Senate and reduce in the future the membership of merely rich men. Surely, if the Democracy continues to display political acumen of this kind, the cartoonists will have to revise their ideas and credit the donkey not with stupidity, but with the wisdom of the owl at least.

If the standpatters have any spirit left in them, they will remind the President, more, let us hope, in sorrow than in anger, that they gave him ample warning at the very outset of all this reciprocity nonsense. It is easy to push Humpty Dumpty off the wall, but who is going to put him back again? Certainly not Representative Burleson of Texas, who has introduced a resolution calling upon the Executive to begin negotiations with Mexico "looking to freer commerce between the two countries." "Freer commerce," of course, is only another name for reciprocity, which itself is but a variant of free trade. The tragedy of the situation, as the standpatters will feel bound to point out to Mr. Taft, is that he has furnished the ammunition for any one who wishes to do what Mr. Burleson has done. If reciprocity with Canada is good, why not with Mexico? It is not easy to see what the President can say in reply. He has punched one hole in the sacred wall: others will be irreverent, too. There is one element in the Mexican proposal that will make it easier to advocate than the Canadian agreement: even Champ Clark will hardly suggest annexation of our southern neighbor. Altogether, it is almost enough to make an old-fashioned statesman despair of the republic.

The minority report made by four members of the Senate Census Committee, including its chairman, Mr. La Follette, assigns valid reasons for opposing the enlargement of the membership of the House proposed in the pending reapportionment bill. The general impression is that the bill will be passed by the Senate; largely, of course, in deference to the sentiment that the question is one upon which the House should be permitted to have its own way. In point of fact, however, the question is a perfectly legitimate subject for decision by the Senate purely on its merits, since the nation as a whole, and not merely the House of Representatives, is concerned in whatever affects the efficacy of that body.

Senator Bailey is more successful in resigning from the Committee on Privileges and Elections than he was in resigning from the Senate a few weeks ago. Perhaps he is more in earnest this time. At all events, he has the country with him, as he would apparently have had it if he had insisted upon the acceptance of his former withdrawal. We have too few instances of such political immolation. In Japan the *samurai* have long practised *hara-kiri* as the last emphatic protest against action which they cannot approve, but in this country the ill-fated example of Conkling and Platt has had few imitators. The risk is too great. The Texas statesman, therefore, while not hearing the testimony in the Stephenson case, will be on hand with his technicalities and his tears when the report of the investigating committee comes before the Senate. It is regrettable that his statement of the reasons which impelled him to resign from that committee shows an important omission. His quarrel is with the free and easy way of receiving evidence which Senate investigating committees have adopted. But the Senator is the champion of a technicality which even the severest law courts do not yet recognize, and that is the minimum amount of bribery necessary to imperil a Senator's seat. Doubtless he will further illuminate the doctrine when the report in the Stephenson case is made.

Representative Sherwood of Ohio, a Democratic Congressman, has recognized the approach of the Presidential election by a speech favoring the payment of a dollar a day to civil war veterans. He is careful to say, however, that he wishes these payments restricted to those who have really earned them. That would rule out a good many thousands of "dead-beats," men who never served at all, camp-followers, impersonators, etc. Mr. Sherwood himself is especially opposed to the pensioning of "spring pullets," who are, it seems, the young women who marry decrepit old soldiers in order to draw pensions as widows. This is one of the abuses which ought to be ended at once, as it could be by a simple enactment refusing a pension to widows whose marriage certificates did not antedate a given time. So tempting an administrative opportunity do the pension rolls offer to an Executive to make a great showing and save millions of dollars that we cannot see how Mr. Taft can resist undertaking this task. He need not even fear that it would affect the old-soldier vote, for the honest veterans could not but applaud his efforts. But Mr. Taft is so good natured that the stream of private pension bills flows on quite undisturbed by the wholesale executive vetoes that ought to be announced day by day during the sessions of Congress. Here are millions to be saved, and a scandal to be ended.

Bryan among the Democrats and La Follette among the Republicans fared equally ill in the Nebraska State conventions last week. Another thing about the Nebraska Democratic doings, which is almost as much of a novelty as the absence of Bryanism, is the presence of a point-with-pride declaration

Digitized by Google

that has something substantial to point to. "We view with pride," say the resolutions, "the splendid qualities of faithful leadership displayed not only by the Democratic leaders in Congress, but by patriotic and courageous Democratic Governors as well." There can be no doubt of the tonic effect that has been produced by the strong handling of difficult questions by the Democratic leaders at Washington, nor of the impression that has been made on the country by the personal force and ability of several Democratic Governors. In treating tariff reduction as the leading issue between the parties, the Nebraskans are doing what will pretty certainly be done by the party throughout the country.

Unqualified endorsement of the Taft Administration was the dominant note in the declaration of the Nebraska Republicans. Pride in the past found expression also, assuming the comprehensive form of a tribute to "the illustrious names of Lincoln, Grant, Garfield, McKinley, Roosevelt, and Taft," leaving only poor Hayes and Harrison out in the cold; but glowing laudation of the past and unstinted approval of the present are not matched by any aggressive declaration concerning the future. The idea suggests itself that a political phenomenon may be here indicated somewhat akin to the law of the conservation of energy in the domain of physics. So long as the Democrats were a feeble and struggling folk, unprepared to lay a vigorous hold on the machinery of government, the Republicans laid down the law with the voice of authority and conscious power; they were the custodians of prosperity, the guardians of the nation, the repository of legislative wisdom, while the Democrats were manifestly nothing better than impotent pretenders, whose only capacity was their knack for mischievous meddling with affairs that they did not understand. But now that the Democrats have been successful in effecting a thoroughgoing reorganization of the House of Representatives, in presenting a clear-cut and practical policy on the tariff, and in steering President Taft's own chief measure through the shoals and narrows of two Congresses, there is a sudden lowering of the Republican note by an octave or two. The deep-toned references to the past are made to serve in place of the shrill notes of defiance and self-confidence which were so easily and naturally sounded in other days.

Now that the Standard Oil Company has announced its plan for complying with the recent decision of the Supreme Court, the point is raised as to what practical end will be attained by a dissolution of the New Jersey holding company. Control of that company has been exercised by a few capitalists through actual ownership of more than 51 per cent. of its stock; obviously, when the $100,000,000 stock of the parent company is exchanged for shares of the thirty-five subsidiary corporations, a majority of the shares of the subsidiary corporations will go to those now in control of the parent company; therefore, control of the business as a whole will remain unchanged. As the primary object of the Government's suit against the Standard Oil Company was to break up a combination which existed to suppress competition, what, it will be asked, has been accomplished?

Exactly the same question was raised in 1904, when the Supreme Court ordered the Northern Securities Company to divest itself of its Great Northern and Northern Pacific Railway shares. The object of that holding company, it was frankly admitted on the witness stand, was to form a corporation with capital stock so large that existing managements could not be unseated. And at the time the Government began its suit against the Northern Securities Company, plans were under way for the formation of a Gould holding company, a Vanderbilt holding company; eventually all of the railways of the country would have been merged into four or five holding companies. With the Supreme Court decision in the Northern Securities case, all talk of such plans abruptly ended. Through ownership of a majority of the stock of the Northern Securities Company, the same interests, as individuals, subsequently acquired control of the Great Northern and the Northern Pacific, and the like will happen in the present instance; but in the natural order of events such control will sooner or later terminate through the winding up of estates, and eventually, without having disturbed property rights, the primary object of the Supreme Court decision will have been carried out. In the meantime, it is worth recalling that all talk of billion-dollar industrial holding companies, such as the recently proposed copper combination of consolidated companies, has ceased. As for agreements and pools between the thirty-five separate oil companies, such proceedings would encounter the same difficulties at the hands of the courts as now confront the members of the Steel Wire pool.

Maryland is at it again. When, at this time of the year, in glancing at a Baltimore newspaper, our eye falls on a proclamation by the Governor of that good old State, we expect, as a matter of course, to find a disfranchising Constitutional amendment; and we are not disappointed. Just what, if anything, the present Legislature had done in that line, we had forgotten; but here it is in black and white—black and white, indeed, in more senses than one. Having made several attempts to circumvent the Constitution of the United States by various forms of the "grandfather's clause," the wise men at Annapolis this time took the bull by the horns. In the sapient scheme now to be put before the voters of Maryland, the right to be registered as a qualified voter is "limited to the following persons":

> First: Every male white citizen not disqualified by the Second or Third Section of this Article possessing the qualifications as to age and residence mentioned in Section 1 of this Article.
>
> Second: Every other male citizen not disqualified . . . who at the time of his application for registration is the bona fide owner of real or personal property, or both, in an amount of not less than five hundred dollars, is assessed therefor. . . .

By what miracle the framers of this measure expect it to escape annulment by the United States courts, we are at a loss to imagine; but they were undoubtedly driven into making so plain that race discrimination which is forbidden by the Fifteenth Amendment because of the fact that so many white voters had shown on previous occasions a strong suspicion that any other basis of disfranchisement might be used against them by the rascally Democratic ringsters.

If Gov. Marshall of Indiana is correctly reported, his sense of the fitness of things is acute. The laying of the cornerstone of a new court house has provided him with an occasion for ex-

Digitized by Google

pressing a sentiment toward the judiciary that is happily rare even among Presidential candidates. Of what he had to say of the double usurpation of the courts of his own State, those who heard him are best fitted to judge. Others will want particulars before making up their minds as to the refusal of judicial bodies in Indiana to obey the law providing that licenses shall be granted for the sale of intoxicants, and as to their assumption of authority to write commands for the Legislature. But it is difficult to conceive of qualifying expressions which can have lightened the sinister suggestion of such a demand as "The rule of reason is a fine thing, but whose reason is it?" The crowd, we are informed, "look upon the decisions of the courts sometimes as humorous, sometimes as corrupt." Did the Governor mean that people in general divide judicial decisions into these two classes, and did he think that the bulk of them are rightly to be so classified?

The report of the National Fine Arts Commission on the proposed Lincoln memorial at Washington reveals painstaking and intelligent study of the various problems involved. To plan an impressive monument in a city that already holds the Capitol and the Washington obelisk can have been no simple task, but the commission seems to have discharged it admirably. The recommendation regarding a site is the same as that of John Hay ten years ago. It is important, says the report, to give to a memorial of such significance complete and undisputed domination over a large area, together with a certain dignified isolation from competing structures, or even from minor features unrelated to it. "Upon no other possible site in the city of Washington can this end be secured so completely as upon the Potomac Park site," on the main axis of the Capitol and the Washington Monument. Without being so high as to bring the memorial into competition with the obelisk, this site is visible from great distances, with no danger of obstruction by buildings which are or may be erected upon private property. The same artistic appreciation marks the recommendation regarding the type of memorial. It should not include a dome, and should not be of great height, but rather characterized by strong horizontal lines. While President Taft and the Memorial Commission, of which he is chairman, will inspect all the sites that have been suggested for the monument before coming to a decision, it is expected that the result of their investigation will be the approval of the Potomac Park area.

Sir Wilfrid Laurier's announcement of the agreement at the recent Imperial Conference in London for coöperation among the Imperial, Canadian, Australian, and New Zealand Governments with respect to the operations of navies, strikes a heavy blow at the main contention of the Chamberlain party. Englishmen have been assured for years that nothing but preferential tariffs could save the Empire from speedy dissolution, yet now the colonies find a rallying-point in the old idea of common defence. It is of interest to see the recognition accorded to the over-seas dominions in so vital and delicate a matter as the ranking of the officers in the combined navies. In cases where the colonial officers have a greater length of service than the British officers, they are to have the superiority. In foreign waters, or in time of war when the naval force of the colonies has been put at the disposal of the imperial authorities, it will form an integral part of the British fleet and be under the control of the Admiralty.

The general election campaign is already under way in Canada, and the Conservatives are plainly preparing to make their fight on the annexation issue. Possibly annexation is the best weapon the Opposition can lay hands on at present, but it is a terribly double-edged tool. To lay stress on reciprocity as the harbinger of annexation, is to befool the other argument which has been brought into play against a commercial arrangement with the United States, namely, the injury wrought to Canada's economic interests. The dilemma is this: If reciprocity brings on annexation it can only be because reciprocity will confer such decided advantages on the Canadian people as to make them anxious for a closer union still. The Conservatives, if they choose, may call reciprocity a form of experimental marriage, but they cannot argue that the experimental marriage will prove a failure, as far as Canada is concerned, and so will lead on to a state of permanent wedlock. From this dilemma the Conservative party will probably escape by dropping the economic argument and expatiating on patriotism. But even then the real danger of the annexation argument remains. At best it means calling upon the Canadian people to give up two birds in the hand for a bird in the bush.

The situation in England in August, 1911, recalls the situation in May, 1832, when the Reform bill had been repeatedly passed in the Commons and thrown out by the Lords, and the Duke of Wellington had failed to frame a Ministry and Earl Grey had been recalled by the reluctant monarch. On May 17, Earl Grey and Lord Brougham were received by William IV, who at once consented to the creation of as many peers as the Ministry might think necessary to carry the bill through the House of Lords. "Sire," said Lord Brougham, "I have one further request to make." "What," replied the King, "have I not yet conceded enough?" "I do not wish to ask any fresh concession of your Majesty," replied the Chancellor, "but simply to request you to put in writing the promise you have made us." William IV wrote:

> The King grants permission to Earl Grey and to his chancellor, Lord Brougham, to create such a number of peers as will be sufficient to insure the passing of the Reform bill—first calling peers' eldest sons.
>
> WILLIAM R.
>
> Windsor, May 17, 1832.

William Nassau Molesworth, from whose "History of England" we have drawn the preceding account, traces the steps to the final settlement. The same evening the King's private secretary addressed the following circular note to the most active of the Opposition lords:

> I am honored with his Majesty's commands to acquaint your lordship that all difficulties to the arrangements in progress will be obviated by a declaration in the House of Peers to-night, from a sufficient number of peers, that in consequence of the present state of affairs they have come to the resolution of dropping their opposition to the Reform bill, so that it may pass without delay and as nearly as possible in its present shape.

There were, in spite of the royal command, a number of peers who were determined to die in the last ditch. They died, accordingly, on June 4, when the Reform bill was read in the Lords a third time and passed by 106 votes to 22.

TAFT AND ALASKA.

The President's special message in reply to the Senate's resolution of inquiry concerning Controller Bay is a vigorous, straightforward, and comprehensive statement of the facts. As an answer to charges in any way reflecting on his own uprightness it is absolutely conclusive. As a reply to accusations that there has been wrongdoing in connection with the affair on the part of any government officer, it seems equally convincing; though it is but fair to remember that, so long as the House committee of inquiry has not finished its investigation, something may still be forthcoming to put a different aspect on the case. The conduct of that committee, however, in suspending its sittings until October, without proceeding with the testimony of witnesses on phases of the matter which have been brought prominently before the public, is difficult to understand. It is possible that Mr. Stanley and his committee have good reason to believe that in the interval access may be had to information essential to the matters in dispute, and at present inaccessible; but on the face of it, the delay in putting Miss Abbott on the stand, so as to give an opportunity for the sifting of her special story of outrageous scandal, seems utterly inexcusable.

So far as regards the "Dick to Dick" letter, much less than what the President says would have sufficed to dispose of that, in the mind of any sensible person; but Mr. Taft has done wisely to be so complete in his statements on this head as to reduce persons who do not answer this description to a condition of harmlessness. That the alleged postscript was a forgery was highly probable from the beginning; and if it was not a forgery, the hypothesis that it was a lie still remained—the conduct it imputed to the President was simply unbelievable. And Mr. Taft treats with equal fulness the charge that a favor had been secretly granted to parties seeking to obtain monopolistic control of a harbor essential to the exploitation of Alaskan resources. He replies to the accusation that the Government's action in the matter was secret. He states that he was personally responsible for the initiation of it; that for reasons which seemed to him eminently convincing in view of the public interest, he threw open 12,800 acres of land at Controller Bay, instead of simply granting 320 acres for the desired terminal; that monopolistic control is, in his judgment, amply provided against by legal safeguards which have in no way been transgressed. In a word, as Mr. Taft leaves the case, it looks as though nothing were left of it for scandal.

But it is not only as a matter of scandal that these Alaskan questions are of public interest. A great question of national policy has all along been interwoven with the mesh of charges and counter-charges about which there has been so much noise. Mr. Pinchot and his associates may have been wild or extravagant in some of their accusations, but it does not in the least follow that the policy for which they have been fighting is a mistaken one. The story of Ballinger and the Cunningham claims is instructive and significant. Throughout the long controversy, it was the constant endeavor of the anti-conservation organs to produce the impression that the only question at issue was whether Ballinger was or was not corrupt. The real question, so far as the great public interests were concerned, was whether Ballinger was a fit custodian of the nation's rights. The country undoubtedly came to the conclusion that he was not; and because of that verdict —the result of the unwearied fight carried on by Pinchot, Glavis, Brandeis, and the rest—the Cunningham claims were ultimately rejected. The same Dennett who, in writing to Ballinger, had spoken of the objections to the claims as foolish technicalities, found, in his report to the present Secretary of the Interior, that the claims were in flagrant violation of the law and could not be allowed.

This matter of Controller Bay ought to bring to a consummation the efforts of years to place the management of the natural resources of Alaska upon a basis of consistent and far-seeing public policy. It ought not to be a matter of maintaining or waiving the limitations of an antiquated law that has no relation to present-day conditions; it ought not to be a matter of the wisdom or unwisdom of a President, who acts from day to day, like some Oriental potentate, the part of a dispenser of abundance or scarcity. Least of all should it be a game in which against the necessarily spasmodic vigilance of the President or the public there is pitted the unremitting effort of great moneyed interests, ever alert to seize opportunities for gaining possession of vast natural resources. The weakest point in Mr. Taft's message is where he speaks of having taken the action he did with the approval of the Secretary of Agriculture and the Secretary of the Interior; this sounds very fine until you remember that these are but other names for poor old Wilson and—Ballinger. The one thing certain in the case is that two years have passed since Mr. Taft entered the White House, and that nothing has been done to place the exploitation of Alaska's resources upon a basis at once adapted to the practical requirements of the present and just to the nation's rights for the future. Let us hope that Secretary Fisher's journey of inquiry will mark the inauguration of such a policy.

THE NEW AUSTRIAN REICHSRATH.

There was something pathetic in the exhortation of Francis Joseph to the Reichsrath, to abstain from factional strife. The monarch is in his eighty-first year, and he may feel that the new Parliament offers him a last chance of bringing about some sort of compromise between the Germans and the Czechs. A glance at the composition of the Lower House shows the nature of the change resulting from the elections throughout the Cisleithan half of the empire.

The crushing defeat of the Christian Socialists, who dominated the last Reichsrath, is only partly expressed in their numerical losses. They have now seventy members, as against ninety-seven in the former House; but the significant fact is that all their leaders were ignominiously defeated, and that the party was repudiated mainly in the cities, Vienna reëlecting but three out of thirty-three, so that the bulk of the Christian Socialists in the new Reichsrath consists of a clerico-agrarian group, without leadership or programme. The German-National Union (*Deutscher Nationalverband*), which is now the strongest party in the Reichsrath, is composed mainly of the old German Nationalists, with whom are allied the German Progressists (*Deutschfortschrittliche*), some liberal Agrarians, and scattered members of the Radical

Digitized by Google

and Labor parties—ninety-nine in all. This alliance, however, holds out but little prospect of permanent cohesion. The patriotic Progressists remember but too well the turbulent and sometimes anti-dynastic tactics of the German Nationalists, and see signs of coming dissensions in a certain overbearing attitude of the *Nationalverband* toward the *Deutschfortschrittliche* members. Still, there can be no doubt that, compared with the aspirations of the Christian Socialists, the *Nationalverband* will for the present show a united front.

The Social Democrats, who had eighty-seven votes in the old House, appear to have now only seventy, the losses coming mainly from Bohemia. It is doubtful whether the various groups of the party, separated as they are by racial and linguistic considerations, will always effectively combine, either against the Government or otherwise. The Czech Socialists are insistent in claiming the leadership of the party, while the Germans are more conciliatory. Throughout Bohemia and Moravia the Czech Clericals have sustained losses. In Galicia nine ecclesiastical deputies have lost their seats, and there is now but one Polish clergyman in the House—a member from Silesia. All told, there are twelve ecclesiastic deputies, as against twenty-three in the former House. The South Slavs are still preponderatingly clerical, twenty-four, as against thirteen Liberals. The composition of the various Czech groups—aside from the Bohemian Socialists—is not yet clearly defined. The difficulty which the Government will experience in recruiting a working majority with the help of the Czechs is apparent from the make-up of the Czech party in the House, which consists of Agrarians, Young Czechs, Czech Catholics, National Czechs, Old Czechs, Radicals, and Progressists.

The question of a compromise between Germans and Czechs has occupied the attention of every Austrian Ministry since Taaffe inaugurated his ill-fated "reconciliation policy" more than thirty years ago. Nominally, Baron von Gautsch, who has been called for the third time to preside over the Austrian Cabinet, will direct the negotiations between the Germans and Czechs. It is barely half a year since such negotiations were broken off, the leaders of both parties having proved equally obdurate. The question of the official equality of the two languages in Bohemia is, and is bound to remain, the principal stumbling-block. Hitherto the Germans have vainly insisted on German autonomy and a linguistic preference in certain German-speaking territories of Bohemia. These negotiations will, however, not be begun until the Reichsrath reassembles in the autumn, and it is currently believed in Vienna that the Gautsch Cabinet, which is not yet complete, will be merely a stop-gap, and that Prince Thun-Hohenstein is destined to become Gautsch's successor and, as such, the promoter of peace between Czechs and Germans. He is now Governor of Bohemia and was once for a short while Austrian Premier. He is not at all popular with the Germans, and not fully trusted by the Czechs, except the Conservative landed proprietors; but he is a forceful personality and enjoys not only the confidence of the Emperor, who has just invested him with the princely dignity—he was until then Count Thun—but, what is equally important, he has probably close affiliations with the heir to the throne, Archduke Franz Ferdinand, whose pro-Czech leanings are well known. It remains to be seen whether either Baron Gautsch or Prince Thun will be able to reconcile the hitherto irreconcilable and to create a situation that will make it possible for Germans and Czechs to work together amicably in the Prague Diet and the Vienna Reichsrath.

The Reichsrath will have to deal, besides matters affecting taxation and the banking system common to the two halves of the Empire, with the army question, which has just been brought before the Hungarian Diet with signal ability by the Hungarian Premier, Count Khuen. The Government proposes a reduction in the military service to two years, with a corresponding increase in the number of recruits, but what will doubtless succeed in Budapest—where the opposition to Government measures has died down into perfunctory protest—will probably evoke fierce criticism in Vienna, where the Social Democrats are opposed, tooth and nail, to any increase of the army.

The situation in Vienna is, however, far from clear. Elated as the Liberal elements were over the defeat of the Christian Socialists and Clericals—the first in twenty-five years—the lack of firm leadership within the ranks of the Liberals is painfully felt. It is one thing to have routed the party of Lueger, within a year of the death of that demagogue; to have forced out of the Ministry and the Reichsrath his protégé, Dr. Weiskirchner (whom he had designated, in his political testament, as his successor in the Mayoralty of Vienna); to have beaten at the polls Dr. Neumayer, the aged figurehead in the Mayor's seat; Dr. Pattai, the president of the last Reichsrath; Aloys Liechtenstein, the princely tool of anti-Semites—but the question who is to consolidate the new liberal forces is still an open one. The truth is, that the German Liberals in Austria, with all their culture and forensic ability, have never produced a single statesman able to cope with the peculiar difficulties presented by the Empire. It is forty years since the "citizen ministry"—a constellation of brilliant Liberal talents—went out of office, but the Germans have not yet furnished a successor to Herbst and Hasner; and even they and their colleagues failed utterly to grapple with the ever-present problem in Austrian politics—the relations between Germans and Slavs. As Gibbon recognized long ago, they understand practical politics better in Hungary, where there has been an unbroken line of statesmen of a high order for generations—the Andrássys and Tiszas and Khuens continuing the work of Deák and Eötvös.

SAN FRANCISCO'S EARTHQUAKE RELIEF.

More than five years after the great event, the American National Red Cross, through the Government Printing Office at Washington, publishes a detailed report of how the enormous fund collected for the relief of San Francisco's earthquake and fire victims was administered and distributed. For the specialist in welfare work, the report, with its wealth of detail, will probably take its place as a classic. But it is possible, too, for the general reader to find amidst the welter of tables and schedules and topical analyses many a curious sidelight on what we may call the human side of the story. How the country responded to the needs created by the great calamity, and how the national genius for organization set to work at the business of succor and rehabili-

Digitized by Google

tation, are clearly enough to be deduced from these formal and colorless pages.

In addition to some 1,850 carloads of food supplies and 150 carloads of clothing, bedding, and housing materials dispatched for the relief of the stricken city, there was remitted to San Francisco directly or through the National Red Cross the sum of $9,673,057. Of this amount $9,279,953 was disbursed from April 23, 1906, to May 29, 1909. To those who have forgotten what the difficulties of the situation continued to be in San Francisco for many months after the earthquake, it may come as a surprise that less than one-fourth of the relief fund was distributed before July 31, 1906. Or to put it another way, three and a half months after the destruction of the city the people of San Francisco were still in so deplorable a condition as to justify the expenditure of more than six million dollars for their relief. In the technical language of the report, the period up to July 31, 1906, was the period of preliminary organization and the period from August 1, 1906, to May 29, 1909, was the period of permanent organization. The large expenditure during this second period is in part explained by the fact that the relief authorities devoted themselves to the work of rehabilitation as well as immediate help. Nearly two and three-quarter millions of dollars were spent in the form of loans for clothing, household equipment, or rebuilding to others than those sheltered in the refugee camps. Thus, with the aid of the relief funds, there were constructed no less than 2,300 permanent habitations.

Even in the face of apparently overwhelming disaster, the spirit of faction asserted itself. There was bitter criticism of the methods pursued by the relief authorities, consisting of the San Francisco citizens' committee and the National Red Cross committee, which had merged into a single body. There was organized a corporation of United Refugees who contended that relief work was overburdened with red tape. This organization succeeded in creating a distinct feeling of mistrust in the country at large, with the result that money contributions fell off and the relief work at San Francisco was seriously hampered. A committee of the Massachusetts Association for the Relief of California, after a thorough investigation on the spot, reported in September that all such rumors were ill-founded in so far as incapacity or dishonest management was concerned. Red tape was too much in evidence and mistakes had been made, but the problem was one of unprecedented difficulty. What had probably happened was that the men in charge of the relief work, painfully conscious of our defects as an unsystematic people, had gone in too emphatically for system. Experience soon taught better.

The largest single contributor to the relief fund was the United States Government, which gave, by Congressional appropriation, the sum of $2,500,000. Canada sent us $145,000, Japan $245,000, and China $40,000. There were several $100,000 contributions, and from that amount subscriptions ranged all the way down to a remittance of 7 cents, which came from Fork Vale, Tenn., enclosed in the following letter:

To the Mayor of San Francisco:

SIR: I am sorry that such a disaster overtook your city, but it is the work of the omnipotent Lord that delivered the law to Moses on Mount Sinai. Probably it is all for the better. Mr. Mayor, you will enclosed find seven cents for the relief fund. I want you . . . to buy bread with this seven cents and give it to some poor widow woman that has got as many as three children, oldest child under seven years old. If I was a John D. Rockefeller or an Andrew Carnegie and E. H. Harriman, I would give thousands to the relief fund, but, Mr. Mayor, I am poor, not got much this world's goods, just married me a wife two weeks ago, and seven cents is all that I can handily spare. May 'Frisco rise to be another great city in the near future. Yours, sincerely,

_____ _____.

Nor was this the only letter of its kind. Another such opportunity to point a moral and adorn a tale might not occur in a century.

Particularly interesting in the report is the detailed enumeration of contributions by States, towns, and villages. If any social philosopher is anxious to draw a humanitarian map of the United States, here are the materials. In comparing the following figures one must take into account, of course, the general level of wealth as well as the population. With that reservation in mind we figure it out that the people of New York State, in contributing the sum of $2,840,000, gave approximately 31 cents per capita. Other States gave in the following ratio: Massachusetts, 23 cents; Connecticut, 15 cents; Pennsylvania, 13 cents; Arizona, 11 cents; Maryland, 10 cents; Missouri, 9 cents; Illinois, 8½ cents; New Jersey, 8 cents. The South, an agricultural and poorer region, naturally gave less. Virginia gave 2½ cents, Texas 2 cents, and Mississippi still less. But what was the matter with Kansas, when, in the face of such dire need, it could spare only ½ cent per capita? Where were those rolling plains of alfalfa and those farmers rolling in automobiles in whom the heart of Mr. William Allen White takes delight? Florida, a State with only half the population of Kansas, gave more than three times as much. The city of Jacksonville alone gave $4,000 more than Kansas. Jacksonville gained the place of honor among the smaller cities, with a per-capita rate of 22 cents. Chicago gave 25 cents a head, Philadelphia and St. Louis 40 cents, New York city 60 cents. Boston gave more than a dollar for every one of its inhabitants.

EDWARD M. SHEPARD.

A man of widest culture, unquestioned ability, the highest ideals, and of an intense civic patriotism—the city and the State lose much by the premature death of Edward M. Shepard. Indeed, there is no little of the tragic about it. Only the other day he was the choice of an overwhelming number of Democrats, outside of the party workers, for Senator from New York. He had no press agent; he asked no friends to work for him; he pulled no wires; he curried favor with no editors or politicians. But when the vacancy came in sight, the brains and conscience of the party turned at once to Edward M. Shepard. Looking back, one may truly say that it was Mr. Shepard first and the rest nowhere, until there came into the contest an obnoxious candidate, the necessity for whose defeat superseded that for Mr. Shepard's election. That the result, the choice of an almost unknown judge, was a grave disappointment to Mr. Shepard, we have no doubt. He had an ambition for high office that was thoroughly legitimate and that would have been gratified in any other country under the sun. And yet his philosophy was of the highest, and that same serenity of spirit which carried him through other disappointments made it possible for him to rise above this. A man who is defeated because he is of

Digitized by Google

too fine a quality, and too independent for politicians in every way his inferiors, has no reason for heartburnings or chagrin.

More than that, Mr. Shepard had solid civic achievements to look back upon. He could ask public preferment because from early manhood on he had demonstrated that he knew how to work long and arduously against misrule. He was a tower of strength for good government in his early thirties; his was a conspicuous part in the freeing of Brooklyn from John Y. McKane and his ring. Free-traders, ballot and civil-service reformers, sound-money advocates, anti-imperialists, men of all causes that had to do with liberty and public honesty, learned quickly to turn to him, and never sought his aid in vain if his conscience approved. His service in representing the Pennsylvania Railroad in its negotiations for its tunnels and station in New York was in the highest degree unselfish and productive of good for the city. Thanks largely to him and to the late W. H. Baldwin, jr., no hint of scandal ever accompanied the transactions. What he has done year in and year out for the City College, with keen, far-sighted vision and modest self-effacement in the task, the city has yet to learn; but its debt is great indeed. Above all, his professional standing was of the highest. It could truly be said of him, as of Gov. Hughes, that while he had advised large corporations he had never put himself in a position in which one of them could dominate him. The measure of his spirit in accepting the Pennsylvania's retainer may be gauged by the fact that he took it despite friendly warnings that he ought not to be a "railroad lawyer." The opportunity to serve the city was what he saw, not the effect it might have upon him politically.

Why is it then that there must ever be a sense of disappointment in contemplating Mr. Shepard's career, as of a promise unfulfilled? Primarily, he was the victim of a vicious party system, with its boss domination. In England no man of his intellectual calibre could have been excluded from public life; his place must have been at one time or another on the Cabinet bench. During the Parker campaign, when the hopes of Democratic slate-makers ran high, his name naturally appeared as the man best fitted for the Secretaryship of State, which he would have adorned with the ability of Elihu Root, and with a broader view. Again, the blight of Bryanism, by driving his party out of power for most of the years of Mr. Shepard's active maturity, deprived him, like many another, of the opportunity to help direct the ship of state.

But it must be admitted that the fault lay in part with Mr. Shepard. He could never wholly free himself from the thraldom of party fealty. It was never given to him to feel the thrill of rebellion and to lead publicly a revolt against his own party when it went wrong. For all his independence, the spell of regularity lay upon him. It was that, as well as a belief that he might be the chosen instrument to undo Tammany Hall, that led him to accept Richard Croker's nomination for the Mayoralty in 1901. He had himself described Tammany misgovernment as "the most insolent and audacious, as well as the most reckless, assault we have yet known upon the welfare of Greater New York, and of the masses, especially the less fortunate masses." How could he square this with his acceptance of the Mayoralty nomination? Not even he, master of dialectics as he proved to be, comparable in skill and cleverness to the elusive and subtle Arthur J. Balfour, could reconcile the public to his position. But he was sincere throughout, and retracted nothing of his avowed hostility to civic corruption. To the *Nation* it seemed as if Mr. Shepard had made the mistake of seeking ends without stopping to consider the means he might have to use.

Never did independent editors more reluctantly oppose a candidacy or testify more readily to their opponent's high character and personal worth. To urge his selection, in later years, for Governorship and Senatorship was all the more a pleasure. He was the kind of scholar that ought to be in politics; and we can but regret that he did not give us more from a pen that wrote so masterly a story of the life and times of Martin Van Buren. It has been often said of him that he was austere and not a "good mixer," to use current political slang, and that this gravely affected his political career. Yet those who penetrated a slight barrier of shyness or modesty found sympathy and warmth of heart in abundance, as well as the mind of a true statesman. Best of all, they found a patriot second to none in his devotion to the public weal.

ANTHROPOLOGY AND HISTORY IN AUSTRALIA.

SYDNEY, July 10.

Dr. George Brown is one of a devoted band of missionaries to whom science owes a debt of gratitude. He it was who discovered exogamy and motherkin in Northern Melanesia, as it was a missionary who discovered the classificatory system of relationship in Australia, and other missionaries who ascertained its prevalence over a large part of the globe. Dr. Brown, a few years ago, published an account of the more picturesque portions of his life-work in New Britain, Samoa, and has lately completed the survey by summing up its results ("Melanesians and Polynesians: Their Life-Histories Compared," Macmillan*). In a long series of analytical chapters he examines and compares every feature of the collective existence in the two groups of peoples; and on the ground of strong presumptive evidence comes unhesitatingly to the conclusion that both are descended from a common stock, of which the Melanesians are the oldest representatives. The conclusion is not that of certain other Australian inquirers, who hold that the Polynesian is of Caucasian race, modified by a negroid infusion at a comparatively late date. Dr. George Brown finds little else than identities between the two races, and he easily accounts for the differences. Thus, many of the Melanesian islanders have remained exogamous, while among the Polynesians consanguinity is the only bond. Yet there are still traces of exogamy in Samoa; the advance from uterine to agnatic descent can be followed; and it occurred by a natural process under changed conditions of life. The passage from the one to the other Dr. Brown believes to have been made through the gradual decay of the exogamous system and the consequent necessity of tracing descent through the father.

By papers published in the transactions of learned societies or in official reports, and in other ways, Dr. Brown has contributed no little to what is now, in England, denominated Social Anthropology—a term coined to avoid the hybrid Sociology. He has furnished the omnivorous Prof. J. G. Frazer of "The Golden Bough" with fresh facts concerning totemism. This theory is almost of Australian origin. The facts from which it has been extracted were first brought to light by two Australians—the savant Baldwin Spencer and the magistrate Gillen. One of them, Professor Spencer, the real author of the two now celebrated volumes on the

*A notice of this book was printed in the *Nation* of April 6.

Digitized by Google

"Native Tribes" and the "Northern Tribes of Central Australia," which are among the greatest single contributions made to our knowledge of a savage people, so stated the facts that (as Dr. Frazer modestly implies) the inferred theory almost emerged of itself from the statement. In a paper read before the Australasian Association, and in private letters to Dr. Frazer, Professor Spencer arrived simultaneously with him at conclusions that are virtually identical with his. The startling theory thus shaped has now been traversed in the country of its origin. It has a base that will surprise many readers. Incredible as it may appear, the natives of Central Australia, who yet have initiatory ceremonies at puberty, are stated to be ignorant of the nature of physical paternity. Alone in the world, for aught that at present appears, they are unaware of the father's part in bringing children into existence. How do they believe that children are begotten, then? By a process of immaculate conception. Spirits of their ancestors, lurking about near trees, rocks, water-pools, or other hallowed spots, enter the womb of a passing woman, and become the totem of the child then conceived, which was identified with its begetting totem.

Dr. Brown does not wholly accept such explanation of the facts; he finds a number of objections to a theory that seems to be little more than a transcript of the facts. How, then, can he doubt it? He does not exactly dispute the facts, but he is skeptical of their universality. He believes them to be abnormal, and therefore not typical or truly explanatory. Is it not enough to reply that the native tribes of Central Australia are possibly the most primitive people on earth, and therefore may well be the depositaries of beliefs older than the oldest yet known? He is on firmer ground when he objects that the theory fails to connect itself with still earlier beliefs. If religion has its taproot in ancestor-worship, may not that, in some unknown way, be the origin of totemism? And how did the Central Australians arrive at the idea of the entering spirit? Tylor and Herbert Spencer, by a marvellous dialectic, have explained its genesis; but among these primitive Central Australians the notion is already so mature that doctrine of transmigration is highly developed. Further, he asks: how was it to the advantage of primitive men to identify themselves with totem animals, plants, or objects? The conceptional theory, which explains totemism in Central Australia, does not explain it among other peoples where human paternity is known. Yet, may not the conceptional view be the earlier and the root of the later views?

Dr. Brown's opinion is that totemism has its origin in the belief and practice of magic. It dates back to a time when man grew conscious of a Power greater than himself, which he sought to coerce (coercion is of the essence of magic), for his own advantage or the benefit or injury of others. To make his own connection with this Power manifest, there must be some visible means of communicating with it, and thus an animal, plant, or other natural object was chosen for that purpose. On this base, we may add, far more readily than on the foundations laid by Baldwin Spencer and Frazer, a science of religion might be reared, as, indeed, it has been reared by Principal F. B. Jevons. Dr. Frazer now inclines to minimize the part of totemism in the evolution of religion. He holds that it is inferior in importance to ancestor-worship as an agent of religious development. Perhaps we may conclude that it will explain animal-worship, and that is much. Herbert Spencer's theory of animal-worship is understood to be the weakest link in his philosophy of religion.

In the domain of history, the younger scholars in Australia have been using the new, scientific methods with good results. A work called "The Coming of the English to Australia," by Ida Lee (Mrs. Bruce Marriott), and issued by Longmans, consists of a succession of vivid pictures of Australia in the first years of colonization. A diligent search among unused, or but partially used, sources of information has enabled the industrious authoress to shed a genial light over those dark, early days, and to recover facts that were unknown to the best-informed students of the period.

Another historic writer of importance is Dr. Marion Phillips, whose monograph on "A Colonial Autocracy" (Westminster: P. S. King & Son) gives the results of the most exhaustive inquest that has yet been made into a special portion of Australian history. An Australian, but working in London, where alone the manuscript records, the dispatches, and correspondence are to be found, she has filled up many a blank in a critical period and put a fresh complexion on the whole of it. She has drawn a speaking portrait of Gov. Macquarie (the "colonial autocrat" referred to), son of the sixteenth hereditary chief of Ulva in Skye, and colonel of the Highland regiment he took out with him to New South Wales in 1809. She describes the growth in him of the political and social ideal that governed his policy—the ideal of a convict community converted to right ways of living by good government, participating in important public works, sharing in pastoral and agricultural labors, and furnishing out of itself members of every trade and all the liberal professions. She narrates the battles that Macquarie fought to realize this ideal and his struggles with the believers in a very different system. She tells of its hopeless failure as the potent element that was to build up a new Australia came gradually to the front, and the squatter—at first identical in kind with the American squatter, but soon becoming the pastoralist proper—overflowed the acknowledged boundaries of the Colony, and, in spite of the resistance of the Government, home and local, founded sheep and cattle stations in the bush, thus gradually making Australia the foremost pastoral country in the world.

Dr. Phillips complains that she is unable to understand the "sociology" of the subject. It was a needless confession. She might have found the key to Australian history in the "Bush Essays" anonymously published in Edinburgh by George Ranken, some forty years ago, but she has found it by means of her own clear discernment, and she has skilfully applied it. For the first time the early history of Australia has been made intelligible. The able and laborious authoress has lighted up many an obscure passage in that history, corrected not a few accepted errors, revealed unknown incidents, painted the portraits of a number of now-forgotten individuals, and revived features of colonial life that ought not to be left in obscurity. J. C.

Correspondence

A VISIT TO SIR WILLIAM S. GILBERT.

TO THE EDITOR OF THE NATION:

SIR: Little more than a year ago I was privileged to visit Sir William S. Gilbert at his home at Harrowweald and to hear him talk intimately of his dramatic effort and aims. Some reminiscences of our conversation may be suggestive to those who have regarded Gilbert chiefly as the librettist of "Pinafore" and "The Mikado" and as the author of popular comedies.

Gilbert's own interest lay primarily in his serious poetic dramas. "Broken Hearts," "Gretchen," and "The Wicked World" were, he said, his own favorite plays. As the talk turned on the question whether in "Gretchen" the heroine's sudden yielding to sin was probable, I was forced to confess that there seemed to me no natural reason for the change of character. I was quite taken aback at the answer: "Just so. The explanation is unnatural. It is diabolical power—the Satanic spell that Gretchen cannot resist. The Faust legend is sufficient authority for any improbabilities of dramatic action." As Gilbert went on to press the point, he seemed to suggest a reason why his poetic dramas are often unconvincing. He was content at times to let his characters escape irksome conformity to the laws of nature and to hold them accountable only to the lax laws of fairyland.

Of Gilbert's extraordinary sensitiveness to adverse criticism I had remarkable proof. Though he was scrupulously faithful to the minutest details of rehearsals, he confessed, to my amazement, that he had never

Digitized by Google

dared to attend a single actual public performance of even the most popular of his dramatic or operatic successes.

"'What, never!'" I ventured.

"'Well, hardly ever!'" he replied, with a twinkle. "In fact, really the sole exception that I recall was a production of 'The Mikado' in German. They persuaded me to go, and it was"—he leaned forward confidentially—"rotten." Then he added: "I have always been fearful of failure. In the theatre there is always something that may go wrong. The risk of seeing my own failure in public—no, I cannot brave that."

Other proofs of Gilbert's peculiar sensitiveness were frequent. He had just produced a new opera, "Fallen Fairies," based on his early poetic play, "The Wicked World," but the fairies had fallen upon somewhat stony ground. That his expectations had not been met fully had evidently cut to the quick. Again, I had just been reading the volume on Gilbert by Edith A. Browne in the series called Stars of the Stage. As the author's preface acknowledges a debt to Gilbert for biographical information, I ventured to ask his opinion of the work. "Don't ask me," he said. "Part way through the book she said some things that I couldn't bear about my poetic plays. I never read the rest of it. Usually, you know, Lady Gilbert is my press censor. She reads all the press notices, but lets me see only those she thinks I will like. I tremble at reviewers." Still another evidence of Gilbert's feeling came by merest chance. I had been speaking of a successful amateur revival of his delightful extravaganza, "Engaged," and to his passing phrases about its whimsical absurdity I thoughtlessly rejoined that nothing in the play itself seemed to me so absurd as the criticism on it which interpreted it as a bitter and cruel caricature of mankind. "Did somebody say that of 'Engaged'?" queried Gilbert. It was too late to retreat, and I had to tell of the pages in the book of Filon, the French critic, on "The English Stage," in which he finds something almost of Swift's *saeva indignatio* underlying the playful topsy-turvydom of Gilbert's fancy. "And they call that dramatic criticism in France, do they?" said Gilbert gently. "Could any one have misconceived 'Engaged' more perfectly?"

Another trait which Gilbert revealed was his attention to details. The themes of many of his operas, he said, had come to him by chance. A Japanese sword hanging on his library wall had suggested the picturesque setting of "The Mikado," a Venetian picture that of "The Gondoliers." The chromo of a beef-eater placarded as an advertisement at a railway station had been sufficient hint for "The Yeomen of the Guard." I remarked that such instances suggested intuition rather than accident. "Well," said Gilbert, "I suppose there is a knack in observing trifles. Most people are too busy to bother with petty details."

Since the advent of "Gilbert and Sullivan opera" the mirth-loving public has been loath to let its most delightful jester put aside cap-and-bells. Doubtless this English Yorick was a fellow of infinite jest, yet if I essayed to pluck out the heart of his mystery, I should take a hint from one who interpreted the English humorists of an earlier age. "Harlequin without his mask," says Thackeray, "is known to present a very sober countenance, . . . a man full of cares and perplexities like the rest of us, whose Self must always be serious to him, under whatever mask or disguise or uniform he presents it to the public." GEORGE HENRY NETTLETON.

Yale University, July 16.

TRADE WITH SOUTH AMERICA.

TO THE EDITOR OF THE NATION:

SIR: In reference to your editorial in the *Nation* of June 22, allow me to state that our merchants are neglecting the best market tributary to the United States. Ever since the time when Mr. Blaine was Secretary of State, some of our ablest statesmen have called the attention of our merchants to the large and ever-growing trade of South America; the digging of the Panama Canal, Secretary Root's visit to South America, etc., have finally crystallized a sentiment in this country that we desire to get our share of the South American trade. But this determination will avail little unless our people make up their minds to do business in South America under conditions as they exist there. Otherwise we might as well stay at home, and not waste our time and money.

One of the reasons why the United States has such a very small share of this trade is undoubtedly the fact that our merchants and financiers are afraid of operating extensively in South America. This fear is due entirely to a lack of knowledge as to the conditions under which business is done in these countries. Our merchants and financiers should be aware that the English, German, and other European merchants who have been operating in South America for so many years, would not continue doing business there if it were not profitable. Failures in South America are very rare as compared with the United States. Some years ago an American consul reported that in the thriving commercial centre of Medellin, Colombia, there had not been a failure in half a century. A similar state of affairs (or very nearly so) can be found in other important South American commercial centres. Our financial institutions ought heartily to second the efforts of the merchants. The merchant and the banker must of necessity work hand in hand, if they wish to control or even get a share of a foreign market. Those of our banks that have sufficient enterprise to reach out for new and profitable fields should open branches in some of the leading South American cities, and then gradually extend their branches as English and German banks have done, to whom we now have to pay tribute on nearly all the business we do in South America.

A great many of our people, among them some of our leading merchants and financiers, seem to be under the impression that the South Americans have hardly emerged from the early Darwinian state of humanity, and that goods shipped down there will surely be lost unless payment is received before the shipments leave their home port. If the South Americans were anxiously waiting for our wares, it would be easy to compel them to buy on our terms. This, however, is not the case. The various South American countries are canvassed and drummed to-day as energetically and intelligently as any American State in the Union. This drumming for trade is done by general representatives and by local agents of European exporters. Our merchants should send competent men to those countries to study them, men who are familiar with the Spanish language, and who can meet the Latin American in his club as well as in his office. That a drummer has been successful in a logging camp does not necessarily qualify him to capture a foreign market. The impetuous and often free and easy ways of American salesmen are not appreciated by people who are by nature courteous and decorous. Many failures on this very account have come under my personal observation.

Numerous European steamship lines are plying between their ports and the various Latin American republics, and enough of them ply between our ports and South and Central America to take care of all the business we have to offer. While it would be desirable to have American ships carry our merchandise, this is not nearly so essential as the mutual efforts of our merchants and bankers, because ships will always be forthcoming if freight is to be had. Some years ago the Pacific Steam Navigation Company and the Chilian Steamship Company sent their splendid modern steamers from Valparaiso to the North Pacific Coast ports, but after losing a lot of money they had to give it up for lack of freight to load their ships.

J. B. HAVRE.

San Francisco, July 7.

GREEK AND A CHRISTIAN EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: Permit me to point out the extraordinary fallacy in a communication in the *Nation* of July 20, entitled "The Question of Greek." The writer argues that the study of Greek and Latin is doomed because a Christian civilization must get its spiritual nourishment from a Christian literature and cannot be "dominated by the literature of a pagan age and nation."

The fact is, of course, that there is nothing distinctively Christian about most of the great masterpieces of literature, modern or ancient, unless we except Dante, who has unfortunately an even smaller place in our curriculum than the Greek poets, and Milton, whose theology is the chief stumbling-block to his eminence. Certainly Shakespeare and Goethe, the accepted representatives of the culture of our race, are as essentially pagan as the Greeks themselves. Plato and the Neo-Platonists, Cicero and the Græco-Roman Stoics, may be said to have contributed more to Christian thought than all the modern masterpieces.

Above all, your correspondent seems to ignore the fact that the better part of Christian literature was itself written in Greek and Latin, and that the New Testament, the very foundation-stone of our civilization, is a Greek book. Christianity was born a Jewish child into a Græco-Roman world, and the Greek and Roman elements that have entered into its life are hardly less important than the original Hebrew element. But for them it could not have burst its swaddling-bands of Judaism, and spread among the gentiles on its world-conquering career. It is not without significance that the two greatest branches of the Christian Church still use the Greek

Digitized by Google

and Latin languages in their daily services. That little Greek book which we call the New Testament, whatever view we may take of it, is of such transcendant importance in the history of mankind that it alone, if all other Greek books had disappeared, makes the study of Greek the most important which our whole curriculum can offer—next, of course, to the proper mastery of our own tongue, which lies at the basis of all other intellectual achievement. Attacks against the classics from a utilitarian point of view are to be expected, until our public is sufficiently enlightened to know what true utility may be, but an attack under the pretext of Christian sentiment seems quite preposterous.

Meanwhile, those who took courage at the action of Amherst College have had further justification in the recent action of a representative part of the Cornell faculty. Perhaps, after all, the study of Greek and Latin is not doomed. H. H. YEAMES.

Hobart College, July 25.

TO THE EDITOR OF THE NATION:

SIR: I fancy that if the world was truly concerned with Christian civilization the battle of the Greeks were suddenly won, and that it would find in the literature of this pagan civilization of the ancients a most Christian teaching. At least the word "pagan" harks back to that "Nature" which it is all our fashion to-day to cultivate. It is in the Greek rather than in the modern classic that we find the clean fitting of word to vision which is the soul of truth, and which is the stylistic mark of the Nazarene's words. The world is not so much in need of a civilization that shall call itself Christian as it is in need of one that shall be objective and true as far as the perception of life is concerned, and equitable and just and courteous in the expression of it. That this will be essentially Christian probably no one seriously doubts; but this certainly is what modern civilization is not in its literary expression. Contrast the involved and conventional social organization of to-day, its traditional valuation of things, its uncertain and diffident estimation of men, on the commonplaces of which modern thought moulds its language, with the simple, graphic, primitive conception of man and his value on which the Greek builds his, and we easily discover the use of Greek in teaching fundamental thinking. This is no theory. It was no accident of history that the rediscovery of Greek foreran humanism and the origin of modern democracy. Moreover, if to see clearly, to act manfully, with due regard for the pious service of God, not forgetting the devoir toward man, be Christian, it is also Greek. For a young mind to live in thought the wonderful conceptions of the fine Greek spirit—and they do find habitation in the mind—is for it to grow strong and sane and devout, to be ready to hear and to obey the voice that called by the waters of Galilee. This is the wisdom of a Christian priest, who needs his Greek even as he needs his Bible.

Amherst College, true to its tradition of clear thinking and its emphasis on the things that make for real culture and intellectual fineness, is discovering that as a guiding thread in the blind labyrinth of modern culture Greek is, as it has always been, sustaining. And the happy mark for Amherst is that there are many not inexpert in the ways of the modern world, who think the Greek ideal, the *kalon k'agathon* has some educational value, and who wish their children to possess something of the culture of the ancient literatures.

OSCAR WOODWARD ZEIGLER.

All Faith Rectory, Saint Mary's County, Maryland, July 22.

THE POPULATION OF OREGON.

TO THE EDITOR OF THE NATION:

SIR: In an article by Burton J. Hendrick, entitled "The Initiative and Referendum in Oregon," in the July issue of *McClure's Magazine*, one finds this statement:

> In its settlement, Oregon drew upon many of the best elements in the American stock. The Western coast was settled largely by New Englanders, many of them seafaring people. There is a tradition that, when the time came to name their leading city, the pioneers tossed a coin to determine whether they should call it Boston or Portland; and Portland to-day, with its central green, its general atmosphere of quiet respectability, strongly resembles a New England town.

Without animadverting upon Portland, its name, or its "quiet respectability," I desire to call attention to an error, apparently common, regarding the elements of population which settled Oregon. While Washington would probably more nearly measure up to Mr. Hendrick's statement, Washington and Oregon have been very different, in elements of population, in forms of government, both State and local, in general atmosphere, till within the past ten years or so. Oregon drew its people but slightly from the Atlantic Coast: the belt of States, including Virginia, Kentucky, North Carolina, Tennessee, Arkansas, and Missouri furnished, in the early days, the bulk of the population of the Willamette Valley, which, for many years, was virtually Oregon. Based upon nativity figures, as given in the United States Census, the above mentioned commonwealths contributed, in 1850, 30.6 per cent. of the total inhabitants of Oregon; in 1860, 22 per cent.; in 1870, 14 per cent.; in 1880, 12.8 per cent. If, for the same years, we add to this the quota afforded by Ohio, Indiana, Illinois, a group the southern portion of which contained much the same social elements as were to be found south of the Ohio River, we account for, respectively, 48.7 per cent., 40.2 per cent., 25.5 per cent., and 23.7 per cent. of the total population.

Perhaps it may be affirmed that, more than any other one commonwealth, Missouri shaped the early development of Oregon, primarily by furnishing a large portion of the people, and consequently by moulding its institutions. According to the census of 1850, of the 13,294 souls in the Oregon Territory, 16.5 per cent. were born in the Compromise State; in 1860, 10.8 per cent.; and it was not till 1870 that New England, New York, New Jersey, and Pennsylvania together sent as many migratory spirits to the Pacific Coast as did the one Middle Western State. Hence, it is to be seen that New England alone played little part in the earlier days; in fact, in 1850 only 4.2 per cent. of the Oregonians were New Englanders by birth; and, by decades, the proportion from the northeast stood at 3.13 per cent., 2.5 per cent., 4.4 per cent., and, even in 1890, but 4.5 per cent.

Since 1890, the Atlantic Coast has contributed somewhat more in proportion than previously, yet the mass of incoming population—and it is estimated that between 25,000 and 30,000 entered the State during one "boosting" month of the past spring—continues to come from the Middle West, Kansas, and especially Nebraska, now vying with Missouri for the largest fraction. Literature

THE SCIENCE OF CRIME.

Modern Theories of Criminality. By C. Bernaldo de Quirós. Translated from the Spanish by Alfonso de Salvio, Ph.D. With an introduction by William W. Smithers, Esq. Boston: Little, Brown & Co. $4 net.

Criminal Psychology: A Manual for Judges, Practitioners, and Students. By Hans Gross, J.U.D. Translated from the Fourth German Edition by Horace M. Kallen, Ph.D. With an introduction by Joseph Jastrow, Ph.D. Boston: Little, Brown & Co. $5 net.

Crime; its Causes and Remedies. By Cesare Lombroso, M.D. Translated by Henry P. Horton, M.A. With an introduction by Maurice Parmelee, Ph.D. Boston: Little, Brown & Co. $4.50 net.

Criminal Man according to the Classification of Cesare Lombroso. Briefly summarized by his daughter, Gina Lombroso Ferrero. With an introduction by Cesare Lombroso. New York: G. P. Putnam's Sons. $2.

The first three of these books are a part of the Modern Criminal Science Series, issued by the care of the American Institute of Criminal Law and Criminology, which was organized in Chicago in 1900. The purpose of the series, under which nine titles are announced, is explained in a general introduction by Mr. Smithers. Criminal law, he holds, is to-day in the position of medical science of two centuries ago, when every disease was attributed to the will of God and almost the only treatment was calomel and blood-letting. In law it is still a dominant tendency to ascribe every crime to a vague and inscrutable "free will" and to treat all kinds of crime and all kinds of criminals simply with varying doses of jail or fine. Yet it is known that every crime, like every disease, has a specific natural cause. While, however, the search for these causes has been going on in Europe for forty years past, with the use of all the resources of science—"anthropology, medicine, psychology, economics, sociology, philanthropy, penology"—the American public and the legal profession in particular have remained either ignorant or indifferent. The purpose of the Institute is to educate the profession

Digitized by Google

and the public by procuring the translation of some of the more important treatises on criminal science in foreign languages.

It is one thing to point to the existence of a deficiency, another thing to define it, and still another to determine the remedy. It is true that toward the constructive development of law and punishment the legal profession has been strangely and perhaps culpably deficient; in which respect it presents a sharp contrast to the attitude of medicine toward health. We must therefore welcome any signs pointing to a consciousness of its position. It does not follow, however, that the legal profession must forthwith embrace "modern science." From the sober conservatism of the law to the tumultuous speculation of criminal sociology is something of a leap. And the calm confidence of the General Introduction, together with the list of works selected for translation, tends to suggest a rather naïve attitude on the part of the gentlemen of the law toward the possibilities of "scientific method."

This impression is deepened upon acquaintance with their first number, "Modern Theories of Criminality," by De Quirós. Under this hopeful title the reader will expect to find a digested analysis, with some constructive criticism, introducing order among the issues, so that a sober thinker may find his way. The only order perceivable is in the table of contents. This, indeed, presents an elaborately logical classification, which is also historical, tracing the science from its "origins" among the psychiatrists, Morel and Maudsley, and the statistician, Quételet, through the "innovators," Lombroso, Ferri, and Garofalo, to the "development," which is too complex for mention. But no sense of relationship is conveyed by the text. The theories of crime—virtually the whole criminological stock of ideas—are summarily disposed of in the first hundred pages, and are followed by an even more summary account of methods of punishment and detection. The author jumps quickly from atavism to degeneration, to epilepsy, to neurasthenia, from social to socialistic theories, with only a bare sentence of criticism here and there in the repetition of some clever remark, and the reader is left to wonder how far these multitudinous theories give the lie to one another, or whether, indeed, they have reached a speaking acquaintance. The one purpose served by the translation is that of a catalogue of material. Nothing could present the study of criminology in a much worse light, and the only excuse to be offered for the character of the book must be the present state of the "science."

While the criminologists have performed a useful service in calling attention to the facts of crime, it must at the same time be said that their theories of human life, even of criminal life, border mostly on the grotesque. And a review of the theories suggests that the science (nothing, if not empirical) is burdened by a more or less unconscious assumption, which is formulated by Mr. Smithers when he says that every crime, like every disease, has a natural cause. Now it may be urged that every intended human action has also its reason; and a reason differs from a natural cause, a crime from a disease, at least in the fact that it operates consciously. It is then not absurd to suppose that this consciousness of what one is doing must in some way characterize the action and the agent. And this is the ground, at bottom, upon which the older theories sought to connect crime with free will and responsibility. Whatever the difficulty of these conceptions, they are interpretations of a fact of human life—indeed, of its most conspicuous fact. Modern criminal science may then be almost completely characterized by the statement that it leaves this fact out of account. One may go through the theories represented by De Quirós and find every conceivable factor represented—heredity, physical degeneracy, social conditions—every factor but that of intelligible human motive. The truth is that any assumption of the efficiency of motive is repugnant to the "method of science." And this accounts for the grotesque; for what it all means is that a really scientific anthropology must ignore the feature most characteristic of man.

From De Quirós it is a satisfaction to turn to Prof. Hans Gross's "Criminal Psychology." The first German edition of this book appeared in 1897, the later edition, from which the version is made, in 1905. The title is somewhat misleading. For the "criminal psychology" considered in part ii concerns the criminal only as witness, or examinee, and is quite as much occupied with the mental conditions of the other witnesses, while part i, covering two-fifths of the work, deals with the reasoning processes of the judge. Briefly stated, his psychology is that of a function peculiar to the judicial system of the Continent, that, namely, of the examining magistrate. None the less, the work should be one of deep interest, not only to the legal profession, but to all who are interested in the weighing of human testimony; and, in spite of the rather crude, and not always idiomatic, English of the translation, it is entertaining and readable. Professor Gross displays little of the pedantry of "modern science." He is a "scientist," of course, but cautious. "Whenever people delayed in establishing the right thing and then suddenly tried for it, they went in their haste too far." (This might be recommended to the consideration of the American Institute.) In fact, if "science" is to stand for a thoroughly coördinated system of ideas and facts, he is hardly a scientist at all. What he really offers is an extensive survey of the facts and conditions of judicial investigation which is based upon personal experience as a judge, enlightened by a broad erudition, and well seasoned by ripe judgment and shrewd common sense. Two things are noticeable: first, that his psychology is nearly always relevant to his special subject—which is unusual in books of this class; secondly, that he regards the criminal as a human being and (not disregarding other factors) applies the assumption of human motive. "Who thinks to know the character of a man without knowing his view of the world?" Yet, he adds, "who [among the judges] talks of their world views with his criminals?"

Lombroso is at any rate picturesque. His theory of the born criminal has quite failed to convince, but it will doubtless continue to interest all those who are given to the search for congenital human types. "Crime: its Causes and Remedies," to which Professor Parmelee contributes a slightly cautionary Introduction, covers an extensive range of topics, and furnishes some interesting exercises in the logic of statistics. Published first in French in 1899, it offers a more mature and much revised statement of the views put forth in "Criminal Man," in 1876.

Lombroso's "Criminal Man" is too well known to call for comment. Yet, though easily the most conspicuous landmark of criminology, it has never been turned into English—possibly because of its three volumes. The present abridgment offers an easy and authoritative access to its contents, and useful synopses of other works of Lombroso are given in an appendix.

CURRENT FICTION.

The Valley of Regret. By Adelaide Holt. New York: John Lane Co.

The involved destinies of a strong man, a weak man, and a beautiful woman are by no means new topics for the writer of fiction. But in her somewhat inaptly named book, "The Valley of Regret," Adelaide Holt has created such life-like central characters and narrated their experiences in so plausible and direct a manner that the romance of their careers seems genuinely fresh and real. The development of Betty, the heroine, from a fanciful child to a woman courageous in love and self-denial, is told simply and logically and with much skill in the analysis of emotion. It is regrettable that so unnecessary and cheaply theatrical a character as Sebastian Oppenheim, an impossibly villanous Hebrew, should have been dragged into the story. He is introduced only to be murdered by Edward Charteris, Betty's dissipated young husband,

Digitized by Google

whose resulting term of imprisonment clears the field for the other lover, John Earle. This man is of the large, conquering type that some modern woman writers delight in describing, but in this case he is a human being and not a mere caricature of the superman. His love affair with Betty is described frankly, and its heroic and renunciatory termination is an episode of powerful dramatic appeal. The minor characters in the story—with the exception of Sebastian Oppenheim—are much more than the usual marionettes. One of them, a ritualistic priest of the Church of England, who devotes his talents to work in the London slums, acts as the confidant of Betty and of John Earle, and his kindly and wholesome personality plays an important part in the development of the plot. It is perhaps an unusual fault to find, but there are too many vital and interesting characters in this book. There is no background of commonplace humanity, no steadying chorus of the uninspired. The result is that one leaves the story with a suspicion that, in spite of its excellence, it is too intense, and that its author has yet to learn the lesson of restraint.

The Second Amendment. By Henry Clay Hansbrough. Minneapolis: The Hudson Publishing Co.

Thirty-two "chief characters" would seem to be sufficient for a five-foot shelf of novels, yet this, according to the list prefaced to the book, is the number of the main personages in Senator Hansbrough's story. It is accordingly scarcely a matter of surprise that their identities become hopelessly confused and that the heroic reader who perseveres beyond the first chapter finds himself lost in a tangle of virtuous statesmen, corrupt politicians, capitalists, desperadoes, editors, adventuresses, and superlatively beautiful young women. The author has endeavored to portray American Senatorial life and to predict the developments of American politics. He has elected to do this by means of the novel, a form of composition with the elements of which he is evidently unacquainted. The result is that the plot is buried under mountains of platitudinous sermonizing, tedious description, and dialogue of remarkable dulness. The story has to do with one Senator Twain, belonging to a new progressive party, barbarously named "Altrocratic," who is abducted by the agents of his political opponents in order to prevent his voting on an amendment. It is difficult to find just what the amendment was, but the original bill, apparently, was to authorize the exchange of the Philippine Islands for Canada. It is possible, but by no means easy, to trace the fate of Senator Twain through varied adventures to his final rescue and marriage, for, of course, there is a "heart-interest," put into the story with the laudable purpose of adding life and color. Unfortunately, this purpose is not attained, although the love-affair is treated in the best sentimental manner of Miss Laura Jean Libbey.

A Fair House. By Hugh De Sélincourt. New York: John Lane Co.

The explanation of the title of this novel is to be found in a stanza which follows the dedication:

> O Love, they wrong thee much
> That say thy sweet is bitter,
> When thy ripe fruit is such
> As nothing can be sweeter.
> Fair House of joy and bliss
> Where truest pleasure is,
> I do adore Thee;
> I know Thee what Thou art,
> I serve Thee with my heart,
> And fall before Thee.

The author's "Fair House" suffers here and there from want of plausibility. Toby Warren, a young playwright, going with the news of the completion of his latest masterpiece to his friend, John Camden the publisher, is stopped at the threshold by the housekeeper, whose orders are to let nobody in. After a little parleying Warren is shocked to learn the reason: "We buried young Mrs. Camden yesterday four weeks." It seems rather strange that so intimate a friend of the Camdens should first hear of the event in this way; but he does. He pushes past the protesting housekeeper and goes up the stairs to find Camden dead to everything, including the infant daughter, which lived in spite of the fate that took its mother. He sets himself to rouse his friend from this paralysis, and to this end proposes a week's walking trip. They take it, starting in a heavy rain, and it proves the beginning of Camden's revival of interest in life. Another spur to his deadened energies is the visit of an arrogant young novelist, whose first work Camden offers to buy—and burn. It is brilliant but pessimistic, and he labors to alter the author's philosophy. The result, however, is only to evoke the undisguised contempt of the young genius for him and for his ideas, and the arrogant but precocious youth goes out to become a very popular novelist. In the course of time the daughter grows up, responding with incredible cleverness to her father's manifold system for her intellectual development. The brilliant novelist comes into her life in a somewhat peculiar way, and it is their relations that are particularly unconvincing. He goes out of it again, and for a space there is gloom. Then young Tommy Gates, her father's right-hand man, suggests to Warren that she should take the leading part in Warren's new play. He is persuaded by Tommy's enthusiasm; she does take the part, makes a hit, but not too soon, and finds a lover to solace her for any woe from her other love-experience.

Tillers of the Soil. By J. E. Patterson. New York: Duffield & Co.

In a preface rich in archaic word-forms and squinting constructions, our author proclaims an adamant resolution not to be influenced by what critics have said regarding the formlessness of an earlier novel from the same pen. This is our old friend the cross-section-of-life theory, by which a story begins nowhere in particular and ends nowhere in particular. But the book in hand is a complete refutation of that theory. There are in it several real persons and two or three attractively worked out persons. With a plot to bind them together they might have produced no mean effect. But as it is, they move in pale colors across the pages and drop out of sight with the last one. As to the main current of the story, we doubt if an American public can be interested in psychological parallels between the Yorkshire farmer and the Essex type. Curiously mixed with realistic character portrayal runs a heavy strain of poetizing that reaches a ridiculous climax in the character of Lucian A. Kingdom, the young American who sings songs of his own composition to his lady love. But we would rather hear him sing than make use of the American dialect the author has provided him with.

AN AMERICAN IN THE EAST.

The West in the East: From an American Point of View. By Price Collier. New York: Chas. Scribner's Sons. $1.50 net.

Mr. Collier, though adequately prepared by reading, did not enter upon his tour with the usual prepossessions of a Western radical. "The Oriental mind," he discovers, "has no conception of equality between men. Even in matters of justice he dislikes rules of procedure, laws of evidence. He prefers that the matter should be settled face to face between himself and the ruler. He cannot understand that superior standing in the community is of any value, unless it can be used even in the courts for his own advantage." The attempts of Hindu agitators to replace British control in India, which have many sympathizers in this country, fill the author with disgust because he regards their democracy as a sham, their plea for liberty as hypocrisy, and because their success, he thinks, would entail inevitable misery upon the great mass of the population:

> The Brahman has never been a fighting man; he has fattened upon superstition, and consequently has aided it, and continues to encourage it to the utmost, and holds, con-

Digitized by Google

sequently, the strange position in India of being a seditionist as against the English and a reactionary as against his own people. There is a harsher word than I care to use for this type of citizen, but whatever he may be, he is distinctly a stumbling-block in the present situation. Men who ask for larger representation in the government, knowing full well that they alone are sufficiently educated to profit by it, and who are inciting the weak-minded to assassinate, and the ignorant to balk, the alien reformers, are difficult to deal with, especially when one hears on every side from disinterested natives that they tremble at the idea of their future magistrates, having as much concern with the increase of their salaries as with their caste elevation, and who say: "It would be treason to humanity to place us by force of British bayonets under the yoke of those whose flesh creeps on their bones when they hear of war." I quote from a Rajput noble of Oudh.

The troubles of India are numerous enough, but now the country has to withstand a new danger, the "economic lymph of the West," the standard of money, from which England must try her best to protect it. In a land where people have always looked up to birth and holy living as ideals they are learning that one may be accounted great for what he possesses. "The social and even political tyranny of the irresponsible rich is yet to be their portion and their potion, and it will prove more unpalatable to them than any that has yet been forced upon them. They must go through all this, and then, alas! learn all over again that comfort is not prosperity, that luxury is not culture, and that a mind besmeared with odds and ends of learning is not education. Even England and America are only just beginning to see this." To meet the difficulties which beset them Mr. Collier detects two qualities that probably none but an American would adduce as helpful assets in the English character. In the first place, they are not too fine for the job. "Fortunately for the problem and probably for themselves, this hard-playing, unanalyzing, governing race of Englishmen, with unbounded confidence in themselves, take all these matters so lightly, ignore them so placidly, discuss them so flippantly, that for them they cease to exist. They come and stare at Benares like children at a pantomime, then return to deal justly and patiently with three hundred million wards, as though the whole spiritual and intellectual life of thousands of years and millions of subjects did not exist." In the second place, they succeed because, unlike the long series of their predecessors in the conquest of India, they refuse to settle in the country and become victims of climatic and social degeneration. What is often alleged as a weakness in the British relation to India may well prove its strength if the English continue to breed carefully trained experts in Asiatic administration and can keep them from being overruled by sentimental voters at home.

While much the most effective part of his book is devoted to India, Mr. Collier is not a bit less amusing and incisive in his comments upon conditions in China and Japan. In these countries, however, he does not appear to have been so well instructed. Like most recent travellers in the East, he yields to the current reaction against Japan, putting them far below the forceful and competent Chinese in ability and character. China, he thinks, is certain to come into her own again. So far the Japanese have succeeded in their task of national reconstruction through devotion to a divinely descended Mikado, but it is idle to contend that this is the only influence that keeps the nation together, or that "once the superstitious awe in which the Japanese Emperor is held by the people disappears, Japan will be like a study table covered with papers in a breeze, when the paper-weights have been taken away."

A few errors of statement have escaped the author's revision. Instead of half a dozen, there are 147 distinct languages in India; John Nicholson was not shot through the heart at Delhi; Hideyoshi was not the founder of the Tokugawa Shogun House; nor can it be fairly said that the poor Indian weaver is ruined for the benefit of the Lancashire manufacturer by an excise duty of 3½ per cent. The tax is a counterpoise to a similar customs duty paid on imported cottons. A terrible scoring of the "uninformed diplomacy that has dished us in the East," inspired by Secretary Knox's proposals as to Manchurian railway management, appears to have been founded upon a total misconception of the plan. Such slips, however, may readily be forgiven in a volume that is at once the most readable and the best worth reading of books on the Asia of to-day.

The Cabin. By Stewart Edward White. Illustrated with photographs by the Author. New York: Doubleday, Page & Co. $1.50.

Jungle Trails and Jungle People: Travel, Adventure, and Observation in the Far East. By Caspar Whitney. New York: Harper & Bros. $3 net.

To the many recent books on the Sierras Mr. White adds a characteristic miscellany of descriptions and narratives that centre about a cabin "in the far mountains, seventy miles from a railroad and a mile up in the air." Here he spends his summers in the company of Billy, of Flapjack, a shiny black mule, and Theophilus, an extremely wise and hungry-looking totem bird that commands the main avenue of the forest. There is no plot, there is not even a sequence of events; and the book has, as a result, only a wavering kind of interest. We are put down among big trees and bade forage as best we may. Unfortunately, the amount of enticing fodder is scant, for though every chapter is graceful and not without occasional happy touches, there are no unusually well-done stretches of narrative, description, or comment. One is inclined to feel that the author's affection for his cabin in the hills has dimmed his sense of what is interesting and what is not. Now and then he writes with an inconsequential garrulity that leads him into the schoolgirl naïveté of "We had the best kind of a time."

The fault accords with Mr. White's philosophy of life, which seems to be identical with that of California John, the old ranger—"just live along." In a discussion with California John he quotes Stevenson's couplet, "The world is so full of a number of things." "He's dead right," replies the ranger, "and to my notion in His eyes they're all one about as important as the other." Mr. White objects: "Do you mean to say that you really believe it's as important to ditch that meadow as to dig the Panama Canal?" "Not to Roosevelt," is the reply; "mebbe to me." And one suspects that Mr. White more than half agrees with California John.

A more rebellious soul is Mr. Whitney. In what he calls modestly, but accurately, his halting style, he confesses that he "would be free from the crying newsboys and the pressure of conventions." The pathless jungle is a "larger world of which our conventionalized smaller one is but the gateway." And so he wanders about Siam and the Malay Peninsula—he has exhausted the best of the remainder of the world—tracking the elephant, tiger, rhinoceros, buffalo, gnuadang, observing the ways of queer people and the ways of European Powers, and now reports for the advantage and delectation of those who helplessly chafe at routine and convention. His narrative is interesting throughout. Despite his frequently atrocious style, with its grammatical weaknesses, its abundance of cheap and slangish expressions, and worst, perhaps, its baffling and inscrutable punctuation, he writes with so much personal pleasure and humor that we follow him gladly. Though fond of the local term—klawng, plook-pee, namphrik, tumbuk lada, and the like—he does not bewilder the reader with exoticism. Like most jungle hunters, he asserts that he is not bloodthirsty, and, unlike many of these hunters, he is genuinely interested in pursuit and mastery rather than in gory success. He does not kill four lions in three days, but very often fails to kill anything. The buffalo he finds, as do most hunters, perhaps the most difficult trophy to get: after following the trail for many hours he is close to the beast; in the appallingly silent forest he must cut his way with the jungle knife, and the least

Digitized by Google

sound is likely to start the buffalo and necessitate another long pursuit. No less difficult is the seladang—"it is your life or his."

Mr. Whitney regards the colonial policy of the French and the Dutch as largely mistaken; for the English, however, he has nothing but praise. "It is worth a journey around the Peninsula, if only to see the type of young men whom England calls out to help her solve Malay problems; and to see the type is to understand why England's colonial government is so eminently successful." The Chinese, he insists at intervals, are "the industrial backbone of Siam and of the Malay Archipelago." England could make no progress without them, and the United States, "Congress to the contrary notwithstanding," will find them just as essential in the development of the Philippines.

Notes

The latest addition to the excellent Centenary edition of Dickens, imported by Charles Scribner's Sons, is "Our Mutual Friend," in two volumes.

A volume of "American Addresses," by the Hon. Joseph H. Choate, is promised by the Century Co. for this autumn. From the same house is to come Prof. A. C. McGiffert's "Martin Luther: The Man and His Work."

Henry Frank, author of "Modern Light on Immortality," is finishing a sonnet-sequence to be entitled "The Story of America Sketched in Sonnets." The book will be published by Sherman, French & Co.

George Moore, who has removed his residence from Dublin to London, is writing an autobiography called "Hail and Farewell," which will extend to two or three volumes. The first volume, dealing with his life in Ireland and on the Continent, will be published by D. Appleton & Co. this autumn.

In view of the swarm of imitations that have entered the field, it is interesting to hear that Henry Holt & Co. are issuing the fifty-ninth edition of "The Prisoner of Zenda," and the twenty-third of "Rupert of Hentzau."

Prof. Albert Bernhardt Faust, head of the German department at Cornell, has just received the Loubat prize (3,000 marks) from the Royal Prussian Academy of Science for his work entitled "The German Element in the United States." The book is published by Houghton Mifflin Co.

A. C. McClurg & Co. have a long list of titles for autumn publication. It includes in biography and history: "Robert Louis Stevenson in California," by Katherine D. Osbourne; "Fifty Years of Public Service," by the Hon. Shelby M. Cullom, senior U. S. Senator from Illinois; "Kansas in the Sixties," by the Hon. Samuel J. Crawford, Governor of Kansas; and "The Expedition of the Donner Party and Its Tragic Fate."—In travel: "A Motor Flight through Algeria and Tunisia," by Mrs. Edward Ayer; "Abroad in a Runabout," by A. J. and F. H. Hand; "A Garden of Paris," by Elizabeth Wallace; "Through the Heart of Canada," by Frank Yeigh; "America of To-morrow," by Abbé Felix Klein; "The Coming China," by Joseph King Goodrich, and "An Army Officer on Leave in Japan," by L. Mervin Maus, U. S. A.—In fiction: "My Lady of Doubt," by Randall Parrish; "As the Sparks Fly Upward," by Cyrus Townsend Brady; "The Blood of the Arena," a translation by Frances Douglas of Señor Vicente Blasco Ibáñez's Spanish story of bull fighting; "Dr. David," by Marjorie Benton Cooke; "The Texican," by Dane Coolidge; "Out of the Primitive," by Robert Ames Bennet; "The Quest of the Silver Fleece," by Wm. E. B. Du Bois; "Something Else," by J. Breckenridge Ellis; "The Fusing Force," by Katharine Hopkins Chapman; "The Smile of the Sphinx," by Marguerite Bouvet; "Emerson's Wife, and other Western Stories," by Florence Finch Kelly; and "A Viking's Love and other Tales of the North," by Ottilie A. Liljencrantz.—Miscellaneous: "Arts and Crafts of Our Teutonic Forefathers," by G. Baldwin Brown; "Myths and Legends of Alaska," by Katharine B. Judson; "One Thousand Books for Children," by Penrhyn W. Coussens; "The High School Debate Book," by E. C. Robbins; "The Modern Railroad," by Edward Hungerford; "Searchlights on Some American Industries," by James Cooke Mills; "The Woman Movement in America," by Belle Squire; "Ship Subsidies," by Edwin M. Bacon; "Building Your Girl," by Kenneth H. Wayne, and a new enlarged edition of "The New Home Cook Book."

Among the miscellaneous books announced by Frederick A. Stokes Company for publication this summer and autumn are the following: "Industrial Depressions," by George H. Hull; "The Book of Love," by Arthur Ransome; "My Confession Book," "The Fortunes of My Friends," "Revelations of My Friends," in Thumbograph Series; "A Tribute to the Dog," by Gustav Kobbe; "The Woman with the Lamp," by Richard Dehan; "The Secret Garden," by Frances Hodgson Burnett; "A Prairie Courtship," by Harold Bindloss; "The Fruitful Vine," by Robert Hichens; "Pandora's Box," by John A. Mitchell; "Advanced Auction Bridge," by the expert of the New York *Sun;* "The Syrian Shepherd's Psalm," by Jules Guérin; "The Great Adventure," by Louise Pond Jewell; "The Tragedy of St. Helena," by Sir Walter Runciman; "In Northern Mists," by Fridtjof Nansen; "At the Silver Gate," by John Vance Cheney; "A Roman Pilgrimage," by R. Ellis Roberts; "Across the Roof of the World," by P. T. Etherton; "The Danube," by Walter Jerrold; "The Fortunate Isles," by Mary Stuart Boyd, and "The South Wales Coast," by Ernest Rhys.

As with a good many other flowers, the glory of Count Albert d'Orsay was rooted in ill-smelling ground. As the accepted lover of Lady Blessington, it is not nice that her husband (who signed himself "Blessinton") should have promised to provide for him if he would abandon his career in the French army, and marry one of Blessington's daughters (by a former wife, it is pleasant to add). That, nevertheless, was the support of the Count's career, which is told with some sprightliness, falling at times into amateurish smartness, by W. Teignmouth Shore in his "D'Orsay, or the Complete Dandy" (Brentano's). There is not enough known of the Count to fill out the pudgy volume which English publishers think necessary for a biography, and as a consequence a considerable part of the book is really a life of Lady Blessington, with an account of the society which gathered in her salon. If the early career of Lady Holland kept a few of the more precise ladies of London away from Holland House, the unrepentant conduct of her rival in society, Lady Blessington, limited the circle at St. James's Square and Gore House almost entirely to men. But where Louis Napoleon, Thackeray, Disraeli, Dickens, and others of that kidney met, there was conversation, at least. Like Beau Brummel, our dandiacal hero suffered the ignominy of debts and ended his career in the shade, so that the tale of his life is as moral as it is entertaining.

There is not much political or military history in A. C. A. Brett's "Charles II and His Court" (Putnam), except that Charles's youthful adventures in the Rebellion are related with sufficient detail. It is the romantic and personal aspects of the subject that have appealed most to the author, and these he has set forth with sufficient knowledge and sober skill. He writes confessedly as a partisan of the Stuarts, and this is no bad thing in a popular book of this sort. Now and then he rather strains the note of partiality, as when he maintains that Charles received the French subsidies in a spirit of patriotism, or when, in reference to the Rye House plot, he observes calmly that "the rest of the Whig chiefs decided on attempting to kill the King"; but for the most part the story is told without distortion of the facts. Even for the general reader it would have been better if Mr. Brett had been more particular in stating his sources; it is sometimes irritating to read an extract from a letter or diary without knowing the name of the writer. Nor should Mr. Brett date the foundation of the Royal Society in 1663—it was founded in 1660 and chartered in 1662—nor is he quite precise in speaking of the Whigs before 1679.

In "The Great Epic of Israel" (Sturgis & Walton), Amos Kidder Fiske reports on his readings in Old Testament criticism for the benefit of a popular audience. How far his readings ranged, or on what writers he pins most faith, he leaves the reader to guess, for there are no footnotes, and in the preface the only reference is to the "Encyclopedia Biblica." The author's purpose seems to be to persuade a generation taught by "teachers and preachers who still shrink from teaching and preaching the truth freely and candidly" (p. viii), that there is no special inspiration in the Old Testament. He declares that "the consecrated writings of the Jews are here treated as an epic of the people of Israel," but he nowhere defines the meaning of "epic," nor does he seem to make any attempt to relate it to the Iliad and the others, except by constant insistence that it is the work of man and that it contains many myths and much fiction. His attempt to bind the heterogeneous contents of the Old Testament into a single continuous work in narrative form would be puzzling, we believe, to readers who know their Bible in the old-fashioned way; and hardly less so to those who have studied the higher criticism. The development of the history and of the religion of Israel was undoubtedly

Digitized by Google

continuous; but the literature has come down to us in fragments, which cannot be forced into continuous form without violence to their nature.

Brown Brothers' of Philadelphia are putting forth a Modern Authors' series of translations in the form of thin volumes averaging some forty pages in attractive blue-board covers. Modern is here used in the sense of advanced. The authors drawn from are mostly leaders of revolt. Upon the basis of the three booklets that have reached us, comprising three short stories from the German of Frank Wedekind and one from the Russian of Garshin, we are not yet prepared to say that the series meets a long-felt want.

In his "Greek Immigration to the United States" (Yale University Press), Henry Pratt Fairchild has swept the ground clear. The book was written as a Ph.D. thesis for the Yale department of anthropology, and it breathes on every page the love of the infinitesimal for its own sake. It goes against the grain to pick fault with so honest, so thorough, and so readable a contribution to social science. Inclusiveness is its virtue and its sin. Everything that could possibly be said about the causes of Greek immigration, about the mechanics of it, about its scope and character, about its effects on this country and on Greece, has been said. Nevertheless, the doubt will occur whether it was worth a trip to Greece and 120 pages of close text to ascertain that the Greeks come to the United States because Greece is a poor country, where the peasant wrings a scanty subsistence out of a reluctant soil, etc., etc. The architecture of the Greek Orthodox Church, at Lowell, Mass., receives three-quarters of a page. For the principal Greek colonies in Chicago, New York, and Lowell, there are detailed enumerations and censuses that come close to killing a small fly on a very big wheel. The time-honored grubbing of the Ph.D. thesis is here devoted to modern uses. But while a treatise on the leg structure of an obscure member of Coleoptera may be rather trying, it has a dignity that does not attach to an enumeration by States of the number of candy and fruit stores owned by Greeks throughout the United States. Mr. Fairchild has written a fairly useful book, but it would have been just as useful if he had made it shorter by two-thirds. With less space to cover he might have driven his analysis closer, here and there. Closer study, for instance, would have shown that the situation in Greece is not necessarily intolerable because "a laborer earning five drachmas a day will pay ten drachmas per month for a room for himself and his family." Two days' income for a month's rent is not a crushing expenditure. The ordinary laborer in New York probably pays out six or seven days' income as rent.

A real difficulty in the use of Latin beginners' books lies in the fact that the vocabularies and the sentences for translation are usually put together on the same page. To avoid this difficulty Miss Abby Kirk and Miss E. L. Bull have adopted a new device in their "First Latin Book" (Lippincott). The translation exercises are grouped together in the second part of the book, and the space thus usually occupied under the different lessons is left blank. From the mechanical point of view, the appearance of the book is therefore peculiar, for the authors have arranged that every lesson should begin at the top of the page, with the result that many pages are from one-half to two-thirds blank. The idea, however, is not a bad one, and gains a special point from the insistence nowadays that translation should be the test of knowledge rather than an end in itself. Otherwise these lessons are arranged with great care and with evident pedagogical insight.

"Spanish Short Stories" (Heath), edited by E. C. Hills and L. Reinhardt, contains fourteen stories, preceded by a concise but adequate introduction, and followed by notes and a vocabulary. Among the authors represented are Bécquer, Valdés, Alarcón, Pereda, Galdós, Ibáñez, and Emilia Pardo Bazán. The stories are well-chosen and interesting, and the editing is well done.

Miss Minnetta Taylor, a noted linguist, fifty-one years old, died at her home in Greencastle, Ind., yesterday, from injuries received in a fall a short time ago. She is said to have spoken forty-five languages, and was the joint author with Señor Biragua of New York of six Spanish-English textbooks.

Isaac B. Morris, a retired lawyer, died on Thursday in Brooklyn. He was born in Chester County, Pa., and was graduated at Miami University in the class with Horace Mann. He was a writer on many subjects pertaining to his profession and also on sociological and political questions, and was the author of "The Battle of the Standards," a work on bimetallism.

Robert Dewey Benedict died on Saturday at his home in Burlington, Vt., in his eighty-third year. He was once a prominent member of the American Bar Association, specializing in admiralty. He was born in Burlington, and soon after his graduation from the University of Vermont in 1848 he came to New York. He was the author of "Reports of Cases Argued and Determined in the District Courts of the United States within the Second Circuit" (ten volumes), and also of many published addresses, and he edited "Benedict's Admiralty."

Edward Morse Shepard died last Friday night at his country home, Erlowest, at Lake George, after an illness of several weeks. He was born in New York on July 23, 1850. His father, Lorenzo B. Shepard, who died when he was six years old, was a conspicuous Democrat in the city when Democracy signified principle, patriotism, and civic spirit. He was an orator of power and of charm, a man of much learning and of marked qualities of mind. The boy was fortunate in the friendships that his parentage secured to him. Abram S. Hewitt became his guardian, as he had been the friend of the boy's father. This function coincided with the removal of the family to Brooklyn, and young Shepard was put in Public School 13, in Degraw Street. From here he went for a year to Oberlin College, absorbing some of the atmosphere which the great educator, Horace Mann, had there created. He then entered the College of the City of New York, from which he received the degree of A.B. in 1869. He also held the honorary degree of LL.D. from Tulane University, 1903; Washington and Lee, 1904, and Williams, 1907. Mr. Shepard studied law in the office of John E. Parsons, and was admitted to the bar in 1871. In 1876 he formed a partnership with Albert Stickney, an association which continued until 1890, when the firm of Parsons, Shepard & Ogden was organized. In 1902 Mr. Shepard became head of the firm of Shepard, Smith & Harkness. He was appointed civil service commissioner in Brooklyn in 1883, remaining on the board for two years and becoming its chairman from 1888 to 1890. He was State forestry commissioner in 1884-85 and also a member of the judicial commission to fix the value of the plant and franchise of the Long Island Water Supply Company. At about this time, in the early nineties, he was active in the reorganization of the Kings County Democracy, and did the lion's share in getting the disreputable characters, which made it notorious, ousted from that organization. In 1893 he came prominently before the public in the prosecution of John Y. McKane for ballot-box frauds in Gravesend. From that time his political activities extended from the city to the State, and from the State to the nation. Amid the distractions of politics and the tasks of law he found time for study and writing. His published books are only two: "Martin Van Buren" and "Memoirs of Dugdale," but he wrote also many articles for the magazines.

From Paris comes the report of the death of Hippolyte Garnier, the well-known publisher, at the great age of ninety-six. In 1833 he and his brothers started as booksellers in the Palais Royal.

Science

The Frederick A. Stokes Company announces the following science and nature books: "The World's Minerals," by L. J. Spencer; "Through Birdland Byways" and "Wild Nature Wooed and Won," by Oliver G. Pike; "The Wild Beasts of the World," by Frank Finn; "Flowers from Many Gardens," by H. Shaylor; "Roses"; "At My Window," by Ruth Johnstone, and "Joys of the Garden."

Lord Avebury announces a new work to be entitled "On Marriage, Totemism and Religion: An Answer to Critics." Meanwhile Longmans, Green & Co. issue a reprint of the sixth edition (1902) of his "Origin of Civilization and the Primitive Condition of Man," to which Lord Avebury has added a new Preface touching briefly on these disputed questions.

To the third edition of his "Grammar of Science" (Macmillan) Karl Pearson has added a new chapter on our ideas of causation, and has included a chapter on Modern Physical Ideas by Prof. E. Cunningham. These increments have made it necessary to divide the work into two volumes, of which the first has appeared, with the sub-title: "Part I.—Physical." The second part, dealing with living forms, is promised for this year.

For those who retain the old-fashioned romantic interest in the starry heavens Mary Proctor has prepared an attractive little book called "Half-Hours with the Summer Stars" (McClurg). Science, history, legend, and poetry here join amicable

Digitized by Google

hands, though there is no improper confusion of one with another.

Volume IV of "Papers from the Tortugas Laboratory of the Carnegie Institution," though containing but three papers, maintains the excellent standard set by its predecessors. Of special interest to the morphologist is S. H. Pratt's discussion of "Monocotyle floridiana, a new monogenetic Trematode." Monocotyle is a genus of peculiar trematode worms, of which but two species have hitherto been known, both parasitic on rays. One of these is reported from Naples, the other from Japan. The third species, from the gills of the eagle-ray at Tortugas, is the subject of Dr. Pratt's study, which adds much of value to Goto's description of the Japanese species. Edwin Linton continues his studies of the helminth fauna of the Dry Tortugas by a consideration of the Trematodes. His paper is illustrated by twenty-eight beautiful plates, giving not only figures of the entire specimens, but of sections showing much anatomical detail. Something of the assiduity with which the work was prosecuted may be gathered from the fact that the collections upon which it is based were made in about three weeks each of the summers of 1906, 1907, and 1908. In all, sixty-four species are described, of which forty-six are new. So unfamiliar are many of these that the author has found it necessary to establish thirty-seven new genera. A key to the genera and species listed adds greatly to the value of the work. An elastic interpretation of the scope of "marine biology" admits to the series T. W. Vanghan's "Contributions to the Geologic History of the Floridian Plateau," but much of the completeness of this interesting paper is due to the facilities afforded by the laboratory, and its consideration of the agency of the coral in the building up of the plateau gives it a zoological interest. For some years it has been known that the land surface of Florida represents only about half the area of the Floridian Plateau. For instance, ten miles south of St. Augustine the total width of the plateau is 405 miles, of which only 135 is land surface. The agencies which originally shaped and subsequently dominated the development of the plateau are discussed at length, and many valuable data are presented regarding the source, quantity, methods of transporting and distribution of the sediments now being deposited, which consist mostly of silica and carbonate of lime. It is a popular belief that the land area of Florida has been built up primarily through the agency of the coral polyp, but from this view Mr. Vaughan, in common with most modern students of the subject, dissents. The more important limestones of the State are oölitic, the corals playing a relatively unimportant rôle.

One of the most interesting botanical regions in our country lies near San Francisco. It has been carefully explored by a good many botanists, both professional and amateur, and its treasures are more or less accessible in numerous treatises. One of the most convenient of these is Prof. W. L. Jepson's "Flora of Western Middle California" (San Francisco: Cunningham, Curtiss & Welch), a second revised edition of which has just appeared. The "key" to the natural families has been constructed in such a manner as to lead even a beginner by easy steps, and the descriptions, both generic and specific, are sufficiently ample. There are no illustrations, but the lack is not altogether serious. One could wish that, for the botanists coming from the East, rather more information had been given about trivial and yet interesting peculiarities, such as fragrance, exceptional methods of dissemination, and the like. The author has wisely adopted the sequence which places at the beginning of the book the families simplest in structure and lowest in the scale, passing thence to the more highly differentiated. He has not attempted to indicate by accents the pronunciation of the technical names of the plants, always a difficult and ungracious task, and one which is, on the whole, of little worth; nor, quite properly, has he contrived common names for the native species, although he has retained the good ones, like "cream-cups," "sand-verbena," "tar-weed," etc. Information concerning local words is given compactly and well. Thus, "Chaparral consists of Manzanita, Pickeringia, Buckbrush, Scruboak, or similar shrubs which form impenetrable and extensive thickets clothing densely the higher slopes and ridges of the Coast Ranges, and the foothills and middle altitudes of the Sierra Nevada." The handy volume of over 500 pages of small octavo contains a geographical index, a sufficient glossary, and a good index of names.

Music and Drama

Richard Strauss: Der Rosenkavalier. A Guide to the Work by Alfred Schattmann. Berlin: Adolph Furstner; New York: G. Schirmer. 50 cents net.

The attitude of managers toward new operas has changed considerably since the time when Richard Wagner gave his music-dramas to the world. In most cases he had to wait years before he could obtain a performance. Richard Strauss, in our day, sends his manuscript, as soon as the ink is dry, to the managers, and in a few months the première is ready. Shortly after the first performance of "Elektra," Hofmannsthal and Strauss put their heads together for another opera, to follow that harrowing musical tragedy. The poet rapidly sketched the scenario of the "Rosenkavalier," submitted it to the composer, and immediately proceeded with its elaboration. The book was written act by act, and as soon as an act was ready—indeed, in some cases, sooner—the manuscript was sent to the composer, who set to work on it. At the end of the full score the words "Garmisch, 26th September, 1910," are written. Four months later the opera had its first performance, in Dresden. The time would have been even shorter had there not been some delay due to a disagreement between the manager and the composer, who at first demanded not only an exceptionally large royalty but an additional guaranty of four annual performances of "Salome" and "Elektra," for a period of ten years, for the right to produce the "Rosenkavalier." At this the management not only of the Dresden Opera, but of the other German institutions, balked, because neither of those operas had held its own long after its sensational launching.

It was predicted when "Elektra" was produced that Strauss himself would be unable to go beyond it in vocal untunefulness and orchestral complexity and cacophony, and that he would therefore next compose a comic opera full of tunes. That was what he did. There is nothing gruesome in "Der Rosenkavalier"; it relates the adventures, mostly comic, of a baron who, shortly before his expected marriage to the daughter of a wealthy merchant, makes love to a young man who happens to be disguised as a chambermaid, and consequently gets into no end of trouble. The place of action is Vienna, in the early years of the reign of Maria Theresa, and Strauss could therefore introduce several Prater waltzes and a minuet in the manner of Mozart.

Apart from this, however, and the inclusion of an Italian tune and an oversentimental passage in Mendelssohn's style, "Der Rosenkavalier" is not so very different from "Salome" and "Elektra." A hundred players are needed for the orchestra, besides a band on the stage, and the score is such a complex woof of leading motives that the composer sanctioned the preparation of a special guide to the music, the English version of which, by Alfred Kalisch, makes a little book of eighty-eight pages. The compiler, Alfred Schattmann, says that the names given to the themes were in most cases decided on in consultation with the composer, wherefore his Guide may be considered official. It would have been well if he had begun with a brief synopsis of the plot, for in the detailed comments on the dialogue and music one who has not read the libretto must here and there lose the connection.

The number of guiding themes in the opera, according to this book, is 118. Wagner has only 90 in his four Nibelung dramas. Some of the names given to Strauss's themes are "Octavian," "The Princess," "Passionate embrace," "Tinkling of bells and menace," "The little black boy," "Polite conversation," "The noble orphans," "Servants of Ochs," "I'm glad I'll be married soon," "My son-in-law," "The Princess as a young girl." Musically, most of them are simple groups of notes, the merest tonal commonplaces, and there is no visible or audible reason why the "Young Princess" theme and the "Black boy" theme should not be exchanged—and so with most of the others. Perhaps the six notes of motive No. 29 do suggest "the coarseness and angularity of Ochs's character"; but such sentences as "Ochs is bleeding freely (72, with triplets and trills in the bassethorn, horn, and bassoon)," and "Now Faninal threatens her

Digitized by Google

with the convent 'for all her life' (85 and 55, trills in the horns)," and again, "'Hussy, you; off to the convent!' (55, vehement trills in the horns)," are apt to make a comic impression on readers who are not converts. However, for those who look forward to hearing Strauss's latest opera (which is to be produced in this country in the autumn), this guide will prove of value. The 118 leading themes are printed in the text in their proper places, and appended to the little book is a large sheet on which they are all brought together for convenient memorizing at the piano. Some of the waltz themes are ingratiating.

While the late Felix Mottl was a man of wide sympathies, he had, like Gustav Mahler, two specialties in which he excelled particularly—the operas of Wagner and those of Mozart. The death of these two musicians, following so soon that of Levi and of Zumpke, makes an irreparable breach in the ranks of the great Wagner conductors, all the more as the veteran Hans Richter has virtually retired, although he will wield the bâton once more at Bayreuth this summer. The situation is deplorable in these days when the operatic conductor has come to be regarded as at least equal in importance to the star singers.

Berlin is not the only German city which attracts American and English students of music in shoals. The Leipzig Konservatorium der Musik prints its prospectus in English as well as in German.

The next Strauss novelty is to be an orchestral tone poem entitled "Alpine Symphony." It will depict the climb of a lonely wanderer into regions where there are gullies, waterfalls, and other obstacles to surmount. A thunderstorm also occurs; but finally the summit is reached, and the first movement ends with a song of praise to the glories of the Alps. In the second movement, which is concerned with the descent, the wanderer grows skeptical, and is tormented by religious doubts. In the end, however, faith prevails, and the "Alpine Symphony" concludes with a majestic hymn.

The Hungarian Government has official charge of the Liszt Festival, to be held from October 21 to 25 at Budapest. On the morning of October 21 (Liszt was born on October 22, 1811) his Coronation Mass will be sung in one of the churches. In the evening there will be a performance of his "Legend of Saint Elizabeth" at the Royal Opera. Siegfried Wagner (grandson of Liszt and son of Richard Wagner), Weingartner, and Stephan Kerner have been engaged to conduct the orchestral numbers of the festival concerts, and among the distinguished pianists who will be heard are D'Albert, Friedheim, Lamond, Rosenthal, Sauer, and Stavenhagen. To the many American organizations which intend to give Liszt concerts next October, the programmes of October 22, 23, and 24 will be useful as models, all the pieces and songs on them being gems of the first water. The festival will close on the twenty-fifth with the singing of the oratorio "Christus," which is a combination of choral writing in the sixteenth century Palestrina manner with modern orchestral coloring, such as only the brilliant cosmopolitan genius of Liszt could have made.

Viennese operetta has once more won first place, not only in Germany and Austria, but in England and America. The situation is summed up by Ernest Mayer, director of the International Copyright Bureau in London, who gives the following really remarkable list of Viennese works that are now running or will shortly be produced in the United States and England: In London, "The Duke of Luxembourg" bids fair to continue its run through the whole of next season, when it will also be taken on tour on both sides of the Atlantic. Lehar's "Gipsy Love" is to be staged in New York in November, in London in December. There is to be a brilliant revival of the "Fledermaus" in London, where there will also be English productions of the "Förster-Christel," and Fall's "Schneeglöckchen" and "Brüderlein fein." Earlier works, like "The Merry Widow," "The Dollar Princess," "The Waltz Dream," and "The Divorced Woman," are in the meantime being sung in the English provinces. Other Viennese operettas in preparation are Fall's "The Siren" and Lehar's "The Man with Three Wives," in a version made by Paul Potter.

The Coburn Players performed "Macbeth" last Friday night on the College Green at Columbia University. This marked the climax of a week's successful engagement—an annual event toward which summer students as well as the few theatre-goers left in town have come to look. Mr. and Mrs. Coburn have associated with them this year a well-balanced cast. They have appeared to great advantage in the lighter Shakespearean plays, such as "Much Ado About Nothing" and "As You Like It." It cannot be said that their excursion into tragedy was as effective, although the acting was spirited, and Mr. and Mrs. Coburn themselves put much conscientiousness into their handling of the leading rôles.

October 16 has been set as the date for the first performance in the second season of Russian ballets under the Metropolitan Opera House management. There will be a three days' performance in the Madison Square Garden, which will be turned into a Russian village. In the company will be Mlle. Pavlowa, M. Mordkin, M. Moroseff, and Mlles. Pajitzkara and Bewickowa from the old company, and Mlles. Karsavina, Geltzer, Siedowa, and Kschenskaja from the Metropolitan Opera House. In addition there will be a corps de ballet of twenty-four couples, and the Imperial Russian Court Orchestra, under the direction of W. W. Andreeff, several instrumental soloists, and a quintet of Russian opera singers. Karsavina is the premier ballerina from the Imperial Opera House at St. Petersburg, Geltzer was popular at the London Alhambra this summer, and Kschenskaja is the chief soloist at the Imperial Opera House in Russia, but appears only when the Czar is in the house. She, too, danced in London this summer. Siedowa is one of the younger dancers, and has never been seen in England.

Maurice Hewlett's "Ariadne in Naxos" was performed a fortnight ago at the Little Theatre in London, under the direction of the Poets' Club. The piece forms the second part of "The Agonists; a Trilogy of God and Man." Regarding the production, the London *Times* says:

The purpose of the whole trilogy is to relate three unsuccessful attempts at union between God and man as illustrated by the rise and fall of the House of Crete, a history more horrible than tragic. The scene of this second part is laid in the Island of Naxos, and is in brief the tale of the passion of the God of Wine for Ariadne. . . . The performance as a whole was undeniably distasteful; the heights of passion are levelled when all is done under the influence of frenzy that might not unreasonably be termed drunkenness. The spell of Dionysus is over mankind and this effect was enhanced by the dances.

Art

VASARI'S CENTENARY.

The Life of Giorgio Vasari: A Study of the Later Renaissance in Italy. By Robert W. Carden. With illustrations. New York: Henry Holt & Co. $4 net.

In view doubtless of the four hundredth anniversary of Vasari's birth, July 30, this well-printed biography has been prepared. It is primarily a character study on a large scale, though sufficiently well-ballasted with facts. Insight, humor, and style make the volume most readable. Possibly the subtitle promises too much, for there is little general consideration of the later Renaissance, and the treatment of the famous "Lives of the Painters" is scant and scrappy. Here Mr. Carden has probably assumed that the facts are familiar, a hazardous supposition for any biographer. Still, the book gains in literary unity from such exclusions, and the temptation to treat merely the man Vasari was hardly to be resisted. So complete and on the whole so amiable an egotist is rare even in the most self-centred of callings.

Listen to him on the very day of Michelangelo's burial in Santa Croce. Vasari, having duly laid the Titan away, writes to Duke Cosimo and reassures him about the future of the arts. Vasari will look to it personally: "I shall spare no pains to keep these noble arts alive and to advance them by means of my paintings, my writings, and by every other means within my power." The indefatigable little man merely exaggerated somewhat the popular opinion of himself. To be sure, Benvenuto Cellini had snarled in good sonnet form at that fecundity which seemed ordained to fill the world with error—

Per far nel mondo d'ogni sorta errore,

but popes and grand dukes had taken a different view. Vasari was good company, as many frank egotists are. The dour Buonarroti opened his heart to him, Cosimo in the last black days wanted him at hand, prelates and scholars gladly aided in the "Lives" or in the invention of the great historical frescoes. Messer Giorgio was friendly, and naturally much befriended. To oblige

Digitized by Google

the Cardinal del Monte, he took a wife, to solace her while he was absent in the great world of Rome or Florence he addressed to her numerous sonnets expressing his own distress. In best Petrarchan fashion he alternately burns and freezes, but alas! the work that is to immortalize himself and her must continue.

As to this work, most of it seems to-day appallingly bad. All the squirming anatomical insistency of Michelangelo is in it without a whit of Michelangelo's nobility. One may hardly remain long in the frescoed great hall of the Palazzo Vecchio, and one marvels at the taste that could not merely endure but admire these contorted lividities. Vasari had no qualms on the subject, for he printed a series of Dialogues in which to a princely hearer the artist expounded the perfections of these great battle scenes. With customary luck, Cavaliere Giorgio died too soon to hear the abuse that followed the unveiling of his last great work, the frescoes inside Brunellesco's dome. The satirist, Grazzini, better known as il Lasca, opines that the dome thus decorated is become a footbath or a washtub. Vasari is generally hated as a "public thief and assassin," and the Florentine people will never have an end of regret except through the aid of whitewash.

Now, barring the personal abuse, il Lasca's verdict was right enough. Whitewash is emphatically what the inside of the Florentine dome still needs, and, generally speaking, most of the walls decorated by Vasari's brush would better please in honest Tuscan plaster. As a painter, the man was a rank mannerist. Nothing much can be said for him on that score but that he shared with most of his Tuscan contemporaries a fair gift for portraiture. His bewildering success as a decorator merely indicates the fallen condition of the art of painting in Rome and Florence of his time. Mr. Carden gives over the painting and claims rank for his hero only on the ground of his work in architecture. And, indeed, the man who built the Uffizi Palace, and that of the Knights of St. Stephen at Pisa, deserves something more than a footnote in the history of art. Yet even the painting commands, if not approval, a certain admiration for its sheer athleticism. There never was so ready and competent a man.

For the world at large Vasari survives merely as the author of the "Lives," and here the world judges aright. One evening at Cardinal Farnese's in Rome, Vasari was present with many humanists. The talk drifted to a project of Paolo Giovio's to celebrate the artists from antiquity to the present day. Vasari noted that Paolo spoke well, but, after the fashion of the literary critic, very much in general and with frequent inaccuracies. As the group discussed the plan approvingly, the Cardinal turned to Vasari, who also approved, "provided that Giovio were assisted by a painter or some one who could put the facts into their proper order and explain the technicalities to him." The Cardinal readily divined that Messer Giorgio could name the painter. As a matter of fact, Vasari had been collecting old drawings from his boyhood, had visited Northern Italy in 1541, meeting the artists and taking notes, and presumably had already nourished the plan which he actually accomplished at the Cardinal's suggestion. It was like Vasari to wait for precisely the most picturesque moment at which to commence author. According to his own account, this evening with Giovio, Caro, Molza, and others of the Cardinal's set fell in 1546. The researches of Scoti-Bertinelli make it almost certain that Vasari misremembered by two or three years, and that the memorable conference must be set in the year 1543. About this range of doubt attaches to all dates cited by the author of the "Lives." In 1550 the first edition in two volumes appeared in the types of Torrentino and was promptly exhausted. In 1568 the revised and enlarged edition in three volumes appeared with the Giunta imprint. Almost immediately, for the author's airs had doubtless made him enemies, the charge was made that Vasari had favored Tuscan, and especially Florentine, artists and had filled his pages with legends and errors. To tax Vasari with gross inaccuracy has ever since been fashionable.

Genially interpreted, neither the charge of "campanilism" nor that of carelessness is true. Vasari was a singularly openminded chronicler. Born in Arezzo, a border town between Tuscany and Umbria, working much at Rome, varying his life at court with long retreats at Camaldoli, Vasari was capable of detached views. In spite of his prolonged and devoted service to the Medici, he was not a Florentine. Of his native Arezzo he became a Gonfaloniere; there he adorned the chapel of his family and there he was buried. The worst that can be charged against the "Lives" is that there is some harmless puffery of early Aretine painters. Vasari could not make bricks without straw. At Florence only he commanded a considerable amount of manuscript and traditional material; at Rome he knew the great personages of Raphael's following and Michelangelo's. His knowledge of Lombard and Venetian painting was perforce gained from two short trips. The embittered relations between Florence and Siena hardly admitted of research in the City of the Virgin. It is true enough that Vasari's account of Sienese painting is defective, yet it is also true that he praised generously the greatest Sienese artists—Duccio, Simone Memmi, Ambruogio Lorenzetti—gave full recognition to his own older Sienese contemporary, Baldassare Peruzzi, and loyally set down whatever was accessibly recorded about the neighboring school. Naturally, Vasari was limited by his opportunities; but his curiosity was universal, his temper remarkably catholic. In the days of express trains, photographs, museums, and centralized archives it is easy to make game of his achievement, but to mock him shows as great an absence of historic sense as of modesty. The charge of provincialism recoils from him upon his critics.

On the score of accuracy, Vasari cannot be held blameless, yet here to understand is to pardon. He had an unhappy habit of giving his approximations in exact figures. Instead of saying an artist died about seventy years old, he would say "in his sixty-eighth year." Sometimes such a statement is based on written authority, more often it represents a verbal tradition; occasionally, one must fear, it represents nothing but Vasari's surmise. This means simply that Vasari must not be taken arithmetically, and that is no shame to him. In his time nobody could have written a chronologically exact history of art. Even in our time it has taken two generations of scholarship partially to set Vasari's dates right. The moral is plainly, don't use him for dates, but for facts of another order. In all these matters we shall be able to judge more fairly when the "Lives" are cleared of the present litter of superfluous and polemical annotation and printed in a way to show the relations of the first and second editions, and of both to the literary sources. In its day, the translation with Dr. Richter's notes in the Bohn Library was excellent. The recent German translation rearranged under the categories of the arts is a model for economy and accuracy of annotation. We are soon to have a critical edition edited by Karl Frey, and the Florentine publishers of the Milanesi, which, however behind the times, is still the standard, have long promised a thoroughly revised reissue. The convenience of Blashfield and Hopkins's selection would justify a corrected edition on the basis of the new and forthcoming material. About the scholarly shortcomings of Vasari nothing new and important is likely to be learnt. His substantial merit will appear more clearly when we have conveniently set together his exact text and its sources.

That Vasari was a deliberate myth-maker is a more serious accusation. It has even been said that without verification nothing should be accepted from the "Lives." Now, Vasari was an uncritical compiler, but we do not think a single instance of mystification could be cited from the three volumes. More

Digitized by Google

frequently than is imagined, Vasari drew from written sources which were themselves inaccurate. Toward tradition of whatever value, so it were interesting, he bent a credulous ear. But what a service it was to collect even indiscriminately the artistic tradition of the sixteenth century, to make three generations of artists stand before us as breathing men! How grossly the inaccuracy of Vasari's tradition has been exaggerated, let a single instance attest. When Crowe and Cavalcaselle wrote the life of Fra Filippo Lippi they denied as legendary the seduction of the nun Lucrezia Buti and the paternity of Filippino Lippi. Vasari's culpable weakness for a good story was noted. The improbability of the scandal in itself was emphasized, its incompatibility with the beautiful spirit evinced in the Fra's paintings. *A fortiori*, the yarn that Fra Filippo had been captured by the Barbary pirates was smiled out of court. Well, the documents have since proved that as regards Lucrezia and Filippino Vasari merely told truly what was matter of common knowledge at his time. What is truly fantastic in the case is the skepticism of Crowe and Cavalcaselle and their egregious attempt to whitewash the errant friar. So much for one of Vasari's "legends." It would not be surprising if evidence of the Fra's Barbary captivity should some day turn up. Nothing contradicts the story, and Leonardo da Vinci, who could have had it from Filippino, was telling it before the year 1500. To attack Vasari gratuitously is dangerous, as we have shown above, and here we may imagine how those who are now assailing the Life of Cimabue would treat the story of the boy Giotto drawing the sheep by the roadside if Vasari were our only warrant for it. What an instance of Vasari's "novelistic" tendency this pretty legend would be if only it did not occur a century earlier in the "Commentaries" of Lorenzo Ghiberti.

And Vasari had inklings of the modern method. His sources were not to be taken wholly on faith, but were to be controlled by inspection of the works of art. "For long experience teaches careful painters to know the various manners of the artists not otherwise than a learned and experienced scribe knows the handwriting of his peers, and any man the characters of his closest friends and kin." Here is implicitly the Morellian programme. The second edition of the "Lives" shows constantly the advantages of growing knowledge and taste. On the side of taste, indeed, barring a very few of his contemporary judgments, Vasari was almost impeccable. Equally accessible to him were the Roman severity of a Mantegna, the idyllic charm of a Giorgione, the fantastic excellence of a Piero di Cosimo. Unlike Michelangelo, Messer Giorgio could do justice to the mannered beauty of Perugino. In fine, the just proportion of appreciation was set once for all by Vasari. What he lauds seems still admirable, where he is silent we generally have to do with secondary or merely recondite merit. It is doubtful if any of the many painter critics who have succeeded him have equalled him in true catholicity.

More important yet to an open-hearted reader is Vasari's vivid sense of personality, precisely that picturesqueness for which he is reprehended. He wrote at a time when old men still remembered Pollaiuolo, Ghirlandaio, Botticelli, and treasured the words of those who had seen Ghiberti, Ucello, Fra Angelico. Vasari caught the impress of these artists just as it was fading irrevocably. To him we owe such vivifying traits as Ucello muttering "O, fair Perspective!" Ghirlandaio yearning to fresco the walls of Florence, distraught Piero di Cosimo with his eggs boiled ahead for undisturbed days of fantasy, Masaccio oblivious of praise and pay, Angelico praying his way toward a new masterpiece. And if whatever of life and color has been transmitted from the *botteghe* of the fifteenth century to ourselves is largely due to Vasari, we owe him an even greater debt for his portraiture of such princes of art as Leonardo da Vinci, Raphael, Michelangelo. Their achievements we might gather from other sources, though a life of Leonardo without Vasari's aid is almost unthinkable, but the impression they left, their pride and gentleness, their passion and restraint, their asperities and their charm, live in Vasari's pages as nowhere else. Quite incidentally, while writing a series of artist biographies, he has given us the picture of an age. Next to the incomparable Boccaccio, he is the most important source for the history of Italian culture, and possibly through his very limitations he got nearer the soul of Italy, whereas Boccaccio tends outward toward mankind.

Whether Vasari was a great man or not, his latest biographer declines to answer, but Mr. Carden's silence and the general tone of his book suggests that we must not take Messer Giorgio too seriously. The issue is possibly an unprofitable one, closely allied as it is to the still open question, How shall we take Boswell? It matters less, clearly, how we take these memorable ridiculous persons than that we do take them. To rule out Boswell for his foibles, or Vasari for equal weaknesses—or, more concretely, for bungling the lives of Masolino, Masaccio, Castagno—this merely proves lack of imagination and consequent bad literary breeding. Is not our proper attitude in either case profound gratitude without waiver of the right to smile? Vasari writes from busy days at Rome to Don Vincenzo Borghini, "Poor old Salviati has only had the pleasure of seeing me twice." The sentiment and the form of the phrase are eminently Vasarian. The reader may test his own quality by inquiring whether he has merely laughed at Vasari or whether he has also envied Salviati the high pleasure so narrowly measured out.

The Frederick A. Stokes Company has the following art books on its list: "The Painters of Japan," by Arthur Morrison; "Corot," "Delacroix," "Boucher," "Fra Lippo Lippi," "Montagna," "Perugino," "Van Eyck" (Masterpieces in Color), by T. Leman Hare; "The Old Clock Book," by N. Hudson Moore; "Chats on Farmhouse and Cottage Furniture," by Arthur Hayden; "Chats on Postage Stamps"; "Epochs of Chinese and Japanese Art," by Ernest F. Fenollosa; "Ceilings and Their Decoration," by Guy G. Rotheray; "Liber Studiorum," by J. M. W. Turner; "Fireplaces, Inglenooks, and Mantel Shelves," by Guy G. Rotheray; and "Albert Dürer," "J. R. Smith," "Watteau and Boucher," "Goya," "Van Dyck," "Montagna" (Great Engravers), by A. M. Hind.

Edwin Austin Abbey, who died in London or Tuesday, was born in Philadelphia April 1, 1852, and received his first instruction at the Academy of Fine Arts in that city. His first recognition came through his work as a pen draughtsman, but he also made many drawings with the brush. Some of the best of his most recent works consisted of tone drawings. The pictures depicting scenes from "The Tempest," both those in tone and the pen drawings, are commonly regarded as the best Abbey produced. It was to get pictures for the illustration of a volume of Herrick's poems for Harpers that Abbey made his first trip abroad in 1878. His associates in the art department of Harpers were John W. Alexander, Howard Pyle, and Joseph Pennell. With this search for local color Abbey became so fascinated that as soon as his contract with the American publishers expired he returned to England to stay. Soon afterward he received his commission from the Boston Public Library for the mural decoration of the delivery room, and his fulfilling of that contract with the Quest of the Holy Grail made him famous and popular in his own country. His compensation for that work was $15,000. The expenses of the undertaking probably exceeded that, but, as his friends put it, "his idea was not to make money; he accepted the commission for the love of the work, to set the ball a-rolling." Ten years ago Abbey received the royal commission to paint the picture of King Edward's coronation. The same honor was offered to him a year ago, when the preparations were being made for the crowning of George V, but he declined because of his unpleasant recollections of the previous coronation work. King Edward and Queen Alexandra had been considerate and reasonable; but with people of less exalted station he had had to suffer in the most exasperating fashion from their unpunctuality and from their well-nigh incredible vanity. Abbey's Edward VII coronation picture was received with much praise in the art world. The canvas is fifteen feet in length by nine in height, and the predominant colors are crimson, gold, and blue. The scene is at the crossing of

Digitized by Google

the transepts of Westminster Abbey, looking toward the south transept—a scene considerably altered from its usual aspect by the temporary removal of a tomb and the introduction of galleries or boxes, as they were called, between the great columns. Abbey's other great mural work, besides that for the Boston Library, was done for the dome of the Pennsylvania State Capitol. Penn's Treaty with the Indians, and Camp of the American Army at Valley Forge, the two large canvases for this place, were finished only a short time before his death. Of the character of his work as an artist we shall have more to say next week. He had received many degrees and honors, and was Member of the National Academy of Design, Chevalier of the Légion d'Honneur, Corresponding Member of the Institut de France, and president of the Artists' Cricket Club.

Finance

ENCOURAGING SIGNS.

Before the recent sale of Panama Canal bonds, the New York Clearing House banks had a gratifyingly large surplus reserve, on the strength of which there were many encouraging predictions with reference to our autumn financial situation. To-day, their reserve instead of being noticeably large for this season of the year is about on a level with the average of the years preceding 1907, when, in the opinion of many, there was too much inclination to sail close to the wind. The very marked decline in the reserve in consequence of the Panama Canal bond sale has focused a good many minds on a fact which, in the past, has been quite generally ignored, namely, that public expenditure has had a great deal to do with creating the situation of the last few years, and is having a great deal to do with retarding our recovery from that situation.

At the time the Panama Canal bonds were sold, it was generally assumed that the proceeds would speedily find their way back to the banks. Though it was understood that these particular bonds could not be used as a basis for bank-note circulation, their legality as a basis for deposits was plainly declared. It was, therefore, taken for granted that what the New York banks lost as private deposits they would get back in the form of government deposits. That hope has not been realized, nor is there any reason to believe that it is going to be. The money has gone into the Treasury's vaults, and there is the strongest ground for asserting that the Secretary of the Treasury intends that it shall stay there, except as it is paid out over Uncle Sam's counter in the ordinary course of business. The banks have by this time, no doubt, abandoned their expectation of regaining it for use during the crop-moving period.

Presumably, the Secretary of the Treasury chose the midsummer of 1911 to float the Panama Canal issue, because he thought he could do the best thing for himself with the least amount of harm to the money market. What he actually did was to steal a march on the industrial world by eliminating this great block of money market money, to use Bagehot's phrase. Considerably more than $50,000,000 that might otherwise have been loaned to merchants and manufacturers, to say nothing of Wall Street, has been locked up for the purpose of being paid out in comparatively small sums to countless persons in a great many different localities. Doubtless, if the financial situation should change radically for the worse, the Secretary of the Treasury would feel obliged to undo his work to the extent of depositing this money in the banks.

But short of some such necessity as that he is not likely to act. The need of such action later on is not exciting thought at this time. Nevertheless, while the absence of the money absorbed by the Panama Canal bonds may not, and probably does not, imply any new hardship to general industry, it is quite conceivable that it may play no inconsiderable part in delaying the return of general industry to its old-time activity. That it will have some effect in retarding the bond market is likely. It is no secret that the bond houses have expected that by this time there would be a slowing down in the movement of bonds, owing not only to the Government's withdrawal of more than $50,000,000, but also to the larger volume of discounts and purchases of commercial paper by the banks.

Heretofore the country has not given very much thought to the financial aspect of the Panama Canal. Here was a great public work that would benefit the whole world, and we, the builders, were an enormously wealthy nation. At last, however, we seem to have reached a point where the floating of bonds for only a small fraction of the cost has appreciably hampered the money market. In other words, this country is now having an object lesson in public expenditure, and is coming to see that the money which it is spending without stint is just so much capital withdrawn from the channels where the 90,000,000 Americans look for their bread and butter. A decade at least of extravagance in public expenditure, a large part of it far less justifiable than this particular item, has contributed as much as anything to the adverse condition existing in America and Europe in the last four years; and yet no very serious effort has been made to check the policy.

With our far from affluent bank reserves, what may we expect for business and speculation in the autumn of 1911? This is a natural question, but at best a futile one. In none of the many aspects of the situation have conditions yet declared themselves with sufficient clearness to admit of predictions. As regards money, for example, it is possible to obtain a fair idea of the state of our bank reserves on this side of the Atlantic, but it is not wholly plain just what our credit balance abroad is. Outwardly, it is large, and it is hard to avoid the conviction that when all that we owe Europe for interest, freights, etc., is deducted, we shall still be in a position to draw gold in liberal amount from the other side. At the moment, money is in abundant supply in Europe. On the other hand, if foreign crops are as deficient as some have led us to suppose, Europe, while drawing on us more freely for sustenance, may, perhaps, find herself unable to purchase our manufactures on as large a scale as heretofore. But such discussion is hardly profitable at this stage: it is necessarily characterized by too many "ifs" and "buts."

Still, while it is not easy to read the immediate future, there is strong ground for the conviction that basic conditions are improving, the change for the better being especially noticeable in the last week or two. There has been a manifest absurdity in the various attempts of the past few years to create a new industrial boom, with its attendant stock market effusiveness, on top of the inflated structure built up in the years prior to 1907. The most encouraging feature to-day is that more real progress has been made in the last few weeks toward a rational basis for a new prosperity than has been witnessed during the same length of time since the panic of four years ago. Inside of a week cotton has broken 11 cents. Where it will stop on its downward course, no one knows; but until there is a pretty general belief that it has struck bottom there is not likely to be an increase of activity in cotton manufacturing. Meanwhile, cotton goods have continued to sag in price on small sales, and some of the mills have found it advisable to pass their dividends. Tariff and other uncertainties have retarded the sale of wool textiles, but it is a significant fact that manufacturers seem disposed to abandon the thought of a profit, and even to accept a loss, in the hope of keeping their machinery measurably employed. Reports are conflicting with reference to steel, but here too it looks as if manufacturers were increasingly bent on enlarging their business by hook or crook.

This will bring about a genuine improvement in our economic situation quicker than anything else. It is doubtful if any one looks for a pronounced revival during the rest of 1911; first, because it may take longer than that for the cost of production wholly to adjust itself to new conditions; and, secondly, because in the crop-moving period the cash may not be forthcoming

Digitized by Google

for largely increased activity in general industry. Still, so far as the aims and methods of private industry are concerned, it looks as if a real tendency in the right direction had at last been created. It could be wished that the same could be said of the aims and methods of nation, State, and municipality. General business is suffering too much at the hand of the tax-gatherer.

Paper-Bag Cookery
By NICOLAS SAYER

The chef of Brooks's Club, London, here explains his method and gives his recipes. The method cooks almost everything but soups in paper-bags, on a broiler, in any oven.

ADVANTAGES: (1) Food more savory, (2) Economical—no shrinkage in cooking, and smaller fuel bills, (3) Labor-saving—no cleaning of pots and pans, (4) Hygienic—no germ-haunted utensils, (5) No smell of cooking. A boon to both epicures and cooks. For information, write

STURGIS & WALTON CO.

FOUR IMPORTANT NEW BOOKS

GETTYSBURG

The Pivotal Battle of the Civil War

By R. K. BEECHAM.

This is one of the best descriptions of the crucial battle of the Rebellion now available. Captain Beecham was a member of the Second Wisconsin Infantry of the famous Iron Brigade, which earned great distinction during the three days' fighting. He has spent years in the preparation of his description of the battle, and his work is remarkable for its clearness and unbiased adherence to facts. His criticisms are logical and are remarkable for their delicacy and freedom from malice. The book contains sixty-seven illustrations and a photographic relief map, by the aid of which the movements of the contending forces can be easily traced.

298 pages. Indexed. Illustrated. Handsomely bound. $1.75 net.

WAR OR PEACE

A Present Duty and a Future Hope

By General Hiram M. Chittenden, U.S.A.

Is War Necessary? This question is logically and thoroughly discussed by General H. M. Chittenden in his new book. The present-day prominence of the "universal peace" movement makes this work particularly welcome.

General Chittenden is a firm advocate of peace, and his advocacy is made the dominant note in his book. But he is also a soldier schooled in the science of war and experienced in its practice. By virtue of this training and experience, and the knowledge that man is naturally a fighting animal, he has avoided falling into many of the prevalent mistaken ideas entertained by laymen as to the comparative readiness with which universal peace might be attained, and he therefore confines his remarks to possibilities and cold practical facts. He believes that peace will eventually come to all the world.

Cloth bound. Octavo. Printed on heavy paper with large type. 273 pages. $1.00 net; postage 10 cents.

THROUGH the HEART of CANADA

By FRANK YEIGH.

This book comes at an opportune time and from the hands of one who knows his Canada well. He makes the reader see the things he describes, and points out, in an attractive way, the advantages of life in the Dominion. The volume is in every way an important one.

Fully illustrated. Indexed. 319 pages. Cloth bound. $2.75 net.

Nature Sketches in Temperate America

By DR. JOSEPH L. HANCOCK.

In the pages of this book will be found not only a systematic series of studies of outdoor life in America, but for the first time in a similar volume a thorough explanation of the processes of organic evolution which have moulded the various forms of life described and pictured. The book constitutes a splendid introduction of nature study for the amateur, gives the layman a most interesting and accurate summary of the doctrines of evolution, and at the same time is adapted for school and college text-book purposes, and contains many original observations that will interest the advanced biologist. The illustrations are practically all from original sketches and photographs by the author.

With over 200 illustrations from original drawings and photographs, 12 in color. Indexed. 451 pages. $2.75 net.

Some Comments by the Press and Individuals Concerning These Four Books

GETTYSBURG

"Few historians, if any, have given so graphic a description of the three days' fighting in the greatest battle of the war to save the Union."—J. A. WATROUS, Lieutenant-Colonel, U. S. A., retired.

"The vivid description of the battle is great."—BELLE C. HARRIS, National President, Woman's Relief Corps.

"The author has contrived to present the famous three days' struggle in new aspects, and to that extent to invest it with a new interest."—*The Herald* (Boston).

"A relief map of the battlefield adds interest to the text description of the fighting. With this simple map the locating of the two armies at the close of each day's conflict is comparatively easy, and enables the lay student to follow the fortunes of the battle with keen interest."—*Army and Navy Journal* (New York City).

WAR OR PEACE

"It should be published in all languages and given the widest possible circulation. If it does not do more than Carnegie millions, arbitration treaties, and Hague tribunals, toward establishing universal peace, it may at least show how these millions might be spent and how these treaties and tribunals could be more effectively operated."—*The Record-Herald* (Chicago).

"There is much in General Chittenden's exceedingly interesting and well-written book with which every practical-minded American will cordially agree."—*The Post-Express* (Rochester, N. Y.).

"A volume which will pretty certainly command the attention of all who are interested in the discussion of this important question."—*The Living Age* (Boston, Mass.).

"General Chittenden is not a sentimentalist of peace, but he is not a sentimentalist of blood and iron, either. The book deserves many readers, and it is to be hoped it may obtain them."—*The Rocky Mountain News* (Denver, Colo.).

"It is by far the most comprehensive and suggestive study of the subject published in years."—*The Detroit News.*

THROUGH THE HEART OF CANADA

"To those contemplating a visit to Canada the book will be found to contain much information of value, and to those who wish to know something of the geography, institutions, and development of the great country across the border, much of interest."—*Bellman* (Minneapolis, Minn.)

"While all that is said are statements of fact, the telling of them is done so well that the book is absorbingly readable, and the reader will lay it down with regret after he has travelled through its three hundred pages."—*Bookseller and Stationer* (Toronto, Ont., Canada).

"Mr. Yeigh has the faculty of saying things graphically. Canadians themselves will find much in this book that they did not know."—*Toronto Star.*

Nature Sketches in Temperate America

"Have this book in your family for your boys; also in the school library. It is quite out of the ordinary run of nature books, being both more scientific and more readable, as well as having an originality in text, typography, and illustration that is very unusual."—*Independent* (New York City).

"For the first time in an out-of-door book, the wonders of animal and plant life have been presented and popularly explained in the light of organic evolution. It is written from first-hand observation in the field and research in the biological laboratory by an investigator of recognized standing among biologists. The book contains many original scientific observations as well as an authoritative summary of the present state of biological science. From the standpoint of popularizing the latest authentic scientific biological information that is a treasure, but beyond all that it is a charming literary work, familiarizing the general reader with biological science as delightfully as though he were reading a bit of romance."—*Journal of Education* (Boston, Mass.).

THIRD EDITION NOW READY

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seised well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

First Edition, October 1st;
Second Edition, November 21st;
Third Edition, March 1st.

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.

$5.00 net. Postage 26 cents.

The Nation

NEW YORK, THURSDAY, AUGUST 10, 1911.

The Week

If the peace agreements with Great Britain and France are to meet with opposition in the Senate, such opposition cannot be based on the ground that the treaty-making powers of that body have been curtailed. Secretary Knox asserts that the Senate's functions under the new arrangement remain what they are under the present limited treaty of arbitration with Great Britain. His contention is completely borne out by the text of Article I of the new treaties, which declares that, whether a question be submitted for arbitration to the Hague Tribunal or to a specially constituted court, the method of submission shall be in the form of a special agreement, "which special agreement shall provide for the organization of such tribunal, if necessary, define the scope of the powers of the arbitrators, the question or questions at issue, and settle the terms of reference and the procedure thereunder." This special agreement shall be made, on the part of the United States, "by and with the advice of the Senate." The most jealous defender of Senatorial rights could find no peril in this, even in the Senate as we have known it.

With his characteristic modesty and absolute devotion to the Japanese Crown, Admiral Togo will doubtless accept all the courtesies which are shown him here merely as tributes to the supreme virtue of the Mikado. It was to that, it will be remembered, that the chief Japanese naval official attributed Togo's great victory in the Straits of Tsushima, in acknowledging receipt of the Admiral's report of his amazing achievement. But in the warm reception which the Admiral is enjoying, there is sure to be much of the personal. He is the greatest sea-fighter of the age, properly characterized as the Nelson of Japan, and he is the more interesting because of his reputation for silence and mystery. This characteristic of the man does not, however, prevent his being a genuinely forceful personality, as well as a great strategist. No one must think that his very silence failed to impress his subordinates or that he was merely the brains of the Japanese fleet, a marvellous sea-Moltke, cold and impassive, or a wonderful thinking automaton.

Mr. Carnegie has provided a pension for Andy Toth, the Hungarian who some time ago was released from the penitentiary at Pittsburgh, where he had spent twenty years of a life term for a crime which it was discovered he had not committed. But what sticks in the mind, in considering the tragedy, is the lack of any regular means of redress for errors of this sort made by society. The individual who injures us, though under a misapprehension, has to pay for his mistake; but legal procedure against the State for a similar act is impossible. Would it not have been the more suitable procedure for the late Legislature at Harrisburg to acknowledge the State's mistake, and to perform the only reparation in its power by providing the victim with an annuity? This course would have been consistent with its own dignity, and would have had the advantage of distinctly presenting the relief, which must at best be wofully inadequate, as an act of justice and not of charity.

As a practical proposition, Senator Owen's bill for the elimination of the Federal judiciary as an independent department of the United States Government does not call for serious consideration; as a sign of the times, it is distinctly worth attention. In proposing that Congress shall have power to remove any Federal judge at its pleasure, and without the assignment of any other reason than its own opinion of the requirements of the public good, Senator Owen goes far beyond what any body of public sentiment now worth considering would at all countenance; but the restiveness which, in his case, finds expression in this wild and revolutionary proposal is felt by many sober persons who are casting about for some means of curbing the power of the judiciary, and who, though reluctant, yet feel tempted to look to the recall, in some form, as the necessary remedy. The essence of the matter is the assertion, first, that the judiciary has usurped legislative functions; and, secondly, that by virtue of the finality which attaches to the acts of the highest courts, we have a system of government in which irremovable judges are clothed with unlimited power.

Take, however, that particular instance of Supreme Court "usurpation" which, more than any other, has aroused the indignation of the enemies of judicial autocracy. In the Standard Oil decision, the Court, we are told, takes a statute, and where the words appear "restraint of trade," it says "unreasonable restraint of trade" is meant, even though Congress has expressly refused so to limit the statute. Now, is there anything under Heaven to prevent Congress from passing a law, in a score or so of words, declaring that the Sherman act prohibits *all* restraints, whether reasonable or unreasonable? Yet Congress will not do it. It *did* refuse to insert the qualification in so many words; but it will also refuse to put in the *denial* of the qualification in so many words. The Court thinks Congress could not have meant to prohibit *all* restraints, because that would result in the sort of thing which was the undoing of Shylock; the Supreme Court refuses to take the position of Portia, though perhaps that may have been literally nominated in the bond. But nothing would be easier than for Congress to leave the Court no alternative. Until Congress does so, the Court's suspensory veto—if veto it is to be regarded—will hold good; the moment Congress decides to go the whole length of the literal prohibition, it can have its way.

If anybody was expecting Mr. Roosevelt to give but a half-hearted approval to his own action concerning the Steel Trust's absorption of the Tennessee Coal and Iron Company, he must have been sadly disappointed on reading the statement presented to the Stanley Committee last Saturday. The Colonel enthusiastically approves everything the President did in 1907; he finds it perfect not only in purity of motive and soundness of judgment, but in all its consequences, immediate and remote, direct and collateral. But while four years of opportunity for contemplation have thus failed to reveal to Mr. Roosevelt any possi-

Digitized by Google

bilities of defect in the little transaction of November 4, 1907, between himself and Messrs. Gary and Frick, upon other minds inconvenient doubts obtrude themselves. It took him only the brief space intervening between his breakfast on that morning and the opening of the New York Stock Exchange to decide that if in the future the steel magnates should be charged with having been actuated by any monopolistic motive, this would not represent "what could honestly be said, but what might recklessly and untruthfully be said"; and yet there are to-day great numbers of people who are not in the least either reckless or untruthful, and who think that no other supposition really fits the facts.

Counsel for Lorimer, at Monday's session of the investigating committee, worked "for all it was worth" the fact that the witness Beckemeyer, who confessed that he had taken a bribe, had at another time denied that he had done so. Mr. Hanecy made Beckemeyer brand himself a liar, over and over again. That may have been fun for Hanecy, and it was certainly hard on Beckemeyer; but it does very little for Lorimer. A man that will take a bribe is very likely to lie about it; and the fact that he actually did lie, however thoroughly it might be established, would leave the matter just about where it would have been without it. The case is very different from that of Hines; if Hines could be proved a liar, the bottom would drop out of his defence against the charge of bribe-giving. It is unfortunate, but true, that a man's denial of having committed a crime is not entitled to the same degree of confidence as his acknowledgment that he did commit one. And as for this Lorimer case, it is further unfortunate for the challenged Senator from Illinois that there are a number of separate and distinct persons who have confessed to receiving bribes, and also a formidable array of witnesses whose statements agree in pointing to Hines as the collector and distributor of a big corruption fund.

Only six years old, the Dreadnought type of monster battleship is doomed, if the report is correct that the Admiralty has decided upon smaller armored ships. Ever since the launching of the first Dreadnought, which set all the major countries to building imitations, the Admiralty has each year planned a bigger and faster battleship. The Dreadnought itself was nine per cent. larger than its predecessor, having a displacement of 17,900 tons. But within five years the Lion appeared with 8,450 tons more of displacement, and a length 170 feet greater. This ship is but 40 feet shorter than the gigantic 700-foot ocean liner. Hence, it is easy to understand the excitement in British and foreign naval circles when it was rumored that the 1911-12 battleship is to be smaller than the Dreadnought by 400 tons and inferior in size by nearly 9,000 tons to the Lion and her sister ships. No official announcement has as yet been made as to the exact changes, but naval opinion has accepted the report that these smaller ships will carry only six monster guns, presumably of fifteen-inch calibre, as opposed to the eight 13.5-inch guns of ships of the Lion class, the reduction being, of course, necessitated by the smaller tonnage.

Prospects of further trouble between the Des Moines City Railway Company and its employees are now said to be small, "except in the courts." As the courts are the places specifically established for the reception and settlement of such troubles, the situation in this respect is just as it should be. The injunction which interrupted the strike was prematurely assailed by Mr. Gompers, who was unaware that it was directed against the company rather than against the men, and who seized the opportunity to fulminate against all injunctions as intended to bring workingmen "into a condition of slavery." It is now attacked by the president of the company. If the statement of the president of the Des Moines carmen's union is true, however—and it seems to be undisputed—the duty of the company is plain. An agreement has been in force, he is reported as saying, between the company and the union, requiring that disputes be arbitrated. The company, he asserts, refused to arbitrate the case of the discharged conductor which brought on the strike, and the court's order reinstating him and compelling the company to submit the matter to arbitration followed. If the result of the dispute and attempted strike should be to compose the difficulty peaceably, other cities will envy the Iowa capital its good fortune in having such an agreement to swing over the heads of both corporation and employees.

The highly regrettable election of ex-Governor Vardaman as Senator from Mississippi will probably have one good result—to put John Sharp Williams on his mettle to maintain the dignity of the State which he represents. If he succeeds in doing this in spite of what his colleague does to the contrary, he will be a leader indeed. Outsiders will wonder why the present incumbent, Senator Percy, should not have been re-elected. True, he is almost alone in his attitude toward charges of bribery, returning promptly to the Mississippi capital when such allegations were made against his managers and demanding a new primary; a demand which was not granted simply because his enemies could not produce enough evidence to warrant the expenses of his reëlection. He has not been long enough in the Senate to be a notable figure. Moreover, Senator Percy is simply a gentleman, an able man, a lawyer of unusual merit, fair-minded toward all people and both races—as different from the Vardaman type as a man could well be. His successor may be expected to run a close race with Jeff Davis for the position of chief Senatorial demagogue and buffoon.

The popular notion that the owner of the soil owns everything above and below it, says a writer in *Case and Comment*, has no well-founded support in law. No exclusive right can be had in either light or air. All that there seems to be in the maxim *Cujus est solum ejus est usque ad cœlum* is that ownership to the sky means preferential use of the space by the owner of the soil, and that such use is interfered with only when the enjoyment of the soil is diminished. What, then, are the landowner's rights with respect to aviation? May he prevent flights across his land on the theory that they constitute a trespass by interfering with his beneficial enjoyment of the soil? According to one theory, set forth in a Paris journal, one has a claim to sunlight, and is entitled to damages for shadows of aeroplanes that are cast upon him. Presumably, airships flying at a great height would not be much bothered by this restriction. Another

Digitized by Google

theory limits vertical ownership to three hundred metres. This is even more fanciful, if anything, than the preceding view. The idea that seems likely of adoption lies between these two. It is that the ownership of the soil extends into the air as far as it is of use. The higher we build the higher our ownership reaches. But there will always be a point where ownership ceases to have any meaning, and where the owner ceases to have a right to hang out a No Trespass sign. This view, which is that dictated by common sense, has already been taken by the Swiss Civil Code.

It was Mr. Balfour's contention in the House of Commons on Monday that Mr. Asquith has wrought damage to the dignity and prestige of the Crown by obtaining the King's coöperation in the struggle with the House of Lords. But the plain facts in the case are that Mr. Balfour has done great harm to the prestige and dignity of the Crown by dragging the person of the King into the sphere of parliamentary debate. Every man in Parliament must have known what Mr. Asquith was finally forced to state in blunt terms, that there never was any question of the King's accepting the advice of his Ministers to create peers; "the system was cast-iron." Every English schoolboy knows that the King, so far as the play of the great political forces is concerned, is but a figurehead and that sovereignty abides in the House of Commons. But loyalty and decorum and reverence for ancient form have continued to invest the monarch with the traditions of power that he does not really enjoy. It remained for the Unionist leader to bring out, in unmistakable terms, the impotence of the Crown. Mr. Balfour's motion of censure against the Ministers for having abused their power over the King is another way of saying that the Ministers have made wrong use of the tool in their hands.

The tariff bill now pending in the Dutch States-General makes a classification of manufactured goods into three great divisions—partly manufactured, nearly finished, and fully manufactured; the duties ranging from 3 to 6 per cent. in the first division, going as high as 10 per cent. in some cases in the second, and reaching a maximum of 12 per cent. in the "fully manufactured" class. With raw materials free, and with an extreme limit of 12 per cent. for manufactured goods, it is difficult to see how those poor Dutchmen will manage to survive. It is well known that they have the misfortune to be more prosperous than most of their neighbors, and it is distressing to think of what the pauper labor of Belgium or Austria will do to them, with nothing but a duty of from 3 to 12 per cent. to keep the country from being flooded with foreign goods. Or rather it would be distressing if one did not remember that, contrary to all common sense, they have hitherto persisted in trying to live along without any protective tariff at all, and have actually succeeded in keeping up a very good show of prosperity. Their foreign trade, for example, has for many years been growing at an astonishing rate, and the total of exports and imports—not counting transit trade—now exceeds two billion dollars annually; a tidy sum for a nation of barely six million people.

The maxim "Few die and none resign" is as inapplicable to Haytian Presidents as to French, although the resignations bear a larger proportion to the deaths in the West Indian republic than in the European. Gen. Simon was elected by the National Assembly in 1908 for the seven-year term, the method of choice and the length of service again suggesting France. Last year, however, there was a plot to depose him and put in his place Gen. Firmin, who recently deserted his post as Minister to Great Britain to join the present successful revolt. The failure of the one a year ago was due to the death of the aged General and ex-President Nord Alexis, who was furnishing the funds. He had been luckier than his successor was destined to be, for it was not until the last year of his term that he was compelled to leave the position which had given him a fortune. Haytian history offers as good an illustration as could easily be found of President Lowell's figure of government as a stage-coach whose horses are running away, and whose driver has as his chief concern, not the safety of his passengers or the bringing of them to their destination, but the keeping of his seat. Just now the question is who will get the one from which the latest unsuccessful driver has been pushed.

It should now seem as if the very gloomy situation in Albania a few days ago were only the darkness that precedes the dawn. The Albanian tribesmen had had their taste of Turkish promises, and were not disposed to try again. The Government of Montenegro was openly encouraging the hostile tribesmen. The tone of the European press was hostile to Turkey. All the elements of a conflagration were present, yet Turkey's ultimatum to Montenegro, instead of supplying the incendiary spark, has cleared the air at one stroke. The hostile tribesmen have accepted the concessions offered by the Turkish Government only under orders from the Montenegrin Government. And inasmuch as it was King Nicholas of Montenegro who kept the revolt alive, he was undoubtedly the proper person to order a halt. Behind Montenegro is supposed to have loomed up the sinister influence of a great Power eager for trouble. But whoever the party to the quarrel may have been, Austria or Russia, it is apparent that the prospect of a general war on account of Albania was very much more than it bargained for.

Predictions are made of the retirement of the Katsura Ministry in Japan and the organization of a cabinet by Marquis Saionji, who was Katsura's predecessor in office. Thus parliamentary government in Japan seems tending toward the two-party system on the English model, although Japan has no two parties corresponding to Conservatives and Liberals, and there is no responsibility of Ministers to Parliament. One thing that may be expected with the passing of Premier Katsura is a relaxation of the rigorous policy of suppression which has been felt in the field of literature, art, and economics, as well as politics. Significant indications of an extraordinary state of affairs in the Mikado's Empire are continually breaking out in the Western press. Workingmen's organizations are being persecuted, books and the theatre are censored, the newspapers are under strict supervision. The recent so-called anarchist trial with its wholesale hangings aroused a sense of horror all over the world. The rulers of Japan will find it harder to meet the ideas of the West than they found it to meet the West's battleships and cannon.

THE OUTLOOK IN CANADA.

In attempting a forecast of the results of the approaching parliamentary elections across the border, we are in danger of overestimating the importance of the specific issue of the moment and underestimating the general drift of Canadian party politics. Sir Wilfrid Laurier has dissolved on the question of reciprocity and is making his campaign on that platform. Yet it is essential to remember that reciprocity is being advocated by the party which has been in control of Canadian affairs for a decade and a half. The predominant question to-day is whether or not the Liberal party has run the length of its tether. If the Canadian people are tired of Sir Wilfrid Laurier, reciprocity will hardly save him. If they have no desire for a change on general grounds, reciprocity will hardly destroy him.

The two-party system in Canada has worked more along the lines of our own political evolution than that of England. Even in the mother country the theory that one party in power succeeds another in swift rotation has seldom been realized. The tide will run Conservative through several Parliaments and then set as steadily in the Liberal direction. Nevertheless, the cycles of party supremacy and party eclipse in England are much shorter than they have been with us or with the Canadians. Our own record of half a century of Democratic ascendency followed by half a century of Republican ascendency has almost been paralleled in Canada. From the establishment of the Canadian Federation in 1867 to 1896 the Conservatives were out of power for only five years. From 1896 to the present day, the Liberals have been in control. The Manitoba school agitation was the specific issue upon which the Conservative party went to pieces in 1896, but the real cause was rather senile debility. It cannot be said that the Laurier régime has reached that stage.

It does not detract from the prestige of the Canadian Liberals that the Liberal party should be so largely Sir Wilfrid Laurier. For that matter, the Conservative party during its long period of supremacy was largely Sir John Macdonald. It has been Sir Wilfrid's good fortune to have behind him oldest Canada and newest Canada—Quebec, in which his influence is largely a question of blood-descent, and the great Canadian West, whose marvellous development, fortunately for the Liberals, began just when that party was coming into power. To that development Sir Wilfrid Laurier and his followers were wise enough to lend the very heartiest encouragement. The political advantage they have derived is therefore the honest reward of opportunity well seized. How fast the Canadian West would have grown under a Conservative régime is not a practical question. The average voter does not look behind the returns. With us it has taken a quarter of a century to knock a breach into the widely accepted dogma that it is the Republican party that makes the corn grow. To Alberta and Saskatchewan the Liberals are in a position to point with pride. And it is fair to presume that as the influence of the West continues to increase, the fortunes of the Liberal party, speaking broadly, are likely to grow with it.

That reciprocity will prove, in the present campaign, to be one of those dynamic issues that work political revolutions seems highly improbable. For one thing, as a practical question, it is not old enough and has not bitten into the public consciousness deep enough to produce a nation-wide upheaval. The sentiment for reciprocity is, we believe, a good deal stronger than the sentiment against it. The farmers of the West have spoken with no uncertain voice on the matter. But even among those Canadians who favor reciprocity, we miss the passionate zeal with which the great majority in this country has approached the question. To us reciprocity is a great deal more than a commercial arrangement with a neighboring nation. In a more intimate sense, it is a domestic problem. This first breach in the tariff wall is something more than a tariff measure. It is an assault upon the spirit and the scheme of things of which the tariff is only one manifestation. It is an assault directed against the entire practice of private gain at public expense, whether the public's loss be actual dollars and cents or the corruption of our institutions by the agents of private interest. To millions in this country, the tariff wall is a symbol in the same way that the Bastile was a symbol. The occasion is one for passions to run high.

But Canada has little reason to feel about protective tariffs as we do. To our neighbors, the affair is an economic one, to be judged and decided by a balancing of diverse economic interests. The Conservatives have tried to impart moral fervor into the discussion by raising the issue of annexation and the integrity of the British Empire. Their manœuvre promises to be as futile as the great imperialist call to arms in favor of tariff reform, sounded by the Chamberlain party in England. Obviously the English elector likes his economics and his patriotism separate. The argument of imperial unity failed before the argument of swelling trade returns and increased employment. It will probably fail in Canada, and for the same reasons.

Fought out on its merits as an economic policy, it is exceedingly doubtful whether the reciprocity issue can cut down Sir Wilfrid Laurier's substantial majority. We have seen that the Liberal strength is concentrated in the Province of Quebec and in the new provinces of the West. In both sections, the predominant interests are agricultural, and consequently in favor of a measure that throws open the vast markets to the south. Opposition to reciprocity centres in Ontario, the stronghold of the Conservative party and the principal seat of Canadian manufactures. The division is fairly clear-cut. Anti-reciprocity may gain seats in Ontario. Reciprocity will probably gain seats elsewhere.

MOROCCO AND EUROPEAN PEACE.

Reports now agree that France and Germany are to arrange their quarrels amicably. The details of the settlement may be some time in coming out. For that matter we do not even know with certainty the general lines along which negotiations have proceeded. The only thing that is certain is that the much-touted war for supremacy between Great Britain and the German Empire, with France as a pawn and Morocco as an excuse, is not to come off this time; and this for at least two reasons. One is that in a general European war France would be much more than a pawn, and the other is that for the purposes of such a war Morocco would be a very poor excuse.

Germans are in the habit of complaining that their ambitions and their methods are sadly misunderstood. And they are right to this extent, that we

Digitized by Google

have fallen into the habit of looking upon Germany as a fighting machine that needs only the pressure of a button by an irresponsible autocrat to be set into irresistible motion. As a matter of fact, however confident of the German army the Kaiser and his ministers and generals may be, it is childish to suppose that they take nothing but regiments and batteries into account. The War Lord and his advisers know very well that in war there is such a thing as a cause and such a thing as morale. They know that their soldiers are not automata who will fight with just as much devotion for Morocco as they fought for national unity and independence in 1866 and 1871. We may be sure that before the rulers of Germany set out for Armageddon, they will see to it that the nation behind them is inspired by something more than a few hundred square miles of Moroccan desert or a hundred miles of Kamerun coast-line.

There are several other serious problems connected with war which Wilhelm II in all probability does not dispose of as glibly as the ordinary Pittsburgh millionaire who spends two days in Berlin and announces that the French nation is doomed. War has its accidents, and even with sixty millions against forty millions there is no telling what a nation of forty millions will do when driven to desperation. France has before this developed a Joan of Arc and a Napoleon, and it is a far cry, indeed, to Calais and Boulogne as German naval harbors, threatening destruction to Great Britain. Germans may outnumber Frenchmen in the ratio of 3 to 2, but numbers are not infallible. Germany had only a little larger population than her opponent when she beat France to her knees in 1871. Prussia had a smaller population than Austria-Hungary when she overwhelmed the Hapsburgs in 1866. Neither in 1866 nor in 1871 did the German rulers have to reckon with the forces of internal discontent represented by some three million Socialist voters. Take it all in all, the very fact that German prestige stands so high today must be a powerful argument against going to war on any but the most serious grounds.

This does not drive us to the conclusion that Germany's recent action in Morocco was merely a "bluff," and a "bluff" that Great Britain has "called." It is not necessary for Germany to threaten war in order to win respect for her claims. These claims she has put forward in that rough, nerve-racking tone that is unhappily the manner of German diplomacy. Here was France obviously preparing to absorb the greater part of Morocco. Here was Spain scrambling frantically for her own share. No rival Power could stand by without putting in its own demands. Other Powers might have done it politely, though firmly; Germany sent a warship. Just what the Kaiser has asked for we do not know. The early rumors that he wanted all of French Congo have been liberally discounted. What Germany has asked for probably depends upon what she thought France was getting for herself in Morocco. If any one were to accuse Germany of trying to force war on the French Government, Germany might with good reason ask why she should be discriminated against in the distribution of prizes.

Undoubtedly the Agadir incident had its wider phase. Germany was once more testing the strength of the Franco-British friendship. Why she should have done so at this time is at first puzzling. The German Foreign Office could not have been so ill-informed as to believe that Great Britain would refuse to stand by France. The Liberals are supposed to be rather lukewarm to the French alliance; yet it is notorious that Unionists and Liberals hold alike to the principle of a continuous foreign policy, and that in no case would a British Government abandon a virtual ally under pressure. But the German procedure becomes comprehensible if we take the object to have been not to try whether Great Britain would stand by France, but whether France would hold to Great Britain. It was a renewal of the policy of 1905, which was described as one of "Love me or I'll knock you down." In other words, once in so often it seems a part of German policy to remind France that a desirable alternative exists to the Franco-British understanding, and that is a Franco-German understanding. There is in France a considerable body of public opinion that favors a reconciliation with Germany. England's sincerity cannot be taken for granted—when it comes to the pinch, she may pluck the fruits of victory over Germany, and France would have to pay the costs. German diplomacy reinforces this argument by frequent "tests," serving to remind the French people that they must choose between a British understanding with constant vexation and a German understanding with peace.

French pride, undoubtedly, chafes under the necessity of falling back on English support. At the beginning of the present crisis, the Parisian press was loud in asserting that the question was one that concerned France and Germany only. When it came to the test, however, the unfortunate tone of German diplomacy apparently asserted itself. France was asked for sacrifices which she could not concede, and the result was Mr. Lloyd George's speech. This speech was on the face of it a declaration of England's readiness to stand by France, but at the same time it was a declaration that France was still determined to look for friendship to England and not to Germany. Viewed in this light, it is no paradox to say that the latest Morocco crisis did more good than harm to the cause of European peace. France detached from England and in alliance with Germany might easily have brought on a conflagration. France with England behind her can hold Germany in check.

MR. BRYAN'S MISADVENTURE.

The extraordinary scene in the House of Representatives on Wednesday of last week may or may not prove to be the *coup de grâce* to Mr. Bryan as one of the potent forces in American politics. He is doing his best to make irremediable the damage done to his standing by his reckless and malignant attack on Chairman Underwood. Instead of making a manly retraction of the charge whose baselessness Mr. Underwood so convincingly demonstrated, he refers to a Washington dispatch in an Omaha paper as the source of his information, and entirely ignores the exposure made by Mr. Underwood of the falsity of the charge. As that gentleman gave a detailed and undisputed statement of the facts on the floor of the House, as these facts were in diametrical contradiction to the assertions of the obscure Washington dispatch to which Bryan so readily pinned his faith, and as Bryan's own close friend Congressman Kitchin declared, in support of Mr. Underwood, that there was "not a word of truth" in Bryan's charges, and expressed his regret that his cherished

Digitized by Google

leader should have been so grossly misled—the stupidity of Bryan's falling back on his precious "information" is only equalled by its audacity. The affair leaves the peerless leader in a far worse position than any in which he had previously found himself.

And that is saying a great deal. The Nebraskan is fresh from two blows to his prestige, each of a kind which no leader of his pretensions can easily afford to suffer. That the party in his own State has turned the cold shoulder to him is bad enough; but a worse thing happened to him a few weeks ago, when the instructions on the wool tariff which he gave to the Democrats of the House in his old-time dictatorial manner were incontinently rejected. The disastrous repulse which his second attack on the House leader encountered derives its significance less from the matter immediately involved than from the circumstance that it was evidently an attempt to recover the ground lost in the first encounter. In his game with Mr. Underwood, Mr. Bryan was playing for double or quits; and the result was not only a doubling of his losses, but an additional stroke of ill-fortune that cannot have occurred to his imagination as possible. That Mr. Underwood might set up a successful defence, Bryan may have been prepared for; that the occasion should have been turned into an ovation for the Alabama man, in which the whole Democratic membership of the House enthusiastically joined, must be a staggering blow to the Nebraskan's self-esteem.

To say that this curious performance is characteristic of Mr. Bryan may be going too far; but there is more than one aspect in which it throws an instructive sidelight upon his nature. Granted that he has not been fundamentally insincere, there is a certain streak of humbug that runs through his career. It can be seen in the cross-of-gold and crown-of-thorns speech, which suddenly made him a national figure; though there it may perhaps be forgiven as a superbly successful oratorical flight. It was more distinctly in evidence four years later, when he refused to part with his stock-in-trade as the unyielding champion of free silver; though here, too, there was something to be admired in the splendid audacity with which he relied on his hold upon his admiring followers. But it was after the silver issue had died out that the streak of humbug became most plainly visible. One "paramount" issue was always in readiness when another had failed; if it was not destruction of the Trusts, and not Government ownership of railways, then it was guarantee of bank deposits that must be attained if the nation was to survive. Always some shibboleth must be ready, failure to pronounce which in true Bryan fashion brands a man as a traitor to his party and an enemy of the people.

It was not, then, altogether an accident which led Bryan into his attack on Mr. Underwood. Mere misinformation, however complete, does not account for it. The denunciation smacked of something else than simple condemnation, the result of opinion or conviction. There was in it something of the artificial ferocity of a "new Messiah" scenting danger to his supremacy in some mystery-bound organization. Silver was gone; bank guarantee was under a cloud; Trusts were not an immediate issue; the tariff was the one thing just now to the front. And so the tariff had to serve; it was possible, even upon wool and steel, as formerly it had been on silver or the Trusts, to commit the unpardonable sin. I will unmask Underwood, and he shall be cast into the outer darkness—that is what one reads in Bryan's statement. And that is what he cannot wipe out by any explanation. If the Democrats of the country have their wits about them, they will find in this incident an excellent opportunity for shaking off what remains of the grip that this persistent exploiter of panaceas so long maintained on the party.

THE ROMANCE OF LEARNING.

Now that the status of higher education in this country is being considered in the numerous informal sessions and conferences which every summer creates, it is pleasant to note how far the discussion of the problem has progressed in the past year or two. Amid confusion of thought and promiscuous laying of blame, it was easy at the outset for college faculties to take to self-pity and to insist that undergraduates, with their athletics and worldliness, were quite willing to trample education in the mire. Then came the muckrakers with the message that the real pearls were the students. There followed a contagion of apology which led to wild utterances. To one well-known scholar came a voice saying that he not only did not teach, he fuddled. Another found a scandalous moral in the rare organization and discipline of athletic teams as compared with the loose running order of the ordinary college course. And a leading university barely escaped the humility of issuing buttons, ribbons, and banners with the purpose of luring students back to the poor business of college life, as who should say, as the Pléiade said of themselves, "La Docte Brigade."

The discussion has reached a more hopeful stage. Loose thinking has been replaced by the general agreement that neither student nor faculty has been criminally neglectful, but that both have suffered from a natural, if mistaken, policy. It is seen that the mischief has been done by a tendency as wide as the nation—intense specialization—and that if the traditional inner ideal of the college is not to be lost, there must be a spirited reaction. For the college can never, while still remaining a college, employ the methods of technical schools, since its chief function is, by definition, to give a general education. The reaction, as every one knows, has already begun. At Amherst more than elsewhere, but at Harvard, Yale, and Princeton, too, there is now a resolute facing about.

That good will come from broadening students' programmes there can be little doubt. But the problem is, of course, deeper seated than mere curriculum, and can be met only by a constant struggle with the impulse which is behind specialization—the spirit of immediate utility. Just now, while there is discontent with the plan of preparing students narrowly and exactly for after-life, it is not hard to grow enthusiastic over the probable benefits from a study of the remote or intangible. In academic discussion Greek civilization is assuming almost its old-time importance. But when the talking is over and remade schemes of study have begun to operate, the danger is likely to reappear, along with the well-known cry, "What's the use of taking Greek?" Or, at any rate, "Economics 13," let us say, will continue to be more easily justifiable. The danger is increased by the attitude, or language, of many of those

Digitized by Google

who are keenest for reaction. They speak of Greek and like subjects as admirable mental discipline, and allow the inference to be drawn that they are nothing more. It may be desirable that all courses should be regarded from the standpoint of discipline merely, but this is not likely to happen. So strictly preparatory are certain courses to various occupations as to have an almost measurable money value. They and their kind are increasing, even at institutions which in general policy have faced about.

So long as the distinction is allowed to persist, the struggle is but half won. To be sure, some headway has been made by carefully compiled tables showing the relative success, in and out of college, of those who have had Greek. The tables are impressive, and should remove Greek from the defensive and warrant a positive faith in it. But what is most imperative is not the study of Greek as such, or of any other subject as such, but an enthusiasm for ideas, for the magic of thought, for abstract speculation. It is especially needed in this country. Here students are more conservative and conventional than elsewhere. The American, having been given a campus, playgrounds, in short a little segregated community which he may call his own, proceeds to make it as much like the outer world as he can; whereas the European, excepting the Englishman, has no such separate domain, and yet wrings from city blocks and halls and walls a world that is distinct and sequestered. Universities in Europe have always been looked at by the people at large with some apprehension, because of their free thinking. Who in this country fears that students will put into practice theories a little too advanced? This is not a plea for such hot-headed outbreaks as sometimes occur in a country like Russia. But when a little learning—the only amount which an undergraduate can acquire—ceases to be a dangerous thing, one may suspect that the sort of learning that is got is not only harmless, but futile. Greek, philosophy, science, to gain an eager following, must profess something more than disciplinary value; they should be shown to have transcendental possibilities.

The task seems, no doubt, titanic. The American outlook is said to be literal, and students are young America. Yet students are protoplasm, too, possessed of tendencies, hardly yet of traits; and, in common with all youth, of imagination. The situation, also, of a large number of boys living together for a good part of four years is in itself romantic and capable of being vastly impregnated. Not that all youths can be made frequently to pursue midnight searches for the philosopher's stone. Yet if those who are so inclined were separately encouraged, there would undoubtedly be formed those cults of far-and-wide thinking which are so necessary to every great college, and which could not fail to influence even the plodding common run of students.

FRENCH NOTES.

PARIS, August 1.

I have already noticed at some length (*Nation*, August 18, 1910) the important studies undertaken by Albert Mathiez in the history of the French Revolution, particularly in all that concerns Robespierre and religious legislation. "Rome et le Clergé Français sous la Constituante" (A. Colin: 5 francs) is the most important general work yet published by M. Mathiez; and to this must be added his recent particular study, "La Déportation des Prêtres et la Sécularisation de l'Etat Civil—conséquences du 10 Août, 1792" (E. Leroux). The documents concerning the Constitutional clergy have been examined by him completely and competently; and M. Mathiez is incapable of any *suppressio veri* where there is question of the refractory or Roman Catholic clergy properly so called. But he is guided by his antecedent judgment that the Pope, as head of the Roman Catholic religion, could, if he would, accept the Civil Constitution of the clergy. In connection with the similarly civil constitution of worship or "cultual" associations attempted by the late Separation Law, which was also refused by the Pope, and has left the Roman Catholic religion outside of French law, this gives a controversial bearing to what should be documentary history. The like unintended consequence of New York State legislation for church trustees, long since fallen into desuetude, shows the impossibility of transforming by law the Roman Catholic Church into something contradictory of Roman Catholic religion. In the *Annales Révolutionnaires* (Ernest Leroux, 5 numbers yearly, 22 francs) for 1910 and January, 1911, M. Mathiez has published other papers of considerable interest. "Robespierre et le culte de l'Etre Suprême" (30 pages) accurately situates his work in controversies which are inevitable, yet necessarily unending, since each party uses the essential terms of the Revolutionary vocabulary in varying senses. Even if words should be made to signify the same things in all mouths, the disputes would, in their last conclusions, prove beyond solution because the parties do not agree as to what is and what is not right or wrong in government and revolutions of governments.

Among those whom Mathiez calls "republican historians" he is chiefly opposed to Aulard—"the personal enemy of Robespierre." According to Aulard, Robespierre used the Supreme Being to serve his own purposes, whereas the preceding Revolutionary worship of Reason was a means of intellectual "emancipation" for the people. For Mathiez, the later worship was only the earlier "continued and perfected." Robespierre, indeed, charged his opponents with "atheism"; but his "fears were exaggerated, his accusations ill founded. The feasts of Reason were in no wise atheist. Their organizers, whose whole ambition was limited to replacing the Catholic mass by a civic mass, did not believe that the people could get on without some kind of worship. For the most part they were not more *advanced*—not more *laïques*, in our sense—than Robespierre himself." What would M. Mathiez think of the language of Goldwin Smith, whose work has been supposed in England and America to make for intellectual emancipation, and who yet applied the term "atheist" to the *laïque* training of France under the present Republic?

According to Mathiez, the deist worship of Reason and the Supreme Being was but the second step in the "de-Christianization" of France undertaken by the Revolution, the first step having been the attempt to found a Constitutional Catholicism. "The essential in the Revolutionary religion was the adoration of the Republic, of liberty, of equality, new words whose prestige was still quite intact; the rest, metaphysics, was a side-issue." Robespierre's greatest discourse—his report urging these religious feast-days on the Committee of Public Safety—sums up the Revolution: "Everything has changed in the physical order; everything should change in the moral and political order." New England never imagined an authority in the American Revolution competent to work a change in its existing moral order.

The *Annales Révolutionnaires*, published by the society of Etudes Robespierristes, includes in this year's subscription the fascicles of Robespierre's works which the society is publishing. English readers who have retained their interest in Carlyle's intuitive history of the "sea-green Incorruptible," or in G. H. Lewes's philosophic defence of Robespierre (to which may be added Belfort Bax's unphilosophical "Marat") both books apparently un-

Digitized by Google

known, perhaps for documentary reasons, to French students, or in the serene judgments, based on critical study and the English sense of liberty and government, just published from the pen of the late Lord Acton, ought to appreciate as keenly these rehabilitating studies of Robespierre as they have done the equally one-sided work of Aulard for Danton.

One of M. Mathiez's papers, which has been published apart, has immediate interest for American students of their own history. The thirty-four pages of "Lettres de Volney à La Révellière-Lépeaux (1795-1798)" contain new material which has been accessible to research only since the first of January, 1910, in documents left by La Révellière's family to the Bibliothèque Nationale. Before the Revolution Volney had met, along with the philosophers who came to the house of Madame Helvétius, Franklin and Jefferson. It was he who presented Bonaparte, after the fall of Robespierre, his protector, to La Révellière, who passed him on to Barras, with the result that all the world knows. Volney made a first attempt to escape to the United States during the Terror, but failed. In 1795 he sailed at last, "to seek a refuge of peace for which Europe no longer offered him hope." His travels had their main conclusions set down in his well-known "Tableau"; but these letters add suggestive notes:

I saw in the South the *slave régime* and its moral effects; in the West, the state of society at its birth; in Upper Canada, Frenchmen of Louis XV become half-Indians; in the East, English of the last century already an old nation, the only one here which has a formed character.

The representatives of Revolutionary France, with whom he did not agree, called him "aristocrat, because I see everybody and have dined with Alexander Hamilton and Mr. Jay." A speech of John Adams "breathes hateful and hostile dispositions" toward France; in fact, Adams is "at the head of the very great number who have a taste for the Constitution of England" in the "quarrel of English principles against French principles." More penetrating views of this philosophic outsider in regard to the fundamental difference between East and South, the necessity of expansion in the near future, and the divergence of "Federal and Republican" may be gleaned in these few pages.

"Américains et Barbaresques—1776-1824" (Roger et Chernoviz; 357 pages, 8vo, 5 francs), by Emile Dupuy, is a complete and documentary history of the first attempt of our American Republic to regulate the other half of the world. It was all in our own interests, of course, more perhaps than the latest and more self-glorious efforts in the Philippines and others to come in Liberia and farther afield. The successive defeats of the Barbary Powers by the youngest of the nations was a revelation to many, in diplomacy as well as in war. The whole story is told in these pages with great detail and much sympathy and respect.

An appendix gives the "treaties of peace and friendship" signed by the United States with the Barbary Powers —Morocco, 1786; Algiers, 1795, 1815, 1816; Tunis, 1799; Tripoli, 1796, 1797, 1805. The chapters of the book take up in order events from the capture on a Charlestown sailing vessel, in 1778, of a doctor of Harvard College who was hurried away into slavery in Algiers and never came back; through our early imitation of Europe in tribute-paying and buying back of captives; peace negotiations, followed by our first navy with its operations against Tripoli down to Decatur's cruise; to the last period when "the representatives of England had to recognize the ease presiding over relations between the United States and the regencies," and confided British interests to the American Shaler. S. D.

NEWS FOR BIBLIOPHILES.

The origin of the modern temperance movement is traced by some historians to Dr. Benjamin Rush's "Inquiries into the effects of ardent spirits," a tract which he published in 1785 and which was reissued in 1793, and in many subsequent editions. It is a notable fact that he had called attention to the subject many years earlier in a small volume which is now of great rarity.

Two editions have been consulted, and the two title pages are interesting from their variations, and from the evidence they show of intercourse between America and the old home in the late colonial period. Another instance is that Rush's tract was published in full in the *Gentleman's Magazine* for September, 1785 (vol. LV, pt. i, p. 696). The titles read:

Sermons to Gentlemen upon Temperance and Exercise.

Turgidus hic epulis, atque albo ventre lavatur, Gutture sulphureas lente exhalante mephites. Sed tremor inter vina subit, calidumque triental Excudit e mánibus, dentes crepuere retecti Uneta cadunt laxis, tunc pulmentaria labris, Hinc tuba—candelæ.

Persii Satyra III.

Vitam sub Dio-agat. Hor. Lib. III. Ode II.

Philodelphia: Printed by John Dunlop, in Makket (sic) Street M. DCC. LXXII. (pp. 44).

The English edition has this title page:

Sermons to the Rich and Studious on Temperance and Exercise with a Dedication to Dr. Cadogan. By a Physician. (The same mottoes as in the American edition) London: Printed for Edward and Charles Dilly, in the Poultry. 1772. (pp. 80).

Both editions contain the Dedication, but the American has also a Preface of a dozen lines from which we learn, without surprise, that the sermons were never preached.

Both editions were anonymous, or "to speak by the card," the American edition is anonymous, while the English one is pseudonymous. The "Sermons" are duly credited to Dr. Rush in Evans's great work on "American Bibliography." Further evidence, if such were needed, is given by the colonial binding of the writer's copy which has been lettered "Rush's Sermons." Neither edition is in the British Museum Catalogue. The "Sermons to Gentlemen" are admirable expositions of the eighteenth century virtue of Moderation. There is an absence of enthusiasm, and the whole appeal is to the spirit of enlightened selfishness. Dr. Rush quotes the saying of Plato: "I have beheld a monster in Nature, a man who eats two hearty meals in a day," and he strongly advises that the principal repast should be in the evening and followed by sleep. He draws a melancholy

picture of a man who has spent part of his life "among eaters of flesh" . . . Better, far better would it have been for him, had he [in the words of our text] "put a knife to his throat" or even plunged a dagger into his heart, the first day he gave himself up to his appetite than lived to endure such aggravated misery.

The second sermon deals with wine and strong drink, and shows that Rush was then still satisfied as to their usefulness in old age and in certain forms of disease. But he strongly advises that they should not be given to children or be the indulgence of the studious. Moreover, "Wine should not be used by young people, or such as are under five and thirty or forty years of age," except in the case of the diseases he has already named.

To give you an idea of the dreadful consequences of excess in drinking, let me beg of you to accompany me to the bed chamber of a man afflicted with the gout. Be not alarmed at his groans—Let us go in—Is this the man who a few years ago was the life and soul of every company he went into?—Is this he who boasted of the quantity of liquor he could drink without being intoxicated—who spent his youth in a constant round of gayety and pleasure?—How is he changed?—It is now eleven years since he has been a prisoner in his chamber. His physicians have long since deserted him; nor is it any reproach to their art that they cannot cure him, any more than it is that they are unable to raise the dead. He is a burden to his friends. In vain does he seek relief from wine—food—physic—company, or even from philosophy. His only amusement is to number the days of his misery on the wall with the chalk which grows on the ends of his fingers.—Death, the last friend of the wretched, refuses to come at his call—He lives—I retract the word—He has ceased to live ever since his confinement—He breathes shorter and shorter, till at last he closes his eyes for ever in the silence of death. This is not exaggerated picture. We have all seen it at some time of our lives.

In the third sermon he speaks of slavery as a reproach of the American colonies and of humanity—"a crime compared with which every other breach of the laws of Nature or nations deserves the name of holiness." He recommends walking, dancing, fencing, and swimming, but thinks running "too violent to be used often or continued for any length of time." He has praise also for "Skeating," jumping, tennis, "bowles," quoits, and golf which last he describes as "an exercise which is much used by the gentlemen in Scotland. A large common, in which there are several little holes, is chosen for the purpose. It is played with little leather balls stuffed with feathers; and sticks tipped with horn. He who puts the ball into a given number of holes, with the fewest strokes, gets the game. The late Dr. McKenzie, author of the Essay on Health and Long Life, used to say that a man would live ten years the longer for using this exercise once or twice a week." While "riding in a chariot has but few advantages," "riding on horseback is the

Digitized by Google

most manly and useful species of exercise for gentlemen."

The little book ends with a fable in the full-bottomed wig of the eighteenth century. The goddess Hygeia appears in the island of Ceylon before a company of invalids each possessed of a pet disease and a pet medicine for it. By her directions "the gouty man broke his vial of elixir, threw his powders into the fire, and walked four or five miles every day before breakfast," and all his afflicted friends did something reasonable. They were all cured, and "joined in offering sacrifices to Hygeia. Temples were erected to her memory, and she continues to this day to be worshipped by all the inhabitants of that island."

The Philadelphia issue of the book as already mentioned is duly credited to Dr. Rush in Evans's "American Bibliography," but both editions are now very rarely seen even by collectors.

Correspondence

SEGREGATION.

TO THE EDITOR OF THE NATION:

SIR: There are certain features about the segregation law recently adopted by so many Southern cities, which differentiate it from previous legislation touching the race problem.

First, it is a municipal ordinance, and not an act of Assembly; which is tantamount to saying that it is local and not general in its bearing. Hitherto, all important Southern legislation relating to the negro has been of Statewide application. Such was the case with the statutes forbidding the intermarriage of whites and blacks, their coeducation in the public schools, and their occupation of the same steam railway cars; and such too was the case with the statutes that indirectly abridged the franchise. Now we have a measure designed like these to enforce the separation of the two races, but, unlike these, wholly municipal in its scope. It is only when each Southern State shall grow to be as densely populated as Belgium that this municipal ordinance will be superseded by an act of Assembly applicable as well to rural as to urban communities—in short, to all the communities of the State.

Secondly, all the previous Statewide measures to separate the two races have had the unanimous approval of the Southern white people. On the other hand, this new municipal measure has not the unreserved endorsement of certain important sections of that people. At least, it can be said that the wealthier classes look upon the law with indifference. There is with regard to it none of that community of feeling so perceptible in the attitude of the whites toward the intermarriage, the coeducation, and the co-transportation of the races. The evils of these are presumed to come home to all the white people everywhere; on the other hand, the evils which domiciliary segregation are supposed to remove, come home only to a few white people residing within certain local bounds. The ordinance was passed at the instance of small white householders, who, more for social than for pecuniary reasons, objected to the intrusion of negroes about them. Now, the large white householders reside in a part of the city which is virtually removed from the possibility of such encroachment. For them, the question has no social side whatever. Nor are they likely to be seriously injured pecuniarily should they own tenements in the quarters which the negroes are invading. In the long run, negro tenants of the better class pay more rent than white for houses of the same character; as a rule, they pay just as promptly; and they are much less troublesome in their demands on their white landlords. For these reasons, though negro occupants are in the mass more destructive and neglectful, a considerable proportion of white property holders in the South prefer black to white tenants. In reality, the bulk of the white population assents to the passage of domiciliary segregation laws simply in a spirit of sympathy with a vague racial feeling. Many thoughtful citizens, however, put aside the suggestions of this feeling, and question the practical advisability of such an ordinance even should it be upheld in the courts. They look upon it as a blunder because it further restricts and complicates an economic situation already confused by the presence of two races which can never be amalgamated.

Thirdly, it is quite possible that domiciliary segregation will ultimately prove to be for the negro a means of recovering a certain measure of political power. Indeed, he may, through it, attain the full possession of the right of administering his own local civic affairs. With the rapidly growing black population of every large Southern city rigidly confined to its own residential area, there must come a time when that population will form a single compact body that will count its numbers by the hundreds of thousands. The spectacle will then be presented of a great black city, joined on to a great white city, as Buda is joined on to Pest. The first result of this concentration will probably be the urban negro's acquisition of complete control over his local public school system. That system would, under these circumstances, be directed by a negro general superintendent, responsible, not to a white board, but to a black. At present, the negro schools, though each has a negro presiding officer, are overlooked by a white general superintendent, and a board of white trustees. On the other hand, a segregated negro population would manage their own public schools, the white population theirs, and the only bond between the two would be the central white authority that governed the entire city.

But the political probabilities of domiciliary segregation go beyond the educational. When the size of the concentrated negro population of any city shall justify it, that population is quite certain to be permitted to exercise a large degree of municipal power within their own area—to have their own street-cleaning, building, and health departments; their own policemen; their own magistrates; their own police justice; and even their own local councils. The next step would follow inevitably—they could not be prevented, even if it were sought, from choosing persons of their own race to represent their own districts in the State Legislature; and, if the black population was sufficiently large, from electing a member of Congress. As the constituencies of these public officers would be exclusively composed of negroes, no objection could or would be urged by the white people. Under the operation of the law of domiciliary segregation, the experiment of negro self-government would have a much better chance of success than it has had in Hayti or Liberia, for these black urban communities would remain under the direct influence of the white communities in their immediate vicinity, and would always be subject to the firm supervision of the central authority, Mayor or commission, that administered the general affairs of the city.

PHILIP ALEXANDER BRUCE.

Norfolk, Va., July 30.

TOM L. JOHNSON.

TO THE EDITOR OF THE NATION:

SIR: Commenting editorially upon books and politicians, you make this statement:

> Consider the case of Tom L. Johnson, a man who made a deep impression upon his fellow-citizens. Typical of his kind in other respects, he was not less so in the narrowness of his intellectual range.

The *Nation* seems to have what amounts to genius in its ability to misunderstand Tom L. Johnson. So far as this particular statement is concerned, it is true that he was deprived of the advantage of a college education, and that is as far as the statement even approaches the truth. He was surrounded by college bred men, and was the centre around which their intellectual activities played. His intellectual range was enormous. The sciences, both on the practical and purely scientific side, were his constant delight. He studied and fairly mastered French during the busiest part of his mayoralty in Cleveland. He read with interest both philosophical and historical works, and had rather better judgment upon some questions of a purely æsthetic character than most of those who were constantly with him. He knew his Gibbon far better than any of us, and when the last hours came and he was too feeble for personal exertion, friends and employees entertained him by reading Plutarch.

Mr. Johnson did not regard himself as either a scholarly or learned man, but it was very perilous for anybody else to act upon such an estimate of him.

NEWTON D. BAKER.

Cleveland, O., July 31.

If we have misunderstood Mr. Johnson, we have erred in company with some of his avowed friends. For example, on page 127 of Carl Lorenz's recent life of Johnson, statements may be read which support all that we have said. We may add that the *Nation* has not failed to recognize Mr. Johnson's sterling qualities.—ED. THE NATION.]

A SMALL FRENCH UNIVERSITY.

TO THE EDITOR OF THE NATION:

SIR: The comparative merits of the small and the large school have been so thoroughly discussed in the United States, and champions of the small school have been so numerous there, that one wonders at finding them so rare among American students who go abroad. Of compatriots

Digitized by Google

who have studied in France, I think I could name some dozens who went to Paris, one or two who chose Grenoble, and that is pretty nearly the list. There are fifteen universities in France, all under the same national control; and while the great Paris school is, of course, furnished, in general, with the best men and the best equipment, the difference is probably not nearly as great as the Parisian would have the foreigner believe. As far as I have been able to learn, all the schools offer special courses for foreigners, and some of them at least have become much more active within the last year or two in encouraging foreign attendance. Montpellier, where I am, and the neighboring Spanish University of Barcelona are now negotiating a system of exchange professorships on a grand scale, to be put in operation for the first time this coming school year. Half a dozen professors from each school are to go in a body and spend a considerable period lecturing at the other. It will not be the fault of the university managers if a number of other French universities besides the one at Paris do not rapidly acquire an international character.

With a summer in the Alliance Française at Paris as my only means of first-hand knowledge of French higher education, I had reached the somewhat hasty conclusion that Paris was France, educationally as otherwise. Turned almost by accident in the direction of the ancient *alma mater* of Rabelais and the home of Auguste Comte, I found it necessary to revise that judgment. There are libraries in these provincial universities which no American schools save a half dozen of the wealthiest can match; there are excellent instructors, of whom some are internationally known; and, most significant of all, the small number of foreigners in attendance makes it possible to come into such personal contact with members of the faculty as would never be possible in Paris. There was a certain profit, of course, in sitting at the back of a large room and sharing one of René Doumic's piquant lectures with five hundred other foreigners; but there is much more in a tête-à-tête with a critic who is not a René Doumic, perhaps, but is none the less a thorough and well-furnished scholar. There was profit in listening to the Abbé Rousselot as he discussed his experiments in phonetics, but there is more in half an hour of individual drill under the direction of a phonetician who is not as widely known as the Abbé Rousselot, but has won the respectful attention of scholars beyond the limits of his own country.

The frequenting of a particular school puts the student in touch with regional peculiarities, which may in some cases prove a help, in others a hindrance. Montpellier, in the heart of the sunny and garrulous Midi, warm in winter and tempered by seabreezes in summer, is one of the most curious and pleasant of places for twelve months in the year. The language of the natives is a variety of Provençal, and even the educated inhabitants speak French with an accent that is a long way from the "pure Parisian." This fact frightens some foreign students away—why, it is hard to see, inasmuch as the difference between the French of Paris and the French of Montpellier is the merest trifle compared with the difference between the French of either and the French of Cincinnati or Chicago. On the other hand, it is a distinct advantage to the student of Romance who is interested in the dialects of Provençal to work with them where they are spoken, even if the visitor does not go to the extreme of the young German who entered this institution for a regular course in modern French, but who ate of the lotus of Mistral and Bigot till he forgot his purpose entirely and came out a disciple of the Félibriges.

Of a total attendance of a thousand there are some fifty foreigners (exclusive of a number of Spaniards, Algerians, and others who have spoken French from childhood and take the regular courses). Half of this number are Russians, with several Germans, a small group of English, a few Poles, Norwegians, Swedes, and one American. In view of the advantages of a small school which is at the same time a good school, the wealth of historical, archæological, artistic material in one of the oldest corners of Europe, the unrivalled charm of Mediterranean France, the climate advantages, the low cost of living in a modest provincial city, it seems as if the list of Americans might be a little longer.

ROY TEMPLE HOUSE.

Montpellier, July 12.

"PAMELA" AND SHENSTONE'S LETTERS.

TO THE EDITOR OF THE NATION:

SIR: A correspondent in *Modern Language Notes* of May, 1911, calls attention to a connection between Richardson's "Pamela" and the second of William Shenstone's letters in Volumes III of "Works in Verse and Prose" (London: Dodsley, 1777). He points out that this letter is a parody of a letter in "Pamela," yet bears at its end the date "Leasowes, July 22," and at its head "1739"; that "Pamela" is noticed in the Register of Books of the *Gentleman's Magazine* of November, 1740, as item 18; that his letter indicates that Shenstone was on July 22, 1739, sufficiently familiar with "Pamela" to write the parody; that Shenstone may have seen the novel in MS.; that, however Shenstone became familiar with "Pamela," Richardson's statement that he wrote "'Pamela" between November 10, 1739, and January 10, 1740, is incorrect, or that Mrs. Barbauld, in her "Richardson's Correspondence," misquoted the novelist's statement, or that the accepted date of publication of "Pamela," November, 1740, is untenable. The writer finally states that apparently "Shenstone's letter has not been noticed by any of Richardson's biographers and critics, though the reference to 'Pamela,' explicit as it is, if it does not prove that the novel was in circulation as early as July, 1739, makes it incumbent upon the student of Richardson to show beyond a doubt that the letter is incorrectly dated."

Does not this last declaration go too far? Must not one rather say that Richardson's own statement of the date of composition is intrinsically credible and must be shown beyond a doubt to be incorrect, especially when challenged on the basis of a dating by an eighteenth-century editor of letters; as must also the *Gentleman's Magazine* registry of the appearance of an edition in November, 1740 (it is to be noted that the *London Magazine* and the *Scots Magazine* also record this publication in their November, 1740, issues); and as well the announcement of a forthcoming "second edition" of "Pamela" (the novel being characterized as "publish'd but last month") in the *Gentleman's Magazine* of January, 1741; and likewise the announcement of issue of the "2nd edition" in the same magazine of February, 1741?

Shenstone's letter reads as if he wrote from knowledge of a printed book for a person who had knowledge such as would be obtained from a printed book. Men are unlikely to write parodies of MSS. passed from hand to hand, and not in print. Further, we have no evidence that the MS. was read by or to Shenstone or his correspondent. The burden of proof is to be borne by him who opposes the accepted dates of composition and printing of the novel. If any considerable doubt as to the correctness of the dating of Shenstone's letter can be shown, the accepted dates of "Pamela" must stand.

In an article shortly to appear in print, I shall show that this same extraordinary foreknowledge of facts is manifested in a number of Shenstone's letters, as they are dated in Dodsley's edition. In other words, I shall show beyond doubt that Dodsley's dating of a number of the letters (among them iii, iv, v, vi, vii, x, xiii, xxi, xxix, xxx) is incorrect, in several cases by as much as two years. The letter under discussion is probably misdated as are these.

JOHN EDWIN WELLS.

Beloit College, July 12.

"CURIOUS TO KNOW."

TO THE EDITOR OF THE NATION:

SIR: There has been of late an eruption in Chicago of the expression, "curious to know." One popular newspaper writer of the city is so fond of the locution that he uses "c2k" as an ordinary abbreviation for it.

Irritation at the persistence of this phrase led me to look into Murray's dictionary for information that might afford mental relief, but I was horrified to find that the only appearance of it noted in that monumental work is credited to E. E. Hale's "In His Name," with the date of 1873, thus implying a recent American origin for the atrocity. If the lexicographer's reader had turned back a century further he would have found in Boswell's "Journal of a Tour to the Hebrides," in the entry for August 30, 1773, the following sentence: "Dr. Johnson was curious to know where she slept"; and in the course of the narrative of Prince Charles Edward's escape from the Highlands, attached to the entry for September 13, "I was curious to know if he had really heard," etc. The great doctor himself came perilously near adopting the offensive neologism of his entertaining follower, when in his own story of the tour he said: "The political tenets of those islanders I was not curious to investigate." In his dictionary, however, he gave no sign of trying to affix the meaning "inquisitively anxious" to the word "curious," as he must have done if he had thought his own and Boswell's use of it legitimate in the sentences above cited.

Perhaps examples of the use may be found dating before Boswell's time. I should like to have it as far removed as possible from liability to the imputation of American origin.

SAINTE-BEUVE AND MACAULAY.

TO THE EDITOR OF THE NATION:

SIR: I am not aware that Sainte-Beuve and Macaulay had any personal acquaintance, nor do I remember that Macaulay ever alludes to his French contemporary. Their lines of work were in some respects similar, but their methods were as different as possible. Sainte-Beuve called himself "a naturalist of souls." Perhaps Macaulay, for all his brilliancy, was rather "a showman of souls."

Sainte-Beuve has at least one passage referring to Macaulay, which is exceedingly interesting, because it deals precisely with this difference of method:

On lui a prêté un peu plus de physionomie qu'il n'en a eu peut-être, selon le spirituel et périlleux conseil de M. Macaulay, qui est fort suivi aujourd'hui: "Les meilleurs portraits, a dit ce grand peintre historique, sont peut-être ceux dans lesquels il y a un léger mélange de charge. . . . Quelque chose est perdu pour l'exactitude, mais beaucoup est gagné pour l'effet. . . . Les lignes moins importantes sont négligées, mais les grands traits caractéristiques s'impriment pour toujours dans l'esprit." C'est ainsi qu'on raccommode apres des siècles et qu'on refait bien des personnages!

This passage occurs in the "Premiers Lundis," Vol. III, p. 163. I should be very grateful if any one could point out to me the work of Macaulay from which Sainte-Beuve quotes. As the French article was written in 1864, after Macaulay's death, any of his writings may have been referred to.

PLEASURES OF A KING.

King Edward VII as a Sportsman. By Alfred E. T. Watson. With an Introduction and a chapter on "Yachting" by Captain the Hon. Sir Seymour Fortescue, C. M. G., K. C. V. O. Contributions by the Marquis of Ripon, G. C. V. O., Lord Walsingham, Lord Ribblesdale, and others. With 1 photogravure plate, 10 plates in color, 12 Rembrandt-gravure plates, and 79 half-tone illustrations. New York: Longmans, Green & Co. $6 net.

If for nothing but its outward dress, its quality of paper, typography, illustrations, and binding, every collector of the literature of sportsmanship will want this volume on his shelves. Any one who expects to find the text dull and perfunctory, however, will be agreeably disappointed. Edward's sporting successes, both as King and earlier as Prince of Wales, had to be won on merit, as was shown when his apparent winning of the Grand Military Gold Cup, in a steeplechase near Sandringham in 1887, was successfully contested on the claim that he was not at the time an officer in active service, and hence should not have been allowed to enter.

Mr. Watson's opening chapter gives a brief sketch of the Kings of England as sportsmen. Even the saintly Edward the Confessor delighted to follow the hounds. Angling, however, makes but a poor showing, possibly because it is a sport which loves more of the contemplative and solitary than the pomp and circumstance of royalty can admit. On one occasion, when the late King was shooting at Bradgate, the country place of Lord Stamford, the moving of the party to a second covert was declared by the keeper to be virtually impossible because of the presence of about four thousand spectators in the space between the two coverts. Imagine an attempt to whip a trout stream under such circumstances! King Edward is said occasionally to have tried for trout during his sojourns in the Highlands, but he never manifested a real taste for the sport, and is said not infrequently, and with a certain degree of acquiescence, to have quoted Dr. Johnson's description of angling, "a worm at one end and a fool at the other." The rod excluded, however, Mr. Watson claims for his subject a unique place as a sportsman. Most English gentlemen hunt or shoot, he says; some keep race horses or steeplechasers, others are yachtsmen, and a limited number have shot big game in other lands. But "very few have gained distinction in all these sports alike, and there is no record of any one who has approached the wide range and high degree of success achieved by King Edward VII." And yet at the one point in which personal skill counts most in the sports to which the King devoted himself, the use of the gun, exceptional skill is not claimed. "As a shot King Edward was somewhat variable, at times distinctly good, though never approaching the very front rank, in which King George, Lord Ripon, Lord Walsingham, the Hon. Henry Stonor, and a few others stand by themselves." His comparatively poor shooting is more than once excused on the ground of mental preoccupation with weightier matters, which would seem to indicate that the zest of sport for its own sake never completely got hold of him. Sport was a relaxation to him, the author says, not an end in itself. He was distinctly averse to any attempt to make records in game shooting, and for that reason Mr Watson tells us comparatively little of the material results of his days with the gun on the preserves at Sandringham, Windsor, Balmoral, and the various other places where he sought recreation of this kind. The few figures that we do get, however, are occasionally far too large to make pleasant reading to any American sportsman imbued with the newer ideas of sporting methods.

In the three chapters dealing with Sandringham, Windsor, and Balmoral, as scenes of the King's sportsmanship, the author has interwoven a great deal of matter of historical interest. One owner of the Sandringham property, Col. William Cobbe, suffered temporary sequestration at the hands of the Parliament for his alleged devotion to the cause of Charles I. Through the old Flemish family of the Hostes and then the Henleys the estate came into the hands of the famous Pierre Antoine Motteux, the story of whose death gives a lively idea of the rugged character of *ex tempore* sports which might be indulged in no longer ago than the middle of the eighteenth century. While celebrating his birthday some roystering companions hung him up by the neck just for fun. Unfortunately, a procession passed down the street, and off they are rushed to the windows. When the procession had passed, they discovered to their consternation that the spirit of their swinging host had passed, as well. By a descendant of Motteux the estate was bequeathed to the Hon. Spencer Cowper, and by him sold to the Prince of Wales, in 1861. Windsor, in the form of "Wyndleshora," was acquired by William the Conqueror from Eadwin, Abbot of Westminster, by exchange for lands and mansions in Essex. It was from Windsor, in the thirtieth year of Henry III, that a writ was issued to the sheriffs of London commanding them "to provide a muzzle, an iron chain, and a cord for the King's white bear, to use the same bear to catch fish in the waters of the Thames," a story which makes one wish that the ubiquitous kodak enthusiast of to-day could have happened along when this angling bear of the royal tackle-box was in action. Windsor was King Edward's chosen place for entertaining his royal guests at shooting, and the Kings of Italy, Portugal, Greece, and Norway, as well as the Emperor of Germany, have all enjoyed the shooting there in recent years. With Balmoral King Edward had been associated from childhood. Queen Victoria had acquired the reversion of the lease of this estate in 1848 and purchased it from the trustees of Sir Robert Gordon, brother of the Earl of Aberdeen, in 1852. It was here as a little boy, in 1848, that the future King had his first introduction to deer-shooting, going with the young Queen and the prince consort to the heights of Craig Daigh, where the three concealed themselves in an artificial cover of hurdle-work interwoven with fir and heather. Victoria's description of the scene, which the author quotes from her "Leaves from the Journal of Our Life in the Highlands," makes a good companion-piece to the younger Pliny's famous letter on his wild boar hunt, in which he tells of taking his writing tablets along with his luncheon-basket and wine flask, that he might not return empty-handed even though the game should fail.

One suspects, however, that the King's heart was more deeply interested in his extensive participation in the sport of

Digitized by Google

horse-racing, to which two long chapters of the volume are given. For the first eight years of his efforts in this field, ending with the season of 1893, his winnings in stakes had amounted to less than six thousand pounds. The next six years, however, formed an era of distinguished success, culminating with winnings of nearly thirty-two thousand pounds in 1900. But the nine remaining years, in spite of the large number of entries and horses in training, aggregated only a little more in stakes than this one season. We are told, however, that the King's racing establishment as a whole was remunerative. A cheque for £1,000 was handed by him to Lord Marcus Beresford, when he was put in charge, and he was never called upon for another shilling. On different occasions he drew large sums from the profits of the royal stables, and at one time about £60,000 was standing to his credit. His interest in yachting had an early start, since as a youth of ten years he stood with his parents on the deck of the royal yacht Victoria and Albert and saw the schooner America round the Needles with a good lead over her English competitors in the first race for the America Cup. It was more than forty years later that he was to have the Britannia built, which contested successfully against Mr. Gould's Vigilant, in the season of 1894, finally to yield to the German Emperor's cutter Meteor.

It should be said to the credit of Mr. Watson and his collaborators that King Edward himself stands out in their work as a well-defined, thoroughly human, and interesting personality. Considering his position, they might easily have been afraid to get close enough to him to make this possible. The illustrations are lavish in number and chosen to illustrate the text, not simply to attract the eye. They are well-executed, too, with a little possible reserve as to the success of the coloring in some of the reproductions from paintings by Archibald Thorburn and Miss M. D. Hardy.

CURRENT FICTION.

John Sherwood, Ironmaster. By S. Weir Mitchell, M.D., LL.D. New York: The Century Co.

John Sherwood learns to be an ironmaster and not much else, and unlearns the lesson in the Maine woods. His uncle owned an iron-foundry, and he himself had a natural instinct for machinery. At nineteen he was a successful inventor, and at thirty the proprietor of the works in which he had been trained. With no love for money in itself, he liked to manage men and to out-do rivals. In short, he lived the life of the successful American. "If, at times I had doubts as to the entire wisdom of my life and vague thinking about what I might do on that some day or other with which the never-quite-satisfied American toys at times, I never set myself seriously to the task of planning any other life." He is American in giving up exercise, after a very active youth. At thirty-five he is pulled up short by tuberculosis, and takes to the woods. So begins a regeneration, mental and spiritual as well as physical. John Sherwood's life in the wilds does not entail hardship. He retains all the real comforts, including his body-servant. But he feels the charm of nature for the first time, the imagination and zest of a child return to him, and, instead of a mere hard-driving force, he becomes a man.

He is not so much alone on his thousand acres that there is no chance for the expression of his new nature. There are several squatters on his land, whom he befriends out of simple good feeling, such as, though known as a philanthropist of sorts, he has never experienced before. One of these people is a madman who thinks he has killed his wife, and has fled to the wilderness for asylum. The upshot of the story, so far as these pages can be said to make up a story, is that the madman, after again trying to kill his wife, falls over a cliff, and, in due time, John marries the widow. But the merit of the book is independent of its story. We suppose Dr. Mitchell's popularity as a writer is due to his optimism. His interpretation of human character is always cheerful and wholesome. His style continues to be rather awkward; it is the kind of style that deals with "individuals" instead of persons, and in general is content with words as rough counters. On two pages, examined at random for evidence of our impression, we find such sentences as these:

> At last I took ample apartments in the city and joined the older club with as little change of life as it was in my power to avoid.
>
> One day we will become transparent to that terrible physical confessor, the doctor.
>
> I fully realized that the complete social isolation I liked was clearly impossible for a man in my position.

For "it was in my power to avoid" read "necessary"; for "will," read "shall"; and omit the word "clearly," and you have sentences which will pass muster. But the chief fault of this writer is not a matter of correctness: it is a certain thickness of speech amounting almost to an impediment.

The Story Girl. By L. M. Montgomery. Boston: L. C. Page & Co.

The many admirers of this author will welcome her new book. And those who, in the cases of the later Anne and of "Kilmeny," found cause to temper praise with comparison will give double welcome to a story which returns to the plane of the author's best work. The scene is still in Prince Edward Island, the actors are a group of merry children spending their lives or their vacations on ancestral acres. The acres bloom in the old picturesque and fragrant way. The children are of all sorts, except very bad. Inevitably one of them must be dowered with a fantastic soul, and this one is the Story Girl who has the gift of remembering, inventing, and, above all, of telling. Fairy tales, Norse legends, the family ghost stories, the domestic ancestral joke are alike fuel for her fire. She becomes, in a way, the mouthpiece for much anecdotage, but through it all preserves a marked personality, compounded, in the author's agreeable manner, of fancy, fun, loftiness, and perversity. She is the leading spirit, but there is no lack of individuality among the boys and girls with whom we spend the summer, and pass long hours in the old grand-paternal orchard, where every member of the clan is represented by a tree. We go to school, do chores, gather apples, burn potato stalks, and after the manner of youth attack the problems of the universe. To sit in the grassy aisles of the orchard with the cousins and listen to the Story Girl's witching voice, to assist at counsels of mischief, at the drolleries, scrapes, and inter-squabbles of the young folk, and to have clear if brief glimpses of the elders is to be left with a lively sense of lively and actual acquaintance.

The Stolen Singer. By Martha Bellinger. Indianapolis: Bobbs-Merrill Co.

The hero of this medley is fresh from Lynn, Mass., and the shoe business, the heroine is snatched from the concert stage, the second lady and villain are imported from the court of a small imaginary European principality, while a number of minor characters are supposedly indigenous to the "down in Maine" village where, under the guidance of chance and the author's will, the principals foregather. The arrival of the shoe manufacturer and the lately stolen singer on the wild New England shore is in itself a complete aquatic idyl of a most exceptional order. A comfortable nocturnal tête-à-tête of two castaways floating with one life-preserver between them—what better opportunity could an author's ingenuity offer for a kidnapped lady and her self-appointed squire to make each other's acquaintance, compare experiences, discuss life, death, and eternity, and match quotations. How naturally ensue the shoe manufacturer's heroic and almost fatal exertions to reach terra firma with the exhausted lady, and his not too hasty convalescence under her grateful care.

The author's style adjusts itself to geographical demands with amazing elasticity. In Lynn she is far more sophisticated than in rural Yankeedom; in New York she becomes positively ur-

bane, and on the beach reverts to the limpid simplicity of the desert-island romance—the resuscitation of Agatha being quite classic in its tone:

> Then he gave her food in little bits from a basket and sweet water out of a bottle. Agatha's soul revived within her and her heart became brave again.

The Revolt at Roskelly's. By William Caine. New York: G. P. Putnam's Sons.

Mr. Yule, benign embodiment of the democratic holiday spirit, goes to pass Christmas at Roskelly's, on the "Cornish Riviera." The "best people" finding his easy camaraderie most obnoxious, relegate him to the society of the "plebs," who of late years have come to infest the resort with too noisy mirth and too promiscuous friendliness. Among this outcast people and a few free spirits who belong to neither class, but are just natural human beings, Mr. Yule contents himself. Jovial and lavish as a man of his name and Santa Claus aspect should be, he heartens the despised plebs with sweetmeats and tobacco, with "dumb charades," a holiday dance, and a Christmas tree; and after playing Cupid in a grandfatherly way and showering the disdainful ones with works of art too choice for their appreciation, he confounds them all by producing a title to which every snob must perforce bow the knee.

The effect of the whole story can best be summarized as something between "The Third Floor Back" and Dickens's "Christmas Carol." As a satire on caste consciousness, while full of happy strokes, it is not more remarkable than the performances of numerous other young English writers, with whom this theme is nowadays very much in favor.

THE DUBLIN PARLIAMENT.

The End of the Irish Parliament. By Joseph R. Fisher. New York: Longmans, Green & Co. $3 net.

Mr. Fisher has scarcely done himself justice in his title. The title suggests a book on the lines of Dr. J. R. Ardill's "The Closing of the Irish Parliament"; but Mr. Fisher's volume is more than this, and might better have been called "Ireland in the Last Thirty Years of the Dublin Parliament"; for Mr. Fisher has taken Townshend's tenure of the office of Lord Lieutenant—1767-72—as his starting point, and has carried the political and to some extent the agrarian and social history of Ireland from Townshend's struggle with the undertakers—otherwise the bosses of the House of Commons—down to the Union in 1800.

From every point of view, Mr. Fisher's starting point was well selected. Ireland in the eighteenth century had no Parliamentary history so long as the undertakers were in control, Poynings's law in operation, and the Lord Lieutenant non-resident. All the Parliamentary history of Ireland that has any significance was compressed into the period that lay between the Lord Lieutenancy of Townshend and that of Cornwallis. This was the period of the Octennial Act, Grattan's Parliament, the rejection of Pitt's commercial proposals, the trouble over the regency, the liberation of the Presbyterians from the fetters of the Test act, the enfranchisement of the Catholic forty-shilling freeholders, the movement for Parliamentary reform, and the movement for complete political emancipation of the Catholics that was to keep both Ireland and the United Kingdom disturbed until the breakdown of the old Toryism on this question in 1829.

The Irish Parliament as a representative institution has little interest for Mr. Fisher. Nowhere does he give even a description of it, or describe the franchises on which the House of Commons was elected. This omission is a defect, because it was the franchises, all modelled on those of England, and in the eighteenth century warped from their original basis as much as those in England, that put the Irish House of Commons so easily under the control of the large landed proprietors. The political strength of these magnates—particularly after the octennial act and the repeal of Poynings's law—lay in the number of members they could return to the House of Commons, and the power they could exercise over their docile nominees and through them over the lord lieutenants, who after Townshend's time were charged with the disagreeable and sordid business of House management. Mr. Fisher takes it for granted that his readers are familiar with all this, and familiar also with the social, agrarian, and ecclesiastical conditions of Ireland up to 1769, and after an introductory chapter in which he recalls the narrowly sectarian character of the Irish Parliament and the origin of Poynings's law, he proceeds with the history of the Parliament from 1769 to 1800. He goes over ground that has been travelled by Froude and Lecky and other writers on Ireland in the eighteenth century. But he imparts much freshness and value to his treatment of this period; for he has drawn upon the Dropmore, Carlisle, Rutland, Charlemont, and other manuscripts which have in recent years been published by the Historical Manuscripts Commission or have otherwise been made available. In particular, Mr. Fisher is the first writer on Irish history to draw to any extent on the Macartney papers; and as Macartney was Chief Secretary for Ireland during Townshend's struggle with the undertakers, much new light is thrown on this contest, on the character of the men with whom Townshend had to deal, and on the cost of the struggle which made his three years at Dublin Castle memorable. The victory, that in the long run meant so little—for other lord lieutenants and chief secretaries had to continue the sordid business that he took over—cost the Irish Treasury half a million sterling, with the creation of five new peerages as a make-weight.

More valuable still is the new light that Macartney's correspondence throws upon the social condition of the Irish people and the methods by which the landlords used the influence they possessed in Dublin and in county government to throw their burdens on the luckless and starving tenantry. The troubles of Ireland, apart from the never-ending struggle among the ascendancy group in Parliament for offices, sinecures, and peerages, even at this time, were agrarian rather than racial or religious. The landlord, the parson, and the priest all preyed in turn on the peasantry, until "the poor reduced wretches have hardly the skin of a potato left them to subsist upon." The outflow of rent to absentee landlords resident in England was, in 1773, estimated at above £700,000 a year. But when Blaquière, who succeeded Macartney as Chief Secretary, proposed a tax on the incomes of the absentees, Burke put his pen at their service; they were numbered among the Rockingham Whigs. The remonstrance which Burke wrote was signed by five great Whig peers. It killed Blaquière's proposal—"not the first, nor the last time," adds Mr. Fisher, "that Burke in his party zeal did a bad day's work for Ireland."

No Englishman nor Irishman who has written on Ireland in the last half of the eighteenth century has evinced a greater contempt than Mr. Fisher for the Irish Parliament and the Irishmen who worked that institution to their own ends. Macartney who helped Townshend to break down the undertaker system, and Castlereagh who was foremost in the work of sweeping the Parliament out of existence, are the only Irishmen of the period for whom Mr. Fisher has much admiration; and like other students of the subject, he regards the Parliament as too hopeless to have been reformed. But the value of his book does not lie only in the fresh light he has been able to throw on the Irish Parliament and its management; it lies also in his sidelights on the social and agrarian condition of Ireland, on the wretchedness and social squalor of the period, most of it due to corruption, vested interests, and mismanagement, for which, in the final result, ministries and Parliament at Westminster were responsible. England to-day is paying the penalty. Most of the social problems which are now pressing on Parliament had their beginnings in the England of this period of 1769 to 1800, and most of them were aggravated by the inpouring into England of Irish, who left home

because of misrule and started a long-continued migration thither.

The Religion of Beauty in Woman. By Jefferson Butler Fletcher. New York: The Macmillan Co. $1.25 net.

The essays and studies collected in this volume deal with the love theories of the *dolce stil nuovo* and of the Renaissance. Many of the essays were already well-known and highly valued. They gain by collection: the lights of definition and allusion interplay most effectively throughout the volume.

The criticism of Cavalcanti forms perhaps the most notable portion of the work. Professor Fletcher's translation and exposition of the *Donna mi prega*, together with the admirable essay on Guido's philosophy of love, afford a welcome illumination of a poetic personality very rich in itself and very different from that of Dante or that of Guinizelli. To Cavalcanti love was necessarily desperate, deathly; for he felt, beyond all partial fulfilment, the insatiable craving for the fusion of soul with soul, and he had no faith in a divine all-blending love. From the thwarting actuality he turned, like Leopardi in a later age, to the contemplation of the ideal reflection of beauty within himself—an image, but an image utterly possessed.

Dante's love, on the contrary, was profoundly religious, and its essence was self-renunciation. Imperfect, uncentred, at first, while he enjoyed the salutation of Beatrice, it reached its centring when he had banished all thought of his own welfare, and the end of his love had become solely the versing of his lady's praise. One may question, however, whether the mature religion of Dante was as essentially an outgrowth of his love for Beatrice as Mr. Fletcher thinks it to have been—whether the "Vita nuova" and the "Divine Comedy" are directly continuous. Was not the vision of Dante wrought by the intense intellectual activity of the years in which the memory of Beatrice was darkened, and even betrayed? Is it fair to say that Dante's love reached out from Beatrice "to all humanity, and from humanity, by the leading of faith, to humanity's God?" It is true that in the early days of his love the salutation led him to think no man his enemy; but in later life he seems, like Giovanni Selva, rather to have loved men because they are God's children than to have loved God because He is man's Father.

Mr. Fletcher rightly takes the words

> Io mi son un che quando
> Amor mi spira, noto,

to imply that Dante regarded a certain spontaneity as the distinctive quality of the Sweet New Style, but says nothing of the fact that such spontaneity is hardly to be found in the verse of those whom Dante called his father and his betters in poetry. The love doctrine of Guinizelli was, in fact, a deliberate, even scholastic, product, and was accepted and developed as such by his lesser followers. But to the young Alighieri, truly gentle, rich in imagination, the curiously fashioned doctrine seemed a vital thing, and in the ardor of his fresh idealism he carried into life the beauty of what had been a poetic abstraction: the dry theory came to blossom, like the rod of Aaron. Naturally enough, then, Dante read into the poetry of gentleness a breathing of love that was in reality all his own.

The same miracle appeared in the Platonism of the Renaissance, and of its manifestation there Mr. Fletcher writes fully and with discernment. The Platonic doctrine, fostered in Medicean Florence, had its versified *summa* in Benivieni's "Ode of Love." This poem Mr. Fletcher prints, with an excellent translation and clear analytic comment. The doctrine spread swiftly through the brilliant circles of the Renaissance. Bembo was its pontiff, Castiglione its acolyte, Spenser its missionary, the whole courtly train its devotees. But while it remained for the most part a matter of literary interest and of social fashion, two men made of it a living gospel: Michelangelo, in old age, and Sidney, in his youth. For Michelangelo Mr. Fletcher has only passing references. The essay on Sidney is one of the most finished in the volume.

Such breadth of reading and such alertness in assimilation as Mr. Fletcher possesses are not without their perils. The essay on Dante and Beatrice represents an unfortunate yielding to the temptations that beset a writer so endowed. It seems to have been the noting of a certain similarity between the phenomena of the religious ecstasy of Methodist Bradley, as recorded in James's "Varieties of Religious Experience," and the phenomena of the ecstasies of Dante's love, as recorded in the "Vita nuova," that led to the writing of the essay. The comparison yields more loss than gain. Is it not self-evident that the psychological tatters of all ecstasies will be similar? Furthermore, the thesis of the essay as a whole is this: *any one* may find responsive truth in the "Vita nuova," for the experience there recorded is essentially that of "every Jack in love." Dante would have resented such a thesis. The little book was written for the few who truly have intelligence of love, and the experience it narrates is that of a sensitively aristocratic heart and mind. The comparison of Dante in his love for Beatrice to "any small boy who, unintimidated, resigns the core of his apple to another small boy," to "Nancy Sykes dumbly devoted to her abominable Bill," to "the rake of De Musset's poem suddenly pitiful of his poor hired drab," evinces a regrettable carelessness of real values and real distinctions.

This essay, and the preface and introductory essay that precede it, are marred by a flippancy of phrase and allusion to which the dignity of the subsequent studies offers a welcome contrast. To advance comparisons such as those just quoted, to advertise modernity by dint of uncalled-for references to Bernard Shaw, pragmatism, and "It Never Can Happen Again," to multiply, even with such apology as quotation marks afford, words and phrases like "stuffed with sawdust," "beauty-show," "puppy love," and "damfoolishness," is to captivate the sophomore, no doubt; but it is also to risk the esteem of a maturer audience.

The Business of Congress. By Samuel W. McCall. New York: Lemcke & Buechner. $1.50.

By revising and publishing these lectures, delivered at Columbia University two years ago, Representative McCall has produced a volume which usefully supplements the existing sources of information concerning his subject. It is neither a parliamentary manual nor a political history nor an essay on the philosophy of government which he has given us, but a book which pleasingly blends the qualities of all three. Intended to give a working knowledge of the way in which Congress actually transacts business, the lectures necessarily went at some length into the organization of the House, the choice and powers of committees, the introduction and advancing of bills, together with much relating to rules and practices; but a great deal of concrete and personal detail is given by way of illustration, while genial or shrewd remarks on the political interpretation of changes and events in Congress are frequent. Nearly all of Mr. McCall's pages are readable and many of them are filled with instruction or fruitful suggestion.

The Massachusetts Representative is continually in this book adducing English precedents. By so much he makes his study one in comparative government. Looking for likenesses or equivalents, he is fond of showing how differing forms come to the same thing in effect. An instance of this is his maintaining (p. 50) that Congress has virtually as much benefit from the advice of Cabinet Ministers in the matter of supply bills affecting their departments as has the House of Commons. The advice is given, to be sure, not on the floor of the House, but in the room of a committee; but the American plan is not so far away from the English as some suppose. Later (p. 193, *seq.*) Mr. McCall takes a somewhat different line, and argues for the

Digitized by Google

superiority of the British system, which he would like to see more closely imitated in this country. He justly observes that if our members of the Cabinet were compelled to attend the House and to be prepared to explain and defend their policies, it would make impossible some of the appointments to the office which we have had. Equally out of the common view is the author's contention that it would be a good thing for the House of Representatives if we could have in it, like the House of Commons, captains of industry and some men of great wealth—he specifies Morgan, Carnegie, and others—since, "where all classes are directly represented, the whole circle of fact will be known and one class will not be so likely to fatten upon the others."

Resisting the temptation to cite further, we merely point out that, in the matter of the rules of Congress, the hair has grown while Mr. McCall was shaving, the radical departures made by the Democratic majority in the Sixty-second Congress having made some of his statements antiquated. In a few cases he has been able to indicate this in footnotes.

Notes

The text of "The Lure of the Garden," announced by The Century Co., is furnished by Hildegarde Hawthorne, and full-page illustrations in color are prepared by Jules Guérin, Maxfield Parrish, Anna Whelan Betts, Ivanowski, and others; there will also be illustrations in black and white from photographs.

The Century Co. also has in hand "Four Months in Spain," by Harry A. Franck; "Toddie," by Gilbert Watson, a Scotch author, and "Written English," prepared in collaboration by John Erskine and Helen Erskine.

Romain Rolland's "Life of Tolstoi" will be brought out this autumn by E. P. Dutton & Co. The same firm will publish Arnold Bennett's "Hilda Lessways" and Pierre de Coulevain's "Heart of Life."

"More Mastersingers," by Filson Young; "Favorite Poems in English," compiled by Burton E. Stevenson, and the translation into English of Rolland's "Jean-Christophe in Paris," which is the sequel of "Jean-Christophe," are in preparation by Henry Holt & Co.

The second volume of A. Maurice Low's "The American People, a Study in National Psychology" is promised by Houghton Mifflin Co. for the autumn.

Clayton Hamilton is at work on a life of Stevenson. The book will be issued by the Baker & Taylor Co.

In "My Own Story," which the Putnams promise before long, Princess Louisa of Tuscany gives the history of the events which led up to her flight from the court of Saxony.

Among the autumn books announced by Thomas Y. Crowell Co. we note three for boys: "The Aeroplane at Silver Fox Farm," "Boy Scouts in the Maine Woods," both by James Otis, and "The Unmannerly Tiger and Other Korean Tales," by Dr. William Elliot Griffis.

The Tennysonian celebrations which are now going on at Somersby, England, include an address by the Oxford professor of poetry, Dr. Warren, on "Tennyson: the Poet in the Poet's Land"; "Memories of the Tennyson's at Somersby," by Canon Rawnsley; speeches by J. Cuming Walters and E. Hartley Coleridge, and recitations of several of Tennyson's poems.

The two journeys of William Morris to Iceland, in 1871 and 1873, were, it is well known, the turning point in his life, dividing his literary composition into the works that go with "The Earthly Paradise" and those that go with "Sigurd the Volsung." It has been known, too, that he kept a diary of these, to him, momentous travels. "This diary," says Mackail, in the Biography, "scribbled from day to day on the spot, was carefully written out by him when he came home, and afterwards revised and written out again with some idea of publishing it. This idea, however, considered and deferred more than once, was finally rejected by him towards the end of his life. The extracts here are from the revised manuscript given by him to Mrs. Burne-Jones in 1873." Of the four new volumes now added by Longmans, Green & Co. to their superb edition of "The Collected Works of William Morris," the greatest interest will, therefore, attach to the eighth, which gives in full form the two "Journals of Travel in Iceland." Much of the narrative, it must be admitted, consists of that continuous and changing description of natural scenery which palls very quickly on the reader, and it may be for this reason that Morris himself withheld the Journals from publication; but the brave, romantic character of the man is revealed on every page, and there are many amusing stories of his impulsiveness and absent-mindedness. Volume VII of this edition contains a number of translations from the Icelandic, and the Introduction, by Miss May Morris, tells the story of Morris's acquaintance with Magnússon, and of their work together. Not the least interesting thing in these two volumes is Miss Morris's account of the family life at Kelmscott, while the master of the house was in Iceland. Rossetti was occupying the famous Tapestry-Room, and working in his strange, lonely way. "I can see the rather broad figure," writes Miss Morris, "tramping away doggedly over the flat green meadows, in search of exercise and air enough to keep in health for the day's work; I can see him returning after dark with a burden of weariness upon him—even the young child in pauses of happy playhours felt the loneliness of it."

The other two volumes (V and VI) of the present instalment give the concluding parts of "The Earthly Paradise." As in the Introductions to the earlier volumes of the poem, Miss Morris writes a clear account of the growth of the various tales and of the various forms they passed through. A good deal of rejected material is printed, whether wisely or not we need not say. Three of these rejected stanzas, designed presumably for the month of October or November, may be transcribed:

Come forth, O love, to-day, although the earth
Is pale and sad with death of many things
And shrouds the memory of her months of mirth
And dulls the thoughts of coming winter's stings
With haze of morns and faint gray evenings
Of windless rain: come forth and drive from me
These dreary thoughts of what my life may be.

With hardened heart to pass the once loved place
Where I have felt the unforgotten kiss,
With hardened heart to think upon the face
Whose sight filled day and night for me with bliss,
With hardened heart to live alone—for this;
The praises of the careless world to hear,
Listless with fear of death, and death anear.

Ah it may be, but while we both forget
That we and all our love were made to die,
While fear our foe is not our master yet,
Unsatiate of life, we pensively
May watch the lives of other men go by,
In listening the tales that have been told
For we are young, although the years grow old.

It is certainly too early to pass final judgment upon the woman suffrage agitation in England; perhaps, also, it is too late to treat the movement with either irritation or contempt. Whatever one may think about it, however, the account which E. Sylvia Pankhurst gives in "The Suffragette" (Sturgis & Walton Co.) may at least be credited as a first-hand and, so far as it goes, truthful story of this extraordinary episode. We say truthful so far as it goes, because, while Miss Pankhurst's sincerity and devotion are evident, she hints not the least suspicion that even the most extravagant doings of the suffragettes violated either decency or good manners; but, on the contrary, relates in fullest detail all the numerous exhibitions of lawlessness with characteristic soberness, and without even a saving dash of humor. As an arsenal of facts, at least, the book has distinct value. In one important respect, moreover, quite apart from its bearing on the suffrage question, the volume is a fearful indictment of present-day England, its government, and its people; and that is in the matter of prison administration. Miss Pankhurst's circumstantial recital, in effectively simple language, of the foul conditions of English prisons, of the brutal and inhuman treatment of some of the suffragettes, and of the horrors of forced feeding, is enough to stir the blood of the most indifferent. For what is virtually a revival of torture, joined, in case of some of the suffragette trials, to direct intimations of the kind of rulings expected from the courts, the home secretary, Herbert Gladstone, seems to have a good deal to answer for.

"Daniel Webster: A Vindication, With Other Historical Essays," by William Cleaver Wilkinson, is published by Funk & Wagnalls Company. Professor Wilkinson is the author of many books on biblical and classical subjects, of which the best known is perhaps the "Preparatory Greek Course in English." Something above half of the present work is devoted to Webster, the "other essays" having been added apparently to fill out the volume. At least, apart from the long essay on Webster, it would be hard to justify the publication. The vindication, however, will have its use, though it might easily have been shorter. It has obviously been a labor of love. Professor Wilkinson admits frankly that he is a passionate admirer of Webster, and if this has its disadvantages, it has also its advantages, for it has made him an ardent collector of Webster ma-

Digitized by Google

terial during a long life. The essay is about equally divided between a vindication of the public and the private life of Webster. The vindication of his public life centres in the justification of the Seventh of March Speech, with the result that Webster's conduct is found to have been conscientious, consistent, patriotic, wise, and right. Most historians now admit that Webster acted conscientiously and consistently, while the author's passionate defence of his conduct as patriotic, wise, and right will leave the present generation, which cannot remember the heated controversies of the civil war period, a little cold. The vindication of Webster's private life was rather more worth doing. Professor Wilkinson has given immense pains to tracing to their source the innumerable stories of Webster's alleged intemperance and immoralities, and he makes it reasonably certain that the stories have no sufficient foundation in fact. That the book will do much to destroy the popular tradition is hardly to be expected, for popular traditions are difficult to destroy when they are once well fixed, and few are more firmly fixed than that of the laxity of Webster's private life. However, it is well worth while to have a careful analysis of the evidence upon which the tradition rests.

To see Mexico as Mary Barton has represented it in her "Impressions of Mexico" (Macmillan) is almost to share in a discovery. It is a land for the artist; and she does not hesitate to compare the atmosphere enveloping Popocatapetl with that of the Alps, or the gorge of Necaxa with the panorama of the Himalayas at Darjeeling, or Lake Patzcuaro with Como. In the series of twenty reproductions from her paintings, exhibited in London, as in the narrative accompaniment, there is a charming display of temperament and personality; in both, an antipathy for the Mexican commonplace; in both, an absolute honesty of expression, allied with a sublime faith in the British point of view. The result is an engaging combination of whimsical impatience at the human incidents of Mexican life and breathless adoration of the soft blue of such mountain peaks as Orizaba. The keynote of the whole story is color, and the printed page often recalls to mind the experiments of Stephen Crane. What one misses is the absence of comment on the work of Mexican painters. Ceramics no longer stands for the national art of Mexico; and Cabrera, Ramírez, and Parra have won recognition in France for precisely those aspects of light and transparence in Mexican waters and skies which appeal so strongly to the author. Her opinion on the reputed Titian at Tzintzuntzan, which she could have seen without much difficulty, would have been worth having. In spite of deficiencies of this sort, and in spite of her hasty judgments on the music and drama of the country which was for a time the home of la Malibran and of Barili, Adelina Patti's uncle and teacher, this book does much to reveal that better Mexico so generally neglected by writers.

Hidden away in volumes of the Nueva Biblioteca de Autores Españoles there has been appearing, for some years past, a study of the origins of the novel which, though of the first importance, does not seem to have attracted general attention. Professed Spanish students have, of course, reckoned with it; but its scope is far wider and should appeal to every one interested in European literature who can at all find his way through simple Spanish prose. It consists of the introductions prefixed by Menéndez y Pelayo to the three volumes which have so far been published (1905, 1907, 1910), of reprints of early Spanish novels supplementary to those that had already appeared in Rivadeneyra's original Biblioteca. Yet, to speak of them as "introductions" is hardly to deal adequately with their weightiness. They occupy the whole of the first volume, a large octavo of 532 pages, 140 pages of the second volume, and 289 pages of the third. A concluding part will come with the fourth volume and will deal with the picaresque novel and other analogous forms, such as satirical colloquies. The whole will form an imposing study of the history of the novel in Spain and of its affiliations by origin and influence throughout Europe and the East, worthy to stand beside its author's "Historia de las ideas estéticas en España," and form with the reprints of novels in these volumes and in others of the Biblioteca a worthy pendant to the series of volumes of his Antología de poetas líricos castellanos. Beginning with a sketch of the novel in classical antiquity, he passes to the Oriental tale and its transmission through Spain to the Western peoples. This, though not written by a professed Orientalist, is easily the fullest and clearest statement of the whole subject and its tangle of problems. Then follows the influence of these stories in mediæval Spanish literature, where we meet the picturesque figures of Raimundo Lulio, Fray Anselmo de Turmeda, and the Archpriest of Hita. Of the two Franciscans, the missionary and the pervert to Islam this is by far the best and fullest easily accessible account. The same can be said of the history, above 170 pages in length, of the rise and fall of the romances of chivalry in all their cycles. It is a learned and delightful commentary on the catalogue of Don Quixote's library. The question of the origin of the "Amadis" is handled with especial wealth and keenness. The novel of sentiment, such as the "Carcel de Amor," the historical novels which played such mischief among the earlier historians of the reconquest, and the pastoral novel, the "Dianas" and the rest, leading up to the "Galatea" of Cervantes, follow in order. The introduction to the second volume deals with collections of stories and short tales, mostly under the influence of the Italian novelists; that to the third is an elaborate and illuminating treatment of the "Celestina" and all its descendants.

It is impossible to give a list of the texts reprinted in the second and third volumes. They are professedly supplemental to those already printed in Rivadeneyra, those which are to appear elsewhere in this new series, and those which are generally accessible in other modern reprints. To Sr. Menéndez y Pelayo it was evidently a relief that for some of the "Celestinas" he could refer to the collection of Libros Raros y Curiosos, and with regard to those that he does reprint he hopes that the antique orthography and learned apparatus will be a kind of thorn hedge to ward off "el profano vulgo." But some mention should be made of another series of volumes in this Biblioteca which are bringing reprints of important romances of chivalry. Two have appeared, edited by Prof. Bonilla y San Martín, and a third is promised which will contain an elaborate historical study of chivalry and its romances, of their introduction into Spain, and of the different Spanish cycles. A bibliography down to 1615 will be added. So far reprinted are the "Baladro del sabio Merlín" and the "Demanda del Sancto Grial," "Don Tristán de Leonís," "Tablante de Ricamonte," and "Carlos Maynes" from an Escurial MS. In the second volume are "Palmerín de Inglaterra," the "Destrucción de Jerusalem," "Roberto el Diablo," "Clamades y Clarmonda," "Oliveros de Castilla y Artús Dalgarbe" (with a great many wood cuts), "Hystoria del rey Canamor y del infante Turian su hijo," "Conde Partinuples." A glossary is added, variant readings to the "Palmerín," and an index of proper names. "Tirant lo Blanch," with a Spanish translation, is promised, for a separate volume of the Biblioteca.

Lippincott publishes a second edition of Lieber's "Manual of Political Ethics." The work has been revised and edited by Prof. Theodore D. Woolsey, and President Nicholas Murray Butler has written an introduction, in which he points out that, although the book was written nearly three-quarters of a century ago, its principles, disquisitions, and ideals have immediate application to the political action of our own day. The work has been very little changed from its original form. Of the notes prepared by Dr. Lieber, only those which were of primary value or which modified or corrected the text have been inserted, and a very few notes by the editor have been added.

Three writers of some distinction have died recently in France: Viscount Albert Révérand, an authority on the subject of French peerages, who for a number of years edited the "Annuaire de la noblesse de France" and produced a "Dictionnaire historique" of about ten thousand titled persons beginning with the opening of the eighteenth century; Maurice Maindron, the author of several romances, whose setting is laid chiefly in the sixteenth century; Jean de Mitty—his real name was Golfineanu and he was born in Rumania—a student of Stendhal who discovered and published the original manuscript of "Lucien Leuwen."

The death is announced of Prof. Georg Wenker, the chief librarian of the University of Marburg, aged fifty-nine. He had written a number of works on the German dialects, among them "Verschiebung des Stammsilbenauslauts im Germanischen," "Sprachatlas von Nord- und Mitteldeutschland," and "Sprachatlas des Deutschen Reiches."

The death is reported from Monteagle, Tenn., in his eighty-second year, of the Rev. Oscar Penn Fitzgerald, Bishop of the Methodist Episcopal Church South, and author of the following works: "California Sketches," "Christian Growth," "Glimpses of Truth," "Life of McFerrin," "Dr. Summers, A Life Study," "Centenary Cameos," "Bible Nights," "Eminent Methodists," "The Whetstone," "The Epworth Book," "Judge Longstreet," "The Day and the Word," "Sunset Views," and "Upper Room Meditations."

The Newer Spiritualism. By Frank Podmore. New York: Henry Holt & Co. $2.75 net.

It is our good fortune that before Frank Podmore went to join Gurney and Myers and Hodgson and James in the ghostly realm where at least guessing ceases, he left us his own last guess on spirit communication in a volume which worthily completes his long study of this difficult question. Indeed, the word "guess" is quite inappropriate to this book, for it is a careful exposition and judicious analysis of the recent evidence on the subject and is marked by an entire lack of that obvious prejudice and easy wit which rob so many books on each side of the spiritistic controversy of much of their value. The volume has no surprises and its outcome is exactly what one would be led to expect by the author's previous works. It simply brings the discussion of the question up to date; but certainly it is of no small interest to know exactly what Podmore thought of the more recent discoveries of psychical research.

The book overlaps to some extent the author's previous work on the same subject, "Modern Spiritualism." This appeared in 1902 in two large volumes and covered the whole period between the witches and the "controls." Both books deal with Daniel Douglas Home, and the present one takes up the story of Eusapia Palladino and of Mrs. Piper where the previous work had left it. "The Newer Spiritualism" falls naturally into two parts: the first devoted to physical phenomena, the second and more important to the question of trance messages. In the former, the two most striking of the physical mediums —Home and Palladino—are taken as typical and studied with some care. Podmore's treatment of Home is particularly characteristic of his keenly critical but open mind. In contrast to some writers who refuse to consider Home at all on the ground of unsatisfactory records, Podmore devotes over fifty pages to a careful analysis of the records that we have. And in equal contrast to other writers who have accepted Home's cases of levitation (largely on the ground of his moral character), our author is able to point out exactly where the evidence is weak, and ventures to show that the famous medium's reputation for strict honesty rests on very flimsy foundations. Eusapia Palladino fares no better before his keen analysis, and the final conclusion to which he leads the reader is that the physical phenomena of spiritualism may be amply explained by sleight-of-hand on the part of the medium and an occasional lapse of attention on the part of the sitter.

No such easy explanation is to be sought for in the case of the purely psychical phenomena. And with fraud eliminated, there are evidently three possible lines of explanation open. One is the naturalistic which seeks to write down all that seems startling as due to the regular laws of normal or abnormal psychology, and relegates all that cannot be treated thus to a possibly faulty record. The second uses all these means but finds certain outstanding facts for whose explanation it appeals to telepathy. The third hypothesis is, of course, that of "spiritualism." Podmore's treatment of the subject is remarkably open-minded, and he recognizes that the question cannot yet be fully answered; but he does not hesitate to uphold stoutly his own tentative explanation, which is that involving telepathy.

The naturalistic hypothesis our author does not consider directly and in detail, but his exposition of the phenomena makes such an explanation seem quite out of the question—unless, indeed, one falls back upon the easy appeal to a "faulty record" wherever one meets with difficulties. The spiritualistic hypothesis is taken very seriously and tested with care. Some of the evidence (especially in the case of cross-correspondencies) might be put more persuasively, but, on the whole, a strong case is made out for the spirits. And yet in every instance but one he shows that the hypothesis of telepathy would furnish at least an equally satisfactory explanation. The exception referred to is the "Lethe Incident," which occurred in the spring of 1908, and in which the "Piper-Myers" exhibited an acquaintance with an obscure story of Ovid's which (so far as could be ascertained) neither Mrs. Piper nor the sitter nor any one connected with them had ever read. Podmore points out two subordinate features of the case which somewhat weaken its evidential value; and it is barely possible to explain it on the theory of subconscious memory with telepathy—or, of course, by a much more sweeping kind of telepathy or by clairvoyance, once you admit such things. But the spiritistic hypothesis would certainly seem the simpler, if the case were only reinforced by others equally good. Podmore's comment on it is as follows:

> It must, I think, be admitted on all hands that the method of answering the Lethe question was well devised; that this is precisely the kind of evidence demanded for the proof of spirit identity; and that, though no single case can, of course, be conclusive, yet that if evidence of this kind were multiplied the presumption in favor of the reality of spirit communication might at length become irresistible. Taken by itself, however, the new evidence can hardly be claimed as strong enough appreciably to weaken the presumption against the authenticity of these spirit messages derived from the whole experience of the past. . . . The improbabilities involved in any of the suggested alternatives are at least equally serious. The wisest counsel, if also the most difficult to follow, is to hold our judgment in suspense.

To some extent this case is counterbalanced by the interesting "Sevens Incident," which also occurred in the spring of 1908, and in which a most beautiful cross-correspondence was completely explained by telepathy from the living—namely by an idea in the mind of Mr. Piddington himself, which he had embodied in a "posthumous letter," written by him at the time. This case is one of the most persuasive pieces of evidence on record for the existence of telepathy; and incidentally also it "invalidates by anticipation all evidence for the agency of the dead which might have been derived from 'posthumous' letters, and has thus deprived us of what would have seemed an important, though not, of course, a crucial test."

But while Podmore regards the evidence educed by psychical research as quite insufficient to prove spirit communication, he by no means regards the investigation of these phenomena as worthless. On the contrary, the prospect of really valuable discoveries in the field seems to him particularly bright.

> The most promising line of inquiry at the present time would seem to consist in the possible indications of a directing and organizing intelligence to be found by careful comparison of the scripts of the several autonomists. . . . The evidence so far presented will not, it seems, admit of a positive conclusion. But even while the investigation is still incomplete it is clear that the results so far attained are worth all the labor that has been spent upon them. If a final verdict must be deferred until further investigation shall have enlightened our ignorance, and shall enable us to give a decisive answer to the question whether these dark sayings proceed from the dead or the living, we need not wait to recognize that even now there are other, if perhaps less momentous, issues involved which concern our immediate interests. . . . If we reject for the present, at least, the explanation suggested by many of the utterances themselves, that of communication from the dead, we must seek for some other cause adequate to the effects. There remains only the agency which has been provisionally named telepathy, but which no one has yet ventured to define in other than negative terms, as communication apart from the recognized sensory channels. The establishment of such a faculty, if only as a vestige of a primitive mode of sensibility, now superseded by articulate speech, would surely be a result worth all the labor spent in the vineyard.

"Stories of Useful Inventions," by S. E. Forman, is in the Century Company's list of autumn books.

Lieut.-Col. Lawrence Laurenson Bruff, Ordnance Corps, U. S. A., died on Friday of last week at Philadelphia, aged fifty-nine. He was for a number of years an instructor

at the Military Academy, West Point, and was the author of several books, among them "Gunpowder and Interior Ballistics," "Exterior Ballistics," and "Ordnance and Gunnery."

Drama

NOTES ON GERMAN DRAMA.

Carl Hauptmann's latest dramatic work, "Napoleon Bonaparte" (Munich: Georg D. W. Callwey), is of vast proportions. It is in two parts, the first devoted to the citizen Bonaparte, the second to the Emperor. The prelude on the coast of Corsica effectively introduces to the reader the parents of Bonaparte, fugitives in the revolution which convulses the island, and suggests qualities later to be consummated in the son. With its rugged shepherd types against the background of a rough cave among jagged rocks, its atmosphere of unrest within and danger without, it attunes the reader to the storm and stress of the hero's future career, who is at the time peacefully slumbering in a basket suspended from the donkey that carried his mother to safety. The first act begins with Bonaparte's conquest of the fascinating Josephine and presents a vivid picture of the lightsome and frivolous spirit of the Directoire. As the poet follows Napoleon through his triumphant Mediterranean career, he loses no opportunity to show the profound impression made by the Corsican's imperious personality upon the wily men of the world whom he meets in diplomatic conference, upon the soldiers whom he inspires with his own ambition, courage, and energy, and even upon those whose kingdom is not of this world, as is amply illustrated in the scene in the convent of Tolentino. A peculiar conceit of the poet is the "pale young man in chains," who, invisible to any but Bonaparte, appears before him at critical moments and warns him—it is his starved and fettered conscience. It is he who wrings from him the promise of a truly democratic constitution for France, which Bonaparte calls the first and last idea and the only legacy of the great Revolution.

In the second part, of four acts, the author dramatically groups the events which took place during the brief reign of Napoleon as Emperor of France and sovereign of the greater part of Western Europe, until his enforced abdication, and the postlude brings his death on St. Helena. The spirit of the work approaches classical standards more closely than any other historical drama that has come from the pens of the Young Germans. The poet's conception of his hero is human; he pictures the Corsican superman in his towering strength, but also in those moments when he proves his kinship to the humblest mortal. Of the numerous characters, the most important stand out against the shifting background with remarkable vitality. The style, too, is almost entirely free from the mannerisms which usually mar the beauty of the author's prose. Viewed as a whole, the work seems to indicate a turn in the road of Carl Hauptmann's development, full of promise to those who have faith in his genius.

Hermann Bahr's comedy in three acts, "Die Kinder" (Berlin: S. Fischer) is based upon a problem which he has treated in his story, "Die Stimme des Bluts," and at the beginning might well be taken for a domestic tragedy. For the two young people who so charmingly play at the duel of sex have hardly agreed to be married when the father of the girl, a physician of peasant descent, tells the suitor that he is his son. But the supposed father of the young man, the old count who formerly owned the castle which the doctor has transformed into a villa, had already been summoned, and on learning of the difficulty in the way of his heir's happiness, is also forced into a confession and admits that he is the father of the girl whom the doctor supposed to be his daughter. Thus the tragedy is averted and the conflict dissolved in a comedy of errors speedily brought to a happy ending. It is easy to note the undercurrent of satire in the juxtaposition of the girl who is proud of her father's plebeian origin and the qualities of character which made him achieve professional fame, social position, and wealth, and the young man who represents the staid conservative traditions and conventions of an old aristocracy. But Bahr adds another strong touch of satire in the introduction of a visitor who seeks an interview with the doctor and is revealed to him as the offspring of a long-forgotten student's love. This Bayerlein, a curiously unconventional, hale and hearty fellow, is one of the author's most original creations; he does not come to reproach or make any claims upon the father hitherto unknown to him, but simply to pay his respects to the illustrious progenitor whose career the mother had followed in the papers with no little interest. His mother had brought him up singlehanded; now he was taking care of her, had assured her comfort, and both with philosophical acceptance bore the doctor no grudge. The work is really delightful and sparkles with the bright and graceful wit which distinguishes all of Bahr's plays.

Ludwig Thoma's one-act farce, "Erster Klasse" (imported by G. E. Stechert), is an admirable specimen of the author's broad, rollicking humor. The scene is a first-class car in a Bavarian express train, and many of the funny situations are possible only in that locality. But the *dramatis personæ* are cleverly divided among Bavarians and Prussians whose racial characteristics challenge amusing comparisons. The main interest, however, centres, as usual, in the native rustics, portrayed by the author with an amazing understanding for their robust and jocund good-nature.

Daniel Frohman announces that the Lyceum Theatre will reopen the first week in September with a new American comedy, "Thy Neighbor's Wife," with Arthur Byron, Frederick Tilden, Pamela Gaythorne, and Alice John in the cast.

Rehearsals of George Bronson-Howard's new play, "Snobs," with Frank McIntyre in the leading part, have begun at the Hudson Theatre, where it will be seen on September 4.

Henry B. Harris will open the Harris Theatre, formerly the Hackett, on Thursday, August 31, with Rose Stahl in Charles Klein's new play, "Maggie Pepper."

John Cort announces his plans for the coming season, which include a revival of "Two Women" with Leslie Carter and "The Earl of Pawtucket" with Lawrence D'Orsay. New plays are "Sadie," dramatized from Karl Harriman's novel, by Rupert Hughes, with Theodore Roberts, Thurlow Bergen, Frank Campau, and Fernanda Eliseu in the cast; "Jingaboo," a musical farce by Leo Ditrichstein, with music by Arthur Prior, and "The Fox," a detective play by Lee Arthur.

William A. Brady will start the preliminary season at his new theatre, The Playhouse, on Monday, August 28, with Douglas Fairbanks in "A Gentleman of Leisure," by John Stapleton and P. G. Wodehouse. Early in October he expects to begin the first season of the regular company, headed by Grace George. Other members will be Allan Aynesworth, who has played leading parts in London for fifteen years, and Lyn Harding, a well-known English character actor. The opening play will be "The Earth," by James Fagan, with Miss George in the part played in London by Lena Ashwell, and Messrs. Aynesworth and Harding in their original parts. This will be followed by "Much Ado About Nothing," and for this performance the company will be strengthened. Mr. Brady hopes to establish a repertory theatre, with constant changes of bill, and to that end is making arrangements for the production of new plays by George Broadhurst, Thompson Buchanan, Granville Barker, Cicely Hamilton, and Margaret Mayo, as well as a new fairy play at Christmas time. He will revive "Divorçons," "Pygmalion and Galatea," "The School for Scandal," and old comedies by Molière and Congreve. Other plays to be produced under his management include Justin Huntley McCarthy's "Charlemagne, the Conqueror," in which Robert Mantell will be seen, and the same author's "The O'Flynn"; a new play, by Harrison Rhodes, for Thomas A. Wise, and George Broadhurst's "Bought and Paid For," for Charles Richman. In November, at the Manhattan Opera House, he will produce a new American melodrama, and will also have two musical comedies, "The Violet Widow," by Dorothy Usner, and "The Merry Bachelors."

According to the critic of the London

Digitized by Google

Times the production of Karl Schoenherr's "Glaube und Heimat" at His Majesty's Theatre by the German Play Society was well worth the effort.

Music

The Edward MacDowell Memorial Association announces a music festival to be given on its pageant stage at Peterborough, N. H., on August 16 and 18. There will also be a concert in the Town Hall on the 17th. The orchestra will be led by Eusebius Hood and W. H. Humiston.

Maurice Renaud was a tower of strength to Oscar Hammerstein during his four years of opera at the Manhattan. He was engaged for forty performances in the last season, but Hammerstein found him so strong a magnet that he gave him fourteen more appearances. He has now procured him as his leading artist for the performances next season in his newly built London Opera House, up to January, when the great French baritone returns to America. Lina Cavalieri, Marguerite D'Alvarez, and Orville Harrold will also be taken over from his former New York company. The names of the other singers engaged by him are less familiar. He pretends to have three "Carusos," the list of his tenors including, besides Harrold, Mario Ansaldi, Frank Pollock, Fred Régis, Fernand Leraux. The sopranos will be Cavalieri, Isabeau Catalan, Victoria Fer, Aline Vallandri, Eva Oldhanski, Felicia Lyne, L. Merlin. Mezzo-sopranos and altos: D'Alvarez, Tinka-Joseki, Jeane Duchêne, Nina Ratti, Antoinette Kerlane. Baritones: Renaud, José Danse, Georges Chadal, M. Figarella, Arthur Phillips. Mario Ellandri. Basses: Jean Perkin, Enzo Bozano, Fred. Combe, Giuseppe de Grazia. Among the novelties to be presented are "Quo Vadis," "Don Quixote," and "The Violinmaker of Cremona."

A great treat evidently awaits the lovers of good singing and good songs in the impending appearance in this country of the famous German lieder singer, Elena Gerhardt, who will make her American début at Carnegie Hall on January 12. She is as popular in England as in Germany, and at her last appearance in London not only was the hall full, but many were unable to find seats. One reason for her success is that she sings songs by the composers who were masters of melody, among them Jensen, Rubinstein, Liszt, and Franz. Nikisch paid her the significant compliment of playing the piano parts, as he had done before.

Of Cadman's charming song, "Land of the Sky-Blue Water," tens of thousands of copies have been sold. The royalties enabled this promising young composer, who was seriously ill, to go to New Mexico, where he completely recovered his health. Lillian Nordica is particularly interested in him; in her Western recitals last season she sang several of his songs, and commissioned him to write a cycle for her on Homeric texts. This is now completed, and bears the title, "To Odysseus."

At last New York will hear Liszt's wonderful Dante Symphony, which Weingartner regards as even more powerful than his "Faust" symphony, and of which Wagner said it was "the creative act of a redeeming genius," "one of the most astounding deeds in music." It will be performed by the Philharmonic Orchestra in Carnegie Hall next December, under the new conductor, Josef Stransky. The choral part will be sung by the MacDowell Chorus. The soloist of this concert will be Arthur Friedheim. It will be the great event of the musical season.

The MacDowell Chorus, Kurt Schindler, conductor, has completed plans for the season of 1911-12, and the directors announce that the first concert will take place in Carnegie Hall, on Monday evening, December 12, when the chorus, assisted by the Philharmonic Society and prominent soloists, will present Liszt's "Legend of St. Elizabeth," in commemoration of the one hundredth anniversary of the composer's birth. The second concert will be given in March.

For forty years the late Albert Schatz of Rostock was at work on a history and dictionary of operas from the earliest time to 1900. Some years ago the United States government purchased his collection of more than 12,000 opera librettos. During his recent trip in Europe Mr. Sonneck, chief of the Division of Music of the Library of Congress, purchased also the entire collection of Schatz's manuscripts, data, and correspondence, which makes this one of the most precious treasures of that library. The chief value of these records lies in the complete and authoritative information given regarding the early history of opera. One of the details is a chronological record of performances of Wagner's operas.

Hans Richter, having virtually ended his career as conductor, has purchased a residence at Bayreuth, where he intends to start a school for dramatic singing. He is one of the conductors during this summer's Wagner festival in the Bayreuth Theatre, to which, by the way, automobiles may, for the first time, ascend this summer.

Art

EDWIN A. ABBEY, N.A., R.A.

The late Edwin A. Abbey made one of those perfectly normal successes that seem to belie the romantic traditions of the painter's craft. At an early age the young Pennsylvanian was already a popular illustrator. For the grace and petulance of young womanhood he had an understanding eye. Indeed, it is doubtful if in his later years and in his most ambitious mural paintings he ever did anything more wholly charming and more artistically complete than the two series of pen drawings in which he evoked the heroines of Shakespeare and Herrick. Of these idyllic designs his historical and decorative painting was merely an expansion. Under the stimulus of his growing fame he essayed the larger dramatic themes, and always with a conscientiousness that was impressive; but many of his admirers regretted the admirable illustrator that was submerged in the Royal Academy exhibitor. Would not the Grail decorations in the Boston Public Library look better in the old sensitive penstroke and opposite the necessary explanatory text? The thought qualifies one's admiration for those beautiful decorations.

Unlike the greater number of his American contemporaries Abbey was exempt from the influence of Paris. Whether consciously or by some inconscient atavism, he continued the mood and the manner of the Georgian and early Victorian illustrators. Stothard might have been his grandfather in art, "Dicky" Doyle his granduncle. His affinity with such draughtsmen as Du Maurier and the illustrators of *Punch* generally was clear enough, and the readiness with which he attached himself to the later Pre-Raphaelite tradition is significant. In maturity Abbey tried to paint about as Millais had painted in his teens. These analogies are suggested not to belittle a charming talent, but to define it, and more especially to show that when Abbey moved to England he came in a sense to his own. His success was immediate. His qualities were more highly appreciated in England than they would have been here. For years his Academy contributions shared with Sargent's the acclaim of the public and the press. His admitted superiority in historical painting made it natural that he, rather than an English artist, should be commanded to paint the coronation of Edward VII. In fact it is doubtful if he would have had the chance to execute his monumental designs for Boston and Harrisburg had not his London fame rebounded to his native shores.

In many respects his brilliant career recalls that of his predecessor and fellow Pennsylvanian, Benjamin West. Quite as West rose to fame by carrying out the precepts of Sir Joshua Reynolds and furnishing a kind of art that won the theoretical approval of the judicious, Abbey prevailed by frankly accepting the established traditions of the Academy picture while enhancing it by a more learned and conscientious workmanship. It was the second time that an American had outacademied the Royal Academy, and in both instances British magnanimity applauded the feat with enthusiasm. We have already shown that an act of adaptation which in most American artists would seem a recreancy was in Abbey merely the legitimate outcome of his temperament. On the other hand his place in art will be decided largely by the worth of the tradition to which he attached himself. It is the fashion to decry the British anecdotal picture, and the glamour of the Pre-Raphaelites is distinctly waning. Abbey's repute as decorator and historical painter will rise no higher than that of his sponsors, and any complete rehabilitation of these British schools seems unlikely. We feel that the Her-

Digitized by Google

rick and Shakespeare illustrations will outwear the mural paintings and that notable succession of Royal Academy sensations.

If anything Abbey was a victim of his success, and yet the word implies too much. In greatest repute and prosperity he never relaxed his ideal. He put forth nothing that did not represent superior thinking and high skill of hand. He painted nothing that was not instinct with a certain noble gentleness that was quite his own. The transparent loyalty of the man is written in every stroke of his brush and pen. He has left a sweet memory among his colleagues. We may regret that in a time of artistic confusion he was drawn into tasks not wholly compatible with his powers. A similar mischance, it will be recalled, made for the nonce a monumental painter out of the delightful Stothard. But we cannot withhold admiration from the spirit in which Abbey undertook these imposed tasks. His achievement may not seem to rank very high on an absolute scale, but it increases one's respect for the human intelligence. Finally we shall not be suspected of chauvinism when we rejoice that America had the best of Abbey and the perceptiveness to recognize that best promptly.

From Berlin comes the report of the death of Prof. Reinhold Begas, the distinguished German sculptor, at the age of eighty. His first great work was a group, Hagar and Ishmaël, which showed that his talent was of a different character from that of his master, Rauch; the difference became clearer with the appearance of his group, Psyche and Amor, in 1856. In 1857 he went to Rome and was a student of ancient and modern works, in company with Feuerbach, Böklin, Lenbach, and others. The result of his studies and his work in Rome was shown in his Pan Consoling Psyche, which was completed in 1858, and an heroic group representing Borussia Protecting Commerce, Agriculture, and the Arts, which was placed in the Boerse at Berlin. Begas was chosen instructor in the Weimar Art School in 1861, but served in that capacity only a short time, and then upon entering once more into active work in his profession became a competitor in the international contest for the Berlin Schiller monument. After a long and stubborn artistic controversy, his plans were accepted and the monument, which was unveiled in 1871, justified the decision of the judges. In the meantime, several groups and figures had been produced in Begas's studio, all of which attracted attention and showed a continued improvement. Early in the seventies he began to devote time to new subjects, and his figures became less ideal and more lifelike. His chief works of this period were a Mercury and Psyche under a palm tree and the fountain in the Schloss court in Berlin, with figures of Neptune, centaurs, mermaids, and sea gods. Soon after these works were completed he made the statue of Wealth for the Reichsbank, Berlin, and then an heroic Borussia and two herculean figures representing Strength and the Science of War for the arsenal. With these he established a reputation for thoroughness and fertile imagination. Many believed that the strong personality and individuality of the man were most clearly shown in his portrait busts, among which the most notable are those of the Empress Frederick, Countess Bismarck, and Moltke. Popularly he was best known as the designer of the Kaiser Wilhelm Denkmal in Berlin.

Finance

A HISTORY OF THE STOCK EXCHANGE.

The Stock Exchange. By Francis W. Hirst. A short study of investment and speculation. (Home University Library). New York: Henry Holt & Co. 75 cents net.

The editor of the London *Economist* applies himself, in this concise handbook, to set forth exactly what is the history and function of the Stock Exchange in modern finance. Premising the absolutely indispensable work performed by the institution in these days, the author remarks that the philosopher might wonder "why, with their baths, their theatres, their courts of law, their shops and markets and banks, Athens and Rome never invented or possessed a Stock Exchange." His answer is that interest-bearing paper, in the modern form of securities, was first invented to finance the Continental wars of William of Orange. Even under Charles the Second, the English Government borrowed on what were known as "goldsmith's notes," on which ten, twenty, and even thirty per cent. was exacted by the close corporation of wealthy lenders. Charles's repudiation of £1,328,526 of the public debt (outstanding at 6 per cent.) disclosed the fact that "not merchants only, but widows, orphans, and others, became suddenly deprived of the whole of their property." The upshot, when a government with stability and principles had been provided, was the Bank of England and government securities on the modern basis.

The use of the stock-issue device, on an enormous scale, followed in the days of the South Sea Company, copied from John Law's "Mississippi Bubble" in France, and the civilized world was fairly launched in "booms," "panics" and stock exchanges. Mr. Hirst traces the rise of the London Stock Exchange from the days when brokers met in coffee houses or in the street to the present day. It was the foreign government loans between 1818 and 1832 which brought the institution into public notice (with unpleasant results); but the first rise of the Stock Exchange to a distinct place in the business organism of the day came with the movement to capitalize the railway movement of 1844 and 1845. The history of the London Exchange is in fact made up of a succession of such chapters, each converging chiefly on a new field of financial exploitation. The Argentine craze which culminated in 1890, the South African gold mine craze of 1895 and the four subsequent years made up its field of principal activity. The "Rubber mania" of 1910 was only a repetition, on a smaller scale, of numerous previous episodes of the sort.

Mr. Hirst surveys and compares the stock exchanges of other cities than London. Wall Street does not escape its share of criticism; the secret of its supremacy "lies in the power of its banks as manufactories and curtailers of credit. Hence it is not merely a market of bonds and shares, not merely a recorder, but a manipulator and controller of prices." The use of our Stock Exchange by exploiting "syndicates," the general restriction of its interest to domestic enterprises (despite the talk of 1901 that New York was becoming the "central money market of the world"), and the part played by "margin speculation" and professional traders, are treated with illuminating insight, from the London point of view. It is interesting to note that Mr. Hirst approves the system of daily settlement for purchases and sales of stock on the New York Exchange, as against the London system of fortnightly adjustment of accounts. This, he concludes, "is doubtless one of the causes why failures or defaults are so commendably rare." It may be so; but the system of daily settlements is also in a large degree the cause for the convulsions in the "call money" market which occur on a sudden outside demand for money when bank reserves are low and an active speculation is in progress on the Stock Exchange. Such an outside demand may be merely temporary; it may be such as can be readily offset by gold imports, Treasury operations, or remittances from other markets. But the stock broker must be able to renew his loans at the daily settlement, and that is precisely why, on occasions of the sort, one hears of Wall Street bidding 10, 25, or even 100 per cent. per annum for one day's use of money.

ties, and as to what it is that regulates Stock Exchange prices, Mr. Hirst has much to say. His advice, like that of most experienced observers, is either to judge by the market's own valuation, or else to engage in thorough study of a really intricate subject. He is severe, but not unjustly so, on the unwarranted and indiscriminate prestige which has been won in America by the term "first mortgage bonds." Concerning the securities of our "billion-dollar steel trust," he has a kindly word to say. He believes that the value of iron is more likely to rise than fall, and that the company's position would be helped rather than hurt by sweeping reduction of the tariff.

In discussing movement of prices for securities, Mr. Hirst does not add much to the late Sir Robert Giffen's excellent monograph on the subject. But he has some very suggestive words—based in the main on Wall Street's recent history—regarding that factor in values which is popularly known as "manipulation," and which made the New York stock market of 1905 and 1906 something very near to an economic absurdity.

J. Arthur Thomson's
Biology of the Seasons

By the author of "Darwinism and Human Life," etc. With 12 colored plates. 8vo. 390 pp. $2.75 net.*

Prof. Thomson has aimed "to study the drama of the year with the sympathetic feeling of the old naturalists, such as Gilbert White, with Darwin's dominant sense of correlation and evolution, and with Spencer's grasp of the unity of science." Some of the forty-one chapters are:—"The Tale of Tadpoles," "Rythms of Plant Life," "Some Questions Concerning Migration," "Courtship of Birds," "The Natural History of Nests," "The Work of Earthworms," "The Natural History of Rest," "Hibernation."

A New Enlarged Edition of

August Fournier's
Napoleon I: A Biography

Translated by A. E. Adams. With an Introduction by H. A. L. Fisher of Oxford. With a frontispiece and 4 maps. 2 vols. 8vo, $8.00 net.

The original of this enlarged edition was published at Vienna, in three volumes. On its original appearance Fournier's book took its place at once in the front rank of Napoleonic studies; since its appearance, a wealth of new material dealing with Napoleon has been brought to light. The book has been greatly enlarged, and contains in appendices an extensive and valuable critical bibliography, and also a series of hitherto unpublished letters of Napoleon from the Vienna Archives.

The Nation

NEW YORK, THURSDAY, AUGUST 17, 1911.

The Week

President Taft's message vetoing the joint resolution to admit Arizona is powerfully written. It is evident that he is deeply stirred by what he considers the dangerous impairment of a fundamental principle of our government, involved in the recall of judges, and deals with the whole question on the highest grounds. Both for vigor of statement and elevation of tone his message will rank high among state papers, and ought to have a marked effect. Mr. Taft is under no illusion as to what the people of Arizona may do if they choose. They may procure admission without the judicial recall in their Constitution, and afterwards incorporate it by amendment; and in that case the Federal Government could do nothing, since it is not contended by any that the recall of judges is inconsistent with "a republican form of government." But it was the immediate utterance of important political doctrine and a sense of high official duty which moved the President, and he spoke whether men would hear or forbear. His fellow-citizens ought certainly to give ear to the vital principles which he utters in words of truth and soberness.

Senator Frye's death is chiefly significant as marking the passing of a generation, as well as of a political dynasty. With Blaine, Reed, Hale, and Dingley, he continued the traditions of Fessenden and Hamlin. It was a remarkable group, but one whose vision narrowed steadily as the years passed. The selfish spell of protection was upon them; it became their idol, and almost everything else was subordinated to its safety. Their period was the high-water mark of the system, under which the whole country was exploited for the favored few, while corruption ran rampant throughout our political life, the favors of the Republican party being openly for sale. Senator Frye lived to see the foundations of this edifice begin to crumble; he survived to hear a Republican President fling away the same Chinese wall idea which was as the Scriptures to Blaine and his associates. At least, it was given to him to die in harness; he escaped the fate of his colleague of thirty years, Mr. Hale, who retired to avoid the defeat he saw before him. Able Mr. Frye was, and learned in diplomatic relations and in the law-making procedure of both Houses of Congress, and yet the adjective "great" is not of those that suggest themselves in any review of the long, and in several ways very useful, career recently ended.

The vote of the Senate on Monday fixes the 8th of next January as the date for the report of the Monetary Commission and terminates the life of the commission at that time. This decision was made through an amendment to Senator Cummins's bill of last spring, in which the date had been placed at December 5. When the Cummins measure was introduced it was commonly supposed, inasmuch as its author was an insurgent Senator, to be a move in antagonism to the Aldrich currency plan. In a subsequent statement, however, Mr. Cummins disavowed any such purpose, and frankly expressed his approval of the essential features of the Aldrich scheme. The action of the Senate is based partly on the ground that after the Monetary Commission has been in existence four years it is only reasonable to ask for a formal report, and partly on the belief that it is time, in the interests of banking and currency reform itself, for the matter to be placed, without more ado, in the hands of Congress for legislative consideration and enactment.

The testimony of Dr. Dunlap, who is described as the pro-benzoate member of the Board of Food and Drug Inspection, furnishes most damaging evidence of animus and unfairness toward the man whose place he took in the latter's absence. It was while acting as head of the Bureau of Chemistry in Dr. Wiley's absence that he discovered the arrangement with Dr. Rusby by which the expert was to be compensated in an irregular way. Dr. Wiley returned shortly afterward, and then was again away for a single day. This was the day upon which Dr. Dunlap presented his memorandum to Secretary Wilson, first having taken the precaution to dictate it in the office of the friendly solicitor instead of in his own office. Now, there are times when such secrecy is all-important. In the case of a Tweed ring or a Sugar Trust fraud, to allow the suspected persons to get wind of the fact that they are being watched would be to make the watching a waste of effort. Even in such cases, however, there is no particular reason for preserving secrecy after the proof of guilt has been obtained. But in the case of Dr. Wiley it was apparently necessary to go this length. He had employed an expert in a way contrary to the letter of the law. Such a man was dangerous; so dangerous that he must not be permitted so much as to hear that his crime had been discovered until he had been tried and convicted. And to think that he might have appointed a dozen experts in the same way without the slightest peril if only he had taken the proper view of benzoate of soda!

Caught in a whirlwind of state dinners, ceremonial receptions, and breathless sight-seeing tours, our distinguished Japanese visitor must have felt a longing, more than once, for the comparative quiet and repose of the days when the Russian batteries were busy in Port Arthur. To this self-contained and simple-hearted soldier, his ten days of frenzied holiday-making in the United States must have been something of an inferno, and we shudder to think what opinions may have formed themselves in Admiral Togo's mind regarding the ultimate fighting qualities of so emotional and precipitate a nation. That, however, is a risk that had to be run. However grotesque our tempestuous hospitality may have been at times, it was the right kind of reception to be offered by the American people, because it so faithfully expresses the national temper and outlook. In Japan they do things differently; with them it is quality rather than quantity of entertainment that marks the reception of a distinguished visitor. When Mr. Taft, as Secretary of War, visited Japan, he was greeted by a little army of school-children who sang the "Star-Spangled Banner." The idea was Oriental and characteristic. We in turn have taken Ad-

Digitized by Google

miral Togo and rushed him off his feet. That, too, is characteristic.

Liverpool joins Coatesville in demonstrating how thin is the veneer of civilization over ferocious human passions. Writers for the press describing the bloody riots in the English city are aghast at the terrible beings in the shape of men and women who throng the streets crying for blood. Their revelation of brute instincts in full force, their mania for destruction, their revelling in blood-spilling and death are as startling in their way as the sudden flaming up of the mob spirit, in forms of fiendish cruelty, which has smitten us all full of shame at the fearful crime in peaceful and Quaker Pennsylvania. Such things come to us as the uncovering of the pit and the letting loose on earth of the awful creatures seen by Milton and Dante. We have no fear that modern states will not be able to make head against such outbursts of the animal. But the task set them is both hard and urgent. The community must act as a man does who sets about taking himself in hand. It must be incessantly on the watch, must not glory in its strength or boast of its immunity from sudden temptation. And just as the individual sternly puts down abhorrent passions that sometimes rise in his heart, so must society move relentlessly against every display of mob fury, and make its ministers of justice understand that they do not bear the sword in vain.

Gov. Harmon is to be congratulated on the possession of an extraordinarily active and efficient press agent. It may be doubted whether any candidate for high office in this country ever had publicity worked up for him by a man combining to so exceptional a degree the gift of epigram, of invective, of hortatory appeal, and, above all, of concentrating the attention of a vast public on the person he is engaged in exploiting. And the remarkable thing about it all is that Mr. Harmon avails of the services of this unrivalled press agent without the outlay of a single dollar or the expenditure of a single thought upon the subject. It is not every candidate that can sit back with folded hands in complete confidence that everything that can be done to bring his name in full prominence before the country will be done. If in the course of the next few months there still remains any community or any individual citizen who is ignorant of the fact that Judson Harmon is a figure to be reckoned with in next year's Presidential campaign, it will not be the fault of William Jennings Bryan, whose magnificent efforts to emphasize the importance of Ohio's Chief Executive are bound to be all the more productive of results because they are unsolicited and unrewarded.

Wilbur Wright's condemnation of spectacular aviation is timely. Is it not more than time for the police to take charge of affairs of this kind? When Count de Lambert circled the Eiffel Tower, in Paris, he was arrested and fined, not only because of the danger to the man in the street, but as an assertion of the right of the municipality of Paris to sovereignty in the air above. Although the enforcement of penalties has at times been greatly relaxed, the Prefect of Police has lately served notice on the powerful Aero Club of France that he will adopt drastic measures to remedy the evil. At the opening of last year's aviation season in Germany, Robl flew over Stettin, and was fined $35 for so doing. Shortly thereafter, Frey winged his way over Berlin by map, following a predetermined course, going up one street and down another and turning corners with the precision of a delivery wagon. As soon as he finished this fine piece of work, the police promptly took him into custody. He was fined the same sum as Robl, and further warned that imprisonment would be the penalty for a similar exploit. That ended over-city flights in Germany. To-day, when an aviator journeys from one German city to another he must procure in advance a permit from the chief of police at his intended destination to make a landing in some selected safe reservation. Just before King George's coronation, Parliament enacted a law to prevent heavier-than-air machines from menacing the attendant crowds.

Patriotic Americans must have felt a thrill of pride when they read that the German court, as, indeed, all Berlin, is anxiously awaiting the arrival of the new Ambassador from the United States. It is a satisfaction thus to have our great men get their due abroad. But the eagerness with which the Germans are counting the days till Mr. Leishman reaches their capital is a trifle peculiar. They are not expecting him to outdo Bancroft in culture or to eclipse Motley or Marsh or Lowell or any other of the famous diplomats we have sent to Europe. No; what they are on tip-toe with curiosity to find out is whether the American Ambassador is going to throw into the shade the lavish social entertainment with which Mr. Tower, and especially Mrs. Tower, delighted them when at the Berlin Embassy. It is known that the Kaiser described Mrs. Tower as "the Moltke of society," so that it is at once evident that a high standard has been set for the Leishmans. Will they be able to attain or even surpass it? That is the question now agitating German official circles, and it naturally dwarfs any such petty affair as an arbitration treaty. Mr. Leishman's "past performances" are such as to encourage the hope that he will do everything within the power of mortal purse to meet the high expectations formed in Germany, and if his money holds out we may look for his winning a great diplomatic success. It is even possible that his social glitter may soon enable his friend and patron, Secretary Knox, to announce the conclusion of an arbitration treaty with Germany. The first reciprocity treaty with Canada was "floated through on champagne," and if we only have an Ambassador at Berlin rich enough to dissolve pearls in each glass, who can doubt that the haughty Germans will speedily capitulate?

The changes imminent in the English parliamentary system amount to something more than a Constitutional revolution. They mark the triumph of a force which, for want of a more precise term, we may describe as the spirit of democracy. England before this has experienced profound Constitutional changes, but, in the last resort, the same class has continued to exercise authority under the new forms. It has been the constant grievance of the English radicals that under Tory or Whig ascendency, Conservative or Liberal, the destinies of the kingdom and the empire have been shaped by members of the leisure classes; the fact that England's prosperity has been ascribed to

Digitized by Google

the high quality of political leadership it has enjoyed has not been allowed to invalidate the argument that the functions of government have been the monopoly of the few. Birth and breeding have been almost as important a qualification for leadership among Liberals as among Conservatives. The Shaws and the Chestertons are fond of dilating on the lack of essential differences and the essential community of interest between the Nokeses on one side of the House of Commons and the Stokeses on the other, with a case like that of John Burns as an occasional striking exception.

The personality of the "strong men" in both parties clearly illustrates the movement away from upper-class ascendency in England. Only a few years ago the most dynamic figure among the Liberals was Mr. Winston Churchill, of whom it was predicted that a few years would find him Prime Minister. This would have been in accordance with the old traditions. For all his vehement radicalism, the fact remained that Mr. Churchill is the son of a lord and the grandson of a duke. But the prestige of that ardent young statesman has paled of late before the personality of Mr. Lloyd George, a man of the humblest origin, in temperament and outlook totally different from the older type of English Cabinet Ministers. The strong man of the moment, on the Unionist side, in the recent flurry, was not Mr. Balfour, nor yet Mr. Austen Chamberlain, but a comparative newcomer in the person of Mr. F. E. Smith, whom a press dispatch describes as a man of "no particular family." And Mr. F. E. Smith, like Mr. David Lloyd George, has little use for the old, bland methods of party warfare when men fought resolutely but always with the consciousness that they were English gentlemen. English democracy was long content to be ruled by its social superiors. It is now beginning to choose leaders from among its own ranks. It should seem to be the day for the leader of "no particular family."

French art is more gallant than French science. Only a few months after Mme. Curie's rejection by the Academy, the Prix de Rome is awarded to Mlle. Lucienne Antoinette Heuvelmans over the heads of her male competitors. This is not the first prize for the successful contestant, as, besides minor honors at the end of every year since she entered the Ecole des Beaux Arts in 1904, she won the second Grand Prix two years ago. Yet it is but two decades since an outcry was raised against the daring novelty of even admitting girls to the school, and more than one artist of prominence is still unreconciled to the idea of sending a young woman student to Rome with a purse from the state. But it is not easy to deny ability or opportunity merely because it appears in unaccustomed guise, and the future at least is secure for women artists in France. There is a difference between the cases of Mme. Curie and Mlle. Heuvelmans which is not unimportant. The scientist lost the distinction of membership in the Academy, but there is nothing in that to hamper her in making further discoveries. The withholding of the Prix de Rome would have been the denial of a most valuable opportunity to an artist who had shown herself worthy of great encouragement.

Who would have guessed that Paris was noisier than London? Or New York quieter, or rather, less noisy, than either? These are among the discoveries credited to Mrs. Isaac L. Rice, the anti-noise crusader of this city, who is making observations of the problem abroad. The auto horn is her latest object of attack, and she is reported as planning a campaign to reduce the range of its notes from the present five miles to a block. Equally productive of noise is the frequency of its use. In Paris she found that her own chauffeur blew his horn fifty-five times in less than two minutes and a half in a street that was not crowded, and in London she counted 488 such blasts in the twenty minutes between 8:30 and 8:50 P. M., while an hour later, during the comparatively quiet time before the theatres are closing, she counted 656 blasts in thirty minutes. Whether these numbers are much larger than they need to be, a series of comparisons would soon show.

European ignorance of American geography is equalled only by American ignorance of the way things are arranged on the map of the Old World. It is hardly possible, however, that many of our citizens have reached the height of misinformation reported to have been displayed by Mayor Fitzgerald of—Boston. At Hamburg he made a gracious reference to "Dusselberg," by interpretation Düsseldorf, and then spoke of the keen interest with which he and the hundred members of the Boston Chamber of Commerce who were with him looked forward to seeing the German capital, and after it "those other great German towns, Budapest and Vienna." We are not altogether certain that this last was ignorance. What more subtle compliment to his Hamburg hosts could be conceived than an apparent belief that the Empire stretched to the farthest banks of the Danube? The Kaiser, we are sure, was flattered, and only wished that the American's gracious words were as true as they were pleasing. It is a little difficult to put the same aspect upon Admiral Badger's recent toast to the German fleet while being entertained by Danish naval officers at Copenhagen.

No one will pretend that conditions in Mexico have reached a state of permanent equilibrium. Until a President of the republic has been legally elected and recognized by a solid majority of the Mexican people the opportunity for mischief will never be absent. Yet the outlook is good, and especially in the fact that the late revolution has brought to the front at least three men who rank far above the level of Spanish-American politicians. One man is Madero; another is De la Barra; another is Reyes. Of Madero, it may be said at once that he is giving evidence of excellent powers of leadership. At the beginning of the revolution it was customary to sneer at him as a visionary and a fanatic. Worse than that, he was a spiritualist and a vegetarian. But if a cool mind under adversity, self-restraint, firmness, and insight count for anything, we need not attribute Madero's success to spiritualism and spinach exclusively. His behavior in the recent dispute between his own immediate follower, Gomez, and Acting-President De la Barra has been courageous and honorable. De la Barra is officially conducting his office in the spirit of the peace agreement that brought him into power. Reyes, though a candidate against Madero, is so openly. And that is what the country needs—men who shall play the game aboveboard and abide by results.

THE RISKS OF PEACE.

We often speak of the hazards of war, and nations and statesmen are ready, on fit occasion, to face the uncertainties of an appeal to arms; but it is not so freely admitted that there must also be risks in great plans for peace. In these, too, we must be willing to take our chances. Even the most carefully drawn arbitration treaty cannot take a bond of fate or foresee everything in the future. If we were to wait for a treaty till it was absolutely flawless and danger-proof, we should never get one at all. The thing that sensible men will do is to look the whole document over with an eye to its main intent and effect and then, sure that no human work can be perfect, stand ready to face the possibility that some part or clause may yet make trouble. In other words, enlightened and humane public men will hazard something for peace. They will not leave to those who go to war the monopoly of a cheerful spirit in the presence of unpleasant contingencies.

To this course, however, the United States Senate has been averse. The Foreign Relations Committee has taken up the arbitration treaties recently signed between this country and both England and France, and reported them favorably, to be sure, but with one important and even vital clause stricken out. This is the last part of Article III, by which agreement is made, in cases where the two countries cannot decide whether a dispute is arbitrable, to leave the question to a joint high commission of inquiry. This seems, and it is so regarded by President Taft, as the necessary conclusion of the whole matter. It completes and clinches the treaty. Without this provision it could not be said that the nations were committed to the policy of arbitrating *all* controversies that were capable of settlement on the principles of law and equity. So that the Senate committee, by rejecting the clause referred to, has done what it could to destroy the character of the treaties as universal and all-inclusive.

The reasons given by Senators are of two kinds. They allege that the Constitutional functions of the Senate in treaty-making are infringed upon. Here is an outside body which may determine whether a particular question is of a sort that should be submitted to arbitration. The Senate, it is said, with the President should decide. But the Constitutional prerogative of the Senate is solely to give or withhold its advice and consent to a treaty laid before it; and that is carefully preserved in the President's scheme for all-round arbitration. On each agreement to arbitrate the Senate will retain unimpaired its right to pronounce. You may lead the Senate to a given arbitration treaty, but you cannot make it drink against its will. All this has been clearly set forth by Secretary Knox, and the Constitutional argument is conclusive. Indeed, it is urged by the Senate destructives with only half a heart. What they most bank upon is the assertion that the clause they object to is dangerously vague. Under it a joint commission might some day conceivably decide that questions connected with the Monroe Doctrine ought to be arbitrated; that would, of course, mean the end of all things! But even in that case, the power of the Senate to reject a treaty would remain just what it is, so that unless patriotism—or jingoism—dries up in the Senate, the country will be safe from a recreant President.

It is hard to believe that Senators are entirely sincere in all these horrible imaginings about the future. Some of them, at least, act like men who have motives which they dislike to avow and would cloak in any fair-seeming disguise. They do lip-service to the cause of peace, but at heart are against any agreement wholly removing possible sources of friction between this country and Great Britain, and cast about for some kind of excuse for their hostility to the treaty. We note that some of them, in their desperate clutching for a justifying argument, have been so petty as to intimate that Ambassador Bryce has been craftily plotting, by this treaty, to shear the Senate of a part of its Constitutional powers. Pages from his books are gravely cited in which he accurately describes the ways of the Senate in dealing with treaties, and Senators, too astute by half, point out the possibility that Mr. Bryce overreached our negotiators for the express purpose of humiliating the Senate! What is really needed for such Senators is a joint commission to pass upon the state of their intellects.

There can be little doubt that the Senate means mischief with the arbitration treaties. President Taft has a warrant for being disturbed by this preliminary action. Better than anybody else he knows its significance as a display of hostility, both to his Administration and to all-embracing arbitration. And the dispatches make it clear that the President is roused and ready to join issue with the Senate, if need be. His friends report him as minded to appeal to the people against the opposing Senators. He could not ask for a better cause. No act of his Administration has commanded such general applause as his efforts to eliminate all fear of war by a series of treaties agreeing to arbitrate even questions of national "honor," and there can be no doubt of the overwhelming response he would get from the churches and the peace-loving masses if he called upon them to come to his aid. The common sense of the people is not artfully hair-splitting, and does not need to be jealous of imagined attacks on its own importance. Nor would it go with the Senate in being unwilling to venture something if only peace might lie in level shafts of light across the land.

GOV. WILSON'S CANDIDACY.

Since the opening of a bureau in New York city for the promotion of the nomination and election to the Presidency of Gov. Woodrow Wilson has taken place with his knowledge and apparent consent, it is now fair to speak of him as an avowed candidate. As such, it must frankly be admitted, he is to-day interesting the general public far more than any other man whose name is now being mentioned on the Democratic side. We are aware of the strong hold Gov. Harmon has upon public respect and good will, especially in the Middle West, but it would be idle to assert that he has appealed to the imagination of the masses as has this newcomer in the East. It must also be recognized that Gov. Wilson towers far above such aspirants as Gov. Marshall, ex-Gov. Folk, and the Speaker of the House, none of them of Presidential size. We, therefore, are viewing a close parallel to the career of Grover Cleveland during the first year of his Governorship. Not that we wish to imply that Gov. Wilson is certain of nomination. It is a far cry to the final ballot in the next National Convention, and it must not be forgotten that it seemed at one time as if Gov. Hughes might go straight from Albany to Washington.

Digitized by Google

It is to be presumed, too, that when he is asked by responsible people to announce his candidacy formally, he will respond with the same frankness and plain speaking with which Gov. Hughes presented himself to the public during the winter before Mr. Taft's nomination. The same honorable ambition has actuated both men. They desired to go higher, and have not hesitated to let it be known. To say that the aims of these two men have not been dissimilar is only to carry the parallel a step further. At the same time there is no question that the New Jersey Governor is much the more radical and that his social programme reaches further, just as he has been more successful in actually unhorsing the bosses and their tools who have opposed him. Gov. Hughes concentrated all his efforts—unsuccessfully—upon the direct nominations issue as a step toward restoring to the people the power over elections wrested from them under the boss system. If we interpret Gov. Wilson's attitude correctly, that would be to him only a first step. He is deeply aroused by the failure of representative institutions to represent, and he is prepared to go far, it may seem to many people too far, in his desire to make these institutions over.

Indeed, his recent utterances have chilled the enthusiasm for him of many admirers—his Harrisburg address on the money power, which to some has appeared like Bryanism, and his recantation of his former opposition to the initiative and referendum. However open to criticism these addresses may be, the Governor is at least not to be charged with any failure to be frank. It was courageous of him to avow his changed beliefs, for he must have known that he would be charged with flopping for political purposes only—a criticism that ought to be weighed with his refusal to approve—even in California—of the recall of judges, which to-day seems so popular in the Far West. As for his speech on the money power, there will always be two ways of looking at it. Some will decry it as an attempt to stir up the groundlings, while others will see in it only an effort to be frank—weakened, perhaps, because there was no constructive remedy advanced for what was an alarming portrayal of certain financial conditions.

Why is it that a man so recently come into our public life has already impressed himself so markedly upon the country? It is not merely that he is a new figure and that he has achieved single-handed, as it were, the defeat of long-intrenched bosses by fighting them in a straightforward way and letting the whole State know what was going on. At bottom we have here merely another illustration of the most salient fact in our political history, that the American people love beyond all else a man whom they believe to be fearless and sincerely devoted to their interests. But there is still another reason to explain the way in which the whole country is watching the Governor's career. The tide of insurgency, of revolt against present party conditions and the boss system, is running more strongly than ever, not only in the West, but in the East. No one need be deceived by the weakening of the Republican insurgent movement in Congress, by the doubts cast upon the sincerity and unselfishness of its spokesmen by their course in the present tariff struggle. The significance of these leaders lay never so much in their own actions or in their own opinions as in the fact that they represented a great stirring among the masses of their people, who came to realize that they were being exploited by selfish politicians.

It is because they have found in Gov. Wilson's speeches a kindred striving after more democratic institutions as well as appeals for the abolition of special privilege that men everywhere listen to him so carefully. In Texas and Pennsylvania he has actually proved a peacemaker, in that the warring wings of the party have united to endorse his candidacy. It is the kind of candidacy to be welcomed, whether one is Republican or Democrat, progressive or stationary. Here is a man who has come straight from an academic career to bring his own stimulating note into our public discussions and national life. How will he wear? How will his present popularity affect him? Is he unselfish? Is he sound as well as radical? Has he really thought out the questions of the day? Upon the answer to these queries depends the progress of Gov. Wilson's candidacy in the regard of thoughtful independents in both parties. They know him to be fearless and wholly devoted to the democratic ideal, whether as college president or Governor, and they are beginning to give him their trust.

ON BOTH SIDES OF THE ATLANTIC.

Going abroad was once a holiday. It has now become a function of high public importance. The act of engaging passage on a six-day steamer transforms an ordinary American citizen into an authority on politics, finance, literature, art, and ethics. He is interviewed on the pier and usually improves the occasion to fire a parting shot. Hiram K. Jones, who is in the bicycle business at Dayton, Ohio, declares, as he walks up the gangway, that Mr. Taft has utterly lost the confidence of the country. Leaning against the railing of the promenade deck, Harrison Smith of Indianapolis asserts with confidence that business will never revive until the great Middle West is emancipated from the control of Wall Street. A former Mayor of Ogdensburg pauses long enough in his search for a cabin trunk to express his belief that the divorce evil can be speedily suppressed if only the problem is approached in the right spirit. A detached view is essential if one would see things in their true light, and many American business men fall into this detached attitude from the moment they engage passage on a boat for Europe. We need no longer look to the intelligent foreigner for a frank and penetrating judgment on American civilization. The truth is to be had by waylaying any outward-bound passenger on a North River pier and setting down the thoughts that possess him as he prepares to leave the natal shore.

Once landed on the other side, our traveller immediately acquires a vast insight into European affairs. This he does without losing his importance as a critic of conditions in America. Hiram K. Jones, when accosted in the midst of a jolly little dinner party at a West End hotel in London, affirms without hesitation that the loyalty of the British people to the Crown is as widespread and as sincere as it has ever been since the time of the early Tudors. This knowledge Mr. Jones has obtained while riding in a first-class compartment on the boat train from Fishguard to the capital. Mr. Jones furthermore declares that the British nation is clamorous for war with Germany, and that the outcome of such a war can hardly be doubtful. Germany might score a few preliminary successes, but British pluck will assert itself in the end and the

Digitized by Google

German navy will be swept from the seas. To this Mr. Harrison Smith of Indianapolis adds that the outbreak of war between Great Britain and the German Empire would at once be followed by the invasion of Belgium and Holland by the Kaiser's troops. In both countries the people are eager to cast in their lot with Germany, and Antwerp and Rotterdam are bound to be transformed into German naval harbors. France will play an insignificant rôle in the struggle, because, as we learn from James P. Brown of Ogdensburg, who is found sipping a green liqueur at the Café de la Paix, the French nation is utterly decadent. This he ascertained while motoring up to Paris from Dieppe.

The future of the American theatre is a subject that lies close to the heart of Sunday newspaper readers in America. On this point our travellers abroad suffer no doubts. Mr. Jones, in the course of a three days' sojourn in Paris, has discovered that the French playwrights have nothing to teach us. Why, at the Porte St. Martin they charged him two francs extra for the benefit of the poor, an old woman in black asked a franc for hanging up his hat and coat, and the young woman who led him to his seat demanded a franc for this superfluous service and an additional franc for a programme. The exit facilities were abominable, and Mr. Jones shuddered to think of what would happen in case of fire, considering how given to panic French audiences are. In case of peril, French men always seek safety by trampling over women and children. The general trend of this testimony is confirmed by Mr. Harrison Smith's experiences in Berlin, where he stayed from Friday afternoon to Monday. The vogue of Ibsen and his school is almost extinct in the German capital. This is clearly evident from the fact that every one of the four shows Mr. Smith attended in Berlin were comic operas imported from Vienna. In general, Mr. Smith found little intellectual life in Germany. Germans were only concerned with maintaining the efficiency of their army and opening up foreign markets. German competition was driving England from the field because German manufacturers pack their goods just the way the people of Burma and Paraguay like to have them packed, whereas English manufacturers cling to their own old-fashioned ways of doing business. The enormous expansion of German commerce has convinced Mr. Smith that the United States must establish ship subsidies if we are to win our proper share of the South American trade.

During their stay abroad, neither Jones nor Smith has kept in close touch with the progress of events in this country, owing to the fact that the European press gives little space to American affairs. The news which filters in by wireless on the homeward voyage is meagre. Nevertheless, as the ship approaches Quarantine Jones and Smith automatically become well-informed. The Dayton man feels sure that there is bound to be a tremendous revival in steel as soon as Congress adjourns. The Progressive movement he finds is definitely declining. He believes that much good was accomplished at the recent convention for the improvement of the status of the rural clergyman, and that still greater good is bound to come with time. Conservation is undoubtedly a living issue. The book season has been one of the most successful we have ever had and leaves little doubt that we shall soon lead the world in the output of fiction. Prosperity was bound to come if we only made up our minds to pull together. Having thus spoken to the reporters, Mr. Jones takes the train for Dayton and Mr. Smith the train for Indianapolis, where smokers are given in their honor by the local branches of their respective fraternal organizations.

THE RESURRECTION OF POLAND.

The world at large has ceased to be troubled greatly by the woes of Poland. The crime of dismemberment has receded into the dismal past. The deeds of Polish heroism belong to former generations. The fate of unhappy Poland is looked upon as sealed, and the peoples of Christendom, beset with their own concerns, are not in a mood to lavish idle sympathy upon a broken member of the human family. The Powers to whom the downtrodden Poles might look for sympathy, if nothing else, have their own subject races and the problem of how to deal with them. Yet from France comes an impassioned voice to remind us of the tragedy that is still being enacted, and furthermore to proclaim that Poland is not yet lost. In a stirring volume, entitled "La Pologne Vivante," M. Marius-Ary Leblond, a many-sided and gifted writer, has undertaken to describe the ordeal through which the Poles are passing, under the dominion of Russia and Prussia, and the wonderful powers of resistance which they exhibit. His book is an eloquent appeal to the nations, and especially to France, "the only sister that Poland has in Europe." To Frenchmen, at a time when their ship of state sees no other means of righting itself than by leaning upon the Power which is the great oppressor of mankind, the picture which he has drawn of the moral greatness and martyrdom of Poland must furnish food for bitter reflection. The author himself hastens to disclaim any personal aversion to Russia as one of the Powers. He would have Russia great for France's sake, for the sake of a barrier against Pan-Germanism. "Nous la voulons grande, plus grande." Russia will be the greatest Power in the world when she has decided to deal righteously with Poland.

Having set himself straight with his countrymen in this matter, M. Leblond proceeds to unfold an almost incredible tale of the atrocities perpetrated in Poland by the Russian officials, police, and soldiery during the recent upheaval in the Czar's dominions. "Czarism has deserved, provoked, the execration of mankind by its treatment of Poland since 1904; it has been atrocious, bestial." By the side of this he places another revolting picture, the treatment of the Poles by the Prussian Government. The brutal measures employed in the name of the law to Germanize them render the life of the Poles in the province of Posen more miserable, M. Leblond affirms, than existence under the "permanent state of siege" that prevails in Russian Poland. The only response on the part of the Poles to the acts of their oppressors is a calm and stoical determination to unfold and strengthen their nationality in the face of persecution, an all-pervading activity directed toward the intellectual uplift and physical improvement of the race and its economic development, as a means of bringing about its renascence and ultimate deliverance.

The nation has been subjecting itself to a process of introspection which has materially altered its character. It has broken, in a measure, with the spirit of the past and divested itself of that

Digitized by Google

impulsiveness which found expression in futile uprisings. It has ceased to dream and is applying itself arduously to the task of building up its forces. Vigorous efforts are being made to improve the condition of the peasants by inducing them to organize coöperative societies, which are at the same time patriotic associations. The aristocracy and middle class are laboring assiduously to rouse the humble people by making them familiar with the glorious memories of the nation's past. Nowhere else have literature and art been enlisted to such an extent in the national cause. In no other country has woman played such an exalted rôle in the development and assertion of the national spirit. The Catholic Church is a great mainstay of the nation in its resistance to Russification and Germanization. It is not merely in order to make head against the Orthodox Church or the Evangelical Church that it lends its strength to the Poles in their struggle. The Catholic priests are ardent Polish patriots, and many of them have laid down their lives in the fight for freedom.

The main concern of the Poles at present is the preservation of their language. The most persistent efforts of the Russian and Prussian Governments to force upon them the languages of their masters are proving ineffectual. Every fresh census informs the world that the Polish-speaking population of Russia and Germany, as well as of Austria, is holding its own. In fact, the Germans who live among the Poles are to some extent becoming Polonized. No way has yet been devised by the instruments of Russian and Prussian oppression to prevent Polish parents from inculcating in their children the feeling that their mother tongue is their most precious possession. Even Russian autocracy has to stop short of abolishing the Polish press. Polish theatres are tolerated in Warsaw and elsewhere in the Russian dominions, no play being permitted, forsooth, in which a Polish king is one of the characters.

The extraordinary efforts made by the Prussian Government to repress the Polish element in Posen in favor of the German, through the expenditure of hundreds of millions of marks in the purchase of Polish estates forcibly placed upon the market, and the colonization of German agriculturists, have been thwarted in large measure by organized action in the direction of enabling the Polish peasants to obtain small parcels of land. In every way the Poles continue to bid silent defiance to their oppressors, and there is no saying that a nation so devoted to its soil, its traditions, its language, and its religion is doomed forever. With the Austro-Hungarian monarchy hanging together by such slender threads and with the enmity existing between Muscovite and Teuton, the Poles have reason to hope that a time will come when they will have to be reckoned with. Who can tell whether far-seeing German statesmen, even while the policy of making Germany German is relentlessly pursued, with the Poles as its victims, are not thinking of the creation, when the occasion arises, of a great buffer state between the German Empire and the dominions of the Czar? A resuscitated Poland would mean the erection of a mighty bulwark against a Russian onslaught. And it is not altogether out of the question that, foreseeing such a possibility, the wielders of power in Russia will sooner or later come to the conclusion that the policy of denationalizing the Poles, so vainly persisted in, had better be abandoned in favor of one of pacification through the granting of concessions amounting to a large share of autonomy.

BOOK REVIEWING A LA MODE.

It all began with the publisher who ventured to express his opinion, on the paper wrappers of the book, that the author's style carried a suggestion of Thackeray or Stevenson or Tolstoy, as the case might be. The deluge was upon us immediately. To-day it is the rule in publishers' notices that when a story is loose-jointed, sprightly, and at times ungrammatical, it marks its author as a worthy successor of Thackeray. When a story is replete with battle, murder, sudden death, and antique adjectives, it has the charm of Stevenson. When a story deals with "real" people, that is, with financiers, politicians, hypocrites, misers, dreamers, lovers, and scoundrels, its author is immediately an American Balzac. When a writer ends his stories with a snap he is our American Maupassant. When he ends them with a laugh, he is our new Mark Twain. When he ends them with a riot he is our American Victor Hugo. When he ends them with a death-scene and tears, he is our American Dickens. Literary criticism has become simply a matter of identification. It is no longer necessary to say whether a book is good or bad, or even whether you like it or not. You merely take the author's thumb-print and by comparison with the originals ascertain whether he is Balzac or Thackeray or Dumas.

All this is bewildering to many men of an older generation; bewildering and a bit painful. They wonder whether congenital incapacity makes them insensible to the fact that the literary world to-day reeks with genius, or whether the deadening hand of time has come upon them. Once upon a time people believed that a Dickens or a Thackeray comes once in a hundred years. To-day they come at least twice a year, in the spring and autumn publishing season. Did we say Dickens *or* Balzac? We have for some time been past the stage of invoking these individual old Titans. To-day we have writers of first novels who embody the concentrated essence of the entire nineteenth century. For the petty sum of one dollar and twenty cents you can have your choice of half-a-dozen books, each of which contains the robust realism of Fielding, the grace of J. M. Barrie, the rollicking humor of Pickwick, the *bravura* of Dumas, and the lovely sentiment of "Henry Esmond." All these qualities, it will be noted, the book contains without losing any of the qualities that appeal so intensely to the modern American, lots of red blood, lots of action, lots of Gibson femininity, lots of optimism, and lots of wholesome advice on how to succeed. Our readers of the older generation can only shake their heads and wonder how the thing is done.

But there are other readers in whom the awakened emotion is not wonder, but a sharp disgust. These wild encomiums plastered on every shoddy novel not only tell lies about the present, they besmirch the honored past. While they are appraising Robinson's first novel in terms of Thackeray or Balzac, they are, of course, appraising Thackeray and Balzac in terms of Robinson. A vast body of consumers of fiction that do not know their Maupassant or their Tolstoy will henceforth cherish the belief that Maupassant is very much like Jones, and that Tolstoy is very much like Brown. The offence

Digitized by Google

is ethical and it is æsthetic. It borrows from get-rich-quick finance the elegant assumption that a sucker is born every minute, and applies it to literature, thereby emphasizing the primal truth that a book is like a washboard or a sewing machine or an insurance policy: you can claim all imaginable virtues for it and *caveat emptor*. Under present conditions a book is not quite as important a commodity as a bottle of patent medicine. The law punishes the drug manufacturer for misbranding his wares. But there is no law to keep a bookseller from sending his goods into the open market labelled Thackeray Extra Choice or Dickens Fancy Prime.

But the publisher at least makes no pretence in the matter. He is out to sell his goods, and if a fancy cigar-label will do the trick it is good enough for him. What, however, shall be said of the professional reviewer who plays the assiduous parrot to the publisher's puffs? He imperils the dignity of criticism and of literature. He imperils the dignity of the human understanding. For there need be no mincing the matter: the book-reviewer who, month after month, unearths writers with the charm of Thackeray, with the humor of Dickens, with the vast insight of Balzac, must either be a fool or a liar. It is well enough to be good-natured, to shrink from carping, to search for the best that can be said in favor of a new book or a new writer. But good-nature should have its limits in this business. Greater things than good-nature are truth and the duty of clear thinking, and the duty not to befuddle the minds and the standards of the masses.

SCANDINAVIAN BOOKS.

BERGEN, Norway, July 1.

The Danish essayist, Georg Brandes, has just published a small pamphlet, "Før og nu, to tragiske skæbner" ("Then and now, two tragic fortunes"), which shows him to have lost none of his vigor. Of the two essays, one deals with the life and convictions and tragic fate of the Spanish-French religious scholar, Michel Servet, who was persecuted in the Inquisition, and, owing chiefly to the revengefulness of Calvin, was burned to death. It shows great indignation, gives a clear picture of sixteenth century conditions, and draws the character of the enlightened and courageous Servet, the indefatigable searcher after truth, with much sympathy and comprehension. The other essay concerns the life and death of Francisco Ferrer y Guardia, the Spanish educator, who was shot in one of the trenches of the fortress at Montjuich, near Barcelona, on October 12, 1909. Brandes regards Ferrer as one of the best of men, and his murder one of the greatest crimes which was ever committed. "Ferrer," he exclaims, "died for the liberty of thought, like the martyrs of the sixteenth and seventeenth centuries, like Servet, like Giordano Bruno, the fortunes of whom not many had thought they should see repeated in the twentieth century."

Henrik Ibsen's only son, Dr. Sigurd Ibsen, has never followed in just the literary footprints of his father. Whatever he has written has been preoccupied with a sober and scholarly discussion of philosophical and political problems. After Dr. Ibsen retired as a member of the Norwegian cabinet a few years ago, he lived for some time obscurely in foreign countries; but recently he has returned home, taking up his residence near Christiania, and has now issued a social-philosophical work, "Menneskelig kvintessens" ("Human Quintessence"), which has attracted considerable attention throughout the Scandinavian countries. Dr. Ibsen's book consists of four essays: "Nature and Man," "Why Politics Falls Short," "On Human Aptitude and Human Art," and "On Great Men: An Attempt at Valuation," the three latter more closely explaining and developing the views put forth in the first. He contrasts sharply our position toward nature and our position toward man, and argues that we should not try to find the key to human affairs in nature, which it is impossible for us to comprehend, but rather in the study of man, of whom we have at least some little knowledge. He directs an attack upon the prevailing denial of the independence of human spirit, and does this in language so admirably clear and concise as to make a difficult subject appear easy. It may be hoped that the work will be translated.

In Norway socialism is not very old, although it has considerable power. It was brought to this country from Denmark in the early seventies, but did not win a firm foothold till some years later. In 1897 universal suffrage was adopted, which was an enormous aid to socialism, and now the socialists have no less than eleven of the 123 members of the Storthing. A complete history of socialism in Norway has never been written, but the recent book by Olav Kringen, "De første socialdemokrater i Norge" ("The First Socialists in Norway"), is a valuable work. It describes the introduction of socialistic theories by the Danish saddler, Marius Jantzen, in 1873, the first meetings held by him and his few followers in the early seventies, the opposition to the new party, and the great difficulties of the leaders, and, in a short conclusive chapter, the recent history and the present strength and position of the party. The book numbers only 135 pages, but is well and compactly written. It is illustrated with excellent portraits of leading Norwegian socialists.

A Swedish biography of considerable interest is Anna Hamilton Geete's "I solnedgången, minnen och bilder från Erik Gustaf Geijers senaste lefnadsår" ("At Sunset; Recollections and Pictures from Geijer's Later Years"). It gives much useful information concerning the private life of a Swedish historian and poet, who lived from 1783 to 1847, and was professor of history at the University of Upsala. The work deals with the years 1840 to 1845, a period of Geijer's life which has been rather neglected by his earlier biographers, and will be followed by a volume on the remaining two years of his life. The book will be read with great interest, although it contains a few things which might better have been kept within the circle of the subject's descendants, not being of sufficient importance for public consideration.

Another Swedish biography worthy of attention is Louise Hamilton's work on Fredrik Borg, the Swedish editor and statesman, who during the eighties and the first half of the nineties played an influential part in Scandinavian politics, meeting the demands of Norway for a just settlement of the union controversy between the two countries with unusual impartiality, comprehension, and farsightedness. Of particular interest will prove the correspondence between Borg and his warm friend, the Norwegian poet, Bjørnstjerne Bjørnson. It throws much interesting light on political sentiments of those stormy days.

ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

George Parker Winship, librarian of the John Carter Brown library in Providence, in his annual report, tells of two very important additions to that library. One of them is the Bull of Demarcation issued by Pope Alexander VI in May, 1493, and printed at the time, and the only impression of this important document which can now be located. Another specimen described by Harrisse in his "Additions" was sold at Puttick and Simpson's on May 24, 1854, and was bought by Rich the bookseller for £4 8s., but where it went seems not to be on record. The Brown Library copy was presented to Mr. Winship by a friend of the library in Mexico.

Columbus landed at Palos on March 15, 1493, and his letter to Luis de Santangel was printed as a folio of two leaves at Barcelona, where the court was then seated, probably some time in April. Of this, the first printed book relating to America, the New York Public Library owns the only known example. The quarto Spanish letter of four leaves, of which the unique

Digitized by Google

original is preserved in the Ambrosian library at Milan, was probably also printed in Spain, and perhaps during the month of April. The letter to Gabriel Sanchez, translated from a lost Spanish original into Latin by Alexander de Cosco, which went through several editions in 1493, could not have been printed until early in May. The heading says that it was "ab Hispano ideomate in latinum convertit: tertio Kal's Maij. M. cccc.xciij." The third calends of May was April 29. We may suppose that the Spanish letter, manuscript or printed, reached Rome the last days of April and that the translation was finished on the last day of that month. The Pope's "Bull" is dated at the end, "1493 quarto nonas Maij," or May 4. It seems certain, therefore, that the printed letter, Plannck's first edition, and the broadside "Bull" issued from the press within a very few days of each other. The "Bull" was printed entire, in both Latin and English in the first edition of the "Decades of the New World," edited by Richard Eden and published in London in 1555.

The other "first book" acquired by the John Carter Brown Library, is a little Peruvian pamphlet dealing with the reformation of the calendar, heretofore undescribed, and earlier by a month than any other book printed in Peru.

The important map of Virginia and Maryland, drawn by Augustin Hermann in 1670 and engraved and published in 1673, has been reproduced in facsimile by P. Lee Phillips of the Library of Congress. It accompanies an account of Hermann and his map and is published by W. H. Lowdermilk & Co. of Washington. Of the original map, engraved by Faithorne, only a single copy, preserved in the British Museum, is known. It was issued in four sheets, each 18⅞ by 15⅝ inches in size. It cost Hermann "to the value of about 200 pounds Sterling besides his own labour." He himself criticised the engraving as "slobbered over by the engraver faithorn defiling the prints with many Errours." The edition of the reproduction is limited to two hundred copies.

Wymberley Jones DeRenne of Savannah and Wormsloe, Georgia, has printed privately a catalogue of his books relating to the history of Georgia, the most important collection of its kind ever brought together. The volume, compiled by Oscar Wegelin, is a large quarto of nearly three hundred pages, with a number of reproductions of title pages of scarce books and pamphlets and a folding sheet containing a reproduction of the last page, with signatures, of the original engrossed Constitution of the Confederate States. The books are classified under many headings, such as Almanacs, Botany, Boundary Disputes, Colonial History of Georgia (where the earlier books are described), Histories of Georgia, Histories (of other States) relating to Georgia, etc. "The South Carolina and Georgia Almanack" for 1764, printed at Savannah by James Johnson, seems to be the first book or pamphlet printed in Georgia. Johnson had established his press in April, 1763, and had first printed a newspaper, the *Georgia Royal Gazette*.

Among the earlier books are three issues of Benjamin Martyn's "Reasons for Establishing the Colony of Georgia," 1733, and the same author's "Account Showing the Progress of the Colony of Georgia" (1741), Tailfer's "True and Historical Narrative of the Colony of Georgia" (1742), and Stephens's "Journal of the Proceedings of Georgia," 3 vols. (1842). The third volume of this set is especially rare, only two other copies being known.

Correspondence

THE PACIFIC OCEAN ASSOCIATIONS.

TO THE EDITOR OF THE NATION:

SIR: The Taiheiyo Kyokwai and the Taiheiyo Kwai, the two associations for the study of all questions concerning the Pacific Ocean (is it their ambition to make Japan believe that her control of the Pacific will mean the first step of her control of the world?), which are on the tongue of every intelligent Japanese at present, were organized, to speak ironically, by Capt. Hobson and other anti-Japanese agitators in America; whereas Dr. K. Tomizu, Professor Terao, and many loud-voiced members of the Diet, those active Japanese workers of the associations, are only the endorsers. I believe that there would be no such associations in existence if there were no anti-Japanese spirit in America; here we see many Japanese who are thankful to Hobson and others who showed us the changed position of the Japanese on the Pacific, which was never so clear to their minds hitherto. Behind the words "the requirements of the times" I see the fact that we have decided to prepare, to put it bluntly, against America; however, that does not necessarily mean that there will be a war, in the future near or far, between us, America and Japan. Even if the former wishes to fight, I think that the latter will surely ask to be excused with many profound bows natural to them. In one word, Japan cannot go into war for many years to come.

But when I say that the said associations, indeed, with such an ironical name, are encouraging openly or secretly the immediate enlargement of the Japanese navy, I mean that there cannot be a creditable peace on the Pacific if our navy is far inferior to America's. If there is no way to make America stop her expansion, we might think we must work along the same programme even though there is no real sense or joy in it. It is fatalism that we must find a sort of pride or glory out of bankruptcy and ruin. But as the truth tells, we are the people who always find strangely a way out from impossibility; there is no bad effect on the Japanese mind arising from Fortune or the lack of it; did we not fight Russia with two or three riceballs apiece and a few slices of pickled radishes?

It is almost too late for Japan to speak of the changes of the times and the national position to-day, when the completion of the Panama Canal is a matter of not many years. We have joy in the fact realized, I dare say, that the course of the world's civilization is moving continually, though intermittently, westward; and our country lies really in its course. The civilization which found its centre in England in modern ages crossed the Atlantic Ocean, as some one says, and America became its actual holder. It might be too much to say that the next centre will be found in Japan, but was it not America who opened Japan's door to let the Western light flow in? There is reason to believe that the Indian civilization once imported to Japan did not prove to be the main stream, as it did not flow farther beyond the Pacific. Japan, who assimilated the civilizations of both India and China in olden times, and now takes in the Western civilization for her digestion, has one great object in life; that is to become a true mediator or harmonizer of those different civilizations of East and West And such a work can be accomplished by preserving our Orientalism real and true; the American encroachment, spiritual as well as physical, is most necessary, since it will serve for us as the test of our strength. America will never be our enemy in the plebeian sense; if she be an enemy, that enemy should be welcomed with open arms. Competition is the very way of the nation's advancement; we have some reason to say that even risk is necessary for our existence. It is perhaps the American anti-Japanese spirit (happily not ended still to-day) that made us wise and reflective; under its menace our hold of soul and body will be a hundred times firmer. And on the other hand, Japan might do the same service to America.

We are thankful for the said associations for the study of the Pacific Ocean problem (thankful to Capt. Hobson and others?), that our people in general have awakened at once to the great importance of that question. I think that if the associations could make the government realize the navy expansion which they talk about almost freely, it would be the first step accomplished. However, I myself am not ready to say whether I endorse such action or not. YONE NOGUCHI.

Keio University, Tokio, June 17.

JOHN WESLEY ON SLAVERY.

TO THE EDITOR OF THE NATION:

SIR: John Wesley had a place among the opponents of slavery at a period when the public conscience was remarkably callous on that topic. His pamphlet, "Thoughts on Slavery," published in 1774, was reviewed in a very friendly spirit in the *Monthly Review* for September of that year. In the same number there is a severe criticism on "A Supplement to Mr. Wesley's Pamphlet," in which a pro-slavery advocate had tried to make fun out of a tragic subject (Vol. LI, pp. 234-237). In the October number there is an apologetic letter from a slaveowner (pp. 324-325), who, in the following number (p. 487), receives this sledgehammer blow:

To the Authors of the *Monthly Review:*
Rygate, November 30, 1774.

Gentlemen: I can easily believe what your correspondent affirms, that there are some slaveholders who have a little humanity left, and that the Georgian laws sell the blood of one slave only to each master, and prescribe the instruments wherewith he is to torture the rest.

What is still the general spirit of American slaveholders is observed in a letter from Philadelphia now before me: "As a farther instance of the inhumanity with which the poor negroes are treated, I will add two advertisements published in the public papers, one of Virginia, the other of North Carolina. From the Williamsburgh *Gazette:* 'Run away on the 10th instant a lusty negroe, named Bob. The said fellow is outlawed, and I will give ten pounds reward for his head severed from his body, and forty shillings if brought alive.'

"From one of the North Carolina news-

Digitized by Google

papers: 'Ran away last November from the subscriber, a negroe fellow, named Zeb, aged thirty-six. As he is outlawed, I will pay twenty pounds currency to any person who shall produce his head severed from his body, and five pounds if brought home alive.' John Mosely."

I am, gentlemen, your very humble servant, John Wesley.

Such were the natural results of slavery.

WILLIAM E. A. AXON.

Manchester, Eng., August 1.

THE LEGEND OF THE SOUL DISPOSSESSED BY A DEVIL.

TO THE EDITOR OF THE NATION:

SIR: The reader of Dante will recall the powerful imagination of the poet in the thirty-third canto of the Inferno, where Branca d' Oria's soul is represented as suffering punishment in hell, although his body is still alive in the world above. Friar Alberigo thus acquaints Dante with the singular prerogative of the third division of the ninth circle (Ptolomæa), where traitors to their friends are punished:

"Such an advantage has this Ptolomæa,
That oftentimes the soul descendeth here
Sooner than Atropos in motion sets it.
. . . . . .
Know that as soon as any soul betrays
As I have done, his body by a demon
Is taken from him, who thereafter rules it,
Until his time has wholly been revolved.
Itself down rushes into such a cistern;
And still perchance above appears the body
Of yonder shade, that winters here behind me.
This thou shouldst know, if thou hast just come down;
It is Ser Branca d'Oria and many years
Have passed away since he was thus locked up."
"I think," said I to him, "thou dost deceive me
For Branca d'Oria is not dead as yet,
And eats and drinks, and sleeps, and puts on clothes."
(Longfellow, "Inferno," xxxiii, 124-141.)

The commentators think that Dante had in mind the two Scriptural passages: Psalms 54:16 (55:15) "*Descendant in infernum viventes,* and let them go down quick (living) into hell"; and St. John 13:27, "*Et post buccellam, tunc introivit in illum Satanas,* and after the sop Satan entered into him." Professor D'Ancona was, I believe, the first, in his "I Precursori di Dante" (Florence, 1874) to call attention to a story in Caesarius of Heisterbach's "Dialogus Miraculorum" (Dist. xii, cap. 3) which contains the same idea as Dante's lines cited above. I translate D'Ancona's words, p. 67, note 1:

We may fittingly note here that an example of the contrary case, that is, of a soul condemned in anticipation to the pains of hell, which seems a very bold invention of Dante in regard to Branca d'Oria was already to be found in Cæsarius (xii, 3), of Hermann the landgrave whose soul was "plunged in the depths of hell," and "who a full year before he was buried was dead, and an evil spirit instead of his soul animated his body," as a saint asserted in a vision to a priest who was praying for the powerful lord.

If D'Ancona had cited the whole of the story of Cæsarius it would not have been worth while to refer to the matter again, but he has omitted, I think, what makes it reasonably certain that Dante was acquainted with this particular story.

The belief in demoniacal possession is too old and general to dwell on here, but the notion that the soul could under certain circumstances be dispossessed of its body by a demon is not common, so far as I know, in mediæval legends. Indeed, I can at this moment recall but the two (three) in Cæsarius of Heisterbach. The first (Dist. xii, 3) is the one cited by D'Ancona, which runs as follows:

Not long ago the landgrave Hermann died. After his death, while a priest to whom he had shown many favors, was praying night and day with tears and groans to God for his soul, a certain saint appeared to him and said: "Why do you labor so for this man who has been damned? It does him no good, but rather harms him, for his soul is plunged in the depths of hell." The priest replying: "Lord, he showed me many favors," the saint rejoined: "Cease to pray for him, because a full year before he was buried he was dead and an evil spirit instead of his soul animated his body."

Then follows a passage not cited by D'Ancona. The stories in the "Dialogus Miraculorum" are told by a monk (the master of the novitiates) to a novitiate, who, in this particular case, after he has heard the story of Hermann, replies: "I did not think the human body could eat, drink, or sleep without the soul." Is not this almost exactly the words of Dante quoted above?

Cæsarius then proceeds to cite another similar story from the life of Saint Patrick, about a man who slew the saint's charioteer: "In whose body a devil dwelt for many years instead of his soul. When at the beck of the saint the devil came forth, the body fell into dust." This is the story of Foylge who slew Odranus, the charioteer of the saint, and is related *in extenso* in the Acta Sanctorum, March, Tom. II, p. 552, sections 63-64. There the soul is said to have been buried in hell as soon as it left the body. In closing the chapter Cæsarius remarks that he had heard a similar story from a monk who had formerly been a student at Bonn. Unfortunately he does not repeat the tale.

In the following (v) chapter Cæsarius tells a story of a cleric whose body was animated by a devil instead of his soul. This cleric had so sweet a voice that it was a delight to hear him sing. One day a certain monk happened by, and hearing him sing with his harp said: "That is not the voice of a man but of a devil," and while all wondered, he adjured the demon and he came forth, the body falling down and stinking. The novitiate remarks: "I don't doubt that the demons torture horribly in hell the souls of those whose bodies they thus mock in the present world."

The date of the composition of the "Dialogus Miraculorum" is fixed at 1223-1224 by Schönbach ("Studien zur Erzählungsliteratur des Mittelalters," Vierter Theil, p. 26), and the work undoubtedly enjoyed great popularity at once. How early it was known in Italy I do not know, but it is interesting to recall Rajna's discovery of a possible source of one of Boccaccio's stories in the "Dialogus Miraculorum." I allude to the article "La Novella Boccaccesca del Saladino e di Messer Torello" in the *Romania*, Vol VI (1877), pp. 359-368. Rajna does not give any data for the diffusion of Cæsarius's work in Italy in the thirteenth century, although he alludes to the later use of the work by the compilers of story-books for the use of preachers.

QUANTITY AND QUALITY IN GRADES.

TO THE EDITOR OF THE NATION:

SIR: President W. T. Foster of Reed College, in his recent book, "The Administration of the College Curriculum," recommends the "credit-for-quality plan" for grading students, in conjunction with the "credit-for-quantity plan." The latter is almost universally in use; the former almost nowhere in use; a combination of the two—the obviously most nearly just system—is used in very few institutions. President Foster points out, also, the difficulty in administering the plan recommended, caused by the fact that "the same grade, as assigned by the various instructors even in the same institution, has various values."

For some years Beloit College has experimented with this combination plan. At present "the student's work is estimated in terms of hours and credits. An hour means class-work taken one hour each week for a semester. A credit is a measure of the quality of the work done. One hundred and twenty semester-hours are required for graduation. Forty-two credits are required for graduation." Credits are estimated as follows:

AA= one credit for each semester-hour completed.
A+= 7/8 credit for each semester-hour completed.
A= 3/4 credit for each semester-hour completed.
B+= 5/8 credit for each semester-hour completed.
B= 1/2 credit for each semester-hour completed.
C+=3/8 credit for each semester-hour completed.
C= 1/4 credit for each semester-hour completed.
D gives no credit, but passes the student.
F denotes failure, with privilege of re-examination.
FF denotes complete failure.

(In justice to Beloit College, it should be stated that a simpler system of marking and crediting was adopted at its last faculty meeting.)

By this system a student who attains grade A for "highly commendable and extensive work" gets more credit than the man "who scrapes through on the gentlemen's grade," (C). Also, a student who attains grade AA in fourteen three-hour one-semester courses, or credit for forty-two AA's, fulfils the "quality requirement," but fails to fulfil the "quantity requirement"; the man who makes no grade higher than C, in order to fulfil the requirement, would have to receive one hundred and sixty-eight C's, which would necessitate the taking of fifty-six three-hour one-semester courses—a task impossible of accomplishment in four years' time. It can be seen that "an average standing of C+ is necessary to procure for students the forty-two credits required for graduation, on the basis of 120 semester-hours." Since degrees are granted only "on completion of a four years' course of study, covering not less than 120 semester-hours of work, on which at least forty-two credits have been earned," length of residence and the requirement for quantity and for quality are safeguarded. Honors also are conferred on the basis of credits.

This system, as it has been observed by professors long connected with the college, has seemed to raise the scholarship; it certainly has made life hard for such students as are inclined to rest satisfied with a mere passing mark in most of their work and to be indignant at reproof for not attaining a higher rank. This latter state of mind has disappeared. And yet, at almost every faculty meeting there crops out the fact that uniform grading is not attained. Plotted curves of departmental grades reveal the startling fact that one department is giving a large percentage of high grades, another no AA grades and per-

Digitized by Google

haps many A's, a third largely B's, and so on. Constantly it is revealed that one professor persistently interprets his grades (A, B, C, etc.) in terms of percentage; another in terms of general excellence or lack of excellence, and so on. Any college that will investigate carefully the grading of its teachers will discover erratic individual methods and a woful lack of uniformity. It is, therefore, little to be wondered that several professors at Beloit College have desired to do away with the credit-for-quality plan. Still less is it to be wondered at that some colleges, Beloit among the number, are experimenting to discover the workableness of the scientific distribution of grades, as illustrated by the University of Missouri system.

At odds as the different gradings of the individual instructors may be, the difficulty, as President Foster points out, is not inherent in the plan—indeed, it lies in the administration of the plan, lies in the administration of all systems of grading. If this combination system, the quality plan coupled with the quantity plan, lifts the scholarship of the college, it ought to receive long and patient trial under careful and adequate administration.

Literature

HARRIET BEECHER STOWE.

Harriet Beecher Stowe: The Story of Her Life. By her son, Charles Edward Stowe, and her grandson, Lyman Beecher Stowe. Boston: Houghton Mifflin Co. $1.50 net.

This is a charming book, about one of the most gracious and potent of American women. The kinship of the authors to the subject does not mar their work. Though affectionate, they are restrained and unobtrusive. They comment no more than is necessary to make the story continuous and intelligible, leaving Mrs. Stowe and her circle to record themselves in their conversation and letters. It is a beautiful account throughout of a loving daughter, sister, and wife, a careful mother of seven children, who in the intervals of her cares managed to write many books, among them several which influenced memorably the temper and history of her time.

Mrs. Stowe's mother was a sweet and strong woman. Her father, Lyman Beecher, was a bowlder of the living rock. Her heredity could not have been better, nor was her environment less happy. The step-mother who in Harriet's early childhood took on herself the charge of the brood of eight was wise and loving. When her husband insisted on reading to the family Jonathan Edwards's "Sinners in the Hands of an Angry God," with fine dignity she rose and left the room, declaring she would not listen to such a libel upon the God she loved and adored. Harriet's brother, Henry Ward Beecher, was the greatest preacher of his time, and other brothers were only less conspicuous than he. Her sister, Catherine, was perhaps even more brilliant than Mrs. Stowe herself, wanting only good luck to have become equally renowned. The poverty of her father's household was a wholesome atmosphere for the child. Her contacts from the first were with high-minded people, and she soon came into close touch with the best men and women in America and Europe. Mrs. Stowe grew famous while managing a large household greatly straitened, and did her writing while battling with perplexities in a way as amusing as it is heroic. Catherine writes:

"Come Harriet," said I, as I found her tending one baby and watching two others just able to walk, "where is that piece, for have it I must." "And how will you get it, sister mine. You will have to wait till I get thro' house-cleaning and the baby's teeth are through. There's a great baking down in the kitchen and a green girl for help. It's really out of the question." "I see no such thing. Set your wits to work." "Well, Minna, you may do what I told you, while I write a few minutes." "Here's the ink-stand on the top of the tea-kettle close-by." "Yes, yes," she said, falling into a muse as she attempted to recover the thread of her story. "Ma'am, shall I put the pork on top of the beans?" (from Minna), "Come, come, you see how it is. We must give it up for to-day." "No, let us have another trial, you dictate. Come, I'll set the baby in the clothes-basket. You left off here: 'Borne down by the tide of agony,' what next?" "Minna, pour a little milk into this pearl-ash." "Come," said I, "what next?" "Her lover wept with her. (Minna, roll that crust a little thinner.) He spoke in soothing tones. (Minna, poke the coals into the oven.) What is this life to one who has suffered as I have?" "Shall I put in the brown or the white bread?" said Minna. "Under the breaking of my heart I have borne up." "Ma'am, shall I put ginger in the pumpkin?" "But the breaking heart of a wife still pleads, a little longer, a little longer." How much longer must the ginger-bread stay in?" "Five minutes," said Harriet. "A little longer," I repeated in a dolorous tone, for now she was dictating. We burst out into a laugh. Thus we went on cooking, writing, dictating, nursing, and laughing. The piece was finished, copied, and sent.

Mrs. Stowe's own letters are entertaining, none more so, perhaps, than the one describing the presentation to her at Stafford House, the home of the Duchess of Sutherland, by Lord Shaftesbury, of an address from the women of England. Palmerston, Macaulay, Archbishop Whateley, the Duke of Argyll, and many more of the most distinguished people of England were present to do her honor. Her biographers contrast the incident with one that had taken place only a short time before, when Mrs. Stowe, making her way east with her little family, was stranded, poor and alone, at a small way station in the woods. Seated disconsolately on her trunk, with her children about her, she was sharply interrogated by the brusque station-agent. The contrasts of her life were, indeed, picturesque, but whether her surroundings were grave or gay, she encountered either fortune with complete poise and good-nature.

She was one of the most successful of authors, attaining world-wide fame, and commanding at last a constant stream of dollars by the simple movement of her pen. Her greatness was as a teacher and preacher rather than as an artist. The German critics say of Schiller, that he always *shines through* in what he writes; whereas the perfect artist holds a mirror up to nature, he himself remaining unrevealed. Mrs. Stowe notably "shines through" in her most famous work; and, although in her New England tales she approaches more nearly the artistic ideal, she always falls somewhat short. As an artist, no doubt, she was surpassed by her contemporary, Hawthorne. Lowell and Ruskin, letters from whom are given in this book, plainly show they felt Mrs. Stowe was here lacking, and Lowell deals with her candidly. A moral aim is a fine thing, he says, but the artist is a traitor who will postpone to that or any other thing the accurate reflection of nature. With small abatement, however, few of her time were more finely endowed than she in heart and head, or rendered a nobler service. We are fortunate to have in this book a portrayal of her so detailed, accurate, and properly sympathetic.

CURRENT FICTION.

The Glory of Clementina. By W. J Locke. New York: John Lane Co.

To the reader who knows his Rhoda Broughton, his M. E. Braddon, and his "Duchess," Mr. Locke's latest novel will bring at almost every page delightful reminiscences of an age that is gone. When you have put down this smooth-running story, with its air of pretty culture, its condensed psychological excursuses, its easy indulgence in a Latin phrase that is not too unfamiliar or a bit of scholarship that is not too recondite, you may pick up a pencil and in five minutes jot down the reappearance of a dozen familiar friends: (1) The woman of genius who hides her wit and her beauty under a dowdy exterior until the dramatic moment when she decides to beat the ballroom butterflies at their own game; (2) the woman who thrusts her lover from her under the impulse of mistaken duty, and, repenting, goes to his chambers and finds him on the floor with a bullet through his head; (3) the great-hearted woman who loves a man much younger than herself and saves him by throwing him into the arms of a charming girl of approximately his own age; (4) the adven-

Digitized by Google

turess who sets out to stalk and devour the dreamy, unworldly, scholar-philanthropist and succumbs to the power of goodness innate in her lamblike victim; (5) the elaborate dinner-party engineered by the dowdy heroine; having kept the company waiting for three-quarters of an hour she bursts in upon them, a phœnix, the unsuspected marvels of her neck and shoulders revealed in a five-hundred-dollar gown; (6) the dawn of romantic love in the presence of a Roman temple under a full moon; (7) the letter conceived in terms of extraordinary ardor which the anguished husband finds in a secret drawer and which turns out to have been addressed to another woman than his wife; (8) the fine old sea-dog of an admiral who despises women and is conquered and bound hand and foot by the heroine; (9) the little girl whom her father, before he dies of a lingering fever contracted in China, entrusts to the joint guardianship of the dowdy phœnix and the unworldly scholar; (10) the unworldly scholar who takes his new ward upon his awkward knee and tells her stories drawn from the field of his vast historic readings; (11) the two guardians who, as they watch the little girl play before the fire, determine to marry in order to give the child a real home; but also they have learned to love each other passionately; (12) the closing scene in which delicate but unmistakable allusion is made to the fact that the little girl by the fire will soon have a companion to play with. Thus within the compass of a single volume Mr. Locke has brought together most of the accepted formulas that underlie popular fiction. Actually he is concerned less with the glory of Clementina Wing than with the story of Ephraim Quixtus, who continues the succession of Marcus Ordeyne, Septimus, and Simon de Gex. The narrative has movement and sentiment; and there is wit, of course. There is mention of a toy lamb which, on being squeezed, sings the Jewel Song from "Faust." Mr. Locke refers to this animal as "the apocalyptic beast," for which much should be forgiven him.

The Human Chord. By Algernon Blackwood. New York: Macmillan & Co.

Of such a fantastic romance it is perhaps not over-exacting to demand direct and vivid action and at least momentary plausibility. These requirements—fully met by Jules Verne, by H. G. Wells in his early work, and by others—are not sufficiently comprehended by Mr. Blackwood. He has the imaginative faculty highly developed, and he is evidently a thorough student of the ancient wisdom of the East. But he has written a rather uninteresting book. He starts with a detailed description of the introspective boyhood of Robert Spinrobin, who is gifted with peculiar sensitiveness to sound. Spinrobin is made to find employment as secretary to Philip Skale, a retired clergyman. Skale, of course, shares with Spinrobin his distinctive faculty. Furthermore, he is a student of the mystery of sounds and has acquired a magic control over them. He has learned the Unspeakable Name of Jehovah and aspires to gain divine power by causing the utterance, in proper psychic conditions, of the first four letters of the opening syllable. These letters, spoken each by a suitably pitched voice, are to release corresponding sounds which Skale has imprisoned in his lonely house among the bleak Welsh hills, and the union of the four is to result in his deification. The four agents of the great experiment are to be Skale, Spinrobin, Skale's deaf old housekeeper, and her beautiful young niece. Naturally, Spinrobin falls in love with the niece, and this eventually results in the tragic failure of Skale's enterprise. In order to fill a book with such a story numerous pages of hysterical theorizing on occult subjects have been added, hopelessly cumbering the action. Interest is retarded also by attempts, for the most part awkward and amateurish, at character study.

A Big Horse to Ride. By E. B. Dewing. New York: The Macmillan Co.

This professes to be the autobiography of a professional dancer—the greatest dancer (need we say it?) of her age. She takes herself very seriously and expects her readers to do the same. To full five hundred pages she carries the story of her career, public and private. She is, we think, a trifle over-confident as to the compelling nature of her self-portraiture. To a large class of auditors the narrative will possess that adventitious charm which inheres in all confidences of royalty or stagedom. To hear, or to fancy that we hear, the real voice of one of these great ones, discoursing of that mysterious and disputed matter, her personal life, disarms one's judgment of the actual or intrinsic importance of that matter. Rose Carson is, by her own confession, an extremely beautiful as well as extremely famous woman. She is not commonplace, she is not vulgar. But she is rather a bore. We do not care enough for her to follow with enthusiasm the petty intricacies of her physical and moral experience. From beginning to end she is self-conscious, self-absorbed—too much to be in danger of serious lapses from the code of the world of which she fancies herself independent. Far from her the traditional joys of her kind—the late supper, the intrigue, the succession of casual amours. She must keep in condition, she must be true to her art. Against a pleasant kiss at a fit season, she has no prejudice—but nothing disturbing, thank you! At nineteen, she falls under the glamour of a summer holiday by the sea, and becomes engaged to a charming young man. She breaks off the engagement as soon as she meets his uncle, who seems to her so much bigger that it is folly for her to marry the nephew. Later on, she actually marries the uncle. He is a cool and complaisant person, and interferes not at all with her chosen work. After a while she falls in love with charming young man number two, in spite of the fact that, like charming young man number one, he is manifestly inferior to her husband. She leaves her husband, and frankly tells him why—a piece of news which seems to interest him, but enrages him not at all. The young man chances to be married to Rose Carson's dearest friend, but never mind. Rose Carson's dearest friend does not want him anyhow. She has just found her affinity in that fiery financier, Rose Carson's father. Here you have a pretty social pickle: Rose saves the day after a fashion, by deciding that though she loves the young man to distraction she does not want him for a husband: so she goes back to her long-suffering one, who welcomes her with satisfaction. It must not be thought that the lovely and distinguished Rose ever steps beyond a certain boundary of action. In fact, she is a conventional person. And the spectacle of a conventional person who is always dallying, though chiefly in her mind, with unconventionality, not to say impropriety, is a spectacle more familiar than exhilarating. The style of the narrative is a little pretentious, and—we do not think Rose Carson worth all this pother.

The Measure of a Man. A Tale of the Big Woods. By Norman Duncan. New York: Fleming H. Revell Co.

Mr. Duncan prefaces this tale with a complaint that "Doctor Luke of the Labrador" was generally taken to be a fancy portrait of Dr. Grenfell, and with the explanation that the hero of "The Measure of a Man" is not the Rev. Francis E. Higgins of Minnesota. Personally, we should never have suspected it. We do not know the Rev. Francis E. Higgins of Minnesota; but John Fairmeadow has about as much the air of a photographic reproduction as Colonel Starbottle or the Virginian. He is the product of a vigorous but sentimental pen. Mr. Duncan writes with a good deal of picturesqueness and vividness of a somewhat old-fashioned order. Dickens is his master, as he was Bret Harte's. His "Gingerbread Jenkins" and "Plain Tom Hitch," products though they are supposed to be of American frontier life, are of the Gadshill pedigree. And in general, Mr. Duncan's way of staging and conducting his action is as far as possible from that of the man who takes a bit of real life and projects it on the printed page.

Digitized by Google

John Fairmeadow is a reformed Yale athlete and drunkard who, at the very end of his tether, has strayed into Jerry McAuley's mission in New York, and been converted. Thereafter he sets out as a lay worker to find "the worst town this side of hell." When he gets to Swamp's End in the "big woods" of the Far West, he is assured by the denizens of that lively spot that he has "got there." He is elected pastor of Swamp's End, and at once becomes the most popular man in the region. This is due as much to his physical prowess as to his spiritual offices. He knocks out a few bad men, and so evidently enjoys the process as to win the respect of all beholders. He is welcome in all the camps and dives of a godless wilderness, and by degrees, here and there, picks up a soul, and leads it back to decency, at least. To his credit be it said, there are few sermons in his year's work. He gains his end by service. Rather incomprehensibly, it is understood that Fairmeadow and his parishioners are anxious that he should be regularly ordained. The circumstance is employed to the full in pointing a contrast between the breezy and unconventional worker among the lumberjacks and his prim and prosperous judges. Of course he wins them over by dint of slang and earnestness—the whole episode rather intrudes upon the action proper. For the rest, there is a lovely daughter of the backwoods (all Mr. Duncan's maidens are of exceeding loveliness) whom it is for Fairmeadow to befriend and finally to take to himself. The reader's enjoyment of this story will depend upon his liking for succulent but rather coarse fare.

PASTORAL SATIRE.

The Eclogues of Baptista Mantuanus. Edited with introduction and notes by Wilfred P. Mustard, Ph.D. Baltimore: The Johns Hopkins Press. $1.50.

The poet Mantuan has not been so popular of late as in the days of Holofernes. After holding for two hundred years a high place among the authors regarded as essential to a liberal education, he continued to furnish standard quotations for some time, and then passed quietly into oblivion. His career has been that of such edifying writers as Theodulus, Dionysius Cato, Avianus, Alexander de Villa Dei, whom schoolboys in times past knew and dreaded, but of whose existence schoolboys today, and some teachers, are totally unaware. Mantuan may never be introduced into the schools again, but to the curious reader who knows that Neo-Latin poetry is not infrequently worth while, he can afford many delights. Mantuan was a most versatile thinker and writer; though a monk, and finally the general, of the Order of the Carmelites, he cherished all the interests of the humanists of his day. We can somewhat discount the extravagant eulogies which his contemporaries showered upon the second Virgil, but enough was accomplished by this *philosophus insignis, poeta et orator celeberrimus*, to justify the impression that he made upon his times. Posterity knew him for his eclogues, which are written in excellent verse and which made an admirable moral manual, a kind of "Vergilius Christianus," for the schools. The poems may likewise challenge the reader's attention to-day, since, in one respect, they mark an epoch in the history of the pastoral.

For Mantuan was the first to make moral satire of the Juvenalian type the controlling element in pastoral. Virgil, so Dryden inferred from the vigorous ribaldry of his disputing shepherds, might have excelled in satire had he chosen; bits of this pastoral abuse appear also in Calpurnius; Petrarch and Boccaccio included in their elaborate allegories a touch of the mediæval satire on the church; but the whole coloring of Mantuan's pastoral is satire, just as Virgil had transfused his with epic. Juvenal's very subjects are appropriated for different eclogues; there is a tirade against women, a lament over the scant rewards paid poets, a eulogy of rustic simplicity. This last theme suggests the familiar pastoral debate between country and town, but the spirit of the performance is altogether that of Juvenal's third satire. Mantuan shows great cleverness here and elsewhere in putting a theme from satire or from contemporary life into a setting appropriately pastoral; like Virgil, he both innovates and faithfully preserves the tradition. Nor is his satire altogether Juvenalian in tone. He has his moments of vehemence, as when, in the course of his invective on poor woman, he showers her with a succession of over fifty unpleasant adjectives and almost as many verbs; but he has moments of tenderness and gentle humor, too. In contrast to his general excoriation of woman are his really beautiful lines on the Virgin Mary, who persuades the shepherd of the blessings of the monastic life; she appears in a vision somewhat as Pleasure and Virtue appeared to urge their rival claims upon Hercules, save that the Nymph, as she is called, has the charm of the more agreeable abstraction. Finally, Mantuan has the ability to laugh gently at his own concerns, the dissensions in the Carmelite order; this quality allies him with the urbane Horace rather than with Juvenal.

We welcome a new edition of Mantuan after many years, and are grateful to the learned editor for providing us with one so satisfactory. The text, based on that of the first printed edition (Mantua, 1498), is followed by notes which are devoted chiefly to Mantuan's sources. The introduction gives an account, in which every sentence is the result of painstaking research, of Mantuan's life and works, and deals in great detail with the use of his eclogues in schools and his influence on his contemporaries and on later literature, particularly that of England in the sixteenth and seventeenth centuries. There are sections also on Mantuan's sources, his syntax, his metre, and his highly diversified vocabulary. The book is attractively printed, and though it contains a great deal, is small in compass. It ought to tempt not a few to take up Mantuan again.

Little Cities of Italy. By André Maurel. Translated by Helen Gerard. With a preface by Guglielmo Ferrero. New York: G. P. Putnam's Sons. $2.50.

Florence, Past and Present. By the Rev. J. Wood Brown. New York: Chas. Scribner's Sons. $1.50 net.

M. Maurel is one of those sparkling, epigrammatic writers who dazzle you for a few pages. Then you begin to consider whether his glittering generalizations are true; and you soon surmise that they have little more substance than showers of sky-rockets. He writes entertainingly, so that you go on reading to the end; but at bottom he has neither special knowledge nor a rationalized view of Italian art, history, or literature. His purpose is to have impressions, and he has them. He seems also to make a special effort to have them bizarre.

The places he epigrammatizes about are Florence, San Gimignano, Monte Oliveto, Pisa, Lucca, Prato, Pistoja, Arezzo, Lecco, Bergamo, Brescia, Verona, Vicenza, Padua, Mantua, and Arquà—a sufficiently varied list. Readers who have been to these towns will be reminded of this or that characteristic by M. Maurel's enthusiastic descriptions; but those who have not travelled will get only a fantastic idea. How much more Byron put into a stanza of "Childe Harold" than this Gallic rhapsodist can put into many pages! His book, indeed, would hardly command attention here, if it were not introduced by Guglielmo Ferrero's preface. This, when analyzed, proves to be the amiable letter which an acquaintance of great renown might write to a rising author. Signor Ferrero says all that he can that is pleasant, but adds, significantly: "As a historian, I should be tempted to seek a quarrel with you on several points."

And no wonder! M. Maurel's grasp on history is so slight that, to give only a single instance, he regards the union of Italy under a central government as a great mistake. He longs for the return to a multitude of petty states bound loosely together in a federation.

Digitized by Google

Ferrari is the political philosopher he swears by. Now, Ferrari, it need hardly be said, was the last of the Federatists, whose cause was obsolete—though he was too dull to perceive it—long before he died. It would be no more unkind to disinter the plea of some forgotten politician, who in 1785 declared that the American Colonies ought never to be united, than for M. Maurel to disturb the well-earned oblivion of Ferrari. His generalizations about Guelfs and Gibellines (as these are called throughout the book) are equally erratic.

Mr. Brown's work is of a wholly different sort. It represents endless patient research, much meditation, and unusual ingenuity in suggesting hypotheses. Starting with Florentine life and folk customs to-day, he works back to their origin. To fix this, he goes to the very beginning, beyond prehistoric times to the geologic age when the Valley of the Arno was partly sea and partly lakes. So he traces where primitive men must have had their hunting grounds, then their rude settlements, and their trails from point to point. Gradually, Tuscany, as we know it, emerged; and, with the normal human development from brutes to savages and upward, occupations, besides hunting, appear. The river becomes the highway for primitive traffic, the spot we call Florence becomes a village and then a mart. And so, into historic times, to the days of Etruscans and of Romans, Mr. Brown traces the interaction between man and his environment on the Arno.

We find the story of great interest, and when Mr. Brown takes up ancient or prehistoric survivals in the Florence of to-day we can but admire the keenness of his scent for links of evidence. His chapter on charms and amulets assembles a mass of facts, well coördinated, of which every sojourner in Italy has had partial glimpses. So his study of "Ceppo"—the Yule-log—and of "Befana"—the Twelfth Night doll—transports us to earliest Latin customs and shows their resemblance to similar customs in Greece and Asia Minor. His analysis of a Tuscan harness, with its bells and tassels, its bits of mirror and horn, takes us far back to pagan superstitions, because each of these decorations was originally a charm against the evil eye and other dreaded enemies. In like fashion, Mr. Brown shows how mid-Lent and Easter observance, the mid-summer grasshopper, and the September fêtes have their roots in remote Italic days. In general, paganism still survives in rites and customs over which the Church has spread a thin veneer. It early learned that it was easier and more discreet to give these ancient racial superstitions an apparent Christian pertinence than to attempt to eradicate them.

Folk-lorists may dispute Mr. Brown's interpretations in this or that detail, but in the main they will agree, we believe, that he is sound. Such a matter as the *nth* language, for example, seems to us still too vague to justify basing many conclusions upon it. The fact that the Greek island Zacynthus, the Tuscan village Borgunto, and the Spanish city Saguntum have a consonantal sound in common does not warrant us in feeling sure, even with such other shreds of plausibility as have been collected, in concluding that they sprang from one people. The archæologist of A. D. 3000 who argues that Paris, Maine, must have been founded by colonists from Paris, France, may be able to convince the learned of that time, but will he be right? Mr. Brown, it must be said, does not press this *nth* theory to an extreme, but distinguishes throughout between what is fairly well proved and what is conjectured. His book should appeal to many readers besides specialists. Like M. Maurel's, it abounds in excellent illustrations.

The Cruise of the Snark. By Jack London. New York: The Macmillan Co. $2 net.

This is Mr. London's account of that much-advertised journey in a sailing-yacht across the Pacific, which was to have been a journey round the world. The different chapters in it are, if we understand the matter, reprinted articles written during the voyage. The letter-press is upon a glazed paper, to accommodate the numerous if not striking photographs. The author protests, to begin with, that the voyage was undertaken for fun and not for profit; that his expenses were not paid by any magazine, and that the newspaper reports of his adventures are altogether without foundation. The "Snark," upon which he spent thirty thousand dollars, was a forty-three-foot ketch-rigged craft, with leaky compartments, a seventy-horsepower auxiliary engine that never worked, a launch engine ditto, and a total unwillingness to heave to in a blow. But she was a good sailer, on the whole, and the troubles of the adventure were chiefly incident to the attempt of white men from the North to cope with a Southern climate and Southern diseases. No one on board knew anything of navigation when the "Snark" left San Francisco for Hawaii. They had no difficulty in getting it up on board, and made their port without mishap. The experience of the party in the Sandwich Islands seems to have been the one agreeable phase of their journey. Thereafter they one by one fell a prey to fever and to various unseemly native diseases. In the Solomons, all on board were more or less disabled by one or more complaints indigenous to that cheerful group. We do not learn why the "Snark" did not turn its back with all possible expedition and make for some healthier shore. It did not: the party remained in the region of the Solomons month after month, till, a victim of "yaws" (a malignant ulcer, peculiar to the South Seas), of a horrible swelling of the extremities due to the effects of tropical light on a Northerner, and, last, but not least, of a form of leprosy, Mr. London was constrained to shape his course for an Australian hospital. There he remained for a long time—until it became clear that he must get back to his natural climate. Nevertheless, he insists that the voyage was enjoyable, and calls to witness "the woman who made it from beginning to end." "In hospital, when I broke the news to Charmian that I must go back to California, the tears welled into her eyes. For two days, she was wrecked and broken by the knowledge that the happy, happy voyage was abandoned." It is a pity that the joyfulness of the voyage is not communicated to the reader; from such evidence as the narrative affords, we should say that Mrs. London is easily pleased.

Notes

The Massachusetts Historical Society will publish the first volume of the "Diary of Cotton Mather, 1681-1708," together with many hitherto unpublished letters by Mather. It forms an octavo volume of 604 pages, with heliotype reproductions of Peter Pelham's mezzotint of his portrait of Cotton Mather, and a page of manuscript diary. The second volume, completing the work, will be published in the coming winter.

John Murphy Company of Baltimore announces a "Life of Cardinal Gibbons," by Allen S. Will.

"In the Shadow of Islam," a story by Demetra Vaka which Houghton Mifflin Company announces, has for hero the leader in the Young Turk movement; the heroine is an American college girl.

George Gibbs has completed a new novel, entitled "The Forbidden Way," which the Appletons will issue.

Little, Brown & Co.'s autumn fiction will include "Havoc," a story of international intrigue, by E. Phillips Oppenheim; "When Woman Proposes," by Anne Warner; "The Road," a tale of railway building in the Balkans, by Frank Savile; "The Lotus Lantern," the romance of a Geisha girl, by Mary Imlay Taylor and Martin Sabine; "At Good Old Siwash," college tales, by George Fitch, and "Across the Latitudes," stories of the sea, by John Fleming Wilson.

This house also announces: "Some Aspects of Thackeray," by Lewis Melville; the first five volumes in a new series of masterpieces of literature, called the Burlington Library—"Cranford," with 24 illustrations in color, by Evelyn Paul, "The Vicar of Wakefield," with 24 illustrations in color, by Margaret Jameson, "The Essays of Elia," with 24 illustrations in color, by

Digitized by Google

Sybil Tawse, "A Tale of Two Cities," with 24 illustrations in color, by Sep. E. Scott, and "Of the Imitation of Christ," with 24 colored reproductions from the old masters —"The Brownings: Their Life and Art," by Lilian Whiting, and "Goethe and His Woman Friends," by Mary Caroline Crawford.

Among the announcements by Cassell & Co. of forthcoming books, we note: Handsome editions of Stevenson's "Treasure Island" and "Master of Ballantrae"; "Warships and Their Story," by R. A. Fletcher; "Joan of the Tower," a novel, by Warwick Deeping, and "How Men Fly," by Miss Gertrude Bacon.

Frederick Townsend Martin's satirical account of New York society, "The Passing of the Idle Rich," is to be issued in book form by Doubleday, Page & Co.

Perceval Gibbon is publishing, through the Century Company, "Flower o' the Peach," a story dealing with the race question in South Africa. The same firm has in hand "The Blind Who See," a novel by Marie Louise Van Saanen (Goetchius).

The *English Review* for August contains "Androgynism; or, Woman Playing at Man," from the unpublished manuscript of Charles Reade.

Another abridgment of "Malory's King Arthur and His Knights" has been made by Henry Burrowes Lathrop, and published in an illustrated volume by the Baker & Taylor Co. Mr. Lathrop's aim has been, by omission of irrelevant episodes, to present the main story in consecutive form. The language is largely modernized, and an occasional obsolete word, retained for the sake of quaintness, is followed by its modern equivalent in brackets.

The Home University Library is the name chosen by Henry Holt & Co. for an elaborate series of volumes on every department of human knowledge. Some twenty volumes have already appeared, and eighty more are in preparation or planned. The books are to be sold at seventy-five cents apiece, and come bound in neat brown cloth. The type is large and clear and the page is very attractive. The series is to consist entirely of new books written specially for the Home University Library. In their first score of volumes the editors, comprising Profs. Gilbert Murray and Herbert Fisher of Oxford, J. Arthur Thomson of Aberdeen, and William T. Brewster of Columbia University, have cast their nets wide. We get a volume on Evolution by Professors Thomson and Geddes, one on Shakespeare by John Masefield, on the Opening up of Africa by Sir H. H. Johnston, on Mediæval Europe by H. W. C. Davis, on the Socialist Movement by J. Ramsay Macdonald, on the French Revolution by Hilaire Belloc, on Mathematics by A. N. Whitehead. The list of authoritative names does not stand exhausted.

An examination of the four volumes dealing with Socialism Shakespeare, the French Revolution, and Evolution, makes it very evident that the editors of the Home University Library intend to ride with a loose rein. Having chosen their specialist, he is given leave to say pretty nearly what he pleases. And probably for an undertaking of so popular a character the scheme is the most feasible one. It gives the personal touch to the text which a series of rigidly edited monographs would lack. Thus the volume on Evolution might have been written, here and there, in less technical terms, but it is written with a verve and fancy that carry the reader on. Mr. Macdonald's book on Socialism expounds Mr. Macdonald's kind of Socialism. The Germans would laugh at the curt way in which the leader of the English Labor party dismisses Karl Marx and his fundamental theories. But if an elementary textbook arouses controversy it has already done much to accomplish its purpose. In Mr. Masefield's volume the personal element gets out of hand. What we have is a topical summary of the Shakespeare plays one by one, followed by a few pages of lyrical but somewhat random appreciation. These examples will illustrate the merits and defects of an undertaking that seems exceedingly worth while.

As a rest cure, Frederick Martyn, the author of "A Holiday in Gaol" (Macmillan), recommends a term at hard labor in an English prison. By what on his own showing was chiefly bad luck and perversion of justice, he was sent to Wormwood Scrubs prison, near London, for borrowing money under false pretences. There he made the best of it, and set himself to reading and wide observation of prison life. The prisoners he found easy and rather agreeable comrades, old offenders being notably companionable. The warders were by no means bad fellows. Possibly the most interesting part of the book is its exposure of the shifts by which prison discipline may be lightened or avoided. It does not heighten one's respect for British justice to learn that a prisoner unrepresented by counsel may be condemned on a charge which he hears for the first time in the courtroom itself. Mr. Martyn tells a plain tale spiritedly and with humor, and will be read with interest by all whose curiosity tends prisonwards.

There has been, within the last twenty years, something of an Immermann revival in German literature. Heine, who was capricious in his friendships, both personal and literary, remained true to Immermann, and his exaggerated estimate of that writer's powers has had a share in influencing literary criticism in favor of the many-sided, if not brilliant, author of the "Epigonen." Of all his work, this novel, an imitation of "Wilhelm Meister," full of interesting literary reminiscences, is alone likely to retain its hold on German readers. Dr. Allen Wilson Porterfield has undertaken to trace Immermann's connection with the romantic movement, for the benefit of English students ("Karl Liebrecht Immermann: A Study in German Romanticism"; The Columbia University Press); and if Immermann cannot be said to live again in these pages, the author has at least produced a scholarly and meritorious monograph. Unfortunately, as in the case of so many dissertations of youthful Ph.D.'s, there is buried within this a prodigious amount of largely superfluous erudition. Not even the professional philologist can care for an alphabetized list of archaic words and romantic terms culled from Immermann. Nor is the main thesis clearly worked out. On Dr. Porterfield's own showing, it is impossible to "determine" (as he set out to do) Immermann's exact relation to romanticism, for the more closely he is examined the more of a realist he appears. The "Epigonen" shows us "how real people live and love." The peasant-story "Oberhof" is called "realistic, without a thread of the supernatural." The theme of "Andreas Hofer," Immermann's most popular drama, is "dignified realism," and in the satiric part of "Münchhausen," we find "those unrealities and misconceived realities that encumbered German life and literature from 1830 to 1840 parodically (*sic*) paraphrased." In fact, Immermann "hated Schwärmerei." Of course, like every true German, he had a streak of romanticism in his composition, but after all of Dr. Porterfield's stalwart attempts to define its exact proportions, he and his readers are glad to take refuge in the final summing up: "As an adopted citizen of the romantic republic, he was at times a loyalist, at times a malcontent, and at times a rebel." It is to be hoped that in the subsequent pursuit of literary subjects the author will discard certain eccentricities of style, such as "applausable drama" and "abnegative life." Careful proofreading would have avoided blemishes like "Freidrich II." "Theatre Francais," "Knabenwunderhorn" (one word), "Klagefurt," "Romantichnik," etc., and would also have eliminated from the circle of "literary figures" of Immermann's time the names of Dannecker, Metternich, Rauch, and Schinkel.

A useful book of reference is the "Dictionary of Ecclesiastical Terms" (Lippincott), compiled by John S. Bumpus, honorary librarian of S. Michael's College, Tenbury. The sub-title explains the work as "a history and explanation of certain terms used in architecture, ecclesiology, liturgiology, music, ritual, cathedral constitution, etc."

"The Dominion of Canada" (Little, Brown), by W. L. Griffith, is the most comprehensive one-volume book that has yet been written on that country. It begins with the discovery of Newfoundland in 1497 and comes down to the debates on reciprocity in the House of Commons in the session of Parliament that came abruptly to an end on the 29th of July. There are thirty-eight chapters concerned with as many episodes of Canadian history or aspects of contemporary life. If, however, the chapter on The Prairie Provinces, and that on Labor Organisation, Labor Representation, and Labor Legislation are excepted, there is scarcely one in which Mr. Griffith adds anything that is new. The chapters on The Constitution, on Parliament, and The Cabinet are scrappy and inadequate and characterised by looseness of statement. Much the same inexactness marks that part of the chapter on The Manufactures of Canada which is concerned with the iron and steel industry. Mr. Griffith's history of the preferential tariff for Great Britain, brief as it is, is incorrect and misleading. It contains no mention of the curtailment of the preference in 1904, nor of the many curtailments at the revision of the tariff in 1907. The book is marked by extremely slovenly proofreading; and in a word, while Mr. Griffith has attempted an ambitious book, he has not succeeded in producing one which will displace a single book on nineteenth-century Canada that was in existence when he began his task.

"Der aufsteigende Halbmond," with the

Digitized by Google

sub-title "Beiträge zur türkischen Renaissance," and seventy illustrations and two charts (Berlin: Buchverlag der Hilfe), by Ernst Jäckh, supports the thesis that Germany and Turkey should coöperate in the development of the East. The author witnessed the Turkish revolution in July, 1908, in Smyrna and in Constantinople, and because of a long residence in Turkey has had opportunity to obtain rare information on such subjects as the Anatolian railway, the ideals of the Young Turks, and their relation to modern Occidental ideals. Mr. Jäckh's enthusiasm makes him ignore the ultra-conservative spirit of Islam, and the reactionary forces yet found in the Beduins, the Kurds, and kindred spirits.

Under the title of "Disturbing Elements in the Study and Teaching of Political Economy" (Baltimore: Johns Hopkins Press), Dr. James Bonar publishes the substance of five lectures delivered last year before the economic seminary at Johns Hopkins University. Dr. Bonar points out that the lectures concern themselves, not with economic error in general, but with "the more subtle fallacies which are apt to invade the reasoning of trained economists in spite of learning and discipline." Naturally, the criticism is mainly destructive, but there is much keen observation, particularly in the first lecture, where a dissection of the familiar "liberty, equality, fraternity" is made to illustrate the dangers of a popular political philosophy; and in the third, where the mistaken popular aversion to either economic or political theory is skilfully handled.

The oldest and largest university in the world is El-Azhar at Cairo, we learn from an article in the *East and West* for July, by the Rev. W. H. T. Gairdner, joint editor of the *Orient and Occident*, a weekly magazine published in that city in Arabic and English. Founded in 975, it has been from the start a national institution, the Khedive being the rector. The minimum age of entrance is fifteen, and the applicant must know half the Koran by heart, if blind the whole Koran, and be able to read and write. The curriculum consists of virtually nothing but theology and canon law, the final examinations fifteen years after matriculation being upon these, together with traditions of the Prophet, grammar, etymology, rhetoric, and logic. It is the same instruction which has prevailed for centuries, and one who goes into the great court where the circles of students are sitting at the feet of their Gamaliels, looks upon a scene preserved from the middle ages, "a perfect specimen, living, breathing, and entire." The commonly accepted "Azhar myth," that on account of its large number of foreign students the institution is "the greatest missionary college in the world," is shown not to be founded on facts. Out of the more than 16,000 students in this and the affiliated colleges, 95 per cent. are Egyptians, and become small shopkeepers or "sheikhs of the village mosque, conducting the village school, and constituting the village bureau for legal information concerning person or property, and for pious gossip about the little theological riders that have interested thirteen centuries of professional or amateur Moslem theologians." The comparatively few foreign students, 661 in 1906, come from lands where Islam has exclusive possession.

Mrs. Elizabeth Akers Allen, a writer of songs and poems, died last week at her home in Tuckahoe, N. Y., in her seventy-ninth year.

Philippe Monnier, a versatile writer who died recently, was born in Geneva in 1864. Poet, novelist, and author of an autobiographical volume, entitled "Le Livre de Pascal," he distinguished himself chiefly by essays on Italian subjects. "Le Quattrocento" and "Venise au dix-huitième siècle" were crowned by the Academy.

Heinrich von Poschinger, the noted political writer and the author of many works on the life of Bismarck, died in Berlin just a week ago. He was born in Munich in 1845.

The death is reported of Francis Paget, since 1901 bishop of Oxford. He was the author of several books, among them "The Redemption of Work," "The Spirit of Discipline," and "Studies in the Christian Character."

Science

The Diamond. By W. R. Cattelle. New York: John Lane Co. $2 net.

The present work aims to give a comprehensive view of the mining and marketing of diamonds, besides a study of the historic specimens, and the place occupied by the gem in literature and legend. The description of diamond-mining in India, Brazil, and Africa is full and satisfactory, and considerable information is imparted in regard to the less important occurrences of the stone in many other parts of the world. As a popular exposition this portion of the book is worthy of commendation.

Of the diamond trade the author has much that is interesting to say, and offers many shrewd observations and some practical hints touching the matter of selection. The growth and development of the diamond trade and the astonishing proportions it has attained since the discovery of the African mines are treated at considerable length, and, in the main, with accuracy and judgment.

The chapters devoted to celebrated and historic diamonds are less satisfactory than the rest of the book. This is in part due to the fact that too much is attempted within a restricted space. The result of this method, or lack of method, is shown in the case of the Orloff diamond (pp. 67-69). The existence of two or more versions of the history of this stone has led to the assumption that *two* diamonds of exceptionally large size and approximately the same value were bought by Count Orloff or by the Russian Government in 1776 and 1791. It is true that Streeter also interprets the tradition in a similar way; but it is a pure assumption. Of the Sancy diamond we are told (p. 78) that there are but two things upon which writers agree, viz., that the first known owner was Charles the Bold, Duke of Burgundy, and that later it came into the possession of Nicholas de Barly (*sic*), Baron de Sancy, after whom it was named. Only the second part of this statement is exact. Nicholas Harley de Sancy certainly owned the diamond, but there is absolutely no evidence to prove that it ever belonged to Duke Charles. There is, however, little doubt that at the time when James I of England bought the Sancy he already had in his possession the diamond of Charles the Bold, which had been acquired in 1547 by Henry VIII, and was duly entered in the inventory of the crown jewels made shortly after the accession of James I to the English throne. William Waldorf Astor paid £14,000 for the Sancy. This diamond appears in the French inventory of 1791, but not under the name Sancy; it formed part of the Order of the Golden Fleece. The 33¾-carat diamond, called the Sancy in the inventory, and sometimes known as "the little Sancy," was also at one time in the possession of Harley de Sancy. The description of the Tiffany yellow diamond (pp. 93-94) does not give the weight, 125⅜ carats. As regards weight, it should be noticed that the carat of 205.5 milligrammes is equivalent to 3.171 grains, instead of 3.174 grains, as stated by Mr. Cattelle on p. 333. Four grains avoirdupois exactly equal four grains troy, hence the carat of 205.5 milligrammes cannot be equal to "four grains avoirdupois." Probably the origin of Mr. Cattelle's error, which has been made before, is to be found in the fact that four of the old French grains of the *poids de marc* equalled 3.278 grains troy, only a trifle more than the 205.5 milligramme carat. The English carat is .2053 grammes, equal to 3.168168+ grains avoirdupois. The new international carat, now authorized in many European countries, is only 200 milligrammes.

In conclusion, we may remark that some items and a few names noted in the text have been omitted in the index.

The early history of British Guiana is the subject of an article in the *Geographical Journal* for July by J. A. J. de Villiers, in which he shows the remarkable activity of the Dutch explorers and traders in the eighteenth century. A striking personality was Storm van 'sGravesande, governor for thirty-four years, whose dispatches, containing quotations from Horace and Virgil, Shakespeare and Molière, "would fill twenty-one volumes of three hundred octavo pages each." A selection from them has been published by the Hakluyt Society. In an account of the flowing wells of Central Australia, which are used, not for irrigation, but for supplying water and food for travelling stock, Prof. J. W. Gregory advocates strongly and convincingly the theory that their origin is not from rainfall, but from a "plutonic or deep-seated source; and that the ascent of the water is not due to the simple principle that

Digitized by Google

water will find its own level, but arises from more complex causes, including rock-pressure and gas-pressure produced by the heat of the plutonic water." Hence it is in danger of being exhausted if continuous outflow is permitted. In Major L. Darwin's presidential address at the anniversary meeting of the Royal Geographical Society the statement is made that the geographical work of the future will not be pioneer explorations, but the detailed examination of small areas, and that the aim will be to do systematic, scientific, and thorough work for the advantage of mankind. At the annual dinner, the new president, Lord Curzon, referred to Peary as having planted the flag of the United States upon the North Pole and annexed to that country—"I will not say a new continent, because it is reported to be of a somewhat unstable and precarious description, but a heritage of everlasting fame." The cosmopolitan character of the society is shown by the fact that its principal medals this year were given to a Russian, Col. Kozloff, for his Central Asian researches, and a Frenchman, Dr. Charcot, for his Antarctic explorations.

Chemists have commonly appeared before the public in an unfavorable light, owing to the fact that manufacturers have often suborned their services. But the volume edited by Charles Baskerville, entitled "Municipal Chemistry," a series of thirty lectures by experts on the application of the principles of chemistry to the city, delivered at the College of the City of New York (New York: McGraw-Hill Book Co.), shows in how many ways chemists may come to the aid and defence of the community instead of inventing ingenious means of cheating. The volume will be of value to any one interested in municipal economy, for it presents in popular style modern scientific views of the various phases of public sanitation. The pictures are numerous and appropriate, though poorly printed. The examples are mostly taken from experience had in New York, but the principles and information given may be applied to any city or town. There are chapters on the water supply; milk and dairy inspection, by ex-Commissioner Darlington; food adulteration, by Dr. H. W. Wiley of the United States Department of Agriculture; the adulteration of drugs and the insidious employment of habit-forming agents; the questions of street cleaning and sewage disposal; gas, smoke, and ventilation; textiles, explosives, paint, and concrete; and parks and playgrounds, a topic not ordinarily embraced in the science of chemistry.

In the second edition of his work, "The Art of Revolver Shooting" (Putnam), first published in 1901, Walter Winans has brought the subject up to date, has made the book something more than mere instructions for beginners, and has added a chapter on automatic and duelling pistols. He is undoubtedly right when he says that those who take up pistol and revolver shooting will never regret it, and that it teaches self-reliance, coolness, and the control of one's temper; but when he condemns such sports as cricket, tennis, and golf as useless, and calls for the substitution of shooting, hunting, swimming, and polo, he lets his predilection run away with his judgment. After telling of his experiences in his early youth as a shot, and saying that he became a pistol shot because he was forbidden by his parents to handle firearms, he deals in an interesting way with the evolution of the revolver from the old flint-lock pistol. His advice regarding the selection of a pistol is good, and his instructions on practice are clear. Several chapters are devoted to the competitions at Bisley and there are some good illustrative targets. The chapter on shooting in self-defence is frankly brutal.

Ernest Jules Pierre Mercadier, director since 1881 of studies at the École polytechnique, is dead at Paris, aged seventy-five. He was the inventor of the multiple telegraph, and was the director of telegraphs during the siege of Paris. He wrote numerous treatises on his subject.

Drama

Three Plays by Brieux. With preface by Bernard Shaw. New York: Brentano's. $1.50 net.

The professed foe of all conventionalism, conventional as he is himself in many of his ideas and literary methods, it is only natural that Bernard Shaw should be an enthusiastic admirer of the French dramatist Brieux, one of the most uncompromising of modern realists. With his accustomed recklessness, he does not hesitate, in his introductory preface, to compare the latter with Shakespeare and Molière, with neither of whom he has much in common, except a certain intrepidity of utterance. This quality Mr. Shaw, witness his so-called unpleasant plays, shares with Brieux, as well as certain social theories, but in other respects there is vast difference between the two writers. Far less brilliant in witty paradox or humorous sophistry than Mr. Shaw, Brieux impresses the thoughtful reader with his substantial knowledge of the subject which he is treating, his profound appreciation of the enormity of the abuses which he assails, and the sincerity of the indignation which prompts his attack. He does not expose himself to the suspicion of seeking notoriety for the sake of profit by the means of cheap sensationalism, although, in his zeal to demonstrate his case, he is often guilty of some of the most flagrant tricks of the sensationalist, such as violent exaggeration, illogical deduction of general results from specific instances, the excessive use of coincidence, and the employment of unnecessary grossness, both of speech and incident. Not all the realities of life are admissible in literature or art.

Of the three plays in this volume, "Maternity," "The Three Daughters of M. Dupont," and "Damaged Goods" ("Les Avariés"), all dealing with the conjugal and other relations of the sexes, the second, already produced in New York in slightly modified form, is not only the truest as an actual study of daily life, but the only one that is practical for theatrical purposes. However untrustworthy it may be as a pretended reflection of general domestic conditions in France, there can be no doubt that it is a credible picture of possible evils arising from a matrimonial system offering peculiar opportunities and temptations to avaricious and unprincipled persons. It is a skilful exhibition of character through the medium of dramatic action, and is a real and interesting, if sordid, comedy. All the personages are thoroughly alive, from the shameless parents who strive to cheat each other in the matter of marriage settlements, to the wretched daughter, who, deprived by her libertine husband of the right of that motherhood to which she has looked forward as her sole compensation, is driven into the arms of an illegitimate lover. It need not be disputed that the play is a sincere and powerful assault upon evils of a more or less common and most demoralizing kind, but the premises from which it proceeds are by no means universal, and the implication that (French) marriage is but a legalized form of prostitution is, of course, wholly unjustifiable. But no one who is at all familiar with the subject will deny that Brieux's fiction is founded on fact. His subject matter, indeed, has been the common property of novelists and dramatists for many years, but he is one of the first to try to set some of its most repulsive features in the glare of the footlights.

It is this attempt on his part that constitutes his most transcendent virtue in the eyes of Mr. Shaw, who seems to regard all reverence for the ordinary proprieties of life in stage representation as a proof of arrant stupidity. He holds that sexual matters of such vast import to humanity at large as are treated of with power, knowledge, and ability in Brieux's "Maternité" and "Les Avariés" should be proclaimed from the housetops. Unquestionably they ought to have all the publicity possible among adults capable of giving them intelligent consideration, and it is long since there has been any conspiracy of silence concerning them. The dissemination of knowledge concerning them in every variety of printed and spoken instruction and advice has been going on for generations. There are few topics in which mankind in the mass are better informed. But the theatre would be no place for discussions of this kind, even if M. Brieux had anything new to tell, which he has not. In writing for the theatre he, like Mr. Shaw, appears to overlook the fact that the effect of a play often depends not so much upon its own character as upon that of the audience. A play may easily be productive of indecent suggestion without being itself purposely indecent either in motive or incident. "Ma-

Digitized by Google

ternité" has some good qualities, emotional and dramatic, together with a considerable admixture of clap-trap. It points out, with some fine passages of fiery scorn, the indignities, the abuses, and the cruelties to which many suffering and powerless women are subjected by male tyrants with the tacit approval of existing laws and customs. On the printed page it is a moving, able, and arresting protest, although much of it is in the nature of special pleading. In the theatre it would simply be an appeal, possibly an exceedingly profitable appeal, to the lovers of morbid sensation. As for "Les Avariés," that, as has been said in Paris, is too much in the nature of a medical treatise to be of any value in the theatre. Moreover, the truth and significance of the lesson which it undoubtedly inculcates are nullified by the crude sensationalism of the details. Of the English versions of the plays that of "The Three Daughters of M. Dupont," by St. John Hankin, is the best.

In addition to playing in Rostand's "Lady of Dreams," on October 23, Mme. Simon will be seen in "The Thief" and "The Whirlwind," both written for her by Henri Bernstein; she will use the English language. The Irish Players will make their first appearance in September at the new Plymouth Theatre in Boston, and will come to New York later in the season.

Louis N. Parker has about completed a new play for Viola Allen, in which Lady Godiva is the central figure.

Margaret Anglin will begin her New York season in "Green Stockings," and in midwinter will be seen in Israel Zangwill's "The Next Religion," while she will also make matinée productions of classical plays at the Century Theatre.

Among the attractions for the season announced by Lee Shubert is George Bernard Shaw's new play, "Fanny's First Play." "Bunty Pulls the Strings" will be played by a Scotch company from The Playhouse, London. The production of "Œdipus Rex" by Martin Harvey at Covent Garden, in London, will be brought over in its entirety to the Manhattan Opera House after its London run. Among the French plays procured are "Aime des Femmes," by MM. Hennequin and Mitchell, which has had a great success in Paris, and "Sherlock Holmes and Arsene Lupin," which has made a sensation at the Châtelet Theatre.

George Broadhurst's drama, "The Price," in which Helen Ware will be the star, will open at the Hollis Street Theatre, Boston on September 4, and will come to New York in October.

James K. Hackett will begin his season at Rochester on September 7, in Louis Edward Shipman's dramatization of David Graham Phillips's "The Grain of Dust," the author's last novel.

Gustav Amberg will assume the management of the Irving Place Theatre on October 1, and the operetta, "Die Schöne Helena," by Jacques Offenbach, will be sung in German on the opening night, as it was originally produced at the Artists' Theatre in Munich.

Music

It is reported that Paderewski has been engaged for the season 1912-1913 to give eighty recitals in the United States.

Carillon music is receiving much attention just now in England.

According to the eminent English conductor, Landon Ronald, each year seems to see a decrease in the number of concert-goers in London. He is, however, optimistic enough to believe that this is due solely to the pernicious habit of giving away free tickets. He is convinced that if no such tickets were given away at all, "before two years passed by, the ranks of paying concert-goers would be swelled to such a size that gradually we should boast of having a musical public of large dimensions who pay to go to concerts."

One-half of the Opéra Comique Company of Paris has gone to South America, where performances will be given till the autumn. Rehearsals were held on shipboard.

When Grieg returned to Norway, after studying at the Leipzig Conservatory, there was some danger of his continuing to compose (like the Danish Gade) in the German style. From this he was rescued by his young friend, Richard Nordraak, who was a great enthusiast for Norwegian folk-music, and who increased in Grieg the interest in national Norse music which Ole Bull had already aroused to some extent in his youth. For this service to national art, in all probability, rather than because of any merits of his own compositions (he died very young), a monument is to be erected to Nordraak in Christiania. While acknowledging his influence on Grieg, one must nevertheless bear in mind that Grieg's music is intensely individual and original. Among his many delightful songs not one has a borrowed melody, and of his piano pieces only those are folk-tunes which are distinctly marked as such, and printed in separate collections. The dozens of piano pieces ("Lyrische Stücke" and others) are as original as the songs.

Strauss came next to Wagner as an operatic favorite in Vienna last season, but it happened to be Johann Strauss, not Richard! The Viennese think so highly of the waltz king's operettas that they produce them at their Imperial Opera with the same care as grand operas, and with grand opera singers. The result is that "The Gypsy Baron" was thus given last season nineteen times, "Cinderella" eight times, and the "Fledermaus" five times, making altogether thirty-two. Wagner's operas were sung sixty-four times. Richard Strauss's operas were heard twenty-six times—the "Rosenkavalier" eighteen times, "Elektra" eight times. Altogether, sixty different operas by fifty-four composers had 294 performances, and besides these there were fifteen different ballets, which were represented ninety-one times at the same house.

Emma Eames and her husband, Emilio Gogorza, will begin their concerts in this country next January. Among the operatic artists who will be heard here in concerts the coming season are Schumann-Heink, Alma Gluck, Maggie Teyte, John McCormack, Mario Sammarco.

Weingartner was not particularly anxious to come to America next season just for a fortnight's operatic performances in Boston and two concerts, so he asked what seemed to him a prohibitive price. But Henry Russell promptly accepted his terms, and so the great conductor will cross the Atlantic next February and conduct "Tristan and Isolde" in Boston twice, with Nordica, Schumann-Heink, and "Urlus," and also "Faust" and "Tosca," with Miss Marcel as the prima donna. The programmes of his two concerts will include some of his own compositions. Before coming to this country, Weingartner and Miss Marcel will make several concert tours in Europe, including one in northern Russia (St. Petersburg and Moscow), and one in southern Russia and Poland (Odessa and Warsaw). The Vienna Philharmonic concerts are still under Weingartner's direction.

In honor of Gustav Mahler two performances of his eighth symphony, which requires 1,000 players and singers, will be given next season in Vienna, where also a fund for some musical purpose is to be named after him.

Lillian Nordica's concert tour will begin two weeks sooner than announced, in order to make it possible to visit California, too. Canada will be included; also Illinois, Wisconsin, and Minnesota. Thirty recitals will be given.

Art

FAR EASTERN PAINTING.*

I.—China.

The Western artist paints usually with viscous colors on a non-absorbent material, which permits retouches and corrections. The Far Eastern artist paints preferably in fluid colors upon highly absorbent materials—paper or silk—where correction or retouch means ruin. Evidently, the Far Eastern painter is bound to a scrupulously thoughtful and precise technique. This contrast of material conditions corresponds to profound discrepancies of racial temperament and æsthetic aim. European art appeals largely to memories of things. Chinese art appeals chiefly to memories of feelings; European art treasures as a chief maxim *ars est celare artem*. Chinese art utterly repudiates a requirement that would deprive it of conscious joy in fine and economical workmanship; European art is judged mostly

Three Essays on Oriental Painting. By Seiichi Taki. London: Bernard Quaritch. 18 shillings; post 8vo; 57 collotype facsimiles.

These three essays, by the talented editor of *Kokka*, treat Japanese painting, Chinese painting, and the India Ink School, from the point of view of pure criticism. Released from chronological and biographical considerations, the author is free to treat typical masterpieces of the Far East merely as so much art, and his observations carry weight because he is conscious both of the merits of Occidental realistic painting and the limitations of the more imaginative art of China and Japan.

La Peinture Chinoise au Musée Guimet. Par Tchang Yi-tchou et J. Hackin. Paris: Librairie Paul Guenther. (Annales du Musée Guimet. Bibliothèque d'art. Tom 4.) Sixteen plates representing the main types of Chinese painting to recent times, with valuable historical and critical notes.

Digitized by Google

by correspondence with fact and conceals its means, Far Eastern art is judged merely by its correspondence with fine emotions and avows its means. Or, pursuing the antithesis, Occidental art will tend to be realistic, or, under favorable conditions of selection and arrangement, classic; but there will always be an implied reference to a common experience that must not be offended; whereas Oriental art will tend to be exclusively romantic, setting no bounds to the emotions and permitting any exaggeration or distortion of common experience that the refined imagination may suggest.

This contrast of classic and romantic at which we are arrived very well illustrates both the usefulness and the danger of these general terms. For we must immediately attenuate the contrast by remarking that the romanticism of the Far Eastern painter is highly disciplined and limited by restrictions, sometimes hieratic, sometimes traditional in his craft. For example, a Chinese painter of the best period (roughly speaking, coincident with the Sung dynasties, from the tenth to the thirteenth centuries) is perfectly free to make a mountain ten times higher than it is, but he is bound to draw its edge according to one of a few standard formulas. These prescribed strokes, though based on the Chinese notion that painting is akin to calligraphy, are also admirable syntheses of the chief forms of structure in nature. Within less than a score of such strokes (for the correlation of which with facts of stratification, cleavage, erosion, etc., we must refer the reader to Mr. Taki's interesting pages), the Chinese romanticist must find his repertory. His art no sooner attains the lyrical freedom of music than, like music, it accepts the straitest conventions. And here again is a rather instructive difference between West and East. Precepts in the West are likely to apply to ways of feeling —to be, that is, a sheer drag upon the artist of talent, whereas, in the East, precepts are generally confined to ways of doing and give the artist both a steadying discipline and a kind of social support. Another difference: the Chinese or Japanese artist is subject only to the authority of his peers or betters; great artists, learned priests, æsthetes, connoisseurs, are his law-givers. In fact, there existed in China a varied and flexible art reinforced by a subtle and exquisite criticism at the time when all Europe lay contentedly in a doddering Byzantinism. The European artist, on the contrary, has usually been more or less at the mercy of his æsthetic inferiors. Plain men have marked out the limits which genius at best might only evade. This fact will account for the rarefied quality of the best Chinese and Japanese landscapes. Their excellence is not accessible to untrained intelligences. Beside them the most diaphanous of Whistler's nocturnes would seem just a shade too explicit. It is an aristocratic art, compounded of subtile understandings, of permitted audacities and syncopations, beside which Claude, Corot, and Turner at his broadest seem comparatively common, accessible, and democratic. Thus, with its tendency to sink into cheap realism, European art is, after all, far more widely representative of the civilizations that have produced it, and so more humanly significant, while Far Eastern art achieves a higher emotional intensity and a more strenuously choice and beautiful craftsmanship, after all, within far narrower limits.

I.

For the student of painting all periods before the Sung dynasty, which ruled from the tenth through the thirteenth century, are merely legendary. Early historians and critics give us some idea of the works of the T'ang dynasty, the seventh and eighth centuries, and of the Five Dynasties, from 907 to 960; but since no works surely of these periods have come down, our concern is chiefly with Sung painting. We have merely to note that the artists and critics of this period, perhaps erroneously, regarded themselves as decadent. Here ancestor worship may well have caused public expressions of inferiority which by no means corresponded to intimate convictions. It is hard to imagine anything finer than the best landscape scrolls which have been transmitted to us by these self-styled epigoni. So fine was Sung painting that the Tartar conquerors of the Yuan dynasty, the fourteenth century, did but continue the established manner. In spite of patrons like Kublai khan, there was during the Tartar sway a marked falling off in all the arts.

When the Ming emperors, ruling from the latter part of the fourteenth to the middle of the seventeenth century, restored the native dominion, the old, severe, philosophical tradition of Chinese art had pretty well worn itself out. Elegance was now the quality most desired. Beside the traditional landscapes and religious subjects, which have taken on a character at once more realistic and more sentimental, we find familiar pictures of courtly life. Woman now gets full standing in art. From Ming painting derives, at a considerable interval, the figure subjects on old blue porcelain. The Manchu emperors, who for more than two centuries have held the throne, have in the main thrown their influence in favor of the imitation of Ming design, though there have also been partial revivals of the Sung manner. In the eighteenth century Chinese art becomes strongly realistic, carrying *genre* painting into all walks of life. Very ingenious and sprightly much of this work is, but it is inferior to similar Japanese painting and rather lacking in specific racial quality. This hurried chronological survey may introduce us to our real subject, the painting of the golden age—the Sung dynasty.

In the temple treasuries, museums, and private collections of Japan, there are more than two hundred paintings of the Sung and Yuan dynasties, while a scantier remnant persists in China itself and in the public and private collections of the West. The Boston Art Museum, the Freer Collection at Detroit, and the British Museum are among the richest in this art. The Musée Guimet also contains a few fine examples. Such admirable facsimiles as we have in *Kokka* and the "Select Relics," published at Tokio, make Sung painting fairly accessible to all students. There are a very few early paintings that possibly antedate the Sung period, and strongly suggest a primitive Chinese art free from Buddhistic influence and relatively realistic. Its existence is confirmed by those *genre* subjects in glazed terra cotta, of the Han dynasty (about the beginning of the Christian era), which have recently come to light. But the qualities of such underlying realistic painting must remain largely inferential. To the hieratic ideals of the Buddhist missionaries and the aristocratic formulas of the adepts of Confucius and Lao-tse, Chinese painting had yielded long before the to us merely traditional glory of the T'ang period (the seventh and eighth centuries). Of the severe splendor of the earliest hieratic painting, we have only Japanese echoes of later date. Still in the magnificent heroic figures of the Hôriuji Temple at Yamoto and the famous portable shrine of the same establishment we have paintings not later than the early years of the seventh century of our era, and, what is more important, exquisite works of an art still profoundly religious. To suggest the high qualities of these hieratic figures of incarnations of the Buddha, one is driven to ambitious analogies. Imagine a Crivelli purged of his smaller eccentricities, a Mantegna endowed with spirituality and freed from merely perfunctory dignity, and you will have some notion of the tingling austerity of this art, of the elaborate beauty and significance of its line and color, of its tense and urbane spirituality. I fancy Giovanni Bellini, had he remained in his Mantegnesque phase and painted wall decorations, might have done something as fine, but I cannot imagine any other artist of Europe meeting these far Eastern mystics successfully on their own ground. Even in the superabundant scrolls of the centuries of decadence, some persistence of the solemn splendor of the parent art may be noted. At the risk of protesting overmuch, I must repeat that the value of this early hieratic

Digitized by Google

art at its best is not relative, but absolute. Without pushing wide and futile comparisons, the seeker of the higher forms of beauty must acquaint himself with these rare survivals as he must familiarize himself with the pediments of Olympia, the mosaics of Ravenna, and the portals of Rheims.

II.

If the hieratic art of China and Japan finds its analogies in the great religious art of other periods, Chinese landscape painting is a thing apart. No painting of landscape so fully realizes the profoundly psychological aphorism of Amiel that landscape is a state of mind (*un état de l'âme*). Occidental landscape painting has never fully emancipated itself from the requirement that it should be a record of facts. Hence, since large and comprehensive record is impossible, it has tended to limit itself to the picturesque bit. Our artists mostly prefer the thing that can be quite fully remembered and represented. A restricted kind of intimacy is their ideal. Now the Chinese landscape painter, dealing primarily with feelings about nature, naturally chose those aspects that evoke feeling most powerfully. Great expanses of plain rimmed by looming mountains, ravines widening out to river valleys, perilous gorges, were his favorite themes. The long scrolls upon which some of the earlier landscapes are painted represent in a single work nature in many aspects. One may unroll gradually and with delight quiet rivers with boating parties, gardens with the pavilions of the rich, arable fields, temples, and usually there will be a mountain screen behind these foreground subjects, gaunt and formidable against the sky. As one plies the rolls, picture succeeds to picture in modulations expressing so many phases of the love of nature. I hardly know an occupation more soothing, more evocative of reverent contemplation, than such converse with a landscape scroll of good period. Such apparently naïve art prevails in virtue of fine selection and prudent elimination, withal by concentration upon the significant facts of landscape—its scale and proper magnitude, the run of rivers, and the passing of winds.

Repeatedly the Chinese artists give us the simple theme of a hermit sage shadowed by a lone tree and seated in contemplation of sublime scenery. These tiny philosophers often choose the brink of abysses for their meditations, or gorges cooled by the spray of cataracts. What is remarkable in these pictures is the impregnation of the whole with the mood of the small figure. The balance of the contours of the ravine, the outreaching of trees from the crags, will seem merely the projection of the thinker's mood, or, conversely, he may be regarded merely as the incarnation of the spirit of the place. Such equilibrium between mood and fact is exquisitely maintained by the great Chinese painters and even by such gifted amateurs as the Emperor Huitsung, two of whose landscapes are included in Mr. Taki's album. In these pictures the landscape is reduced to its minimum expressive lines, mere things have been well-nigh eliminated, and we have the kind of prospect that might exist in a world of ideas before the actual gross substances of the earth had been created.

Early Chinese art offers as well landscape of a more literal sort. There are snow scenes, views of frozen lakes, and the like, presented with the finest atmospheric equilibrium and with an infallible sense of texture. Here the rhythm is usually in the third dimension, dependent on the accurate placing of significant objects in aerial perspective. Snow scenes ascribed to Li Ti and Ma Lin in Mr. Taki's book may best illustrate this comparatively objective phase of Chinese landscape. But here again the work is permeated with mood. Take the Summer Landscape in Viscount Okitomo Akimoto's collection ascribed to Kao Jan-hui. Nothing could be simpler than its ingredients. A cascade bordered by dark firs slips down in a double curve and forms a quiet pool. High above, beyond intervening mists, the shaggy shoulder of a mountain takes up the double curve and loses it again in the upper vapors. There is in these hints a sense of the secular life-story of the rivulet, of its eroding task through the ages, of its kinship with fog and rain; and one hardly needs the temple on the nearest ridge to remind us that these immemorial processes are sacred. To a beginner in this art I especially recommend this beautiful painting, the spiritual quality of which, together with its masterly and simple composition, must deeply affect any sensitive mind.

I can hardly dwell upon more deliberately fantastic and romantic phases of Chinese landscape. painting, though these are most interesting. Let me merely remark the sea view ascribed to Chao Po-kiu, and illustrated in plate ii of the Musée Guimet Catalogue. Bare headlands rise like fangs against a rippled inland sound. In the interspaces are scant pine trees. Beyond, two straits enclose an island which presents crags still more formidable to the sky. The sun touches the distant waters with broad, sullen streaks that are lustrous without brilliancy. Near-by the wind crisps the water and urges tiny craft over the waste. Far away rules an ominous calm, and beyond an horizon lost in gloom there are faint but keen indications of an ultimate mountain ridge. The colors are a sombre blue and green, accented with black and gold. The whole impression is troubling and sinister in the extreme. One hardly needs the beautifully written note of a friendly critic, formerly custodian of this treasure, which informs us that

> In the sea there are great islands, the home of marine demons, of crocodile-men, of pearls, and fish of every sort. These isles are rather lofty, and rise from amid the waves. One sees emerge the crags where the spirits dwell and where the birds which fly between heaven and sea perch and brood and raise their young.

III.

In the attempt to get at the spirit of Chinese landscape I have intentionally carried into one category of expression works in color and works in India ink. The harm is the less because the Chinese in landscape use colors sparingly, often employing only two fundamental tones, and because they require of their draughtsman in ink the illusion and richness of color itself. Dead ink is their strongest term of reproach, meaning ink carelessly and inexpressively applied. And their connoisseurs distinguish no less than five colors of ink, a refinement which, since the paper has a perceptible yellow quality and the ink a tendency to blue, is by no means imaginary. We shall do well to admit with the native critics that, although the simplest and most concentrated effects are attained in monochrome, the colored landscape has a wider range and a more accessible amenity. If a Westerner readily casts his vote with the devotees of ink, it is largely because such work suffers less in reproduction. Nor can I make much of the very interesting native division of all landscape painting into Southern and Northern, although this somewhat paradoxical distinction throws much light on Chinese ways of thought. The river scenery of the South abounds in sublime and sensational features, but Southern painting is suave and gentle. Northern scenery is monotonous, but the Northern style of painting is rugged, emphatic, overtly picturesque. The terms, then, correspond to nothing in Chinese geography, but to much in Chinese modes of feeling. The same painter under diverse inspiration will paint in the Northern or in the Southern manner. Sometimes critics object to the treatment of a Northern subject with inappropriate Southern suavity. The words, in short, present something like our own wide but ill-defined antithesis between the classic and romantic. We should not go far amiss if we said that "Goetz von Berlichingen" was in Goethe's Northern manner; "Iphigenie" in his Southern.

Nearly a thousand years ago the critic, Kuo Hsi, in his work, "The Noble Features of the Forest and the Stream," expressed once for all the guiding sentiment of Chinese landscape painting. He takes it as axiomatic that all gently disposed people would prefer

Digitized by Google

to lead a solitary and contemplative life in communion with nature, but he sees, too, that the public weal does not permit such an indulgence.

This is not the time for us [he writes] to abandon the busy worldly life for one of seclusion in the mountains, as was honorably done by some ancient sages in their days. Though impatient to enjoy a life amidst the luxuries of nature, most people are debarred from indulging in such pleasures. To meet this want, artists have endeavored to represent landscapes so that people may be able to behold the grandeur of nature without stepping out of their houses. In this light painting affords pleasures of a nobler sort, by removing from one the impatient desire of actually observing nature.

Such a passage yields its full meaning only upon very careful reading. One should note the background of civilization, quietism, and rural idealism implied in so casual an expression as the "luxuries of nature." Nor should one fail to see that what is brought into the home of the restless worldling is not the mere likeness of nature, but the choice feeling of the sage. Again, the statement that the enjoyment of a thing merely symbolized and shadowed forth by the artist is nobler than the enjoyment of the thing itself should be duly weighed. Never, I think, did the Chinese fall into the recurrent Occidental confusion of means with ends by which art was thought to be mere imitation or conveyance of nature. Hence, while Chinese landscape-painting is frequently tenuous, and almost always adapted to somewhat esoteric modes of feeling, it is almost never vulgar or inconsequential. Demand was made not upon the observational skill of the artist; that was simply taken for granted; but upon his inner resources. For five centuries and more the Chinese artist was worthy of such a challenge, and even in decadence he retained at least the forms and ceremony of the aristocratic mysticism of greater days.

FRANK JEWETT MATHER, JR.

Messrs. Harrap announce a new color book by Willy Pogány, "Tannhäuser," freely rendered in poetic narrative form by T. W. Rolleston, with 224 pages, lithographed in two colors, including numerous full-page and smaller drawings in line. The book will be printed on gray paper with rough surface; there will be an ordinary and a limited edition.

Josef Israels, the famous Dutch painter, died at The Hague on Saturday of last week. He was born at Groningen in 1824. He early showed such a strong taste for art that his father sent him to Amsterdam to study painting. Later he worked in Paris, Picot, Ary Scheffer, and Delaroche being his masters. At first he painted historical pictures, the most notable being William the Silent of Orange bidding defiance to Philip II of Spain. He was taken ill and went to Zandvoort, a fishing village near Haarlem, to recuperate. There his genius created itself, for in the humble folk he found the characters that inspired him, and the daily tragedy of life became his principal theme. Among his most important works of this period of his artistic career were The Zandvoort Fishermen, in the Amsterdam Gallery; The Shipwrecked Mariner, which was recently sold for $20,000, and the Village Poor. A Frugal Meal, the most important of the many pictures he painted of that subject, was sold for the same price at the Alexander Young sale. Israels was also noted for his water-colors and etchings.

Finance

VERSIONS OF PANIC HISTORY.

It is of frequent occurrence in historical criticism that the same set of known facts are used to construct three or four different and contradictory theories as to causes. This is, perhaps, even more true of financial history than of plain political history, because economic phenomena are in themselves more obscure than political phenomena, and because, also, different people have different theories as to what causes any important movement in finance, and will insist in a given case that the explanation must be fitted to their favorite theories. A great financial crisis is invariably followed by a jangle of discordant voices, each with its own account of the why and wherefore. Every one knows how the controversy raged after the panic of 1907. It was caused by President Roosevelt's policies. It was caused by an inelastic currency. It was caused by Charles W. Morse. It was caused by bad banking laws and inadequate restrictions on trust company finance. It was caused by the recklessness of important financial interests, who got into trouble as a result of their recklessness. It was caused by important financial interests for the purpose of wrecking credit and beating down values, in order to pick up bargains for themselves. There is not the least doubt that to-day, nearly four years after the outbreak of that panic in New York, each of these conflicting explanations has the absolute belief of thousands of people who should be reasonably familiar with the actual facts.

The reason for recalling all this just now is that the Stanley committee's excursions into the history of 1907 succeeded last week in raking up some of the bitterest controversy of that day, and in presenting it in a way which is quite as likely to encourage illusions as to establish the truth. This has been the case, both with the voluminous testimony on the "Tennessee Coal deal" and with the testimony about the famous "statement to the press," the evening before the run on the trust companies began. It had been hoped that this last-named episode might be left to be forgotten, among the numerous foolish and discreditable incidents which always mark a financial panic. It is not easy to see how anything could be gained by reviving it. But since that has been done, and since the incident may easily contribute to false ideas regarding the crisis which preceded and followed it, the plain and well-known facts of the matter may as well be stated.

It is impossible to excuse Mr. Perkins for the manner in which (without authority from the bankers who were laboring to avert the shock which they saw impending in the credit market) he gave out to the newspapers an account of the situation which, as Mr. Stone of the Associated Press said in his subsequent letter to Mr. Thorne of the trust company, "distinctly emphasized the run on the Trust Company of America, if, indeed, it did not precipitate it." The statement, describing that banking institution as in serious peril, and the subject of anxious concern by the Clearing House authorities, may have been true or it may not—that is beside the point. Every one of the least business experience knows that such a published statement from any source, with the Knickerbocker's doors just closed and the whole structure of credit tottering, was like exploding a can of dynamite under an insecure building.

This fact was recognized by the refusal of the Associated Press to send out the statement to the newspapers, although it came from a supposably responsible source, and one or two less scrupulous papers were known to be publishing it, and although, if true, it was news of paramount public interest. There are times when such news, in view of the public safety, must either be suppressed or stated in the most guarded possible way, and it was not at all thus stated in the account in question. Mr. Stone was unquestionably right in asserting that it emphasized and might conceivably have caused the run on the America, and Mr. Thorne is wholly within the facts in describing it as a "piece of stupidity." But there are times when stupidity is pretty nearly criminal.

It is unnecessary to insist on this very obvious aspect of the matter. What should be emphasized is the utter folly of supposing such a thing to have been done by the wish of the powerful financiers who were at that moment engaged in preparing to protect the business community against the coming strain. Throughout the hearings of the Stanley committee, there have been constant signs of a leaning toward the notion that powerful interests were inspiring and promoting the panic situation, with a view to their own selfish profits. The idea—based, no doubt, on the wild talk of La Follette that booms and panics, prosperity and adversity, are caused altogether by a group of unprincipled millionaires—is wholly preposterous; but it is none the less dangerous because it is preposterous to instil the idea into

Digitized by Google

the unthinking public's brain. For the excesses and extravagances which paved the way to the crisis of 1907, our High Finance was gravely responsible; but when the crisis came, it took its stand, in the disinterested protective measures, with the most conservative of the banking interests. Indeed, it had to do so. If there had been no other motive, self-preservation would have been sufficient.

But it is equally true that the public's illusions on this head will not be removed until a sane and intelligent view of the panic itself is taken. The trust company authorities, in insinuating that there need have been no trouble but for Mr. Perkins's statement to the reporters, are as wide of the fact as is the author of that statement, in intimating that it was harmless. It was their own financial practices, their defiance of the [illegible] proposals of the Clearing House, and their amazing neglect of the principles of sound banking, by which the trust companies invited the storm which nearly wrecked them. All this is now a matter of established financial history, and, happily, with the new trust company law of 1908 and the new Clearing House affiliations of 1911, it is a closed chapter. It will probably take longer for the people at large to realize fully that their own extravagance, neglect of old-time business precautions, and plunge into constantly mounting liabilities, so as to get rich quicker than pursuit of sober business methods would make possible, were fundamental in the lesson which the whole community received four years ago.

BOOKS OF THE WEEK.

Allen, P. S. Daheim: A German First Reader. Holt. 70 cents.

Shepherd's Historical Atlas

By WILLIAM R. SHEPHERD, Professor in Columbia University. 321 pp. 8vo. $2.50.

Planned originally as a translation and adaptation of Putzger's well-known *Historischer Schul-Atlas*, the result is a new atlas on a much larger scale. It contains nearly 300 maps beautifully printed in colors, including about 35 double-page and 60 single-page maps. The range in time is from Mycenean Greece and the Orient in 1450 B. C. to the Europe and United States of the present day, and to the Panama Canal with its surroundings. A complete index of 94 pages to the names that appear on the maps is added.

Henry Holt & Co. 34W. 33d St. New York

SEEING EUROPE BY AUTOMOBILE

By LEE MERIWETHER

12mo, 425 *pages*, 32 *illustrations, end papers, map, index*, $2.00 *net; postage, 16 cents.*

An entertaining and serviceable book for the motorist in Europe, full of information about handling a car in Europe. Describes a trip of 5,080 miles in hundred days.

By the author of "A Tramp Trip Abroad."

The Nation

NEW YORK, THURSDAY, AUGUST 24, 1911.

The Week

It is fairly to be said for President Taft's message vetoing the "Farmers' Free List" that it makes out a much better case than did his argument for refusing to sign the Wool bill. He is able to show that the measure was loosely drawn, so that its effect would, in some particulars, be highly doubtful and would lead to a great deal of litigation, while certain clauses were so carelessly constructed as to defeat their own end or to lead to absurdities. True, much the same could be said of the Dingley bill or the Payne-Aldrich law, both of which have given the lawyers endless business and taxed the courts to interpret them; and those acts were signed without hesitation. Yet Mr. Taft's criticisms have much force, and should be heeded when similar statutes are drafted in the future. And it is to be noted that the President uses a phrase, "conceding the wisdom of the general policy," which plainly intimates that he would favor an expansion of the free list—if only it were made in a different way, say, by a united Republican party.

The prompt passage of the new Statehood resolution is clearly a triumph for the President. By a vote of 53 to 8 in the Senate, and without even the formality of a roll-call in the House, Congress accepted Mr. Taft's terms for the admission of the last Territories in the continental United States. Arizona may now come in as soon as she drops the recall of judges from her Constitution, and New Mexico has only to decide by formal vote whether she will yield to the judgment of the representatives of her sister States who think her Constitution should be capable of amendment in an easier way. If she insists upon the present method, however, she will be admitted nevertheless. When one seeks the cause of this reversal of opinion by one branch of the Government at the instance of another, one finds it in the less prominent qualities of President Taft. Eager to conciliate, never spoiling for a fight, upon this occasion he forgot everything except the danger to what he regards as a vital principle of the government, and the result was a message that challenged attention for its reasoning no less than for its courage. It was one of the times when a powerful word powerfully spoken could turn the tide, and fortunately the President was willing to speak it. This revelation of the possibilities that lie open to a Chief Executive when he is in dead earnest must make even Mr. Taft regret that he did not similarly exert himself two years ago when the Payne-Aldrich tariff was crying out for a veto.

A careful study of the text of the arbitration treaties with Great Britain and France fails to show in what way the Senate is to be driven into delegating away its Constitutional powers in treaty-making. What is the greatly feared Joint Commission of Inquiry, and how is it to be constituted? Article II of the treaties declares that the high contracting parties "as occasion arises" shall appoint a commission of inquiry, and while the appointment of three commissioners by each side is recommended, that number is not made obligatory. Here, then, is no question of a permanent international commission of definite membership which may arrogate to itself powers hitherto exercised by the Senate. We are concerned with a special committee designated for the performance of a special task and passing out of existence as soon as its work is accomplished. There is nothing in the treaty to prevent the designation of one or more Senators as members of the Commission. And there is nothing in the treaties that compels the Senate to accept the findings of the Commission, except in form. It is true that if the Commission declares that the question at issue is justiciable, we are under the obligation to arbitrate. But the Senate, in fixing the conditions and limitations under which the arbitration tribunal is to arbitrate, may, if it choose, virtually nullify the Commission's recommendations.

The resolution offered by Senator Owen of Oklahoma, to investigate the causes of the panic of 1907, might possibly be regarded as an earnest endeavor to establish the facts regarding a great economic event if it were not for the Senator's own explanation of the purposes of the proposed inquiry. He believes, as he informed the Senate, that the panic resulted from "a deliberate conspiracy for enrichment of those who engineered it," that the engineering exploit was "treason against the United States," and that it "ought not to go unrebuked." The conclusion is possibly a bit lame, because treason is not "rebuked" by our statutes, but visited with capital punishment. This statement of the case rather tends, therefore, to turn the Senator's proposal into a joke. It is, however, a natural enough sequel to the theories of the La Follette school, whose view of political economy, so to speak, is strictly and exclusively anthropomorphic. It is quite inconceivable that our legislators should take seriously these vagaries of the Wisconsin and Oklahoma Senators. Yet one might almost wish that the formal inquiry should be made, and on precisely the lines proposed; for nothing short of the evidence which would surely and promptly be obtainable, from bankers, business men, and economic students, is likely to remove such foolishness from minds that entertain it.

The result of the election in Trenton bears out the claim that the commission form of government takes municipal affairs out of politics. Three of the commissioners chosen are Democrats, and two are Republicans. All of them are, or have been, officeholders. One is president of the Trenton harbor board, one is the street commissioner, one is an assessor, one is the city controller, and one has been city engineer. They go at their new task, therefore, with some experience in various lines of municipal service. Of more importance is the direct responsibility which they must feel to the mass of the citizens, who have selected them with such emphatic disregard of party affiliations. They could not have a greater incentive to give of their best to the city. All this is only saying that Trenton is still on the threshold of her new experiment in governing herself, although with excellent indications for its success. There will doubtless be more than one occasion when it will be necessary for her to

Digitized by Google

remember that comparisons are to be justly made, not with an ideal government, but with that to which she has been accustomed. It ought not to be difficult for the commission to meet that test, particularly as its members cannot fail to recognize that other New Jersey communities will in some measure shape their opinions of the commission form of government in general from this first trial of it in the State.

The methods of industrial and accident insurance companies which are being condemned by the insurance commissioners of various States are evidently of a different and lower order of wrongdoing from those that were revealed in the life insurance investigation. To buy legislation is bad enough, but it is not so revolting as direct and systematic plundering of policy-holders in the adjustment of their claims. The offence is aggravated by the circumstance that in the main these persons, ironically termed "beneficiaries," are unfitted because of ignorance to make a stand for their rights. The widespread nature of the frauds is indicated by the disclosure that the company doing the second largest industrial business in the country is charged with employing the worst devices known to fleece its customers. The higher officers of this concern are declared to share in the ill-gotten gains of its agents. The ethical possibilities of modern business are illustrated by the fact that in 70 per cent. of its operations this company is found to be honest, but in the rest, which have to do with industrial and accident insurance, the temptation to take advantage of its patrons is too strong to be resisted. The insurance commissioners are to meet in convention at Milwaukee and are to receive a preliminary report of the investigation.

The death of the veteran Gamaliel Bradford removes a genuine patriot who made a substantial contribution to the science of government, and frequently, as in the anti-Imperialist agitation, gave an admirable illustration of his ability to stick to his guns even when most severely criticised. He was one of the growing number of men who believe that the failure to make our Cabinet responsible to Congress by giving them seats on the floor of the House is one of the great defects in our form of government, and to the advancement of this belief he gave much time and labor. It must frankly be admitted that the whole anti-Imperialist adventure in which this country has been engaged has furnished much experience to reinforce Mr. Bradford's contentions. Whether we shall ever obtain the radical reform he desired is a question which only time can answer. He was one of those unpaid servants of the people who was of especial use because he was fearless, superlatively honest, and as patriotically devoted to the public welfare as became a direct descendant in the eighth generation from Gov. Bradford of the Massachusetts Bay Colony.

Mr. Edison is an unconventional traveller. He is not only not ashamed to declare that this or that is surpassed by something of the same sort in America, but he is original enough to discover objects for admiration that have hitherto evaded the Baedeker-guided eyes of the ordinary tourist. Thus, if he hurts Parisian pride by depreciating remarks about the illumination of the Champs Elysées, he gives it new inspiration by praising French bread. Could candor and courtesy be more beautifully blended? It must seem passing strange to the chefs of the capital, accustomed to Americans who do not hesitate to point out the deficiencies of their finest concoctions, to behold one whose tastes are so nearly in accord with that Spartan simplicity lacking in those who most prominently represent us abroad. In one respect, the great inventor is at variance with multitudes of his countrymen. He is not disturbed by the heat that is oppressing Paris, but professes himself perfectly happy when the thermometer is at 90. Is this the reason why we have not been provided by him with a cheap and convenient device for lowering the temperature?

An interesting question as to the value of newspaper notoriety is raised by Mayor Gaynor's action in the matter of a new novel which the authorities of the New York Public Library have refused to put on their lists. The Mayor finds that the book is quite harmless, but very stupid. The question is whether this characterization will help or harm the book. It is a maxim among many publishers that condemnation for a new book is quite as desirable as approval, provided the book is talked about. Silence is the aspiring author's worst enemy. But while it may be profitable to have a novel vigorously characterized as very wicked or very youthful or very prejudiced or very ill-informed, does the magic power of notoriety go to the point where it helps the sale of a book to be called very stupid by some one prominent in the public eye?

The Advocate of Peace calls attention to a recent happening in the United States navy of far greater significance than the commissioning of the latest Dreadnought or the Delaware's preëminence in the Coronation naval review. In June last, virtually unnoticed, the little sheet-iron steamer Wolverine, for nearly seventy years known as the Michigan, and our sole naval protection on the Great Lakes, was struck from the active list and finally put out of commission. Built in Pittsburgh in 1843, she was taken piecemeal on ox-carts over the mountains, put together, and launched on December 5, her impressive armament being but one 18-pounder, and her crew ninety-six men. This one gun was all she could carry under the happy Rush-Bagot agreement, which forever prevented the arming of the boundary line between the United States and Canada. Dr. William Elliot Griffis has estimated the Michigan's service to civilization as far higher than those of the Constitution, despite the fact that almost her only crowded hour was when Confederates attempted to capture her in the civil war. The *Advocate of Peace* draws the proper moral from the Michigan's career:

> Why are the nations so reluctant to follow in their relations to each other such a conspicuous example of the success of limitation (one might almost call it annihilation) of armament as that furnished by the British-American disarmament on the Great Lakes? Disarmament on the Atlantic or any other ocean—mutual, of course—is just as practicable as disarmament on the Great Lakes, whenever the nations *think* so and decide to have it so.

The arguments of the Conservative leaders in the Canadian electoral campaign continue to manifest a deep-seated inconsistency to which we have called attention before this. Mr. Borden, leader of the Opposition, declares in a set speech, first, that the advantages of reciprocity would be with the United

Digitized by Google

States farmer and not the Canadian, and, secondly, that "press and public in the United States believe firmly that Canadians would not be willing to go into the treaty were they not prepared for annexation; the treaty was therefore the beginning of the end of the British Empire." We may put aside the question as to where Mr. Borden and his followers have derived the impression that "the leading newspapers and statesmen of the United States" are unanimous in accepting reciprocity as the entering wedge for annexation. The problem is not what people in the United States think, but what the people of Canada think. Even Mr. Borden will not contend that annexation will come by armed invasion and conquest. Canada will have to be a consenting party to annexation. And what will win the Canadian people over to annexation? Why, this treaty of reciprocity which, as Mr. Borden declares, will benefit the people of the United States at the expense of the Canadian people. In other words, reciprocity, being a very bad bargain for Canadians, will make them fonder than ever of the people that got the best of them.

Every law that the Gomez Administration has passed has been subjected to the most searching inspection by these jackals without pride of country or, where they were foreigners, a sense of decency to the country where they lived. The liberal laws of Cuba allow perfect freedom of the press. Newspapers are born and die in Cuba almost weekly. When the instrument of blackmail or preferment has served its purpose it is cast aside.

We quote from an impassioned appeal addressed to the American Secretary of War on occasion of his recent visit to Cuba, by the Havana *Post*, the only daily American newspaper in the island. Recent dispatches from Havana offer rather ironic comment on the liberal laws of Cuba and the perfect freedom of the press. The character of Señor Villaverde, for many years editor of the staid *Diario de la Marina*, does not lend itself to the suggestion of an unrestrained and unscrupulous gutter press. The simple fact of the matter would appear to be that Latin-American newspaper warfare reflects the exuberant methods of Latin-American politics. And yet, no matter to what excesses the anti-Administration partisan may resort, it is not for the Government to imitate. The Gomez Administration can either ignore criticism or punish it under the law. Arbitrary acts like the deportation of hostile editors will be interpreted by the outside world as confession.

Of the British railway strike, as of all strikes on a very large scale, it is apparent that the very magnitude of the movement enforces a speedy solution. Public opinion too often remains neutral in the strife between employers and workingmen; it needs such a temporary paralysis of the national life as Great Britain experienced for more than a day to rouse public opinion to self-assertion. British public opinion, through the Government now in power, has declared that neither employers nor workingmen shall be allowed to make the national welfare the football of their private contentions. The peaceful adjustment of a quarrel involving nearly a quarter-million workingmen is a tribute to the traditional English genius for compromise and conciliation. The grounds for compromise existed. It is pretty definitely established that the railway workers' demand for higher wages was justified. This is admitted by nearly all the Liberal organs of standing, which deplore at the same time the violence of the means adopted. Another grievance had to do with the workings of the industrial conciliation boards of 1907 which the strikers asserted were being used against them. Here, too, was a demand deserving of respectful consideration which the companies were wrong in summarily rejecting. At any rate, the suspension of hostilities has been received with such general satisfaction that we may regard a permanent settlement as pretty definitely assured.

There will be opened in Berlin on October 16, in the new Royal Library, a "German Institute" for the benefit of foreigners who may come to Berlin to study the language and the cultural life of Germany. It is not intended to be a learn-German-quick affair, but a serious institution manned by teachers of the higher schools of the capital and by docents of the university, with the main purpose of familiarizing foreigners who have graduated from colleges or universities at home, not only with the language, but through the language with the intellectual achievements of the nation, and this in as short a space of time as possible. There will be practical instruction for small groups, lectures on German literature, art, science, and institutions, excursions to other cities and intelligent guidance through the Berlin galleries and museums. Each semester will last eight weeks, and the tuition fee is to be only $25 for the period. The Government thinks so highly of the idea that the undertaking rejoices in official patronage and supervision, and the university authorities are also deeply interested. The idea is to see to it that the intelligent foreign visitors who really want to make use of their time shall be given a proper appreciation of Germany's intellectual greatness and aspirations, so that they may in turn on their arrival at home be able to interpret Germany properly to those whom they may influence. In other words, it is another striking move toward doing away with that ignorance of Germany which at bottom is responsible for much foreign ill-will and distrust.

A Shanghai journal laments that all that it has to show for its long list of notable visits and festivities is a Jubilee fountain and a Nursing Home. It mentions, nevertheless, one great benefit from them. Each nationality represented in the Chinese city in turn takes the lead in welcoming guests whom it delights to honor, and this makes for international good-feeling. Thus, the first of royal blood to be attracted to the Model Settlement was the Duke of Edinburgh, who came in 1869. A dozen years later the present King of England and his elder brother saw the city as midshipmen. They were not their own masters, however, and, owing to their captain's severe curtailment of the reception that was awaiting them, they found themselves limited to a dance at the Consulate and a run up the country. In 1890 came the Duke and Duchess of Connaught. Of the German notables Prince Henry is best remembered. Then there have been the Duke of Genoa, Prince Fushimi, four Manchu princes, one reigning monarch, King Kalakaua of Hawaii, Gen. Grant, and Secretary Taft. An historical pageant in Shanghai is unique in variety. It is a veritable parade of the nations. One can understand the pride with which the Shanghai writer closes his account with the words: "No other place has such a record."

TAFT AND CLEVELAND, 1893 AND 1911.

The close of the long and tedious extra session of Congress suggests comparisons with the one called by President Cleveland in 1893. At least one close analogy stands out: the great Administration measure, in either case, was carried only by the votes of the opposing party. Eighteen years ago the repeal of the silver-purchase act, demanded by a Democratic President, was enacted with Republican support which was indispensable, just as a Republican President has now been able to get through Congress the bill for Canadian reciprocity by means of Democratic assistance, without which he would have completely failed, as he himself has handsomely acknowledged. In both these Congresses the party in power was badly split, a large fraction refusing to follow its own President. In 1893 this rupture foretokened bitter contests and prolonged divisions within the party, and ultimate defeat. It would be rash to predict confidently that the Republican break-up of 1911 will have similar consequences next year, yet no candid friend of Mr. Taft's can be blind to the political danger of the open dissensions in the Republican party which have broken out under his Administration.

Political parallels are seldom so complete as they look to the casual eye. Analogies in politics should never be pressed till they drip blood. The efforts put forth by President Cleveland to prevent the country from going to the silver standard were immensely more important than those of President Taft to procure reciprocity with Canada. The latter measure we do not underestimate. It is significant both in itself and in what it portends. Credit to President Taft for his initiative in devising this breach in the walls of protection and for his courage in pounding away at it, we have not withheld, nor shall we seek to minimize it. But it remains true that the struggles in Congress this year have been neither so dramatic nor so critical as those in 1893. Then it was a case, not of making a slight reduction in tariff taxes, or of breaking with the past of a political party, but of saving the nation from a well-nigh irretrievable financial disaster.

Another marked difference lies in the condition of business, then and now. In 1893 the country was entering upon a period of intense and alarming depression. Apprehension and dissatisfaction reigned on every hand. And the state of the public mind was such as to fasten itself intently upon the particular legislation which the President was urging upon Congress, with the result that passion ran high and debate was furious. The entire contest seemed titanic at the time, and appears scarcely less so as we coolly look back at it across the years. It was the economic circumstances of the country that then intensified everything, and caused the struggle in Congress to be watched with a jealous public interest far beyond anything which we have witnessed this year. President Taft has been much more luckily situated, in this respect, than was President Cleveland. This year the great experiment of an Executive flinging himself upon Congress and winning from his opponents the support which his own followers denied him, could be carried out in comparative calm. We have seen little this time of the violent waves of feeling which swept over the land in 1893.

Politically, the comparison of the Silver Democrats and the Populists of 1893 with the Insurgent Republicans of 1911 is somewhat misleading. We do not refer to questions of the ability or sincerity of the dissidents, but to their party affiliations and their political strength. The Silver Democrats were more powerful than the Insurgent Republicans. The former kept on fighting, with the aim of obtaining control of their party organization, and finally got it. And as allies they had a third party, just then at the flood tide of its success. The Populists won 22 electoral votes in the election of 1892, and polled a popular vote of more than 1,000,000—one-fifth as many as that of the Democratic party. Here was certainly an element much more potent for revolt than anything now discernible in the movement of the Insurgent Republicans. The latter still profess themselves loyal to the old party, and as the months pass it becomes more and more unlikely that they will ever think of flocking by themselves.

Long before the troubles of 1893 burst upon him, Mr. Cleveland gave remarkable evidence of his political sagacity in a letter to Mr. Lamar. Therein he distinctly predicted the coming of the silver crisis in his party, and looked forward to an Administration harassed and unsuccessful in consequence. One wonders if anybody has in his possession a private letter from Mr. Taft, reading the future with equally clear vision and with like equanimity? Has the President fully counted the cost of driving a wedge, at once into the sacred doctrine of protection and into his own party, by his policy of Canadian reciprocity and his announced purpose to insist upon an early revision of the tariff, schedule by schedule? If he has given his mind seriously to the subject, he must have had many sober, and possibly a few amused, thoughts as he has looked forward to the drafting of the Republican platform next year, and his renomination by men many of whom will believe that his election is impossible and some that it is highly undesirable.

A MISTAKEN VETO.

A man who is haunted by a sense of inconsistency, and who fears that he is giving color to a charge of insincerity, cannot write in an energetic and persuasive manner. That is the explanation it seems to us, of President Taft's halting performance in his message vetoing the wool bill. Even Republicans who desired him to write it admit that it is weak and inconclusive, but what could they expect? In this matter of the wool duties, Mr. Taft was in an exceedingly awkward predicament. He had boldly declared that the existing rates are "indefensible," yet he now appears as their defender, or at least as the official by whose sole act they are kept in force indefinitely. Declaring two years ago that they should have been lowered then, he apologized for failure to do so on the ground that "a combination of representatives from the manufacturing and wool-growing sections of the East and West had a majority in Congress that was overwhelming." But now that combination has been broken up. A majority in either House that was non-partisan and stood for the interest of the consuming masses has done what President Taft asserted in 1909 should have been done then, yet he dashes their work to the ground by his veto! The bill may not have been perfect. Much has been made of La Follette's offhand statement that it was put together "with blacksmith's tools." But

Digitized by Google

they are better than the burglar's tools with something very like which the woollen schedule was got into the Payne-Aldrich act.

The horse on which the President seeks to ride away is "scientific revision." We must be judicially minded and get all the facts before us, especially must determine to a hair's breadth the difference in cost of production at home and abroad, before doing anything. Yet without anything of all that, Mr. Taft was ready to assert two years ago and, in fact, does it in this very message, that he believes the Payne-Aldrich wool duties to be excessive. How does he know this, inasmuch as the Tariff Board has not yet reported and until it does we are not supposed to know anything? Why, he knows it, of course, just as does any man with common sense, by a mere glance at the outrageous duties now exacted. The President states that the average existing rates on cloths are 97 per cent. and on wearing apparel 81 per cent. If manufacturers cannot get along without such exorbitant protection, with its resulting taxes weighing so heavily on the poor, then, as Representative Redfield said in his speech on June 12, they ought to turn their factories over to men with brains enough to run them. We need no one to come from the dead to tell us that a tax of 100 per cent. on clothing is a gross injustice, or that cutting it in two is an act of justice. Nor is it true that Congress did the cutting wholly in the dark. Early in June the House asked for all the information about the woollen schedules in the possession of the Tariff Board, and the President ordered it sent. It was not complete, of course, but so far as it went, the Ways and Means Committee had the advantage of it. Mr. Taft is able to point out no lack of "science" in their use of it, or in the framing of their bill, yet he nevertheless exercises his veto.

This he cannot do without plunging into the old slough of protection. He recites the fact that the platform on which he was elected was protectionist. This from the President who has just forced through the Canadian reciprocity agreement! The argument he uses against the wool bill could be used, in fact, was used, against that measure. And Mr. Taft, falling into the out-worn language of the high-tariffites, talks about the need of giving the woollen manufacturer "a duty to protect him against foreign competition with cheap labor." But this is to beg the whole question. How does the President know, in advance of the report of the Tariff Board on cost of production, that our well-paid labor is not the most efficient and, therefore, really the cheapest? On this point, the President would have done well to consider some of the actual instances adduced by Congressman Redfield. We cite one of them:

> Last January I was in the city of Tokio, and a friend who was with me took a large contract, by the way, from the Japanese Imperial State Railways, in open competition with Germany and England, for several million dollars' worth of locomotives. That gentleman went to the head of the locomotive shops of the Imperial Railways, and the Japanese master mechanic said to him: "We can make locomotives much cheaper than you can in America. We have American equipment, and we can produce them for less than you can." "Can you?" inquired my friend. "If so, let us get at the facts. If you will tell me from your cost sheets precisely what your locomotives cost I will tell you what ours cost." And, by the way, he said: "What makes you think that your locomotives cost less than ours?" "Why," he said, "because we only pay one-fifth the wages to our men that you pay to yours."
>
> So they got out the cost books, and they found that the fact was that the labor cost for locomotives on the same specifications was three and one-half times greater in the Japanese shop than in the American shops. And that is a perfectly normal fact and not an abnormal one.

The President expresses the purpose, and we do not doubt that he honestly entertains it, to urge a revision of the wool schedules upon Congress at the next session. Indeed, he speaks of adjourning revision by his veto "only ninety days," as if the presentation of the Tariff Board's report and the framing and enactment of a bill would be simultaneous. But in this Mr. Taft is pinning his hopes to two great uncertainties. One of them is the success of the plan to determine accurately the cost of production at home and abroad. As a practical manufacturer, Mr. Redfield asserts that this cannot be done in a way to fix a scientific basis for tariff legislation, since the cost will necessarily vary not only from place to place but from time to time in the same place. "Base a tax upon the January cost, and it is altogether altered by July, and by December it may be three times the difference in foreign cost." "Every manufacturer knows these things and lives up to them every day." Granting, however, that Professor Emery and his associates may work out a passable estimate of the cost of production, how can President Taft be sure that Congress will act upon it? The Presidential election will be impending; party plans and platforms will be in the making; the Republicans will be preparing to go in again with a whoop for protection, and the campaign managers making ready to fry the fat out of the manufacturers once more. What chance, under those circumstances, will tariff revision have, no matter how solemnly it may be labelled "scientific"? Instead of Mr. Taft's "ninety days," we are much more likely to have ninety weeks.

In our opinion, the President has made a great mistake. He has disappointed the just expectations of the country. For the sake of dubious relief in the future, he has sacrificed an assured present relief. Politically, he has made a present to the Democrats of a telling issue and a golden opportunity.

"DEALING WITH FACTS."

Mr. Roosevelt concludes his complacent review, in last week's *Outlook*, of his course in authorizing the Steel Trust to absorb the Tennessee Coal and Iron Company, with the assertion, "I dealt with the facts." The assumption is that to ascertain facts and act upon them is the easiest thing in the world. Principles may be cloudy and ideals escape us, but when you have a big, brutal set of facts before you, how can you go wrong? Everybody who stops to think, however, knows that dealing with facts is one of the most delicate operations of the human mind. There is, in the first place, the enormous difficulty of making sure that the facts are as stated to us by others. Next comes the arduous duty of avoiding that "instinctive theorizing," whence the fact looks to the eye as the eye likes the look. And in the end there is the obligation to decide what is the correct inference to be drawn from the facts, once granted that they are clearly established. To say in defence of challenged conduct, "I dealt with the facts," is no defence at all unless you are able to show that you first got your facts straight and then dealt with them properly.

A highly instructive contrast to Mr. Roosevelt's way of doing whatever he was asked to do in a time of financial

Digitized by Google

panic, is furnished in the recently published Life of Lord Goschen. He was Chancellor of the Exchequer at the time of the Baring failure and the threatened panic in 1890, and the extracts now first published from his diary and letters not only throw new light upon that affair but show how a trained and conscientious official met the crisis. Goschen, too, had the "facts" laid before him, just as Messrs. Frick and Gary presented them to President Roosevelt. We cite from the Chancellor's diary at the time:

> Sunday, November 9.—. . . Mysterious letter from Governor of the Bank, hoping I should be in town early to-morrow—very alarming. Monday, November 10.—To the Governor of the Bank. Found him in a dreadful state of anxiety. Barings in such danger that unless aid is given, they must stop. —— came in while I was there; almost hysterical. Governor and he both insisted that the situation could only be saved if Government helped. They must be helped by four millions. Bank would give one million, if Government would give the same. Others such as Rothschilds, Glyns, and banks must find the remainder. Picture drawn of the amount of acceptances held by various banks, which would have to stop. All houses would tumble one after the other. All credit gone. I entirely understood their reasoning, but remembering action taken in France when Comptoir d'Escompte was in difficulties, I said the great houses and banks in London must come together and give the necessary guarantee. This was declared impossible if the Government didn't help. From Bank I went to ——, hoping to induce them to come forward. I found —— and —— in a blue funk, very much demoralized. —— suggests the Government should say that they would save Barings. Preposterous! —— less wild, but said everything "must go to crash unless Government helped." I alone could save the situation. He wouldn't believe in the possibility of a guarantee fund without Government help. . . .

There could hardly be a clearer case of the "facts" being brought to the attention of a responsible official by the very highest financial authorities. But how did Goschen "deal" with them? He denied, in the first place, that they were the facts. In the second place, he withstood all the pressure to induce the Government to intervene where it had no business to step in, and insisted that *haute finance* pull itself out of its own quagmire, as, in fact, it presently did without any Government aid whatever. But, then, Goschen was a man who knew something about finance, and, besides, had some firm convictions about governmental duty which he would not lightly set aside at the request of financial magnates.

Behind the ex-President's avowal, or glorifying, concerning this particular occurrence, there is evidently a conviction on his part very like the one he evinced when he wrote to Mr. Harriman, "You and I are practical men." This is the creed of the political realist. No fine abstractions for him; only "the facts." It is the doctrine which Bismarck implied when he said that for a public man to cling to "principles" would be like trying to run along a narrow path through the woods with a long pole held crosswise in his mouth. This is a materialistic age, and the men who are most successful in it are those with a keen eye for the physical things that bulk largest. So it is that the triumphant assertion, "I dealt with the facts," comes as a kind of confession of faith in stark power and a worship of force.

In this, too, it cannot be denied that Mr. Roosevelt is a child of his time. Business and the professions are filled with men who take for their guide the maxim that one must deal with the facts. That moral considerations, that character, ideals, an heroic sense of duty, self-sacrifice for a cause, can ever be ranked as facts to be recognized, these men do not concede. When they say "facts," they mean gas or electricity, stocks or money. New York had an illustration of this brutalizing way of "recognizing the facts" in the career of the late John W. Gates. When he first descended upon this city, and for some years after, he was thought of mainly as an unscrupulous gambler. Leading financiers spoke of him as a dangerous man, to be shunned as well as despised. It was long before he dared to address himself to the most respectable houses. But finally his audacity and the very magnitude of his success as a "plunger" made him seem to be a power that could not be ignored; and so we had the infinitely demoralizing spectacle of Gates deferred to by leaders in the financial world, toadied to by a certain section of the press, and erected into a typically "successful" American. That is what comes of dealing with the facts. But the process and the result are such as to sicken one who believes that honor or self-respect is a "steel-cold fact" as truly as unlimited credit or the most boundless political power, and to make him pray Heaven for men who will refuse at any cost to prostrate themselves before grossly material facts which only trample their natures down into "congenial mud."

PUBLIC WORK WITHOUT PAY.

In introducing his bill for paying salaries to members of the House of Commons, the Chancellor of the Exchequer spoke of the bad effects of working for the public without pay. This was partly by way of reply to the resolution against the change, moved by Mr. Lee, which asserted that payment of members would be "an indefensible violation of the principle of gratuitous public service." But that principle itself Mr. Lloyd George declared to be ill-founded. "Why should the administration of the laws be paid for and the making of laws be necessarily gratuitous?" Moreover, argued the Chancellor, gratuitous public work leads straight to bureaucracy. "Take the bench of magistrates. There the work is gratuitous. But who really does the work? Why, the clerk to the magistrates. Where you have a mayor who performs gratuitous service, the work is getting more and more into the hands of the Town Clerk." Lloyd George gravely argued that it was demonstrably bad for the country "to get too much gratuitous work of this kind."

If this peril be great, it must be said that democracies do their best to avert it. We believe that there is a statute of the United States forbidding any man to work for the government without pay. This was doubtless an expression of the jealousy of Congress. It did not propose to leave it to the Executive to fill any offices which it had not created and over which, by forcing the Executive to come to it for the money for salaries, it could exercise a certain measure of control. But the darkest pessimists about our political conditions could not aver that we are suffering from too much gratuitous public service. In the Federal administration, as well as in the work of our States and cities, the rule seems to be that, while duties may be permissive, salaries are absolutely mandatory. If there is any rush of citizens to work for their country for nothing, the press has failed to report it. The zeal for public service which we do witness is of the sort that the French have come to call *empléomanie*, and this thinks of a "place" mainly for what it pays, and is entirely willing to take the cash and let the credit go.

Digitized by Google

On the main question of making the radical change of paying members of the House of Commons, there is, of course, much to be said of more weight than the alleged harmful results of gratuitous service. The old theory of the gentlemen of England meeting for a few weeks of the year to dispatch the nation's business has plainly broken down. The labor of Parliament has become intenser and more exacting. Sessions are more frequent and more prolonged, and the matters pressed upon the attention of the House of Commons are yearly more complicated and difficult. Doubtless there are still large numbers of capable Englishmen ready to sacrifice their time and pay their own expenses as members of Parliament, but the example of other countries, and the growing pressure in behalf of poor men with talent for public life, it has long been felt, would make the paying of Parliamentary salaries inevitable. As one of the Labor representatives, Mr. Ramsay MacDonald, said in the House, members without fortune or members not the sons of rich men, have "to live by their wits, by becoming directors of companies," or in other ways. And since the Osborne judgment made it unlawful for workingmen's unions to vote any part of their funds in payment of the expenses of their Parliamentary representative, the voting of a small salary to all members appeared to be the only way in which there could be Labor members. The change will seem an immense break with a theory and a tradition venerable with age, but England has been compelled to undergo many such shocks in recent years, and will survive without any real fear that the universal smash is at hand.

What is said either in England or this country about working for the public for nothing applies, of course, to official positions. The amount of non-official service patriotically rendered in both nations is very great and of the highest value. This has often been dwelt upon, and is one of the most hopeful things in our public life. That there are increasing numbers of men in our country able and willing to devote time and energy to all forms of civic activity, without pay and without hope of reward except in helping to get good work done, is a source both of strength and encouragement. Of the benefits that come through such means, we have before our eyes at this moment a vivid example in the discussions now going on concerning the proposed new charter for New York. Societies by the score and individuals by the hundred have come forward in the most gratifying way to do what they conceive to be a public duty. How much more the city owes to such men—the lawyers, bankers, educators, clergymen, philanthropists, and business men who have flung themselves unselfishly into this important contest—than to those it officially pays!

WHEN DOCTORS DISAGREE.

The Dean of the medical college of New York University was giving testimony before the commissioner in the case of Health Officer Doty, when some one brought up the practice of fumigation. Fumigation, declared this medical authority, is a delusion and a fraud born in superstition and fostered by the ignorant or unscrupulous for gain. This opinion ran parallel, almost word for word, with Bernard Shaw's declaration on the same subject in the preface to "The Doctor's Dilemma." The burning of sulphur in sick-rooms, our best-known iconoclast asserts, is about as efficacious as the practice of exorcism, of which it is a modern variant, differing only in the accompanying evil smell. When Mr. Shaw makes a heterodox assertion on a scientific topic, no great shock is imparted to common belief; if anything, the tendency is to believe more firmly what Mr. Shaw denies. But when a physician of high standing puts his foot through a common sanitary practice the result is bewilderment.

The fact is that the science and practice of medicine are being severely manhandled in the house of its friends. More destructive than the assaults of revolutionaries, Christian Scientists, and New Thought practitioners are the startling denials emanating from, or attributed to, well-known men within the profession. A few years ago Dr. Osler was widely quoted as maintaining that, with the exception of two drugs, mercury and castor oil, our entire pharmacopœia might as well be pitched overboard. Dr. Osler was doubtless misquoted, but the harm was done. The statement was seized upon with great glee by the opponents of orthodox medical doctrine and reiterated in season and out, with the result that many sober citizens must have been shaken. Mr. Shaw's bitter comments upon the bloodthirstiness of surgeons have been echoed by men eminent in the field of surgery. Respectable authority can be cited against the anti-toxin treatment for diphtheria, as also against vaccination. Hence we find ourselves in this peculiar situation: while newspapers and platform orators continue to boast of new advances made by men in the conquest of disease and death, physicians and experts frequently throw scorn upon the most cherished medical beliefs.

Subversive statements like that of the Dean on fumigation suggest the need of a universal congress of doctors at which the fundamentals of medical science might receive definite formulation, or at least full and authoritative discussion. Such a congress might be unsuccessful in drafting a creed, but it would supply thinking men with an opportunity to form a rational creed for themselves. In such a congress all schools of medicine and anti-medicine should be represented, but a fixed programme should prevent debate from ranging over the entire field of medical inquiry. We are not concerned with problems that are still in the experimental state. Consumption cures, cancer cures, opsonian treatment, anti-typhoid inoculation, radium therapy, starvation, the behavior of alcohol—these things the layman is content to leave to the experts until the experts themselves attain something like a common agreement. What an Ecumenical Medical Congress could thresh out for us would be the problems which the great majority of men to-day regard as completely solved.

We are aware that controversy is not lacking among the doctors. But chiefly it is controversy carried on in the seclusion of specialist publications of which the results never reach the general public, or reach it in mutilated, distorted, or, at best, fragmentary form. The great public takes its medical knowledge from the Sunday supplements, from which they learn successively that science can now create life, that bathing does more harm than good, that a cure for tuberculosis is near at hand, that X-ray therapy kills more people than it saves, that tuberculosis is on the increase, that cancer will soon be checked, that diphtheria is on the increase, that cancer is on the increase, that hydrophobia is on the increase and

Digitized by Google

the Pasteur cure is a fraud, that organic diseases can be cured by starvation, that starvation leads to madness and death. It is a welter of credulity and rumor that would be laughable if it did not so intimately concern the lives and the health and even the spiritual well-being of the community. For it is a fact that people will stake their own lives and health, and those of persons dear to them, on vagaries, wild assertions, and equally wild denials. And because every vagary or superstition always associates with itself some name high in authority, the mischief thrives the more.

Until a universal medical congress for the enlightenment of laymen can be assembled, why might not one of our enterprising newspapers set in motion an inquiry into the subject on a large scale? A detailed *questionnaire* might be addressed to a couple of thousand representatives of medical thought in every one of its phases, the world over. Such a list of questions should aim to set down in plain terms how expert opinion is divided on important matters. Is vaccination desirable? Will cleanliness prevent the transmission of disease? What is the case for the vaccines and the serums? What about food, alcohol, tobacco, sleep, exercise? What about exertion and fatigue? Simple questions these, but questions on which enormous divergences of opinion continually manifest themselves. What we want is a definitive pronouncement partaking of the nature of a creed. There would be dissenters and heretics, no doubt. But even then we should be better off than we are.

NEWS FOR BIBLIOPHILES.

In John Payne Collier's "Account of the Rarest Books in the English Language" there is a description of Sir George Peckham's pamphlet "A True Reporte of the late discoveries and possessions, tak n in the right of the Crowne of Englande, of the Newfound Landes. By that valiant and worthye Gentleman, Sir Humphrey Gilbert, Knight," printed in England in 1583, and some extracts are made from the preliminary verses which precede the narrative. Collier's copy, from which his description seems to have been made, at the sale of his library in 1884, brought £210 and was bought by the late Charles H. Kalbfleisch. After his death, by gift of Alexander Maitland, it passed into the Lenox Library, and it is now one of the books displayed in the exhibition cases in the new library. There are two copies in the British Museum, one being imperfect, but, though the book is mentioned by both Lowndes and Sabin, until a few months ago no other example could be traced. A copy which was sold by Sotheby, Wilkinson & Hodge last March, bringing £300, is now in a private library in New York; a comparison with the New York Public Library copy shows that, in part at least, the types were twice set. The textual difference seems to be only in the preliminary matter, there being nine preliminary leaves in the new copy and only seven in the library copy. The title and dedication (to Sir Francis Walsingham) are alike, apparently, in both. "The Table of the Chapters" has been reprinted, the first line ending "con-" in one copy and "contai-" in the other.

Then follow, in the Public Library copy, as described by Collier, and partly reprinted by him, commendatory poems by Sir William Pelham, Sir Francis Drake, M. John Hawkins, Maister Captaine Bingham, Maister Captaine Frobisher, Mathew Roydon, and Master Anthony Parkhurst, filling six pages, the verses by Frobisher and Roydon being on one page. In the newly discovered copy the Frobisher verses have a page to themselves, those by Roydon are transferred to the next page, and with them is a new poem by Maister Captaine Chester, and following all are two new poems by Arthur Hawkins and John Achelley, each occupying a full page. The verso of the last preliminary leaf is blank.

The text of the book was reprinted by Hakluyt, and so is well known. At the end, filling five unnumbered pages, is "The Contentes of the Articles of Assurance, betweene the Principall assignes of Sir Humfrey Gilbert Knight, and the four sortes of adventurers, with them in the voyage for the Western Discoveries." These leaves differ slightly in the two copies. The first page in the public library copy has the catchword "just," while in the other copy it has "portion."

Not solely on account of its rarity but also on account of its intrinsic importance would this book take a high rank in any collection of Americana. Gilbert was granted his first patent by Queen Elizabeth on June 11, 1578. He did not, however, put foot upon American soil until August 4, 1583, when he landed at St. Johns, Newfoundland. On the next day he took possession of the land "in the right of the Crowne of England by digging of a Turfe and receiving the same with a Hasell wande delivered unto him after the manner of the lawe and custome of England." That event is recorded in this book by Peckham. Nor was Gilbert with his four ships alone, for we are here informed that the fishing fleet in St. John Haven "Englishmen and Strangers" were "in number betweene thirty and fortie sayle." On September 9, 1583, Captain Edward Hay arrived in England, but, in his words "of Sir Humfrey as yet, we heare no certaine newes." Gilbert had sailed in the smaller boat, the "little Frigat," the Squirrell, "seeming to him most fitt to discover and approche the Shoare," and the boat had gone down in a storm. The pamphlet was distributed to induce settlers, but like so many other first efforts at colonization, nothing came of it.

The laudatory verses by such voyagers as Sir Francis Drake, Martin Frobisher, and John Hawkins, the last two not yet knighted, are of great interest. Drake had returned three years before from his circumnavigation of the earth, Frobisher had made three voyages to the Arctic regions, and Hawkins, pioneer Englishman in the slave trade, had suffered adventures of many kinds on the coast of Africa, in the West Indies, and on the Spanish Main. We do not often think of these men as poets. We may, however, quote here the six lines by Frobisher:

A pleasaunt ayre, a sweete and fertill soile,
A certaine gaine, a never dying praise,
An easie passage void of lothsome toile
Found out by some, and knowen to mee the wales:
All this is there, then who will refraine to trie,
That loves to live abroade, or dreades to die?

Correspondence

MORE RECORDS OF THE FEDERAL CONVENTION.

TO THE EDITOR OF THE NATION:

SIR: The publication recently of Max Farrand's compilation of the "Records of the Federal Convention of 1787" adds interest to two papers which have been discovered since the book appeared and are now in the Library of Congress. They were a part of Madison's notes, but, becoming separated from the main groups of his papers, passed to the auction room a few weeks ago after seventy-five years of obscurity. They relate to George Mason's participation in the work of the Convention, and are contemporaneous with the meeting. Both were annotated by Madison in his old age, when he was arranging his papers for posthumous publication. The one which I shall give first has this note at the top:

Paper in the handwriting of Col. George Mason & without date; probably handed to Mr. Madison on the 31 May when the subject was under debate.

This is in the hand of John C. Payne, Madison's brother-in-law, who acted as his amanuensis for many years after his retirement at Montpelier, and under his direction transcribed The Madison Papers which were published in 1840. The paper follows:

In the choice of the Senate, there is a material Differrence between classing differrent Districts of the same State for the choice of Deputies or Sub-electors, to appoint the Senators for their State; & classing together differrent States for that purpose—in the latter mode, there wou'd be confusion, by blending together, in the choice, the Representations of differrent States.—The principal objection to each State's choosing separately, seems to be in the Danger of making the Senate too numerous; as the smallest State must have an integral Vote in the Senate & the larger States in proportion.—

Might not this objection be obviated, by apportioning duly the Representation to each State, giving the smaller States an Integer, & confining the larger States to sending a smaller number of Senators than their proportion, to deliver their due number of votes? This method wou'd perhaps be exceptionable in the first Branch of the Legislature; but the objections do not apply, with equal Force, to the Senate.

These observations were written on the third day after the Convention got to work, the Virginia resolutions having been introduced on May 29. The Convention had resolved that a national government, consisting of a supreme executive, legislative, and judiciary ought to be established, and that the Legislature ought to have two chambers. It had agreed that one cham-

Digitized by Google

ber ought to be elected by the people; and had then considered the clause of the Virginia plan which provided "that the members of the second branch of the national Legislature ought to be elected by those of the first, out of a proper number of persons nominated by the individual Legislatures, to be of the age of —— years at least"; etc.

The idea that representation in the Senate as well as the House should be proportioned on the population and wealth of the States had already been submitted to the Convention and passed over, although it was evidently relished by a majority of the members; but the debate showed that nobody had as yet formed a definite notion of how the second chamber should be constituted. According to Pierce's notes George Mason opposed election of members of the second branch by members of the first branch, because this would cause delay and expense in filling up vacancies and would make that branch too dependent upon the first branch; and Charles Pinckney said he meant to propose to divide the continent into four divisions, out of which a certain number of persons should be nominated, and out of these nominations to appoint a Senate. Some such idea was running through Madison's mind, for, when Wilson proposed that Senators might be elected by uniting several election districts, he said it would destroy the influence of the smaller States associated with larger ones in the same district, as the Senator would always be chosen from a larger State. The plan of government of Virginia, drawn up by George Mason in 1776, had provided for an upper house of the Assembly, to consist of twenty-four members to represent twenty-four districts formed from the counties. Each county when electing its two members of the lower house was at the same time to choose twelve sub-electors' who were to choose a member of the upper house for the district. Mason's memorandum, handed to Madison during or immediately after the debate, shows that the Virginia delegates had been experimenting with this idea in a modified form for the Federal upper house, but that Mason thought election to both houses might better be by the States than by districts, and that he was not in accord with this part of the Virginia plan.

The second memorandum is in Madison's hand and is endorsed by him as follows:

The within paper communicated to Js. Madison Jr by Doctr McHenry March 16, 1788, with a note subjoined that it was given by Mr Mason to one of ye Maryland deputation for yr consideration with information that if the alterations could be obtained the system would be unexceptionable. Their concurrence & assistance to carry them was requested.

A note says the clauses marked with a cross (here printed with an asterisk) were concurred in by the Maryland deputies, and that the final clause was agreed to by some of them. The paper reads:

The Council of St: instead of being formed out of ye. officers of the Great Depts. to consist of not less yn. 5 nor more yn. seven members to be constd. and appd. by law.

*The objects of ye. natl. Govt. to be expressly defined. instead of indefinite powers under an arbitrary construction of genl. clauses.

Laws disapproved by ye. Executve. not to be re-enacted but by a majority of ¾ instead of ¾ of the Legislature

*No law in the nature of a navigation act to be passd. but by a majority of ⅔ of the Legislature

*The duties imposed upon imports by the natl. Govt. to be the same in all the States.

The Legislature to be restrained from establishing perpetual revenue.

Laws for raising or appropriating revenue or fixing ye. salaries of officers to originate in the House of Reps.

The power of making Treaties & appg. ambasrs. &c to be in ye. Senate with the concurrence of ye. Council of St: or vice versa

The appointmt. to all offices estabd. by the legisl: to be in the Executive with ye. concurrence of ye. Senate.

The Members of both Houses to be ineligible to offices under ye. genl. Govt.: except to commands in ye. army or navy: their seats to be vacated during their holding such commands.

The President [torn out] ye. U. S. to be ineligible a second time

August 31, 1787.

In the progress of the debate Mason stated all of these propositions, except that concerning the imposition of import duties, which is a little puzzling, for it was agreed to on August 31, the day the memorandum was handed to Dr. McHenry. The Maryland delegates who agreed to his proposition concerning the ineligibility to reëlection of the President were Luther Martin and John Francis Mercer, who, like him, did not sign the Constitution. The State voted for re-eligibility.

GAILLARD HUNT.

SAINTE-BEUVE AND MACAULAY.

To the Editor of The Nation:

Sir: The inquiry by Gamaliel Bradford, jr., in the *Nation* of August 10, concerning Sainte-Beuve's quotation from Macaulay, gives me a welcome opportunity to render the slight service he asks.

Sainte-Beuve translates, very freely but without damage to the central thought, a paragraph from Macaulay's essay on "History." This paragraph in my edition (Harper 1880) is on page 162, in volume I of the "Miscellaneous Works." It begins: "No picture, then, and no history, can present us with the whole truth; *but those are the best pictures and the best histories which exhibit such parts of the truth as most nearly produce the effect of the whole,*" etc.

CHARLES H. GENUNG.

THE GALVESTON PLAN OF GOVERNMENT.

To the Editor of The Nation:

Sir: The widespread interest in municipal reform and the pronounced tendency to experiment with the commission form of city government have given especial importance to the Galveston Plan—which has operated with notable success since 1901. It is somewhat unfortunate, therefore, that the two works of reference issued this year which will probably be most relied upon for a compendious statement of the Galveston Plan—the new Britannica and The American Year Book—leave the subject with some errors and ambiguities.

Concerning the evolution of the present Galveston charter, the Encyclopædia Britannica says:

The city's commercial experts, the Deep Water Commission, . . . drew up a charter providing for government by a board of five appointed by the Governor of the State. A compromise measure making three members appointees of the Governor and two elected at large by the voters of the city was in force for a time, but was declared unconstitutional. A third charter was adopted providing for five commissioners, chosen by the people . . .

Bearing in mind the inexorable limitations of space with which encyclopædia writers contend, it is perhaps gratuitous to cavil at this; yet in so far as it suggests that the first charter was ever in operation, or that the compromise charter was the result of dissatisfaction of Galveston citizens with the first one, it is inaccurate. The fact is that the first charter failed of passage in the State Legislature because it was thought to violate the right of Galveston to local self-government, and the second was granted as a legislative compromise.

Passing to a description of the Galveston government, the Encyclopædia says:

The legislative power is vested in the commission as a whole, over whose meeting the Mayor-President presides; he has no vote save in the event of a tie, and has no veto power. . . .

The error here consists in denying the Mayor the right to vote. According to the charter his voting privilege is exactly on a parity with that of the other commissioners.

The ambiguity in The American Year Book arises from the writer's discussing under the caption, "The Galveston Plan," general features of commission government, notwithstanding the fact that his previous caption is "The Commission System." After a brief paragraph on Galveston he gives President Eliot's definition of commission government, and then in the following paragraph says:

Significant features of the plan as set forth by its advocates (in this instance the analysis of the Charleston Community Club is utilized) in addition to those already mentioned are [among others]:

Power to initiate desired legislation reserved in the people . . . this right being known as the initiative:

Power to call for a public vote on any measure adopted by the commission, before given effect as law, reserved in the people —this being known as the referendum;

Power at any time to make any member of the commission stand for reëlection reserved in the people—this being known as the recall.

It would be an error of fundamental importance to attribute these provisions to the Galveston charter. The people have no power of initiating legislation, except in so far as any citizen may offer suggestions to the commissioners. There is no provision for a general referendum, but in making contracts involving the expenditure of sums above five hundred dollars, the commissioners must advertise and award the contract by majority vote to the lowest responsible bidder, and no franchise can be granted before full publication on three several days of its exact terms. And the charter provides for no recall; commissioners may be removed by judicial process alone before the regular courts. To this thoughtful citizens of Galveston are inclined to credit much of the success of their government.

I would not be understood as saying that the Year Book ascribes these features to the Galveston government, but a reader who had not previously studied the Galveston charter might easily gain the impression that it does so ascribe them.

THE HON. CHARLES PINCKNEY, LL.D.

TO THE EDITOR OF THE NATION:

SIR: Of late years, much attention has been given by experts in American history to a study of the career of Charles Pinckney, one of the delegates from South Carolina to the Philadelphia Convention of 1787. I am not aware, in this connection, that any scholar has ever called attention to the fact that there are in existence two slightly different title pages to Pinckney's well-known pamphlet which first appeared in print soon after the Convention adjourned in September, 1787. The title of the pamphlet, as listed by Joseph Sabin in his "Dictionary of Books relating to America" (xv, 128), reads:

Observations on the Plan of Government submitted to the Federal Convention, in Philadelphia, on the 28th of May, 1787. By Mr. Charles Pinckney, Delegate from the State of South-Carolina. Delivered at different Times in the course of their Discussions. *New York: Printed by Francis Childs.* [1787] Sm. 4to, pp. 27.

The late Paul Leicester Ford, in his "Pamphlets on the Constitution of the United States" (1888), p. 419, gives almost the same title, but has this variation:

By the Hon. Charles Pinckney, Esq., L.L.D., Delegate, etc.:

The pamphlet described by Sabin is to be found in the Boston Athenæum Library; that of Ford in both the Yale Library at New Haven and the Watkinson Library at Hartford. A page-by-page comparison of the texts of the two pamphlets shows no differences of language. It is clear that for some reason two slightly differing title-pages were printed. Why should the "L.L.D." have been added in one case and not in the other?

In a vain effort to answer this question several months ago, I was able to obtain one item of information from Dr. E. C. Richardson, librarian of Princeton University, which has some slight historic significance. It appears that the degree of LL.D. was voted to Pinckney by the authorities of the College of New Jersey, under date of April 18, 1787, about a month before the assembling of the Convention at Philadelphia. The transcript of the record reads:

The board considering the literary character and reputation of the Honorable Charles Pinckney Esqr. delegate to Congress from the State of South Carolina Resolved That the degree of Doctor of Laws be conferred on the said Charles Pinckney Esqr., and that the president of the board prepare and forward to him a diploma of his degree.

This looks very much as though Pinckney's degree was probably conferred *in absentia*. The supposition is strengthened by the fact that at the regular commencement exercises which took place on the following September 26, 1787, there was no mention of Pinckney's name. On the preceding day the board, according to the Princeton records, voted the doctor of laws degree to James Madison; and this degree was duly conferred on Madison on the 26th, as the account of the exercises which appeared in the *Pennsylvania Packet and Daily Advertiser* of Saturday, October 6, 1787, clearly indicates. Charles Pinckney, it is worth recalling, was born in 1758. He was consequently about twenty-nine years of age. He was not quite the youngest member of the famous convention, for Jonathan Dayton of New Jersey was born in 1760, and John F. Mercer of Maryland in 1759. But it is curious that he should have been deemed worthy of the degree before Madison.

HENRY BARRETT LEARNED.

ANACHRONISM IN THACKERAY'S "ESMOND."

TO THE EDITOR OF THE NATION:

SIR: In your issue of July 27 you published a communication from W. E. A. Axon, in which he points out that in "Esmond" Thackeray makes one of the characters refer to Peter Wilkins and his "Glawrie," though this was not published till 1750, the date of the action being 1712. I had already drawn attention to this anachronism in the Introduction I wrote for the edition of "Esmond" published by George Allen in 1896, p. xxvi; but I there suggested that some sort of a defence might be made by remembering that Col. Esmond is supposed to be writing his history in old age, somewhere in the "50's" of the eighteenth century. The lapse might thus be a failure in Col. Esmond's memory rather than an anachronism in Thackeray's presentation. In the same Introduction, however, I pointed out two or three other slight inaccuracies; so perhaps this defence of Thackeray is too subtle.

JOSEPH JACOBS.

Literature

THE AMERICAN CONSTITUTION.

The Origin and Growth of the American Constitution. By Hannis Taylor. Boston: Houghton Mifflin Co. $4 net.

This is neither a textbook of constitutional law nor, in the usual sense, a constitutional history; but rather, as the elaborate title-page declares, "an historical treatise in which the documentary evidence as to the making of the entirely new plan of Federal government embodied in the existing Constitution of the United States is, for the first time, set forth as a complete and consistent whole." The "entirely new plan" in question, that of a Federal Union with adequate financial powers, appears to have been first clearly set forth by Pelatiah Webster, in a pamphlet entitled "A Dissertation on the Political Union and Constitution of the Thirteen United States of North America," printed at Philadelphia in February, 1783. The recent reprint of this interesting document, and its wide dissemination through the pages of the *Congressional Record*, have called attention, virtually for the first time, to what is undoubtedly the most important single documentary anticipation of the Constitution; and places Webster, hitherto known chiefly as a writer on finance, in the front rank of early American publicists.

Mr. Taylor undertakes to show, by elaborate and detailed study, the indebtedness of Hamilton, Madison, and Pinckney to Webster's pamphlet. The evidence is not, indeed, direct, since no one of these three statesmen explicitly acknowledged Webster as the source of his suggestions; nor was the pamphlet apparently a subject of discussion in the convention. On the other hand, the significant points of correspondence between Webster's proposals and the Constitution, the absence of any similar plan in the period between 1781 and 1786, and the prominence of Webster in public life, are elements in an argument which, as a whole, may fairly be regarded as conclusive. At any rate, the story of the origin of the Constitution must henceforth be told in the light of what Mr. Taylor very properly regards as a discovery; and for his own connection with that discovery he is entitled to hearty praise.

It would be gratifying if equal commendation could be given to the workmanship of the volume as a whole, or to the treatment of its other important topics; but at these points approval must at times be seriously qualified. Doubtless it is too much to expect that Mr. Taylor should openly reject the theory of "unbroken political development" of American institutions from Anglo-Saxon times, set forth so prominently in his well-known work on the English Constitution; but it is at least surprising to find that theory, no longer held by any considerable number of scholars, put forward again here in its baldest form, as the historical basis of an elaborate chapter on the "evolution of the typical American State." Once he gets past the days of barbarian beginnings, Mr. Taylor is on surer ground: he knows his English history pretty well, and draws his information, more largely than in his earlier work, from primary sources. He does well, for example, to point out (p. 78 *et seq.*) that the prevailing constitutional theory in England as to the rights of the subject, at the time the American Union was formed, was that stated by Blackstone, in which were embodied the far-reaching results of the revolutions of 1640 and 1688; and not the older theory of Coke, which embodied the earlier ideas of royal prerogative. He very properly criticises the Supreme Court, in such earlier cases as Davidson vs. New Orleans, for its historical error at this point.

One cannot but wish that Mr. Taylor had taken pains to fortify himself as well in American history as he has in the history of England, and had read with more care some of the documents which he cites; though possibly too much thoroughness should not be expected of an author whose reliance seems to have been, almost exclusively, on a handful of secondary narratives. It is wide of the mark, for example, to say (p. 97) that the Massachusetts charter

Digitized by Google

based upon a certain awful obscurity; and with any influence that reaches beyond expert philosophical circles, niceties of argument have, it is to be feared, less to do than most philosophers like to suppose. It is not always even the novelty of a conception that renders it epoch-making; for not a few "revolutionary" ideas have owed their potency to the fact that several little-regarded and unremembered men have by much iteration rid those ideas of the too-keen edye of their novelty, before the one man came who was to make them a universal possession—and thereafter to pass for their originator. Thus the exposition of the meaning and merits of a philosopher's teaching is not necessarily equivalent to an explanation of his influence and his place in history. An understanding of the latter would presuppose not merely a study of the writer himself, but of the reactions of both his disciples and his adversaries upon his ideas, and a determination of the precise factors in his doctrine which most effectually appealed to the intellectual presuppositions and the imaginative needs of the age which he influenced. Such an inquiry would be of especial value in the case of a writer like Kant, who presented, not one idea, but a vast medley of conceptions poorly excogitated and imperfectly harmonized. A searching and detailed analysis of the causes of the amazingly great and rapid vogue of the "Critical Philosophy," and of the growth of Kant's fame, would be an uncommonly interesting contribution to the psychological interpretation of the history of thought.

Professor Wenley, whose learning would have qualified him for the task, has not chosen to undertake this inquiry on any considerable scale. His book concludes, indeed, with a short chapter on the reception and diffusion of the Kantian doctrine; but for the most part it merely does over again in a competent manner what has often been done before. The best and freshest part of the volume is that which seems least pertinent to the present series—the account of Kant's life, character, and social environment, to which a full third of the work is devoted. The story has seldom been so well told. Professor Wenley puts before us chiefly the Kant of his prime and middle life, not the serio-comic valetudinarian of Heine's famous picture. Good use is made of recent German studies concerning Kant's personal history. The exposition of the system presents not much that is novel or noteworthy. Such slight criticism as is offered is chiefly of a sort that British neo-Hegelianism has made familiar. Some traditional errors and exaggerations are repeated, notably the usual over-estimate of the originality and historic importance of Kant's "Theory of the Heavens" of 1755.

The Life of George Joachim Goschen. By Arthur D. Elliot. 2 vols. New York: Longmans, Green & Co. $7 net.

When Lord Goschen published in 1903 the Life of his German grandfather, John Morley wrote to tell the author how much he liked the book, saying, "it is graphic, objective, vivid, cheerful, just as a biography ought to be." Only one or two of those adjectives, and that with qualification, could be applied to Mr. Elliot's Life of Lord Goschen himself. It is a dignified and discreet performance, written without undue partisan heat—though the biographer makes no concealment of his strong political convictions and argues them rather needlessly—but it is so "objective" as to leave on the reader the impression that Goschen was, indeed, a full-blooded and efficient statesman but a somewhat shadowy man. So few are the touches that could be called *intime* that the deliberate purpose seems to have been to write only of the public man. Exception made of the first chapter, Early Years, which very happily and instructively describes ancestry and education, and shows how an ideal strain derived from Weimar blended in Goschen with a hard English matter-of-factness, nowhere in the two volumes does one find much of his private life or personal interests. He was a man of reading and of wit, a chosen companion of choice spirits, but all this is barely hinted at. The biography is one of the Member of Parliament, the Minister, the first Viscount Goschen, not of George Goschen the man.

Thus self-limited, the work has much to commend it, and is a real contribution to English political biography and to the history of English parties during the past thirty years. The rôle played by Goschen was never first, but was one of great distinction. His City training, combined with natural aptitudes and enormous industry, early gave him an authority in finance which he held throughout his life. In his last years he could point to the fact that Consols, which he had reduced from "the sweet simplicity of the 3 per cents" to 2½, were still above 90; it might have staggered him had he lived to see them go below 80; though even then his explanations of the rise in the rate of interest would have been illuminating. How sound he was as a financier, and how correct his ideas of the relations of government to banking, these pages show in their account of the Baring failure in 1890, when Goschen was Chancellor of the Exchequer, and when he resisted great pressure to induce him to come to the rescue with public funds, compelling the banks to stand together and save the situation themselves.

Politically, however, Goschen will be longest remembered as one of the Liberal leaders who in 1886 broke with Gladstone and the majority of their party on the question of Irish Home Rule; and again as one who, after becoming a Conservative and taking office as such, refused to follow Chamberlain, and the party machine which had been captured, in the proposed return to the policy of protection. These two historic displays of political independence indicate the fine quality of Goschen and help to account for his influence. He put principle higher than party and would not allow a caucus to dictate his convictions. This sort of proud maintaining of his own intellectual and moral integrity often got in the way of his political advancement, but it lent peculiar weight to his name in the two crises mentioned. Goschen was a man of moderate opinions for which he was yet prepared to contend with all the zeal of an extremist. As he himself once humorously said, he was "a violent moderate man." As such he often got a hearing where a red-hot partisan could not. These volumes naturally give many letters and extracts from journals bearing upon the two party revolts in which Goschen took part, yet add little that is new, certainly nothing that is startling, to our knowledge of the events and manœuvres of those periods. An occasional bit of characterization or anecdote lightens the narrative. When Gladstone was giving his first inklings of a leaning to Home Rule, Lord Arthur Russell wrote to Goschen about seeing Lord Derby, who asked: "How did you find the great chief when you were at Hawarden?" "When I saw him last he was much troubled by the immoral means which were used to bring about the Union; he felt that a great national sin had been committed and his conscience was troubled." "Oh, damn his conscience!" answered Lord Derby.

Toy Dogs and Their Ancestors. By Hon. Mrs. Neville Lytton. New York: D. Appleton & Co. $7.50 net.

According to Mrs. Lytton's statement, she wrote this book on toy dogs "because no one seemed to know anything about them or their history," and because "historians have been contented to repeat the errors of their predecessors," and because "editorial offices are hotbeds of suppression, and the work of the reporters at shows is so blue-pencilled by the editors that there is no such thing as criticism." This is a sweeping charge in view of the fact that nearly all her history of the dogs of which she writes is quoted, to the extent of about 200 pages, and that she rarely questions what she quotes. As to the suppression of facts by editors, she offers nothing more than general charges, except changes in articles which she has written. Possibly the wording of her articles may have been as vague as the

Digitized by Google

advertisements she published when preparing to write the present book. She complains that she advertised for pictures of spaniels, and received cigars, crocodile skins, incubators, and engravings of prehistoric beasts; she then withdrew her advertisement from the papers and went to the British Museum, where she studied the "errors" of historians for many months.

In spite of all this, however, Mrs. Lytton has written an interesting book on the toy spaniels and Pomeranians, declaring that she knows nothing of some of the other breeds of toys and little of the rest. She concludes her investigations with the statement that "compiling a history of the spaniel breeds is unravelling a Chinese puzzle; and the King Charles is not a King Charles, the Blenheim is not a Blenheim, and the Pomeranian is not a Pomeranian at all." All this is nothing new, for it has been stated in as many words many times before. As a matter of fact, the history of the various breeds of dogs matters little to owners or breeders. A dog in an exhibition stands for himself alone. He may or may not have a pedigree, and yet sweep all before him. How to produce the type which will win is the main object of all breeders, and any one of authority who writes on that subject is welcome. In this respect Mrs. Lytton gives much valuable information. She has bred winners, and many of them; she knows what winners should be, and how they should be shown. On some minor points she will be contradicted—all breeders are—but in the main her methods will meet with approval.

When Mrs. Lytton takes up the subject of judging, however, she falls into the same error as in her introduction, for it is not only unwise, but without the facts, to say that "the whole fabric of modern judging is utterly unsound, while the club judges are bound by club regulations which prevent the exercise of private judgment." This sounds like the wail of a disappointed exhibitor rather than of one whose aim is declared to be for better things in the dog world. She gives the points demanded by the toy spaniel clubs, says they require total revision, and on no other authority than her own. Surely, the men at the head of the clubs have not set those points without considerable study and consultation. Can it be that all other breeders and judges of toy spaniels have been groping in the dark for years and that she alone knows what the dog should be? When she says that the Pomeranian is the noisiest of all breeds, one wonders if she has never for any length of time been within earshot of the collie, with his ear-splitting bark which resounds from dawn until dark and sometimes much longer. It is true that there are a few noisy Pomeranians, but there are only a few quiet collies.

Much credit is due to Mrs. Lytton for her crusade against monstrosities in spaniels, and especially for her agitation against the abnormal development, or, rather, lack of development of the nose. The monstrosities in this respect which have been favored of late in bench shows should speedily disappear. There is nothing beautiful in a toy spaniel with virtually no nose at all, and the snuffling beast of this type should be extinguished. This does not mean that we should return to the pointed nose: surely there is a happy medium, and Mrs. Lytton is undoubtedly seeking it.

The book is copiously illustrated—better than most books of its kind—and the letterpress is notably free from typographical errors.

Adam Mickiewicz, the National Poet of Poland. By Monica M. Gardner. New York: E. P. Dutton & Co. $3.50 net.

Aside from the work of Sienkiewicz and of certain other modern novelists, the literature of Poland is probably less known to English readers than that of any other important nation in Europe. There is no systematic treatise on it in our language; except for articles in encyclopædias and the like, one must depend on the translation of Brandes's "Poland," a disorderly work, written with more enthusiasm than knowledge. Mickiewicz (1798-1855), the leader of the three great romantic poets of his country, and one of the chief literary figures of Europe during the nineteenth century, is only a name, or perhaps less than a name, even to professed students of foreign literature. Few of his works are accessible in our language. His masterpiece, "Pan Tadeusz," has been rendered into English by Miss Biggs (London, 1885), but this translation, long since out of print, is so bald and harsh that it gives only the faintest idea of the beauty of the original.

Under such circumstances, any book on Mickiewicz would be a boon. To the present volume, however, one can give much more than perfunctory praise. Miss Gardner writes with ample knowledge of her topic, after study not only of the works of Mickiewicz himself, but of the most important Polish treatises on his life and writings. Though she is perhaps not a trained literary critic, she shows skill in exposition, and genuine enthusiasm and sympathy for her great subject. She gives summaries and appreciations of Mickiewicz's chief works, "Konrad Wallenrod," "The Ancestors," "The Books of the Polish Nation and of the Polish Pilgrimage," and "Pan Tadeusz," accompanied by dignified prose translations of some of their most striking passages, and she narrates the facts of his life simply and clearly. His personality, gentle, generous, dreamy, filled with the mysticism that was so characteristic of his nation in its period of sorest trial, is described with a charm that must win the heart of the most prosaic of readers. The life of Mickiewicz was a most poignant tragedy. After the completion of "Pan Tadeusz," at the age of thirty-six, he wrote no more poetry. Seven years later he fell under the spell of the "prophet" Towianski, who wrecked not only his outward prosperity, but ultimately also his inward peace and the power of his intellect. A prey to mystic broodings, full of fantastic hopes for the regeneration of Poland that rose anew after each defeat, he wasted away, a man bowed by age and sorrow while still in the prime of life. Telling this pathetic story with rare understanding, Miss Gardner has made plain why and how the great poet truly represented the ideals of his people, and why he will doubtless always remain their reverenced and beloved national poet. Only good translations are now required to give the English public a real acquaintance with the master spirit of Polish letters.

Vorlesungen über den Islam. Von Ignaz Goldziher. Heidelberg: Carl Winter's Universitätsbuchhandlung.

For years, we have been looking expectantly to Goldziher for a connected treatment, in brief or at length, of the institutes of Islamic theology, law, and philosophy—as these have been moved by or have reacted upon the fundamental attitudes and constitution of the Moslem state and the ideas and usages of its inhabitants. No other Arabist has, or has ever had, anything like the same width of knowledge in these subjects as he is universally admitted to possess. And if it cannot be broadly laid down in the slang of the street that what he says necessarily "goes," it is only because he has created a school of younger Arabists, who, *longo intervallo*, are trying to follow in his footsteps. We who study these things are all his pupils; we know that he commands the whole field in a way that we do not, and when we disagree with him in details, it is with an uneasy consciousness that the presumption is rather that he is right.

Any general view of Islam, then, which he gives us is to be received with gratitude and respect. We might wish that it had been much longer, and all must hope that the present sketch will, in time, be expanded into a detailed treatment. Certainly, an English translation is a pressing necessity. Very many persons nowadays are interested most practically in Islam who cannot read German, and just as this book stands alone in German, so would its translation in English. This is all the more to be urged as it was only by an unhappy accident that such a transla-

Digitized by Google

tion did not form one in the series of American Lectures on the History of Religions.

The book falls into six lectures on Mohammed personally and the origins of Islam; on usage and tradition, and on the development of canon law with its bases and schools; on the development of dogmatic theology; on asceticism and mysticism; on the sects in Islam; on the latest developments and the modern situation. But to each of these is added a mass of notes and references, which amount to above sixty pages in all, and which furnish a great part of the value of the book for the student. When he has worked his way through them and, especially, has traced out and read the array of Arabic references, he will have gone through such a discipline as he can obtain in no other way, and will have gained much in his breadth of view. In doing this, it will be well for him to register his discoveries in additions to the index. For it must be said that the index is the unsatisfactory part of the book. It extends to nearly twenty pages, but could easily, and with great advantage, be two or three times as long. Important rubrics are omitted and for others only a few of the references are given.

It is manifestly impossible to deal exhaustively with such a book. But among outstanding treatments that of the Mu'tazilites is especially masterly. More plainly than ever before, their relationship to the early ascetics is worked out, and the error of imagining that they were in any sense liberal free-thinkers is exposed. Their permanent victory would have landed Islam in a scholasticism even more intolerant than it eventually reached. This is one side of the constant puzzle of the East. The party and the individual to whom we should naturally look for a spirit of freedom and progress is apt to set back into an even narrower and more embittered attitude than that of the broad and unmoved orthodox. Breaking away from easy-going and indolent tradition appears of necessity to lead to fanaticism, and an educated Moslem, indoctrinated in modern European civilization, and thoroughly conscious of the weakness of Islam, will hold that there is nothing for it but to go back to the reactionary puritanism of the Wahhabites.

Another illustration of the same tendency is the fact here brought out (p. 302) that Beha and his followers often loosely called the Babites, although we should expect to find them in the liberal camp, are frank opponents of the recent revolutions in Turkey and Persia. In Prof. E. G. Browne's "Persian Revolution" (pp. 424-429) the same paradox is discussed, and the view is urged that Beha enjoined upon his followers abstention from political activity because their aims should be wholly spiritual. Yet there cannot be much doubt that a party led by an inspired and almost divine leader cannot logically act and choose for itself, and the utterances of Beha himself indicate a genuinely legitimistic dislike of the new word and idea, *hurriya*, "freedom."

On page 13, a view which suggests to Professor Goldziher the speculations of Marcion could be given a higher authority, it is fundamentally Pauline. On p. 293 by a slip the Wahhabite state is dated "ein halbes Jahrtausend" after the Medina of the seventh century, instead of "ein Jahrtausend." In note 4 on p. 29 exception is taken to the inference, from the absence of a word for "interesting" in Arabic and Turkish, that these peoples do not know the disinterested curiosity which we so strangely call "interest." It is true that the mere absence of a word is no proof; in ancient Greek, for example, there does not seem to be any simple way of expressing that very idea. But encyclopædic Moslem writers regularly divide the sciences into the praiseworthy and the blameworthy, and teach that all which is not of direct use and moment for man's life in this world or for his eternal salvation is to be reckoned as blameworthy. The good Moslem should study the useful only, and it is for his soul's peace to wash his mind clear of the merely interesting. That is a part of his Islam, "surrender" to Allah. This utilitarianism of Islam is one of its most "interesting" and curious aspects.

But, excepting whatever we may except, the attitude of all users of this book must be one of homage and gratitude.

Notes

Stanley Weyman will furnish the preface for the complete edition of his stories which Smith & Elder will issue in the next few months.

Edward Alsworth Ross, professor of sociology in the University of Wisconsin, is publishing through The Century Co. the results of his studies in China in a volume entitled "The Changing Chinese."

Ian Hay's new novel, "A Safety Match," and "A Country Lawyer," by Judge Henry A. Shute, are announced by Houghton, Mifflin Co.

Sturgis and Walton have in preparation: "Their Majesties as I Knew Them," by Xavier Paoli; "Recollections of an Officer of Napoleon's Army," by Capt. Blaze, translated, and "The Christmas City: Bethlehem Through the Ages," by Lewis Gaston Leary.

Messrs. Methuen will bring out during the coming season: "Maurice Maeterlinck," by Edward Thomas; "The Ballad of the White Horse," and a volume of essays, by G. K. Chesterton; "Old Lamps for New," another set of essays by E. V. Lucas; "First and Last," by Mr. Belloc, uniform with his previous collections of papers; the poems of Shelley, edited and annotated by C. D. Locock, with an introduction by A. Clutton-Brock, and "Shelley and His Friends in Italy," by Mrs. Rossetti Angeli.

The autumn list of publications of the Yale University Press includes the following: "War and Other Essays," by William Graham Sumner, edited by Prof. Albert Galloway Keller; "From School through College," by Henry Parks Wright, for twenty-five years dean of Yale College; "The President's Cabinet," by Henry Barrett Learned, an historical study of the growth of this institution; "Thomas Carlyle: a Study of His Literary Apprenticeship, 1824-1831," by William Savage Johnson, Ph.D., of the University of Kansas; "Alexander Hamilton," an essay by W. S. Culbertson; "The Port of Hamburg," by Edwin Jones Clapp of New York University, which describes the high degree of efficiency displayed in the handling of transatlantic commerce at the port of Hamburg; "Jesus the Son of God, or Primitive Christology," by Prof. Benjamin Wisner Bacon; "The Reform of Legal Procedure," by Moorfield Storey; "International Arbitration and Rules of Procedure," by Robert C. Morris; "Concordanza delle Rime di Francesco Petrarca," compiled by Kenneth McKenzie, Ph.D., and printed in a limited edition from type; "The World that God Destroyed," by Frederick Erastus Pierce of Yale University, a biblical drama in blank verse, together with miscellaneous poems; "Lovely Peggy," by Jack R. Crawford, a play in three acts, based on the love romance of Margaret Woffington and David Garrick; "The Poems of John Cleveland," edited by John M. Berdan, and "Theories of Solutions," by Svante August Arrhenius, Ph.D., director of the Nobel Institute, Stockholm, Sweden, being the lectures delivered before Yale University under the Silliman Foundation in 1910.

No one who has read George Meredith's "Essay on Comedy" can use the word *comic* again in the old, light-hearted, haphazard way. He has isolated the idea of comedy forevermore from the motley crew of associated ideas—farce, humor, satire, irony. He has even imparted to it something of the high seriousness of tragedy. With its present denotation and connotation, it is his idea, and his distinctive idea. This fact, presented more or less casually in the multiplying discussions of the novelist, Joseph Warren Beach seeks to emphasize and elucidate in his book on "The Comic Spirit in George Meredith" (Longmans). Many readers who have been candid enough to see the reflection of their own faces in the Egoist will question Mr. Beach's assertion that "the characters upon whom he turns the most searching light of ridicule are shown the gentle indulgence of one who has taken a wide survey of human nature, and who feels the force of that saying, *que tout comprendre c'est tout pardonner*." Exactly the tonic in Meredithian comedy is that, though it is just, it is absolutely pitiless. On the whole, however, the interpretation is sound, and the manner bright and entertaining.

The Essex Institute of Salem, Mass., has recently issued the third volume of "The Diary of William Bentley, D.D.," pastor of the East Church of Salem. Some comment upon the interesting personal qualities of this sharp-tongued ecclesiastical diarist was made in these columns upon the appearance

Digitized by Google

of the first volume, five years ago. The present instalment covers the years 1803 to 1810, inclusive, a period during which the writer's mind was most deeply concerned with the rapid growth of the Baptist denomination, which he deplored, and the New England rancour against President Jefferson, for whom he entertained a profound respect and admiration. At one time he explains the growth of the Baptists on the rather uncharitable theory that "their rite is so definite as to make a more easy distinction in the public mind than any doctrines can, and this distinction gains a ready exemption from parish taxes." Again, he attributes their success in some measure to the active part which the regular clergy had taken in the opposition to President Jefferson. Salem for a time resisted the Baptist invasion, but on the 9th of January, 1805, Dr. Bentley sorrowfully records, "A very rainy day, and the day designated for the public ordination of a Baptist minister in Salem. It was a dark day, because we were afraid of the uncharitableness of this sect, which has been the most illiterate in New England. All the ministers were invited. I did not attend. No Congregational minister of the town was present." Two months later comes the entry, "Last Sunday the new Baptist minister in this town dipped his converts for the first time, but he caught such a cold by his indiscretion as to bring on a fever and he did not preach this day. . . . What is worse than in cold weather, without regard to the habits of people, to duck women as you would not dogs in cold weather?"

Perhaps the one thing that kept Dr. Bentley's temper from becoming hopelessly soured by the Baptists from without and the spiteful anti-Jeffersonian spirit within his own communion was his habit of taking some of his fair parishioners and going to some point along the shore, such as the Neck, or Nahant, for a day's outing, which often wound up with a supper at some house where the ale was known to be of good quality. The miniature character sketches in which the volume abounds are intensely interesting. One is tempted to doubt their accuracy when unfavorable, for Dr. Bentley was hardly the man to be strictly fair to one whom he did not like. We are sorry that a volume so full of interesting matter should not have had an intelligently constructed and complete index. The editor should also have provided the reader with more assistance in the way of explanatory footnotes, especially in the way of identifying persons referred to in the text merely by initials, family names, or other uncertain modes of designation. Not everybody in these days can be expected to know that "the wonderful boy in town from Vermont who has such uncommon power in numbers" was Zerah Colburn, though the name is sure to be a matter of interest to most readers. We must close this notice with an extract in illustration of the continuity of college spirit. "There have been some interruptions at Cambridge lately from the eccentricities of the youths, who made for the entry into the buttery and carried away articles provided for a Corporation dinner. Several youths were obliged to leave the college." We are not told that there was a strike among the classmates of these disciplined students, that the faculty on reconsideration found extenuating circumstances, and that the whole group was finally restored to college standing on the promise of good behavior for the future; but the next few entries are taken up with certain vicious manifestations of anti-embargo sentiment in Newbury Port, Gloucester, Beverly, and Bath, and doubtless these necessary corollaries of faculty interference with traditional undergraduate privileges passed unnoticed on that account.

From P. S. King & Son, London, we have "Capture in War on Land and Sea," being a translation of "Das Beuterecht im Land- und Seekriege," by Dr. Hans Wehberg of Düsseldorf. It is a compact historical survey of the whole question, with full account taken of modern tendencies and lingering disputes over this chapter in international law. The author's position is that the law of prize at sea ought to be entirely abrogated, and he expresses "the hope that, at no very distant date, under the firm guidance of North America, the Powers will pursue the course laid down for them not only by humane considerations, but also by modern conceptions of the nature of war." A good bibliography adds value to the volume.

"The Family and Heirs of Sir Francis Drake" (London: Smith, Elder & Co.), by Lady Eliott-Drake, traces in excellent fashion the family fortunes of the Drakes of Buckland in Devonshire. As the life of Sir Francis Drake has been often and well told, in the old days by Stowe and Camden and in our own day by the delightful and scholarly pen of Julian Corbett, Lady Eliott-Drake has wisely and modestly refrained from attempting to rewrite the story of the public life of her Elizabethan hero. But she does give some interesting private information as to the maps, portraits, silver-plate, and other heirlooms which have come down in the family. She also destroys some of the legends which had gathered like barnacles upon Drake's figure. It is not true that he stole a coat-of-arms from another branch of the family, nor that his second wife, tired of long waiting for her roving lord, betrothed herself to another suitor and was approaching the altar for the marriage ceremony when a miraculous stone from heaven—which is still preserved—fell on the train of her dress to deter her from unfaithfulness. Lady Eliott-Drake has worked out with great care the genealogy of her family, although, curiously enough, the date of Drake's own death is wrongly given in the genealogical table. Drake was twice married, but left no children. His heirs are descended from his youngest brother, Thomas, and it is to the history of these heirs that nine-tenths of these two volumes are devoted. The numerous illustrations and the author's pleasant chattiness will commend themselves to the less serious reader, while the pedigree hunter and the student of history will be grateful to her for her genealogical researches and excellent index.

We have no doubt that there is, here and there, something of interest and value in "Switzerland of the Swiss" (there are, it seems, still new titles under the sun), by Frank Webb (Scribner), but it has been our misfortune, during a preliminary tasting of the contents, to bite into the following morsels:

One writer affirms that the Swiss people are an example to the world and a model State. Another will say that as a people they combine the grace of the French with the solidity of the Teuton. They are amiable, but reserved; a worthy race, without false pride, but conscious of their value and merit. In other words, they deserve to be the rulers of the world, which they would govern to perfection if only allowed the chance. Thus much we have heard said by Switzers in presence of the notice and attention they receive. These fulsome eulogies may inwardly gratify them, for human nature is alike. One can never be too sure.—From the chapter on A General Survey.

The great development in printed cottons dates from 1690, and in the eighteenth century was the most prosperous branch of trade in Switzerland.—From the chapter on Industry and Commerce.

The American army possesses a distinguished general of Swiss birth, General Fréderic Tschudi, born at Glarus, who is commander-in-chief of the Pennsylvania district.—From the chapter on Institutions and Alpinism (*sic*).

But when, somewhat bewildered, we turned back to the preface and were assured that—

other authorities: Voltaire, Mme. de Staël, Hugo, Dumas, might be cited, whose opinions corroborate those already mentioned. None, however, better than the writer, in the course of his thirty years' contact with the Switzers, has had the same opportunities of judging them,

we closed the volume and read no more that day.

The second volume of "The King's Customs" (Dutton), by Henry Atton and Henry H. Holland, begins with an account of the years of famine that marked the opening of the nineteenth century. The authors soon resume their dreary annalistic narrative of events important and unimportant, without the least pretence of appraisement and analysis of their materials. The second chapter, on The Period of Gradual Relaxations, deals with the reforms inaugurated between 1826 and 1844, and in the same unsatisfactory manner, since it obscures as effectually as possible the significance of the work of such men as Huskisson. The next chapter, which comes down to the year 1855, treats of the movement toward free trade which, it is evident, the authors do not approve, although they admit that some change in the corn laws was necessary, since "the people could be starved no longer." For Cobden, Bright, and the Anti-Corn-Law League, Messrs. Atton and Holland have little respect, except perhaps as disturbing factors. Gladstone's reforms receive only brief mention, and, except for a concluding chapter on Customs Literati and an appendix containing illustrative documents, the work virtually closes with what the authors call "a few workaday hints" on protection and free trade, which are quite as inane and useless as the greater part of the annals that precede them.

J. B. Lippincott Co. has just published in excellent form "A Short History of the United States Navy," prepared for the use of students at the Naval Academy, by Capt. George R. Clark, U. S. N., and three of his assistants in the department of English at that institution. The work has the great merits of moderation in tone, accuracy of statement, in the main, and a subordination of details to the outlines of the picture. It is free from self-glorification, and it aims to treat events with equal justice to friend and foe, a tendency which at times denies to the fleet its full measure of praise, as, *e. g.*, in the cases of

Digitized by Google

Yorktown and Porto Rico. It is lacking in that breadth of view and that exposition of great strategic principles which a layman might be pardoned for regarding as essential in a work designed to influence the young naval mind; but as a short chronicle it is worthy of commendation.

The first volume of the Naval History Society's publications has just been issued to its members in a beautiful piece of book-making by the De Vinne Press. It contains the hitherto unprinted log-books of the Serapis, Alliance, and Ariel, when under the command of John Paul Jones, with pertinent extracts from public documents and unpublished letters and narratives, and it is illustrated with reproductions of scarce prints. A notable commentary and preface is furnished by Capt. John S. Barnes (late of the United States navy), whose unique collection of naval memorabilia, and whose intimate acquaintance with naval matters, are known by all students of our naval history. A few spare copies of a limited and numbered edition may be obtained through members of the society, or through the secretary, Robert W. Neeser, No. 247 Fifth Avenue, New York.

What can perhaps be regarded as the literary testament of the late Prof. Friedrich Paulsen, who for nearly thirty years held the leading chair of pedagogics in Germany, that of the University of Berlin, appears in a good-sized volume, entitled "Pädagogik" (Stuttgart and Berlin: J. C. Cotta'sche Buchhandlung, Nachfolger). Paulsen had finished half of the work when he died in August, 1908, and had left a clear outline of what was to follow. On the basis of the latter and of Paulsen's manuscript lectures, the book has been completed by one of Paulsen's leading pupils, Dr. W. Kabitz, privat docent in Berlin. The discussion is divided into two parts, viz., "Die Bildung des Willens" and "Die Unterrichtslehre." It is preëminently a work for earnest students.

Thomas Hall, jr., instructor in English in Harvard University, died on Saturday in Johns Hopkins Hospital, Baltimore, after an operation for the removal of a tumor on the brain. He was born in Boston in 1869, graduated from Harvard in 1893, and for several years had been an instructor in English there.

We note with regret the death of Gamaliel Bradford of Boston, who was fatally injured by a trolley car on Sunday. He was born in Boston in 1831, the son of Gamaliel Bradford, and the fifth of that name. He graduated from Harvard in 1849, and at one time was candidate for Governor. After he retired from the active business of banking he devoted his time to public speaking and writing. He was the author of "Lesson of Popular Government" in two volumes.

We have to report the death last week of the Rev. Dr. William Curtis Stiles, associate editor of the *Homiletic Review*. He was born in 1851, and was ordained in the Universalist ministry in 1876. He later contributed to the magazines and religious journals, and was the author of several romances.

The death is announced from London, in his sixty-eighth year, of John Wordsworth, Bishop of Salisbury, who visited this country a year ago as a delegate to the Triennial General Convention of the Protestant Episcopal Church in Cincinnati. He was a grandnephew of the poet Wordsworth, and his father was Bishop of Lincoln. Educated at Winchester and New College, Oxford, he became a fellow of Brasenose in 1867, was Bampton lecturer in 1881, and four years later was appointed to the see of Salisbury. He had made his chief mark as a scholar and as a theological student. His published works include a course of "Lectures Introductory to a History of Latin," "Fragments and Specimens of Early Latin," "University Sermons on Gospel Subjects," and "The One Religion—Truth, Holiness, and Peace, Denied by the Nations and Revealed by Jesus Christ," a course of sermons which he delivered as Bampton lecturer.

Patrick Francis Moran, the first Australian cardinal, whose death is reported from Sydney in his eightieth year, had written a number of works on religious subjects. One of his books is devoted to the "History of the Catholic Church in Australasia."

Albert-Léon Lefébure, the distinguished economist, is dead in Paris, at the age of seventy-three. He was engaged actively in political life for several years, being a member of the second De Broglie Cabinet, and was interested officially in the conditions of French prisons. His writings on economic subjects are numerous, and include his well-known book, "Etude sur l'économie rurale de l'Alsace." He was elected to the Académie des Sciences Morales et Politiques in 1903.

The death is reported of Prof. Colmar Grünhagen, professor of history of the University of Breslau, aged eighty-three. He is remembered chiefly for his works on Silesian history, among them "Aus dem Sagenkreise Friedrichs des Grossen," "Geschichte Schlesiens," and "Schlesien unter Friedrich dem Grossen."

Science

Physical Optics. By Robert W. Wood. New York: The Macmillan Co. $5.25 net.

This is the second and revised edition of a book which is unique in its way and one of the most important treatises on physical science ever published in this country. As Professor Wood states in his preface, "the rapid advances made in Physical Optics since the appearance of the first edition of this book in 1905, have made additions necessary in practically every chapter." The first edition was marred by many misprints, and although most of them have been corrected, the new edition still shows signs of hasty proof-reading. As might be suspected from the well-known fact that Professor Wood is the most prolific experimentalist this country has produced, the pages of his book are full of interesting experiments described vividly, humanly even, and briefly, but in enough detail to permit of their repetition by the reader. For the first time these experimental accomplishments of the author have been collected and made readily accessible from their widely scattered places in journals.

It is only a short while ago that optics was a well defined and distinct branch of physics. How marked is the difference in the present idea of the subject may be seen by a comparison of the headings of the chapters in the two editions of this book. The change set in with Faraday's experiments on magneto-optics and Maxwell's electro-magnetic theory of light; and the revolution forced by Roentgen's discovery has been completed by the phenomena of the discharge of electricity through gases and by radio-activity. What with our knowledge of heat and electromagnetic waves on the one end of the spectrum and of ultraviolet light, Roentgen rays, etc., on the other, the radiation we call light is now taken to be merely a specialized portion of the larger manifestation of radiation—specialized, because if our sense of sight were not limited to stimulation of this particular kind, there would be no reason for the branch of optics as distinct from radiation. On the theoretical side, the idea that light waves are due to a material displacement of an elastic and solid ether has been abandoned for the belief that this radiation is but a form of the general electro-magnetic disturbance of an ether without ponderable properties, and this change has made the mathematical development of optics merely a special problem in electrodynamics.

In conformity with this modern view this new edition, besides the usual topics, has chapters on electro-optics, magneto-optics, and the relative motion of ether and matter. The book closes with a short chapter on the new principle of relativity first announced by Einstein. How hopelessly inadequate the older theories of light have become to the minds of modern investigators can be seen by quotations from this chapter:

> Einstein's postulate denies the possibility of absolute velocity (which must be considered possible if we have a substantial medium or ether) and consequently abolishes the ether at the outset. With the disappearance of the ether we are forced to remodel our views concerning light and electro-magnetic waves, which now become a type of energy which propagates itself in an absolute vacuum. . . . Einstein is of the opinion that the next phase of the development of theoretical physics will be the formation of a new theory of light which will be in the nature of a fusion of the wave-theory with the old corpuscular theory. . . . On the relativity theory there is no such thing as real length, either of time or space.

Minkowski develops the mathematical side of this principle by using geometry of four dimensions, where three coördinates are the usual ones devoted to the three dimensions of space and the fourth

Digitized by Google

represents time as a space coördinate. Since we have no appreciation of figures in four dimensions, it is impossible to show these relations diagrammatically, and since we have so far never been able to determine any geometrical relation between time and space, the representation of time as a coördinate puts the whole scheme outside the realm of rationality. Where this confusion and metaphysical tendency will end no one can foretell.

As stated before, this book is written by an experimentalist, and the mathematical development is usually subordinated. Fortunately we have in Drude's "Optics" a treatise which is particularly strong on the theoretical side, and the use of the two books simultaneously, gives a full contemporary treatment of the subject.

The first woman to occupy a university chair in Germany, is Fräulein Woker. For some years she has been privat-docent at the University of Berne. She had a brilliant university career, and is now called to Leipzig to be "extraordinary professor" there, and to edit a periodical devoted to the mathematical and experimental sciences. Her own specialty is chemistry. Fräulein Woker comes of a scholarly family. Her father, a Swiss Catholic, is professor of history in the University of Berne. Her grandfather on her mother's side was a professor of theology. At Berne, she has been lecturing on the problems of physical chemistry and of its application to biology. She is an earnest "féministe" and has worked in support of woman's suffrage in Switzerland.

The National Science Association of Switzerland has just concluded its annual meeting at Solothurn. That ancient town has a good scientific museum which is well endowed. At the meeting, there was an interesting discussion concerning earthquakes. During the last thirty years about a thousand earthquakes have occurred in Switzerland. The association is about to establish at Zürich a station for the observation of such phenomena. The director will be Professor Früh of the university.

In "The World of Dreams" (Houghton Mifflin) Havelock Ellis has produced a positively attractive book, which is at once a serious attempt to develop the theory of dreams, based upon an extensive reading in this and related subjects, and an appeal to popular interest, giving to the land of dreams a flavor of poetry and romance. Much of the author's material is drawn from personal experience, or from the dreams of friends, written down soon after waking; and to this we must attribute its remarkably circumstantial character. Like most ardent collectors, however, he is more successful in explaining special cases than in making his general theory quite coherent. He adopts the current view that dreams are due to the relaxation of attention in sleep, or, in technical terms, to the cessation of the activity of "apperception," which, like the process of balancing in walking, keeps the waking life logically straight and clear and the absurdities at a distance, and in the absence of which the mental life breaks up into "dissociated" areas; and he rejects Freud's theory that a dream is the symbolic expression of a wish. Yet symbolism, he holds, is characteristic of dreams. When dissociation occurs our own deepest convictions may speak to us, perhaps reprovingly, in the character of other persons, and many dreams are purely symbolic interpretations of emotions otherwise objectless. Hence there is logic in dreams, and, if we believe Mr. Ellis, good logic. Absurdities arise because, through dissociation, the dreamer is confined within a limited field of fact. This, however, involves a rather unintelligible separation of reasoning and apperception, and assumes, contrary to the trend of all recent analysis, that reasoning has nothing to do with the limitation of the field. In the end the most important question is left unsettled and obscure, whether, after all, the dream life is a contraction of the waking life or the reverse, a poorer or a richer life. If we adopt the author's suggestion, drawn from Giessler and Freud, that dream life is a reversion to the attitude of the child and the primitive man, it becomes a question whether the evolution of waking intelligence is not most unfortunate. Be this as it may, it remains a distinct merit of the book that it seeks to make the dream mind continuous with the waking by applying to both the significant principle that, "sleeping fully as much as waking, mind is a thing that instinctively reasons."

From London comes the report of the death in his seventy-second year of Dr. Samuel Gee, the author of "Auscultation and Percussion," and "Medical Lectures and Aphorisms."

Francis Collingwood, who took a prominent part in the building of the Brooklyn Bridge, died last Sunday at his summer home at Avon-by-the-Sea, aged seventy-seven. He received a gold medal from the English Engineering Society for his report on the Firth of Forth Bridge, and had been a prolific writer on engineering subjects. He was a fellow of the American Association for the Advancement of Sciences and of the New York Academy of Sciences, and also a member of the British Institute of Civil Engineers.

Music and Drama

Franz Liszt and His Music. By Arthur Hervey. New York: John Lane Company. $1.50 net.

Liszt und die Frauen. Von La Mara. Leipzig: Breitkopf & Härtel.

If Liszt had been like most musicians, esteeming individuals or nations in proportion to their appreciation of his efforts, he would have had occasion to regard England as the least musical country in Europe. It was in Britain alone that his concert tour was a failure, at a time when the whole Continent was applauding him wildly; and his compositions have never struck root there, most of them being virtually unknown to this day. Scant, also, is the English literary output regarding him. The editor of the new edition of Grove's "Dictionary of Music and Musicians" felt obliged however, though not personally in sympathy with Liszt's compositions, to double the space assigned to him in the first edition, because in the musical world he looms up bigger and bigger every year; and now, at last, an Englishman has made him the subject of a book, and a good book, too.

Mr. Hervey does not neglect to chide his countrymen for the fact that with them Liszt's "genius as a composer is even now strangely under-estimated." After a brief analysis of the orchestral works, including the great "Faust" and "Dante" symphonies, he finds it "difficult to avoid a feeling of sadness at the thought that so many of the tone poems of which I have been writing should have been neglected to such an extent"; but he is confident that the time is now coming when justice will be done to one "who is par excellence the pioneer of the modern musical movement." That he has been so persistently represented as lacking in musical invention "is certainly extraordinary, for his works literally teem with melodic ideas and are superabundantly rich in new harmonic combinations and original modulations." Nor is this all: Liszt's influence on musical form has been greater than that of any other master excepting Wagner. It was reserved for him "to emancipate music from the thraldom of symphonic formalism and to create a new art-form pregnant in possibilities." Before Liszt, as Saint-Saëns pointed out, orchestral music had only two forms at its disposal, the symphony and the overture; now, thanks to him, it has an endless variety of symphonic or tone poems.

In an appendix a list is given of the principal compositions only, and the text, as was inevitable in a volume of only 176 pages, also confines itself to those works which most deserve praise. Mr. Hervey is not only a prominent critic; he is also well-known in England as a composer, and his comments on Liszt's works are therefore those of an expert. In three chapters, he deals with the pianoforte pieces, the symphonic works, the sacred compositions, and songs; and these chapters are the best in the book, the preceding biographic sketch and comments on Liszt as a musician and man being rather fragmentary. Particularly good is the analysis of the great sonata in B minor, which Mr. Hervey does not hesitate to call "a work which in point of originality of conception, thematic invention, depth of thought, and emotional feeling has not been surpassed by any other in the entire range of pianoforte literature." Yet Liszt is greater still in his works for orchestra; in composing some of his earliest piano pieces, he seemingly had the orchestra in mind, and it is in his symphonic poems and symphonies that his genius culminates. Concert-goers will be glad to read Mr. Hervey's succinct

Digitized by Google

comments on these and the other principal works, particularly in this centenary year, when Liszt will be honored by more performances than ever before. For a fuller account in English of his life and works we must wait till October, when the Scribners will issue the biography on which James Huneke has been at work for eight years.

With the exception of the Countess d'Agoult and the Princess Wittgenstein, whose influence greatly stimulated the efflorescence of Liszt's genius, and whose sympathy encouraged him when nearly all the world doubted, none of the many women who were Liszt's friends is mentioned in Mr. Hervey's brief sketch. To these women—or twenty-six of them—La Mara has devoted a special volume of 321 pages, in which she endeavors to prove her thesis that "probably in no other artist's life have women played so important a part." Mr. Huneker's painstaking research has convinced him that Liszt's "reputation for gallantry was hugely exaggerated." He had his adventures, and, unlike Wagner and some other famous men, he never took the world into his confidence regarding them. But with the exception of Caroline de Saint-Criq, whom he loved madly when a youth, and the Countess d'Agoult, who became the mother of his three children, the women in La Mara's book were simply his friends. Most of them were of the musical world, or belonged to the upper nobility, and with all of them he corresponded more or less. To Agnes Street-Klindworth he wrote letters enough to make a whole volume, which La Mara edited for publication in 1894. As the recipient did not wish her name to be mentioned, this collection appeared under the title "Liszt's Briefe an eine Freundin"; but Wagner's official biographer, Glasenapp, revealed the secret. Three of Liszt's letters not contained in that volume are printed in the present one, which also includes a very interesting letter written by Wagner to this remarkable woman.

George Sand was for a time a friend of Liszt, but their hearts were otherwise engaged. Others of the twenty-six who are well-known are Pauline Viardot-Garcia, Caroline Unger-Sabatier, Camilla Pleyel, Bettina von Arnim, Sofie Menter, while the list of titled women includes Countess Laprunarède, Countess Louis Plater, Princess Begiojoso, Countess Sauerma, two Grand-Duchesses of Saxony (Maria Paulowna and Sophie), Countesses Schleinitz and Dönhoff, Princess Rospigliosi, Baroness Meyendorff, and, of course, Princess Sayn-Wittgenstein, whose marriage to Liszt was frustrated by her relatives' appeals to the Pope. She subsequently wrote a work entitled "Des Causes intérieures de la faiblesse extérieure de l'église" in twenty-four volumes, with instructions that it should not be given to the world till a quarter of a century after her death. That will be next year; will any publisher have the courage to undertake that task?

On the whole, there is in this volume much more about "die Frauen" than about Liszt, but as all of the twenty-six women are in themselves interesting characters, this is no fault. One is particularly grateful for glimpses of Liszt's life not previously given, as in the pages devoted to Nadina Helbig, where we read that while living in the Villa d'Este at Tivoli, Liszt used to take a little tin lantern and attend mass at three o'clock in the morning. Storm and rain could not deter him. "The weather does not consider me, why should I consider it?" he used to say. Of particular interest are the chapters on Camilla Pleyel, whose playing Liszt admired so much that he turned the leaves for her at a concert; on Sophie Menter, whom he called his Brünnhilde, and with whom he played duets; on Baroness Meyendorff, in which interesting details are given regarding Liszt's ways with his pupils. They followed him from city to city, and it is remarkable how many became famous. At one time the classes included Vera Timanoff, Adele aus der Ohe, Marie Jaell, Reisenauer, Friedheim, d'Albert, Siloti, Sauer, Rosenthal, Vianna da Motta, Lamond, Ansorge, Stavenhagen, and Göllerich.

A translation by W. Ashton Ellis of "The Family Letters of Richard Wagner" will shortly be issued by the Macmillan Company.

Liszt is not the only famous composer whose centenary is being celebrated this year. Ambroise Thomas was also born in 1811, and to commemorate this event the Paris Opéra has engaged Maurice Renaud and Mary Garden to give a series of performances of "Hamlet" before departing for America. Others of Thomas's works are also to be produced.

Mme. Schumann-Heink is appearing this month at the Munich Wagner performance as Erda in "Rheingold" and "Siegfried." Waltraute in "Walküre," First Norn and Waltraute in "Götterdämmerung," and Magdalena in "Meistersinger." Fortunate Munichers!

The dates are now given (April 8-28, 1912), of the concerts which Arthur Nikisch, the greatest of living concert conductors, will give in this country with the London Symphony Orchestra. The extraordinary demonstrations of Parisian enthusiasm over Nikisch last month will doubtless be duplicated over here.

Italy is preparing to celebrate the centenary of Verdi's birth as brilliantly as Wagner's will be celebrated in Germany. The greatest of opera composers of both countries were born in the same year, Wagner on May 22, Verdi on October 10, 1813.

A grand musical prize contest is to take place next spring in Paris. Not less than 200,000 francs are to be awarded in prizes to the winning clubs. Among the judges are Saint-Saëns, Massenet, Fauré, Widor, Paladilhe, Dubois, Pierné. Invitations have been sent to 25,000 musical societies.

Hans Richter has, after all, not put away his bâton. From London comes the announcement that he will conduct the Wagner performances at Covent Garden in the autumn. He will be seventy in two years.

"Lovely Peggy" is the title of a three-act comedy by J. R. Crawford, a member of the Yale University faculty, which has been printed by the Yale University Press. It was written last year for a dramatic competition, but, owing to the position of its author, was not eligible for the prize. This is the avowed and, perhaps, the only reason for its present publication. As the work of an amateur in theatrical work it is by no means devoid of merit, but it bears many marks of inexperience. The heroine is the famous Woffington, and the central theme of the story is her professional and domestic relationship with David Garrick, a tolerably well-worn subject. Mr. Crawford has not permitted himself to be hampered too closely by a strict concern for historical accuracy, and so contrives to impart a certain freshness to it, but his mechanism is crude from the opening scenes to the unexpected tragic conclusion. He introduces Garrick, Rich, Quin, Macklin, Tate Wilkinson, Samuel Johnson, George Anne Bellamy, and other historical personages, and fortifies his dialogue with innumerable quotations which prove his general acquaintance with the literature of the period. But something more than free quotation is needed to impart vitality to stage characters, and the distinction between the original and the imported matter in this piece is somewhat too obvious. The character of Peg herself is sketched with some spirit and humor, if not with much verisimilitude, but most of the other personages are mere lay figures.

Details of the organization and plans of the Imperial Russian Ballet, which will tour this country under the management of Max Rabinoff, are announced. The tour, which opens at the Madison Square Garden on October 16, 17, and 18, will include the United States, Canada, Mexico, and Cuba. The principal dancers will be Anna Pavlowa, Mikail Mordkin, Julia Siedlowa, Katarina Geltzer, and Carlotto Zambelli, and in support will be Marie Ossipova, Ludmila Goulouck, Rita Zalmarna, Bronislawa Pajitzkaia, Helen Schmolz, Stanislawa Kuhn, Stephina Plaskewietskaja, Hermina Czarniki, Wanda Mezkouskaja, Doria Barbee, Selma Courtena, and Alena Czenskiaf, as the women, while the men will be Stanislav Idzikouski, Mikail Machat, Sregi Morosoff, Francesco Trejanouski, Veronine Westof, Kiprion Barboo, Feodor Wrsynski, Alexis Kowdofski, Antonin Hermanski, and Wassili Mauntag. They will be supported by a full corps de ballet, making it the largest organization of Imperial Russian dancers ever seen outside of St. Petersburg or Moscow. An augmented orchestra will also be carried. Five productions will be presented, identical in every way with those of St. Petersburg and Moscow. The scenery and costumes are already being prepared.

Otto Franz Leitenberger, whose death is reported from Vienna, in his sixty-fourth year, wrote several successful dramas, besides volumes of stories for the young.

Art

FAR EASTERN PAINTING.

II—JAPAN.

Japanese painting, unlike its Chinese models, is perplexingly various. It tends ever to break aristocratic bounds and become widely representative of the people, it invents recondite forms of decoration, and creates a whole school of evasion. Almost in our own day it has developed extraordinary realistic resources. Its story is a bewildering tangle of revolutions, eclecticisms, reactions. We have to do with a more fiery race, less given to contemplation; a civilization in which taste vacillated ardently after the fashion of modern Paris. Again we find odd implications of art with politics. The upstart Ashikaga shoguns, in the fifteenth and sixteenth centuries, take up the refinements of the Sung ink-tone manner, leaving the traditional polychromy to the old nobility. At many periods of Japanese art an excessive sensibility and cleverness prevail. Two centuries before Whistler, Kôrin represents a sumptuous and sophisticated simplicity in many fields of design. Utamaro anticipates by a hundred years the perverse languor of Aubrey Beardsley. The whole Fujiwara period, from the ninth through the twelfth century, seems to breathe the feverish ambiguous charm of Provence of the troubadours. There is no extravagance of Western feeling that the Japanese have not sometime outdone. How pale our transcendentalists from Pythagoras to Emerson look beside those adepts of the Zen philosophy, who regarded words as an impediment to understanding and committed their doctrine to abrupt and ejaculatory fragments of phrases. The brittle stroke of the great painter Sesshu carries the Zenistic mood into the graphic arts. In short, while the Chinese artists in their most audacious eliminations and suggestions made the necessary compromises with Confucian common sense, the Japanese artists are absolutists and their art seems to chafe restlessly at its bounds. Even to an eye unaccustomed to Far Eastern art, the sobriety of most Chinese painting will be apparent, whereas only upon full acquaintance will much of the best Japanese painting lose an initial flavor of caricature. Such observations are not made to minimize Japanese art. Precisely its variousness and the extravagance of its beauty commend it to us. It escapes our formulas, and through acquaintance with it our formulas may profitably be enlarged. Only a few salient characteristics of this variegated production can be treated within the measure of an essay.

I.

From the coming of the Buddhist missionaries in the middle of the sixth century for a hundred and fifty years, Japan gave herself to the assimilation of the monumental religious art of China. It has already been noted that our actual knowledge of the severe splendors of T'ang painting rests merely upon its echoes in Japan. And this imported hieratic art soon begins to assume a native character. A softer and more fantastic beauty appears in the placid faces of the Kwannon and the saints, more sumptuous forms of coloring and gilding announce a keener decorative intention; with the growth of the minor Buddhistic pantheon and the adoption of native divinities by the new cult a complicated repertory of sacred subjects and personages is added to the simpler iconography inherited through China from India. A surging and somewhat tumultuous life, very unlike the gravity ever characteristic of China, is seeking expression. Bushido, the knightly code, self-immolation for punctilio, the gossamer intricacies of Zenistic morals and philosophy, are still far in the future, but already the extravagance of new feeling is surging within the old hieratic bounds. Some flicker of the ancient stateliness of the T'ang mood will persist for centuries; its mere shell is still erect to-day, but the soul of the people is elsewhere. A vigorous collective life unfit for the isolated and inaccessible virtues of the hermitage is now to draw the artist from the temple to the highway.

That peculiar sensibility which is the distinction of Japanese character is in many respects the product of the Fujiwara period, from the middle of the ninth to the end of the twelfth century. Under a refined and pleasure loving aristocracy the fibre of the people was relaxed as its emotional life was extended. These were centuries of amazing talk, of skilfully cultivated hyperæsthesia. Already in earlier periods the roots of this ultra-refinement are to be found. The Empress Koken thus dedicated the field flowers to Buddha in lines still famous:

> If I pluck them, the touch of my hand will defile; therefore, standing in the meadows as they are, I offer these wind-blown flowers to the Buddhas of the past, the present, and the future.

We are already near the perilous brink of sentiment and sentimentality, and the Japan of Fujiwara will eagerly take the hazardous next step. Upon the fervors of this period, it would be interesting to dwell. The excited throngs which followed eloquent priests recall similar scenes in Italy and France of the thirteenth century. But the Japanese adepts lack the savage energy of the European evokers of the Holy Spirit. Indeed the Fujiwara mood is more closely allied to such organized languor as we find in the Troubadours and the Précieuses. The Land of Tenderness had been thoroughly charted in Japan some six hundred years before the geographical researches of Mlle. de Scudéry. Again there are aspects of Fujiwara which anticipate Tarascon. We read of panoplied captains who could not mount their chargers. In general, reality was being hard pressed by fair appearance. And this passing from the theological symbols to joy in appearance is what constitutes the new movement which was proudly called, in distinction to the imported styles, Yamato, native Japanese.

II.

The material of the Yamoto painters was men in collective action. Battles, pilgrimages, the bustle of civil and religious life are admirably treated in the few remaining scrolls of the Fujiwara period. And the endeavor of the artist is chiefly given to setting groups of men in their proper relation, in suggesting the joint action of the throng. Little attention is given to the individual. He becomes merely a term in an anecdote. In this respect Yamoto painting resembles closely the narrative Byzantine style with which it is exactly contemporary. The greatest exemplar of the narrative Byzantine tradition, Duccio of Siena, shows the same disregard for the form and physiognomy of individuals and the same tact in rendering the action and emotion of men in groups. In this social art Japan asserted her independence of China and renounced the severe individualism of the T'ang and early Sung styles. Yamoto painting overflowed its parent period, and during the artistic reforms associated with the Kamakura régime (the thirteenth century) and that of the Ashikaga shoguns (from the fourteenth century through the sixteenth), the native narrative style persisted alongside the revived hieratic style and the refinements borrowed from late Sung painting. The Yamoto scrolls divide into a more ornate and a simpler class. On the one hand we find an ideal chiefly decorative associated with utmost sumptuousness of color and gilding; on the other a preoccupation with effective story telling. Kano Sanraku early in the seventeenth century took up the ornate native style and reëstablished its honor. His admirable picture of the panic caused by the colliding wagons of the female admirers of the fair Prince Genji may be studied in Mr. Taki's album. For elaborate and fantastic movement it may be compared with certain pictures of Old Brueghel. The leader of the new popular or Ukio-ye school, Matahei, a younger contemporary of Sanraku Kano, is also a notable decorator, but, on the whole, derives from the simpler illustrative branch of the Yamoto tradition, of which Hokusai may be regarded as the last great exemplar.

Digitized by Google

It seems to me the singular merit of Mr. Taki to have made clear the historic continuity between the revered Yamoto style and the too often contemned popular school. Very generally, the Japanese purists have condemned the Ukio-ye masters as trifiers, or, worse, as traitors to the standards set by the priestly or Kano school. Such criticism emphasizes certain important facts. The popular school has had its defects of languor, of sentimentality, and of overemphasis. Its taste has wavered with its morals; it never has had the severe standards that have guided the Japanese revivers of the Sung style, nor yet the discretion that has characterized such uncompromising æsthetes as Sotatsu, Kôrin, and Hoitsu. But, while it is permissible to prefer these aristocratic manifestations of Japanese genius, it is obviously unfair to rule out an avowedly popular art for lack of aristocratic flavor. We do not hold it against Charles Keene that he failed to produce the "Tanagra" pastels of Whistler or the delightful mediævalisms of Burne-Jones; and I think we should be foolish to measure the charming masters of the color prints against the esoteric refinement of Kôrin or the tenuous sublimity of Sesshu. And while these humbler illustrators of Japan obviously fall short in specific Far Eastern idealism, for that very reason they represent a very precious native quality: the capacity for finding beauty near at hand and in common things. They touch hands with generations of Japanese artisans who, through imitation, have achieved style —not the greatest style, but one infinitely adroit, winning, and preëminently Japanese.

III.

The Kamakura shogunate witnessed a masculine reaction against Fujiwara sensibility, established the feudal ideal, and initiated the Samurai code of honor. Religion assumes a sterner cast. A tonic hero-worship pervades the islands. Portraiture begins to flourish alongside the old hieratic art, and the narrative style of Yamoto achieves new triumphs. A precious screen depicting the Heiji campaign, in the Boston Museum, shows the power of the military painters of this heroic age. Its triumphs, however, are in sculpture. Its painting chiefly infused a more manly spirit into existing forms. To the already ample iconography of Buddhism it adds hells of grotesque horror.

The sway of the Ashikaga shoguns corresponds significantly with the European Renaissance. It was a period when the Japanese mind deliberately aroused and fortified itself by re-perusal of the *exemplaria Græca* of India and China. The new shoguns emulated the contemporary Medicis and Gonzagas in hospitality to new thought and exotic forms of beauty. The painter priest Soami revives the Sung manner in ætherialized form, and invents the art of planning gardens symbolically. Soon the refined monotony of the tea ceremony is reduced to a code, tea-houses arise in calculated and expensive simplicity. Humble brown tea-jars become priceless for accidents of potting and firing appreciable only by the elect. The Samurai conceal their magnificent swordblades, the work of famous smiths, in simple wooden scabbards with the bark on. Beauty is achieved through renunciation.

In the Zen philosophy the soul of the time finds truest expression. Since the world is a flux, and nothing is permanent or valuable in itself, man must create within the vast illusion his own values and his personal sense of duration. Things are absolutely on a parity, equally important or equally negligible as they are perceived. A philosopher must consent to the flux for the sake of great contemplative moments which may be snatched from the universal purposeless movement. The smallest event will feed the thinking soul. Beauty must be sought where it lies obscurely. The obvious must be avoided. Amid illusion the unlikeliest places may become our coign of vantage. Our part is to cultivate a precise gentleness and expectancy, never to force things or to pretend. The soul must borrow the honorable trenchancy, the veiled splendor of the sword. Excess is the most heinous vice. The Zen symbol for a wantonly foolish person was a monkey reaching down for the reflection of the moon in the water. If he succeeds, he shatters the beauty for which he stupidly yearned. Such is the penalty for grasping at illusion as if it were reality.

With the Zen priest Sesshu, whose activity covers the latter half of the fifteenth century, the theory of the flux produces works of art, the most durable and satisfactory that Japan can boast. Sesshu draws his inspiration from the India-ink painters of the early Sung dynasty. He made a triumphal progress through China where his austere dexterity put to shame the trivial elegance of the contemporary Ming artists. Where Sesshu differs from his exemplars is in the impetuous economy of his stroke. He outdoes the Chinese at their own game of expressive syncopation. Few Western drawings are so instinct with the actual nervous tension of the artist. The landscapes and the rare figure subjects of Sesshu reveal a disciplined breathlessness. He has pushed emotion to the breaking point without losing control. One likes to think that he was the contemporary of Rogier de la Pasture, Sandro Botticelli, Leonardo da Vinci.

There is in the Imperial Museum at Tokio a Summer Landscape by Sesshu which for generations served as a model for the Kano painters. In the foreground a few velvety dots and dashes indicate no definite form, but suggest keenly the sense of trees and shrubs pushing up from the water's edge. We have the feeling of growth abstracted from individual growing things. Above, twin crags loom thinly through mist that veils their roots. At the top of the tall strip a square mass of calligraphic writing repeats the tone and in a manner the strokes of the foreground. Such a picture is essentially a hieroglyph. A trained eye will yield to its fascination and will read something of its meaning; an untrained eye will make nothing of it whatever. In other moods Sesshu is vivid to the point of explicitness. There is a landscape scroll in the collection of Prince Motoakira Mori, the geological precision of which rivals certain drawings of Dürer. A basaltic causeway zigzags back into the picture at the right. Its tip is tufted with strong cedars profiled against the sky, and a spur of rock overhangs a pagoda set on the edge of the central ravine. The gulf itself is full of mist, but tree tops rise into the light and an exquisite pine shrub caught in a crag at the left seems to beckon to its great fellows below. Overlapping ridges cut across the ravine in the far distance. The pagoda is sketched with a crispness that makes it akin to the cedars and the neighboring crag, the basalt causeway gives the sense of actual mass and weight, of being deeply rooted below the inhabited surface of the earth. In such a picture the cosmic quality of Chinese landscape assumes a more individual and intense expression. No one who has seen this picture of Sesshu can forget it. Indeed, it will take its place with actual memories of nature. I shall be able to forget it only when I can forget how the buttresses of Staffa looked summers ago. All of the peculiar restrained energy of Japan is in the painting of Sesshu. It is he who best gives form to her tenuous yet potent idealism. Of the chivalry of the Ashikaga period, he is the herald. His influence was potent through the century that closed with the thunder of Hideyoshi's drums and the desperate emprise in Korea.

IV.

Sesson and the priestly school follow the example of Sesshu at a distance, or, rather, they modify his teaching by consulting his own early Chinese models. Sesson is in his degree a great painter; so are the two earlier Kanos, Masonobu and Montonobu. These men seek the energy of stroke of their great predecessor, but their quality is softer, their manner a little less spontaneous, and except for Sesson, who anticipates certain *finesses* of the æsthetic school of the seventeenth century, the Kanos tend to run out in a stereotyped pseudo-classicism. Near the end

Digitized by Google

of the seventeenth century Kano Tanyu made superb imitations of Sesshu, but his resonant echo of Zen painting is exceptional. The heroic age of Japan was passing. The traditionalists of the Chinese manner are becoming a stale survival. An age of splendor and ease is to pervert the Zen teaching to Corinthian uses, and corresponding to this age a new and purely æsthetic school exempt from hieratic prescriptions and Chinese predominance. With Sotatsu and Kôrin the new art of Japan is born, the art that, decadent, still holds the bazaars; the art which in its eighteenth-century exuberance captured the imagination of Whistler and the Goncourts. How far Sotatsu and Kôrin drew upon the ornate Yamoto style, lately revived by Sanraku, what hints they took from the hieratic polychromy, it would be difficult to say. In any case, their screens display a sumptuousness of gold and pigment new even in Japan. Nature was surely their chief teacher. Her lovely textures, in water, bark of trees, softness of flowers, gloss of gourd and fruit, glint of metal and stone, they studied with passionate fidelity. Following nature again, they threw over the consecrated linear formula inherited from China, and painted, as nature herself paints, in lineless masses of tint and tone. Yet the art remains primarily decorative. Nature is used merely as a repertory of motives, the combination in the actual work of art is highly abstract and conventional. Certain refinements of tone and arrangement reach their limits in Sotatsu, Kôrin, and their eighteenth-century follower, Hoitsu. A kind of canon of asymmetry is attained. Compared with these men, Whistler seems merely a gifted amateur and lacking in precision of means. As a by-product, these men cultivated also the peculiar snobbisms of the artistic temperament. Kôrin himself could paint only in full dress and seated upon a brocade cushion. "I must feel like a daimio while I create," he remarked. No man has gone further in seeking remote forms of beauty, no one has better illustrated the solitary, superior, anti-social conception of the artist, and the exquisiteness of his work partakes of decadence, and his influence soon led to mere ingenuity and prettiness. In the eighteenth century the æsthetic movement is already overripe, in the nineteenth the tenth-rate attenuations of Kôrin's manner will be hurried across the seven seas to satisfy the gimcrack seekers of the Western world. Like the rococo movement in Europe, we have a transient and most poignant grace, an assertion of the worth and the underlying sadness of pleasure, an ideal comprised in fine manners and chastened voluptuousness. But the rococo of France dies with Sedan, while that of Japan survives Port Arthur.

The real art of latter-day Japan, despite the purists, is not found in the various eclecticisms and revivals, but in the continued tradition of Ukio-ye. And now the popular school, which dominated the islands for the two hundred years preceding the death of Hokusai, 1849, has in turn yielded the day. There have been heroic and meritorious efforts to revive the Zen manner, but these attempts have not reached the national consciousness. For three centuries, Japanese sentiment has been social and realistic, and it seems as if these motives must guide any artistic revival of national scope. It is to be hoped that Japan may content herself with her own tradition and that of kindred China. Could there be a greater calamity than that the nation which has produced the most splendid hieratic painting, the idealism of Sesshu, the æstheticism of Kôrin, the apostolic succession of illustrators from the pioneers of the Yamoto style to Hokusai, that this nation should consent to be artistically a provincial appanage of Paris? May that omen be averted, is the prayer of all catholic lovers of art.

V.

In our rapid progress through the art of China and Japan, much has naturally been made of national differences. I may have given the impression that we are dealing with a very special sort of humanity beyond the reach of European sympathy and understanding. Personally, I could wish that the Kiplingesque cant concerning East and West might be abated, so that one could examine real differences without seeming to imply an impassable gulf. There is, as a matter of fact, nothing in the art of China and Japan that a person really trained in European art cannot appreciate. I mean a patient, open-minded person whose eye has kept something of the adventurous quality. In studying painting in its most diverse manifestations, I am increasingly impressed with the kinship existing between the finest things of whatever nation or time. The other day I noted the wind-blown reeds in the foreground of Ruysdael's Mill at Amsterdam and was struck by a vague resemblance. The touch and the feeling, on reflection, were identical with that of certain reeds in a Kano painting on my own walls. Mr. Cortissoz in his delightful memoir of John La Farge tells how La Farge, as a fitting greeting for the Japanese critic, Okakura Kakuzo, procured him the view of some fine Rembrandt etchings. To them the pilgrim knelt and said, "This is what the great Chinese black-and-white masters tried to do." And, indeed, the far Eastern painters share Rembrandt's scorn of the unfelt and uninterpreted appearance, his passionate devotion to light and shade as conveyers of emotion, his love of the single energetic stroke, his royal disregard of mere facts, his habit of painting with his soul.

In these essays on the painting of China and Japan, I have gladly taken the risks of an admiration as ignorant as it is profound. The facts I have perforce taken at second hand, and doubtless I shall have written much to make a judicious expert grieve. But there is nothing second hand about the thrill these lovely works evoke. Any great expression of the human spirit must come home to a sensitive intelligence. The way to art is through art, and the critic is merely an explorer seeking new kindred for us. Later comes the ethnologist and measures their heads, an important but a colder process. As a belated explorer, then, my humble part is to say that this land is delectable and that all who really love their early Sienese painters, Mantegna, Botticelli, Rembrandt, may enter fearlessly.

FRANK JEWETT MATHER, JR.

"Temperamental and Architectural Refinement," a study of asymmetries in mediæval churches, by William H. Goodyear, is in the autumn list of publications announced by the Yale University Press.

Dr. Georg Loeschcke has been appointed successor to Prof. Kekulé von Stradonitz as director of the Archæological Museum in Berlin. Dr. Loeschcke, one of the most eminent archæologists of the day, is well known for his frequent contributions on Greek vase painting, and, as professor at the University of Bonn, has exercised great influence on the education of young archæologists.

René Binet, the architect, whose death is announced at the age of forty-four, was born at Sens, and studied at the Ecole des Beaux-Arts. He designed the Maison des Comédiens at Pont-aux-Dames, and among other things the Cours la Reine at the Exhibition of 1900.

Finance

THE BREAK ON THE STOCK EXCHANGE.

Since the closing days of July, an all but continuous decline has been in progress on the Stock Exchange. During this period of three or four weeks, the shrinkage in value of important stocks has ranged from 10 to 25 points. The pressure of sales has been so constant and heavy as to suggest unmistakably that very large holders were liquidating their accounts; yet who those liquidating holders were, and why they insisted on selling progressively at the decline, no one seemed able to say. There were those who ascribed the whole movement to "the bears"; but "bears" do not sell borrowed stock unless they know of real stock pressing on the market. Others ascribed it to the Government's policy in railway rates

Digitized by Google

and public inquiries; but all that policy was clearly visible a year ago, when Stock Exchange prices were advancing rapidly.

Some other facts—an admittedly disappointing grain harvest, the absence (perhaps because of that) of vigorous trade recovery, and the imminence of a Presidential campaign—were assigned as an explanation, and they seemed to apply. But while they may have explained the general phenomenon of lower prices, they did not explain the character of this month's decline. For a fortnight past, no casual judgment on the stock market could be obtained in Wall Street which did not contain the statement that the market was a mystery. It did not do what it should have done. It would seem to be "sold out" and on the eve of a vigorous recovery; yet it would decline again next day. It would be treated to one of those "overnight advances by way of London" which, by starting the next day's market off at a rise of 2 points or so, used to bring in a host of other buyers; yet on this occasion these potential other buyers would sit apathetically before the blackboards, wondering in an idle way why the overnight support of the market was not continued. Traditions which the experience of 1909 and 1908 and 1906 and 1905 had appeared to fix as immutable principles on the Stock Exchange, seemed to be wholly inapplicable to the market of 1911.

But after all, the times change and we change along with them, and it may be worth while to ask whether some of these very traditions did not impress the Wall Street of a decade or so ago as novelties and mysteries. There was never a stock market which appeared to be so surcharged with occult influences as the market of April, 1901. It all but awakened superstition. The best explanation that the man in the street could find for the things which happened was that the Captains of Industry were using an absolutely inconceivable personal wealth to buy up and bid up, regardless of its price, every property listed on the Stock Exchange. The fact that no human being had ever done such a thing before, or thought of doing it, made no difference. How else could you explain the market? In the end, the very men who were busiest on the Stock Exchange resorted on their own account to the theory that the laws of political economy had been revised, and that the science of Wall Street movements must hereafter be based on a brand-new set of axioms.

Yet all this state of mind resulted from three things which every one could see, and which, a very few months later, every one understood—that powerful financiers were competing with one another to get an interest in certain corporations; that prices not only went on rising, but refused to decline when Wall Street said it was time for them to do so, and that the outside public was buying heavily, because of its absolute confidence in the future. There are three things in the present market which all the world can see—that powerful financiers, for whatever reason, have been withdrawing from some of their investments; that prices have of late not merely continued to decline but have refused to rise when Wall Street declared a recovery to be in order, and that the outside public has refused to buy, presumably because of uncertainty about the future.

This is a fairly close antithesis; it will at least suggest that there can have been no more fundamental mystery on the one occasion than on the other. It may perhaps be suggested that the contrast is discouraging to people of the present day, in so far as it shows an underlying spirit of doubt and pessimism in 1911 as against the confidence and optimism of exactly a decade ago. But it must be remembered that at the very moment when the stock market of 1901 was exhibiting such boundless enthusiasm as seemingly to indicate a financial position too strong for anything to shake it, the position was shown by the event to have been actually honeycombed with weakness. There were prosperous years after 1901, but there was never any such "bull market" afterward.

The causes which operate to bring about long declines in stocks are five in number. Large capitalists and holders of securities may be in difficulties of their own and be forced to sell. Foreign markets in which our securities are lodged may have been forced to realize through troubles of their own. The banks, from whom the speculative holders of stocks have borrowed money, may have been forced to call their loans. The public generally may be poor, and in no condition to invest on the former scale. Or, finally, that community may have reached the judgment, more or less instinctive, that prices were too high to be warranted by the course of underlying events, and may therefore have suspended buying until prices more close to its ideas are reached, or, in the case of some large investors, may have sold.

The first three causes have either been non-existent on the present occasion, or can have operated only in moderate degree. The fourth may possibly be in evidence, as a result of unsatisfactory business conditions in the past year or more, and of the failure of trade recuperation to begin this summer, as was hoped six months ago. The last-named cause—unwillingness on the public's part to buy because prices seemed too high—is likely to have been present in any long decline. But the point of interest at the present juncture is, that the Stock Exchange has been meeting the public's views in that regard, and offering its securities on a progressively more inviting basis. It has already lowered its prices heavily. That is what settles matters in the markets for commodities; and the Stock Exchange, too, is dealing with consumers.

The Nation

NEW YORK, THURSDAY, AUGUST 31, 1911.

The Week

Senator Cummins's definite announcement of opposition to the renomination of President Taft and support of La Follette carries the Insurgent revolt still more into the open. That the Senator from Wisconsin would rally his followers against the head of his party at the next National Convention has long been certain. It has not been certain how much aid and comfort he would receive outside of his own State. The declaration of the Senator from Iowa shows that in one other rock-ribbed Republican State at least a determined effort will be made to send anti-Taft delegates to the Convention. Senator Cummins is sufficiently in earnest to sink his own claims for leadership for the sake of the Insurgent cause, a fact which Mr. Taft's managers will not fail to appreciate. The most significant part of his statement is concerned with the tariff, that rock upon which the party has split. He has no confidence in the fulfilment of the President's roseate prophecy of ninety days and real revision. On the contrary, he bluntly says that the country need not expect tariff changes at the next regular session of Congress, and, what brings out the actual nature of his position, he holds the President responsible for the failure. The Democratic House, in his opinion, will take revenge upon Mr. Taft for his vetoes by refusing to accept any of his recommendations for revision. In this forecast Mr. Cummins may be mistaken, but no one will question that his mature decision against the President portends trouble for the Republicans, not so much in their Convention as at the polls in the November following.

One point in Speaker Clark's reply to the President is forcibly stated. It is that Mr. Taft is staking everything on the coming reports of Government clerks, as collated and interpreted by the Tariff Board. But to label any statement "official" or "Government" is by no means to guarantee that it is infallible. We recently had a striking illustration of this in the special report of a Government agent on the Harvester Trust. This was put out solemnly as "official" in the highest degree, but the counsel to the Harvester Company had no difficulty in showing that it was stuffed with the most egregious blunders. Matters of common knowledge and matters of record were ignored or misunderstood or misstated, in a way to invite the sharpest correction; yet it was a sacred "Government" document which was thus riddled. How can President Taft be sure that similar blunders will not be exposed in the reports of the Tariff Board? Yet with a kind of superstitious regard for what is "official" he bids us all to suffer and to wait, and risks the whole future of his Administration and his party on a lot of information to be gathered by employees of the Tariff Board, who may prove to be as great bungiers as the agent who messed up the Harvester business.

The parcels post is now really in sight if, as would seem to appear from the statements of Postmaster-General Hitchcock, the Administration is going to make a determined effort to obtain authority for its establishment on rural mail routes. In his recent testimony before the Postal Commission in New York city, and again in Washington on Monday, Mr. Hitchcock came out strongly for this enlargement of the postal service. As soon as the plan is worked out on the rural routes, Mr. Hitchcock will extend the service to other communities, so that packages can be delivered by city carriers. Such a development ought to increase the revenue far beyond the expense involved, and would at least bring the United States postal service up to the level of that on the Continent and in England. The only question is whether the express companies, which have heretofore exercised the veto power, will again be able to prevent the adoption of this reform. It does not seem as if that were now likely. The hold of corporations upon politics has been so shaken—they have lost their Senator from the United States Express Company—that it ought to be no longer possible to delay the needed legislation. Mr. Taft must be anxious to have such a great reform to the credit of his Administration, if his Postmaster-General is allowed to advocate it so unreservedly.

If the United States Senators from the New England States had issued a manifesto to the cotton manufacturers last August—declaring that cotton ought to be much lower in price, that it would be lower but for the New Orleans "bulls," and urging the mills not to buy any cotton for more than 10 cents a pound—one may imagine the outcry which would have resulted. But a group of United States Senators and Representatives from the Southern States have seen fit to issue a manifesto asserting on their personal responsibility that cotton is too low; arguing that nothing but the "New York bears" is responsible for the decline; advising the cotton growers, over the Senatorial signatures, not to sell for less than 13 cents, as against a present farm price of twelve or less, and urging the banks to lend money for the purpose. Among the signatories to this curious document, one is somewhat bewildered to find Senator John Sharp Williams of Mississippi, who does not ordinarily indulge in the philosophy which regards an abundant yield of necessaries of life as a menace to prosperity, and the consequent low prices to consumers as a disaster to be averted by artificial means. Yet his appearance on such a platform is hardly more interesting than the fact that Senator Owen of Oklahoma, the militant censor of the money power, should be appealing to the banks to contribute funds for holding staple products off the market.

We are aware that the Senatorial round robin professes to base its advice on a study of statistics. It pronounces the estimate of a fifteen-million-bale crop (apparently borrowed from Southern estimators) to be outrageously high. But even if that estimate were to be correct, prices have no business to fall; and, anyway, it is "the bears" who are putting them down. This certainly strikes us as a rather pitiful business. It is perfectly true that the cost of raising cotton and the cost of a farmer's living are higher than they used to be. But it is also true that even the thirteen-cent price has been reached in only

Digitized by Google

five of the twenty-five past years, and that the Southern planter received for his cotton crop of the season past—not a scanty yield by any means—a price so abnormally high as utterly to paralyze the consuming trade. A year ago this month, the cotton market reached a height never before attained in this country, except in paper-money days and in the speculative mania of 1836. Such a market, through the resultant dislocation of the spinning industry, pointed to a compensatory fall in prices when a "bumper" crop should be produced again, as the single means of bringing producer and consumer again in touch with one another. That this Senatorial manifesto should appear on the heels of such an instructive economic episode as last year's severe prostration of the West, in consequence of the break-down of a similar attempt to hold up the price of wheat by borrowing bank money to keep it off the market, is not the least singular aspect of the affair.

The reform forces in Philadelphia have made distinct progress within the last few days. Mr. D. C. Gibboney's frank announcement of his candidacy has narrowed the contest for the Keystone Party's nomination to himself and Rudolph Blankenburg. Between these two men there should be a spirited but friendly struggle that should inspire the entire reform forces. Moreover judging by their records in the past, the candidate defeated in the primaries will turn in and work hard to insure the election of his rival. Philadelphia is really to be congratulated upon the whole Mayoralty situation; a three-cornered fight between two machine candidates and Gibboney or Blankenburg would stir the whole city. Certain it is that if the fighting becomes bitter enough, either in the primaries or before the election, some inside facts about the organization and its now quarrelling leaders may see the light of day and serve to educate the people as to just what has been going on. As for the Democratic party, there is not much of it left in Philadelphia; but if its leaders show the same spirit and energy which have marked the process of reorganizing in the State, it ought not to be difficult to induce them to fuse with the Keystone forces.

Mr. Taft's arguments, stated in Rochester last week, to support his contention that neither the Monroe doctrine nor our established policy with regard to immigration can be made a subject for arbitration, are wholly convincing. The Monroe policy has been specifically mentioned by Sir Edward Grey as one of the questions that would not fall within the terms of the arbitration treaty. The regulation of immigration is recognized by international law as being everywhere a domestic problem subject to no outside restriction. But Mr. Taft might have gone farther and emphasized the point that it is not "policies" that come up for arbitration, but specific cases. The Joint High Commission will probably never be called upon to decide whether the Monroe Doctrine is a just doctrine or whether our immigration laws are just laws. At most it may be called upon to pass judgment on a specific matter that may involve the Monroe Doctrine or our immigration policy. But as far as America's representatives on the High Commission are concerned, the mere fact that either of these policies is involved would mean that the case under consideration is not justiciable. The only danger we face is that our representatives on the High Commission may fall into error and decide that a submitted case does not involve questions of fundamental policy, when in point of fact it does.

An article by Mr. John Corbin in the *World's Work*, dealing with the reasons for the failure of the New Theatre, raises a doubt whether the project when revived next year in a new house and on a reduced scale will fare any better. The former literary director of the New Theatre acknowledges that the great size of the auditorium and the poor judgment displayed in the arrangement of seats were among the causes that led to disappointment. But he goes on to argue that the fundamental trouble consisted in the fact that the New Theatre was a millionaires' undertaking, whereas the art of the theatre is essentially democratic. No theatre can succeed that does not make its appeal to the broad masses, and the masses were decidedly not attracted by the air of high social function that encompassed the great building on Central Park West. But will the masses be more tolerant of endowed performances even in a smaller house? Mr. Corbin declares that in the new building, there will be no founders' boxes or other visible signs of distinction. That may help. Yet it will probably take years of fine acting and good plays before the New Theatre lives down its reputation as an institution fostered by men of wealth. There is an injustice in this, for their public spirit and intentions were of the best, but it is one of the facts that must be reckoned with.

Interest in the coming golf tournament for the amateur championship will be heightened by the announcement, now definite, that the British amateur champion is on his way to take part in the competition. No Englishman of Mr. Hilton's golfing prominence has hitherto sought to measure himself against our best in this way, though on one occasion, a Canadian, Mr. Lyon, worked his way to the finals. Hilton is unquestionably a formidable player, able to hold his own with all but the very top-notch professionals, as he showed once more in the recent open championship in England. Yet the chances must always be against any one man's being able to keep ahead all the way from the qualifying round to the finals, when he meets a strong field. To say nothing of the element of luck, which enters into the most skilful playing and may run against the really more capable golfer, there have to be considered all the subtle questions of physical condition and "state of the soul" on a given day, which any thorough-paced golfer will tell you may make all the difference in the world without the player's knowing why. Strange greens and unfamiliar climate also make against the foreign visitor. He has, besides, to go on meeting player after player keyed up to do his best, any one of whom may chance to play a particular round way under par, or by some phenomenal burst defeat the better man. With all these things to be taken into the reckoning, it must still be said that so seasoned and competent a player as Mr. Hilton is certain to give a fine account of himself, and that he may very well prove to be the man to take golfing vengeance for the defeat of the best English amateurs, a few years ago, by Walter Travis.

The Canadian Manufacturers' Asso-

Digitized by Google

ciation—the high-tariff organization of the Dominion, with 2,600 members scattered over the nine provinces—is to hold its annual convention at Toronto in September. The phrasing of the call that has been sent out for the convention is significant. "From a business standpoint," it reads, "this year's convention will be of greater importance in many ways than any of its predecessors. The tariff question has been projected into the foreground through the introduction of the reciprocity proposals. No doubt this will prove the most important item on the agenda; and the Association's policy will have to be enunciated once again with the strength of its whole membership." The fair inference is that the Manufacturers' Association has at last been compelled to abandon the aggressive, after years of success along that line. With the adoption of the policy of reciprocity, the turning point in Canada has been reached; and henceforward it should seem that the Association must be on the defensive, and that the record will be not of advantages gained at Ottawa, but of ground lost. Reciprocity ends at a stroke the long delusion that tariffs have protected the farmer. The mergers of the last three years in Canada are almost as threatening to the existing tariff as is reciprocity or the agitation by the farmers. Nor does this end the enumeration of forces now assailing the protective system in the Dominion. The influence of this country has made itself felt in support of protection in Canada; and as the United States recedes from a high protective policy, its example and influence will again tell across the border, though in an opposite direction.

Satisfaction which we fear is malicious is taken by the Dublin *Sinn Fein* in pointing out that Lord Halsbury, the doughty English upholder of crusted Toryism and the sworn enemy of Irish aspirations, is himself of Irish descent. "His great-grandfather," it is alleged, "was a Murphy of Oularteierg in Wexford," and his grandfather was "the notorious Jack Gifford, sheriff of Dublin." Without vouching for these genealogical details, we merely remark that, if authentic, they illustrate the old contention, which we believe that G. B. Shaw has adopted, that whenever you find a man whom you take to be typically English, it is safe to conclude that he is an Irishman. The discovery in Lord Halsbury's case is particularly delicious because he has just been exemplifying conspicuously the traditional English qualities of bluff downrightness with the courage never to submit or yield even when it is a question of submitting to the inevitable. But the other inference also lies in the incident, namely, that Irishmen are able to attain eminence as rulers of all countries except their own.

The retirement of the Austrian Minister of War, Baron von Schönaich, because of friction with the heir to the Austrian throne, the Archduke Franz Ferdinand, has led to some frank talk in the Continental papers about this royal personage. It is an open secret that the War Minister resigned because he found himself similarly blocked and harassed. "In Austria," says a Berlin newspaper, "people keep quiet about the heir to the throne because of dislike and fear, and in Germany because of dislike and so-called tact." And then it proceeds to open its batteries upon him without mercy. It is generally believed that since Franz Ferdinand became the heir there has been nothing but intrigue, quarrelling, laying of mines, setting of traps, and all other phases of war as it is carried on behind the curtains of a court, because of the question whether his wife shall be deemed worthy to be Empress and her children shall stand on the steps to the throne. In addition, it has long been an open secret that Franz Ferdinand is under strong clerical influence. It is even freely stated in Vienna that he is not only hard at work for the benefit of the Papacy, but in favor of an open breach with the Italian Government. Altogether the situation is one to cause considerable unrest, and to do anything but make cheerful the old age of Franz Joseph.

King Alfonso of Spain has often shown himself an affable and democratic monarch, but he outdid himself on Monday in receiving a veteran Spanish republican. The King assured him that he had a right to hold what political opinions he pleased, and that they need make no difference whatever in his personal relation to Alfonso. The latter asserted, half jestingly, no doubt, that he was a believer in monarchy because he had been born heir to the crown. Being a King was his business; but "who knows that one day we shall not all be republicans?" Such expressions, even if not entirely serious, will make the clerical and political absolutists in Spain shake their heads over the young monarch more sadly than before. But they ought to see that his attitude is wiser than theirs. The lingering republican movement in Spain might be given new strength by a harsh and continuous assertion of autocratic principles by the throne; but to tolerate it and be friendly with it and on good terms with its leaders is the best way of keeping it in abeyance. The talk of a republic in England, not so rare or so absurd thirty years ago, has almost completely died out, mainly in consequence of the growing democratization of monarchical institutions. King Alfonso may be taking a lesson from English experience; he is certainly offering one to his brother at Potsdam.

The career of Theophile Braga, provisional President of the Portuguese Republic, recalls the statesmen-philosophers of the classic world. Scholar and man of books, he was summoned to take the lead in erecting a new political system for Portugal on the ruins of the one his teachings had helped to undermine. In the provisional government that he organized it was rumored that the actual leadership was in the hands of certain of his associates whose political methods were not entirely based on a study of Aristotle and Puffendorf. Yet it cannot be imagined that a mere figurehead would have succeeded in maintaining harmony among conflicting interests and ambitions, as Braga has done. The infant republic had serious problems to face. The loyalty of the army and navy, through which the revolution had been brought about, had to be carefully guarded. Recurrent labor troubles had to be dealt with. Above all, there was the possibility of a Monarchist uprising which, though not threatening now, might easily have become so under an unwise administration. Now that the Constituent Assembly has worked out a new scheme of government for Portugal and chosen a permanent President, Theophile Braga retires to private life with the satisfaction of seeing his work rounded out.

MR. TAFT IN MASSACHUSETTS.

It would require Hosea Biglow to do justice to the President's address to the Massachusetts Republicans on Saturday. In it there is so much confusion of argument, so erroneous an estimate of actual political conditions in Massachusetts, and so complacent a way of making the praise and glory of the Republican party come out in the conclusion, no matter what the premises, as fairly to invite satiric comment. But a plain statement is sufficient. Any one who will take up the President's speech point by point will not be left in much doubt regarding its political futility.

In the first place, the President asserts that national issues ought to be injected into the State election next November. This is certainly not always a sound principle; Mr. Taft was not of that mind when he urged Ohio Republicans to defeat Boss Cox; and if we look at the reasons which he assigns this time we are deeply bewildered. He calls upon Massachusetts to give a favorable verdict upon the work of the extra session. Its chief aim and virtually sole achievement was, as the President states, approval of the Canadian reciprocity agreement. An "expression of opinion" on this result, the President does not see how the people of Massachusetts "can withhold." But if they were to take him at his word, they might well conclude that the thing to do was to vote for the reëlection of a Democratic Governor! For who was it who raised the banner of Canadian reciprocity in Massachusetts? It was Gov. Foss. Who ardently advocated the measure as against the Republican Governor and Senator Lodge, canvassed the State on that issue, and was triumphantly elected? Why, it was the Democratic Governor who will be a candidate again this year, and a vote for whom by Republicans should seem a logical carrying out of the President's urging that reciprocity be made a State issue this year. There are no Congressmen to be elected, and so the direct way to do what Mr. Taft advises would be to plump for the original friend and champion of reciprocity—Gov. Foss!

As ill-timed and inappropriate was the President's remark that, if he had signed the wool bill and the other tariff-reduction measures, nothing could have been expected but "a most serious business depression," especially in Massachusetts, whose "industries" the bills were "not framed for the purpose of helping." This is a bit laughable, coming on the heels of the announcement of a concerted shut-down of factories in Massachusetts and New England generally, despite the fact that the tariff bills were vetoed, and at the same time with the notice publicly served by the president of the New York, New Haven and Hartford railway that business conditions are so bad and the outlook so poor that men must be laid off, trains discontinued, and every possible form of retrenchment enforced. If the voters of Massachusetts really do import all these matters into their State election this year, their ballots may not have the names on them that the President would recommend.

Mr. Taft's other references to tariff questions are little satisfying. In his attack upon the bills which he vetoed, he declares that they were put together in the old vicious method of "log-rolling." But this is surely not accurate. The typical and historic log-rolling by which tariff bills have been framed is that between special interests. It is the kind of thing that we saw exemplified in the McKinley bill, in which a bounty on the maple-sugar of Vermont was written as the price of getting votes for something else. Free hides were knocked out of the Dingley bill by a similar sort of barter. That was the true system of tariff log-rolling, and nobody but the President has alleged that anything of the kind entered into the drafting of the wool bill. The fact that the House enacted one set of rates, the Senate another, and that a compromise was finally agreed upon is no proof at all of log-rolling in the old and noxious sense. In asserting that it is, the President was ill-advised.

And even on the main question, his "key-note" speech, as his Massachusetts address is already called, gives an uncertain sound. He prides himself on having vetoed the wool bill, yet is forced to admit: "It may be that there were rates in it which would constitute only a proper reduction." That is the position which he is bound to take, self-contradictory as it seems, for he argues that "nobody knows" until the Tariff Board shall have reported; and the President must be ready to advocate even greater reductions in the wool schedule if the Tariff Board says they ought to be made. Mr. Taft makes no bones of conceding this. He declares that the popular demand is for tariff revision and that the Republican party is "under an obligation as soon as opportunity comes" to carry it through. But this comes down to nothing except an exhortation to the Massachusetts electors in virtually these terms: "Vote to sustain me as the President who vetoed the bill, threatening to cut the duty on woollen manufactures to 50 per cent., and as the President who will next winter urge their being cut to 35 per cent."

The simple truth is that the President was set an impossible task. He was asked to go to Hamilton on Saturday, as he expressed it, to "speak words of encouragement as to the outlook for Republican success." That necessarily meant a certain amount of sophistication and special pleading. For the ominous facts were known to every one of Mr. Taft's hearers, as to the whole country, and they are (1) that on the issue of Canadian reciprocity one-half of his own party refused to follow the President; (2) that the Insurgent faction continues to be hostile and dangerous; and (3) that on the question of tariff revision the Republican party is in a jumble of inconsistencies, insincerities, and uncertainties. The job of getting "good cheer" out of such a situation is considerably more difficult than extracting sunshine from cucumbers. It is not surprising that the President failed.

THE COST OF CIVIL PENSIONS.

From Senator Cummins of Iowa, chairman of the Committee on Civil Service, we have received a copy of Mr. Herbert D. Brown's comprehensive monograph entitled a "Savings and Annuity Plan" for the retirement of superannuated civil-service employees. Senator Cummins is of the opinion that his committee will probably take up this far-reaching question at the next session of Congress and endeavor to report a bill "to accomplish this much-needed reform." Meanwhile, he hopes for further light on the subject. That his committee may speedily obtain this everybody must wish. The evil of superannuation steadily grows worse. We doubt if any previous Administration found the evil so great as has Mr. Taft's. Vir-

Digitized by Google

tually every one of his bureau chiefs has reported strongly upon the subject, every Cabinet officer has found his department clogged by aged or physically incapable clerks who stand in the way of greater efficiency, and, above all, of the greater economy upon which Mr. Taft has set his heart.

At first the new Cabinet officer is sure that he can find the way out. He vows that he will so rearrange the offices as to put the drones off by themselves, and he will not let sentiment or mawkish sympathy blind him to the grievous plight of the Government's work. But when it comes to a rearrangement, it is not so easy, after all, and when he takes up the individual cases he is apt to be brought up with a round turn. Thus one Secretary selected an octogenarian for slaughter. But the man produced a letter signed by Abraham Lincoln stating that he had been appointed to that department for especially meritorious services rendered to the President and to the country. Whereupon the proposal to remove that particular clerk fell to the ground. Thus, eventually, every Cabinet officer resigns himself in despair to present conditions and prays that Congress will pass some retiring scheme. That the present Congress has had many plans before it, our readers are aware, and they will doubtless recall that the bill of Congressman Gillett was favorably reported in 1909. After several other modifying bills were introduced, the author of the pamphlet before us prepared a bill which was introduced in the Senate by Senator Perkins, while a similar measure, H. R. 22013, was favorably reported in April of last year. Still another Gillett bill and an excellent draft by Congressman Austin have been introduced in the current year.

Nearly every one in authority being agreed that some such measure is essential, the question of the cost to the clerk and the Government becomes the all-important one. To this question, Mr. Brown devotes considerable attention in his pamphlet. As he points out, the ideal way to begin would be by retiring all superannuated employees forthwith, while compelling all other employees to start at once to save for their own future annuities. If the first were impossible, it is plain that to wait until the accumulations became large enough to retire everybody who ought to go out, would require at least thirty years. Hence the only alternative seems to be to follow the example of New Zealand, and to appropriate annually from the national treasury the necessary sums to carry the system until it is self-supporting. Elaborate calculations cited by Mr. Brown show that to put the Gillett bill into effect throughout the entire Federal service, with pensions limited to $600, would cost the Government $87,055,280 during the next seventy-eight years—until the present clerks were all dead—and $130,581,273, if the Perkins bill, which has no such limit, were to be adopted. Should the experiment be limited to the District of Columbia, it is estimated that it would cost only $400,000 for the first year, on a basis of 1.5 per cent. of salary for each year of service.

This "only $400,000" is noteworthy, because it is the very sum which a committee of the National Civil Service Reform League estimated was the annual loss to the Government because of the failure of clerks seventy years of age and more to do the maximum quantity of work of which a thoroughly efficient clerk is capable. Even the figures quoted above for the entire service do not seem overwhelmingly large, when it is considered that the navy swallows up more than $130,000,000 in a single year, and that the proposed $130,000,000 is to be spread over a period of seventy-eight years. Compared to the annual appropriation for military pensions—$160,000,000 in 1910—it also sinks into insignificance. Nevertheless, it is well to inquire just what this added expense would mean and how it could be met.

Mr. Brown thinks that the plan can be put into operation without additional appropriations by the Government. To prove this he cites the experience of Secretary MacVeagh, who in 1910 undertook to ascertain whether the cost of aged clerks in his department was not greater than the amount that would have to be appropriated under a fair contributory system. Taking the 300 old men in the Treasury, he figured out how much would be left of the present appropriation for their salaries if these veterans were first paid annuities on the scale proposed under the Perkins bill. He found that $400,559 was now expended for their salaries Were annuities on a minimum basis of $360 and a maximum of $1,000 to be paid them, there would be still left $206,251, for which 229 efficient clerks could be hired at $900 a year—an obvious saving to the Government. Indeed, Mr. Brown firmly believes that, while it is difficult to state with absolute precision just what the saving to the Government would be if the superannuated employees were retired, "such statistics as are available would seem to indicate that the amount lost to the Government through the inefficiency of the aged about equals the cost of superannuation" under a reasonable plan. As for the expense of administering such a system, Mr. Brown thinks that twenty-six bookkeepers could take care of the pension system for the entire civil service, and that four bookkeepers at $1,400 could take care of the accounts of the employees in the District of Columbia. Other expenses of administration, including the salary of the head of the office and his assistants, would probably bring the total cost up to $20,000.

LESSONS OF COATESVILLE.

Rather more promptly than analysis usually follows an event, a first-hand study of the Coatesville lynching has been made by Mr. William T. Ellis, who presents his facts and conclusions in the *Continent*. With the incidents of the atrocity itself the whole world, unhappily for our American complacency, is familiar. The gathering of the crowd about the hospital while the echoes of the Sunday evening church-bells were still sounding in its ears; the vain appeals of the frightened nurses over the telephone to the officials and to leading private citizens; the seizure of the victim upon his cot with only the most perfunctory attempt at protecting him by the solitary officer in charge; the barbarous thrusting of him back into the flames, not once nor twice, but three times—these occurrences were told in the newspapers that lay upon Monday morning's breakfast-tables. Sinister as they were, however, they were only the beginning of Coatesville's story. What would her representative men have to say; more, what would they do, when they realized the stigma which a lawless mob had brought upon the place they called home? Not until their answer should be given could it be altogether just to condemn a community which had dispelled the obscurity of its existence by lighting a human flame.

Digitized by Google

The first fact that meets the investigator is that the representative men were slow in saying anything. Monday went by without any indication that they were disturbed over Sunday's affair. By Tuesday the rest of the world was expressing itself so emphatically that the leaders of public opinion in Coatesville were stirred, and that evening an arrest was made. The main agitation that day, however, was over a local baseball game, except, perhaps, among those who went in and out of the Young Men's Christian Association rooms. They talked of the business men's annual picnic at Reading on Wednesday, and when Wednesday came, a thousand persons attended it. Some "vigorous indignation" Mr. Ellis did hear. It was directed at the newspapers because they had published long accounts of "this thing." How could it "blow over" with some one stirring it up all the time? Mingled with this rage, and mollifying it, was a lurking sense of vanity over the commotion that Coatesville was making. The one leading citizen who was moved at the city's shame did not think that anything more would be done than to put some of the young men in jail for a few years, was troubled over the fact that some prominent families were involved, and declared he would use all his influence to prevent the indictment of the lynchers for murder. The man whom Mr. Ellis describes as "the doddering and fatuous old burgess" apparently voiced the general sentiment when he said that the public would blame nobody if it understood all.

It is this "all" that Mr. Ellis's study enables the public to come nearer comprehending. For, much as we should like to think Coatesville peculiar, abnormal, un-American, this writer makes it impossible. It is, he tells us, a representative American community, "of even a higher type than ordinary." Instead of railing at "this respectable, prosperous, commonplace old Pennsylvania town," he regards it merely as Exhibit A in a study of American life. Before we can accept such a view, with all that it implies, we must be supplied with convincing details of Coatesville's social and political status. Are there not foreigners in Coatesville? There are, Mr. Ellis replies, three thousand of them. But no one, least of all in Coatesville, accuses them of taking part in the crime. The mob of four thousand was drawn from the eight thousand white citizens of American birth. What is more, "Coatesville is a more than ordinarily religious town." Seven Protestant churches, and one Roman Catholic; a Young Men's Christian Association of four hundred members; "politics of the petty, sordid, and dirty kind"; is there anything in these particulars to distinguish Coatesville from a thousand other American towns, or to exclude from its category the particular one that a reader may happen to know best?

For Mr. Ellis the conclusion is irresistible: "The crime of August 13 strikes its roots back into the present-day American character." It was not a race riot, although there was race feeling in the leaders of the mob, due not so much to dislike of the Coatesville negroes as to disappointment over the defeat a year ago of the white champion pugilist by his negro rival. The outbreak, thinks Mr. Ellis, was due partly to frivolous-mindedness, the old Athenian lust for a new sensation; partly to the corner-loafing habit; partly to intemperance; partly to the enervating influence of local politics of the Pennsylvania brand "small-souled officials who were politicians first and executors of the law afterwards"; partly to that provincialism which makes men incapable of considering consequences beyond their own village; and largely to the absence of the conception of loyalty to law, God's or man's. "This will be bad for politics," was the first, instinctive comment of even the county officials, not at Coatesville, but at West Chester, twenty-five miles from Philadelphia. Long ago some one expressed a popular notion in the epigram that God made the country, man the city, and Satan the small town. Perhaps it is not fanciful to see in the town, lacking on the one hand the quietistic and elevating influences of the country, and on the other the opportunities for amusement and the highly organized machinery for order of the city, an entity peculiarly favorable to fits of lawlessness. In such a community, a few bold spirits, seizing upon an apt situation, can readily work their will.

The only things against this explanation are the lynchings which have occurred in such places as Springfield, Ill., and the admission that we do not know what outrages of the same kind we have escaped by virtue of the armies of officers who keep the peace in our crowded centres. The demon that showed himself at Coatesville appeared a few days later in Oklahoma. The crowd that faced the hospital that Sunday night, says Mr. Ellis, was not a bloodthirsty crowd, but seemingly heedless, fundamentally lawless, and eager for any sort of excitement. "Any strong man could have turned them aside." But the strong man was not there, and liberty degenerated into license. It is an old phenomenon, but one that we shall have to suppress if we hope to go some other way than most of the republics before us.

POPULARITY IN STATESMEN.

Mr. James Ford Rhodes, in his article in the September *Scribner's* on the Republican Conventions of 1880 and 1884, deals at some length with the movement to nominate Grant again in the former year. Referring to Grant's return from his tour about the world, he states what is probably the historic truth that "when Grant arrived at San Francisco in September, 1879, he was certainly the most popular man in the United States." The ovations which he received during his entire trip across the country served to heighten the impression of that popularity. But how surely it sank and disappeared when he permitted selfish and unscrupulous politicians to use it for their own purposes, there is no need of an historian to tell us. The fall was swift and grievous. It had a kind of parallel in the experience of that other ex-President who came back to his native land last year, hailed as not only the first citizen of America, but the most prominent man in the world, but who quickly fell from his high estate.

The uncertainty of popular fame is an old sub-division under the general head of the vanity of human wishes. As a breath has created it, so may a breath destroy. To many a victim of the ephemeral nature of popularity, the subject is full of vexation and melancholy, inclining one to pessimism. Outsiders who find it most pleasant to observe from the shore the strugglers on the great deep of public life, see in these ups and downs of popular favor an inviting study. They are not willing to

Digitized by Google

stop with the attitude of a Coriolanus, despising the very crowd he seeks to cultivate, and maintaining that every reputation conferred by the acclaim of the multitude is necessarily hollow. Nor can we rest content with advising statesmen to strive to attain something like the grim temper of Cromwell, who said, when riding through the cheers of the populace, "Yes, but they would shout even louder if I were on my way to be hanged." Even for so mysterious a matter as popularity, or its sudden and apparently unaccountable loss, there must be causes, although obscure, and it is for the searcher into the more subtle of political phenomena to endeavor to discover them.

The inquirer does not look long before perceiving that in a democracy, avid, like that in Athens, of new things, the readiest way to attain popularity is by speech and the surest way of losing it is by performance. The people seek a sign, and the most flaming sign that a public man can give to-day is the utterance of some party watchword, the fiery declaration of some policy, a resounding oratorical attack upon some hoary abuse. Happy the aspirant for popular applause who does not need to subject his words as big as Pistol's to the cruel test of deeds. In this respect, Mr. Bryan may be accounted singularly fortunate in the fact that he has never attained high office. This leaves him in the lucky position of being able to assert roundly what he would do if he were President, instead of being exposed to the taunt: "We believed you and gave you power only to find that you could not do one of the things which you had promised." It should be something of a comfort, albeit a little cold, to Mr. Bryan to know that no historian will be compelled to say of him that his countrymen would have believed that he would make a good President if he had not been elected President. The *nisi imperâsset* is a sad verdict, and that at least the Nebraskan has escaped.

For a concrete instance illustrating the workings of popularity and unpopularity in public men, the philosophical observer might do well to turn to Gov. Wilson. The high repute in which he has been held in his own State has undergone and is undergoing a certain change. We do not say that his popularity does not remain great. The memory of his wonderful campaign of last year, and of his most effective speaking and leadership, abides. His fame has spread beyond New Jersey, and the very fact that he is so prominently spoken of as the probable nominee of his party for the Presidency next year, obviously sets up a kind of refluent wave from the outside to lift him still higher in his own State. This had its clear evidence in the resolution just adopted by the Democratic State Committee, pledging to him the delegates of New Jersey in the National Convention. Yet it is plain to attentive students of Jersey affairs that Gov. Wilson has entered upon an inevitable period, we will not say of unpopularity, but of declining popularity.

The reason for this is not at all to his discredit; rather the contrary. It springs from the fact that the legislation which he promised last year has been enacted and is now in force, and that thousands of those who called for it do not like it now that they have it. Among these laws must be classed the new statutes regulating party primaries and elections. Thousands of citizens who vaguely maintained that the old system was tyrannous and rotten, are amazed and indignant at discovering all the details of registration and voting through which they must now go. We never dreamed of this, they say; and they go on to ask what Gov. Wilson could have been thinking of to impose such a vexatious measure upon the State. The creation of the Public Utilities Commission has provoked a little of the same sort of criticism, while even more has been caused by the Employers' Liability Act. Excellent people can be heard fairly raging at the discovery that they must insure against accident to any of their servants, or employees, and saying in the most aggrieved tone that if this be reform, they want no more of it. Of course, all such persons are of the class who fondly imagine that an omelet can be made without breaking eggs. It is not probable that the offence they have taken will have any serious results, politically. Gov. Wilson should easily rise above all this sort of fault-finding. But for the present, as we have said, it indicates a certain abatement of his popularity. And the cause is plainly the one above indicated—that is, the peril which a statesman always confronts when he comes to translate his glowing oratory into prosaic legislation.

If popularity goes as well as comes, men in public life may reflect it sometimes comes again as well as goes. Politicians are easily deceived in such matters. They will tell you that a statesman has lost his popular hold, just on the eve of his demonstration that he has it more firmly than ever. Bourke Cockran made his famous sneer at Mr. Cleveland, in the Democratic Convention of 1892, as the man who was highly popular upon every day except election day, only to see the ex-President win a sweeping electoral triumph a few months later. The wisest course for any man in official life, as for his friends, is to be as imperturbable as possible about ebbing and flowing popularity. Mr. Taft entered the Presidency amid extraordinary manifestations of general good will. "This will not last," he said to his intimates. It certainly did not. Within a year he himself was publicly recognizing the truth: "This Administration is not popular." Since then there has been a degree of recovery from the depths: but how it will go later, we have no sure word of prophecy. It is pleasant for statesmen to be popular; but if they are not, they can say to Sempronius that there is something better, and that is to deserve to be.

SUMMER HOBBIES.

Hobbies are among the things that make a man seem human and picturesque. One likes Lowell rather the better for his insisting year in and year out that the English have no sense of humor; and the austerity of President Eliot is softened by his certainty that there is no sport comparable to rowing. Here is a case of two distinguished and, in general, uncompromising minds employing the kind of special pleading that makes the whole world kin—Lowell because his own wit was not always caught in London; President Eliot because—we wonder if it is not chiefly because he once pulled a valiant oar on his college crew. Certain personalities give the world a glimpse of their hobbies the year round. But generally it is in this summer season of relaxation that the world at large gets, or fancies it gets, a chance to look into the hearts of its heroes. Then the reporter goes forth with his camera to see if perchance he can find a dandified actor

Digitized by Google

hoeing potatoes, or a statesman baiting a hook or rebuking a gun when his aim is false. When greatness steps from its pedestal and joins the common run, all the world is happy at the sight.

The English "Who's Who" includes the "recreations" of the persons mentioned. We need not accept as serious hobbies all such confessions, especially that of the cynic who says simply "gout," or another's, "sleeping when I can find time." Mr. Asquith and Mr. Balfour quite properly have the same preference —golf; after Parliament adjourns, what notable animosities must be whirring in their drives. John Burns is satisfied to box. Bernard Shaw makes a distinction: his exercise is "public speaking"; his recreation is "anything except sport." Rather curiously, William Osler recreates with "bibliography." In the same volume is Col. Roosevelt's own statement, "ranching and big-game hunting on the great plains and in the Rocky Mountains." By comparison, Andrew Lang's mere "cycling" sounds tame. It would have been more illuminating, if, instead of recreation, "Who's Who" had called for hobbies. A recreation is usually taken to mean an out-of-door sport, which attains to being a hobby only if a man brings to it something of a passion, and not if it is undertaken merely for the sake of the exercise. Fishing was a hobby with Grover Cleveland and Joe Jefferson, both of whom planned far ahead for the outing. A hobby is also illustrated in President Taft's unwavering hope that a low score will some day be his on the links. Something more than a passing interest is involved; here are expended the accumulated resolves formed in odd moments during the winter months of professional labor.

Ideally, a summer hobby would keep one out of doors, yet much by one's self. Not only should the body be set to work in unwonted ways, but the mind also. Mr. Arnold Bennett is distressed by the sight of men devoting weeks to tennis—all this for the body, and what for the mind? Mr. Bennett has undoubtedly felt the inspiring glow of physical fitness. Yet he would prefer the picture of Gladstone swinging his axe and in spells of resting calling his Homer and Horace to mind, or of Mr. Bryce climbing mountains, but not for want of thought. Getting one's mind off one's daily work should, according to Mr. Bennett, only furnish the opportunity to put it on something else. And the advantage of being apart from one's fellows lies in the fact that the mind then grows philosophical. Stevenson's old Scotch gardener constantly attacked the deep mysteries of the universe; so does many a Maine guide. How much in a similar way is accomplished on the elated or rueful walks between holes in golf, there be many to say. As a matter of pure theory, however, fishing, tramping, gardening, sailing, paddling, and the cycling which still holds its own in England should be of greater avail. For to a sensitive mind companioned only by a heath or a dense wood, there comes usually the desire to reflect largely, to complete the scheme of things—just why the particular shape of the bay, why a giant of the woods has fallen while its huge neighbor stands, and why in a garden the weeds of sin are so much hardier than virtuous plants. Continually the mind is challenged to explain the reason of its being, to summon together into a system its divergent impulses. Perhaps in the process one gains that so-called "irony" proclaimed by Friedrich Schlegel—the power, that is, to choose one's world and for the moment to be supreme in it, untouched by workaday shams. Who shall say that the attitude is entirely dropped when later the shams again become much the order of the day?

We urge our readers to acquire a summer hobby, but we shall not venture to come out in favor of any particular one. What though we truly know the best hobby of them all, is it not the virtue of the other fellow's hobby that he knows equally such another? Your fisherman meets your gardener, when the season is over, and attempts to impress upon him the peerless joys of standing waist-deep in a stream; there's a dragon-fly dipping at a waterbug, there's the most curious hole in the bank, and hour after hour the ripples go by. "Yes," says the gardener, "it must be very nice. But speaking of bugs, I've got the best killer of them all. For a time it looked as though my larkspur and browollia"——. No use; a hobby is chosen, not imposed. But the man without at least a summer hobby knows not the delight that comes in the thick of winter from realizing that a release is in store for him, body and soul.

ADJUSTING RACIAL DIFFERENCES.

LONDON, August 20.

The first Universal Races Congress met in London July 26-29, inclusive, and gathered unto itself beturbaned Persians and Indians, modernized Chinese and Japanese, French-speaking Turks and Egyptians, negroes from South Africa and the United States, American aborigines, and white-faced people from all over the world. The object of the Congress was to discuss, in the light of science and modern conscience, the general relations subsisting between the peoples of the West and those of the East, between so-called white and so-called colored peoples, with a view to encouraging between them a fuller understanding, friendlier feelings, and a heartier coöperation. The absence from the papers* written for the Congress of the kind of bias which regards a dark skin as the mark of permanent, foreordained inferiority, is most welcome; though it is evident that a desire to hurry along the millennium made some of the writers forget, or lightly remember, the vast difficulties to be overcome.

The scientific and quasi-scientific papers do not present any new material, nor state a new theory. They merely rehash old ideas, giving them, however, a new flavor and freshness. The case for miscegenation, for instance, has been well put by Prof. Earl Finch, a negro member of the faculty of Wilberforce University, who elaborates Thevenot's dictum: "The mulatto can do all that the white man can do; his intelligence is equal to ours," and roundly remarks that people who criticise the products of certain mixed marriages fail to bear in mind the mentally and morally low condition of their progenitors. He emphasizes the trite remark: "The greater number of negroes who have achieved distinction in the United States have been men of mixed blood," and in order to prove his statement that race blending, under favorable circumstances, "produces a type superior in fertility, vitality, and cultural worth to one or both of the parent stocks," says that the census in America "shows that there has been a more rapid increase among mulattoes than among negroes of the purer type." He cites the case of Pitcairn Island, which was settled, in 1790, by nine English mutineers, six Tahitian men, and fifteen Tahitian women. In eighteen years all the Tahitian

*The papers have been collected under the title, "Inter-Racial Problems," and are edited by G. Spiller; the publication of the book in this country is in the hands of The World's Peace Foundation, No. 29 A Beacon Street, Boston, Mass.

Digitized by Google

men had died, leaving only the white men and Tahitian women. The half-breed progeny, as it grew up, intermarried and bore many children, so that by 1855 the population had risen to 200. They were removed to Norfolk Island the next year, and there continued to increase so rapidly that, in spite of the fact that sixteen returned to Pitcairn three years later, in 1858 they numbered 300, while by 1905 the population of Norfolk Island had grown to be 1,059, most of them direct descendants of the mutineers who originally settled on Pitcairn Island. One of these descendants bears testimony to the hardiness of the people, declaring that they have excellent constitutions, in spite of the fact that they are so closely related, and are as healthy and active from childhood to old age as it is possible for any one to be.

The case for miscegenation is strengthened by Dr. Joao Baptista de Lacerda, director of the National Museum of Rio de Janeiro, corresponding member of various scientific societies of Europe and America, and honorary professor in the faculty of medicine at the University of Chili, who writes of the *metis*—the half-breeds of Brazil—whom the republic admits to "the National Congress, the courts, higher education, the diplomatic world, and the highest branches of the administration," thus giving them a status which in general no mulatto enjoys elsewhere. The *meti*, we learn, "himself endeavors, by marriage, to bring back his descendants to the pure white type." Children of *metis* have been found, in the third generation, to present all the physical characteristics of the white race, although some of them retain a few traces of their black ancestry through the influence of atavism. The influence of sexual selection, however, tends to neutralize that of atavism, and removes from the descendants of the *metis* all the characteristic features of the black race. "In virtue of this process of ethnic reduction, it is logical to expect that in the course of another century the *metis* will have disappeared from Brazil."

A curious thing in connection with these scientific papers is the fact that writers reasoning from one and the same premise—the monogenetic origin of the races and the color of the skin being solely due to pigmentation produced by nature as a protection against the rays of the tropical or semi-tropical sun—arrive at such divergent conclusions as the building of Dreadnoughts and the disarmament of nations. Probably one writer's bias is the result of his nationality, but after explaining the anthropological view of the common origin of all mankind, Dr. Felix von Luschan, professor of anthropology in the University of Berlin, remarks:

> . . . *racial barriers will never cease to exist*, and if they should show a tendency to disappear, it will certainly be better to preserve than to obliterate them. . . .
>
> Nations will come and go, but racial and national antagonism will remain, and this is well, for mankind would become like a herd of sheep, if we were to lose our national ambition and cease to look with pride and delight, not only on our industries and science, but also on our splendid soldiers and our glorious ironclads. Let small-minded people whine about the horrid cost of dreadnoughts; as long as every nation in Europe spends, year after year, much more money on wine, beer, and brandy than on her army and navy, there is no reason to dread our impoverishment by militarism.

From the scientific and quasi-scientific papers, one turns to those dealing with the rise of the Orientals, the negroes, and other aborigines from the standpoint of history. Considering the fact that they have been contributed by "authorities," one must confess to a sense of disappointment. This is especially true of the essays which concern the East and Far East. Even in the case of the Afro-American, the negro's side of the question has not been fully stated. While Dr. W. E. B. Du Bois of New York, late professor of history and political economy in Atlanta University, takes up fifteen pages of small type to discourse upon "The Negro Race in the United States of America," he merely sets forth the point of view of those men and women of African descent who are out-and-out opponents of Dr. Booker T. Washington of Tuskegee, and others of his school of thought. Fairness would have required that this be supplemented with another paper written from the opposite point of view.

Probably the most important portions of the book are those penned by British pro-consuls, who set down in plain, unvarnished terms the results of their mature experience, and whose testimony to the worth and progressiveness of the negroes and Asiatics is at least as significant as the driving force of moral and scientific platitudes. Three such papers: "The Modern Conscience in Relation to the Treatment of Dependent Peoples and Communities," by Sir Charles Bruce, late Governor of Mauritius; "The Government of Colonies and Dependencies," by Sir Sydney Olivier, Governor of Jamaica; and "The World Position of the Negro and Negroid," by Sir Harry H. Johnston, formerly British commissioner and consul-general in Africa, are included in the volume. Sir Charles Bruce, at the end of a thoughtful chapter, makes the unequivocal statement that

> . . . the modern conscience rejects as a fallacy the claim of Western civilization to a monopoly of the capacity of self-government based on an indivisible interrelation between European descent, Christianity, and the so-called white color. It recognizes that while this interrelation has evolved a capacity for self-government in an appropriate environment, a similar capacity has been evolved by an interrelation of other races, creeds, and colors appropriate to other environments. It maintains, therefore, that the conflict between West and East must be adjusted on the same principle that has adjusted the conflicts of race and creed in the West, the principle of freedom interpreted as liberty of person and conscience and equality of opportunity for all, without distinction of race, creed, or color, under a settled government.

Sir Sydney Olivier, after insisting that the white man does not colonize in any part of the world as a missionary for the sole purpose of uplifting the natives, but as a selfish individual bent upon bettering his fortunes, lays down the following rules for stimulating the growth of backward races under Occidental tutelage:

> I have personally a very strong opinion that, whatever may be the case with Asiatics, African peoples generally are not at all suited by temperament or talent for that kind of industrial position as wage-workers under capital into which the proletariats of industrial European countries have come, nor does it appear to me at all desirable that they should, if they can avoid it, pass into that position or acquire in all respects the characteristics of the European wage-workers.

Under present circumstances he believes that their powers of production can be quickened only with organized education by employers of "the advanced or industrial race":

> Outside of this the only method for assisting them to maintain those services which they are being more and more taught to require, is a very considerable personal education in agricultural and technical skill. But this education can only be obtained by an industry and application upon their part which it is very difficult to induce them voluntarily to undertake. Under the European apprenticeship system, craftsmen learned their trades as youths under the very severe dominion of a skilled master who controlled and, if necessary, beat them. I do not know of any means except compulsion of this sort or stress of want to induce the steady industry that is required for thoroughly learning a trade in competition with the great counter-attractions of indolence and sensuality that are constantly pressing upon the youth of all tropical populations.

Sir Harry Johnston declares that "the negro will probably die out in Asia (though leaving in the new peoples of Polynesia and Malaysia and India an ineffaceable trace of his former presence in the land); but in Africa and in America he has a very important part to play, and he may even permeate the life of Europe in the coming centuries."

NEWS FOR BIBLIOPHILES.

The Omar Khayyám Club organized at a dinner at Pagani's Restaurant in London in October, 1892, has just issued (one hundred and eighty-one copies only) "The Book of the Omar Khayyám Club, 1892-1910." Some of the drawings which appear on the menus by well-known artists are reproduced, and poems written for and read at the dinners by eminent men of letters are printed. The Introduction is by Edward Clodd. The volume contains four poems by Austin Dobson, three by Edmund Gosse, two each by William Watson and Henry Newbolt (who, it is prophesied, will become a "collector's author" with his first editions selling at high prices), and others by Andrew Lang, Alfred Noyes, Stephen Phillips, William Sharp, and other writers. Included also are a letter by Swinburne and remarks made by George Meredith at the dinner of 1895, where Meredith delivered his "first and only public speech." While many, perhaps most, of the verses have been reprinted elsewhere, the volume is one which collectors will enjoy owning.

A Thackeray exhibition was held at the old Charterhouse, June 30 to July 15, under the auspices of the Titmarsh Club, and a little catalogue has been printed. Lady Ritchie, Thackeray's daughter, loaned a bust and four portraits (original drawings by George Chinnery, Frank Stone, Frederick Walker, and Sir John Millais), three sketch books, several framed drawings, and a few manuscripts and proof-sheets. The more important manuscripts exhibited are from private libraries, notably those from J. Pierpont Morgan's collection, which comprise the manuscripts (or existing portions of them) of "Vanity Fair," "The Virginians," "Lovel the Widower," and "French Caricatures," a part of "The Paris Sketch Book." Trinity College, Cambridge, loaned the manuscript of "Henry Esmond," and the Charterhouse School a portion of that of "The Newcomes."

The first editions at the exhibition are for the most part loaned by dealers, Frank T. Sabin showing a nearly complete set of them. A "Collection of Earliest American Editions" is loaned by S. Causley, which, however, includes only the series issued by Appleton in 1852-1853, Harper's edition of "The English Humourists," 1853, and Ticknor's "Ballads," 1856 and "Early and Late Papers," 1867. The first appearance of Thackeray's work as a book in stiff covers was in Philadelphia, in 1838, when Carey and Hart collected his early contributions to *Fraser's Magazine* and published the volume as "The Yellow-plush Correspondence." It is very probable that the author's name was unknown to them. The first American edition of "The Four Georges" is dated 1860, while the English edition is dated 1861, but there seems to be no positive proof of priority of publication. The case is different with "Lovel the Widower," Harper's edition dated 1860 undoubtedly preceding the first English edition of 1861, and with "Denis Duval," which Harper reprinted in 1864, and the first English edition of which is dated 1867. And there are other American books which have actual first edition value.

The Grolier Club of this city will hold a Thackeray exhibition in the late autumn which will undoubtedly surpass in all respects the one recently held in London. The best Thackeray collections are in America. Mr. Morgan, Major Lambert, Mr. Widener of Philadelphia, and Mr. Bixby of St. Louis own among them, we believe, more important manuscripts than exist in England.

Correspondence

THE TARIFF ON WOOL.

To the Editor of The Nation:

Sir: President Taft's implied assumption that the inflation of the tariff has ever been based on "accurate and impartial information" reveals better than anything else could his protectionist conviction. It is a fact curious to all but protectionists, that jacking up a tariff is a thing of no moment, but letting it down is a thing of awful solemnity. There seems to be a belief that an increase of the tariff can only swell individual profits, while a decrease will ruin many businesses. This is, of course, false reasoning. Not only does every rise in prices injure the purchasing power of consumers in respect to other articles, but it is just as likely to throw a sequence of firms into bankruptcy as a corresponding decrease. For it drives out of business men of small capital by raising the price of raw materials beyond their reach, and so tends to throw business more and more into the hands of the great combinations. As to the small wool-grower, for whom the President is so solicitous, it is notorious that the tariff has been his worst enemy; it has limited the importation of the fine foreign wools, whose mixing with the coarser native ones can alone give the latter a sufficient market. Each heavy increase in the wool tariff has been accompanied by a shrinkage in the native product.

RACE PREJUDICE.

To the Editor of The Nation:

Sir: With all due respect to those who are interested in the uplift of the "negro" in this country, in the opinion of the writer, it is the inherent color prejudice which dominates the Caucasian nature in this country that has most aided in creating this flagrant disregard of law and order, and that is causing the world to look upon the United States as a mere parody on true representative government.

The Coatesville lynching, while new in the State of Pennsylvania, is not new to the country; and its occurrence would seem to verify the declarations of its Southern originators that the prejudice against the man of color is not confined to the South. When the poor blacks in the South were originally made the sport of Southern savagery, their supposed friends were at first, as now, horrified, but gradually recalling that it was only the "negro," and that the poor Caucasian mourner over the Lost Cause was worthy of sympathy under the circumstances, the feeling of repulsion gradually subsided. The ever-present color prejudice failed to bring to mind the logical deduction that it would only be a short time when that same disposition to disregard all law would become a disease, and that self-constituted judges the country over would be the rule, instead of the exception; and that the "negro" would not always be the target. The Constitution, if honestly regarded, must always insure protection to all citizens. The failure to compel that protection has been the direct cause of the lynching disgraces referred to.

The writer of this communication is a native man of color, but no "negro." He is of native Indian origin, and in his veins courses some of the best Caucasian blood. He has endeavored to improve and has some knowledge of French, German, and Spanish. He has a wife, and five boys, three of whom have completed their education, while the other two are still at school. As he views conditions, the color line in this country will grow more and more pronounced and will ultimately cause the country's downfall. Being well acquainted with both French and Spanish peoples, subscribing for their publications and being in correspondence with those of South American origin, it is his intention soon to migrate to Argentina to mingle with people who regard humanity from the standpoint of its recommendations. The natives of that portion of the country being of mixed blood have repeatedly stated to the writer that they consider themselves as superior in origin, on account of that mixture, and they are controlled by proper consideration for their citizens, some of the most distinguished of whom are distinctively black, but splendidly equipped mentally.

A NEW DEPARTURE IN GERMAN HISTORICAL RESEARCH.

To the Editor of The Nation:

Sir: On May 15, 1909, occurred in Leipzig the formal opening of the Royal Saxon Institute for Cultural and Universal History, under the directorship of its originator and founder, Prof. Karl Lamprecht, the well-known German historian, and the present rector of the University of Leipzig. This event, heralded at the time in a variety of publications, scientific and popular, as marking the beginning of a new period in German historical research, was, of course, only formally the beginning of the new movement, the real genesis of which is to be sought in the thinking and planning of Professor Lamprecht for a decade previously.

Convinced, as a result of his own extensive historical research, that the great problems of history were not to be solved by the traditional methods of investigation, Professor Lamprecht began about 1900 to formulate a plan for a new system of study, better calculated, as he felt, to answer the need of a more comprehensive and productive consideration of historical questions. The modern tendency towards specialization, no less active in the field of history in its narrower sense than in the other fields of knowledge and scientific research, though it conduced on the one hand to a more minute and exhaustive study of special branches of the subject, seemed, on the other, to be attended with a very evident evil. This evil Professor Lamprecht found in the inevitable tendency of the system of independent specialization to destroy the broad perspective which he considered essential to a really intelligent understanding of the large questions in the development of the human race as a whole, the study of which devel-

Digitized by Google

opment he claimed as the domain of cultural and universal history.

The true significance of historical phenomena can, according to Professor Lamprecht, be understood only in the light of a comparative study of different nations, not merely with respect to their political history, but also with reference to their intellectual, social, and economic development. This, then, was Professor Lamprecht's project, to combine into one organic whole the prosecution of studies in the fields of religion, psychology, sociology, economics, and politics, so far as they shed any light on the larger problems of a universal cultural history of the human race. That such a combination of courses was not to be found united under any one departmental faculty in Germany was evident, and no less evident was the fact that any suggestion of a plan to form such a group within the university curricula would be futile. Consequently, the only course left to Professor Lamprecht was to strike out for himself; and this he did with unexcelled vigor and enthusiasm.

In January, 1906, he first presented to a group of friends in Cologne his project for an institute for cultural and universal history in which students should find instruction in the form of seminars in all the related fields which, according to the originator of the plan, formed the necessary components of a comprehensive survey of history in its larger sense. Beginning with the sum of 6,000 marks subscribed at that time by these friends in Cologne, Professor Lamprecht undertook an active campaign for funds to start a library, the *sine qua non* of a research institute. As first proof of his own unselfish devotion to the idea he gave his valuable historical library of some four thousand works to form the foundation of the institute. Then, aided by a most energetic and tireless assistant, Dr. Köhler, he succeeded by dint of countless letters, public lectures, and personal solicitations, first in raising considerable money by private subscriptions, then in enlisting the support of the Saxon government for books and necessary clerical aid, and, finally, in obtaining a home for his institute in the historic old building back of the university. Furthermore, the Saxon government provided for an annual grant of money, without which the work could not have been carried on.

It is remarkable what has been accomplished in the short space of two years, since first the institute was formally opened. A carefully selected library of 30,000 volumes, well catalogued and ordered, and attended by three assistants, offers facilities for instruction and investigation in the general history of the nations of western Europe, of the United States, and of China and Japan, as well as in ancient history and the history of religion. Eighteen instructors—among them in the present semester representatives of three foreign countries, France, Belgium, and the United States, who, in their native tongues, offer courses in the history of their own countries—conduct twenty-two weekly seminars in as many different subjects of historical interest. The courses are divided into three general groups, comprising, respectively, psychological studies in the development of individuals and races, studies in the cultural history of particular nations, and comparative studies in the development of different races.

The number of students has in this the second year of the institute's existence passed considerably above the three hundred mark, and only the lack of adequate space prevented further growth. For the coming year additional quarters have already been engaged and a considerable increase in the teaching force has been provided for.

HERMAN G. JAMES.
Docent in the Institute for Cultural and Universal History.

Leipzig, August 10.

TRAVELLERS' TOLL.

TO THE EDITOR OF THE NATION:

SIR: A number of railways in the Eastern part of the United States issue transcontinental tickets in a manner most inconvenient to travellers. Instead of selling complete through tickets, they sell a ticket with an order which must be exchanged at some point en route for another ticket for the balance of the journey.

It is evident that the construction and division of inter-road rates are affected by a multiplicity of distances, junctions, and other factors, which, on account of the great volume of business, make the distribution of this revenue a complicated and expensive process. By selling exchange orders, railways may save a large part of this expense; they may also save the cost of supplying agents with proper tickets. In selling a complete through ticket, a company takes the responsibility for payment to other lines for the entire distance to be travelled, while in selling a ticket in connection with an exchange order, it generally retains only part of the fare collected, paying the balance to some other company, which agrees to bear the expense of apportionment.

The use of such orders might be acceptable if there were a consequent saving to the public, but the cost of transportation is not reduced, and the public does messenger service in exchanging tickets. Moderate use of exchange orders is, perhaps, to be expected at small stations, but the extent to which they are now used at the largest stations is not in line with the march of present-day improvements. Under present conditions one person demanding a complete through ticket has but little effect upon "the system." An informed public should, in time, be able to obtain that for which it pays. The improvement may come as a result of direct application or through the agency of the railway commission.

Denver, Col., August 15.

CORONATION ODES.

TO THE EDITOR OF THE NATION:

SIR: An editorial not long since published in one of the usually more reliable of New York papers, entitled "An Odeless Coronation," carries with it an inference so erroneous that it should seem deserving of comment. I use the present tense concerning it, as I have twice seen it reprinted; and some correction becomes, then, the more timely since it may yet farther "go the newspaper rounds."

Noting the fact that Mr. Austin had written no "official" ode for the picturesque historical event of June 22, and suggesting that this apparent oversight may have been due to the King's neglect to order a poem, the editorial goes on to declare that present-day readers will have to go back for coronation poetry to the 1902 productions of William Watson and Bliss Carmen, as, "with the exception of some verses attributed to the Emperor of Japan, we have seen no poetry to speak of inspired by the coronation." As for the monarch's part in his laureate's literary activities, is it not true that, throughout the three centuries which began with Ben Jonson and end with Alfred Austin, it has ever been the royal odist's part himself to take the initiative?

The alleged dearth of non-official coronation verse calls several contributions to mind. We may set aside the barren little quatrain from Mutsuhito, which was interesting only because of Occidental curiosity to see just what so august an Oriental sovereign had to say. For the rest, there may be those who would put out of the count Lauchlan Watt's fine stanzas in the London *Sphere*, or Owen Seaman's dignified and melodious tribute in *Punch*, for Mr. Watt is little known over here, while the "Charivaria" of the Anglo-Saxon metropolis may seem to such as are not acquainted with its traditions for the past seventy years not the ideal channel for serious verse. But what remains? The writer of the editorial evidently did not see Stephen Phillips's splendid ode, though it took the best of two pages in the *Century*. Nor could he have seen the graceful lines of that unlaureate Austin surnamed Dobson, nor the ringing eulogy of another Alfred—Mr. Noyes, nor the glowing ode of an American singer, Florence Earle Coates. Yet these are examples of "poetry to speak of."

WARWICH JAMES PRICE.

Avalon, N. J., August 18.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: Would you allow me to state that I never had the honor of being one of the late E. A. Abbey's "associates in the art department of Harpers," as you say in your issue of August 3. While Abbey was working in the Harpers' office in New York, I was at school in Philadelphia, and I never was engaged in the art department of Harpers at any time.

JOSEPH PENNELL.

London, August 14.

LINES IN "DON JUAN."

TO THE EDITOR OF THE NATION.

SIR: In the lines of "Don Juan," III, ciii:

Those downcast eyes beneath the Almighty Dove—
What though 'tis but a pictured image?—strike—
That painting is no idol,—'tis too like,

I have always regarded "strike" as the indicative verb, of which "downcast eves" is the subject, the sentence, characteristically, being left incomplete. One may conjecture the continuation as "strike certain chords of memory," or "strike with genuine religious feeling." The former would bring out another well-known characteristic of Byron, the recurrence to the personal note.

N

July 31.

Since writing the above and receiving the printer's proof, I have noted the use of "strike" by Shakespeare in a connection

Digitized by Google

so similar as to suggest the possibility that Byron was consciously or unconsciously influenced by it. It is in the last scene of "The Winter's Tale," v, iii, 100, where the supposed statue of Hermione is called to life by Paulina, who says:

> Music, awake her; strike!
> [*Music.*]
> 'Tis time; descend; be stone no more; approach.
> *Strike all that look upon with marvel.*

THE AUTOBIOGRAPHY OF GEN. SIR WILLIAM BUTLER.

Sir William Butler: An Autobiography by Lieut.-Gen. the Rt. Hon. Sir W. F. Butler, G.C.B. With four portraits in photogravure. New York: Charles Scribner's Sons. $4 net.

This book is a record of a life such as no soldier in the nineteenth century could have led except in the service of England. She and Russia alone among modern Powers have a great variety of distant possessions in which, or contiguous to which, wars have a habit of breaking out; and the number and variety of the outside possessions of Russia, if not their extent, is much less than that of Great Britain. The subject of this Life, one of the most distinguished soldiers of his day, served in Burmah, in India, in Canada, in Ashanti, in the Sudan, in Egypt, and twice in South Africa. He had also that love of travel and adventure which is supposed to be innate in an Irishman, and made journeys on his own account besides those to which his military duties called him. Having, along with a keen observation and a genuine love of nature, considerable literary gifts, he wrote several excellent books of travel, and in that way made his name familiar before he had risen high enough in his profession to have opportunities for a display of his military talents. Thus his career has the interest of literature as well as of soldiering, and there are parts of it that may perhaps be thought to illustrate the dangers that beset the literary soldier.

Sir W. F. Butler was born in the county of Tipperary in Ireland in 1834. His family was a branch of the great house of Butler which has enjoyed wide possessions and power in the centre and south of the island for five or six centuries, its head being the Marquis of Ormonde. The family to which Sir W. Butler himself belonged was not affluent, and the schools which the young man attended seem to have done less for him than his own love of reading. Entering the British army at twenty, he was sent out in a few months to Burmah, which seems to have had for him that charm which so many travellers have felt. Thence he went with his regiment to Southern India, narrowly escaping shipwreck in a hurricane. Presently he was transferred to Canada, and was there first brought in contact with Gen. Sir Garnet Wolseley, who was already becoming famous, and among whose group of friends and admirers Sir W. Butler was soon enrolled. After some service in Canada he undertook in 1871 a long journey into what was then the virtually unexplored Northwest, on the east flank of the Rocky Mountains. In 1873 he returned to the same region, and crossing the mountains far to the north of the settled districts, got down to the Pacific. Two books which had much vogue in their day recounted these journeys. Not long after, he went with Wolseley to West Africa and gained credit by his exertions in the Ashanti war, paying the price of distinction by a severe attack of the fever which infests that frightful region.

Next came several successive periods of service in South Africa and some years in the Sudan and Egypt. He fought against Arabi at Tel el Kebir in 1882, and had a large share in the ill-fated expedition up the Nile to rescue Gordon in 1884. In 1885 he was left in command of the British and Egyptian force that was holding the Egyptian frontier near the Second Cataract against the Mahdist Dervishes. Other less interesting employments, interspersed by other journeys undertaken on his own account, followed, and at last in 1898 came the most important appointment he ever held, for it put him in a position where history was being made at a rapid pace, and it fixed the eyes of the British world upon him. This appointment was that of general commanding-in-chief in South Africa at the time when the war against the two Dutch republics which broke out in October, 1899, was already brewing. During the absence from England for some months of the High Commissioner for South Africa, it fell to Sir William Butler (he had been made a K.C.B. for his Sudan exploits in 1885) to discharge the duties of that office, and he was thus called to political as well as military functions of the highest moment. His views of the South African situation at that time and of the causes which led to the Boer war, form the part of the book which has drawn the most attention in England, where the fires of controversy have not wholly died down. For readers in this country the matter has less interest, but inquiring scholars will find his treatment of it a contribution to the still somewhat obscure history of the years between the Jameson Raid of December, 1895 and the outbreak of the war in October, 1899. This was Gen. Butler's last command abroad. On his return to England he discovered that his attitude had exposed him to many charges, which he ultimately found an opportunity of completely refuting. He received in 1906 the honor of G.C.B., the highest which a British officer can obtain, and died in 1910.

His life was a very full and eventful one; and he describes all in which he took part with the skill of a practised man of letters, writing easily and brightly, and showing a special gift of catching the characteristics of any country which he visits. His pictures of the scenery of Burmah, of the Malabar coast, of Palestine, of the Sudan, and of Egypt are all singularly fresh and true. Here is a passage about the last-named country:

> More interesting to me than the tomb or the temple of the dead past in the desert was the endless picture of the life of the fellah in the soft green level of his home land; his fields of grain, in their many stages between seed and stubble, his plots of onions, sweet-smelling beans, deep green clover, cotton, and flowering flax; the brown canal banks where the cattle, goats, donkeys, and camels stood in the shade of the acacia trees in the hot hours, munching the stalks of sugar-canes; the big blue buffaloes, with their horns and noses just showing above the yellow water; and the date palms rustling in the cool north wind round some old marabout's tomb, whose little dome shows very white over the green fields; and under the glorious sunshine the great flocks of white pigeons shimmering over villages; the strange paddy birds, standing in the inundated fields; above all, man, woman, and child at work everywhere, sowing, reaping, weeding, working the water wheel in winter, and in summer when the Nile is pouring down its flooded waters, opening the little watercourses from one field to another with their feet to let the saving flood flow on its way (pp. 247-8).

Not less faithful in conveying the salient beauties of nature in a very different region are these few lines about South Africa:

> I saw again with pleasure the hot blazing wastes of the Karroo, the great plains of the upper plateau, the far-apart river valleys, with their yellow streams; the green mimosa fringings, the huge table-topped hills, with glimpses beyond those hills of blue mountain ranges, and over all that wondrous sky, with its atmosphere of arm-stretching and long-expanding freedom, the glory of space everywhere visible (p. 397).

Nor is Sir William Butler's interest less keen in man than in nature. Those who have read his Life of Sir George Colley will remember the striking passage in which he describes the night march of that unhappy commander to seize Majuba Hill, where next day he was killed and his force destroyed. In that description one is made to feel as if the rocks through which and the stars under which the little army moved to its fate were watching, like a Greek chorus, the opening act of a tragedy which, happening in a distant corner of a lonely land, was played be-

Digitized by Google

fore the eyes of the world, and became a momentous event in the history of South Africa and of England. There are some such passages here, too; and we find also in these pages sketches of some of the remarkable men with whom the author was brought in contact. He knew Parnell, the famous Irish leader, and in the vivid picture he gives of the "uncrowned King of Ireland," as people used to call him, there is not much exaggeration:

> There was something in him beyond definition or description. It was power, utterly careless of its possession, seemingly unconscious of its own strength, unaggressive in its mastery, unstudied, impassive without one touch of haughtiness. He was usually silent, but saying what he wanted to say in the straightest words, always fair, always thinking, but never absorbed in his thoughts; thoughtful of others, alive to everything around him, entirely without pose or pretence, showing breeding to his finger-tips. He spoke little of politics, said no ill about anybody, and I remember his giving unqualified praise to the manner in which the governor of Kilmainham jail had carried out his duties to himself when he was detained in that gloomy prison (p. 352).

Sir William's enthusiasm for Parnell may have been heightened by his sympathy as a Roman Catholic Irishman with the head of the Nationalist party. No such feeling, however, could have prompted the even warmer admiration which he feels for Gen. Charles Gordon, that singular man whom so many of his countrymen revered as a hero, or even as a sort of saint, and whose death at the hands of the Mahdist forces in January, 1885, at Khartum, made so deep an impression in England. Gordon has remained something of an enigma ever since, so the impressions of another soldier are worth giving:

> I was introduced to a man of middle age, rather under middle height, of figure lithe, active, and well knit, and with a face that lives in my memory, not because of any marked peculiarity in profile or full face, but because of something indefinable in the expression of the eyes. On the ocean one can discover at a glance the difference between the surface that has the depth of the Atlantic under it and that other surface which has the mud of the English Channel only a few fathoms below. A depth like that of ocean was within Gordon's eyes. Above these windows of his soul rose a fine broad brow, over which a mass of curly brown hair was beginning to show streaks of gray. His voice was as clear and vibrant as the note of an old Burmese bell which has a great deal of gold in its metal. He spoke in low but very distinct tones, and his voice, varying with its subject, carried to the ear a sense of pleasure similar to that which the sight of his features, but with the light of a very ardent soul, gave to the listener's eye. Similar tone and glance I never heard or saw, nor did I ever meet a man who had equal facility for putting into words the thoughts that were in his brain (p. 191).

One is glad to have a direct record like this, because it helps to explain the personal charm which Gordon undoubtedly possessed, and which proved in the end a misfortune for himself and his country, since it led to his being entrusted with a commission which his erratic independence made him ill-fitted to discharge.

The book throws a great many interesting passing lights upon phases in recent English history, such as the bellicose and "Jingo" spirit which developed from 1872 onwards, and nearly brought on war between England and Russia in 1877-8; such as the strange delays in the Sudan campaign of 1884 and the amazing mismanagement of the Zulu War of 1879. Much is said about the curious secret influences which were, as Sir William declares, at work in England and in South Africa, before the Jameson Raid, and three years later before the outbreak of the Boer war. Over and over again he dwells upon the old-fashioned ways and general incompetence of the British War Office—the soldier of the field seems always and in all countries to have a standing feud with the military administrator at home. Some of his best stories—and he has an Irishman's love for the humorous—illumine these diatribes; but to detach them from their context would spoil them. Perhaps his humor sometimes hindered his advancement. High as he rose in his profession, one feels as if with so much talent and so much energy he might have been expected to rise even higher. Perhaps he may have wanted tact in dealing with his superiors, or with those officials at home whom he castigates. Perhaps his political views gave offence. Fond of soldiering as he was, he dilates in more than one place on the demoralizing effects of war, and its tendency, so far from improving men, to bring out their worse qualities:

> War brings all the fantastic idiosyncrasies of human nature to the surface. Men will rob and pillage and rape and burn in war who would have lived very decent and passable lives in peace. Many of them think that it is part of the business, and, of course the meaner and more sordid the war is, the more that part of the programme becomes possible (p. 199).

He has many a good word for the enemies he fought against, and is especially warm in his praise of the Arabs and of the South African Dutch. Such sympathetic openness of mind does not conduce to promotion in any army.

We had almost forgotten to touch on a point which should never pass unnoted when one deals with an autobiography. There is no egotism in this book, and very little vanity. Sir William Butler had an adequate sense of his own merits and does not depreciate his own achievements. But we find neither jealousy of others nor self-glorification, and in that part of his narrative where he dwells on the ill-treatment he received, there is less personal bitterness than might reasonably have been expected.

CURRENT FICTION.

The Coward of Thermopylæ. By Caroline Dale Snedeker. New York: Doubleday, Page & Co.

The basis of the tale is in that passage in Herodotus which describes the return of a single Spartan from the hopeless struggle at the Pass of Thermopylæ, in which Leonidas and the rest of his Three Hundred were slain. This luckless warrior, disabled and virtually blind at the time of the battle, had chosen not to throw away his life by flinging himself into the final *mêlée*. He wished to live (according to his present chronicler) so that he might be of real service to Greece. But on his return to Sparta he was branded as a coward, and was finally driven out by the hatred of the people. "Afterwards, however," says Herodotus, "at the Battle of Platæa, he amply repaired all the guilt that was charged against him." Here is an uncommonly promising theme for the historical romancer, and the present story-teller has made good use of it. Aristodemos, the "Coward of Thermopylæ," is of Athenian blood on his father's side. On his father's death, the mother, an uncompromising Spartan, takes the boy to her old home, and submits him to the full rigor of the Spartan training. The captain in the little company of youths to which he is assigned is Leonidas, a brother of the King. Aristodemos becomes his special friend, and is among the devoted band taken by the young King for the defence of Thermopylæ. The story of the part played by Aristodemos in the events which preceded the slaughter of the doomed Greeks is told with vigor, and those who like a blend of historic fact and romantic absurdity will find it all very much according to recipe. The latter portion of the narrative is less fantastic: it involves the poet Pindar, the Eleatic philosopher Parmenides, Æschylus, and other great persons. The style must be said to be impulsive to the verge of the ecstatic. A trifle more restraint would have been in keeping with the theme.

The Carpet From Bagdad. By Harold MacGrath. Indianapolis: The Bobbs-Merrill Co.

One may hope that the time will come when an exciting, though improbable, story is told for its own sake, with little attention given by the author to local color and character-study. The fact is that the compass of the present-day novel does not furnish room enough for adequate treatment of all three elements. In the present instance, there was less

Digitized by Google

need than usual for elaborate description, since the half-a-dozen gay splashes of the illustrator have exceeded anything that words could possibly tell. As for keeping the reader clear concerning the characters, the author had only to say that here are: (1.) a handsome, heartless woman; (2.) her lovely daughter, an *ingénue;* (3.) the mother's brother, a good liver, and as unscrupulous as she; (4.) a young man, well meaning and good-hearted, but too weak and too adventurous to break with gambling; (5.) Percival Algernon, destined for the youthful heroine from the start, but needing first, as his name implies, chastening and vivid activity. Such rough-and-ready psychologizing as the book contains adds nothing to these brief tags. The story itself, if told with a persistent disregard of probability, might have been thrilling. To steal the famous Yhiordes, or prayer-rug, which for centuries had never been outside the Sultan's palace, to be pursued by Turks, to be kidnapped—heroine included—across the desert, to rescue the heroine even from herself, and at length to get back to dear Fifth Avenue and to be married on the same wondrous rug is a series of adventures not unworthy of Charlemagne and his peers. Faulty pagination in the reviewer's copy of this book badly tangles the thread of the story.

Drender's Daughter. By Netta Syrett. New York: John Lane Co.

The action of this novel covers twenty years and more, and concerns the lives and fortunes of a widely differentiated group of persons. Leonard Chetwynd, master of Chetwynd Hall, has been educated by his unconventional mother and by a friend of hers who runs an unconventional school. The elopement of his betrothed with a penniless young guardsman sends him to the seclusion of the Hall with his friend Welby, who suggests the project of adopting a girl and giving her the training necessary to make her a suitable wife for Chetwynd according to their ideals. They choose the seven-year-old daughter of Chetwynd's overseer, and so Nancy Drender is put into the care of Chetwynd's Aunt Agatha and a governess. The child exhibits marked individuality, amounting in certain directions to talent. Unfortunately, those directions are the opposite of what her guardian desires, being literary and histrionic rather than domestic. Nevertheless, when she is nineteen he offers himself as her husband, and she, with eyes open but seeing nothing else to do, dumbly accepts. Gradually the situation becomes impossible for her. The turn comes when she finds her parents, and at the same time makes a startling discovery about herself. From this point the plot unwinds, with as little tragedy as the circumstances allow. The central character holds a reader's attention from the beginning; her development is admirably traced. The other persons in the novel are skilfully drawn, but serve mostly as foils to the heroine.

Dionis of the White Veil. By Caroline Brown. Boston: L. C. Page & Co.

By the end of the fourth chapter of this semi-historical romance the reader is virtually aware of the complete plot, and may amuse himself by finishing the book in his own mind. The time is the early part of the eighteenth century. Dionis is a beautiful young novice, setting sail from France in a company of nuns who are to be missionaries in a savage part of America. On the same boat is the gallant young Chevalier Etienne Fauchet, who is returning to New Orleans from a self-aggrandizing visit to the French court. Can any one doubt that the fate which cares for lovers in novels will bring these theoretically interesting young people together? Of course, there are tribulations, for the Chevalier must rescue the lady from dangers on land and sea, from bloodthirsty pirates with huge black beards, from brigands similarly adorned (Miss Brown apparently thinks that virtue shaves daily), from painted Indians, and from the Church itself, represented in this case by as scheming a Jesuit as was ever created by the heated imagination of a member of the A. P. A. The writer of this tale is to be congratulated on her faithful observance of the canons of this sort of fiction-making. She has successfully avoided the new, the striking, the original, and has not permitted a single flesh-and-blood creature to show his face in the select pages of her book.

PROFESSOR HART ON THE ORIENT.

The Obvious Orient. By Albert Bushnell Hart, Ph.D., LL.D., Professor in the Science of Government, Harvard University. New York: D. Appleton & Co. $1.50 net.

The main interest of this book, and of a few other volumes of Eastern travel which have recently been issued, lies in the fact that they represent the awakening of our generation to the immanence of Asiatic influences upon the Christian world. The authors of these books are types of the best our nation produces in learning and literature—types that have hitherto been satisfied with material obtained from familiar Occidental sources. Professor Hart, as regards the Orient, may be called the cultivated layman taking up a matter which has hitherto been left almost exclusively to experts; it is the layman rather than the expert who is listened to by common men.

The author earns the gratitude of intending travellers around the world by devoting a chapter to the various steamer lines which will take them on their way. It is a useful comparison of the passage rates and treatment to be expected from the four important companies—English, French, German, and Japanese—plying between Europe and Eastern Asia, and affords suggestive material for illustrating national traits. Each line appears to represent its own nation in epitome. If the searcher after truth wishes to know why British rule in India is at once so admirable and so unpopular, let him travel on the famous P. and O. Company steamers, where he is made quite safe and rigorously uncomfortable. This is the whole vexed matter in a nutshell.

Useful information of another sort is contained in the chapters on the Northwest of America; but while the author's original letters to his newspaper at home may properly have followed each portion of his journey, their inclusion in a work the substantive value of which concerns Asia seems incongruous. The reader is not looking in such a book for things about Alaska, and he would gladly learn more of what Professor Hart thinks about Japan and China. A visitor of historical training and reputation like his has great powers for good or ill in publishing a record of his travels. The testimony of less notable people, however cleverly stated, will be forgotten while his will be remembered, and it is gratifying to observe that in this instance the testimony of one who is not likely to be disregarded credits the inhabitants of Asia whom he has visited with being sane and even reasonable human beings. He did not discover in the Japanese a particularly bellicose people, nor does he account their ambition to become a great Power unpardonable. "It is time for sensible people," he adds, "to give up the idea that China and Japan are abnormal countries for whose conduct one must find unusual motives. There is undoubtedly in the mind of the Japanese statesmen a strong desire to be big, . . . but that they have at present any more definite plan of action than to be ready for the next crisis is hard to discover."

One of the best chapters is that entitled Realities of Chinese Government, a brief description of how China is controlled, illustrated by a few personal experiences that are at once suggestive and informing. With some additions it would be good enough to stand by itself as a monograph upon a topic understood by few Western readers. The same qualities that make this summary admirable are revealed in the section on the Philippines, where the author saw all that could be seen in a brief visit under the guidance of his former student, the present Governor-General. He does not find that the Americans there are actually unsympathetic with the Filipinos; far from it. "You cannot stay in

Digitized by Google

the Philippines a week," he declares, "without realizing that the Insular Government is in reality a big benevolent mission, which differs from the usual mission in its power to make everybody in the country put a little something into the contribution box." Nor does he condemn the school system as defective because graduates desire to escape the necessity of working with their hands. The same is true of school graduates the world over. "Nobody," he sensibly concludes, "sees the outcome of the Filipino question. It is a fallacy to suppose that there is an immediate or obvious outcome."

The Steel Workers. By John A. Fitch. New York: Russell Sage Foundation. $1.50.

Homestead: The Households of a Mill Town. By Margaret F. Byington. The same.

Of the six volumes of the "Pittsburgh Survey," these two, the third and fourth to appear, deal exclusively with the steel industry. In them the progress of steel-making, since the famous Homestead strike of 1892, is described, not in sensational figures of expanding outputs and declining costs, but in vivid sketches of the lives, characters, and homes of the workers themselves. On this, the human side—the side which really matters in the long run—the story of Pittsburgh's greatness is at the same time the story of Pittsburgh's shame. For it is triumphant industry, not "triumphant democracy," that is recorded in these well-authenticated pages, and that reader must be a hardened optimist indeed who can find in them much cause for gratification.

Within the period covered the processes of steel-making have been revolutionized. More and more perfect mechanical devices, more and more nearly automatic in their operation, have been introduced year by year. With each improvement, the proportion of unskilled workers, that is, of Hungarians and Slavs, has increased until now more than three-fifths of the employees of the steel mills are of this class. As the transformation of iron ore into finished steel products has become a virtually continuous process, the technical considerations which have long made the operation of blast furnaces for twenty-four hours a day and seven days a week necessary, have come to apply with only slightly lessened force to many other departments. For these and other reasons, the marvellous progress in productive efficiency is reflected, not in shorter hours and higher earnings for the workers, but in hours that are on the whole longer and rates of wages that have failed to keep pace with the advancing cost of living.

This, in brief, is the story which is told in convincing detail by Mr. Fitch. He describes clearly the processes of steel-making. He traces the rise and fall of the Amalgamated Association of Iron, Steel, and Tin Workers as an influential factor in determining labor conditions. He explains how it came about that when continuous production made a choice necessary between the two-shift system with a twelve-hour day and the three-shift system with an eight-hour day, the twelve-hour day was adopted in the great majority of the mills, so that in 1908, when his inquiry was made, quite four-fifths of the 70,000 employees in the industry in Allegheny County worked on that basis. He depicts vividly the deadening consequences of the seven-day week to which one-fifth of the steel workers have to adapt themselves. Turning to wages, he shows from actual pay-rolls that in four departments of a representative mill 72 per cent. of the 2,000-odd employees received $2.50 or less a day, 23 per cent. $2.50 to $5 a day, and only 5.4 per cent. above $5 a day. Finally, he makes clear the effect which certain policies of the United States Steel Corporation—its relentless opposition to unionism, its political activities, and its method of sharing profits with employees who have proved loyal and faithful to its interests—have had on the manhood and independence of the steel workers.

Miss Byington's volume describes the reaction of the twelve-hour day and seven-day week, the low scale of earnings, and the absence of the coöperative spirit—which, sternly repressed in the industrial field, could hardly be expected to flower in other directions—on the conditions of home life in a typical mill town. She shows how Homestead suffers from the evils of absentee landlordism in an extreme form—of an employing corporation which escapes even its fair share of taxation, while sending its profits to indifferent stockholders, most of whom have never seen the mills from which they draw their dividends. Her pictures of typical family groups, her analyses of the ninety family budgets which she collected, and her explanation of the failure of the town government to care properly for common needs, are interesting and illuminating.

Depressing as are these accounts of conditions in the steel centres about Pittsburgh, they are yet not without suggestions that hold promise for the future. Politically, Pittsburgh, like the rest of Pennsylvania, has been demoralized by its dependence on a protective tariff. Both employers and employees have long regarded it as their first and highest duty to vote the Republican ticket, with little regard to the character or capacity of the candidates presented by the Republican machine. The revision of the iron and steel schedule in the direction of free trade, which now seems imminent, should give a healthier turn to political activities than they have known since the civil war. The influx of Hungarians and Slavs, which has had a depressing effect on wages, must be checked before long, as was the Irish immigration of an earlier period, by the gradual exhaustion of the sources of supply. Finally, public opinion, enlightened by this investigation and others of a similar character, cannot remain indifferent to the situation. Already the United States Steel Corporation has introduced a system of accident prevention and accident compensation far in advance of the requirements of the Pennsylvania law. Last year wages were increased an average of six per cent., and earnest efforts were made by the directors to reduce the amount of Sunday labor in the mills. Finally, on the initiative of a public-spirited stockholder, the whole question of hours of labor in connection with continuous processes is now under investigation, with a view to finding some practical substitute for the twelve-hour day. The repressive attitude toward organization on the side of the men is so opposed to every principle of justice for a company which is itself a vast organization on the side of capital, that it must in time give place to a fairer policy. Quite as important as a revival of labor organizations of the right kind is the enactment and enforcement of labor legislation that will establish proper standards of safety and sanitation, not only in the mills, but in the homes of the mill workers. Signs are not lacking that this also is coming. By these changes the career of triumphant industry may be somewhat checked, but no right-thinking citizen will regret this, if, at the same time, proper attention is given to the best interests of the wage-earners and their families, who constitute the great majority in every industrial community.

East and West: Comparative Studies of Nature in Eastern and Western States. By Stanton Davis Kirkham. Illustrated. New York: G. P. Putnam's Sons. $1.75.

Conscious of the virtues of both East and West, Mr. Kirkham has written with the enthusiasm and the sense of the half-tint and half-feeling that one would expect, after reading his "New Thought" books. In choice of scenes, he displays some tact: New England is represented by a first-rate chapter on Cape Ann; New York by a chapter on the woods of Long Island "an hour from Wall Street," one on the Finger Lakes region of the western part of the State, and several chapters on the Adirondacks; Virginia by a study of the Roanoke River swamps; the far West by three chapters on the Santa Inez Mountains of California, one on the Sierra, and four on the deserts of Arizona.

Digitized by Google

His thesis, or, better perhaps, the framework of these essays, consists in the assertion that each region has its unique personality, that we should know many regions and should "not content ourselves with some little corner," that, like the Japanese, we should enjoy our vast garden inheritance and not leave the pleasure to "a chosen few." We should know intimately, not only the dogwood and wood thrush of Long Island and the shadbush and winter wren of the Adirondacks, but also the chaparral and road-runner of California and the saguaro and cactus wren of Arizona. The flora and avifauna of the Middle West lack distinction, but doubtless we should explore that region with the same solicitude. All this is well; unquestionably our country is deserving of much of the "see America, too" enthusiasm. But, when Mr. Kirkham asserts that the redwing is finer than an opera, that the purple-fringed orchid is fairer and lovelier than man, that "the true lover of the woods . . . seeks diviner company than the town affords," that the follower of the Western trail leaves man behind and becomes admirably like a horse, we can only pronounce him guilty of sublime nonsense. Verily, as one of the latter-day nature mystics himself remarked, "the secret is always behind a tree, as of old time it was always behind the pillar of a temple," or, we might add, "in the heart of man." This tree-dodging has become a highly popular spiritual, or sensuous, mode of amusement that is unfortunately often ridiculous.

In seeking to state the relative merits of East and West, the author tries for impartiality yet is himself of the West. In detail, indeed, the East comes off very well: spring and autumn are greatly superior in the East, while summer and winter, though he does not commit himself, are not inferior; the purple and white fringed orchids, peculiarly Eastern, are "perhaps the loveliest creations of the floral world"; the hermit thrush and wood thrush of the East hold an undisputed "first place among North American songsters," while the veery and bobolink follow close after. Most of these judgments will meet with general approval, particularly the high place granted to the Eastern thrushes. The distinction given to the Eastern orchids is more questionable, and few will share Mr. Kirkham's enthusiasm over the songs of the ruby-crowned kinglet and Carolina wren.

In wider comparisons the East does not fare so well. The quiet fields and village elms "appeal to some cultivated and finished part of us and inspire gentle and cultured thoughts. . . . The birds are more intimately related to us than in the West—everything is nearer, the world is smaller." In the main this has the sound of commendation; but after one has read all the essays, it is clear that the author, relatively at least, does not care for a near and small world and for the gentle and "cultured" thoughts that such a world inspires. He thirsts for the bigness, the elemental quality of the West, that quality that Whitman felt when, on a trip to the Colorado Rockies, he said that he had found the law of his own poems. After all, one may well question whether the lover of nature can be devoted to two mistresses at once. Gilbert White and Jefferies, Wordsworth and Thoreau, were each in harmony with one general aspect of the outer world; when they travelled to a land where they found another aspect, they were uncomfortable if not unhappy. Mr. Kirkham's all-embracing sympathy with nature, with mountain, desert, ocean, and the humble pastoral landscape, may be indicative of a soul greater than those of Wordsworth and Thoreau, but, more likely, of a soul less than theirs.

Notes

A translation of "Recollections of Guy de Maupassant by his Valet François" will be issued by John Lane Co.

Catherine of Siena, Vittoria Colonna, Sarah Siddons, Jenny Lind, and Dorothea Beale are among the personages included in Mrs. C. C. Cairns's "A Book of Noble Women," announced by Messrs. Jack of London.

The seventh International Congress for Criminal Anthropology will be held in Cologne from the 9th to the 13th of October. At this convention there will be an exhibition of objects of importance for criminal psychology, such as models of punitive institutions, apparatus for the examination of sick prisoners, literary and other work of prisoners, instruments employed for breaking out of jail, etc. The secretary of the congress is Dr. Brüggelmann, Cologne, Psychiatrische Klinik.

Prof. Josiah Royce is preparing a new volume, entitled "William James and Other Essays on the Philosophy of Life," which Macmillan hopes to issue this autumn.

Ferrero's forthcoming book, "The Women of the Cæsars" (The Century Co.), is the outgrowth of several chapters which appeared in the *Century Magazine*.

From the press of this firm, too, will issue shortly a gift-book edition of "Æsop's Fables," with forty drawings by E. Boyd Smith, and "The Second Boys' Book of Model Aeroplanes," by Francis A. Collins.

An annotated edition of Fontane's "Grete Minde," edited for the use of college students in the first or second year by Harvey W. Thayer, and "Neuf Contes Choisis," a collection of Daudet's best-known tales, edited for secondary schools by Prof. Victor E. François, are promised by Holt for September.

Roy Rolfe Gilson has placed his "Ember Light" with the Baker & Taylor Co.

The authorized translation of Karin Michaelis's novel, "The Dangerous Age," is among the announcements in fiction made by John Lane Co.; it will be followed by new novels by Gilbert K. Chesterton, Maud Diver, Dolf Wyllarde, Mrs. John Lane, Louis N. Parker, John Oxenham, and others. Two works on socialism will be issued by the same house: "Business; the Heart of the Nation," by Charles Edward Russell, and "American Socialism of the Present Age," by Jessie Wallace Hughan.

Three new books on religious topics are in the autumn list of Eaton & Mains, New York. They are "The Great Themes of the Bible," by Louis Albert Banks; "The Presence," by James M. Campbell, and "Some Famous Country Parishes," by Ezra Squier Tipple.

In the list of announcements made by Moffat, Yard & Co. we note: "Some Old Flemish Towns," by George Wharton Edwards; "The Substitute Prisoner," by Max Marcin, and "City Views and Visions," by William Griffith.

Among the miscellaneous books on Putnam's autumn list are: "The Following of the Star," by Florence L. Barclay; "A Weaver of Dreams," by Myrtle Reed; "My Own Story," by Luisa of Tuscany; "Vagabond City," by Winifred Boggs; "Love in a Little Town," by J. E. Buckrose; "Love Versus Law," by Colette Yver, translated from the French—"Les Dames du Palais"—by Mrs. Bradley Gilman; "Reminiscences of a Parisian (Docteur Poumiès de la Siboutie), under Six Sovereigns, Two Revolutions, and a Republic, 1789-1863," edited by his daughters, Mme. A. Branche and Mme. L. Dagoury, and translated by Lady Theodora Davidson; "The Greatest Street in the World," meaning Broadway, by Stephen Jenkins; "Aspects of Religious Belief and Practice in Babylonia and Assyria," by Prof. Morris Jastrow, and "Fifteen Thousand Miles by Stage," by Carrie Adell Stahorn.

The same house will have ready in September "The Caroline Age," being vol. vii in the "Cambridge History of English Literature"; vol. viii, "The Age of Dryden" is promised before the close of the present year.

Little, Brown & Co. announce a long list of books for boys and girls for publication in the autumn, including: "Jackson and His Henley Friends," by Frank E. Channon; "Great Bear Island," by Arthur E. McFarlane; "Scouting for Light Horse Harry," by John Preston True; "Billy: His Summer Awakening," by Charles Keen Taylor; "Fairmount Girls in School and Camp," by Etta Anthony Baker; "Yellow Star," the story of an Indian girl by Elaine Goodale Eastman; "Old Mother West Wind's Children," by Thornton W. Burgess; "Nibbles—Poppelty Poppett," the story of a mouse by Edith B. Davidson; "Within the Silver Moon," a modern fairy tale by Madge A. Bingham; "Tiny Hare and His Friends," by Anne Sykes; "Tommy Tucker's Book," by Mary Frances Blaisdell; "A Chevalier of Old France," a translation of "The Song of Roland," by John Harrington Cox; "The American History Story Book," by Albert F. Blaisdell and Francis K. Ball; "Firebrands," by Frank E. Martin and George M. Davis, and two new volumes in the Little People Everywhere series, entitled, "Hassan in Egypt" and "Marta in Holland."

Digitized by Google

The following is Dodd, Mead & Co.'s list of books, chiefly fiction, which are announced for publication on September 15: "Mary Midthorne," by G. B. McCutcheon; "The Missing Finger," by A. Boissiere; "Down Our Way," by Lilla Hall Smith; "The Eldest Son," by Archibald Marshall; "House of Torment," by C. Ranger-Gull; "The Hidden Empire," by R. W. Fenn; "Cathedral Cities of Spain," by W. W. Collins; "Honeymooning in Russia," by Ruth Kedzie Wood; "London Guide" and "Paris Guide," by S. L. Bensusan; "Stories from Shakespeare's Tragedies," by H. A. Guerber; "Bob Dashaway," by Cyrus Townsend Brady; "Patty's Motor Car," by Carolyn Wells; "Marjorie's Maytime," by Carolyn Wells; "Blue Rose Fairy Book," by Maurice Baring; "Maeterlinck's Symbolism," by Henry Rose, and "Mona," by Brian Hooker.

Dodd, Mead & Co. will also issue this autumn "The Money Moon," by Jeffery Farnol, author of "The Broad Highway."

Among the books which the Broadway Publishing Company promises for the coming season are found: "The Little Sufferers," a novel dealing with the abuses of the children's societies, by G. Martin Jurgenson; "Stonefield Silhouettes," by Cornelia Minor Arnold; "Eight Lands in Eight Weeks," by Marcia Penfield Snyder, and "Jean Carroll," by S. A. D. Whipple.

In our issue of July 20 we noticed a volume containing the poems of Catullus, Tibullus, and Propertius, which was published, as we erroneously stated, by the Medicean Society of London; we should have said the Medici Society.

The last five of the ten volumes of the "Collected Works of Ambrose Bierce" (Neale) are now before the public. All that wide margins, gilt edges, and tooled leather bindings can do for these books has been done, and gentlemen whose bookrooms are papered in brown will find them a tasteful decoration. But except from the upholsterer's point of view they are not books at all, and Mr. Bierce has done an injustice to his considerable if somewhat perverse talent by marshalling its offspring in close formation. Three hundred and seventy-six pages compose "The Devil's Dictionary," which will easily keep all but the most rapid readers employed throughout a painful eternity. The volumes contain, besides, a longish tale, some short ones, a quantity of fables, various essays, scattered verse, and a collection of epigrams.

In "Isabella of Milan" (Scribner) Christopher Hare, discarding the impersonality of the common biographer, attempts "to make the past live once more by using the pen of an imaginary eye-witness, a lady-in-waiting of keen insight, intelligence, and sympathy, who tells the 'Story of Her Duchess' in a series of intimate letters to her sister in Naples." Unfortunately, not even ancillary commiseration is enough to awaken interest in the dreary life of Isabella. Married to the weakling Duke Gian Galeazzo, she struggled in vain, under the tyranny of Lodovico Sforza, to win a more than nominal precedence for her husband, and in her widowhood, the son whom she had hoped to see established in the ducal power was taken from her by Louis XII, and sent to die in a French convent-prison. She was not a woman of intellectual distinction or of social genius. She could not rival Lodovico's young wife, Beatrice. Mr. Hare's imaginary Violante might at least have given us a vivid picture of the life of the Sforza court, but her record of festivities is seldom better than perfunctory, even when she writes of what the ladies wore. In a letter assigned to 1490, she represents Bandello as the leading wit of the garden of Cecilia Gallerani. It may be noted that Bandello was presumably born in 1485.

In the second volume of "Oxford Studies in Social and Legal History" (The Clarendon Press) Professor Vinogradoff presents two more valuable contributions by his pupils to the study of the manor in England. The first monograph is "Types of Manorial Structure in the Northern Danelaw," by F. M. Stenton. Scholars in the last twenty-five years have been inclined to describe, often with the aid of a neat but more or less hypothetical sketch, the "typical manor," as if throughout all England manorial conditions were fairly uniform and Domesday terms fairly identical in meaning. A few years ago even Professor Maitland enunciated, cautiously to be sure, a brilliant theory which would make the word *manerium* in Domesday a technical term of uniform meaning; his theory, if valid, would clear up many difficulties; but it has not, one must sorrowfully admit, stood satisfactorily the test of detailed criticism. Mr. Stenton, instead of seeking definitions which shall be of general application, has narrowed his focus to a minute study of the Northern Danelaw, that is, of the region comprised in the six modern counties of York, Lincoln, Nottingham, Derby, Leicester, and Rutland. Within this region he finds that *manerium* was no technical term of law and apparently had no precise agrarian or fiscal meaning; it was vaguely used to cover the most diverse forms of economic organization. He also finds that many other terms within this region are used in a sense different from that elsewhere. Inland does not mean, as in the South and West, the lord's untaxed home farm; it is contrasted with sokeland; it is taxable; and its capacity to pay taxes is invariably expressed in carucates or bovates. The berewick lying distant from the manor house, but owned by the lord, is a portion of the inland. Sokeland, as contrasted with inland, is land which is regarded as belonging not to the manorial lord, but to the man seated upon it, and as owing certain services and dues to be rendered to the lord of the soke at the central manor house. Mr. Stenton has carried his study beyond the Conquest and is inclined to think that the Old English elements of freedom were unusually persistent and permanent after 1066, in spite of the manorializing influence of the new Norman lords, who tended to consolidate small agricultural groups into larger units and make the manor and the vill more nearly coincide. In the second monograph, "Customary Rents," Miss Neilson, lecturer at Mt. Holyoke College, has classified the various examples of customary rents—manorial, royal, and ecclesiastical—which she has culled from a large number of English mediæval documents. Her work might be described as a kind of general glossary of fiscal terms. It will be a valuable aid to the historical student who is making an intensive study of a locality. It ought also to be of interest to the philologist. It suggests certain sections of Grimm's "Rechtsalterthümer" and Von Maurer's "Fronhöfe," two works which Miss Neilson does not appear to have used, but which might perhaps by German analogy have cast some light upon obscure terms.

The Fleming H. Revell Company is the American publisher of a discussion by some fifteen British clergymen, publicists, and social workers on "Non-Church Going; Its Reasons and Remedies." The writers have the situation in England and Scotland in mind, and they agree that the present outlook as to church attendance is discouragingly bad, although not so bad in Scotland as in England. The disaffection is declared to be among the social extremes, the artisans, and the professional and upper classes. The strength of the British churches lies with the upper middle class. W. Forbes Gray, editor of the *Symposium*, asserts that it is "difficult to over-estimate the gravity of the situation," and that it has not improved since a census, a few years ago, revealed that four persons out of five in greater London never enter a church door. For the most part, it is agreed that the fault lies with the churches. Sermons are prosy, the ritual is tedious, and lack of general aggressive social effort supports the popular impression that the churches are close corporations administered in the interest of the capitalists. The remedies suggested are vigorous reform of the church from within, especially by strenuous grappling with the intellectual difficulties of the times and earnest and effective coöperation in practical movements for social improvement. The example of Dr. Chalmers is frequently cited, and the Pleasant Sunday Afternoon services are mentioned as illustrating methods which should prove successful. Some of the papers do not reach the heart of the question, their authors concerning themselves with schemes and devices rather than with the changes of spirit and conviction which must be at the root of any real improvement.

Algernon E. Aspinall's "Pocket Guide to the West Indies" (Dutton), a revised edition of which has just been published, contains much information to recommend it to travellers who seek not only "points of interest," but facts about the history and industries of the Antilles. While the author omits Cuba and the Bahamas for adequate reasons, he describes the other islands, even the most insignificant, authoritatively and with discrimination. One chapter is devoted to British Guiana, to which tourists are paying more attention, and another to the Canal Zone. Several maps, a number of illustrations, and an index add to the book's value. It is on the whole a comprehensive yet compact volume.

The Mohammedan savant of India, Mohammed Barakal Ullah, in conjunction with the Egyptian scholar, Ahmed Fasli Bey, has begun the publication of an English monthly called the *Islamic Fraternity*, in the interests of Moslem propaganda in Japan. It is said that the money for launching the new enterprise came from the United States. A Japanese edition of the magazine is to be published in the near future.

"Seventeen Years Among the Sea Dyaks

Digitized by Google

of Borneo" (Lippincott), by Edwin H. Gomes, is an important addition to our ethnographical literature, being the first complete picture of this primitive but interesting people. Eminently social by instinct, they live compactly together, a whole village, sometimes of as many as fifty families, occupying one long three-storied house. The house is provided with open and covered verandas, where they gather for amusements, concerts, and the discussion of business affairs. Much stress is laid on the work of the witch-doctor, who is supposed to have a mysterious power over evil spirits, and on the important part played by omens. The building of a house, the departure of an expedition, the beginning of rice-planting all depend on a favorable omen, generally the flight or notes of certain birds. So far as our knowledge goes, birds are more closely connected with their religious beliefs than with those of any other modern people. A bird, it appears, carries to the other world food for a departed soul, as well as the lamentations of his relatives. There, before an expectant crowd, it pours them out, "and lo! the eatables, as well as the tears and sobs of the living which accompany them, have become gold and silver and precious stones wondrously beautiful." Another curious belief asserts that each prenatal child "is brought to the gods, who ask: 'What would you like to handle and use?' If it answer, 'A sword,' the gods pronounce it a male; but if it answer, 'Cotton and the spinning-wheel,' it is pronounced a female. Thus they are born as boys or girls, according to their own wishes." Mr. Gomes leaves the impression that these dusky sons of the jungle are a likeable people, truthful, honest, hospitable, industrious, and hard-working. The strength of the family ties is shown by the author's statement that "in all the many years I lived in Borneo I did not meet a single instance of cruelty to children. An old father or mother need never work unless they like. Their children will provide for them." And yet, less than eighty years ago, they were noted pirates and headhunters, for a man had to bring home a head if he wished to have a wife. But under the beneficent rule of the "Two White Rajahs" of Sarawak, Sir James Brooke and his nephew, Sir Charles, they have been transformed. Piracy and headhunting are things of the past, and the chief occupation of the men is the cultivation of rice, of the women weaving cloth and making mats; the women, says the writer, "do not hold, as in most Eastern countries, an inferior and humiliating position." The book, which has hardly a dull page, is attractive in appearance, having forty reproductions of photographs, mostly of the natives in their various occupations and adornments. There is a glossary of native words used in the text and a map of Northern Borneo.

Edward Lewis Curtis, professor of Hebrew in the Yale Divinity School, died suddenly on Saturday of last week, in his fifty-eighth year. He wrote a "Commentary on Chronicles."

Edwin Asa Dix, who died last Saturday at the age of fifty-one, was formerly literary editor of the *Churchman*, and was the author of "A Midsummer Drive Through the Pyrenees," "Champlain—the Founder of New France," "Deacon Bradbury," "Old Bowen's Legacy," "Prophet's Landing," and "Quincy Baxter," all but the first two being novels.

Prof. Konrad Duden, who had written widely on the subject of reformed spelling, is dead in Wiesbaden, aged eighty-two. His works include: "Anleitung zur deutschen Rechtschreibung," "Etymologie der neuhochdeutschen Sprache," and " Wörterbuch der deutschen Sprache."

Science

Dr. John Beard will publish through Chatto & Windus a book on the origin and cure of cancer.

Science books in Putnam's autumn list include "Kimball's Commercial Arithmetic," by Gustavus S. Kimball, and "The Bacillus of Long Life," by Loudon M. Douglas.

The Geographical Service of the Army of France has caused a map to be made of a region, 50 miles by 80, about Chalons, "the centre of aviation," which is published in the *Annales de Géographie*. It is on the scale of 1:200,000, about 17 by 26 inches in size, and in six colors. The aim is to show the country as nearly as possible as it would appear from a flying machine. Every kind of road, railway, tramway, and electric wires is indicated, as well as the contour of the land, with heights given, the forests, streams, marshes, ponds, cultivated tracts, habited places, stations, garages, churches, graveyards, towers, windmills, forts, and even isolated trees, and the places dangerous for alighting. The map is beautifully executed. Its success, indeed, is so great that the minister of war has ordered the preparation of similar charts of the regions about Paris, Amiens, and Mézières, for use in the great army manœuvres. Commandant Pollacchi of the Geographical Service gives a brief account of the special objects sought in the construction of the map.

In Volume II, part iii, of his "Trees and Shrubs" (Houghton Mifflin), Prof. Charles Sprague Sargent, director of the Arnold Arboretum, gives a full account of twenty-five new species of woody plants. From the beginning of his botanical activity, he has had remarkable success in obtaining the coöperation of specialists in dendrology, who have, under his direction, placed the knowledge of our North American trees and shrubs on a high plane. The drawings by his coadjutor, C. E. Faxon, are among the best botanical illustrations in existence. Few persons can realize the amount of patient skill which is required to obtain from the ordinary botanical material at the command of an artist the true expression of the plant, as well as accuracy in all details. In some instances, too well known in botanical literature, the drawings are sketchy and impressionistic, and reasonably truthful as regards general effect, but are, at the same time, misleading in minor particulars. Mr. Faxon always gives absolutely satisfactory outlines. They constitute a record vast in volume and remarkable for perfection. Professor Sargent has directed the course of this dendrological work throughout, and by his own untiring activity and the support of his aids, has made contributions to the subject of a truly monumental character. When we study these parts of "Trees and Shrubs," as they reach our hands, we regret the necessity which compelled Professor Sargent to relinquish the publication of that most useful work, *Garden and Forest*. To that periodical is to be attributed a great deal of the keen interest which is now so widely felt, throughout our country, in the improvement of natural scenery and in the tasteful adornment of homes.

The "Annual Reports of the Forest, Fish, and Game Commissioner for 1907-1908-1909," for the State of New York, is now published at Albany, and shows the various activities of Commissioner Whipple and his staff during those years. It is something of a picture-book besides being a State document. The colored plates of birds and fish are excellent, but the sentimental camping-scenes might well be spared.

"Yellow Fever and its Prevention" (Dutton), by Sir Rubert W. Boyce, is intended for the information and instruction of medical men who purpose undertaking professional work in tropical regions, more particularly in Africa. It contains a brief history of our knowledge of the existence and spread of the disease, brief but sufficient, and carries also many references to the more important literature of the subject. The author is thoroughly familiar with the question, having an extended personal experience of the methods employed for the control of yellow fever in the West Indies and elsewhere on this side of the Atlantic. Apart from a considerably detailed account of the symptomatology, pathology, and treatment, the special interest of the book lies in the discussion of the prevalence of the disease in Africa. Sir Rubert has made investigations in that country as well, and is able to show the wide distribution of the particular mosquito on which the spread of this fever depends. He is convinced that yellow fever is far more common in Africa, especially on the West Coast, than it has been supposed to be. It appears that many of the prevalent fevers known by various names ("the bilious remittent fever of the country," "inflammatory fever," "African fever," "pernicious remittent fever," and so on) are really yellow fever of varying degrees of mildness. As we are still unable to recognize the causative virus or microorganism, a direct demonstration of the unity of these diseases is out of the question, but the fact that the hygienic measures which check or control the prevalence of them, and particularly the elimination of the mosquito, are the same measures which are efficacious in stopping the spread of yellow fever, makes such unity probable, quite apart from other points of resemblance. The general reader will find the book on the whole rather too special for his purpose, although he may profitably read the historical matter of the first hundred pages, and take an interest in the account of the geographical distribution of the *Stegomyia*, a pest manifesting a rather curious domesticity, and in the means employed for its extermination, which are shown in many excellent pictures.

Only the trout fisherman who has advanced far beyond the sport-loving phases of angling will appreciate Frederic M. Halford's "Modern Development of the Dry Fly" (Dutton), an elaborately illustrated volume on the scientific aspect of luring fresh-water trout with artificial reproductions of insects. Mr. Halford, who remarks

Digitized by Google

that this is probably his last contribution to brookside literature, is perhaps the best-known British writer on his hobby—a hobby which in his case has developed into a lifetime study. Even the amateur can perceive that Mr. Halford's book represents years of thought and painstaking labor. Yet through his weighty arguments, his technical dissertations on colors and shapes, the veteran flycaster's lighter humors are reflected now and again. The habits of advancing age may have led him into science and away from recreation; but he cannot forget altogether that "big fellow" he once netted in the Test, or the terrific struggle he made against that four-pounder in Oakley Hole. The untrained reader, therefore, finds occasional relief in the form of stories which echo with the whirr of reel and the swish of fighting trout. It will be a pity, both for the casual angler and the fly-making specialist, if Mr. Halford adheres to his resolution of writing no more.

Drama and Music

Some Supposed Shakespeare Forgeries. By Ernest Law. London: G. Bell & Sons.

"Nothing else but time," wrote Dr. Furness in 1886, "will ever solve the mystery of these forged leaves in the Revels Book." And now Mr. Law, a barrister of antiquarian tastes, enthusiastically brings in time's verdict. The two leaves in question find their place in two small packets of accounts kept, the first by Edmund Tilney, and the second by Sir George Buc, successively Masters of the Revels. The first leaf contains a list of plays given before King James at Whitehall during the winter of 1604-5, among which appear seven plays of Shakespeare's and opposite four of them, under the caption of "The poete wch mayd the plaies," the name "Shaxberd," a not impossible contemporary spelling. The second leaf contains a similar list for 1610-11, which includes two of his plays, but without the poet's name.

Apart from the intrinsic interest of so full a contemporary reference to Shakespeare, these lists, if genuine, afford important external evidence for the dates of "Othello" and "The Tempest." But when, in 1868, Peter Cunningham, a sometime clerk in the audit office, who had earlier discovered and published these account books, foolishly tried to sell them to the British Museum, they were seized and the play-lists they contain somewhat hastily pronounced to be forgeries, the earlier with rather more confidence than the later. This opinion, most emphatically voiced by Dyce, Halliwell-Phillips, and Grant White, was universally acquiesced in, and the matter was for some years dropped. No specific charges were made against Cunningham, though the general impression was that he was the forger, aided, perhaps, by the then recently notorious J. P. Collier. And now comes the mystery. In 1880 Halliwell-Phillips discovered, among the inedited papers of Malone, the great Shakespearean editor, a memorandum, not in his handwriting, which substantially agrees with the first list, supposedly forged by Cunningham. Malone's papers had remained inaccessible in the Bodleian since his death in 1812, and the transcript, to which Malone in his published writings seems somewhat darkly to refer, must have been made for him prior to this date and certainly before the birth of Cunningham. So startling a state of affairs could only be explained, and then none too convincingly, on the theory that Cunningham had as the basis of his forgeries a genuine document to which Malone's transcriber had earlier gained access. Why Cunningham should offer for sale a forgery, if he possessed the original, and what became of the original itself, remained unanswered.

At this point Mr. Law comes to the rescue of Cunningham and asserts that the lists are not forgeries at all. Professor Wallace of Nebraska and Sir George Warner, Keeper of MSS. in the British Museum, agree with him that there is no sign of modern fabrication. Prof. James J. Dobbie of the Government Laboratories, has subjected the 1604 list to most thorough microscopical and chemical tests and concludes that the ink is of the same character as that used throughout the admittedly genuine account-book of which the list is a part. This kind of testimony seems conclusive; but, before finally acquitting Cunningham, as every one would be glad to do, we can afford to await the results of the searching examination which Professor Feuillerat will doubtless make in the course of his elaborate studies in the history of the Revels.

It has been decided to open the Century Theatre (formerly the New Theatre) on or about September 18 with a revival of "The Blue Bird." Many of the performers will be the same as last year, and among the newcomers will be Burford Hampden, a young player from England, who will be seen as Tytyl. There will be some changes in the performance derived from recent productions abroad. During the run of "The Garden of Allah" at the theatre there will be no music in the auditorium, but during the intermissions Nahan Franko and nine instrumental soloists will play in the foyer.

Charlotte Walker will be seen early in October under the management of Klaw & Erlanger in a dramatization of John Fox, jr.'s, novel, "The Trail of the Lonesome Pine," made by Eugene Walter. Miss Walker will play the part of June, the heroine of the tale of the Kentucky mountains.

Vittorio Podesti, who was a conductor at the Metropolitan Opera House last season, will be the conductor for the season of the Imperial Russian Ballet this year.

Fritzi Scheff has begun rehearsals of her new operetta, "The Duchess," and after a brief tour out of town will come to New York for a run under the management of the Shuberts.

"Shakespeare on the Stage," by William Winter, part of which appeared in one of the magazines during the spring, will be published by Moffat, Yard & Co. in book form. It is announced for October.

London is looking forward to Sir Herbert Tree's performances this season of "Macbeth," and to "Romeo and Juliet," which will be produced with Miss Neilson-Terry as Juliet, Vernon Steel as Romeo, and Fred Terry as Mercutio.

Sir George Alexander will appear at the St. James's in a new comedy by Henry Arthur Jones, entitled "The Ogre."

London will also be given a chance to see "Get-Rich-Quick Wallingford" and "The Havoc."

Mary Eastlake, who died a fortnight or more ago, at the age of fifty-six, at her residence near Ringwood, Hants, England, was associated with Wilson Barrett as his leading actress in his notable management of the Princess's Theatre in the early eighties. That period saw the production by Mr. Barrett of a number of original plays written, alone or in collaboration, by English dramatists who were then coming to the front, including George R. Sims, Henry Arthur Jones, Henry Herman, and Sydney Grundy. In "The Lights o' London," "The Romany Rye," "The Silver King," "Claudian," and "Clito" Miss Eastlake played the leading female parts—a strangely varied and divergent range of characters; but in all she won much critical praise and wide popular approval. Though not a great actress, she had energy and application, sympathy and pathos, and in certain parts a command of passion and intensity which served her well—for instance, as the voluptuous and treacherous Hella in Grundy's "Clito." Her Ophelia to Barrett's Hamlet also had many admirers. A serious illness caused her withdrawal from the stage nearly twenty years ago.

"As a Man Thinks," by Augustus Thomas, has been published (Duffield), and a study of it in print fully confirms the high opinion which was expressed in this journal on the occasion of its first stage production in this city. It assures the author a very high place, if not the highest, in the ranks of living American dramatists. If the artistic quality and logical sequence of the earlier acts had been maintained to the end, it would have been a masterpiece of its kind, but there can be no doubt that in the closing scenes and final development, palpably designed for the assurance of a comparatively happy ending, there is a relapse into conventionalism and sentimentality. But, with this exception, the play is fine throughout in workmanship, substance, and purpose. The first act is a piece of constructive ingenuity of which either Sardou or Pinero might be proud, and once the foundations of the drama have been set forth in action, the story proceeds naturally—each successive incident arising legitimately from the influence of circumstance on character—to a reasonable climax. The weakness of the scheme consists in the adroit but disingenuous avoidance of an apparently inevitable catastrophe. Although the play is strong

Digitized by Google

in human interest, and full of effective situation, revealing at every turn the cunning of the theatrical expert, it is charged with serious purpose and significant example. In dealing with difficult and delicate problems, social, racial, sexual, or religious, it exhibits none of the narrowness or "cocksureness" which pervades the work of many of our younger playwrights, who have thriven upon crude sensationalism. It is the product of a well-stored and observant mind, capable of weighing all sides of an intricate question, and regulated by a wise and liberal spirit. Few more dignified, attractive, or thoroughly human figures than that of the Hebrew physician, Dr. Seelig, have been contributed to the modern stage. And in all recent theatrical discussion of the moral rights of the sexes few passages have been more impressive or more inspiring than that in which the doctor explains why chastity is the crowning jewel of womanhood. But Mr. Thomas holds no especial brief for either Jews or Gentiles. His humorous or satirical strokes—in which his dialogue is rich—are distributed among all of them with grim impartiality. His characters are drawn from the life, are wholly credible, and have the rare merit of being not only interesting in themselves, but instructive in their fortunes. It is unnecessary at this time to repeat the details of a story which is still so fresh in public memory, but some reference ought to be made to the excellence of the dialogue, which is written in singularly clear, simple, compact, and vigorous English, without any attempt at mere rhetoric. "As a Man Thinks" may be enjoyed quite as much in the library as before the footlights.

Wagner's popularity in London is attested by the fact that Sir Henry Wood, in making out his programmes for the Queen's Hall Promenade Concerts, which began on August 12 and will last till October 21, included Wagner's name in them no fewer than 121 times. Beethoven comes next, thirty-four times; Tchaikovsky, thirty; Mozart, twenty-eight; Dvorák and Weber, sixteen each; Brahms, Elgar, and Bach, fourteen each; Liszt, thirteen; Handel, Berlioz, and Saint-Saëns, twelve each; Grieg and Schubert, ten each. Mendelssohn is represented by nine pieces. These sixteen composers occupy considerably more than half the scheme. The "Tannhäuser" overture, with seven performances, will be the most frequently heard work; the "Meistersinger" and "Tristan" preludes, the "Peer Gynt" suite, and the "1812" overture will each be played six times. British music supplies 78 out of a total of 630 items, or 12.4 per cent.

The Bach suite arranged by Gustav Mahler, which aroused so much enthusiasm at the Philharmonic concerts in New York conducted by him, is included in Sir Henry Wood's programmes as one of the novelties. The others are: Pavane, Ravel; waltz from "Der Rosenkavalier," Strauss; Roumanian Rhapsody, No. 1, Georges Enesco; Swedish Rhapsody, "Midsommarvaka," op. 19, Hugo Alfvén; "Shepherd Fennel's Dance," Balfour Gardiner; three pieces for oboe and orchestra, Hamilton Harty; suite, "Children's Corner" (newly orchestrated), Debussy; variations on an Irish air (op. 29), Norman O'Neill; suite for flute and orchestra, "The Flute of Pan," Jules Mouquet; small suite for orchestra, Cecil Forsyth; petite suite for flute and orchestra, Henri Büsser; Symphonic Poem, "Antonie et Cléopatre," Raymond Roze; Fantasia for pianoforte and orchestra, Louis Aubert; orchestral rhapsody, "A Passerby," C. B. Rootham; suite for orchestra (op. 9), Georges Enesco; Miniature Suite, Eric Coates; Canon, by Schumann (op. 56, No. 5), orchestrated by Francis G. Sanders.

Leoncavallo has been asked to write the music for the hymn of the Italian Poet Pascoli, which is to be sung at the ceremony of unveiling the Dante monument in New York on October 12.

Humperdinck is writing the music for the performance of Maeterlinck's "Blue Bird," which is to be given in Berlin the coming season.

After examining the manuscripts of operas received in competition for the "Jungdeutsche" prize, the four judges (R. Strauss, Ernst von Schuch, Leo Blech, and Gustav Brecher) decided that none of them deserved the prize. Three of them, however, were mentioned as noteworthy—"Des Teufel's Pergament," by Ostermann and Schattman; "Der Weg zum Licht," by Ewers and Krumbiegel, and "Kain," by Möller and Surmann. These are to be staged and the Jungdeutsche Verlag (Kurt Fliegel, Berlin) has paid 2,500 marks apiece for them.

Mascagni is said to have been asked to write two new operas, one to be produced on the opening of the Panama Canal in 1915, the other to be staged in Japan.

Otto Neitzel, the well-known Cologne critic and lecturer, has written an opera entitled "Barberina," which is to be staged at Krefeld the coming season.

Frederick Tivendell, who died recently, at the age of eighty-six, was an Englishman who settled at Cassel in 1843. He played at concerts with Spohr and later with Joachim.

Art

A book on "Royal Copenhagen Porcelain," with 100 full-page plates, by Arthur Haydn, is in the list of Fisher Unwin.

The first volume in the series issued by the Egyptian Department of the University Museum in the University of Pennsylvania has already been noticed in these columns. It contained the account of Mr. MacIver's initial campaign, on behalf of the University of Pennsylvania, in Lower Nubia. The continuation of the expedition in the same locality is now recounted in three new volumes, *viz.*, vol ii, "Christian Churches in Lower Nubia," by Geoffrey S. Mileham; vol. iii, "Karanog: The Romano-Nubian Cemetery," by C. Leonard Woolley, and D. Randall-MacIver, Text; vol. iv contains the Plates to illustrate the text of the third volume. The three volumes appear together and form a bulky contribution to our growing knowledge of the cataract region of the Nile and its important position as the link between ancient Egypt and the otherwise impenetrable barbarism of inner Africa in ancient days. It is the only country in which we can discern something of the ancient history of a dark or negroid race in Africa. To the traveller issuing from the jungles of the Sudan and following the Nile valley northward, there is no more sombre memorial of the slow retreat of civilization which went on in this region after the fall of the Egyptian empire (twelfth century B. C.) than the desolate ruins of the Christian churches in which the lamp of enlightenment had flickered for a few centuries till it was quenched in the seventh century A. D. by the southern advance of the Moslems. These Nubian or Ethiopian churches were the southernmost outpost of early Christianity. No attempt has hitherto been made to recover a systematic knowledge of their scanty architectural remains. The churches of Cairo and the north have been studied by Butler in his standard volume on the Coptic churches, but those of Nubia lay neglected until the Pennsylvania expedition wisely attached an architect to their staff and undertook the work. Mr. Mileham's useful volume is the result. Plans, elevations, and photographs in halftone occupying thirty-nine plates furnish the more essential data on the ten churches reviewed by the author. In these and a text of fifty-six pages a conscientious effort is made to present the objective facts. There has been little attempt to reconstruct the buildings as they once were (see plate 25), or to correlate the observed facts with the history of architecture in the north. Any such purpose is frankly disavowed by the author in his preface. The later buildings of Nubia will contribute much to the history of Byzantine architecture, and throw light on the problems in which its obscure origins so abound. The facts recounted in Mr. Mileham's volume will no doubt be found of value in such study.

The work of excavation conducted by the Pennsylvania expedition has been continued by Mr. MacIver at a point about midway between the first and second cataracts, not far from his first campaign. The place is known as Karanog, and here Mr. MacIver discovered a large cemetery embracing a period of four or five centuries which ended not later than 500 A. D. In such an age and on such a remote frontier of the Roman Empire, the material found presents unique and hitherto unknown problems. It is even difficult to find a term by which to designate the cemetery and the whole mass of objects found in it. The term "Romano-Nubian," which is adopted, seems unfortunate; for "Nubian" is an ethnological or ethnographical term, while "Romano" is, of course, purely political. Such a double designation attempts too much; it would be better to call it simply Nubian. The output from the Karanog cemetery was large, and, taken together with Mr. MacIver's returns from his first campaign, makes the Museum of the University of Pennsylvania the leading collection of Nubian antiquities. The burials vary from mere graves to pretentious rectangular superstructures of sun-dried brick, occasionally having even stone masonry bases. The furniture and accessories, like the architecture, may be at once characterized as pseudo-Nubian, displaying as they do a hybrid, composite style, in which the Egyptian veneer but thinly veils the semi-barbarism into which these one-time subjects of the Pharaoh had fallen. Besides an important series of Nubian inscriptions in the Meroitic script, two unique classes of objects were found. A series of curious and grotesque "ba-statues" in painted stone, displays the human-headed bird (the classic

Digitized by Google

harpy), combined with the standing figure of a man, whose head likewise serves as the head of the bird, the body of the latter being attached behind the man's shoulders. The mass of decorated pottery is imposing, and forms also a unique series. It furnishes a new chapter in the history of decorative art. In 116 plates, fourteen of which are in color, these and the other, lesser remains from the Karanog cemetery are very fully and successfully brought before the modern student. The volume of text furnishes a full and careful report of all field data and other facts necessary to an understanding of the plates. A final chapter on the Blemyes and the Roman Frontier, together with an appendix containing the ancient Greek and Latin sources concerned, and a second appendix on the garrison of Egypt under the Roman Empire by G. L. Cheesman, materially enhance the value of the volume. The camera has been well employed in making the field records. It is, however, to be regretted that there is no satisfactory photograph of the imposing rock of Kasr Ibrim, opposite which Karanog lies. It is the dominating feature of the landscape, and on its summit stands one of the churches surveyed by Mr. Mileham, in the midst of a ruined fortress and settlement. In a piece of work so well done, however, this is a small matter.

It will cheer the advocates of photography as a fullfledged art to find that much of the advice which A. J. Anderson gives in his book, "The Artistic Side of Photography" (Dodd, Mead & Co.), is applicable to all design in monochrome. Mr. Anderson is a believer in straight photography, an enemy of the gum-print and over-manipulation of all sorts. He is equally the foe of gloss—even regarding the lustre of oil pigment as a defect. For him the ideal photograph is the platinotype. Through his sensible and vivacious paragraphs on composition and lighting, landscape, portraiture, and pure pictorialism we cannot follow him. Enough that he frowns upon the fussy whether in preliminaries or in the dark-room. His view of the claim of photography to rank among the arts should be noted. Not fulness of definition, which he deems a defect, but beauty of gradation in monochrome is the specific merit of photography. Twenty-four reproductions illustrate what he feels to be the best prints. We have examined these carefully in the light of Mr. Anderson's dictum, and we feel that a skilled draughtsman in monochrome would desire to accent or seriously alter every plate but one. Baron A. von Meyer's The Silver Skirt has satisfactory pictorial quality, Coburn's The Water-Carrier approaches that standard very closely. The rest show empty spots or saliencies that no artist would tolerate. In the high average of contemporary practice, that is, the photographic print is far from being a rival of the mezzotint, lithography, or tone drawing in charcoal or pigment. Whether photography is to be promoted from the position of poor relation to peer of these traditional monochrome processes the future will tell. Meanwhile, the more art that can be put into photography the better. If, as seems to the present writer, its most valuable function is that of objective record, why at least all efforts to make that record agreeable should be welcomed.

Finance

AN ERA OF ECONOMIC READJUSTMENT.

When the financial situation seemed to be improving, last spring, and hopefulness was the dominant note in Wall Street, it was recalled that this was the fourth year after 1907; also that it was in 1897, the fourth year after the panic of 1893, when the movement of financial recuperation and expansion began which lasted almost uninterruptedly for a decade. We have had numerous disappointments since that parallel seemed reasonable to draw. The approach of autumn will not bring renewal of the hopes of springtime, and, while it is not altogether safe to make predictions regarding even the near future, it is perfectly safe to say that this year will not have duplicated 1897.

But when that comparison with the nineties was drawn, it was also remarked that the aftermath of panic in the seventies made up a different story, and that the fourth year after 1873 was a year of reaction and depression. In view of the present perplexities of the situation, it may be interesting to retell the history of the years which followed that financial crisis. That 1893 was followed by one year of profound depression, by a second of premature speculation and expansion, by a third of renewed and violent liquidation—leaving the fourth in the series to begin the true movement of recovery—most people will remember. Let us see what occurred after 1873.

Of 1874 it was said, in a contemporary review at the end of the year, that "there was a general rebound from the previous depression, and an expectation of renewed buoyancy in business affairs which was not really warranted by the facts of the case." At the end of the year, the mistake in such expectations had been discovered, and the year ended with little genuine improvement. Yet in 1875, "recuperation was looked for with confidence." Again, however, "it failed to take place, and it appears that the disastrous effects of the panic were underestimated, and considered more transient and temporary than was really the case." But the markets would not believe that the after-effects of panic could be so prolonged.

At the opening of 1876—so the next year's narrative proceeded—"hopefulness was everywhere noted, and for a time there was promising activity in the Wall Street markets." But only for a time; as in the chronologically parallel year 1910, "this gave way to decided reaction, and the buoyancy and energy of our people were again severely tested by a year of depression and disappointment." The crops were comparatively small, business slow, failures very numerous, new securities hard to sell, and railway earnings wholly unsatisfactory.

Of 1877—which, like the present year, was the fourth year after the great financial crisis—the chronicler of the day wrote, at its close, that it "may long be remembered in the stock market as a period of unequalled depression in prices. There was no panic and no violent or extraordinary events to break down the market suddenly, but values shrank away steadily under the unfavorable influences affecting stocks, and with the most persistent and vigorous hammering by a strong combination of bear operators." It was a year of railway rate wars; of formidable labor troubles, culminating in the great Pennsylvania railway riots, and of constant political agitation, converging in that instance on the free silver coinage dispute. Its one redeeming feature was its excellent harvests, the yield of wheat and corn surpassing all previous records, and cotton turning out better than in any year since the civil war.

It is evident enough from this review that the present twelvemonth, though by no means as gloomy a period, has more points in common with the fourth year after 1873 than with the fourth year after 1893. Historical or economic parallels can never, in the nature of things, be exact. But the fact of even such superficial resemblance should make it interesting to inquire, first, why those two earlier periods differed so radically; then why 1911 should have resembled the one rather than the other, and, finally, what happened after the year which 1911 resembles.

The most obvious explanation of the first question lies in the fact that, in the first year after the panic of 1893, the country passed through the extreme of Stock Exchange depression, business reaction, forced economy, and readjustment of wages, which as we have seen were combated and postponed after 1873. Liquidation, reorganization, and the conforming of staple prices to the new order of things, were largely completed in 1894, and what was not done or what was undone in the premature boom of 1895, was effectively achieved in 1896. There was no such story of prompt response to changed conditions after 1873, and there was no such story after 1907—which may possibly answer the second question. In other words, the economic world took its full dose of medicine promptly after 1893, and was accordingly quick in its recovery. In the two other periods, it failed to take the medicine until after rather long delay.

As for the sequel to 1877—the fourth year after the panic of that decade—the first half of the ensuing twelvemonth was a period of uncertainty, with political influences still dominant, Congress a perpetual thorn in the flesh to the de-

Digitized by Google

spondent and angry financial community, staple prices falling and business hesitating. But it was evident, before 1878 was over, that the long-deferred financial readjustment was complete. Trade expanded and Stock Exchange prices rose in the last part of the year; liquidation ceased, notwithstanding continued political unsettlement at home and war in Eastern Europe. The next year, 1879, favored as it was by resumption of specie payments and by large crops in high demand abroad, witnessed the great financial and industrial revival of the period, and a return to genuine "boom times" in America. To suggest the possible analogies, then, of the next two years of the present chapter of American finance, is a matter for the financial imagination.

Prokosch's Introduction to German

By **EDUARD PROKOSCH**, *Professor in the University of Wisconsin.* x+316 pp. 12mo. $1.15

Part I consists of carefully graded reading material thoroly German in spirit, and simple enough to be taken up at the very beginning of the study of the language. Part II consists of connected lessons, with exercises for drill and colloquial practice, and systematic cross reference to the reading matter in Part I. The vocabulary used in the exercises is the same as that used in the reading selections, and the important words are emphasized by frequent repetition. Part III is a systematic summary of the forms and principles of German grammar for constant use in connection with the lessons, and for subsequent reference.

Second Edition Now Ready

PAPER-BAG COOKERY

By NICOLAS SOYER

Chef of Brooks's Club, London.

Cloth, 16mo, 60 cents net; postpaid 65 cents

Cooks food better, in half the time, with half the trouble, and cuts the fuel bill in two.

This book with its recipes tells how to cook almost everything but soups in paper-bags in *any* oven—a method now practised in many countries and likely to revolutionize cookery the world over. More savory, quicker, cleaner and cheaper cooking; no washing of pots and pans, and no cooking smell. A boon alike to epicures and housewives. For information write—

The Nation

NEW YORK, THURSDAY, SEPTEMBER 7, 1911.

The Week

President Taft loses no occasion to show that he is deeply in earnest about the arbitration treaties. He went to the meeting of the American Bar Association last week in order to argue about them before the assembled lawyers. Addressing himself to the main issue raised by the Senate Committee—namely, that the Senate ought not to be asked to "delegate" or "abdicate" its treaty-making power—he contended with much force that the Constitution certainly places the Senate no higher than the President in this regard, and that either may safely leave it, in certain cases, to an impartial and able commission to decide whether a given dispute is of such a nature that it is "justiciable," and so capable of being arbitrated. And Mr. Taft was really impressive in maintaining that we ought to be ready to hazard something for the sake of the world's peace, but in pressing home the truth that those who object to arbitration because under it the decision might go against their own country take up a position as truly untenable as would be that of a private litigant who should refuse to go into court unless certain that he should win. It is good to be assured that this great cause lies so near the President's heart, and that he will stand up for it in his Western speeches. All the more is it to be regretted, therefore, that on other matters his attitude is such as to arouse opposition and stir up strife within his own party. It would be a thousand pities if the spirit of faction which his coming tour seems certain to embitter should have the effect of emasculating or destroying the arbitration treaties.

Information now in the hands of Senator La Follette's campaign manager indicates that unless a progressive Republican be nominated for President next year, "this country will be compelled to face the disaster which usually accompanies a Democratic national Administration." Whereby the truth is once more exemplified that long after a man has given up believing in God and going to church he will continue to put on a frock coat and carry a cane on Sunday. The Insurgents have found it easy enough to break with nearly every article in the Republican creed, but they cannot forget the moth-eaten party shibboleths, of which the Democratic party's incapacity to cause the rain to fall and the crops to grow is the most ancient. The reproach comes most unkindest from the political agent of the statesman to whose present prosperous fortunes the Democrats in Congress have so generously contributed. We wonder if the certainty of national disaster attendant upon the election of a Democratic President is strong enough to make Mr. La Follette wish that last year's Congressional elections had turned out differently from what they did.

The stationing of a regiment of infantry on the Panama zone at this stage of the canal's development might seem quite inexplicable were it not that Congress will assemble in December to listen to more arguments from Gen. Wood on the necessity for an enlarged army. Up to this time, marines have successfully guarded the canal excavations in coöperation with the canal police. But now fear of an invasion has evidently become tense, and the Tenth Infantry is to leave for the canal at once to reinforce the battalion of marines to which Col. Goethals has let his guard dwindle. Next there are to go Coast Artillery and even cavalry, until a full brigade is stationed at Panama, in complete idleness save for the customary drills. In the intervals, we presume, the men will sit on the banks of the canal and watch the boats go through. It will always remain a mystery why a man who seems so genuinely devoted to peace as Mr. Taft should lend himself to this absurd canal fortifying. We recall his speech about the increase of the navy, to the effect that "we had better go on building two battleships a year until the canal is done, and then take stock of our situation." This indicates the lack of a clear-cut policy in this matter, as in the Philippines.

President Taft has commuted the sentences of two more army officers. One of them was convicted by his fellow-officers of embezzling moneys from the post exchange. Into this case Mr. Taft went with his usual painstaking care, reading all the evidence taken, as though he were still a judge on the bench. It is, therefore, quite unfair to charge him, as some of the Washington correspondents do, with permitting politics to rule. But it is permissible to point out in this as in several other cases in which he has exercised leniency that he does not realize how his acts discourage the service which tries hard to rid itself of its black sheep. An officer is usually not brought before a court for a serious offence until the service is certain that the time has come for drastic measures. In this case of Lieut. Rutherfurd, Mr. Taft apparently concedes that he was guilty, for he has reduced him fifty numbers in rank. But this is utterly inadequate; if he stole, nothing less than dismissal was merited; if he was innocent, he should receive no punishment. As in the case of Col. Cooke, whose sentence Mr. Taft commuted to the pain of the entire army, the President has failed to appreciate the spirit of the service, and has done it positive harm out of what is undoubtedly merely kindness of heart.

In so far as party politics enters into the contest over the retention of prohibition in the Maine Constitution, it concerns only the leaders of the parties, and by no means all of them. The people in general are too deeply interested in the question at issue to be swayed by any extraneous considerations. The Democrats, in taking the responsibility for submitting the amendment to a vote, were actuated as much by what they conceived to be the public sentiment as by hope of the partisan advantage which their opponents foresee for them in its repeal. It does not seem reasonable that many Republicans of the rank and file can be terrified by the prospect of a Democratic machine built up on license patronage. If their own leaders cannot play at such a game as that, then, indeed, political conditions have altered in the Pine Tree State. Nevertheless, even when stripped of politics, the issue is not simple. Both sides exhibit

Digitized by Google

figures which prove and disprove the moral and material advantages of prohibition and license. The repealers argue that the law entails political hypocrisy and corruption; the supporters of the amendment reply that it reduces poverty and insanity. Outsiders will be inclined to think that, if there is any State in the Union that ought to be capable of deciding the question, it is the one that has tried Constitutional prohibition for twenty-seven years, and is in its sixth decade of statutory prohibition. For this reason the result will be watched with general interest.

If William Penn were to return to Philadelphia to-day he would be quite overcome by the ample evidences of brotherly love in the politics of that great city. Senator Penrose gives fresh proof of his well-known public spirit by placing $100,000 in a trust fund to protect any officeholder thrown out of his job because of his adherence to the Senator in his fight against his co-managers of the machine. Apparently, hints have reached the Senator that fear of financial loss might make some of the officeholders, who were swayed like himself by the purest and most unselfish devotion to good government, reluctantly go with the Vares. Hence Mr. Penrose's noble action. From now on officeholders whose activity for Penrose is conspicuous will receive their dismissal with perfect equanimity and live on a slice of that $100,000 until the Senator finds a place for them in the Federal service. But the Vares are not to be outdone. *Noblesse oblige;* and so Contractor Vare shows his high-mindedness by giving up all city contracts as rapidly as he can and by turning over the management of his brother's campaign to some one else.

The first trial of the direct primary for the nomination of Governor of Maryland is regarded by the Baltimore *Sun* as justifying the passage of the law. Had the contest taken place under the old convention system there would have been no contest worthy of the name. With the Baltimore Democratic machine and the State and county organizations all working for Gorman, the result would have been certain from the beginning. As it is, he squeezes into the nomination by virtue mainly of Baltimore's twenty-eight votes, controlled by the Mahon ring. In that city Lee's forces made almost no struggle, concentrating their efforts, with a wisdom revealed by the outcome, in the counties. As the *Sun* puts it, a well-guarded primary law destroys political monopoly, or at least makes its destruction possible, and introduces free competition into the party. This is especially desirable in such a State as Maryland where the Republican party is usually too feeble to be a menace to boss rule. The Maryland law, however, needs amendment. A date two weeks later would accommodate many voters who are absent from Baltimore in August, and still leave a month and a half for the campaign. The election boards, while bi-partisan, are organization men, and this imposes an unfair handicap upon an anti-organization candidate in either party. If the element for Lee pursues the advantage it has gained in more than one county supposed to be in the grip of the organization, the *Sun* will be justified in declaring that a new political era has begun in Maryland.

Adoption of a new form of municipal government by five thousand voters out of twenty-five thousand does not look like majority rule. But that is what has occurred in Omaha. With two thousand voters casting their ballots against it, and seventeen thousand not voting at all, the largest city in Nebraska has decided to try commission government. The striking feature of this election is the degree of indifference which it reveals. Apathy itself in varying amounts is a familiar feature of our experiments with self-government. By it we have proved that we propose to exert no more of the vigilance that is the price of our political happiness than is absolutely necessary. When a contest is one of individuals rather than of principles, for instance, we are apt to allow our inertia to assert itself, and to devote ourselves more completely to business while letting the election run itself. A stranger might be excused for thinking that we were in the habit of calculating the chances, weighing the risk of loss by the election of the most undesirable candidates against the probable loss by neglecting our private affairs, and that, when in doubt, we took the former risk.

Fremont Older, editor of the San Francisco *Bulletin*, and one of the men principally responsible for the bringing to justice of Abe Reuf, is now advocating the pardon of the man whom, in the writer's own phrase, he had "pursued" for eight years. In the *Survey*, Mr. Older gives the reasons for his change of heart. He has ceased to believe that our economic difficulties can be solved by sending men to prison; so long as public necessities are controlled by private corporations, there will be civic corruption; "Ruef was a victim of the system." It is an extraordinary argument. There has always been a great deal of false sentiment and wrong thinking in connection with this unhappy phrase regarding the sinner who is a victim rather than a criminal. Pertinent enough, let us say, in the case of the woman outcast or the juvenile delinquent, the phrase is ridiculous when applied to an unscrupulous corruptionist, whom no other necessity than the depravity of his inner being drove to make a business out of the shame of his city. What system of public management or what system of any kind, economic, social, or religious, can be guaranteed to keep a man straight who is determined to be crooked? Some abatement in our pity for such "victims" of society is necessary if only in justice to the ninety-nine per cent. of us who do not live by theft or vice.

The outlook for the recall of judges in Arizona is indicated in the following dispatch:

> At a mass meeting of the chief Democrats of Graham County, held to decide on the question of accepting Statehood and eliminating the recall of the judiciary feature of the Constitution, it was unanimously decided to vote for striking out the recall provision and to pledge all candidates for every office, and especially for the Legislature, to provide for the immediate replacement of the measure after admission has been consummated.

The thing is not so easily done as all that. Even in Arizona, we presume, it needs a popular vote to approve an amendment after it has been approved by the Legislature. But conceding that Arizona may have back her cherished recall the day after she is admitted into the Union, the fight over the question at Washington and the President's veto have been far from wasted. They have concentrated national attention upon a fundamental change in the spirit of our institutions to which we shall be called upon to give much thought in the fu-

Digitized by Google

ture. Perhaps it is for the best that Arizona should now proceed to make her experiment with the especially watchful eye of the country upon her.

One of the most interesting happenings in the South of late has been a strike of white laborers at Key West because of the discharge of two negro workmen. Usually the case is the reverse both North and South; that is, if there is objection it is to the employment of colored labor alongside of white laborers. But at Key West every union carpenter struck until a board of arbitration found that the men were in the right. They were restored to work, and, says a Key West account, "the white and colored laborers are on much better terms." This is certainly refreshing reading when one recalls the bitter and costly strikes in Georgia and elsewhere of white men to prevent negro workmen on railways from rising above the humblest positions, and if it can be taken as a sign that labor is awakening to the fact that it least of all can indulge in race prejudice, it should give genuine reason for rejoicing. The other attitude particularly to be noted here in the North of excluding the colored man from unions is doubly wrong from the union point of view: it makes the negroes ready to act as strike-breakers, and it makes most of their arguments as to the brotherhood of all labor highly nonsensical. But this is one of the issues which Mr. Gompers finds it difficult to wax eloquent over, while he has sympathy unending for white men charged with the worst of crimes—wholesale murder. Upon what constitutes real brotherhood the Socialists can give Mr. Gompers some desirable lessons.

The amateur strategists are busy deciding the outcome of the war between France and Germany that has not come off. There is a pleasant variety of opinion on the subject. It has been made plain that upon the outbreak of war, Germany will immediately throw her armies into France and occupy Paris before the Russians have a chance to mobilize, or England can bring her troops across the Channel. The German fleet will be destroyed by the English fleet, of course, but for that France will be made to pay, and more; and so the outcome will be acceptable to Great Britain and acceptable to Germany and disastrous to France. But it has also been made plain that when war is declared the British fleet will immediately destroy the German fleet, the Russians will mobilize instantly, the German forces will be held back by the impregnable line of French forts, and even if they succeed in forcing their way into French territory, their gains will be more than counterbalanced by the loss of their fleet, their ports, and their foreign commerce. So war means disaster to Germany. Both conclusions follow inevitably from the careful balancing of regiments, guns, and battleships which constitutes the amateur strategist's sole method for gauging the rise and fall of nations.

An agreement between two great Powers that pleases both parties and satisfies the interested bystanders is a rarity. Such a pact is the one just concluded between Germany and Russia with regard to railway development in northern Persia. Russia is pleased at obtaining German recognition of her predominant interests in the northern half of the Empire; and because the Russian sphere of influence is a product of the understanding with Great Britain, that Power is inclined to view the situation with equanimity. Germany obtains from Russia the promise that the Bagdad railway shall be ultimately extended to Teheran, together with the usual "open door" privileges in northern Persia. It is fortunate for the Liberal movement in Persia, the future of which is still beset with difficulties, that its task should be made easier by the removal of any near possibility of foreign complications.

The tenth Zionist congress at Basel set definite limits to the movement brought into being by the late Theodor Hertzl, and thereby gave it a definiteness of purpose it has hitherto lacked. Dr. Hertzl's conception was of an autonomous Jewish state in Palestine, established under the guarantee of the Powers. The methods to be employed were those of diplomacy. Dr. Hertzl entered into negotiations with Sultan Abdul Hamid without any outward signs of success. The overthrow of Abdul Hamid was a serious check to Zionist aspirations. The Young Turks were Ottoman patriots. Their policy of centralization was utterly opposed to the idea of a self-governing Jewish state within the Empire. The latest Zionist congress has recognized the turn of events by abandoning the idea of a Jewish state and the methods of diplomacy, and declaring instead for a policy of gradual colonization. The two factions have been present in the Zionist movement since the beginning, but the death of the founder of the movement and the increasing pressure of the situation in Russia made the position of the "politicals" untenable. The Congress was forced to recognize the fact that while the theories of Zionism were being discussed, emigration was solving the problem of the Jews in Russia in a way unacceptable to the advocates of Palestine as the destined refuge for oppressed Judaism. Such are the considerations that have led Zionists to abandon the greater but distant hope for the immediate, practical benefits of an active policy of colonization in the Holy Land. After years of hesitation and a great deal of stumbling in the dark, the original idea of a Jewish home in the Holy Land has reasserted itself.

Party names have comparatively little significance in a parliamentary system like that of Japan, where Ministerial responsibility is non-existent and continuity of policy is maintained through the preponderant influence of a small group of veteran statesmen. Yet to the extent that it is possible to speak of Conservatives and Liberals in Japan, the Saionji Ministry, which has just replaced that of Marquis Katsura, may be described as Liberal. The outgoing Premier was at the head of the Government during the war with Russia, and his Foreign Minister, Baron Komura, was Foreign Minister at that time. The war once concluded, the difficult problems of finance and economic readjustment proved to be of a kind for which the military talents of Katsura were unsuited. Unpopularity inevitably attaches to the business of paying the price of war. Baron Katsura retired and was succeeded by Marquis Saionji. Then came the unrest in Korea and the rise of discontent and sedition at home, and Katsura, as the "strong man," once more came to the front, bringing Komura with him. The necessary work having been done, the two men make way once more for what is by comparison a progressive and lenient régime.

MR. TAFT'S NEW EXPERIENCE.

Speaker Clark's rejoinder to the President's Massachusetts speech is a trifle "savage and tartarly," but is significant both in itself and as indicating the changed conditions which Mr. Taft has now to confront. He may have been surprised at some of the Speaker's blunt utterances, but must hereafter be prepared to hear many more of the same kind. The reason is that from now on he will be regarded not merely as the President, but as an active candidate for renomination. His speech-making tour two years ago was frankly a good deal of a failure; but at that time he had been only a few months in office; everybody had personal good-will for him; the deference due his office was shown him; he was nowhere directly attacked. But from now till November of next year all this will be altered. The amenities will give way to the animosities. Mr. Taft's statements will be sharply challenged. His consistency will be questioned. Both Democrats and Insurgent Republicans will open fire upon him, and he will find himself in a political battle where no one is spared.

This will be a new experience for President Taft. He has never before had to go out and take a hand in rough political debating. In 1908 the bludgeon-work was kindly attended to for him by President Roosevelt. Since then Mr. Taft has made a great many perfunctory or occasional addresses, but these have been mostly non-controversial or "official," with no one to answer back. The biting criticism, the hard hitting, will now set in, however, and it is a question whether he is fitted to shine in that kind of political fighting. His greatest strength hitherto he has shown in such deliberately prepared state papers as his veto message on the recall of judges, or the mature and comprehensive speech on the conservation policy which he delivered at St. Paul last year. It is another thing to have to meet all comers without notice; to be compelled to reply as well as to assert. Beginning with his coming tour of the West, the President will enter upon a period of rough-and-tumble political fighting, new to him, and whether he has the readiness, the dash, and the verve for it his best friends may well be in doubt.

How his predecessor would have met such frontal attacks as those of Speaker Clark and Senators La Follette, Cummins, and Bristow, it is easy to imagine. There would have been instant elections to the Ananias Club. Letters would have been drawn from secret places and published. The loud assertion would have been made that the President's opponents were in cahoots with "the interests," and that, if the whole truth were known, it would probably be found that they were in the employ of the Standard Oil Company. Dr. Johnson's method of controversy would have been freely used, and if the pistol had missed fire, the antagonist would have been knocked down with the butt. Mr. Taft, however, is not a man cut out for such scrimmaging. In 1908 the man who nominated him complained that he was putting so little "ginger" into the campaign, and came forward himself to supply the missing article, along with large amounts of mustard and tabasco sauce. It is doubtful if Mr. Taft would care in this way to bang and bethwack his opponents even if he were able; it is more doubtful if he is the man to do it effectively if he were to attempt it. The judicial mind does not go well with the swishing shillelah.

This is one reason why it is wise to accept with reserve the reports that the President is going to take the offensive in his Western tour this month. If one were to believe some of the enthusiastic correspondents, it is Mr. Taft's purpose to sally forth in order to smite the Insurgents hip and thigh. But the fact is evident that, on the main point at issue between them, the President will necessarily go, not with a sword in his hand, but an explanation! On the tariff question, about which everybody is thinking and talking, and which promises to be the chief question on which the next Presidential election will turn, Mr. Taft is from the nature of the case on the defensive. His speeches inevitably take on the air of an apology. In 1909 he sought to explain why he did not veto the Payne-Aldrich bill; this year he has to explain why he did not sign the Wool bill. But an aggressive course cannot be taken by a man who begins by excusing himself. Aside from that, all this newspaper talk about Mr. Taft's "carrying the war into Africa" assumes that he is contemplating an act of stupendous political folly. Will he, by openly assailing the Insurgents, seek to tear his party more hopelessly asunder? And he must know by this time that the Insurgents are to be classed among those very *méchant* animals of the French saying, which, when they are attacked, defend themselves. They will be sure to give the President as good as he sends, if not rather better. They have nothing to lose in continuing to oppose the President; he has nothing to gain by rushing into a fight with them. He will find opponents enough and hear hard words enough without going out of his way to hunt for either.

No phrase in American politics is more deceptive than "an era of good feeling." While you are trying to define what it means, the thing itself vanishes. In the political sense, it is now gone for Mr. Taft. The kindliest personal feeling for him will not prevent the furbishing up of every weapon that can be used against him as a candidate. The stern realities of partisan warfare must now be faced by one who has never shown that he had a large share of the joy of political combat.

THE LAWYER'S PUBLIC DUTIES.

Last week's meetings of the American Bar Association have served again to show how keen is the interest which our leading lawyers take in public questions. From eminent members of the bar and from retired judges we have had able and stimulating discussion of such subjects as the judicial recall, the reform of legal procedure, the regulation of public-utility corporations, and governmental control of rates and prices. These matters are debated by the lawyers as primarily affecting their own profession. Yet few of the speakers at the Bar Association have been content to argue *pro domo sua*. They have seen clearly that all these questions, while having a peculiar importance for them professionally, are also "affected with a public interest." In consequence we have had papers and addresses from leaders of the bar, pitched in the tone of disinterested and patriotic advice or warning. At such gatherings we get more vividly than is customary elsewhere reminders of the sense of obligation to the public which our most conscientious lawyers feel.

If this ought to be acute and constant

Digitized by Google

in any country, it surely should be so in the United States. For we are, as a nation, governed by lawyers. They fill our Legislatures and outnumber all other elements in Congress and occupy most of our high executive offices. If the laws of this land and their administration are not what they should be, lawyers are largely responsible. We do not say that any Bar Association can find or apply the remedy, but it is obvious that it cannot refuse to consider seriously these questions which are vital to the legal profession because they are vital to the country. Not every lawyer can go to a State Legislature or Congress, or can actively shape the ongoing of public affairs, but all lawyers ought to realize that they are under a peculiar obligation to volunteer their services in times of political crisis and to be ready at any moment to contribute everything within their power to the improvement of the laws and of the processes of justice.

We have never been in this country without such public-spirited lawyers; though it may be doubted if during the past twenty years we have had so many of them, and of such weight, as we had in the decades previous. In this city and State, at least, most observers would agree that such is the fact. Mr. Bryce has remarked a falling off in this respect since his first visits to America. He thinks that the community cannot now count upon the services of distinguished lawyers and jurists, like the late James C. Carter, with as much certainty as we could between 1870 and 1890. There are reasons for the change—reasons, some of them, having to do with new aspects of the legal profession. Some of our greatest and most successful lawyers are scarcely known to the general public; and to have due influence as a public adviser a man must not only be in good repute with his professional associates but must have a civic standing that will entitle him to be heard. It takes, indeed, a rare combination of professional attainment and public spirit to make a lawyer ideally fitted to discharge his duties and rise to his opportunities as a citizen.

Such a combination was seen in that ornament which the English bar has just lost in the person of Lord James of Hereford. Able by talent and industry to conquer a place for himself among the leaders of his profession, he was also a lawyer who took his public duties with great seriousness and was most scrupulous in their discharge. Having held office as Solicitor-General and afterwards as Attorney-General, he met the crisis of his life in 1886, when the great prize of the Chancellorship was offered him by Mr. Gladstone. But Lord James was strongly opposed to Irish Home Rule, and Mr. Gladstone's was a Home Rule Government. It was a case of conscience. A story current at the time was that he took some of his most violent anti-Home Rule speeches to Mr. Gladstone, and asked him if he really thought their author could accept the Great Seal from a Home Rule Prime Minister. Mr. Gladstone, on reflection, ruefully admitted that he did not think he could. At all events, Lord James refused the offer. In a speech to his constituents a little later he gave an explanation which not only reflects credit on him but shows how zealously he guarded the reputation and the influence of his profession. He said:

> I belong to a profession often attacked, often slandered. It has many great prizes which must be gathered by some members of it, and so it comes to pass that the accusation is often made that members of the bar enter upon and fashion their political career in order to obtain some of the prizes. To that great profession I am more indebted than most men. I worked my way into its ranks. For thirty years I have remained there. There my friendships have been formed. If you deem it presumptuous in me to say that I have succeeded in my calling, still some would call me ungrateful if I failed to say so. At any rate, for five years I have enjoyed the high privilege of occupying the office which rendered me the leader of the bar, and I felt that it was a duty, almost a special call upon me, that I should so act that no man should be enabled to point to my conduct as proof that the bar of England was composed of men who were unfit to take their part in political life, and I hope I have done so.

THE MAKING OF HOOLIGANS.

England has been going through a time of deep heart-searching since the strikes and the riots. What has startled and alarmed her is not the new demonstration of the solidarity and aggressiveness of her laboring men, not the paralysis of transportation which in a day fell upon the country and made London and Liverpool and Manchester look like besieged cities, but the sudden displays of brutality and ferocity, the appearance in street fights of masses of ruffians. Alongside the striker loomed the much more ominous figure of the hooligan. In place after place the bands of rowdies threw bottles at the police and terrified the vicinity, smashing windows and looting and yelling as if the nether world had let loose fiends. Looking back upon this stirring up of hell from beneath, this outpouring of depraved beings from slum and garret, thoughtful Englishmen are not wrong in thinking that they see a national peril, and a national disgrace, blacker than any possible foreign foe or the loss of a battle.

Public men, teachers, clergymen, aghast at the outburst of riotous hooliganism, are asking what has caused and what can cure it. We are bound to say that in their utterances and their letters to the press, one does not get very much light or help. The symptoms are vividly described. Remedies, however, are not prescribed with a sure hand. Those who speak for the Church naturally come out very strong on the restraints of religion, and on the need of developing a spirit of submission to authority. They confess, too, that the churches have been guilty of neglect of duty, and have more and more drawn away from the classes in which, it now appears, rowdies and incendiaries have been created wholesale. But how to carry the gospel to the masses, how to induce the masses to listen to it and accept it—that problem the excellent intentions of the people we refer to certainly will not by themselves solve. Something is gained, however, by the mere acknowledgment of an evil state of affairs. This at least puts earnest minds upon search for the causes; and to weigh and sift them is the first step.

Economic and industrial conditions unquestionably have tended in England to produce the raw material of the street ruffian. An enormous amount of casual labor exists. Fitful employment means intermittent idleness, and mischief is easily found for idle hands to do. The danger arising from great numbers of men employed only casually was dwelt upon at length in Parliament a few years ago by Winston Churchill and others. What they then said about the folly of leaving such inflammable stuff about, sure to be lighted by agitators in a time of crisis, was fully borne out by the appalling occurrences in Liverpool

Digitized by Google

and elsewhere. Drink and wretchedness do not exhaust their force in making private victims; the public is certain to suffer in the end, as surely as from neglected disease germs. The social body is one organism, and poison in the extremities will infallibly make the head reel and the heart sick.

Whatever it is that has spawned so many lawless and desperate men in England—and all countries have their full quota of them—the question remains: What is the propelling force that sets them in motion? Granted the existence of anti-social passions and destroying instincts, something must inflame them and suggest to them methods of violence before they can burst out in such ways as recently horrified England. And those social philosophers and students of public affairs cannot be wrong who point to the exaltation of force as at least one fount and source of these evils. Many a politician, many a high-placed official, many an aristocrat, who stood in consternation at the excesses of the hooligan had really helped to spur him to his mad courses. The trouble with him is, avers the Churchman, that he sets all authority at defiance. He undertakes to get what he wants by fist and club. Well, but could he not point to Lord Hugh Cecil at the head of a yelling mob in the House of Commons, composed of men representing the best blood in England? Could he not point to the Conservative public men who have said that if Home Rule were granted to Ireland by act of Parliament they would resist it to the death? It was not a hooligan but a Duke—the Duke of Abercorn—who telegraphed a few days ago to a meeting at Derry, where violent Unionist speeches were made in denunciation of the King's readiness to assent to Home Rule: "The time will shortly arrive when action, not words, will be necessary." This could only mean, and was taken to mean, a variation of the old cry: "Ulster will fight and Ulster will be right." But this, as expressing the determination not to submit to the will of the people as enacted by Parliament, is of the essence of hooliganism; and the noblemen and honored public men who take that attitude are in no way to be discriminated from the dockers and corner-ruffians who charged the police and showered missiles upon the troops.

No country is entitled to point the finger of scorn at England in this matter of possessing the potential elements of riot and pillaging. We in this land, and particularly in New York city, see the making of the hooligan going on all the time. The rowdy multiplies faster than the "strong-arm" policemen. Disorder and ruffianism break out on the slightest provocation. And it behooves us all, especially those set in authority, to see to it not only that the laws be upheld and every form of mob violence sternly put down, but that no example of disrespect for the law, no prompting to brutality, no glorification of might above right, come from above.

INDIVIDUALITY AND TEACHING.

A special committee of the National Educational Association declared in a report on high schools and colleges: "It ought to be possible for any strong high school to introduce into its curriculum any subject that meets the peculiar needs of that community or that appears to be the most appropriate vehicle for teachers of pronounced individuality." What is "pronounced individuality," and how "pronounced" must it be to give a teacher the right to free choice of his subject? Independence and freedom are in the abstract excellent things; but school-teaching is a very concrete affair, with concrete boys and girls to work on. If teachers begin to ask for free play for their individuality, parents may well inquire what it is that the teachers ask to be freed from.

If the teachers answer, freedom from a deadening round, freedom to teach only what they best like to teach or only what they think they can teach best, the parents may well suggest that children have rights, too, and that there is no sound work in the world that does not involve the kind of repetition of small acts and the close attention to small details which some people call drudgery. A doctor meets a multitude of petty ailments; a business man has his daily round of letters and office work; yet from them one does not hear the complaint that comes from some teachers, for they take the tedious details as part of the day's work, and look beyond these to the end that is to be attained. The man who sees his work as a whole, and keeps large objects in view, is not bored by details. It is the man without this power of imagination who is bound on the wheel of things: he is the bank clerk, the draughtsman, the bookkeeper; and for him salvation lies in letting work sink into a habit, so that he can get through long stretches of it with hardly an effort of conscious thought.

For the making of such drudges school-teaching provides as much material as other occupations, but no more. Year after year a teacher must carry his classes through the rudiments of his subjects, and the rudiments of all subjects can be made dull. His pupils are at the time of life when they find the bright truths of eternity in commonplaces and truisms; and each new class leaps at the old teachings with the same readiness. There are, to be sure, the laggards who must be hauled along at the expense of the teacher's last ounce of reserved strength, and in time that the teacher ought to have for rest. In all this the teacher never gets to the part of his subject where there is the zest of exploration or of difference of opinion, and it is easy to dress up such facts so as to set every one pitying the poor galley-slave of a teacher.

But the born teacher does not look on himself as a galley-slave: he thinks his profession the most stimulating and the most worthy of all. How does he keep himself out of the bookkeeper class? How can teachers hold to their birthright in the life of the intellect and the imagination? They cannot do it by making their own subjects, for pupils must be instructed in knowledge which is commonplace because it is the foundation of all knowledge. One sometimes meets a teacher of English who rebels against the uniform lists of reading used in high schools: they compel him to teach books that he finds uninteresting, he declares. But how about the pupils? If a teacher of English happens to be bored by Shakespeare, shall his pupils go through school with no introduction to Shakespeare? Teachers must deal with many subjects which have no vivid interest for them, simply because it is the right of each generation of school children to have their share in the general knowledge of the race.

The recommendation of this committee that the teacher "of pronounced individuality" should choose his own vehicle of instruction can, therefore, ap-

Digitized by Google

ply to extremely few teachers. Occasionally there are men or women with a remarkable faculty of teaching whose capacity is limited to a special subject. The instant, however, it is assumed that persons "of pronounced individuality" may be found in the service of the ordinary high school, even in that of the strong high school, there is danger. If we begin to look for these geniuses every day, it may easily become a sign of inferiority (to be distinguished by a smaller salary) not to have the pronounced individuality that is proved by some personally invented subject. Then every teacher would be on the hunt for his chance at something new and individual, about which he could print papers in the pedagogical journals, so that his pronounced individuality might become a source of pride and complacency to his principal and his school committee. We need not push the point too far, for the doctrine laid down by the committee was probably intended only for the rare exception. But it will be a bad day for the schools if the idea gains ground that success in teaching can be reached only through novelty. What we need is to recognize that an energetic mind and a sympathetic imagination can in each succeeding year put fresh life into subjects which have been taught for centuries.

PEDAGOGY AND THE TEACHER.

In the "Protagoras" Plato gives us a picture of Socrates escorting the youth Hippocrates to the house of Callias for the purpose of presenting him to the celebrated sophist Protagoras of Abdera, who has arrived in Athens two days before. The introduction takes the form of a question: "Protagoras, this is my friend Hippocrates, who is desirous of making your acquaintance; he would like to know what will happen to him if he associates with you." To this Protagoras replies: "Young man, if you associate with me, on the very first day you will return home a better man than you came, and better on the second day than on the first, and better every day than on the day before."

The tone of this announcement is singularly modern and familiar, and by its familiarity illuminating. Who are the sophists of these latter days? Not the lawyers and judges, upon whom the title is popularly conferred, for they at most have inherited the sophistic method of making the worse the better reason. The real sophists are the professors of the science and art of education. It is they who have inherited the general attitude and point of view, and it is they who in modern education hold the position assigned by Plato to Protagoras, Gorgias, and Hippias. In Plato's Dialogue, we remember, Socrates questions the assertion of Protagoras that virtue can be taught. Now, whether virtue can be taught or not, we shall all agree with Socrates in holding that it cannot be taught by rule of thumb at so much a lesson. Yet here is a profession which pretends to produce a quality no less personal than virtue, no less the fruit of experience and maturity, if, indeed, it is not mainly virtue itself, by the same short and easy method; and which then succeeds in incorporating its pretensions in the law of the state. The State of Indiana (one out of many) says to the graduates of its high schools who are intending to teach, virtually this: "Young man (or young woman), if you associate with the professors of pedagogy for twelve weeks, and, among other things, listen to their wisdom regarding the science of education, you will be fit to teach—for one year. After that, twelve weeks more of their society will send you home a better teacher than before and fit to receive a longer license and a larger minimum salary. A third twelve weeks will produce a corresponding spiritual and pecuniary improvement. A degree from the State Normal School will render you, after two years of successful experience, fit to teach for life; but the degree of bachelor of arts from the State University will produce no fitness whatever—except as it covers the requirement of pedagogy." It may be doubted whether a better example could be found of a tariff-protected industry.

I.

We might derive considerable amusement from these latter-day sophists, were it not that for some time past they have been getting their amusement out of us. Early in the era of academic expansion it was perceived that a rich and permanent source for the numbers that are supposed to attract endowments and appropriations lay in the prospective teachers; and to-day it may be said that an important part of the work of all of our universities, and the mainstay of the Western institutions, is the training of teachers for the secondary schools. To bring the teachers to the university a department of education is established which offers to furnish professional training upon a scientific basis.

Yet wherein does the pedagogy of the university differ from that of the despised normal school? To this question, put formally to a representative of the subject, the answer was given that, "It treats the subject from a university standpoint." I suspect, however, that the response expressed, even for the respondent, a good intention and a hope. For the present the pedagogy of the university shows no superiority over the common brand. It has no more ideas to offer, and it attracts hardly a better grade of students. What it really does is to introduce the normal school point of view into the university. The idea of vocational training, already too prominent, is substituted for that of intellectual discipline and personal culture, and vocational training is then translated into job-getting. At the same time a class of students is brought to the university to whom "the idea of a university" is foreign and unintelligible, and perhaps the entrance-bars are lowered to let them in. Often painfully illiterate and deplorably in need of the power of forming a few simple and clear ideas, in spite of the technical completion of a high school course, these students are then dosed with platitudes about the social function of the school and the aims and methods of education. Such is the general situation. Familiarity with its character would suggest that what the public school teacher especially needs to learn, and what the university is especially called upon to teach him, is just this—that his real efficiency as a teacher, and his ability to speak to his boys and girls from the standpoint of personal and social authority, will depend in the last analysis, not upon any mastery of the "formal principles of method," or what not, but upon the soundness and breadth of his knowledge and upon the evidence in himself of a thoughtful attitude toward life. With this idea, however, the pedagogy of the university, as of the normal school, is wholly unfamiliar.

The natural result of the policy of expansion through pedagogy is to give a commanding position in academic affairs to a set of men whose chief interest lies in—let us call it management. In the university, as in the State, the professional managers of affairs are always "on the job," and the college professor who is absorbed in the work of teaching and study awakes to find, like the private citizen at election-time, that the conditions in which he is supposed to have a voice have been quietly determined for him. There is nothing strange in this. One of the stock courses of pedagogy is on School Management, in which, as I have heard, the unpublished chapter on the management of school boards is no unimportant part of the text; and the function of the school of pedagogy in the university is less to teach than to keep the university in touch with the schools, bringing the graduates of the high schools to the university as students and getting them back again as teachers. Management, however, is the theory of pedagogy. What it teaches is not the training of children, and never their discipline, but their management. Avoid compulsion; use indirect suggestion; never speak of

Digitized by Google

"work"; and above all place no strain upon the mind. I am told, indeed, that the older "soft pedagogy" has been somewhat unsettled of late years by the appearance of a work in which some excellent psychology was expended upon a careful demonstration of the necessity of intellectual effort; but, at least until recently, the above were the accepted principles. Moreover, the professors of the art may be said to be conceived in management. The older generation has been drawn from the school superintendents, who may be capable teachers and executives, though not necessarily instructive in expounding the philosophy of education. The newer generation, however, is furnished ready-made by the Ph.D. mills (I have high authority for the phrase), especially those having branch factories known as colleges of education or teachers' colleges. The most important part of the machinery is that which places the product, and the test of efficiency is what it will place. I have heard of a machine which appears to be capable of filling any chair of pedagogy with any human being.

If we except a few excellent works on the history of education, it may be said that the literature of pedagogy as a science has contributed virtually nothing either to scholarship or to ideas. This is not to deny that a few men of ideas who were getting them elsewhere have had something good to say. Curiously enough, these occasional and unprofessional contributions to the subject are apt to be the most prized. Within the professional field, however, there are no men to measure with the larger men of other fields, and, with two or three respectable but not brilliant exceptions, the whole literature is banal and inane. In strange contrast to its modernist pretensions, educational philosophy reads like nothing so much as a volume of old-fashioned sermons, the most conspicuous feature of its style being Parson Thirdly's substitution of methodical division for thoughtful analysis. As a random illustration, in one of the later pedagogical works I find that the following are required for the training of memory: (1) Health; (2) avoidance of brain-fatigue; (3) making first impressions vivid; (4) repetition; (5) following memory with understanding; (6) improving the habit of study; (7) making pupils think; (8) training also indirectly through the acquiring and assimilating powers of the mind. It requires no very keen eye to see that the second point virtually repeats the first, and that the fifth, seventh, and eighth are identical—unless, indeed, we are to assume that thinking and understanding are different things and that both are different from acquisition (*i. e.*, mental acquisition) and assimilation.

What is true of the peaks is true of the general level of the range. It seems a dangerous statement, but I believe that, if released from the obligations of professorial courtesy, a nine-tenths vote of our college professors would support me in saying that, as a rule, the professors of education are the least educated men in the university faculty, from the standpoint either of general culture or of special attainment. I say "as a rule," because there are exceptions; they, however, would vote with the nine-tenths. Such is likewise the feeling of the body of students toward the department as a whole. In the university generally mention of the department of pedagogy is very likely to be accompanied by a smile. Pedagogical courses are everywhere regarded as snap courses, and pedagogical methods of teaching are usually the worst. The favorite method is to send the student to the library with a long list of miscellaneous references, from which he is to fill a notebook or present a "report." The notebook serves as a test; but I have known of courses where, without a shadow of test of any kind, everybody passed and received credit toward a degree of bachelor of arts. Of course, one may reply, there may still be ideas. I have made it a practice, however, for some years past, to inflict an informal *questionnaire* upon older students of several institutions who had taken pedagogical courses—many of them men of thirty or so who had taught a few years—to ascertain their impressions; and the nearly universal verdict has been that, up to the present, pedagogy has little or nothing to say. Some of these students have manifested considerable impatience over the character of the work which had been put before them as "professional" and "scientific."

II.

The pedagogical sophistic, as rhetorically presented by one of the professors of the art, runs somewhat as follows: "Would you entrust your sick child to a physician without a diploma? In providing for him in your will, would you consult an attorney unread in law? How, then, can you think of entrusting the development of his mind to a teacher untrained in the science of teaching?" The argument is plausible and may easily deceive; for it is a question of fact. Those in position to know the facts will see a clear case of false analogy. Scientific training is valuable to the physician because medical science possesses a body of definite fact and established principle which would be inaccessible to untrained observation and common sense; and, further, because, although much must be left to the judgment of the practitioner, between medical science and medical practice there is a fairly definite relation. The science of education has virtually no establishment whatever. In plain terms, it is mostly a science on paper, hastily got together *ad hoc*, by a process of forced abstraction, to meet the demands of a professional analogy. At the very best it is one of those "new sciences of human nature" whose claim to be scientific rests upon good intention. And between its science and its practice there is only the vaguest relation. The physician with a difficult case can turn to his "Practice of Medicine" and find some definite and enlightening instructions. The teacher, having diagnosed a case as laziness, turns to his "Practice of Pedagogy," and finds something like this: "Diligence: (1) Teach practically; utilize activity. (2) Fix pleasant associations with work. (3) Use exposition with older scholars. (4) Seek cause of laziness and root it out. (5) Allow for disposition." Or, inquiring for a method of holding his pupils' attention, he learns that he is to apply a judicious mixture of incentives immediate and remote—which not only furnishes no information, but fails to grasp the real question, namely, how to obtain attention for the *subject*.

The scientific basis of education is psychology, and the special brand of psychology used for the purpose is called "educational psychology." No work in educational psychology holds a position of authority as psychology; that is, to put it mildly, there is nothing which approaches the great works of Wundt, James, and Stout, or Ward's article in the Britannica. Just why it should be distinguished as educational psychology, I have never been able to make out, for the textbooks show little distinctive subject-matter. One or two who have taught the subject have whispered into my ear that it was just psychology; and this was confirmed by the fact that in one institution the course in general psychology given under "philosophy" was paralleled by a course in educational psychology in the department of pedagogy, which used the same text and printed a syllabus covering the same topics. The students, however, distinguished the courses as "the men's psychology" and "the girls' psychology." Educational psychology is supposed, of course, to work out the educational corollaries of psychological analysis. But the truth is that the points of contact are surprisingly few, and, for the most part, the educational applications are either highly vague or, as James would say, "the unprofitable delineation of the obvious." Here are some typical examination-questions, all from one paper: "What facts, in your opinion, render a human being capable of education? Explain what is meant by exactness and thoroughness in education? Is it important that the teacher shall understand the emotional nature of children? Do you accept or reject the old doctrine of mental faculties?"

The older style of educational psy-

Digitized by Google

chology is much occupied with an unintelligent elaboration of Herbartian "apperception," ignoring the improvements introduced into that conception since Herbart. The newer style, nothing if not scientific, is given to measurement and statistics and is much interested in a discussion of the value (*i. e.*, the entire lack of value) of general training, or "formal discipline." The importance of this question may be easily appreciated; for if general training *is* important, it is all up with pedagogy. But we shall hardly abandon our faith in intellectual discipline upon such opaque grounds as these: Of thirty students, those who ranked well in English ranked variously in Latin, French, and German; young children trained to discriminate blues had improved little if any in the discrimination of lengths and weights; adults who by special practice had improved greatly in their accuracy in estimating long lines, had made no improvement in their power to estimate short lines; and an untold quantity of like evidence, all of which, as it seems to me, curiously misses the point. For few would hold that extension of power into other fields comes from the blind cultivation of a habit, but only from the exercise of thinking. But this exercise of thinking is just the last thing to be obtained by laboratory methods.

Other staple articles of trade are the history and philosophy of education. I have already indicated my respect for the history of education as a subject for scholarship. The history of any form of education related to our public schools is, however, exceedingly brief, and the "practical" value for the teacher of a study of mediæval universities or a discussion of Plato's arrangement of music, gymnastics, mathematics, and story-telling is very difficult to see—especially under a régime where, thanks to pedagogy, the freedom of the teacher is ever more restricted. On the other hand, for the philosophy of education there is no establishment of ideas, that is to say, no store of philosophical literature. It must not be forgotten that the justification of philosophy in the academic curriculum is its rich endowment of literature, to which the best minds of all ages have contributed from Plato to the present day. For the philosophy of education the philosophers have little to offer. One or two books of "The Republic," a book of Aristotle's "Politics," Locke's "Thoughts," some perfunctory lectures of Kant, Herbart's pedagogical writings, and Spencer's essay are nearly all. Hence, for the purpose of a philosophy of education, the philosophers are lugged in by the heels; and here, as in some other courses, notably those in "social education," a pretentious curriculum is filled out by duplicating the work of other departments.

III.

And now, what is to be done about it? For one thing, the teachers are in the university to stay, and it is well that it should be so. No finer opportunity could be offered for making the influence of the university felt in the community as a whole; no class of students should have a better right to be there, and none should be more welcome. But if the university is to be of service to the teacher, then it must be said that no need of the teaching profession is clearer at present than that of a sound and liberal education. So fundamental is this need that the science and art of teaching sink into humorous insignificance. On the other hand, the duty rests upon the university to see that its degree of bachelor of arts is solid at all points.

Accordingly, I believe that university men should stand fast for the principle that the degree of bachelor of arts from a reputable college should constitute in itself, without pedagogy, a license to teach in the secondary schools, as against any degree of inferior academic rank; and any qualification of this principle should be in favor of the higher scholarship. If it be objected that a bachelor of arts is not necessarily acquainted with methods of teaching, the simple reply may be that he has been taught for fourteen to sixteen years past by a great variety of methods. It is curious that pedagogy never thinks of this, for just in this way are the good teachers made—by the intelligent adaptation of the best methods by which they themselves have been taught.

As for the study of education as a special discipline apart from sociology, psychology, and ethics, all that I can say is that a subject whose problems are so complex, and so broadly involved in all the problems of social order, of civilization, and of life itself, belongs in the graduate school. This suggestion should be pleasing to those who uphold the dignity of the subject, but I fear rather that it will be regarded as a repetition of Swift's "modest proposal."

WARNER FITE.

NEW FRENCH BOOKS.

PARIS, August 18.

"Le Secret de Dubois, Cardinal et Premier Ministre" (A. Colin; 448 pages, 8vo, 10 francs), by Emile Bourgeois, is the author's third and last volume devoted to the beginnings of the Secret Diplomacy of the eighteenth century. The first volume investigated the "Secret" of the Regent, with the policy of the Abbé Dubois in the Triple and Quadruple Alliances from 1716 to 1718; the second, that of the Farnesi and Philip V, with the policy of Alberoni. The present volume takes the investigation down to 1723, the year of the death of Dubois, shortly after the declaration of Louis XV's majority.

It is some years since an historical work of this magnitude has been brought to a conclusion in France. It is twenty years since Professor Bourgeois began reading at the Académie des Sciences Morales et Politiques, whose laureate he was, the results of his documentary work in the history of Alberoni and Elisabeth Farnese. During the years in which he trained to research the students of the old Ecole Normale, whose pupil he had himself been, and in his chair of diplomatic and political history at the University of Paris, he has persevered in digging deeper his special groove. His work may not be conclusive in every respect; and he has kept well within the bounds of his peculiar subject, which is not the complete history of France during the years studied, but France, Rome, all Europe involved in the tortuous diplomacy of the Regent and Dubois. It is possible that he has left little to be done in its documentary study, where long experience and facilities for research in public archives have given him easy mastery. Future study must rather bear on the proper understanding of the ideas of the men whose words are written and whose deeds are recorded in the documents. Meanwhile, these three volumes are necessary even to the general reader of this portion of French history, in which the abuses and, worse still, the inefficiency of the old order were leading straight to revolution in France.

The style is clear, though somewhat heavy for a French historian; and there is a lack of the literary arrangement which, in history, serves to bring out the logic of events. The references, sufficiently full otherwise, are confined to footnotes, with no analysis of sources and no index, but with a detailed table of contents. Perhaps the diplomacy of England, which was little less tortuous than that of the Regent and Dubois, to the great advantage of the house of Hanover, has been studied with too limited reference to the concurrent secret diplomacy of France. In the various Roman questions, mainly connected with the ending of Jansenists as Roman Catholics and the "submission of the Church of France," there is an ignoring, perhaps ignorance, of Roman Catholic religion and church law and operations. Instances are: the canonical position of Lafiteau; the logical, quite as much as religious, force acting on Innocent XIII equally with Clement XI, although the author acknowledges in passing the vital distinction between Roman political relations in France and Spain and the underlying religious needs of Roman Catholics in those countries; the life and character of Daubenton, apart from his position as royal confessor at Madrid, without which his

Digitized by Google

irruption into diplomacy cannot be appreciated with fairness to himself and his cause. In the immensely important story of Law, while M. Bourgeois follows good financial authority, the three projects of this man whose work in part and ideas in totality still exist or periodically reappear are not sufficiently distinguished. All this simply means that the best documentary research does not, by itself, unfold the ideas which issue from the back of heads and make history.

"Pascal, sa vie religieuse" (G. Beauchesne; 427 pages, 8vo), by H. Petitot, theological professor in the Ecole Biblique of Jerusalem, and "Les derniers jours de Blaise Pascal" (H. Champion; 70 pages), by A. Gazier, add something to our knowledge of that uneasy genius who, in life and in death, equally disquiets friends and foes. The more considerable work of Père Petitot is of peculiar value, even after the judicious pages of Professor Strowski. From the inside of Catholicism—and his hero, living and dying, thought himself a Roman Catholic—he weighs carefully all that remains to show Pascal's veritable religious life, and (in a second part) the real process and meaning of his defence of Christianity. The book shows competent acquaintance with the enormous literature of the subject, and with the original sources; and its judgments are guided by what is still more uncommon, a knowledge of Roman Catholic ideas and teaching in Pascal's time. As his own religious order is not concerned historically in the attacks of the "Provinciales," it has been easy for the author to execute his task with all the impartiality that we have a right to demand.

In the recent controversy started by the publication of memoirs of the priest who heard Pascal's deathbed confession, Père Petitot agrees substantially with M. Gazier, who is a Jansenist *contra mundum*, that Pascal made no essential retractation of his controversial writings. M. Gazier might accept an attenuation in his attitude toward Molina on predestination, but never toward the casuistry of Molina's brethren. Pascal, asked by his sister if he had read the books which he attacked, answered indignantly: "Why should I read bad books?" He added that their authors formed one, however empoisoned, of the twelve accredited fountains of instruction in the church. Now the church, he assured his sister, was as the body, of which the Pope was the head; and he does not seem ever to have considered the possibility of his being cut off from the head. He would perhaps have defended his resistance by the distinction which De Maistre caught up from the succeeding generation between the indefectible Roman See and its fallible occupant; but even this was rejected by Bossuet in his controversy with Fénelon. Perhaps the best explanation of what seems contradictory to outsiders is the obvious fact that Pascal was not a theologian.

"Autour d'un Racine ignoré" (Mercure de France; 440 pages, 7.50 francs), by A. Masson-Forestier, is one of those surprising books in which Port-Royal pops up again, to speak with reverence, and which do so irritate that usually placid censor of French literary history, Emile Faguet. The author is descended from Racine's family, and, in looking up his genealogical tree, he has acquired grave doubts of Port-Royal's formative influence upon his ancestor. By race, family, environment, and the known facts of his life, Racine, he assures us, was not the gentle, momentarily backsliding saint of the Jansenist legend, but a full-blooded, passionate, cruel, selfish lover. The book is entertaining reading, not without clear flashes in the dark night, significant of things which many readers of French literature do not divine. "A miracle it is, in sooth, that Racine held out to live, that he was able to withstand the fearful forces which, turn by turn, threatened him without let or stop—his cruel Jansenist family; the furious sensuality, 'Venus holding to her prey,' which was an infliction of his blood; and then that abominable wild beast who, at Versailles, held in his hand, says Goethe, the life and death of a Racine!"

"Les Ecrivains français jugés par leurs contemporains" (first volume, sixteenth and seventeenth centuries; P. Delaplane; 680 pages, 4.50 francs), by Marcel Hervier, although intended for college classes, deserves a place among professed historical works. As a textbook it is worthy of all commendation. It reaches from Clément Marot to Fénelon, including Rabelais, Ronsard, Montaigne, Malherbe, Corneille, Pascal, Madame de Sévigné, Molière, Boileau, Racine, La Fontaine, Bossuet, La Bruyère, Bourdaloue, and less but shining lights like Descartes, La Rochefoucauld, and others of a fairly complete list. With connecting links of dates, history, and intelligent comment, the book gives typical passages of the authors, and then pertinent criticisms and appreciations of their contemporaries. The concentrated history, of almost documentary kind, which is the result, is over and above the literature of the pages. Thus, since Pascal is uppermost, Nicole, who furnished him with citations, is here heard in his own pertinent words; Père Daniel, whose answer is little known, is allowed fair play, as is even the grave Bourdaloue, pursuing the controversialist with his own arms in a sermon on *médisance*. Acquaintance with these judgments of the time reads us somehow into the time's history, a most difficult and desirable thing. Another school-book, "Fénelon, pages choisies" (A. Colin; 400 pages, 3.50 francs), follows another method for a different purpose, to give us a concise knowledge of the voluminous work of one great writer. This, too, is excellently done as history. S. D.

Correspondence

THE EFFICIENCY OF THE STUDENT OF GREEK.

To the Editor of The Nation:

Sir: Greek is disappearing from the secondary school at the instance of those who question its "efficiency." A "practical age" needs facts and figures. And to meet this need evidence is beginning to come in to show that the substitutes for this time-honored discipline are unable to do the thing that a college preparatory education should do—fit a boy to carry on a college course with credit to himself, and to those who have toiled to prepare him. Recent articles emanating from the departments of Latin and Greek, at Dartmouth College, have shown how largely the best scholars in all fields, including that of natural science, are recruited from the men who have been trained in the ancient classics. Having noticed at Wesleyan the prominence of the students of Greek in the honor lists at several successive commencements, I was impelled, even before the appearance of the evidence from Dartmouth, to see if the superiority of the "Greeks" ran through a series of years, and what, if any, were its limitations.

At Wesleyan, as elsewhere in New England, the study of Greek in college was long essential to the attainment of the B.A. degree. To those who presented only Latin for admission the degree of bachelor of philosophy was awarded; those who presented neither ancient language were candidates for the degree of bacheler of science. The number that commenced the course leading to each of these degrees was nearly equal, with a slight tendency to an increase in the number of the science men and a decrease in that of the students of Greek. In 1907 Wesleyan saw a great light—a reflection of that which had previously dawned upon most of her sister colleges. Greek was omitted from the requirements for the B.A., and the degree of bachelor of philosophy was no longer awarded. The effect was a drop, very marked from the beginning, in the number of students presenting Greek for admission, and an increase in the number of candidates for the B.S.

My figures are taken from the records of the classes of 1904-1913, in the years 1904-1911. During the greater part of this time Wesleyan was nominally co-educational and had from six to a dozen women in each class. My figures, however, deal only with the men, except in the matter of prizes, where the women are included in the reckoning. I shall let G denote the students of Greek, L those of Latin, and S the candidates for the B.S.

A further word of explanation must preface the table. "High honors" in general scholarship, are awarded to those who have received first grade on at least forty-six hours' work, second grade on at least ten

Digitized by Google

hours additional, and who have never fallen below third grade. "Honors" are granted for a distinctly lower grade of work. The winner of these must have received third grade on at least fifty hours' work, and as many first as fourth grades, and must never have fallen below fourth grade, that is, must never have failed in any course. Furthermore, each class at Wesleyan suffers heavy loss between entrance and graduation. Few leave by request, perhaps fewer still for reasons purely pecuniary; the large majority drop out because of failing interest and poor scholarship. The figures in the following table must be read in the light of the first two sections of it. Some will think the first section offers the fairest basis for estimating the efficiency of the student of Greek; some will prefer to use the second.

II. Of Latin students it may be said that:

(1.) There is comparatively little shrinkage in their numbers in the college course, while the proportion of students who enter with Latin but no Greek, tends to increase.

(2.) They seldom obtain "high honors," and have sometimes fallen behind the B.S. men in honors, but not in elections to Phi Beta Kappa.

(3.) In capturing prizes they distinctly surpass the science men, particularly in the language group.

III. Of the students of Greek we see:

(1.) Their number, proportionately to the size of the class, is steadily decreasing.

(2.) The proportion of the "Greeks" who graduate is considerably greater than that of either of the other two classes of students.

TABLE OF PERCENTAGES.

Managers of above teams and of track, 1904-1911	G	50	50	50	50	50	50	75	25
	L	25	50	50	50	25	25	25	75
	S	25	—	—	—	25	25	—	—

Note.—In the records the number of men reckoned as composing the football team varies from eleven to nineteen. The team of 1906 contained one "Special."

I. Concerning the science students the table reveals the following facts:

(1.) Some years ago they were winning their share of honors in general scholarship and of elections to Phi Beta Kappa.

(2.) Their numbers even then showed a greater tendency to shrink in the four years of the course, than did those of the classical men.

(3.) They have never won a "high honor."

(4.) They have frequently, particularly in recent years, won only a small fraction of "honors" and of elections to Phi Beta Kappa.

(5.) They have won no prizes in group II, which consists of history, economics, and philosophy; never their whole share, and frequently much less than their share, in group I (the languages, omitting the classics), and in group III (the sciences).

(6.) They never represent the university on the debating teams.

(7.) They tend increasingly to form the backbone of the baseball, football, and basketball teams.

(8.) They seldom attain the responsibility of a managership.

(3.) They take virtually all the "high honors," and nearly double their share of "honors" and of elections to Phi Beta Kappa.

(4.) In the capture of prizes their superiority is greatest in group II, but in the language group (not reckoning the ancient languages) they take more than their share, and usually, though not always, outdo the science men in their own field.

(5.) They form the backbone of the debating teams.

(6.) They hold about half the important managerships.

Certain other pertinent facts not shown in the table may be added here. In the period covered by the survey, honors in special departments were awarded to the number of sixteen. Of these ten went to the Greeks, four to the Latin men, two to the science men. Preliminary honors are granted in two fields only, the classics and mathematics. Ignoring the former as not germane to this discussion, we find that (in our period) honors in mathematics have been granted to twelve men, none of whom was a candidate for the B.S., and only five of whom had not offered Greek for admission.

To draw conclusions from these data is a sore temptation for the teacher of Greek. For the present I forbear, leaving my readers to interpret as they will. This much, however, no one can dispute. For some reason or other the students of Greek, numerically fewer than those of either of the other classes, are more than holding their own in all the distinctly academic activities. The Latin students are inferior to them, but superior to the students of the science and of modern languages, who, though usually outnumbering either of the other two classes at entrance, are holding their own in one field only—that of athletics, and have very little share in the management even of that! A better title for this article would perhaps have been "The Inefficiency of the Non-Classical Student."

J. W. HEWITT.

Wesleyan University, August 24.

THE INVERTED PEDANTRY OF INCORRECT ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: Several laments have recently been made over the bad English of which teachers, especially teachers of English, are sometimes guilty. Is not this bad English, in part at least, a by-product of modern scholarship? Along with the profound and relentless study of origins in language, along with the consequent exalting of the spoken over the written word, there has come a contempt for book grammar, for any authority or conservative force which may tend to restrict individuality of expression. The English professor need not worry about the distinction between *shall* and *will*, for that is merely a matter of "book grammar"; but not to know Grimm's law argues himself unknown. If he betrays ignorance of the difference between *Umlaut* and *Ablaut* in Old English, he is eternally damned; but it is scarcely worth his while to distinguish *lie* and *lay* or *like* and *as*. In fact, the attitude of a good many scholars toward correct English is almost exactly that of Fred Vincy in Middlemarch (I quote from memory): "Correct English is only the slang of the prigs who write essays and history."

These reflections are suggested by a recently published book which is being advertised and no doubt used as a text for college English classes. Its author, a university professor and a doctor of philosophy, is a scholar of the distinctly modern type. Let me say that the book is interesting, consistent in theory, and, in the main, well written. I wish merely to make a few quotations illustrating the author's attitude toward "book grammar," and to raise a question as to the probable influence of his doctrine on the average college student.

As to *lie* and *lay*, the author writes, p. 292:

> The past tense of the verb *lie* is conventionally *lay;* but the form *laid* is also in very general use, especially among persons not held in restraint by academic traditions. An illustration may be cited: "Apparently the bear laid in wait beside the game trails, along which the deer wandered." (Roosevelt, "Hunting the Grizzly," p. 69.)

At first I thought this a gentle criticism

Digitized by Google

of the distinguished author quoted; but consider the following as to *shall* and *will:*

If grammar is, as we assume it to be, the usage of the people who employ the language in the practical and effective communication of thought, any theoretical dogmatizings as to the way in which *shall* and *will* or any others ought to be used, will be worse than useless. . . . With the great majority of speakers, . . . with those who must be counted as the average intelligent population of the country, the greatest freedom prevails. Indeed, one may say that where a strong academic standardizing influence has not been brought to bear, *I will* is as generally used for the future as *I shall*. In the face of these facts, it will obviously not do simply to dismiss *I will* as "vulgar" and "incorrect." It is incorrect only according to the system of theoretical, not of practical, grammar, and the notion of its incorrectness is the comparatively recent outgrowth of the modern grammarian's striving after a rigid regulation of the forms of speech. . . . The observation of the widespread popular usage . . . should encourage one to a disagreement with the strict law of the formal or literary usage.

As to *who* and *whom:*

Since this latter construction ("who did you call?") follows the logical tendency of modern grammar, by that test it is correct; and since, moreover, it is in wide colloquial use, it can be condemned in practice only by the believer in the rigid theoretical system of grammar.

As to *like* and *as:*

A colloquialism *like* as a conjunction may be, but indefensible it certainly is not. It is, first of all, a widespread custom of the speech, it has arisen naturally and in the same way that *as* has, and unless one starts from the *a priori* position that there is only one legitimate form of expression for every idea in speech, it makes as strong a bid for favor as the conjunction *as*.

I might quote other passages, but these are perhaps sufficient to indicate the nature of what may be called an inverted pedantry. What is likely to be the influence of such a textbook on the speech and writing of the average college student? Will it not encourage him to persist in every slovenly colloquialism which he has acquired? Will it not strengthen him in the conviction that "correct English is only the slang of the prigs"? And if the next generation of English teachers are brought up on such doctrine as this, what will their speech be?

HOMER E. WOODBRIDGE.

Colorado Springs, August 22.

A LIE THAT POPE DID NOT TELL.

TO THE EDITOR OF THE NATION:

SIR: So much has it become the habit of critics of the last two generations to accuse Pope of lying upon all occasions that every admirer of the poet must be pleased to learn that even a single one of his "lies" was really not a lie after all. One of the more recent accusers is Prof. T. R. Lounsbury, who, in an elaborate study of the "Dunciad" in "The Text of Shakespeare" (1906), concludes his thirteenth chapter thus:

. . . It is a striking illustration of the carelessness which Pope had more than once manifested in his edition of Shakespeare that his own numbering of the lines of "The Dunciad," which were to be regarded as authentic, was not true of any edition of it ever published. He gave it as ten hundred and twelve. The editions of 1728 consisted of nine hundred and twenty lines, the three earlier editions of 1729 of ten hundred and fourteen, and the so-called second edition of the same year, followed by the later ones, of ten hundred and eighteen.

"His own numbering" is given by Pope in "A Declaration" affixed to the text of editions of the "Dunciad" after 1730. It is commonly reproduced in modern reprints with the alterations made in 1743, and so I quote here a sentence from an earlier edition: "*Now We*, having carefully revised this our *Dunciad*, beginning with the word *Books*, and ending with the word *flies*, containing the entire Sum of *one thousand and twelve Lines*, do declare every Word, Figure, Point, and Comma of this Impression to be authentic:" etc.

And the edition in which this Declaration probably made its initial appearance does contain just one thousand and twelve lines. I say "probably," because in the uncertainty that still envelops the bibliography of the "Dunciad" it is advisable to speak circumspectly. This particular edition is a rare one; it is the folio mentioned by Col. Grant as K2 in the list given in Volume IV (p. 311) of the Elwin-Courthope edition of Pope's "Works." It is slightly unlike the folio listed as 12 in the Lefferts collection of early editions now in the Harvard Library, but I believe the two folios are variants of the same edition. There is no title-page (the Lefferts folio has one), and consequently the year of publication is uncertain. The date usually assigned to it has been 1732 or 1733, but either of these is too early; internal evidence makes it clear that it appeared either in the latter part of 1734 or, more likely, in 1735. The text is very nearly the same as that of the last of its predecessors, the Second Edition (so called on the title-page), published by Lawton Gilliver in 1729. But two lines of the Second Edition (book iii, lines 209-210) are omitted from the folio. Hence the total number of lines in the folio is 1,012.

Professor Lounsbury states that the Second Edition contains "ten hundred and eighteen lines." This assertion I believe to be an error founded upon a printer's blunder (and again I speak circumspectly and under correction). The number is really 1,014, just as in the preceding editions of the year 1729. The blunder not only misled Professor Lounsbury, but was also a source of puzzlement to Mr. Lefferts, as appears in the following quotations from Mr. Lefferts's manuscript notes now at Harvard:

Some issues of the book [Gilliver's 1729 Second Edition] have the leaf "P3" (pp. 109-110) also cancelled and a new leaf substituted, why it is difficult to determine as there is no change in the verses, and the substituted leaf is very incorrectly printed; having four lines beginning "a second effort brought but new disgrace" (lines 167-170 inc.) printed on and properly belonging to p. 111 reprinted on p. 110 and also leaving out twelve lines of the notes to "Remarks v. 149," necessitating a rearrangement of the type-form. This note in its entirety was given in the previous editions and was repeated in subsequent editions.

It might be presumed that the incorrectly printed leaf appeared in the earlier issues of the book and that this was the one cancelled, while the correctly printed leaf was the substituted one, but the stubs left in the book and a careful separation of the "signatures" show that this was not the case; the correctly printed leaf was originally printed as part of the complete signature and afterwards cancelled and the incorrectly printed leaf was substituted for it.

That is to say, two varieties of this Second Edition are known (the existence of a third variety may be inferred, but I do not know of a copy of it), the difference between them occurring in pp. 109-110. The explanation of how this difference came into being is, I think, not difficult to surmise. It presumes a considerable degree of dumbness of head on the part of the printer; but any man of the many who have corrected one error in galley proof only to find several in its place in the page proof will think the explanation entirely plausible. A volume of Gilliver's first octavo of 1729 was corrected and annotated and sent to the printer to serve as "copy" (as is demonstrable, I think). In setting up page 109 of "copy"—it was to be approximately page 110 of the new book, the Second Edition—a line in a note, the third line from the bottom of the page, was omitted. The new book was printed, the type distributed, and then the omission of the line was discovered, perhaps by Pope himself. "Copy" was given a printer, and he was told to correct the error. Two pages of copy, 108-109, were reset, "copy" being followed closely, the leaf was printed, and without sufficient inspection was pasted on the stub of the old leaf in so many copies of the book as remained unsold. But the old paging and the new did not fit; and, as a consequence, instead of a passage correct except for the omission of one line in a note, we have one in which the notes are badly tangled and four lines of the poem already given on one page are reprinted on the page that faces it.

In counting out the lines—they have to be counted in every edition, for the printer's numbering is not to be depended on—Professor Lounsbury used a copy of the Second Edition that contained the substituted leaf, and so was misled into asserting the presence of 1018 lines, instead of the correct 1014.

And Professor Lounsbury is still further wrong. So far is the Second Edition of 1729 from being "followed by the later ones," that it is followed by none of the editions that I know. The folio has 1012 lines, and so has the quarto ("Works," II) of 1735, issued at the same time as the folio. And we might reasonably expect to find that the number had remained at 1012 in later editions, for Pope had continued his Declaration: "And do, therefore, enjoin and forbid any Person or Persons whatsoever, to erase, reverse, put between Hooks, or by any other means directly or indirectly change or mangle any of them" [his lines]. Yet within a few months, he was disregarding his own injunction. The folio was succeeded by the small octavo published by Gilliver without date, yet almost certainly in 1735, though the bibliographers who have suggested a date have hitherto given 1733; the number of lines in it is 1016, the four additional lines arising through a revision of book i, 250-256 of the folio. The number of lines remained at 1016 through the four succeeding editions that I have and presumably through all the editions to 1742, though curiously enough the Declaration was not altered from its first form to suit new conditions. In the recasting of the poem to make Cibber the hero, instead of Theobald, the number of lines was considerably enlarged, and the Declaration was revised.

THE REAL AMERICAN SPIRIT.

To the Editor of The Nation:

Sir: I have been reading an essay, dealing with the relative merits and positions of American men of letters, in which Lowell is regarded as having adhered too closely to European literary convention to be called wholly American. But if Lowell is not American, who is? What is the type American, and what is the American literary character? Must the frontiersman or the out-and-out business man represent the real American spirit? I do not agree that a literary effort must be uncouth, aggressive, and commercial to take its place as a true part of our letters. The literature of a people rises from its culture more readily than from its barbarians. Lowell was an American to his finger-ends—and what an incrimination of this country to suppose that his cultivation made him less so! That active wit, that quick, sane perception and ardent loyalty to ideals, and that brilliant intelligence are the characters extraordinary of the veritable American.

Many feel that a man who does not lend himself willingly to a slap-on-the-back and a jolly tale is a tacit criticism of themselves, and is hence no true American. Are indiscriminate familiarity and the nonchalant impertinence of public officials who feel that to be gracious is to compromise their independence representative marks of American democracy? This is the spirit that has complained of Lowell. Yet his incorruptibility in sentiment and in action, his sincere and ready sympathy, make us wish that such Americans (they exist in all parts of our country) could represent us at all times. Those who knew him know that he brought the traits of his mind and personality to championing his country in a way that the shouting patriots who resent him have helped to defeat.

E. F. Stafford.

THE REFERENDUM IN SWITZERLAND.

To the Editor of The Nation:

Sir: In your issue of August 24 the reviewer hazards the suggestion "that there is, here and there, something of interest and value in 'Switzerland of the Swiss,' by Frank Webb." Permit me to supply some quotations from the work in question which make timely reading in view of a discussion now current in our country. The initial chapter, entitled A General Survey, has a section on the referendum, from which the following extracts are taken:

> The independent character of each canton allows full scope for political squabbles, which, unfortunately, take up too much of the time of the men. The referendum is a democratic measure that cuts two ways. One can have too much of it. The people are always up in arms and in a constant state of ferment over some trivial question. Legislation is sometimes impossible.
>
> Provided the necessary number of votes demanding the referendum be obtained, the electorate go to the poll. Thus, the cantons are in a constant state of effervescence. In a general way, when the vote is taken the attendance at the poll does not represent 25 per cent. of the electorate.

Advocates of the initiative and referendum have pointed to Switzerland as proving the excellencies of the system, but the testimony of this writer, who has had thirty years' contact with the Switzers, does not justify holding up their example as one to follow.

Max Lowenthal.

Rochester, N. Y., August 29.

RAILWAY ACCIDENTS AND RATE REGULATION.

To the Editor of The Nation:

Sir: We are told that no one was responsible for the horror on the Lehigh Valley Railroad, which resulted from the breaking of a rail. The rail that gave way had been examined repeatedly, and there was nothing to reveal its rottenness. No one seems to have considered whether it is possible to construct a railway in such a manner that a derailment on a viaduct, bridge, or embankment shall not involve plunging down into an abyss. Nor was the question raised on the occasion of the recent disaster on the New Haven road at Bridgeport. When the spreading of the rails on an embankment wrecked a train laden with school teachers on one of the Pennsylvania lines a few months ago, no one was heard to suggest that embankments, especially curving embankments, which are the scenes of a large proportion of the worst railway disasters, might, perhaps, be constructed so that not merely a few inches of earth shall intervene in case of derailment between the ends of the ties and eternity.

Of course, the safety viaducts and safety embankments that I have in mind are very expensive things, and perhaps their cost would in most cases be at present well-nigh prohibitive. Some railways, however, could afford them, just as some can afford to have a quadruple track or to do away with grade crossings. But one thing is certain, and that is that we shall not have these things under any system of rate regulation that reduces the earning capacity of our roads to a level at which they are obliged to confine their reconstruction work within narrow bounds. We may regulate the rates of transportation, but we have no machinery for preventing railways from curtailing their outlay for improvements when their finances are inadequate. We hear sufficient talk already of the decision of railway managers to abstain from undertaking certain badly needed constructive work on the score of a lack of funds. The fact that so many of our great railway lines are still single-track is a crying evil. The innumerable grade crossings produce a slaughter at which we are beginning to stand aghast. Yet we shall continue to put up with such things so long as we persist in compelling railway companies to operate at rates too low to yield a surplus adequate to the imperative needs of repair.

Our legislators have chosen to put cheapness of transport above the assurance of safety to the travelling public, and to our army of railway employees. Are we sure that in the present policy of clipping the wings of the railway companies we are not simply running off the track? We ought to be going straight ahead to bring our railway system up to the needs of traffic and the requirements of safety, and instead we are doing our best to defeat this object.

What has happened to make ocean transportation so safe? Suppose that through some kind of international agreement fares and freight charges had been kept down at a minimum, should we now behold the progress in transportation that has taken place within the last quarter of a century?

Textbooks

PEDAGOGICS AND ENGLISH.

If we are to enter the educational New Jerusalem, as prophets foretell us, through the portals of the psychological laboratory, the future of experimental psychology is immense. At present, however, the pedagogical-psychological alliance is to be justified rather by its faith than its works. Pending the development of the "science of education," the immediate value of textbooks on that subject is likely to be in inverse ratio to their scientific pretensions. For the publishing educator, eager for results, drives hard at practice; and it is not the experimenter's handful of indigested conclusions that the young teacher should carry into the classroom, but the old teacher's handful of tested and animated platitudes. To preserve, refine, and vivify our inherited wisdom—that is the problem; nor is there any virtue in translating the precious commonplaces of experience into a pseudo-scientific jargon. L. H. Jones, in "Education as Growth" (Ginn), aims at pupils in normal schools and teachers in reading circles. His book, in spite of its "efferent" and "afferent" nerves and "molecular impulses," is as free as could be desired from scientific pretensions. It represents, indeed, a reaction against the vigorous and rigorous materialistic interpretation of the world, positing as the educational object "a spiritual entity whose essence is self-activity." Its hopeless dreariness is due mainly to the solemn and abstract delivery of the truisms of which it is composed. Thus when a man of this world would say, "If you study a thing hard, you may master it," our author, catering for the sophisticated palate of the normal school, decorates as follows: "A definitely guided process of self-activity in thinking upon a definitely selected object of thought or theme may lead the self-activity from a state of ignorance in reference to such object into a state of intelligence in regard to the same."

The first merit of W. C. Bagley's "Craftsmanship in Teaching" (Macmillan) is that it avoids this phraseological inanity. Constituted of a dozen essays and addresses on specific and timely topics, it is written simply and vigorously, and is informed with common sense and enthusiasm. Its most stimulating chapter—which gives the title to the book—is a thoroughly admirable plea for the development in teachers of the "artistic conscience" and pride in the technique of their profession. Professor Bagley feels an orthodox faith in the possibilities of psychological investigation, leading to scientific method and organization, but he constantly recognizes and seeks to quicken the rather incalculable elements of moral responsibility and personal inspiration in the methodizers and organizers. In a second work, on "Educational Values" (Macmillan), he undertakes the more ambitious task of classifying educative forces ("conduct-controls"), in psychological terms, evaluating these forces, and outlining the methods for the

Digitized by Google

efficient use of educative materials. His categories ("rubrics") are from the nature of things arbitrary, his values infinitely disputable, his methods, as he informs us, are to be expanded in a subsequent volume. When he assures us that the relative worth of translations and originals of the classics is a problem "far from insoluble by the methods that experimental education even now possesses," he provokes a wide elevation of eyebrows; we are incredulous, but open to conviction. It is the saving grace of Professor Bagley that, though he is credulous, he too is open to conviction. If his book is not rich in conclusions, it at least organizes questions with a somewhat unusual definiteness and a sense for the pressing concrete problem, utilizing the light available from recent experimentation.

All who know the excellence of Prof. George R. Noyes's edition of Dryden's poetical works have looked forward with confidence to his "Selected Dramas of John Dryden" (Scott, Foresman & Co.), which proves indeed clearly superior to any other selection of Dryden's plays. Though it contains but four of them—"The Conquest of Granada" (both parts), "Marriage à la Mode," "All For Love," and "The Spanish Friar"—these adequately represent their author's varied achievement in heroic drama, comedy of manners, tragedy, and tragi-comedy. The accompanying essays, "Of Heroic Plays," "Defense of the Epilogue," and the preface to "All For Love," are among the most important of his critical utterances. Of the notes, which are scholarly, pertinent, and succinct, many are judiciously chosen from little-known Restoration writers and from the best critics of later times. The entire text has been more carefully collated than by any previous editor; in fact, in only one trivial case (in the notes, p. 455, "Barroy" for "Chedreux") has a trial of the work revealed the slightest inaccuracy. As the best contemporaneous criticism of the heroic play, "The Rehearsal" has been included in the volume. Since this is obtainable in two good inexpensive editions, by Arber and by Lindher, one may judge it here unnecessary; but largely because its exclusion might have given us another play of Dryden so competently edited by Professor Noyes. The introduction is so modest in tone that its worth is apt to pass unrecognized. Heretofore the readily accessible criticism of Dryden's plays has been rather untrustworthy, and the reliable has been buried, amid much error, in philological publications. Professor Noyes has painstakingly studied these modern discussions about Dryden, has pruned away what was false or futile, and has so well pondered the rest as to create an essay of true value.

Not only is the making of textbooks one of the recognized industries of the time, but so far has the differentiation of labor gone already—when it is no uncommon sight to see anywhere from two to five writers collaborating in the production of an English composition—that the business bids fair to become in a little while a matter of guilds and corporations exclusively. Perhaps one of the best texts of the season on the popular subject of public speaking is a work of this kind, "Argumentation and Debate" (American Book Company), the joint product of J. V. Denney, C. S. Duncan, and F. C. McKinney. The volume makes something of a departure from the usual routine by its reliance on the principles of legal evidence as a source of illustration and by the amount of space, nearly one-half of the book, which it devotes to material for the practical exercises of analysis and briefing. In this way the statement of theory becomes uncommonly concise—not altogether a disadvantage in comparison with the discursiveness of the general run of textbooks; though in one or two cases, as the introduction to argument, it seems to have led the authors to scamp matters which have difficulty for the student.

An excellent little anthology for use in school or elsewhere is supplied by "Characteristic Passages from the Hundred Best English Prose Writers" (Crowell), by A. L. Gowans. The book is a small one and the "passages" are, if anything, rather curt; but the range of selection is wide—from Malory to Stevenson—and the choice is admirable. Indeed, it would be hard to imagine a more representative exhibition in anything like the space.

According to his introduction, Professor Halleck has spent seven years in preparing his "History of American Literature" (American Book Co.). The result is a volume which seems to possess all the features which have made its author's "History of English Literature," such a popular and successful textbook. Its estimates and criticisms show the same immediate contact with the subject and the same knack of treatment and presentation. There are general reviews and parallel surveys of English literature for each period; and there are references for literary and historical study. At the close there is also an appreciation of the significance of American letters, together with a supplementary reading list.

LATIN AND GREEK.

Those who believe in the value of Greek and Latin in education will gain much comfort from a series of essays entitled "Latin and Greek in American Education" (Macmillan), edited by F. W. Kelsey. These papers were presented at the Michigan classical conferences held during the past five years, and have already appeared in the *School Review* and the *Educational Review*. The first three chapters on the Present Position of Latin and Greek, their Value as Educational Instruments, and their Place in the Course of Study, are by Professor Kelsey. Chapter iv, on the Nature of Cultural Studies, is by Professor Wenley. Then follow symposia on the value of the classics in the study of medicine, engineering, law, theology, in practical affairs, in the new education, and from the point of view of formal discipline. Distinguished men from the learned professions, business pursuits, and cultivated circles in general come forward with virtually no dissenting voice to maintain that without the classical training a man is at a disadvantage in all walks of life. In these discussions emphasis is laid first upon the exceptional value of the study of Latin and Greek for training the mind. Formal discipline is somewhat in disesteem at present, and many psychologists look askance at it (wrongly as appears from the last symposium in the book), but it is refreshing to find these men insisting upon this side of training as of prime importance. A few scientists, mainly chemists, demur, but their voice is lost in the larger chorus.

The progress of the new method of teaching Latin in secondary schools is evident in the two most recent elementary textbooks, "Latin for Beginners" (Ginn), by B L. D'Ooge, and "A Latin Primer" (American Book Co.), by H. C. Nutting. These books are wholly unlike, but they are also unlike any that have preceded them. Mr. D'Ooge is much more conservative than Mr. Nutting; his book is intended to prepare for Cæsar in one year. Accordingly he has limited his vocabulary to six hundred words, mainly Cæsarian, selected on the basis of the word-lists of Lodge and Browne. The syntax too has been limited to the essentials indicated in Byrne's summary of secondary Latin syntax. Latin grammar is treated largely from the English point of view. Connected reading is introduced early, and various devices are employed to keep up the interest. A few exercises in conversation at the outset show how the material of the lessons can be handled in the oral fashion. The general style is clear and simple. There is a slight tendency to talk down to the pupil, but it is not offensive. While superfluous things are excluded, there is no inclination to give an appearance of ease by omitting essentials. The reading matter is unusually full. The illustrations are well chosen. Four plates in color, though somewhat crude, add life to the stories. The printing is excellent, and mistakes are surprisingly few. Mr. Nutting's book is not so large, as it is intended to provide material only for the first year in a five-year curriculum, and does not prepare for Cæsar. Hence the vocabulary contains a large number of words that are rare in the usual secondary Latin curriculum. Oral work is insisted upon from the beginning, and the ordinary life of man is made the basis of the reading lessons. There is evident an intention to show the pupils that Latin is a practical language, and that the Roman children were very like those of to-day. Balls, dolls, baskets, roses, monkeys, dogs, chairs, shoes, are the material of the first lessons. As the period covered is briefer, some things are deferred to a later study. Thus, the syntax of the verb is confined to constructions with *ut* and *cum*, the accusative with the infinitive, and simple indirect discourse. In the latter part of the book the reading matter consists largely of stories connected with early American life, particularly the period of the Indian wars. The impression produced by the book is very pleasing, and it should be popular with those who are not afraid of the novel, if it is good.

Dr. Walter Headlam, at his death in 1908, left unfinished an edition of the "Agamemnon" of Æschylus, on which he had been at work for some years. The introduction and verse translation were nearly complete, but the text had not been thoroughly revised, and the commentary was fragmentary. A. C. Pearson has now supplied these gaps, so far as he could, from various publications of Dr. Headlam in philosophical periodicals, and from such manuscript notes and marginalia as were available, and the result is a valuable edition (Cambridge University Press; Putnam). The introduction gives an account of the adaptation of the old epic story to the dramatic needs of his own day by Æschy-

Digitized by Google

lus, and his interpretation of it as a political upheaval due to party faction. While in this interpretation he agrees with Dr. Verrall, he does not accept Dr. Verrall's interpretation of the course of events in the early part of the play, but assumes that an interval of time is supposed to elapse after verse 493 for the return of the Greeks from Troy. There is also an interesting discussion of the moral and religious ideas in the play, in which the editor tries to show that Æschylus's political and social sentiments were those of his own period. The commentary, inadequate and fragmentary though it is, shows how much we have lost in the death of this distinguished scholar. The verse translation is characterized by great dignity and beauty, and will take rank alongside of Dr. Murray's translations from Euripides.

MODERN LANGUAGES.

Laurie's "Mémoires d'un collégien" is to the school life of France what "Cuore" is to that of Italy. If De Amicis's book is the more effective in its lessons of idealism and the more varied in character and incident, Laurie's is the better piece of narrative, and is more complete and coherent in its record of school experiences. The story has been well edited, with notes and vocabulary, by Prof. O. B. Super (Heath), and should prove interesting, in this form, to young American readers.

Prof. C. A. Eggert has edited "les Femmes savantes" for early reading (American Book Co.). The notes are well adapted to initiate the student into the peculiarities of Molière's language and of French verse order, and the vocabulary is unusually rich in its treatment of idiomatic phrases and in its distinctions of meaning. In his introduction, and now and again in the notes, Professor Eggert is at considerable pains to assure us that Molière did not really intend "to throw ridicule on the pursuit of higher studies by ladies"—a contention decidedly less sound than gallant.

"The Poetry of Victor Hugo" (Ginn), a selection of above a hundred poems, edited by Professors Edgar and Squair, is an excellent book. The poems chosen are divided into twelve groups, according to the general character of their content. Nature Poems, for instance, form one group, Napoleon Poems another, and Humanitarian Poems another. Within each group the order is chronological. A few brief notes are given, and at the end of the book appears a long and very necessary glossary of proper names. The introduction contains an analysis of the stylistic development in Hugo's poetry, and a list of his many volumes of published verse. To each of the several groups is prefixed a brief special introduction. The criticism thus presented, if not inspiring, is thoroughly respectable, and affords a good starting point for classroom discussion or independent thought.

Another book which well deserves a place in courses on French literature in the nineteenth century is a collection of eight essays by Edmond Scherer, edited, under the title "Études françaises et anglaises" (Frowde), by Francis Storr. With the passing years Scherer's work is coming to be valued more and more highly. He is admirably qualified to mediate between French literature and the English mind, for he is English in that he is most of all concerned for moral worth, and he is French in the alertness of his understanding and the keenness of his judgments. Mr. Storr's selection of essays is good. Those dealing with George Eliot, Chateaubriand, Thiers, and Sainte-Beuve are particularly notable, both for the criticism of the writers treated and for their expression of Scherer's own views on certain underlying problems of literature and life.

Prof. J. D. M. Ford's "Old Spanish Readings," published some years ago as a pamphlet of selections from critically edited texts, has now appeared in its complete form, with introduction, notes, and vocabulary (Ginn). The introduction consists of a brief treatment of Spanish phonology, excellent alike in the clearness of its exposition and in its typographical arrangement. The notes contain detailed discussions of the many and varied problems connected with the linguistic material or the formation and transmission of the several documents. In the vocabulary are assembled all forms appearing in the texts, with identification or analysis, when requisite, and thorough etymological treatment.

By the omission of some whole chapters, the excision of sundry descriptive passages, and by various other abbreviations, A. Kenngott has reduced by about one-half the bulk of C. F. Meyer's "Jürg Jenatsch," and so made an admirable historical novel available for college classes (Heath). The artistic quality of Meyer's work naturally suffers in consequence of this somewhat violent treatment, and not all the threads of the complicated narrative now seem well knit together. But the student probably will not, and indeed need not, realize what has been sacrificed in order to make his task easier. The text as it stands is good German, and the story told is both interesting and instructive. Mr. Kenngott has supplied all the historical information necessary to an understanding of the text His grammatical notes seldom go to the root of the matter, and many of the translations which he suggests for difficult passages do scant justice to the elegance of Meyer's style.

American students of Germanics are not likely, when they take up the study of Old High German, to need a textbook of the subject written in English; and, as they have by that time familiarized themselves with German methods of presentation, they will probably be inclined to turn to the new edition of Braune's "Althochdeutsche Grammatik" as the most complete and authoritative work on the subject. The subject, however, is complicated, and, in spite of logical arrangement, Braune's book is often baffling to the beginner, on account of the multiplicity of details. Furthermore, Braune presupposes in his reader wide acquaintance with general Germanic philology. The purpose of Lionel Armitage in his "Introduction to the Study of Old High German" (Clarendon Press) is to build upon the foundation of a good knowledge of the ancient classics, to derive Old High German from primitive Germanic, and to link Germanic in outline to Indo-Germanic. This method partakes of the merits of Victor Henry's method, in his "Comparative Grammar"; and, like Wright's "Gothic Grammar," Armitage's book commends itself at sight, with a certain aspect of simplicity and orderliness. It has a map, a classified list of literary monuments, and many tables, as well as the usual paradigms and discussions of the development of sounds, in which abundant examples illustrate the phenomena. Intended primarily for learners, the book is also well adapted to serve the purposes of reference.

HISTORY AND ECONOMICS.

"A History of the United States for Schools" (Appleton), by Profs. A. C. McLaughlin and C. H. Van Tyne, is, in the main, a creditable performance. Its characteristics are its selection (not always very consistent, be it said) of facts which are significant, rather than merely entertaining, its emphasis upon national rather than local points of view, and its relatively full treatment of Western development. The style, while showing a good many signs of "writing down" to the assumed level of the pupil's mind, is at least clear and readable. In the case of an elementary handbook, however, where there is likely to be a good deal of virtual memorizing of the text, the question of accuracy becomes a crucial one; while the points of view, the estimates of personal character or motive, are likely to leave lasting impressions. In these respects the volume before us is not impeccable. There is the same old picture of Stuyvesant, for example, just as though Mrs. Schuyler Van Rensselaer had not recently shown its defects. The summaries of four of the five coercive acts of 1774 (p. 149, note 2) are either incorrect or misleading. In speaking of the disastrous issues of paper money during the Revolution, there is, as usual, no intimation that the States issued as much of the stuff as did Congress, or that Congress, with all its faults, performed a notable feat in the matter of the "new tenor" bills. Was Jefferson's "hesitation" about Louisiana anything more than *pro forma*, and was he "persuaded to yield" in the approval of the treaty (p. 234)? The references for further reading appended to the several chapters show a curious blend of light and heavy books, and both omissions and inclusions seem not to conform to any principle of selection.

Marion F. Lansing's "Barbarian and Noble" (Ginn) is, apparently, the first of a series of six volumes to be issued under the general title of "Mediæval Builders of the Modern World." The seventeen topics of the present volume, ranging chronologically from Drusus and Alaric to Rollo and Richard the Crusader, are treated as separate stories, and in a style which is, on the whole, successfully simple and attractive. We are not quite clear as to the grade for which the book is intended, since it is obviously too elementary for the high school, and mediæval history is not commonly taught in grammar grades.

"A Short History of Europe" (Dutton), from the fall of the Roman Empire to the fall of the Eastern Empire, by Prof. Charles S. Terry of the University of Aberdeen, presents few of the external characteristics of a school book. It has neither maps nor illustrations, no paragraph or marginal headings, and no references for supplementary reading; no "apparatus," in fact, beyond some genealogical tables. The typographical appearance, too, with its small type and closely set page, is rather forbidding. The work itself is an interesting attempt to bring the story of England into the field of early European history, from which it has often been well-nigh wholly excluded; or, as Professor Terry says, to sketch

Digitized by Google

European history in a British perspective. The book is designed for the conditions of English schools, but should not be without value for American teachers also.

Arthur D. Innes's "A General Sketch of Political History from the Earliest Times" (Macmillan) is a painstaking, well-written, and unusually correct epitome, by a practised hand. It calls for but one comment in these columns. Like almost all attempts to condense within the space of a small textbook all that passes current for the history of mankind, it fails to maintain proper proportion. For obvious reasons, the treatment of ancient history, even in standard publications of this kind, is far more satisfactory than that of more recent times. In Mr. Innes's volume the leisurely pace of the first 120 pages which carries the story down to the middle of the fifth century A. D. becomes breathless haste in the thirty pages devoted to the European Powers from 1815 to 1871; in the brief chapter (less than ten pages) given to America, Australasia, Africa, and Asia, during the century ending in 1871; and in the seven pages which suffice for the nations since 1871. Here we have no longer rapid summaries, but vague allusions. Thirteen lines are made to do duty for an account of our civil war, in which not a single battle or a single name (besides that of Lincoln) is mentioned; and twenty lines tell the story of the Russo-Japanese war, which closes the volume.

The "History of Economic Thought" (Macmillan), by Prof. Lewis H. Haney, will fill a long-felt need. There are a number of other works on the general subject, notably Cossa's and Ingram's, but for one reason or another they are not well adapted to class use. The present volume is of suitable compass, and the treatment is such as to make it satisfactory as a textbook. It includes a survey of economic thought from the time of the Greeks, Romans, and Hebrews down to the latest modern writers. In such a vast field it is evident that the author is compelled to exercise a large amount of personal judgment in selection. Since no two writers could possibly agree on the matter, criticism of this aspect of the book is both easy and useless. In the preface, the author acknowledges his large indebtedness to Prof. Richard T. Ely, whose contribution to the work was so great as almost to justify the inclusion of his name as a joint author of the book. The influence of that broad-minded thinker must have had much to do with giving the work its common-sense, teachable character. On the whole, the subject matter seems to be well chosen and well arranged, though the English in which it is expressed is frequently rough and at times obscure. There is little attempt to correlate the development of economic thought with the economic conditions of different periods, though the determining influence of these conditions is not forgotten.

In their "Outlines of Economics, Developed in a Series of Problems" (University of Chicago Press), three members of the department of political economy in the University of Chicago have performed with remarkable thoroughness and grasp a task of great difficulty. The book consists in the main of sets of searching questions, dealing successively with every phase of the great subject, the order being determined by the attempt of the authors "not only to link economic theory with descriptive material, but in a measure to build the theory up out of the familiar events of economic life"; an attempt in which, we believe, they have succeeded as completely as the case admits. But the questions do not stand alone; as a rule, each set is introduced by a concise indication of the central ideas or doctrines involved, the statement in every instance being marked by exemplary clearness and vigor. The authors are careful to state, however, in a prefatory note, that their work is not intended to take the place of a textbook, but rather to parallel some book embodying a systematic presentation of economic theory. Still less, of course, can it enable the instructor to dispense with the furnishing of guidance of the most essential kind; on the contrary, it may be said with emphasis that the use of these questions must subject the teacher to a test far more severe than any it imposes on the student. In the hands of any instructor lacking either in individual force or in mastery of the subject, the experiment would be sure to prove a failure. Indeed, the one doubt that suggests itself concerning the book is as to the possibility of a teacher, however strong, being able to consider with his class these hundreds of questions, when there is often material in a single one of them for many days of difficult and perplexing discussion. But as the book is "the outgrowth of a three years' experiment in elementary economic instruction," we are bound to assume that, with the right teachers, the difficulty is not insuperable; and in any case Professors Marshall, Wright, and Field are to be congratulated on having produced a book that is sure to be stimulating and instructive to teachers of economics, whether they use it directly in their classes or not.

SCIENCE.

Three textbooks of general physics have been received. The "Principles of Physics" (Century), by Professor Magie of Princeton University, is a thoroughly commendable and reliable book. The author has a well-defined purpose, which is to teach physics not only because of its intrinsic interest, but also because it is the best means of presenting to all students the scientific method of thinking. Very rightly, he bases his presentation on the historical development of the subject, as the one likely to proceed from the simple to the difficult. The book, as a result, shows a logical treatment and bears evidence of a most careful verification of material. The style is excellent. The only adverse criticism to be made is that, in basing mechanics on the laws of statics, the writer has overexpanded this subject so that the remainder of the book seems rather compressed. Prof. A. L. Kimball, who has published his "College Physics" (Holt) after considerable delay, presents the science rather from the experimental side and simplifies the mathematical treatment much more than Professor Magie. His text is accurate, and will prove to be a good manual. The discussion is not very different from that of other standard texts. The third one of these books is the "College Physics" (Macmillan), written by Professors Reed and Guthe of the University of Michigan. A sufficient reason for the book is difficult to find, as it is certainly not so good as a number of others now available. There is no evidence of any work in its composition other than a rather hasty expansion of lecture notes, and the style, while it is possibly not bad, is certainly not good. The text is best when phenomena and experiments are described, although the frequent references given to technical articles are useless and pedantic. The mathematical analysis is adequate, but the use of calculus even in a concealed and apologetic form is here quite out of place. It is when the authors give definitions and outlines of physical theories that they show a lamentable weakness. To mention a few examples: "Matter may be defined as that which we can perceive by our sense of touch"; on page 18 the motion of a particle is discussed as if it could have a motion other than linear; in the subject of heat, it is stated that "heat and temperature are two entirely different physical quantities." There is no need of multiplying such illustrations; the book does not attain in any way to the level of the other two. In make-up and in freedom from typographical errors all three are excellent.

The need which has been felt of a good textbook on the development of the applications of electricity in chemical processes is supplied in a most satisfactory way by Prof. M. de Kay Thompson. He has collected "in a single volume the material that would be comprised in a course aiming to give an account of the most important electro-chemical industries, as well as the principal applications of electro-chemistry in the laboratory"—"Applied Electro-Chemistry" (Macmillan).

"A Concise History of Chemistry" (Van Nostrand), by T. P. Hilditch, is an attempt to outline briefly the historical development of chemistry, and assumes that the reader has a fair knowledge of present-day chemical theory and practice. Two features are to be noted in this really worthy effort, namely, the biographical index of chemists with a chronological summary of chemical events of outstanding interest, and the almost complete failure of the author to include American contributions. Willard Gibbs, who originated perhaps the greatest generalization in modern chemistry, the "phase rule," is barely mentioned, and even then is confused with Wolcott Gibbs, who is not credited with the founding of electro-analysis. Acheson's name is lacking in the enumeration of accomplishments in industrial chemistry; yet his artificial graphite has made possible the remarkable development in technological electro-chemistry. Nor do we find Hall's name, although cheap aluminum came about through his absolutely novel process, which is used to produce many million pounds of that metal a year in this country alone. Every recipient of the Faraday medal is enrolled except Richards, one of the world's authorities on the determination of atomic weights. Guthrie is not down as an independent discoverer of chloroform, though he was the real discoverer. The makeup of the book is satisfactory, and some of the tables might be included in a "Universal Almanac."

Prof. Irving W. Fay, the author of "The Chemistry of Coal-Tar Dyes" (Van Nostrand), would have our students and dyers know something of the history, methods of making, chemical constitution, and proper means of applying and detecting the coloring matters of coal tar. Some of the colors simulate, while others are superior to, natural dyes, and still others find no counter-

Digitized by Google

part in nature at all. The book "is intended for those students and dyers who have a good knowledge of general chemistry, and some knowledge of organic chemistry." In general it is well done, though proper proportion is not always kept, and the English is frequently involved. Phenolphthalein is not used chiefly as an indicator in quantitative analysis, as stated on page 253; its medicinal value has become well recognized. Chapter xix, dealing with experimental work, is excellent, and so is the index.

Students of human physiology who keep in touch with the European literature of their subject have long and favorably known the textbook, by Luigi Luciani of Rome, in the German or French versions, if not in the original Italian, of which the third edition has recently appeared. For the English reader Frances A. Welby has prepared a smooth translation under the editorial supervision of Dr. M. Camis of Pisa. The first volume with the title "Luciani's Human Physiology" has now been published by Macmillan in the excellent form familiar to readers of their books of this class. The work is to be completed in four volumes, making a rather large and somewhat expensive treatise. This first part contains nearly six hundred pages, and deals with the circulation and respiration. and includes three interesting introductory chapters, and also a considerable chapter on the Lymph. Judged by this volume the work will appeal to the better sort of student, not merely because it presents the conclusions of a skilled investigator and experienced teacher, but also by the fact that the historical development of the various topics is given in considerable detail. The more important authorities are noted at the end of each chapter, and Dr. Camis has added valuable, but by no means complete, lists of reference to the physiological literature in English. Without undertaking an extended review at this time, we note that the text contains no account of the electrical phenomena of the beating heart, which have been studied assiduously for some time, and in the past few years have come to be regarded as probably of great significance, not merely for physiologists, but for the practitioner. In the matter relating to the study of the isolated mammalian heart too little credit is given to Martin (disguised in the text, but not in the index, as both Newell and Martin) for his discovery of the possibility of keeping up a vivifying circulation through the coronary arteries—a discovery which was somewhat obscurely published, and which has been overshadowed by the successful and more extended work of Langendorff. These and some other deficiences are not serious blemishes in a book which well deserves to be read. In a brief introduction Langley commends the treatise, but takes occasion to enter a hearty protest against Luciani's conclusion that the credit of discovering the circulation of the blood belongs to Cesalpinus, rather than to Harvey. This bids fair to reopen the floodgates of controversy.

"The Animals and Man" (Holt), by Dr Vernon L. Kellogg, ambitiously attempts to cover an enormous field—the structure, physiology, behavior, and classification of animals, together with the makeup and physiology of the human body. The author succeeds as well as could be expected, although it is rather bewildering to leap by the turn of a page from public hygiene to ancient man. The text is well divided between statements of fact and questions which tend to develop originality in the pupil. The chapter on Animal Physiology is especially excellent, both in text and illustrations. Unimportant errors are unfortunately frequent, such as giving ten thousand as the total number of species of birds, whereas, twenty thousand would be far nearer the mark; *gallus* is written both as *bankiva* and *bankivus*, etc. But the volume as a whole is a well-balanced textbook, worthy of a place in school courses of a year's length.

Literature

THE YOUNGER PITT.

William Pitt and National Revival. By J. Holland Rose, Litt.D. New York: The Macmillan Co. $6 net.

It is nearly half a century since Stanhope published his monumental life of Pitt. Since then the archives of the Foreign Office, the War Office, the Admiralty, and the Home Office for the period of the Younger Pitt's career have been opened to investigators. Rich bundles of letters to and from Pitt and his friends, especially the Fortescue Papers of the Grenville family, have had a century's dust knocked off and have been published in part by the Historical Manuscripts Commission. Worthy German monographs in microscopic detail have penetrated the mysteries of cabinets and laid bare many of the hitherto unknown secrets of European diplomacy in the decade which saw the end of the American Revolution, the beginning of the French Revolution, and the attempted partition of Turkey. No English writer, perhaps, is better fitted to weld this mass of new material into a readable and scholarly biography of Pitt than the able biographer of Pitt's greatest world rival. Mr. Rose's "Life of Napoleon I" we have always regarded as the best considerable life of the Corsican, and that in spite of the fact that it is coldly critical and at times icily insular. This criticism cannot lie against his life of Pitt, which is written with an admiration and warmth amounting almost to hero-worship.

The Younger Pitt is indeed a subject to inspire enthusiasm and invite worship. Though personally frigid in manner and cool in calculation, he must always by the purity of his patriotism and the magnitude of his achievements warm the heart of every subject of the British Crown. In 1766, at the age of seven, he said to his tutor: "I am glad that I am not the eldest son, but that I can serve my country in the House of Commons like papa." This remark, his first recorded utterance, strikes the keynote of his character, the life-long desire to serve his native land. At the close of 1783, when England was suffering from a constitutional crisis of peculiar intensity and when he himself was not yet twenty-five, this "Wonderful Boy" became Prime Minister of England. Thenceforth, with one short interval, he controlled the destinies of Great Britain through twenty-two years marked by the gravest problems, both political and financial, social and diplomatic, ending in wars of unexampled severity. He guided the threads of English diplomacy in an age of unusual difficulty and complexity. He improved the commercial relations between England and Ireland, strengthened the imperial hold on India, and encouraged the beginnings of an Australian commonwealth. By an energetic assertion of English rights and English honor in the Nootka Sound affair, he preserved British Columbia for England, and prepared the day, had he but known it, when the vivifying forces of science and commerce would endow with a common life the conquests of Clive and of Wolfe and the discoveries of Capt. Cook. Out of a rotten Whiggism he created a vigorous new Toryism. He tactfully saved England from the unsavory set who surrounded the Prince of Wales and steered the ship of state skilfully through the crisis of George III's first bad attack of madness. He laid the solid foundations of good finance in an age when England, like France, had started down the decline toward national bankruptcy. Mr. Rose has a thrilling subject, and he has handled it worthily. His volume tells not merely the life of an individual man; it describes also, as its title indicates, the revival of a nation.

By way of an introduction, Mr. Rose describes conditions in England about 1780. Two great revolutions were then taking place. The speculations of Rousseau, the teachings of the Encyclopædists, and the writings of Adam Smith were preparing the way for a revolution in thought, and subsequently in politics, such as no age had seen. And by the side of the "Contrat Social," the "Wealth of Nations," and the "Declaration of the Rights of Man" must be placed as equally important the spinning-jenny, the power-loom, and the double-acting steam-engine. The year 1814 ought to be remembered, not only for the first abdication of Napoleon, but also for George Stephenson's "No. 1" Killingworth locomotive. Mr. Rose is one of the political historians who insist that "only those can read aright the riddle of the modern sphinx who have ears for both her tones, who hearken not only to the shouts of the leaders and the roar of mobs, but also listen for the multitudinous hum of the workshop, the factory, and the mine." The lot of William Pitt the Younger was cast in the years when these revo-

Digitized by Google

lutions in thought and in industry began their mighty work. The active part of his father's life fell within the old order of things. The age of Chatham was far less complex and baffling than that of his son. It is true that, with a prophetic vision of the future, the old man foretold in thrilling words the invincibility of the American cause, but then his life-work was done; from his Pisgah-mount he could only warn, and vainly warn, the dwellers in the plain below. His son was destined to enter that unknown land; and he entered it when his people were burdened by debt, disaster, and disgrace.

To persons who advocate the early intellectual training of children and the development of mental prodigies like young Sidis or Wiener, to name only the most recent, the life of Pitt must be instructive, and, on the whole, encouraging, in spite of the fact that his health was never robust and that he died at the comparatively early age of forty-seven. Mr. Rose has discovered among the Pitt MSS. a letter, written apparently by Pitt at the age of seven, which shows a healthy boyish interest in American Indians, and incidentally a surprising command over Latin for a child of that age. "Mi Charissime Pater," it begins, "Gaudeo audire te rursum bene valere. Vidimus primates Mohecaunnuck et Wappinger, Tribuum Indicorum a septentrioli America, qui veniunt in Angliam supplicare regem ob quosdam agros." Pitt also, like that later prodigy of learning and oratorical power, Macaulay, did not go to one of the public schools like Eton or Rugby. Owing to his delicate health, he was trained by tutors, and by reading with his father, until he went to Cambridge. To this education at home Mr. Rose ascribes in part Pitt's intense hopefulness. "Brought up on the best authors, imbued with the highest principles, and lacking all knowledge of the seamy side of life, he cherished an invincible belief in the triumph of those aims which he felt to be good and true." Such hopefulness is an invaluable human asset. It is the sail-power which helps men forward to success; but it needs to be steadied by the ballast of a familiar acquaintance with the ideas and conduct of the ordinary man. In this ballast Pitt, like Macaulay, was deficient. His lack of knowledge of men, except by hearsay, and his stiffness and reserve in dealing with every one except his few most intimate friends, were undoubted faults due in part to his early private training.

In the volume before us, which brings Pitt's career down to 1791, Mr. Rose appears to have allotted about equal space to three main subjects. The first is Pitt's personality: his precocious boyhood, his college friendships at Cambridge, his visits to Westminster and Goosetree's, his leadership in Parliament, and his frisky mornings with Wilberforce on the edge of Wimbledon Common, after one of which that great and good man recorded in his diary: "We found one morning the fruits of Pitt's earlier rising in the careful sowing of the garden beds with the fragments of a dress-hat in which Dudley Ryder had overnight come down from the opera." Less edifying, it must be admitted, were occasional deep potations with Dundas, one of which rendered the Prime Minister unable to speak intelligently in the House of Commons. Fox generously forebore to take advantage of his rival's incapacity, but the situation was hit off amusingly in the skit on Pitt and Dundas:

> I cannot see the Speaker, Hal, can you?
> What! Cannot see the Speaker, I see two.

The second main subject is Pitt's management of England's internal affairs. Mr. Rose wisely treats this topically rather than chronologically. His chapters on parliamentary reform, financial retrenchment, the Prince of Wales, the regency crisis due to George III's lunacy, the slave-trade, India, Ireland, Australia, and Canada are admirable.

In the third subject, England's foreign affairs, Mr. Rose has made use of much new material and given a good deal of information which was unknown to Lecky and will be new to English readers. This was the decade when Joseph II was recklessly trying to centralize and strengthen his congeries of lands; when Catharine II was ruthlessly designing to seize Constantinople and erect the Balkan Peninsula into a kingdom for the grandson whom she had purposely named Constantine; and when the upheaval in France and the unpredictable events at Paris were perplexing Pitt as to whether he ought to incline toward the Francophile policy of Fox or accept the Francophobe ideas of Burke. The chapters on these topics are valuable, but they do not reach the high level of sprightliness and interest with which the author has written of Pitt's personality and his management of England's internal affairs from 1784 to 1791.

Mr. Rose attempts to vindicate his hero, and on the whole successfully, on many points in which Pitt has often been severely criticised. In the investigation of the charges against Warren Hastings he justifies the Prime Minister's attitude of judicial neutrality on the earlier charges, and reconciles it with his fatal speech on the Cheyt Singh charge, which changed some forty votes in the Commons and led to the impeachment. Fanatical abolitionists have found fault with Pitt for not espousing the abolition of the slave trade as a Cabinet question. Mr. Rose shows that Pitt did give the good cause his heartiest support by his eloquence and influence in Parliament, but that, in view of the hostility of the King, of the Lords, and even of a majority of his own Cabinet, he would have been politically foolish and untrue to his patriotic desire to serve his country, if he had made abolition a Cabinet question and resigned office upon its failure. When he first became Prime Minister, Pitt was repeatedly defeated by votes in the House of Commons, owing to the scandalous coalition of Fox and North against him, but for many weeks he refused either to resign or to dissolve Parliament and appeal to the country. Mr. Rose explains this apparently incorrect and unconstitutional conduct by showing that Pitt knew, as the elections eventually overwhelmingly proved, that he, and not the existing majority in the Commons, enjoyed the confidence of the country. This is why he refused to resign immediately. And he refused to dissolve immediately, partly because the Whig opposition objected to a dissolution, and partly because he shrewdly calculated that, the longer he kept Parliament together and allowed the Fox-North coalition to disgust the voters, the greater would be his own eventual triumph at the polls. The outcome showed his calculation to be correct. Just before the fall of the Bastille, Necker appealed to Pitt to allow English grain to be exported to relieve the scarcity in France. Because of the limited supply in England, Pitt coldly but politely refused to propose to Parliament that Necker's request should be granted. It is possible that, had there been sufficient food in Paris, there might have been no banishment of Necker, no fall of the Bastille, no march of hungry mothers to Versailles. Mr. Rose thinks that Pitt's refusal was legally justifiable, but politically regretable. He pertinently cites the Irish policy of refusing to allow the export of wheat to England when wheat in Ireland sold at more than thirty shillings the barrel; but by a curious mistake, the substitution of "until" for "when," his citation (p. 544) asserts the exact contrary of what he really means.

Mr. Rose promises to complete his life of Pitt in a second volume to be entitled, "William Pitt and the Great War." He also intends in "Pitt and Napoleon Miscellanies" to publish many documents, notes, and other gleanings which he has picked up in the course of his study of these two great men. If the second volume of the biography maintains the high character of the first, we are inclined to believe that Rose's Pitt will rank with Masson's Milton, Trevelyan's Macaulay, Morley's Gladstone, Lockhart's Scott, and the other great biographies of great Englishmen.

CURRENT FICTION.

Kennedy Square. By F. Hopkinson Smith. New York: Charles Scribner's Sons.

If it were not for the well-known name on the title-page, this story would be taken for the not very promising work of a novice. The truth is, Mr. Smith is not a novelist, though he has written a number of long stories. His strength has always lain in brief and picturesque sketches of scenes and persons with whom he has come in contact abroad; or with sentimental portraits like "Colonel Carter of Cartersville." When he sets the large canvas before him, and applies himself to the composition of a novel, all of his inspiration and much of his skill desert his finger-tips. His plan is commonplace and his execution crude: he works with a stiff arm. It is a pity and a wonder that a man who can build good lighthouses and paint good water-colors and write good short stories should be unable to compass a really good novel. But one cannot do everything: we suspect that Michelangelo himself would have failed to produce the great American novel.

"Kennedy Square" is a story of the ante-bellum South. The scene is laid in a little inland neighborhood, aristocratic and sufficient unto itself. The central figure is St. George Wilmot Temple, an elegant gentleman of fifty, a bachelor of waning fortunes, but impregnable charm and spirit. He is a member of the bar, but has never practised. His chief merit is in being the best loved man in the community, and his chosen function is to play the fairy godfather to all loving or lovable young couples within his social range. This figure is of the sort Mr. Smith is most successful in portraying—a member of Colonel Carter's guild, of Col. Newcome's—the preposterously chivalrous gentleman of the old school. But one's impression of the character does not grow as the tale goes on. "Uncle George" is the same person on the first and the last of these five hundred pages. The incidents and characters with which he is supposed to be concerned have little reality. We are informed that Harry and Kate are a most charming pair: but we do not believe in them in any capacity. They are merely the leading juveniles in a conventional romantic comedy. It is impossible to believe that this story wrote itself, or that Mr. Smith wrote it without a good deal of tugging at the bootstraps.

The Downfall of the Gods. By Sir Hugh Clifford, K.C.M.G. New York: E. P. Dutton & Co.

To one desiring to escape from modern times and themes to the ancient and the East may be commended this story of Kambodia and the downfall of Brahman ascendancy. It is not a cheerful tale. The atrocities with which it deals and the long-drawn-out manner of recital create the effect of a thick enveloping cloud of sombreness. Descriptions of Brahman ritual and architecture, of vast forests and great temples, of agonized toil and brutal tyranny, of demigod masters and oppressed "casteless folk," make a dark atmosphere. Nor is relief to be found in the scenes of degrading submission on the part of the young hero to the wiles of the power-thirsty woman of the temple. Yet a series of pictures inspired by serious research into the history of a once mighty civilization possesses of necessity a certain interest and value. Out of gloom, horror, and heaviness an impression is imposed upon the imagination of a great movement in race history; of caste tyranny succeeded by anarchy, and that by subjection to an outside enemy. Perhaps the most vividly surviving recollection of the whole story is the figure of old Slat, the wise man, sitting under the shadow of colossal cone-shaped towers and evolving in secret exultation the formula of the arch.

The Ne'er-Do-Well. By Rex Beach. New York: Harper & Bros.

Mr. Beach has painstakingly sought to avoid serving the general with caviare. He has been so very careful about it that he has given us a rather dry and stale feast. He knows how to tell a story, but he is intensely afraid of being original. So we have the good-hearted young scapegrace, the wealthy and affectionate old father, the *ingénue* heroine, the scheming and passionate adventuress, the brutal and cowardly villain, and the supposedly comic negro boy, all according to the ancient recipe. There are several unnecessarily irritating things about this book. One of these is the violent and long-drawn-out abuse of the government officials of Panama, where Mr. Beach has staged his story. The athletic young Kirk Anthony, who has been drugged and shipped to Colon in the place of a chance-met criminal, performs prodigies of valor at a fire. The Colon fire department is described as composed of cowardly fools. Anthony is arrested for turning the hose on the commandant of police. He is thrown into a filthy lock-up and treated with the most flagrant injustice and abominable cruelty. Nor are the natives of Panama Mr. Beach's only victims. The United States consular service does not escape. It is here represented by one Mr. Weeks, consul at Colon, a drunken, dishonest, and disreputable creature. The work of digging the canal and the course of local politics are directed, according to this narrative, by the whims of an adventuress, who complicates matters by falling in love—quite unaccountably—with Kirk. He resists her advances, and, finally, with his father's blessing, wins a beautiful young bride, a native of Panama, but born of an American mother. Mr. Beach gives us a great deal of jingoistic sentiment, and plenty of cheap sneers at people who do not happen to be white citizens of the United States. It is to be regretted that a story-teller of his ability should lower himself sufficiently to write such a book as this. On the cover, Howard Chandler Christy shows the hero to be about eleven feet tall and to have only one leg.

The Ship of Coral. By H. de Vere Stacpoole. New York: Duffield & Co.

Very different from Mr. Stacpoole's "Patsy" is his newest story, as different as "Treasure Island" is from "Gil Blas." His isle of adventure is located a few hundred miles west of Martinique, and the scenes of the action are divided between the two places. Gaspard Cadillac, having saved his fellow-stoker Yves from the wreck of the Rhone, kills him a few days later in a dispute over a few gold pieces found on the island where the men stranded. He is soon rescued by a vessel commanded by Pierre Sagesse, the "Long John" Silver of the story, and is taken to Martinique, but returns to the island for a larger hoard. The return is marked by sinister incidents, culminating in the marooning of Gaspard on the island, and the destruction of the vessel in a storm. Gaspard gets back to Martinique on another conveniently passing boat, only to find the city buried under the ashes of Mt. Pélée. This would have signified nothing to him if he had not met and loved Marie of Morne Rouge. Mr. Stacpoole, however, is not writing a tragedy, and his reader's gloomier emotions are stirred only long enough to sweeten the pleasing discovery which, along with Gaspard, he finally makes. The story is notable neither in plot nor in style, but it is an agreeable blending of love and adventure in a rather fresh setting.

A BOOK OF ESSAYS.

Learning and Other Essays. By John Jay Chapman. New York: Moffat, Yard & Co. $1.25 net.

The collection of occasional essays ordinarily illustrates the dispersion of the author's thought. Though sufficiently diversified in its topics, this little volume, unusually fine in temper and expression, is coherent in purpose. It illustrates the way in which a man sensitive to the finer issues of life may retain possession of his soul in the presence of modern learning and in the engagement with modern drama, business, politics, and art. Emersonian in its serenity, its individualism, its ethical integrity, it

Digitized by Google

refutes the common assertion that New England transcendentalism expired leaving no legitimate issue. Its Emersonianism, however, is transferred from the village to the city, from the hermitage to the forum; it is infinitely subdued, though not baffled, by its more complex environment and its more difficult experience.

It is a curious paradox that the transcendentalists, who of all men fronted the future with most sanguine expectation and spoke most jauntily of the ancients, were, as a matter of fact, among our most enthusiastic and wide-ranging explorers of antiquity. Indeed, a genuine familiarity with the traditions which they hoped to outgrow is one of the marks which distinguish them most sharply from their false disciples. In his admirable essay on "Learning" Mr. Chapman argues that the future of all that we have not and desire depends upon our power to form and sustain a vital connection and intercourse with the past. He who would alter the direction of evolution must be conscious of its previous course; the significant works of art and scholarship, even the great works of character, are blossoms put forth by an ancient stalk. "Many tongues, many hands, many minds, a traditional state of feeling, traditional symbols—the whole passed through the eyes and soul of a single man—such is art, such is human expression in all its million-sided variety." It follows, then, that for him "all teaching is merely a way of acquainting the learner with the body of existing tradition," and that doing away with the classics means doing away with education:

> For the classics are education. We cannot draw a line and say, "Here we start." The facts are the other way. We started long ago, and our very life depends upon keeping alive all that we have thought and felt during our history. If the continuity is taken from us, we shall relapse.

Both in this and in the following essay on "Professorial Ethics" Mr. Chapman analyzes with acumen some of the more dangerous tendencies in current education. Among the chief perils of the hour he emphasizes the bent in our universities toward rigorous business organization, undue exaltation of administrative offices, the elevation in the academic world of ideas of success borrowed from the market, and a blind faith in educational machinery. In the last generation, he declares, the colleges have been "manned and commissioned for a certain kind of service, as you might man a fishing-smack to catch herring." "Professorial Ethics" is anent those who, like Jonah, have been summarily tumbled overboard for objecting to the course:

> The colleges have simply not been different from the rest of American life. Let a man express an opinion at a party caucus, or at a railroad directors' meeting, or at a college faculty meeting, and he will find that he is speaking against a predetermined force. What shall we do with such a fellow? Well, if he is old and distinguished, you may suffer him to have his say, and then override him. But if he is young, energetic, and likely to give more trouble, you must eject him with as little fuss as the circumstances will permit.

Possibly Mr. Chapman and other critics underrate the necessity of organization in our immense educational enterprises. Yet, however indispensable executive talent may be to the general efficiency of our universities, Mr. Chapman's protest against the domination and subordination of the scholar by the business man needs at present to be uttered emphatically and repeatedly. For great scholars are not made by machinery, but by men and in spite of machinery. And the minority which our rigorous organization tends to crush, the independents, the incorrigible individualists, whether learners or teachers, are often, here as elsewhere, the saving remnant, the hope of the world.

Mr. Chapman himself, if we are not mistaken, belongs to the saving remnant. Beneath the thoughtful urbanity of his style, touched with irony and subdued humor, there vibrates that sheer moral idealism which clears the brain and animates the heart like a gust of fresh air in a close room. His address on "The Unity of Human Nature" was delivered before the graduating class at Hobart College. We wish that more graduating classes could hear a message like his. Most commencement orators tell young men how to succeed in life—or attempt to do so. Mr. Chapman tells them how to fail:

> Try to raise a voice that shall be heard from here to Albany and watch what it is that comes forward to shut off the sound. It is not a German sergeant, nor a Russian officer of the precinct. It is a note from a friend of your father's offering you a place in his office. This is your warning from the secret police. Why, if any of you young gentlemen have a mind to make himself heard a mile off, you must make a bonfire of your reputations and a close enemy of most men who wish you well.

We have heard that note struck by a white-haired, unbent, stately, old professor of moral philosophy in one of the New England colleges—one of the last of the transcendentalists. When he spoke his face lost all its customary mild benignity, and grew hard, grim, and lonely like a crag in a high mountain, and his eyes seemed to be fixed upon something far away that none of us had seen. He told us that, if we would live true to our clearest vision, we must not hope for the world's success; that in the significant crises of our lives, in every moment of deepest trial, whether triumphant or tragic in issue, we must stand utterly alone; yet not alone, because upheld by the hands of men before us who had embraced disaster like a bride, sustained by faith in her ultimate issue. What the old man said seemed to cut like a sword through the knot of contemporary moral and political compromise. While he was speaking he seemed to lift us without stooping toward his own level, and to steel our hearts with something of his own heroic and inspiring inflexibility. And when we left his presence, we felt that he had given us a lamp trimmed and burning to guide us through the night of experience. He conducted no doctor's dissertations that we remember, but he showed us the face of truth and the austerest beauty of character.

Such was the choicest gift of the old colleges. To a man of perhaps somewhat similar temper, Dr. Coit of St. Paul's School, in Concord, New Hampshire, Mr. Chapman pays tribute in his remarkably subtle and interesting essay on "The Influence of Schools":

> Dr. Coit was a tall man in a long black coat; and, as he moved and walked about the paths and corridors, he remained always within an invisible tower of isolation, so that you could not be sure that his feet rested on quite the same ground as your own. . . . He lived within that solitude which a great purpose and constant prayer sometimes cast about a man. There was a chasm between him and the rest of mankind which could not be bridged by trivial intercourse. Neither he nor the rest of mankind were at fault for the difference in tension between them. He was so charged with moral passion that many people could not receive the delivery of it.

Such men as these cannot work in the machinery of our modern universities. Such men are not bred by our modern education. Yet Mr. Chapman feels, as every one must who has undergone their influence, that with their disappearance and the decay of the institutions which they created, we shall lose a force in our social and national life that is of quite inestimable value.

John Redmond: The Man and the Demand. By L. G. Redmond-Howard. With 9 illustrations. New York: John Lane Co. $3.50 net.

Before John Redmond was a Nationalist member of the House of Commons, he was on the staff of the House, and in the office that has charge of issuing the orders of the day. When it was suggested in 1881 that Mr. Redmond should be nominated as a Nationalist candidate for New Ross, Timothy Healy described him to Parnell as "Young Redmond, who hands us out the programmes." Since then, and especially since 1900, when Mr. Redmond became leader of the reunited Nationalists, his power to order programmes at Westminster, to determine what business should be taken, has been enormous.

To-day, with party conditions as they have existed since the general election of January, 1910—that is, with the Lib-

Digitized by Google

eral Government absolutely dependent upon the Nationalists and the Labor group in the House of Commons—Mr. Redmond's position as Parliamentary leader is as great as that of either Mr. Asquith or Mr. Balfour; and perhaps greater than Mr. Balfour's position. For while Mr. Balfour can only appeal or protest, Mr. Redmond can command. It is not unnatural that there should be a biography of him. Lord Rosebery, Mr. Asquith, Mr. Chamberlain, and Mr. Lloyd George have all had to submit to the publication of their lives.

None of these statesmen, however, has been so fortunate in his biographer as Mr. Redmond; for Mr. Redmond-Howard, who is a nephew of the Nationalist, lived for years in the Redmond household. He states in the preface that his book has been written independently of his uncle. There can be little in print—in the reviews and magazines, as well as in the Hansards, and the English and Irish newspapers—concerning the Nationalist leader that Mr. Redmond-Howard has not drawn upon.

All this material is handled in the book with much care and discrimination. It never overloads the story of Mr. Redmond's political career; and, moreover, for Irish political biography, it is singularly free from flamboyant eulogy. It carries the story of the Nationalist movement from the downfall of Parnell in 1890 to the general election of December, 1910—the second election due to the rejection of the Budget by the House of Lords in 1909; and is the only book in which the varying fortunes of the Home Rule movement can be followed in detail during these eventful twenty years. With the enactment of the Lords' Veto bill assured, the Irish Nationalist movement is now within reasonable distance of realization—a condition that gives more than ordinary value to a study of the policies and methods of the man who apparently will be the last of the Nationalist leaders at Westminster.

The Republican Tradition in Europe. By H. A. L. Fisher. New York: G. P. Putnam's Sons. $2.50 net.

This is a brilliant, if not a profound, book. It sparkles with clever phrases, and brings together the results of a keen intellect reacting upon a very wide reading. It is dedicated to President Lowell and is substantially identical with the lectures as they were delivered at the Lowell Institute in 1910.

In a broad and sure sweep, popular in form but scholarly in content, Mr. Fisher traces the course of republican thought and action from the downfall of the Roman Empire to the foundation of the Republic of Portugal. He passes in review the mediæval theory of government, the Italian city-states, the rise of the Dutch Republic, and the Cromwellian Commonwealth. He gives his largest attention to the French Revolution, following closely the master of those who know, M. Aulard. He rightly points out the fact that there is an underlying incompatibility between Rousseau's revolutionary doctrine of the perfectibility of man through human agencies and the Roman Catholic dogma that man is born in original sin and that only through the practices of his religion can he succeed in wiping away some part of the evil which is inherent in human nature. The gulf which was opened between Republicanism and Catholicism by the confiscation of the lands of the church and the Civil Constitution of the Clergy has been widened by the bitterness of ultramontane journals, the Syllabus of 1864, the Infallibility Dogma of 1870, and the anti-modernist movement of to-day. The incompatibility is absolute, the gulf abysmal, the war truceless. The old school of Gallicans, like the later school of Liberal Catholics, has been killed out. Interesting also are the pages in which Mr. Fisher deals with the less familiar Spanish experiment with a federal republic in 1873, and the wave of republican feeling in England in the early seventies, when Bradlaugh thought that the English people would not tolerate a successor to Queen Victoria and Richard Carlile hoped to see the day when an English Senate would disown the divinity of the Christian religion.

Mr. Fisher thinks that republicanism has made no substantial progress since 1870. This is due, he holds, to several causes. The personal character of excellent monarchs, such as Victoria, Edward VII, and William I, has won a greater respect and love for kingship than was possible with most of the degenerate Bourbons and Hapsburgs of an earlier age. It is also true that remote persons are difficult to know, and, being difficult to know, are difficult to like. But modern science tends to make the monarch the friendly familiar of every one of his millions of subjects. The art of photography catches him at chance moments, as he steps from a train, walks after partridges, chats with a friend, or pats a dog. The cinematograph exhibits him as a spectacle in motion to crowds who have never beheld him in flesh and blood. Electricity diffuses his messages of congratulation and condolence; steam carries him from one end of the empire to the other. Thus the image of the sovereign and his circle is continually stamped into the brain-stuff of the country; the peasant in the little thatched village carries about with him in his daily task the image of the King and Queen, as beings both splendid and familiar, whose doings in the great capital or elsewhere it is always pleasant to know and to discuss. A more fundamental cause is the growing recognition of the fact that the precise form assumed by the executive is no scientific measure of political or civil liberty. People are beginning to understand that monarchical England is more democratic than republican America in the sense that the will of the people is more swiftly translated into acts under the English system of government than under our own. The cost of kings also is relatively far less to-day than a century ago. A nation which spends tens of millions on Dreadnoughts and old-age pensions can afford to pay its hard-working king a salary exceeded by the income of not a few among its more prosperous merchants and manufacturers. Finally, the two other factors which have given monarchy a stronger hold to-day than fifty years ago are the success which has attended the monarchies which Bismarck and Cavour helped to found, and the growth of world empires; a monarchy, with an unchanging ritual and an hereditary dynasty which are touchstones for sentiment and loyalty, is a more potent means of holding together a great scattered empire than any kind of shifting presidency or constitutional abstraction.

Classical Rome. By H. Stuart Jones. With illustrations and maps. New York: Henry Holt & Co. $1.35 net.

This book is issued in the series of Grant Allen's Historical Guides. It aims to be a sufficient and trustworthy guide for the student of the pagan antiquities of Rome, both out of doors and in the museums. Few men could be so well equipped for the task of its composition as the author, who was the head for a time of the British Archæological School in Rome, and is well known for his special studies in a very important part of the field covered by this book. The book appears to be without doubt the best general manual of its kind. It is also not over the heads of ordinary intelligent travellers who desire something more than their Baedeker; and its chapters on the museums (and on the out-of-door sculptures) may well serve for home-review or for preliminary self-instruction with the help of photographs.

The only misprints noticed by the reviewer that might be misleading are "marked" for "masked" (p. 46), "Dionysius" for "Dionysus" (p. 127), and one or two dates. The monuments under the "black stone" in the Forum (p. 53) were disinterred in 1899, not in 1901, and we imagine that the stretch of the wall of Aurelian, the collapse of which is noted on p. 360, fell some years later than 1893. With regard to the immense mass of detail in a book like this, much room for disagreement must be left to scholars. Generally speaking, however, Mr. Jones is thoroughly well up on the literature of his

Digitized by Google

subject and well balanced in judgment and presentation. We permit ourselves only one or two minor comments. There is some doubt about the question whether there ever was a saddle connecting Quirinal and Capitoline (pp. 5, 155, and 157). If there was in Republican times a roadway through to the campus at a lower level than that of Trajan's Forum, what evidence is there that a continuous saddle, however low, ever joined the two hills? On p. 28, we are told that "marble quarries were not worked in Italy until late Republican times, so that the Etruscans, when they did not employ volcanic stone or terra-cotta, were forced [*sic*] to use bronze." Why "forced"? The glittering cliffs of Carrara were in their own country. Could they not have learned as easily from Greece to quarry marble as to cast bronze? On p. 49, it should have been noted that the stunted brick piers erected in the early seventies of the last century on the floor of the Basilica Julia do not accurately indicate the ground-plan of the building (cf. Huelson). The Ministry of Finance certainly does not mark the Viminal hill, but the Quirinal (cf. p. 197, where the building is correctly located as partly on the site of the Colline gate, though there are other inaccuracies in the statement). The plan of the Senate-house in the map on p. 43 disagrees unnecessarily with that in the map opposite p. 153; and the latter plan could hardly be defended. We had supposed that before the building of the railways travellers "from the north" (p. xi) usually entered Rome by the Porta del Popolo, and only those coming over from Cività Vecchia came in by the Porta S. Pancrazio.

Surely it is indefensible for the publishers to omit the date of issue from the imprint in a book of this sort—or of any sort, for that matter.

Syntax of Early Latin. Vol. I: The Verb. By Charles E. Bennett. Boston: Allyn & Bacon. $1.

In 1853 F. W. Holtze put forth a modest specimen of a proposed syntax of early Latin. The completed work, "Syntaxis priscorum scriptorum Latinorum usque ad Terentium," in two volumes, was published in 1861-2. Although he had almost no critical texts, and almost no special treatises on particular topics, this work was of enormous importance, and has been a storehouse of information since its publication. In 1874-8 A. Draeger published his "Historische Syntax der Lateinischen Sprache," which, much enlarged in the second edition (1878-81), has been for the whole Latin language what Holtze was for the early period. In the interval between these two works wonderful progress had been made in textual criticism, and numerous studies of the style of different authors had appeared. Since 1881 almost every conceivable topic of syntax has been treated exhaustively by scholar and doctor, and there has long been a crying need for some comprehensive treatment of Latin syntax in its historical development. The "Historische Grammatik der Lateinischen Sprache," in course of publication by a group of German scholars, is to include, of course, a full study of the syntax. But there has thus far appeared only a treatment of the tenses, moods, and voices by Blase (1903), and the nominative and accusative cases by the late C. F. W. Mueller (1908). Meanwhile, Holtze's work has become less and less usable, and the need for a special discussion of the earlier field has been imperative. This need Professor Bennett has endeavored to meet in the present work. The first volume of 500 pages is devoted to the verb, the remaining subjects being reserved for a second volume.

After an introductory chapter on Agreement, Voices, Impersonal Verbs, and Omission of Verb, we find eight chapters as follows: Tenses of Indicative in Principal Clauses; Indicative in Subordinate Clauses; Subjunctive in Principal Clauses; Subjunctive in Subordinate Clauses; Imperative; Infinitive; Participles, Gerund, and Supine; The Sentence Question. This arrangement has certain obvious advantages, for it enables the author to treat model usages on the basis of some assumed fundamental meaning or meanings. It has the very serious disadvantage of separating different elements of the same logical category; thus, temporal, causal, conditional clauses, and indirect questions are divided in treatment between the indicative and subjunctive. Nor is there anywhere any attempt to group together these usages, so as to make clear the encroachment of the subjunctive upon the indicative, which is discernible even in the early period.

The natural plan to pursue in arranging categories would be to adopt some general scheme of linguistic origin and growth, and then cite the examples under the various headings. Mr. Bennett is never satisfied to do this. He prefers to summarize and discuss all the theories that have been advanced on every subject, and then to state and defend his own position. The book thus becomes in reality a treatise on theoretical syntax with illustrations from early Latin. The most striking example of this practice is the introductory discussion of the fundamental meanings of the subjunctive mood, which covers seventeen pages, beginning with the Greek and Latin conceptions of mood and coming down to the most recent pronunciamento. Virtually nothing of this discussion is in place in a book of this kind, which should register the phenomena of the period, and Mr. Bennett's own views, which are given in two pages at the end, are all that is needful. Those teachers, however, who are interested in syntactical theory, but have no access to the large literature cited, may feel grateful for these summaries. In treating the historical present, Mr. Bennett follows the arrangement and material of Emery's dissertation; but also consumes two pages with a criticism of Emery's contention that the use of the historical present rests primarily upon the idea of duration in certain verbs. Whether this is true or false, it has nothing to do with the facts of early Latin usage.

The passion for subdivision and multiplication of minute categories, which is so characteristic of the Hale school of syntacticians, is very much in evidence here. Thus the future indicative shows eight volitive uses, with six additional subdivisions, while the present indicative in conditional protases comprises the astounding number of above seventy varieties. This certainly is minuteness run mad. Even where the categories are less numerous, they are often too many. Thus Merc 915, *paullisper mane!—Quid, manebo?* is classified as "an inquiry after a command or advice," while Men 197, *salta sic cum palla postea!—Ego saltabo?* is a "repudiating question." But this difference, though correct, does not constitute a difference in origin or justify a separation of categories.

Not every one will agree always with Mr. Bennett's interpretation of individual passages. His mind is more rational than sympathetic, and he seems often to miss the actual meaning through lack of feeling. Sometimes actually wrong categories result. Thus, he finds only one case of *cum* in the sense of "while" (during), Ba 1122, *pastor dormit, cum eunt palitantes.* But he should know that *cum* can never be the same as *dum* (while). In the passage quoted it is plainly adversative, "whereas."

In discussing the imperfect indicative, Mr. Bennett follows Wheeler in assuming aoristic force for certain imperfects in early Latin. But while Wheeler is inclined to restrict this force to verbs of saying, especially *aibam*, etc., Mr. Bennett includes *eram* and its compounds, *oportebat* (Men 195, Heaut 536), and a few sporadic instances of other verbs. But here he is unquestionably astray. In his typical sentence, Am 429, *cadus erat vini, inde implevi hirneam*, he sees no difference in effect between *erat* and *implevi*. But if *erat* is aoristic, *fuit* could be substituted for it. We doubt whether Mr. Bennett would dare to do so.

In the preface Mr. Bennett says that "examples without figures unless accompanied by 'e. g.,' are intended to represent the complete material." This statement is not borne out by the facts. In a number of places the material as

Digitized by Google

thus indicated is not complete. Thus he gives four examples from Plautus of *ecquis*, with the subjunctive in the indirect question. There are actually ten.

When all is said in criticism, however, the book represents an enormous amount of labor, and will stand as one of the most important products of American classical scholarship, and add much to our prestige in foreign circles.

Notes

Among the miscellaneous books announced for publication this autumn by the University of Chicago Press are found: "The Historicity of Jesus," by Shirley J. Case; "American Poems," selected and edited by Walter C. Bronson; "Assyrian and Babylonian Letters Belonging to the Kouyunjik Collections of the British Museum," edited by Robert Francis Harper, Vols. X and XI; "Statistical Studies in Education," by Walter F. Dearborn, and "Sociological Study of the Bible," by Louis Wallis.

The Swanston edition of Stevenson, which will be issued by Chatto & Windus first in a limited set, will contain a long preface by Andrew Lang.

The autumn list of announcements made by the Scribners includes: "A Window in Thrums," by J. M. Barrie, illustrated in full color by A. C. Michael; Stevenson's "Treasure Island," with sixteen full-page illustrations, by N. C. Wyeth; "Little Lord Fauntleroy," illustrated by Reginald Birch; "Spanish Sketches," by Edward Penfield, with the author's illustrations; "Cupid's Fair-Weather Booke," by Oliver Herford and John Cecil Clay; "Memories of Two Wars," by Brig.-Gen. Frederick Funston; "The Wilderness of the Upper Yukon," by Charles Sheldon; "Recollections, Grave and Gay," by Mrs. Burton Harrison; "Robert E. Lee: Man and Soldier," by Thomas Nelson Page; "The Great Duke," by W. H. Fitchett, two vols.; "The Arctic Prairies," by Ernest Thompson Seton; "The Relations of the United States and Spain—The Spanish-American War," by Rear-Admiral F. E. Chadwick; "Narratives of Early Pennsylvania, Delaware, and West Jersey, 1630-1708," edited by Dr. A. C. Myers; "The Common People of Ancient Rome," by Prof. Frank Frost Abbott; "Old Provence," in two vols., illustrated; "A New Dooley Book"; "Football," by Parke H. Davis; "Criminal Responsibility and Social Restraint," by Ray Madding McConnell; "Referendum in America," by Ellis Paxson Oberholtzer, new edition; "The Life of Robert Louis Stevenson," by Graham Balfour, new edition; "The Poems of Henry van Dyke"; "The Early Literary Career of Robert Browning," by Prof. T. R. Lounsbury; "The Sad Shepherd," by Henry van Dyke; "Robert Louis Stevenson," by Isobel Strong, Stevenson's step-daughter; "The Courage of the Commonplace," by Mary R. S. Andrews; "The Song of Renny," by Maurice Hewlett; "The Witness for the Defence," by A. E. W. Mason; "Ethan Frome," by Edith Wharton; "The Moon Lady," by Helen Huntington; "The Outcry," by Henry James; "Mr. Wycherly's Wards," by L. Allen Harker; "Son," by Ethel Train; "The Confessions of Artemas Quibble of the New York Bar," revised and edited by Arthur Train; "The Ship's Company," by W. W. Jacobs; "Interventions," by Georgia W. Pangborn; "The Centenary Edition of Charles Dickens's Works," thirty-six vols., published in conjunction with Chapman & Hall; "Boat-Building and Boating," by Daniel C. Beard; "Neo-Platonism and Christianity," by the Rev. F. W. Bussell; "The Makers and Teachers of Judaism," by Prof. Charles Foster Kent; "Periodical Articles on Religion, 1890-1899," compiled by E. E. Richardson; "Introduction to the Life of Christ," by Prof. William Bancroft Hill, and "One Hundred Bible Stories," by Robert Bird.

"Warning Out," a book by Josiah Henry Benton, which is in preparation by the W. B. Clarke Co. of Boston, reverts in its setting to the days when the power of constables in New England towns was supreme.

Longmans, Green & Co. will have ready shortly the following miscellaneous books: "Castles and Country Seats of Present-Day Italy," by Mrs. Francis Batcheller; "Garibaldi and the Making of Italy," by George Macaulay Trevelyan; "The Life of Spencer Compton, Eighth Duke of Devonshire," two volumes, by Bernard Holland; "The Position of Women in Indian Life," by her Highness, the Maharani of Baroda, and S. M. Mitra; "An Eirenic Itinerary," by Silas McBee; "Reminiscences," by James B. Angell; "The Mahatma and the Hare," a dream story, by H. Rider Haggard; "Chess Tales and Chess Miscellanies," by Willard Fiske; "Butterfly Hunting in Many Lands," by G. B. Longstaff; "Alexander Viets Griswold Allen, 1841—1908," by Charles Lewis Slattery; "The Credibility of the Gospel," by Pierre Batiffol, translated by the Rev. G. C. H. Pollen; "William James," by Emile Boutroux, member of the Institute, authorized translation by Archibald Henderson; "Salvador of the Twentieth Century," by Percy F. Martin, and "The Life of a Tiger," by S. Eardley-Wilmot.

Fifteen essays and addresses, delivered before more or less popular audiences by William James during the last years of his life, have been collected, under the title, "Memories and Studies," and are to be issued by Longmans, Green & Co.

It is a matter of congratulation that the new Oxford text of Cicero's "Orations" has now been completed. The last two volumes which have recently appeared (Clarendon Press) contain the six speeches for Tullius, Fonteius, Sulla, Archias, Plancius, and Scaurus, by A. C. Clark, and the speeches concerning his recall and the restoration of his property, for Sestius and Balbus, against Vatinius and in behalf of Cæsar's demand for a longer term in Gaul, by Principal W. Peterson of McGill. The same principles have been followed in these volumes that have made the preceding volumes models of textual criticism and have associated Mr. Clark's name indissolubly with Cicero's speeches. New manuscript discoveries, great critical judgment, and extreme care have been displayed throughout the edition. Mr. Peterson is a worthy associate in the work. The new Cicero now lacks only the philosophical works.

"The Blood of the Arena," by Blasco Vincente Ibáñez, the Spanish novelist, will be published this autumn in an English translation. A. C. McClurg & Co., who have the work in hand, announce also "Something Else," a romance of modern New York, by J. Breckenridge Ellis; "Robert Louis Stevenson in California," by Katharine D. Osbourne, and "Fifty Years of Public Service," by Shelby M. Cullom.

On September 15 Houghton Mifflin Co. will issue: "Mother Carey's Chickens," by Kate Douglas Wiggin; "The Jester of St. Timothy's," by Arthur Stanwood Pier; "The Indian Book," by William J. Hopkins; "Dramatis Personæ," by Robert Browning, with ten full-page illustrations in color by E. F. Brickdale; "Why We May Believe in Life After Death," by Charles E. Jefferson; "Bird Stories from Burroughs," by John Burroughs; "The Scarlet Letter," and "The Marble Faun," by Nathaniel Hawthorne, new holiday edition; "Some Family Letters of W. M. Thackeray," Riverside Press edition; "The Riverside Third Reader," edited by James H. Van Sickle, Wilhelmina Seegmiller, and Francis Jenkins; "Old World Heroes," by Eva March Tappan; "A Dickens Reader," edited by Ella M. Powers; "Cooper's The Spy," with an introduction and notes by Charles Swain Thomas; "The Story of a Bad Boy," by Thomas Bailey Aldrich, with a biographical sketch, and "Polly Oliver's Problem," by Kate Douglas Wiggin, with an introductory sketch.

Doubleday, Page & Co. have a long list of titles for autumn publication. It includes in fiction: "Sixes and Sevens," a posthumous volume of O. Henry's stories; "The Boss of Wind River," by A. M. Chisholm; "Adventures of Bobby Orde," by Stewart Edward White; "Abe & Mawruss," by Montague Glass; "The Taming of John Blunt," by Alfred Ollivant; "An Enemy to Society," by George Bronson Howard; "The Transformation of Krag," by Eugene P. Lyle, jr.; "The Case of Richard Meynell," by Mrs. Humphry Ward; "Margery," by E. F. Benson; "Cicely," by Sara Beaumont Kennedy; "Further Adventures of Nils," by Selma Lagerlof; "The Adventures of a Suburbanite," by Ellis Parker Butler; "A Venture in Identity," by Lucile C. Houghton; a booklet containing "The Gift of the Wise Men," O. Henry's Christmas story; "Joey the Dreamer," by Henry Oyen; "Strawberry Acres," by Grace S. Richmond; "The Composer," by A. & E. Castle, and "The Boy Who Brought Christmas," by Alice Morgan. In biography and history their list includes: "The Life and Letters of Moses Coit Tyler"; "The Life of Andrew Jackson," by John Spencer Bassett; "Reminiscences of Basil W. Duke"; and "The History of England," by Kipling and Fletcher. Miscellaneous: "The Passing of the Idle Rich," by Frederick Townsend Martin; "The Call of the Carpenter," by Bouck White; "We and Our Children," by Woods Hutchinson; "My Larger Education," by Booker T. Washington; "The Richer Life," by Walter A. Dyer; "The Forester's Manual," and "Manual of Signs and Sign Language," by Ernest Thompson Seton; "Wild Animals Every Child Should Know," by Julia E. Rogers; "Shakespeare a Child Can Read and Act," by Ben Greet; "The Magic of Dress," by Grace Margaret Gould.

Digitized by Google

and "Many Celebrities and a Few Others," by William H. Rideing.

"A Likely Story" has been finally decided upon as the title of De Morgan's new novel which has been announced by Holt as "Bianca."

"Land of Play," a collection of old favorites in verse and prose, selected by Sara Tawney Lefferts, is in the press of Cupples and Leon Co.

The progress of the admirable Centenary Edition of Dickens (Scribner) is marked by the appearance of two volumes containing the "Christmas Stories."

"A Study in Southern Poetry" (Neale), by H. J. Stockard, is in reality an anthology—and not, as the name might seem to imply, a criticism—of Southern verse. Intended for use in school and college, as well as for general reading, the volume is equipped with an introduction on Poetics, which is too slight, unfortunately, to be of very much service, with brief biographical sketches of the several poets, and with comments and questions on the various pieces, which, if not always very discriminating and illuminative, are at least characterized by unfailing enthusiasm for the subject. But, whatever the shortcomings of the critical apparatus, the selection of material is not only wide, but representative—even the emphasis laid upon the singers of the Confederacy is significant—and the book in this respect is well calculated to gratify its editor's wish for a more extensive acquaintance on the part of the general public with the poets of the South.

In view of the frequent identity of names and places mentioned in the two books, "Notes from the Life of an Ordinary Mortal" (Dutton), by A. G. C. Liddell, and "Memoirs and Memories" (London: Smith, Elder & Co.), by Mrs. C. W. Earle, one is not surprised to learn that the authors are cousins; but since the first Lord Ravensworth left fifty-nine living grandchildren at his death, it is not strange that these two fail to mention each other. Mr. Liddell, "the ordinary mortal," assures us that his only reason for writing is the existence of "a considerable class who may be amused, and even interested, by any memoir honestly written." If we add those who will enjoy an intelligent and agreeable companion for 350 pages, we shall precisely state his case. But he is wrong in thinking that he is not for the most part occupied with "persons that I have seen." Of his own career, in the law, on government commissions, and then as a minor public official, his way of taking himself humorously leaves us in doubt. But in his visits to country houses, in his shooting, painting, and dining out, he has "seen" everybody of importance in English letters, politics, art, and science for forty years past. For some reason these celebrities had little that was significant to say at the dinners attended by "the ordinary mortal," but his sketches of them are good: Carlyle after dinner, delivering his views upon things in general while young ladies sat on the floor at his feet; Huxley eating and expounding oysters; George Eliot and the author engaged in a correct conversation about dialects (here the humor is unconscious). There is an interesting picture of a vacation reading party, with plenty of fun and eight hours a day of steady work, under Jowett and then under "Tom" Green. And here is a sketch of Arnold: his speech "was delivered with great self-confidence, one might also say self-enjoyment; but his superior air was so natural and unaffected, and he seemed altogether such a 'brave garçon,' to say nothing of the excellence of the matter, that there was no offence." Mrs. Earle, the author of a "Pot-pourri from a Surrey Garden," which has run to twenty-nine editions, writes with the pleasing simplicity of an old lady of seventy. Her memoir is largely a family document, occasioned by the possession of a box of letters, mostly of her father and mother, Edward Villiers and Elizabeth Liddell, dating from about 1830. Apparently, as she says, the Villierses were ardent letter-writers. But these letters are extremely interesting as showing that under the old-fashioned formality of English family life of two generations ago there lay a genuine grace and courtesy.

The Baedeker for Switzerland, which has just appeared in its twenty-fourth edition, is a volume of nearly 600 pages (Scribner).

In the preface to his seven lectures on Ruskin ("Ruskin, a Study in Personality," Putnam), Arthur C. Benson explains that he has no intention of writing another small biography. He has nevertheless skilfully interwoven a biographical and bibliographical sketch into his study of personality, so that in general character and usefulness the work may stand beside Frederic Harrison's volume in the Men of Letters series; and it would be difficult to point to the exact difference between the two judgments of the man. There is the same note of warm affection, the same tribute to Ruskin's prophetic intuition, the same unsparing criticism of his dogmatism and his ignorance of the technique both of art criticism and of economic theory. Yet Mr. Benson is worth reading for himself, if only for the freshness and animation of his style, and in the end there remains the difference of the positivist and the idealist. For to Mr. Benson, Ruskin, in spite of his many limitations, clearly and relentlessly set forth, is still something of a hero and a god—at least a wonderful and mysterious personality, hardly to be appreciated by men at large, and least of all by the stolid British Philistine. Ruskin attained his position in the literary world by work that "was pervaded by gross faults of dogmatism, erring knowledge, and baseless judgments. His best work is still to a great extent unappreciated and unpraised, his genius hardly suspected." And this because he persisted in referring two perfectly separate impulses—the moral and the artistic—to one basis. Yet it is not clear how far, for Mr. Benson himself, these impulses are independent. His criticism of "art for art's sake" suggests a moral standpoint; and he thinks that perhaps some of the finest of all art is born out of "that very struggle" between a love of the pure and a passion for the gross.

To the series issued under the name of The Wisdom of the East, A. Hart Edwards has contributed what purports to be a rendering of a Persian poem of which "no comprehensive translation has hitherto been placed before the reading public"—the well-known "Bûstân of Sadi" (Dutton). Ten minutes' search would have shown Mr. Edwards that, even if we ignore as foreigners the scholars and poets Graf, Schlechta-Wssehrd, Rückert, and Barbier de Meynard, there was already an English version of this poem, published in 1879 by Captain Clarke, a thorough Persian scholar and possessed of an admirable diction, which Mr. Edwards is far from equalling. To call the present work a translation is simply a misnomer. It is nothing more than an abridgement, devoid of any flavor of the original, of a fine Persian poem that is far too beautiful in style and noble in content to be mutilated as it here appears. Presumably the condenser's purpose was to cull out noble sentiments; but if so, one is doubly puzzled to know why he should ignore many of the most exquisite thoughts in the "Bûstân."

Dr. James Guinness Rogers, who died a fortnight since at the age of eighty-eight, was a leader of the nonconformists, a friend of Gladstone, and, besides numerous contributions to the periodicals, wrote several books, among them "Church Systems of the Nineteenth Century," "Present Day Religion and Theology," "The Christian Ideal," and his "Autobiography."

The death is reported, in his sixty-sixth year, of Freiherr Raban von Canstein, professor of civil law in the University of Graz. He is remembered chiefly for his two books "Anerkennung und Geständnis" and "Lehrbuch des österreichischen Civilprozessrechts."

Science

GOVERNMENTAL GASTRONOMY.

Consul George N. West writes from Kobe that the prohibition in America of colored tea has encouraged Japanese planters to make some improvement in the quality of their teas. A marked change is noticeable this year, and the planters intend to make still greater efforts in the future to improve the flavor rather than the color and appearance of green tea. It would be a good thing if the example thus set by the Japanese, spurred by our pure food laws, were generally and voluntarily followed in our own country by the producers of foods and beverages. One would naturally suppose that in the making and marketing of things to eat and drink, flavor and palatability would always be considered first; but, as a matter of fact, the judges at county fairs allow 20 points on looks and only 15 on flavor; and this ridiculous verdict reflects the attitude of the majority of purchasers. A few years ago one of the Government's food experts contributed a long article on this subject to the Yearbook of the Department of Agriculture, under the head of "Consumers' Fancies." Dr. Wiley has written sarcastically on the same subject, noting how the wise farmer culls out the small strawberries and blackberries and the unsightly apples because they are better, and sends the large and showy ones to market because they sell better.

It is not always, however, the consumer who is to blame for inferior fruit

Digitized by Google

in the markets. Take the pineapple. Nothing is more refreshing in hot weather, and the juice is held to be as great an aid to digestion as pepsin. In a recent number of the Consular and Trade Reports attention was called to the fact that while large quantities of canned pineapples are imported into France (1,684,980 pounds having been received in 1910) the importation of the fresh fruit is very limited. The French prefer the canned article to that in its natural state because the latter is no longer fresh when it arrives after a long trip in the hold of a ship; whereas for canning, the best ripe fruit is used in India or the West Indies. In the United States canned pineapple—especially the luscious Hawaiian brands—has also sprung into great and sudden favor. In this case the fresh fruit is placed at a disadvantage, not so much because of deterioration during transportation as because of inferior quality. Professor Bailey's assertion that the pineapple commonly seen in our markets is run down and ought to be replaced by hybrids, which are much better, is endorsed by epicures. In the Yearbook of the Agricultural Department for 1905 Herbert J. Webber wrote that when the Department's pineapple-breeding experiments were started the question of the variety to be cultivated was agitating growers. Many of them insisted that the red Spanish is the "best"—and so it is, from their point of view; that is, it is well adapted to open-field culture, is free from disease, and is a good shipper. Other growers, however, contended that "as varieties existed that were of far better quality and flavor, the market should be educated to demand these better so-called 'fancy fruits.'" The rapidity with which the public discovered the excellence of the canned Hawaiian pineapple suggests that there will be little need of educating it to appreciate fancy fresh pineapples, if the dealers will only supply them in abundance and at reasonable prices.

The officials of the Department of Agriculture are doing good work in behalf of gastronomic America. In the Yearbook for 1907 attention is called to the fact that there has been for years a strong tendency in the trade to urge fruit-growers to reduce the number of varieties. The result is shown, for instance, in the lamentable lack of variety in the peach and grape markets, barely a dozen kinds of each being offered out of hundreds of existing ones. The dealers who pursue this policy of restriction would do well to ponder the words of William A. Taylor, pomologist of the Bureau of Plant Industry: "Attractive diversity in appearance and quality stimulates a demand for fruit among consumers." For this attractive diversity the Government is providing in its agricultural experiment stations, of which each State and Territory now has one.

Primarily, the aims of these experiment stations are, of course, agricultural and economic; the results obtained are given to the public free in the form of Farmers' Bulletins, the number of which already far exceeds four hundred, and among which are special practical treatises on various cereals, vegetables, fruits, berries; on cattle, sheep, hogs, poultry; on eggs and their use, and on cheese-making; on canning vegetables and fruits, and so on. In the last analysis, however, what are all these bulletins but so many governmental lessons in national gastronomy? In the last two years, moreover, the Department of Agriculture has boldly invaded the kitchen itself, providing admirable lessons in the art of preparing and serving appetizing food, in such bulletins as "The Care of Milk and its Use in the Home," "Bread and Bread-Making," "Food Customs and Diet in American Homes," "Care of Food in the Home," "Economical Use of Meat in the Home."

Among the most interesting of the Government's contributions to gastronomic literature are the chapters in the Yearbooks describing and illustrating the new fruit productions of the Department of Agriculture, among them the tangelo, a cross between the tangerine and the pomelo (grape fruit), the "citrange," besides new limes, improved pineapple hybrids, etc. The "Bulletin on Guinea Fowl" (of which there are many varieties) suggests an interesting solution of the feathered-game question. In the guinea fowl we have a partial substitute for our rapidly disappearing edible birds, as its flesh has naturally an agreeably gamy flavor. Unfortunately, the price of guinea fowl has already begun to soar like that of the few remaining game birds.

In "The Call of the Snowy Hispar" (Scribner importation) Fanny Bullock Workman and William Hunter Workman give an account of their exploration of the Hispar glacier of north Kashmir in the western Himalayas. The text has but little literary charm and makes heavy reading as a personal narrative of travel. Though the native Nagar coolies are not particularly interesting, and though the region offers little but bare rocky slopes and snow fields, yet there are many aspects of general interest in such a trip which are almost totally neglected, the preponderating emphasis of the volume being laid upon geological and glacial matters. To the mountaineer and glaciologist the book appeals, and to these it offers much of importance. The photographs and telephotographs are extremely good, equalling any glacier pictures ever published. Three appendices treat respectively of the Basin of the Hispar Glacier, Summary of the Minerals, and of the Plants Collected. These are by Drs. Calciati and Koncza, two graduate students of the University of Fribourg, who accompanied the expedition. Besides traversing the entire length of the glacier, seven of the lateral tributaries were explored and mapped. Chapter xii affords some amusement in its hint of the professional jealousy existing between rival feminine mountain-climbers. It seems that one Miss A. Peck claimed to have ascended a peak in Peru to the height of "above 23,000 feet, and probably 24,000 feet." Doubtful of the lady's facts, Mrs. Workman sent to South America a special expedition of engineers to determine by triangulation the exact altitude of this mountain. This proved to be 21,812 feet. So the final sentence of the volume triumphantly announces: "The altitude of the lower summit of Huascaran, claimed to have been ascended by Miss Peck, is some 1,500 feet lower than the highest altitude attained by Mrs. Bullock Workman."

Dr. G. Carroll Smith's "What to Eat, and Why" (W. B. Saunders Co.) is not exactly the popular treatise which the title may lead the casual purchaser to expect. It is rather an aid to the medical student, and yet more particularly to the general practitioner in deciding dietetic questions such as arise in the treatment of the more common diseases. It is not intended for the guidance of the laity, although intelligent readers of this class may glean much useful information from the book. A brief introductory chapter lays down the fundamental principles of proper feeding, mainly by a consideration of the opinions of standard writers, but with frequent restrictions and modifications dictated by the very practical good sense of the author. Dr. Smith is no faddist, but evidently believes that the food habits of a community have a certain good foundation, however much harm may come from them in special cases. He is thoroughly skeptical concerning any general application of the doctrines of Chittenden; has no sympathy with one-mealers, or even two-mealers; favors careful mastication, without advocacy of multi-mastication, and with no allusion to Fletcher and his isms; and finds in alcohol a very useful servant to man, but a servant that must be taught to know his place. The greater part of the book discusses diet in disease, and contains much that is suggestive and well calculated to be helpful to the practitioner and to lessen his dependence on the specialist. There is a useful bibliography, which would be better were the references more precise, and also if more of the strictly original sources were included.

Prof. W. L. Jepson, author of "The Silva of California" (Berkeley, Cal.: The University Press), has been gathering his material for about a score of years, and a part of it has plainly been long awaiting publication. The delay has not been without its advantages. It has enabled the author to emphasize many subjects bearing on conservation and forestry which would have fallen on dull ears only a short time ago. And it has permitted him to adopt a system of scientific nomenclature which is open to the fewest objections, namely, that which was agreed upon at the Vienna International Botanical Congress in 1905. For the common names of the trees and shrubs, however, he had no guide or authorized standard, a condition which was aggravated in the case of California by the rough-and-ready inventions of a very wide range of transient immigrants, especially during the

Digitized by Google

gold fever. His practical sense in selecting good distinctive names—thus "maul oak" (Quercus chrysolepis) in place of a dozen other names for this tree—is evident throughout. Professor Jepson's descriptions give the impression of first-hand knowledge. The records appear to have been made largely in the forest, and supplemented by herbarium comparison at home and abroad. The author evidently has a happy knack of getting well acquainted with lumbermen, and therefore his contribution to a practical knowledge of California forests and forest-products is of great value at this critical period in the history of forest-waste. We can commend to every Californian the pathetic appeal made by Professor Jepson to save a remnant, if no more, of the Redwood of the coast. The illustrations are numerous and are worthy of the text. The volume—an ample quarto—taken in conjunction with Professor Sargent's "North American Silva," makes the study of the woody vegetation of California possible for all.

The first volume of the fourth edition of Brehm's "Tierleben" (imported by Lemcke & Buechner) has now made its appearance, and when completed this old standard work will be as up to date as is possible for any published treatise on general natural history. It is edited by Prof. O. zur Strassen, who, with his assistants, has completely rewritten the text. Volume I, "Aves," of the present edition shows complete inversion of plan when compared with the same volume of an earlier edition. The classification is inverted, beginning logically with the generalized Flachbrustvögel, or ostriches, and their allies, instead of with the thrushes. While no generalizations can be made until the remaining volumes on Aves appear, several radical changes are apparent, such as the reduction of the three orders of Ratires to a single order, this in turn being divided into six sub-orders. The title of the introduction, "Ein Blick auf den Bau und das Leben der Gesamtheit," is well fulfilled in the text, and the accompanying photographs of feathers and embryos are excellent. A considerable number of the famous old wood-cuts still survive, but the colored plates have been replaced with new and better ones. The most pleasing innovation is the number of remarkably fine photographs, and it is flattering to note that more than a fourth of these were taken in the New York Zoölogical Park. Readers of German will welcome this new presentation of a work which for many years has held so high a place in the field of general natural history.

Samuel Hawksley Burbury, who was well known in England as a student of the classics and mathematics, is dead, at the age of eighty. He published three works on mathematics: With Dr. H. W. Watson, "Generalized Coördinates" and "The Mathematical Theory of Electricity"; alone, "A Treatise on the Kinetic Theory of Gases."

The death is reported from Paris of Paul Georges Dieulafoy, one of the most distinguished medical men in France. He was born at Toulouse in 1839, was a commander of the Legion of Honor, and wrote an important work, in two volumes, entitled "Manuel de pathologie interne."

Dr. Albert Ladenburg, whose death in his seventieth year is announced from Breslau, was professor of chemistry at the university of that town. He wrote extensively in his subject, among his works being "Entwicklungsgeschichte der Chemie," "Die Kosmischen Konsequenzen der Spektralanalyse," and "Ueber den Einfluss der Naturwissenschaften auf die Weltanschauung."

Drama and Music

Chatto & Windus announce "Original Plays," by Sir W. S. Gilbert, fourth series, with a portrait of the author.

"Ibsen's Drafts of His Plays," translated by A. G. Chater, with an introduction by William Archer, is promised shortly by the Scribners.

"The Single Man," a comedy in four acts by Hubert Henry Davies, which was produced in the Empire Theatre on Monday night, with John Drew in the principal part, proved a disappointment in almost every respect. There was little in it worthy of the author of "Cynthia," "The Mollusc," and "Mrs. Gorringe's Necklace." It contains many bright lines, some of questionable taste, one or two amusing situations, some clever characterization, and one excellent scene, but, on the whole, it suggests an immature work, hastily prepared for a particular occasion. The story is trite and the personages are old theatrical types. A bachelor author, in the early forties, a man of gravity, imagination, and learning, engages himself to an empty-headed hoyden of eighteen, who soon reduces him to the last stages of boredom and fatigue. Next he is exposed to the fierce amatory suit of a malicious, desperate, and determined spinster. Then he discovers that the only woman in the world for him is the secretary who long has loved him in secret. The scenes in which these lovers find each other and make common cause are by far the best in the play, and partly justify its existence. But generally the piece is crude and conventional in structure, slovenly in composition, and ineffective in action. Moreover it is not cast happily. Mr. Drew, himself, in spite of his technical dexterity and ripe experience, is quite unable to identify himself with such a character as that of Robin is supposed to be, especially on the sentimental, romantic, and emotional sides. It is strange, indeed, that he should have been induced to undertake it. Nor are his associates much more happy in the parts allotted to them, with the exception of Mary Boland, who plays the secretary with a simple sincerity and womanliness which prove very effective. She carried off the acting honors of the evening.

The first volume of the dramatic works of Goethe in the Grossherzog Wilhelm Ernst Ausgabe (Leipzig: Insel-Verlag), edited by Hans Gerhard Gräf of Weimar, appeared nearly two years ago. The volume was also published separately with the title "Goethes Faust, Gesamtausgabe" (see *Nation*, January 20, 1910). Gräf's example of printing in full the "Urfaust," the finished texts and fragments that Goethe published or left for his administrators to publish, and all other known manuscript fragments, has since been followed by Karl Alt and Georg Witkowski, yet, despite this fact, Gräf's "Faust" has already reached a third edition of 5,000 copies. His second volume of the dramatic works appeared a few months ago, and the third and concluding volume will be out before long. The second contains, in chronological arrangement, the dramas and dramatic fragments written in the years 1765 to 1785, except a fragment from "Belsazar" and one from the "Königliche Einsiedlerin," found in the "Urmeister" and included by Morris among the "Nachträge" to his new edition of "Der junge Goethe." The two versions of "Götz" are given in full, as are also the two of the "Jahrmarktsfest." The first version of "Erwin und Elmire," "Claudine," "Iphigenie," and "Elpenor" appear in this volume; the later forms will be included in Vol. III. "Stella" in the earlier version is followed by the later ending of 1806 (three and a half pages), as nothing would be gained by printing the whole text a second time. Likewise "Jery und Bätely" is followed by the expanded ending of 1825. The thin-paper volume of 905 pages, somewhat smaller in form than the Everyman's Library series, is not quite three-quarters of an inch thick. It is beautifully printed from Latin type and bound tastefully in flexible red leather. A cheaper blue cloth binding is also to be had.

"Franz Liszt," by James Huneker, is in the Scribners' list of autumn books.

A Liszt Museum was opened at Franz Liszt's birthplace, Raiding, on the twenty-fifth anniversary of his death. The ceremonies were preceded by a funeral service in the church.

German opera at the Metropolitan next season will not be confined to Wagner and Humperdinck, but will include the novelties: "Lobetanz," by Ludwig Thuille, and Leo Blech's one-act opera, "Versiegelt."

Among the pianists to be heard in this country the coming season, none will be more welcome than Katharine Goodson. Besides giving a number of recitals she will be heard with several orchestras, including the Boston Symphony and the New York Philharmonic, with which she once before played the Grieg concerto. In addition to this great work her répertoire will include concertos by Liszt, Brahms, Tchaikovsky, Saint-Saëns, and her husband, Mr. Hinton.

Another artist who will be cordially welcomed here the coming season is Albert Spalding, who has won laurels on two continents by his excellent violin playing, the outcome of hard work combined with unusual talent.

Not only will F. C. Whitney not produce the "Rosenkavalier" in this country, but he has also postponed his production of Strauss's new opera in London till next spring, chiefly because of the difficulty of getting the necessary singers. He tried to procure Nordica and Alice Nielsen, but both had previous operatic and concert engagements.

The Milan Scala's repertory for next season does not include the "Rosenkavalier," which was produced in that theatre last winter. Next year the whole season in Milan will be devoted to a Verdi cycle, in commemoration of his centenary.

After a successful tour of the world,

Digitized by Google

Sousa and his band will reach American soil again late in the autumn by way of Hawaii.

Saint-Saëns's latest opera, "Déjanire," which was first sung at Monte Carlo with great success, is to be produced soon in Paris, and, in a German version, at Dessau. The hero of the opera is, of course, Hercules.

Hamburg newspapers announce that Caruso will appear at the opera house in that city on October 15, 18, 20, as Don José in "Carmen," as Canio in "I Pagliacci," and as Count Richard in Verdi's "Masked Ball."

Oscar Hammerstein intends to open his London Opera House with "Quo Vadis."

Ermanno Wolf-Ferrari, whose comic opera, "Suzanne's Secret," was so successfully produced in New York last season by Mr. Dippel's company, will cross the Atlantic next season to conduct the rehearsals of his latest opera, "The Madonna's Jewel," at Chicago, and to conduct his "Le donne curiose," which is to open the season at the Metropolitan Opera House, with Geraldine Farrar and Johanna Gadski in the leading rôles.

Humperdinck's "Königskinder," which was the most popular opera at the Metropolitan last winter, will be the novelty at the autumn season of German opera in London, which begins on October 20. There will be no Geraldine Farrar or Otto Goritz in the cast, but the music is so beautiful and the play so touching that it will doubtless score a success nevertheless, as it has done in the cities of Germany. In Berlin, where the performance was so unsatisfactory that the opera did not at first arouse much enthusiasm (the New York papers printed cablegrams to the effect that it was a failure there), it nevertheless achieved a brilliant success, having had more performances during the season than any other work excepting Mozart's "Magic Flute," on the staging of which a fortune had been spent.

Art

Lady Charlotte Schreiber's Journals: Confidences of a Collector of Ceramics and Antiques throughout Great Britain, France, Holland, Belgium, Spain, Portugal, Turkey, Austria, and Germany from the Year 1869 to 1885. Edited by her son, Montague J. Guest, with Annotations by Egan Mew. Illustrated by upwards of 100 plates, including 8 in color and one in photogravure. In two volumes: New York: John Lane Co. $12.50 net.

This record of an indefatigable Englishwoman's ceramic quest describes the formation of the valuable Schreiber collection, given to the British nation in 1885. The diarist, born in 1812, was the only daughter of the ninth Earl of Lindsey, who at sixty-five, in a second marriage, had wedded Charlotte Layard, daughter of the Dean of Bristol. The father died in 1818. His daughter's education, directed by an easy-going mother and uncongenial stepfather, the Rev. Peter Pegus, was neither extensive nor methodical. An active mind, however, supplied deficiencies. The young lady read voraciously and, helped by her brother's tutor, studied Latin, Greek, Hebrew, and Persian. At twenty-one she was married to a middle-aged widower, Sir John Guest, ironmaster of Dowlais, near Merthyr Tydfil. The young wife not only bore her husband ten children but took a most active interest in his affairs, concerning which she wrote, "I have so schooled myself into habits of business that it is more congenial to me to calculate the advantage of half per cent. commission on a cargo of iron than to go to the finest ball in the world." As a recreation she mastered the Welsh language and literature. Her translation of the "Mabinogion" inspired Tennyson's "Idylls of the King."

Sir John Guest died in 1852. Three years later his widow was married to Charles Schreiber of Melton, Suffolk, eldest son of Col. J. A. Schreiber of Wellington's army. In 1869 Lady Charlotte, now past fifty, unexpectedly caught the "china mania" from two of her sons who had become connoisseurs at a time when "any person with a very small amount of knowledge could go round the old shops and pick up the untold treasures of to-day for the most trivial sums." The mother soon outdid her children in enthusiasm and connoisseurship. Accompanied by her husband who carried a red bag and a chicken basket known to every customs inspector in Europe, she rummaged about, and ransacked antique shops, bargained, and dickered, with successes that appeared when, in memory of Mr. Schreiber, who had recently died, she gave to the public about 2,000 of her finest pieces.

This gift did not result from a sudden impulse, for in 1884 Lady Charlotte wrote:

> The idea is not a new one with me. Indeed, years ago C. S. used to say what a pleasure it would be to collect national objects for the benefit of our country. This plan has slumbered of late years. But the last thing I did last October, before leaving England, was to make a Will, leaving all the "English Collection," as far as I might have the power of leaving it, to the South Kensington Museum, under certain conditions as to its being kept in its integrity.

On November 19, 1885, came the parting with her treasures:

> Before 10 o'clock the storekeepers from the South Kensington came to commence their labors. They have packed and carried away all the Bow—and have packed most of the Chelsea. I have been in all day—attending to the packers. The dear Chelsea Aviary is gone. I close this sad volume with my adieux to the collection.

The lady's sight at this time was failing and many of her former pursuits were denied her. She lived, however, until 1895.

Lady Charlotte for many years kept journals, of which such portions as relate to the years of china collecting appear in the volumes now published. The entries show her to have been a woman of broad sympathies and many interests. Comments on British politics alternate with narratives of adventure among antique shops, for she was of the old Whig persuasion and never in her travels forgot the game that was playing at home. At the general election of 1880, her husband and two sons stood for seats as Conservatives, two other sons as Liberals. As literature, her journal will rank high. Its style befits such a person as her son, Montague Guest, has described:

> In her nature, she was a woman with a deep sense of moral duty, very self-possessed and calm, with an extraordinary control over her feelings. I can truly say that I never saw her angry or unduly excited in my life. She had an untiring energy and was endowed with unlimited perseverance.

Charles Schreiber, though quite as enthusiastic as his wife in collecting, appears to have been less of a connoisseur than she, and he suffered from such physical disabilities that the ferreting, figuring, and haggling often devolved on her alone. A high principled woman she was, but a born bargain hunter also, alert to take advantage of another's ignorance or need of ready money. A characteristic "find" was one at Rotterdam in 1874:

> C. S. presently ran joyfully back to me bringing what de Maan was offering for sale. What was my astonishment and delight when he displayed before my bewildered eyes no less than 5 beautiful Bristol figures!—The price was not small for Chelsea, which de Maan considered them to be, but it was little enough for Bristol, which they really were, and we gladly gave him the £22 to which, after a little parley, he came. Our Bristol figures now surpass every collection.

The unexpected often occurred in the quest, as in the following instance:

> We drove about at Haarlem. The character of its shops has altered a good deal. Franse having changed his manager had nothing good or old to show, Romain's new shop was bad and dear; we got a plate at old Hauja's and were regretting our loss of time and trouble, when, as a sort of forlorn hope, we looked into Leeuw's, where we never yet found anything to buy, and our eyes were greeted with the sight of the loveliest of smelling bottles of fine Bristol glass! I need not say that I carried it off in triumph to add to the three other little darlings that I have at home.

As collector, Lady Charlotte frequently encountered amateurs from the United States. At Dresden in 1879, she wrote: "We came across an American gentleman who told us he had a large collection at home. . . . He cor-

Digitized by Google

roborated what we had already heard, that the Americans are now paying great attention to antiquities and making collections everywhere." Through the later entries are scattered personalia concerning a wealthy woman, of small knowledge, but long purse and patience, who bought curiosities for an American museum.

The journals, apart from their considerable interest as a human document, should be consulted by future compilers of manuals for ceramic collectors. Bits of out-of-the-way information abound in them. In Portugal, for example, Lady Charlotte unearthed data unknown to the ceramic books of her day—and to several very recent publications—concerning the royal works superintended about 1775 by Gen. Bartholomew da Costa, who had "discovered the art of making a beautiful biscuit porcelain and piaques and medallions à la Wedgwood." Elsewhere are minor but valuable additions to ceramic knowledge. In bringing out these memoirs, Mr. Lane will have performed an especially important service, if they should lead to published accounts of the formation of other great museum collections.

The Scribners announce for publication this autumn: "Other People," a Gibson book; "Fair Americans," by Harrison Fisher; "The Annual of the Society of Illustrators"; "The Classic Point of View," by Kenyon Cox, and "History of Art in France," by Louis Hourticq.

"Materials for Permanent Painting" (Van Nostrand), by Maximilian Toch, is an admirable manual intended for the use of manufacturers, art dealers, artists, and collectors. The author is one of the foremost paint technologists; he is also a chemist, practical color manufacturer, and art connoisseur; and is well known as the author of "The Chemistry and Technology of Mixed Paints," the first work ever written on the subject. The manual is not technical, yet sufficient of the chemistry of pigments, solvents, varnishes, driers, etc., is included to give the work a particular as well as general value. The chapters on History of Painting, Sinopia, Photo-Chemical Deterioration of Oil Paintings, and those dealing with the causes of the cracking of paintings, the renovation and cleaning of pictures, and the choice of materials are especially interesting. The description of the pigments (107 pages) appears to be well distributed and of the sort to serve as an excellent artist's guide. If painters will follow Mr. Toch's advice and "will limit the colors used on their palettes to the least possible number [these are stated] and use only those which do not interact [a discussion of this is ably presented], as well as exercise a little judgment in glazing over colors only after they are thoroughly dry," it is reasonable to conclude, as does the author, that "absolutely permanent results will be obtained." The book is supplied with a well-prepared index, and the print, binding, and illustrations are unusually good.

"Rugs of the Orient," by C. R. Clifford (New York: Clifford & Lawton), is planned rather for the practical rug-buyer than for the collector. It goes thoroughly into the modern weaves, especially those of carpet-size. For the identification of weaves the author proposes seven empirical tests, which we believe would work out with all rugs in original condition. There are many plates, including useful photographs of the backs of characteristic types. Outline plates give the elements of the various types of design, and there is some attempt to link these to ancient patterns. On the whole this album is as good a guide as we know to the rug market as it is. It omits certain important types dear to the collector, such as the geometrical mats in scarlet and azure generally ascribed to Damascus. The various kilims might have been mentioned, though the author may not regard these thin fabrics as rugs.

The archæological excavations in Nubia, which were undertaken by the Survey Department of the Egyptian Ministry of Finance, have resulted in interesting discoveries. Excavations were carried on at Bega, Shellal, Khor Bahan, and other important sites. The first pre-dynastic remains were discovered at Shellal. The bodies, which had mostly been buried in the usual contracted position, were found lying on their left side and were in each case accompanied by pottery of good workmanship. In one grave were found no less than twenty-five persons of both sexes. At Khor Bahan some very ancient graves were examined, but here the bodies, though in a perfect state of preservation, were so fragile that it was found impossible to remove them. In graves of a later period some pottery, slate palettes, axe-heads, and beads were brought to light. Between Shellal and Dehmir some graves of the Pharaonic age were cleared, but owing to the infiltration of the Nile they were found to be so damp that most of the bodies crumbled away at the slightest touch. The bodies were not bandaged in the Egyptian style, but were occasionally covered with reed mats or skins.

The excavations which were carried on this season at Priene in Asia Minor, under the auspices of the Austrian School of Archæology at Athens, have had some important results. Among the most interesting finds was a large cistern of very early date, which was restored in later times. Near the cistern were discovered some pieces of early Greek sculpture, and a female statue of Roman workmanship. Some buildings of the Doric and proto-Doric order were also brought to light, as well as a temple dedicated to Apollo. In the neighborhood of Priene a large number of reservoirs were found, which appear to have supplied the town with water, and these were connected with a spring by means of water-pipes. One of the reservoirs ended in a vaulted chamber, built almost entirely of enormous limestone blocks in a primitive manner.

Various archæological discoveries of interest are reported from Italy. Prof. Dante Vaglieri, who is in charge of the excavations at Ostia, has discovered in the theatre there a fine statue of Venus, probably a copy of a Hellenistic work dating from the third or second century B. C. It is supposed that the statue formed part of the ornamentation of the theatre. Professor Dall' Osso, director of the Museum of Ancona, has just found near Osimo the remains of a large Gallic settlement, superimposed on a collection of neolithic huts, which are supposed to date from about 3,500 B. C. The huts are of circular form, with a hole in the centre for the pole which supported the roof. At Paestum excavations have been carried on of the Roman buildings between the temples of Neptune and Ceres. A fine statue was found, larger than life size, which probably represents Drusus Junior in sacerdotal garments.

The intense heat which has prevailed this summer in Europe has threatened to destroy many of the most valuable paintings in the Germanic Museum of Nuremberg, among which some of the works of Albrecht Dürer are especially to be mentioned. The varnish melts and runs across the pictures, and the wood on which they are often painted cracks and falls in pieces. It has been found necessary to remove these rare artistic treasures from the extremely hot gallery to the cellar until a new building is erected, in which they will not be subjected to such excessive and destructive variations of temperature.

The death is reported of Charles Louis Gratia, the oldest member of the Société des Artistes Français. He was born in 1815 and began exhibiting at the Salon in 1837. He is best known as the author of portraits in pastels.

Finance

THE THREAT OF A RAILWAY STRIKE.

Last Friday's conference, at San Francisco, between the Southern Pacific managers and the representatives of the machinists on the line, ended as most fair-minded people expected and as all of them must have hoped. It ended in a courteous but firm refusal of all the shopmen's demands. The decision had been awaited with considerable anxiety, for two reasons. One reason was the financial community's apprehension that, if the demands of the railway machinists were denied, the men would strike. The other was the doubt which existed in some quarters whether the railway managers might not yield. Either a strike or a surrender by the companies to these new demands would have been badly received in financial circles generally, but in view of all the circumstances, it is probably safe to say that the second alternative would have had much the worse effect. The question was not tested. The railways having stated their position, the employees did nothing except to express, through their leaders, a wish to have their proposals arbitrated. So the matter stands at this writing, the probability of a strike having greatly decreased. It remains to inquire what was the nature of the issue which has been thus raised and brushed aside.

When the employees of the Union and Southern Pacific Railway shops voted

Digitized by Google

two weeks ago, apparently by overwhelming majorities, to place certain demands before their employers and to strike if the demands were not conceded, a good many people declared that the long-predicted "labor trouble" was at hand. There had been much talk ever since 1907, but especially since last spring, about "liquidating labor," and although nobody seemed to know exactly what was meant by that somewhat singular figure of speech, there was a general feeling that the process would mean industrial collision.

It was only last week that the general public got the text of the shopmen's ultimatum. They wanted the company to deal, in shop disputes, with a federated union of all crafts throughout the system, instead of with separate unions for each craft. They insisted that the company should compel all shop employees to join that union, whether they so wished or not; that the union's committees should designate who should be laid off when forces were reduced, and that no union employee should be discharged or suspended without that committee's previous consent. They asked for an increase of wages and a shortening of hours which, the management set forth, meant average total increase of 36 per cent. in payrolls. Last, but not least, they asked that the company should put a stop, now and hereafter, to all piecework, premium, or "bonus system." That is to say, they asked the official abandonment and rejection of the "scientific management," whose possible general introduction, with its resultant economies to employer and employee, was the central argument before the Interstate Commerce Commission, six months ago, against the granting of higher railway rates.

When these demands were published, it was manifest to every thinking man that the railways could not possibly concede them. It was at least peculiar, when the Harriman lines were laying off 20 per cent. or so of their shop employees, because of falling earnings and reduced requirements of business, to expect them to increase wages. The concessions to the federated union would have been tantamount to surrender by the companies of final management of their shops.

The matter was probably at no time taken as seriously outside of Wall Street as on the stock market itself. Our railway employees have been encouraged to make demands, because of the ready yielding of the companies to the demands of other years. The earlier concessions may have been wholly warranted, but they evidently encouraged the making of fresh demands which were not. Almost alone among the industries, the railways have increased the average pay of their employees since the panic of 1907; the shopmen themselves have had 12 to 15 per cent. increase in the past five years; therefore they have no grievance. A year ago, some 27,000 Pennsylvania Railroad trainmen voted authority to the union leaders to call a strike unless wages were increased. The managers explained that they could not do it; that wages had already been raised while profits were declining, and that no further increase could be made. The men accepted the reply and did not strike. There is reason to believe that enough of this spirit exists in the ranks of American labor to avert any general outbreak of such trouble.

The industrial history of this country, during the past quarter-century, indicates that strikes are most numerous at the culmination of a business boom, and naturally most successful, but that when they break out in a period of trade depression, they are then more violent than at other times and usually least successful. Prior to the beginning, in 1898, of the last epoch of prosperity, the year with the greatest number of strikes in the United States was the "boom year," 1890, and nearly 53 per cent. of them were successful. The greatest "strike year," numerically, on the Bureau of Labor's published records, was 1903.

But 1877, when the Pennsylvania Railroad strikers virtually declared war on the public authorities; 1882, when the famous Homestead strike occurred, and the employees of the Carnegie mills intrenched themselves behind steel billets, firing at whomsoever the company sent to recover the works, and 1904, when the United States regular army had to be called upon to protect the trains from the insolent embargo of the Railway Union at Chicago, were all years of financial and industrial depression. The companies could not grant demands for higher pay, and the workingmen fought with all the greater bitterness. But sometimes the issue was not a question of wage advances, but reductions. This, at least, has not yet become an issue in the present industrial situation—least of all with the railways. That is one reason why people best qualified to judge have not predicted for the United States an experience like that of England.

TWO IMPORTANT NEW BOOKS

A Short History of the Roman Republic

By W. E. HEITLAND, M.A.

8vo. With 6 plates and 18 maps. $2.00 net.

"This writer's larger book on the same subject is favorably known to classical scholars, and, while the present volume is no mere abridgment or epitome of the former work, it is not unfairly described as an effective adaptation of it, though it has some features that were not present there, *e. g.*, illustrations of coins. It is, for the rest, a scholarly and instructive history, which should prove useful to all classes of students of its subject."—*Scotsman.*

The Collected Papers of Frederick William Maitland

Downing Professor of the Laws of England

Edited by H. A. L. FISHER, M.A.

In three volumes. 8vo. $10.00 net.

With the exception of his prefaces to eight volumes of the Selden Society and his introduction to the *Memoranda de Parliamento*, these three volumes practically represent the whole mass of the late F. W. Maitland's scattered writing; wherever an article, however brief, contains a new grain of historical knowledge or reveals his original thought upon some problem of law or history, it has been included in this collection.

Second Edition Now Ready

PAPER-BAG COOKERY

By NICOLAS SOYER

Chef of Brooks's Club, London.

Cloth, 16mo, 60 cents net; postpaid 65 cents

Cooks food better, in half the time, with half the trouble, and cuts the fuel bill in two.

This book with its recipes tells how to cook almost everything but soups in paper-bags in *any* oven—a method now practised in many countries and likely to revolutionize cookery the world over. More savory, quicker, cleaner and cheaper cooking; no washing of pots and pans, and no cooking smell. A boon alike to epicures and housewives. For information write—

The Nation

NEW YORK, THURSDAY, SEPTEMBER 14, 1911.

The Week

Gov. Harmon's criticism of Mr. Taft's tariff vetoes is not so easily answered. Who can deny the truth of his statement that Mr. Taft needed no tariff commission report,

when he promised a general reduction before his election, nor when he called the special session to keep the promise, nor when he signed the bill that broke the promise, nor when he confessed that the woollen and cotton goods duties were too high, nor when he made the agreement with Canada?

Nor is it possible to deny the Governor's assertion that Mr. Taft refuses to give any tariff relief where he admits it is needed "until five men who are not responsible to the people, nor even experts, shall advise him" how much the profits of men who by tariff-making trickery have obtained the right to rob the people shall have those profits reduced. On what he deems Mr. Taft's abuse of the veto power, Gov. Harmon is equally emphatic. He believes in the veto; but for Mr. Taft to use it to defeat the plain mandate of the people as expressed by Congress, because he himself is not certain about its wisdom, and wishes to wait for somebody else to advise him, is, the Governor thinks, "a new and perilous departure from the wise design of the Constitution." Even discounting the fact that he is a Democrat, Mr. Harmon's criticism, coming after Champ Clark's vigorous protest, puts Mr. Taft more clearly on the defensive than before, just as he sets forth on his tour of vindication.

Senator Bailey's announcement that he will not be a candidate for reëlection at the end of his present term does not constitute the sole basis for expecting the Senator's absence from Washington after March 3, 1913. Mr. Bailey could not be reëlected if he would, such has been his steadily mounting unpopularity among the people of Texas. The Democratic victory of last year, the Democratic record in the last session of Congress, and the Democratic hopes of next year, have all combined to make Senator Bailey's position untenable. It may be pardonable in the member of a minority party to kick over party principles and the party traces. A touch of madness is always permissible in people who are in a minority, and besides there is no harm done. But with the Democrats once more come into their own, recreancy of Mr. Bailey's type becomes a very real source of embarrassment. The Democratic party cannot afford to have it said that one of the most conspicuous survivals of "Aldrichism" is to be found within their own ranks. Mr. Bailey entered the United States Senate at the early age of thirty-eight. He will leave it at fifty, what we regard in politics as still a young man. His passing is significant of the profound change that is coming over the make-up and the temper of the Senate.

In Monday's vote in Maine, on the proposal to strike prohibition of the liquor traffic from the State Constitution, the cities went strongly against prohibition; the country districts stood stanchly by the old policy. This does not necessarily imply that Bangor and Portland and Biddeford are as wicked as Sodom and Gomorrah. Nor does the vote of the rural sections prove that they are models of all the virtues. But the large towns and the villages gave a natural verdict upon the conditions as they have been affected by them. In the cities, the prohibition law has been too often a mixture of farce and failure. There has been not only drunkenness, but a great deal of beastly drunkenness. Maine seaports have had a bad name with naval officers, who have said that shore-leave there meant the worst kind of intoxication for the sailors. At points near the Canadian or the New Hampshire line the going to and fro in search of intoxicants has long been notorious. One Sunday morning train from the north has had the nickname of the "Grand Drunk Train." Near Portsmouth the sight of returning revellers, many of them raging drunk, has been painfully common. All these facts have inevitably led many dwellers in the cities to come to the conclusion that prohibition had broken down, that it caused greater evils than it cured, and that a wiser plan would be high license and strict regulation.

Residents in hamlets and the countryside, on the other hand, have had a different moral beaten in upon them. An occasional drunkard has staggered down the village street, or been discovered in a ditch by the road, but in general there has been, not only an entire absence of open temptation to drink, but a very high level of temperance in practice. People will tell you, with pride and with deep feeling: "Why, two generations of boys have grown up here without once seeing a saloon!" They cannot be blamed for thinking this an inestimable blessing.

Maine may find it difficult to make up her mind about prohibition, but she has no doubt as to direct primaries, the returns from the vote upon this question showing a large majority in favor of the direct-nominations bill. In this respect the State is thoroughly in line with those others that have been permitted to express an opinion upon the subject, and which have jumped at the chance of trying a weapon that the politicians have been so stupid as to fight to keep out of their hands. No longer ago than last January, Gov. Plaisted, in his inaugural address, advised limiting direct primaries to those offices in which the people feel the deepest interest and the candidates for which are likely to be well known to the mass of voters. "We are bound," he said, "to enact a direct primary law." But he thought it unwise to go farther than nominations for Governor and Representatives in Congress. The Legislature passed such a bill. There was a demand, however, for a more inclusive measure, and it is this that the voters approved on Monday, even the Governor having at last come out for it.

In a decision involving the right of the judge of the Police Court to sit in extradition cases, thus paralleling the case of John J. McNamara, now in jail at Los Angeles on a charge of dynamiting, Judge Remster of the Circuit Court held to-day that the Police Court has no jurisdiction in such cases.

Thus runs an Indianapolis dispatch. We call attention to it as a matter of justice; for if the McNamaras were illegally extradited, the country ought to know it. But the question is still to be answered whether any substantial injustice was done by taking J. J. Mc-

Digitized by Google

Namara before this police judge or whether the injury is purely technical. It is hard to see why, in view of the statements of Mr. Burns, there was not more than enough evidence to warrant any judge, high or low, in handing McNamara over for trial. At the same time it must be pointed out in fairness to the labor people that this Indianapolis Circuit Court's decision will confirm them in their belief that wrong has been done to the McNamaras, whom they believe to have been illegally kidnapped by men who have since been indicted.

A grave danger confronts this republic. It is not the danger of anything fundamentally wrong with our government to-day. It is the danger of the socialistic horde sweeping in from the West, and threatening to overwhelm the rest of the nation. It must be stopped or the liberties and the freedom of this people will be blotted out and representative government, the best ever devised by human minds, will have ceased to exist.

This trumpet-call to duty by Senator Lorimer is a gratifying demonstration that not all of our public men are mere office-seekers. A few of them at least have the statesman's point of view. "The only thing, in my opinion, that threatens American freedom and American liberties," continues the Senator, "is the proposed changing of our system of government." He refers to the initiative and referendum and the recall, advocated, as he discriminatingly declares, by so-called "progressives" who are in reality simply Socialists. The Chicago *Daily News* recalls that when the infamous Yerkes street-car bills were defeated at Springfield, despite the heroic efforts of Mr. Lorimer and his friends, the disappointed traction magnate proceeded to deplore the triumph of Socialism. Political authorities in Illinois, both past and present, are evidently agreed, therefore, upon what constitutes the real peril of the republic. As a fitting climax to his appeal, the Senator should call upon all Senatorial investigating committees to drop their comparatively unimportant tasks in order to give their entire attention to the new Attila.

The incorporation last week, under the New Jersey laws, of a new steamship company to build and operate vessels through the Panama Canal between New York on the East coast and San Francisco on the West, is of particular interest, for two reasons. First, it insures the building of American ships adapted to the service, in time to engage in this transportation work when the canal is finished in 1913, and, next, the terms of the charter provide with the greatest care for an absolutely independent service. Nobody who is connected with any competitive rail or steamship enterprise, whether as a director, officer, or agent, is to be eligible as director in the new company. Even a stockholder is to be barred from voting on any question if the Postmaster-General serves notice that such stockholder represents a competing interest. The shareholders' voting power is so arranged that holders of large blocks of stock shall have less voice in proportion to their holdings than the small investor.

Additional provisions of the plan, chiefly prescribed by the United States Government, bar out absolutely both underwriting syndicates and stock watered to give a bonus to promoters. In return for these binding stipulations, the Government engages not to let its mail contracts to any steamship company not conforming to the same essential requirements—especially the absence of entanglement with competing railway enterprises. The reason for all this scrupulous provision may readily be found in the past history of the Panama route between our Eastern and Western coasts. Through ownership of such facilities, direct or indirect, and often through heavy cash subsidies to the Isthmus railway and the steamship line connecting with it, the transcontinental railways have for a very long time past been able to block the competitive possibilities of the ocean route.

Mr. Alvey A. Adee's completion of his twenty-fifth year of service as Assistant Secretary of State constitutes a remarkable record in our ever rapidly changing Federal Government. In the State Department Mr. Adee has furnished precisely the link between a new Administration and the past which is indispensable in a branch of the service where precedents count for so much. He himself has long personally proved the desirability in the United States of such permanent under-secretaries, removed from politics, as are to be found in every foreign country of importance. But it is in the diplomatic departments that such valuable officials as Mr. Adee seem to be most readily developed. The case of Herr von Holstein, who for many years was the real power in the German Foreign Office, but whose name was hardly known outside of that bureau, is an example of this. Of Sir Robert Herbert, who was from 1871 to 1892 under-secretary of the British Colonial Office, it was said that he really "controlled its destinies."

The outcome of the Mayoralty primary in Cincinnati should not be overlooked. Henry J. Hunt, the young prosecuting attorney who has served two terms in that office as an independent Democrat and did his utmost to bring Boss Cox to trial last winter, received the Democratic nomination without opposition, while the Republican nomination goes once more to Mayor Louis Schwab. From now on there will be a contest in that city worth watching. Mr. Hunt is no mean campaigner, as his reëlection to the prosecuting attorneyship shows. He represents, moreover, the best type of the young college man in politics and is a fit representative of the new and progressive Democracy. Behind him the forces of good government ought to rally vigorously.

A Cincinnati professor has been advising teachers of civics to read the newspapers. By studying his own community and comparing it with others, he holds, the pupil arrives at a correct understanding of the fundamental principles of community life. This looks like putting a pretty heavy burden of induction upon the pupil. Older heads than his might be puzzled to work out the fundamental principles of community life from the records of Cincinnati, Omaha, and Seattle which appear in the daily press. Rather, let the pupil learn his fundamentals from his civics text as developed by his instructor, and then turn to the newspapers for illustrations of them. This kind of perusal would tend to have an effect upon the press itself. Once set any large number of intelligent persons to searching for matters of significance in the columns of the newspapers, and it will be harder for sensational editors to justify their practice of "burying" such items in order to give prominence to the brutish or the trivial. Meanwhile, classes in civics may ponder over the problem of community life that is presented by its distorting mirrors.

Digitized by Google

To what extent are our sentiments regarding death, love, and other elemental facts a matter of good taste and easy command of language? A young wife has been shot down by the side of her husband under circumstances that cast grave suspicion on the latter. How does the unfortunate young man bear up under the double burden of the great calamity and the horrible suspicion? On the morning after the murder the bereaved husband is discovered sitting on the porch of the house within which the body of his wife still rests. He is drinking beer, and he expresses regret at the tragedy in very much the same manner he might deplore losing his hat through a car window. Is it moral depravity? It may have been in this particular case, but the news of every day brings instances of men neither criminal nor abnormal, but only uneducated, who speak of death neither with emotion nor with complete indifference which in itself would be a form of emotion, but with an utter inadequacy of expression that is almost ludicrous. Does this mean that speech is everything, and that without a ready command of the words in which literature has enshrined the tremendous facts of life these facts have little of the sacred honor or sacred joy that commonly surround them?

Mr. Balfour's recent utterance upon the necessity of the party system finds an echo in the Far East. As the Shanghai *Mercury* puts it, one does not apologize for eating one's dinner, nor even for breathing, unless one happens to be very badly affected by a cold. But it is impressed with the ex-Premier's statement of the waste of political energy caused by party politics, his calculation being that about 80 per cent. of the brains, character, and health employed goes for naught. It makes a suggestion, therefore, for saving a large part of this activity. All that is needed is the formation of a Central party of moderates, lying between the irreconcilable Tories and the equally irreconcilable Socialists. Of the 670 members of the House of Commons, 500, it believes, would naturally belong to this new party, which would debate and vote with far less time, talk, temper, and money than are required now. The shortest reply to this proposal is that, while the great bulk of the Commons may be called moderate, no Prime Minister could hold it together for a single session. One may be moderate and still have opinions at sharp variance with another moderate. The ground that lies between extremes is wider than a garden-patch. It has taken all of Mr. Balfour's metaphysics to keep one party together, even with Joseph Chamberlain out of the arena, while Mr. Asquith has not had too easy a time keeping the other united.

It is interesting to take a glance at the figures for foreign commerce in the French colonies with a view to determining how far French rule militates against the traders of other countries. The term "Tunisification" has come to mean the transformation of a dependency into a closed commercial preserve. It is the Tunisification of Morocco that Germany protests against. The figures, however, show that twenty years ago Tunis bought 60 per cent. of her imports from France and sent 78 per cent. of her exports to France and her colonies. In 1898 the respective ratios were 66 2-3 per cent. and 76 per cent. In 1906 they were 67 per cent. and 57 per cent. In 1907 they were 67 per cent. and 54 per cent. Thus, during twenty years of French rule, Tunis has brought France an increase of 7 per cent. in imports and balanced it with a decrease of 24 per cent. in exports. Evidently, the foreigner has not suffered severely, and as a matter of fact British and Italian trade has been growing with remarkable rapidity. Taking all the French colonies with the exception of Algeria and Tunis, it appears that, twenty years ago, France had about 40 per cent. of the colonial trade, fifteen years ago she had about 45 per cent., five years ago she had 43 per cent., and in 1908 she had 45 per cent. Here again there is no evidence of a rapid tendency to undermine the trade of other nations.

Just how embarrassing is the Kaiser's speech foreshadowing additional naval construction appears from an examination of the German press. The Socialist organs alone are jubilant; it is for them a splendid campaign issue, this statement by the Kaiser that new fiscal burdens and more grinding taxes are to be placed upon the poor. Without doubt, this speech helped to bring out the 200,000 workers who paraded the other day to protest against a possible war with France over Morocco. The *Vorwärts* makes for the Socialists a severe attack on the Crown and points out that it is impossible to expect peaceful tendencies to develop in England so long as such a programme is threatened in Germany. As for the cry of more taxes, why nothing could help the Socialists as much, and a programme of more ships will but widen the cleft between the Liberals and Radicals and the Conservatives. Moreover, it will be recalled that when the British Prime Minister approached Germany with a view to the discussion of the question of limiting armaments the Chancellor replied that, much as his Government desired such limitation, it was unable to do so, owing to the Navy Law regulating the building of the fleet for some years to come. But if that law is to be amended so as to provide more ships, the question of a *rapprochement* between the two nations is again indefinitely postponed. It is no wonder that the Berlin *Tageblatt* thinks that "it is scarcely to the public interest to give an extended meaning to the Kaiser's words," and that the bulk of the non-Socialistic press remains silent.

Educational problems are getting unusual attention in China. The Ministry of Education is proposing to introduce a system of compulsory education for elementary studies. The details are apparently not well worked out, but, in the opinion of the *North China Herald*, criticism for the moment may confine itself to one vital principle, namely, that where education is made compulsory, the state must be prepared to pay for its poorest citizens. It is led to this reflection by Rule 6 of the tentative plan, which exempts those who are too poor to pay for the elementary course. The *Herald* admits that possibly, since the abolition of the old form of competitive examination in the Chinese classics as the one road to official promotion, the keen interest of Chinese parents in the education of their children has become somewhat deadened. It holds, nevertheless, that in China the problem is not so much the making of education compulsory as the bringing of it within the general reach. It may be a far cry to free public schools in China, but there is evidence that the initial step—the step that costs—is not remote.

THE SERIOUS CANADIAN OPPOSITION.

In the course of the political campaign now going on in Canada, an immense deal of clap-trap has been talked. This was inevitable. Canadian politicians are not so different from our own that they do not know how to run off on side issues, appeal to prejudice, and seek by every cunning device to make the worse appear the better reason. So we have had the cries in Ottawa and Toronto and Vancouver about threatened annexation to the United States and about the American Trusts financing the anti-reciprocity campaign; have seen Canadians lash themselves into excitement about their proposed navy, though what that has to do with reciprocity it would puzzle seven men who can render a reason to say, and have heard bewildering discourses about "loyalty" and about the peril to the British Empire which would result from Canadians and Americans buying and selling more freely. Of such is the kingdom of politics, one side of the Canadian border or the other.

This is not to say, however, that the campaign has not produced some thoughtful and worthy debating. The weight of argument, as we believe, has been on the side of the Government in its efforts to bring about closer trade relations with the United States, but the Opposition has not been without speakers who have had something to say deserving the attention of sensible men. In the speeches of Mr. Clifford Sifton, in particular, there have often been a gravity and a force that command respect even if they do not compel agreement. This ex-Liberal who has had so much to do with the development of the Canadian West, and who has now cast in his political fortunes with the Conservatives, disclaims all idea of hostility to the United States. In opposing the reciprocity pact he does not accuse this country of sinister intentions. Dismissing, in fact, the common anti-American "bogeys" of the campaign, he bases his position upon considerations of national welfare. This he thinks that the Canadians can best procure while completely detached from us. A good indication of his line of reasoning is given by the following extract from a recent speech of his:

> We regard the United States as a great nation confronted by serious problems of unemployment, of exhausted resources, and monopolistic control of commerce. We wish our great neighbors well in the solution of these difficult questions, but do not desire to mingle their problems with ours. We object to this treaty because it binds the provinces of Canada in firm bonds of social and commercial union with the United States.

This is obviously something more than the average humbug of the hustings. In it there is food for thought, not only for Canadians but for Americans. Our Northern neighbors will in due time pass judgment upon this reasoning from the point of view of national economy and wise public policy for the distant future. We hope that they will detect the element of exaggeration in it, and refuse to believe that the freeing of commerce between two nations necessarily means the absorption of one by the other. If trade with the United States means the doom of Canada, then she is already doomed, for that trade is great and growing, despite tariff barriers. But it is chiefly to Americans that the sober language of Mr. Sifton should give pause. How much truth is there in what he says? Is it true that our situation as a country is now such as to make patriotic Canadians honestly shrink from putting themselves into nearer contact with us? This is, for the United States, the serious side of Canadian opposition to reciprocity.

It will have to be confessed that Mr. Sifton could justify some of his statements by citing our own public men. That we have squandered our natural resources until some of them are at the vanishing point, has been a commonplace with us for years past. Particularly in the matter of our forests can the charge of Mr. Sifton be maintained, and the fact shown to have a direct connection with our efforts to establish reciprocity with Canada. There has been no concealment of the desire to extend our purchasing radius for wood-pulp and printing paper. And something of the same sort may be said in regard to our exhausted soil, in certain sections of the country. As for our having fallen into the grip of monopoly, and having labor and industrial problems of the most difficult kind, we are in no position to make denial. Have not all these things been shouted from every stump and printed in every magazine?

It is not a very flattering picture of us which Mr. Sifton presents. By way of protest, we could, if so minded, insist that Canada is not ignorant of evils of the same kind as those we suffer from. It is the better part, however, to admit the element of truth in what Mr. Sifton alleges. The proper reply to him would confess our national sins, but point to the signs of repentance and amendment. If we have been prodigal, we are resolved now to be prudent. We are striving to break monopoly and to deal wisely with the discontents and the dangers of labor. And in any event, we should have to tackle our own problems. Canada could not help us more than we could help her. Nor need she fear any such assimilation as would draw her away from her own national housekeeping into ours.

THE BARBARIAN.

If a Zulu were asked to agree to settle in court his quarrels with a neighboring chief, his disdainful clicks and snorts would be promptly heard. "What, give up the chance to sneak up by night and burn his kraal and steal his cattle and kill his women and children? Not so long as I can hurl a spear or brandish a club!" And it is equally natural for a nominally civilized man in whom the barbarian instincts are dominant to indulge in savage antics when it is proposed that nations shall abolish that form of murder called war, by entering into treaties for the quieting of all disputes by arbitration. The greater the applause evoked by such an effort to establish universal peace, the more violently will the barbarian rage against it. He will fall before his war-gods, like an Ashantee grovelling at the feet of Unkulunkulu or an Aztec in the dust before Huitzilopochtli, and call upon them to save us from the awful calamity of having no more skulls to crack.

If this particular barbarian happened to be a man who knew nothing about the law, he would attack the work of the ablest lawyers in this country and in Great Britain as betraying "hopeless confusion." They, to be sure, had carefully studied their problem, had chosen precise legal terms in which to express their meaning, had explained and defended their aim and the exact effect of their proposals, and in so doing had commanded the assent and approval of our leading jurists, as of the humane and Christian people, not only of this country but of the whole world. That, however, would only inflame the barbarian the more. He would cry out that

Digitized by Google

these men of light and leading were nothing but sentimentalists and hypocrites. He would delight in setting up his opinion against that of our best, and would let the world know that, like Moloch, his voice is still for war.

If this particular barbarian happened to be a man who could not endure the popularity of a President, he would set himself to doing all that he could to undermine it. Having noted the acclaim with which the whole civilized world had hailed the forward movement of that President along the path toward universal peace, he would seize the occasion of an adverse Senate report to fling himself into the fight against the arbitration treaties, and so endeavor to cloud the President's best title to present gratitude and to future fame. He would eagerly ally himself with the basest elements arrayed against the President. All the inveterate enemies of England, the Clan-na-Gael, the physical-force conspirators, the schemers who for their own selfish purposes would keep alive old animosities and continue to make of industrial democracies armed camps—with all these the barbarian would gladly join himself. Not for him self-restraint, or the courtesy due a friend and the official head of his own party. No; the war-drum and the snake-dance would set his blood tingling, and he would rush out to help bring the noblest work of the President to the ground.

If this particular barbarian happened to be a man with pretensions to literature, he would assiduously shape his conduct according to the directions of the great master of perfidy in statecraft. Machiavelli's Eighteenth Chapter would be his guide. The Italian instructed the public man that nothing was more important than to have always in his mouth words about truth and good faith and religion, while ever ready to violate a pledge or to disregard the most solemn obligation. Accordingly, the barbarian would have much to say about "righteousness," but would betray his real nature and intent by declaring that "this country would not keep an agreement to arbitrate all questions of vital honor and interest, even though it were so unwise as to make it." And the precedent of the tearing up of our treaty with Colombia and our theft of Panama would be tacitly in the mind of the barbarian as in that of all of the rest of us.

If this particular barbarian happened to be a man who for six years had been drunk with power, and who could not bear retirement, he would let no opportunity slip to grasp at the old notoriety and the grateful clamor. If a chance offered to stir up a row, he would seize it; if the worst passions among his countrymen seemed to be dormant, he would seek to rouse them; if leadership in the cause of secure and permanent peace seemed to be developing strength, he would dash in to shatter it if he could. Anything to make trouble, to excite ill-will, to widen breaches, to embitter factions, to create a sensation. But just because he was a barbarian, he would not know how hopelessly out of touch with his time he had become; would not realize the mingling of contempt and disgust which his leaping forth as the plotter against the President and as the champion of war would cause throughout the country; would not understand that the American people are no longer minded to dance when he pipes to them. And so of this barbarian, as of the shorn Samson who said that he would go out as at other times and shake himself, it has to be recorded that he wist not that the Lord was departed from him.

THE COLLEGE AND THE MAKING OF MEN.

The alumni of Washington and Lee University are naturally gratified by the remarkable number of its graduates who are now occupying prominent positions in politics, on the bench, and in the various fields of social activity. A new Justice of the Supreme Court, Joseph R. Lamar, is a graduate of the law school's class of 1878, in which were also ex-Gov. Stephens of Missouri, ex-Gov. MacCorkle of West Virginia, the present Chief Justice of the Supreme Court of Alabama, the general counsel of the Baltimore and Ohio Railway, and the director of the Russell Sage Foundation. In the Senate of the United States are five graduates of this university—Foster of Louisiana, Chamberlain of Oregon, Owen of Oklahoma, Bryan of Florida, and Poindexter of Washington. Six graduates speak for five States in the House of Representatives, including such useful Congressmen as Slayden of Texas and Hay of Virginia. It is claimed for Washington and Lee that its law school, "though never large in comparison with such schools as Harvard, Columbia, Yale, and others," has none the less more "alumni upon the supreme courts in a larger number of States than any other law school in the country." The Chief Justice of the Court of Claims in Washington was graduated in 1868, and still other prominent graduates are Thomas Nelson Page, Clifton R. Breckenridge, lately Ambassador to Russia; Wade H. Ellis, Dr. James H. Dillard, the head of the Jeanes Fund, and Julius Kruttschnitt, now prominent as the executive of the Harriman railways.

Altogether, this is an extraordinary showing, and one which has set people to wondering just why Washington and Lee should have produced so many notable men, particularly during a period when it was sharing the reconstruction miseries and the poverty of the South. The advocates of the small college will, of course, find in it a complete justification of their contention that the smaller the institution, and the closer the contact between professors and students, the more the graduate gains from the teachings and personal impress of his instructors. The St. Louis *Republic* has a theory of its own about this particular case of Washington and Lee. It is this:

> The kind of education that makes great men is not merely cultural, technical, or what not; it is a training that unlocks the possibilities of personality. In Washington and Lee to-day the life of the teachers is static rather than dynamic; they were and are men of small incomes, simple habits, and well-furnished minds, secure of their positions, honored in their communities, and satisfied with the scholar's kingdom. Is there not more, perhaps, in contact with men at peace with themselves and the world than in membership in a great university where the instructor desires to become an assistant professor, the assistant professor an adjunct professor, the adjunct professor to head a department, and the president to secure five millions more of endowment than did his predecessor?

Now, we should be the last to deny the spiritual influence of the man at peace with himself and the world and free from restless ambition—of him whose thoughts are ever centred upon things eternal rather than temporal. With much of the *Republic's* contention we are wholly in sympathy. That the advocate of the small college is, moreover, correct in asserting that there is in it a greater opportunity for moulding the students, for guiding their thoughts, and particularly for inspiring them with high ideals of public service, we have often contended. But it is quite possible to go too far in this direction. If

Digitized by Google

the record of Washington and Lee is exceptional, it is surely due to exceptional conditions, as well as to the self-abnegation of a faculty whose fruits prove them to have been remarkable teachers. In the first place, it would be hard to find another small college with such a tradition and setting. When Gen. Lee, after Appomattox, rode his famous Traveller over the mountains to Lexington and became president of Washington College, it was to a town already distinguished as the home of "Stonewall" Jackson and the site of the Virginia Military Institute. Many distinguished soldiers and citizens had lived there or near-by, and the college itself had grown out of a benefaction of George Washington.

After the idol of the Confederacy, there came to Lexington the colonels and captains of his defeated legions, men of unusual character, fortified by years of warfare and suffering, who sought to complete their interrupted education. To them succeeded, after Gen. Lee's death, youths also of unusual character, for it required sacrifice, courage, and ambition to obtain a college education in the South in the late sixties and the seventies. They found at Lexington an unusual spirit and inspiring associations, as well as teachers to admire and profit by. Hence it is not altogether unnatural that the graduates of this period speedily became leaders in their communities. The really educated men were rare, and these had also acquired the pioneering spirit in the Virginia hills and found their way readily to Oregon, to Oklahoma, to New York, to New Orleans, all over the new South. Thus, while we would not rob the faculty of Washington and Lee of a tittle of its just due, it is only fair to say that conditions as well as the teachers were responsible for the record of public service to which we are glad to call attention.

It is idle to deny, too, that more and more in the larger universities the teacher is lost in administrative work and can give but less and less of himself to the thronging students. Ex-President Eliot found it necessary to devote himself to the working out of great educational and administrative problems and had but little time, and perhaps inclination, left for direct personal contact with the students. Yet in Harvard, crowded as it has been, there are and have been rare personalities, like Agassiz, Norton, Lane, Child, and Shaler—to mention but a few—who did their wonderful work of inspiration, even though 400 men listened where but forty would have heard at Washington and Lee. Nothing was more distant from their minds than the thought of their titles, their power within the walls of the faculty-room, or their pay. They were great teachers, born for their places, and the men under them were quickened for a lifetime by their spirit and their thought. In Texas again it is the large university of that name which sweeps everything else before it in the public and social life of the State. So that it is not the size of the college that counts alone, nor its distance from the marts of the world. It can only be said that for him who has a distaste for administrative problems and would find his life's happiness in setting firmly the stamp of his personality upon the students before him, the small rural college does to-day offer the best opportunities.

THE ART OF THE SHORT STORY.

Short-story writing, says Mr. H. G. Wells in the introduction to his new volume, "The Country of the Blind," is a young man's game. It is the "jolly art of making something very bright and moving." It may be "horrible or pathetic or funny or beautiful or profoundly illuminating," but it must move quickly or it will never get done in time. An eminent authority thereby subscribes to an opinion that is commonly accepted but is by no means absolutely true. We fall into error by reasoning from abstract principles. Writers on the theory of the short story have taken it for granted that, because a short story is short, its technique must bear the same relation to that of the novel as the technique of the 100-yard dash bears to the Marathon race. The theorists find that the short story is in essence a single incident, an anecdote; and to a certain extent that may be true enough. It is certainly more true of the short story as it is written on the Continent and even in England than it is among us. But taking the anecdote for granted, why does it follow that the manner of its telling must be a "sprint"? The art of telling a good story consists precisely in the elaboration of detail. It is no paradox to say that if we compare the novel and the short story with regard to the ground covered in either—plot, number of characters, breadth of canvas, and duration of time—the pace of the big book will be found to be proportionately swifter than that of the short story.

The secret of successful short-story writing in this country was formulated by the editor of an "all-fiction" magazine, who tells his contributors, "Pick out your subject and write all around it." That was not Maupassant's method, but it is open to question whether Maupassant, if he were writing to-day, would find an easy entrance into the American magazines. The Frenchman's stories moved rapidly, but it was with a swiftness that carried him by the shortest route from the beginning of his story to the end. Our own short stories move rapidly, but it is a form of speed that is confined within the limits of each paragraph. Every sentence must have "go" to it and stimulate the desire for the next sentence as an object in itself, and only secondarily because it brings us nearer to the end of the anecdote. In brief, our short-story writers concentrate, as a rule, on the manner rather than on the substance of the narrative. They elaborate, they embroider, they are not particularly anxious to keep their surprise to the end, as the tradition of the anecdote and the short story requires. Their specialty is rather in creating sustained interest than in creating suspense. They make the walk pleasant by pointing out one curious object after another on the road rather than by hurrying you on to a big treat at the end.

The magazine editors believe they know what they want in the line of short fiction. Their pathetic cry for movement and plot must be familiar to tens of thousands among the army of the rejected. But if movement and plot are what editors insist upon, their most successful stories indicate that they do not get what they want. Movement we have discussed. Take plot, now. To what extent does plot enter into the stories of the late Myra Kelly? To what extent does it enter into the graceful fiction of Mr. Gouverneur Morris? Of what importance is it in the brilliant Western stories of Mr. George Pattullo? Of what importance is it in the eminently successful stories of Mr. Montague Glass? The late O. Henry and Mr. Jack London stand closer to the European

Digitized by Google

tradition than most of our popular short-story writers. But even in these two men the plot is often subordinate to the manner. They do not disdain the snap of surprise or emotion at the end, but they give infinite attention to the entertainment of the reader on his way from the very beginning to the end. Thus instead of plot or real movement we have action, which is not at all the same thing as movement. For the latter means progress toward the point of the story, whereas action means agitation in any direction, provided only there is "something doing" in each paragraph.

From the beginning: that is the secret of short-story writing to-day. You must start at the crack of the pistol, not necessarily to tell your story, but to seize the reader's attention. You may do so with a laugh, or an epigram, or a flaring bit of headline matter, but the trick must be done at once. It is the secret of the "lead" which has been imported from the newspapers into the magazines, a secret of which Maupassant knew nothing and of which the foreign writers to-day know very little. Maupassant usually begins his stories by stating that two men or three men or any number of men are sitting about and talking in a Parisian drawing-room, or are pheasant-shooting in Normandy, when one of the company points to a man or woman that happens to pass by and says, "There is a very tragic story connected with that person." The others then ask him to tell the story, and he does so. It is a method which strikes most of us as stale, and in editorial offices is taken as the hall mark of the hopeless amateur. Contrast it with the "lead" as O. Henry developed it—those wild, antic, irresponsible, irrelevant beginnings that had little or nothing to do with the matter of the story and were frankly intended just to put the reader into good humor. Contrast Maupassant's beginnings with Mr. Morris's sparkling progress through a string of opening paragraphs that only gradually, gradually creep up to their subject. The theorists who preach the straightforward method of beginning a short story are guides to failure.

There is between the classic forms of the short story and the successful forms of to-day the same difference that exists between the humor of a classic like Mark Twain and the popular humor of to-day. Mark Twain got his effects by pages or paragraphs; to-day we must get our effects by lines. Mark Twain, that is, was content to move forward on a normal level of fluent talk, with here and there the suggestion of a humorous overtone, to his climax of loud laughter. Then comes subsidence and an easy approach, full of joyful anticipation, to the next outburst. Our humor of to-day must have its laugh or its attempt at laughter in every sentence. A true humorist like Mr. Dooley almost succeeds in doing so, though at the cost of a vast exhaustion and comparatively limited productivity. The would-be humorist takes recourse to that violence and contortion of language which passes as slang. Slang is now the great staple of humor because slang has a "kick" in every word. There is the parallel. A "kick" in every sentence is what the successful short story of to-day demands, no matter if it takes an hour of kicking to get to a point that might be attained in a half-hour of quiet going.

A SCOTTISH UNIVERSITY: ITS FIFTH CENTENARY.

SYDNEY, Australia, August 7.

At the head of one of the many bays that break the contour of the iron-bound coast of Fifesnire a rudimentary harbor has for ages afforded shelter to a small fleet of fishing-boats. A fishing village sprang up, and proved the mother of the most famous ecclesiastico-university town in Scotland. With an eye to the possibilities of the situation, the monks found it out, and there the ancient Culdees planted a brotherhood, to which a more orthodox order of Augustinian canons succeeded. On that foundation was reared a bishopric, and out of it, as it expanded, grew many things—a world of ecclesiastical relations, a centre of political intrigues, and finally the starting-point of a great reformation. There the proto-martyr of Scottish Protestantism was given to the flames, and there the last representative of traditionalism was done to death in his own castle. There the chief author of the new régime thundered and "dung the Bible into blads," and within a few miles of it the venerable figurehead of a bastard system, [illegible] between the old and the new, was cruelly assassinated. The very stones of the ancient place were drunk with blood, and every rod of ground is saturated with history. That tall tower was built by a fabulous saint, many centuries ago; here are the remnants of the longest cathedral in Europe; and there is Cardinal Beaton's castle, with the dungeon where the Giant Despair of the old religion immured his victims. Does not the cheek whiten and the heart beat faster as we contemplate the spots where memorable things happened that influenced all future time, where men acted greatly in a right cause or a wrong, where heroes lived and martyrs died? We do not wonder that the historical imagination of Dean Stanley was fired to see in the old stones reminders of both Canterbury and Oxford. Others may feel that St. Andrews is the old-world Salem, the Calvinist Wittenberg, the Scottish Geneva.

The tumult has long since died away, and now picturesque red-gowned figures walk the peaceful streets. The traditions of learning and teaching that preceded its memories of strife have survived them. By far the most ancient of Scottish universities, St. Andrews can produce such a beadroll of teachers and scholars as few seats of learning can boast. From John Major, George Buchanan, and Andrew Melville to John Hunter, and Thomas Chalmers, Brewster and Forbes, Ferrier and Tulloch, it has enjoyed the instruction of professors and principals unsurpassed in Scotland. Its students have been no less distinguished. Two famous marquises—he of Argyle and that other of Montrose—adorned it, and they have been followed by lords-chancellor, lords-justice-general and lords of session, poets like Ferguson and mathematicians like Napier (of the logarithms), while ecclesiastical leaders like Robert Wallace, divines like Lindsay Alexander, philosophical controversialists like Patrick Proctor Alexander, metaphysicians like William Wallace (of Oxford), and men of letters like Andrew Lang, have in recent times worthily maintained the credit of the university.

The celebration of the fifth centenary of the venerable institution may justify some reminiscences of its teaching staff, as I knew it in a past generation.

The leading professor in the curriculum of arts, John Campbell Shairp, was a deeply Anglicized Scot, who had undergone the influence of Newman at Oxford, and has painted the most vivid portrait of the future heresiarch—on the streets, in St. Mary's, and in privacy—that has ever been drawn. He was next assistant master at Rugby under Archbishop Tait, and there he bred the eminent materialist metaphysician, Shadworth Hodgson, who confesses that he derived more from the contagious enthusiasm of Shairp than from his scholarship. It was the same at St. Andrews, where he was professor of Humanity, as the Scots call Latin. He was still the enthusiast, and though "humanity" was not neglected, the humanities were assiduously cultivated. He was ever citing Plato, with his doctrine of *mnêsis* and *anamnêsis*, or spouting Wordsworth (especially the sublime "Ode on Intimations of Immortality"), with a gusto

Digitized by Google

that indelibly branded both on the memories of his students. He was already known as a poet, and his "Kilmahoe: a Highland Pastoral" was on one occasion read by Archbishop Tait to a party of stranded tourists on the shores of a Highland loch. The professor, however, was greater in criticism than in verse, and his essay on Wordsworth in the *North British Review* was a revelation. Never before, or never since Ruskin glorified Turner, had a great master been so adoringly and yet so illuminatively expounded. It was the high-water mark of impassioned criticism in our time, and it deserved the eulogy of Matthew Arnold, who said that it ought to be printed at the head of every edition of Wordsworth's works. Shairp succeeded F. T. Palgrave as professor of poetry at Oxford, and his "Aspects of Poetry," delivered there, was one of the saintly Henry Drummond's canonical books. He will be most celebrated for his friendships, which he carried through life. In youth, at Glasgow College, the large-hearted Norman Macleod was his bosom friend, and to the last the good Norman wrote to him as "Dear John." At Oxford Dean Stanley and Archbishop Tait, A. H. Clough, and Matthew Arnold were among his intimates. Well might Professor Knight compose his biography with the title, "Principal Shairp and his Friends."

Shairp's colleague in classics was Lewis Campbell, who was reckoned to be one of the first Grecians of his time. He had edited three of Plato's dialogues in a manner worthy of a German scholar; he was to coöperate with Jowett in editing the "Republic"; and he issued a scholarly edition of the plays of Sophocles. We might have perceived it in the classroom, but we were then young and not very wise, and it was not till he published his translations of Sophocles and Æschylus that we realized that we had had a poet for our prælector in Greek. He, too, was an enthusiast, but while Shairp disported on the streets of St. Andrews (like Blackie on the streets of Edinburgh) in Highland plaid and shepherd's crook, Campbell had his translations of the "Trachinian Maidens" of Sophocles and the "Choephoroe" of Æschylus performed in Scotland; and, only a few days before she received the tidings of the professor's death two years ago, an accomplished lady-principal in Sydney, a daughter of the celebrated Grecian, Dr. Badham, and therefore Campbell's cousin, trained her pupils to reproduce, with acknowledged success, the Sophoclean "Trachiniæ." He was the joint-biographer of his old fellow-student, Clerk Maxwell, and of his master, Benjamin Jowett. His later years were given to larger studies in Greek tragedy and religion. Tall, but shortened by the student's stoop, with a high but receding forehead and delicate features, he diffused around him an atmosphere of refinement in which everything coarse died in the act of being born. Perhaps he lacked masculine robustness, but many of his old students will remember his genuine solicitude alike for their intellectual progress and their material interests.

In those days, though he had been dead for more than a decade, Sir W. Hamilton filled the chairs of philosophy in Scotland with his pupils. Three of them—William Spalding, John Veitch (Hamilton's biographer), and Thomas Spencer Baynes—successively occupied the chair of logic and metaphysics at St. Andrews. Veitch had a rugged and craglike exterior, but a kind heart, and was the soul of integrity. Another Wordsworthian, he was a dreamer and something of a poet, and he had made extensive researches in the early history of Scottish philosophy, which were destined never to mature, save in an article in *Mind*. Baynes had been Hamilton's class-assistant, and had expounded the "New Analytic of Logical Forms," which the indolence of the master had hindered him from elaborating. In a sparkling controversy with Augustus De Morgan, carried on in the *Athenæum* through weeks, he vindicated the claims of Hamilton to originality with a stringency of reasoning and a literary brilliancy that matched—they could do no more than match—like qualities in the versatile mathematician. An Edinburgh reviewer and a Saturday reviewer, Baynes edited a great part of the ninth edition of the "Encyclopædia Britannica," but left no philosophical work to perpetuate his name. The Hamiltonian school has been almost sterile.

The most brilliant of St. Andrews professors a generation ago was James Frederick Ferrier. A nephew of Miss Ferrier, the novelist, he was the most literary of modern philosophers. He soon won his spurs by fascinating essays on Consciousness and on Berkeley, about which Emerson inquired of Carlyle. He published a treatise on metaphysics, scintillating with wit and humor, yet reasoned with Spinozistic rigor. Just once did the present writer hear him lecture, but the occasion was unforgettable. To listen to him was an enchantment. The illuminated face, as of one who had had a vision of absolute truth, the musical voice, spiced by the "Northumbrian burrh," the flashes of wit, the novelty of the ideas, the subtlety of the reasoning, the soaring thought, carried his class through the history of speculation as over a summer sea.

Some high figures these reminiscences have left untouched. Principal James David Forbes, who claimed to have discovered the polarization of heat and fought fiercely with Tyndall over his alleged discovery of the viscosity of ice; Principal Tulloch, leader of the Broad Church in the Kirk, who was delighted to find that scholars in Cambridge (Mass.) knew more about his "Cambridge Platonists" than did English Cantabridgians; Prof. Robert Flint, from whom we heard the first exposition of Spencer's Classification of the Sciences—a course of lectures published only forty years afterwards—these and others still would well deserve the brief delineation here necessarily denied them.

Correspondence

BUSINESS MEN AND SCHOLARS.

To the Editor of The Nation:

Sir: All scholars, from the humblest to the most distinguished, are cognizant of the fact that the foundation stone upon which civilization is based, the axis upon which the world turns, is business. Religion, education, art, the drama, all sorts of thought are subject to the laws of, and feel the inspiration of, business. Business men frequently tell scholars what they think of them, and sometimes favor them with their advice, very often with their money. The scholar then becomes the employee, but of this relation it is not my purpose to speak. Of the business man's contribution to education, in the way of advice how to do it, the *fine fleur* is the famous report of Mr. Morris Llewellyn Cooke to Dr. Pritchett of the Carnegie Foundation. Dr. Pritchett, being a practical man, in the employ of a practical man, Mr. Carnegie, employed another practical man, Mr. Cooke, to see what the business man could tell the scholar that would make him more efficient. This report, which goes into most minute details, from the covering of apparatus with a neat muslin cover to the making two men breathe the air in rooms that only one had breathed before, from the question of high-class inbreeding to the estimation of research as a business proposition, has been treated in your columns, and I will not stop to comment upon it. But, according to the proverb, turn about is fair play, and I think it only fair that the business man should occasionally get a word of advice from the scholar. It may do him no more good than his does us, but still it is only fair.

Frankly, then, I am tired of scientific management, so-called. I have heard of it from scientific managers, from university presidents, from casual acquaintances in railway trains; I have read of it in the daily papers, the weekly papers, the ten-cent magazines, the fifteen-cent magazines, the thirty-five-cent magazines, and in the *Outlook*. Only have I missed its treatment by Theodore Roosevelt; but that is probably because I cannot keep up with his writings. For fifteen years I have been a subscriber to a magazine dealing with engineering matters, feeling it incumbent on me to keep in touch with the applications of physics to the convenience of life, but the touch has become a pressure, the pressure a crushing strain, until the mass of articles on shop practice and scientific management threatened to crush all thoughts out of my brain, and I stopped my subscription. From now on, I shall have

Digitized by Google

to get my applied science through those charmingly imaginative reports that the daily papers give us. (They are written by the same person who, we are told in the "Bab Ballads," writes the mottoes in the little paper crackers.) I have read Mr. Taylor's book, and found the tale of bricks, as told by him, ineffably tedious. When I was a boy and belonged to a military company, I learned that from the carry to present arms was in "one time and two motions"; but I refuse to believe that bricks are laid in one time and eighteen motions. In fact, Mr. Taylor's quantitative statements remind me of Babbage's famous emendation of the lines:

> Every moment dies a man,
> Every moment one is born.

Calling attention to the fact that if this were true the population of the world would be stationary, Babbage proposed in the interest of accuracy:

> Every moment dies a man
> And one and a-sixteenth is born.

Thus the story of the old Dutchman carrying pig-iron, and subject to the commands, "Now walk—now rest," while it may make the unskilful laugh, is more likely to make the judicious grieve. Its conclusion, so familiar to the student of physiology, reminds one of Dr. Holmes's apostrophe to the katydid:

> Thou say'st an undisputed thing
> In such a solemn way.

Would that Mr. Taylor had kept to high-speed steels, and had let low-speed men alone.

But to come to the business man and his product. For upwards of a hundred years this country has produced little besides business men; so that we may expect to see him here in his supreme development. Of course, if he knows anything, he knows how to do business. Of course, he has elaborated a philosophy of business, and systems upon which he may forever smoothly work. But let us see. The most prominent items in the papers to-day have to do with the cracking of business systems built up by such intellectual giants as John D. Rockefeller. The Trusts are being investigated. The banks are being investigated. The railways are being investigated. (The universities are not being investigated, but they ought to be.) Wherever you see business men gathered, the conversation is all of one thing: "What next?" "Lord, is it I?" It is not so much that they are expecting to be caught in wrongdoing, as that they seem to be trying to find out whether they have been doing wrong. Business is such a businesslike thing! The National City Company is a great business organization. Is it lawful or unlawful? Business men must know. To-day comes George W. Perkins, an extremely capable business man, bitterly assailing Congress for its policies destructive to business, and making a number of sensible propositions which it would seem practical men should have made long ago. And yet Congress is composed of practical men, supposedly. The Vice-President of the United States, like thousands of other business men, is snivelling over present tendencies with regard to the tariff, although the tariff has for half a century been "framed up," as they call it, by these same business men, who have not, for all that, been able to devise a philosophical, that is, practical, scheme by which tariff policy can be made stable by being removed from politics.

I realize that it will be replied that the problems of business are greater than any others that confront us, more than those of science or philosophy. This I do not for a moment believe. If so, we shall find all countries similarly convulsed with business earthquakes, but I fail to see that this is the case. To be sure, great social movements are going on, of which our business troubles are a small but interesting symptom. These are attacked in a serious and thoughtful way in many countries, but I believe that we are somewhat backward. I believe it is not too much to say that the business man has not yet come to the realization that man does not live unto himself alone; but he is coming to it. Shall scholars then continue to look with equanimity upon the management of our universities by business men, under the application of business criteria of efficiency? Heaven forbid! I propose rather that business be put under the advisement of scholars who, uninfluenced by the desire to get the better of somebody else, are influenced by the desire to get at the truth, and to answer Pilate's question.

ARTHUR GORDON WEBSTER.

Worcester, Mass., August 13.

A TEST-CASE FOR UNIVERSAL ARBITRATION.

To the Editor of The Nation:

Sir: The present situation in Morocco furnishes an excellent example of one of those basic facts of history which the advocates of disarmament and of universal peace entirely ignore. And naturally, for it is the one unanswerable fact which vitiates most of their logic and which disproves their fundamental assumptions. The Hague Tribunal may very well settle all cases where *both* nations have an arguable position, and where the only matter involved is the case itself. Such cases have rarely caused wars and have usually been decided even since the earliest times by discussion. Men have not ordinarily fought until they have become convinced that their desires or rights could not be attained in any other way. But the presence of the German fleet at Agadir is so direct a violation of the Algeciras conference that Germany would have no defence which even the fluid forms of international law could recognize. She is in the position of the bully who covets the other boy's apple, and who knocks him down, and then demands the apple as the price of letting him up. The wrong is all on one side. What possible object would there be, moreover, in submitting this matter of pure aggression to arbitration, when every diplomat in all Europe knows that the settlement of affairs in Morocco and the Congo for all time would not decide the real question at issue? We are dealing here with the one thing which the peace advocates ignore, that most great wars in history have been the product of aggression, not of actual wrong. The issue is not ownership, or trade rights, or fishing within one, three, or five miles from shore, but the relative position of great nations, their supremacy one over the other, their possession of certain bits of land, which they desire because these are aids to further aggression or simply to regain what their country once held. The throwing from the windows at the beginning of the Thirty Years' War, Jenkins's Ear, the march of the British on Concord were only the subterfuges put forward by great forces which had been long in contention. The supremacy of Protestantism in Germany, the English monopoly of the West India trade, the independence of the colonies were the real issues at stake and could no more have been decided by arbitration than the relative influence of Germany, France, and England in the affairs of the present world can be settled at The Hague. For Germany to allow the present case to go before a board of arbitration would mean the withdrawal of the real claims she had in mind, when she sent the fleet to Agadir; it would mean that the real decision had been already made and the real question settled, and that the judges at The Hague would be allowed simply to "save" Germany's face as best they could, by hiding from the general public what the diplomatic world judged it inexpedient to publish. Arbitration would mean that France and England had checkmated Germany, did not themselves wish to use the case as a pretext for war, and allowed Germany to retreat, because they believed that a more favorable opportunity for the decision of the real issue would appear at a later day.

THE PINCH OF THE CUSTOMS.

To the Editor of The Nation:

Sir: In contrast to many "wild and whirling" words about the United States customs, Miss Repplier's protest, in *Life* for August 10, advocates a practical remedy for an almost intolerable condition. In connection with her point, that the limit of $100 barely allows for "wear and tear," it seems apposite to call attention to what has been largely overlooked—(1) the kind of person who suffers most from the customs law; and (2) the resulting repudiation of culture.

Few object to a 60 per cent. charge on the spoils of the idle and vagrant rich, but it seems wholly objectionable to throw such an obstacle to extended foreign travel in the way of professional men that they must think twice before they dare leave the country, especially if they have families. This objection would be equally true were they rich or poor, but it happens that most professional men are not rich; so that the question of customs dues seriously affects their acceptance of an opportunity to go abroad. Yet it is surely a fair assumption that such men, if a reputable institution gives them a year's leave of absence for study and research, will return to their country more valuable citizens than when they left. The very fact that we have little in this country, outside of science, to attract professional men with a free year is only another way of saying that we need greatly the culture which these men know is to be found in the Old World, and which we can acquire only by encouraging them to bring it back.

Any one who has tried to live abroad for a year knows how uncomfortable it is to

Digitized by Google

acquire only one hundred dollars' worth of personal effects; at least, though he might manage for himself, he would refuse to subject his wife and family to the regimen; and usually, when the allowance for "wear and tear" has been made, he still has to pay more than he can easily afford. Too often the Sabbatical professor must renounce Paris or Rome and return with sad heart to the public library of Kalamazoo.

Of course, our law-makers do not mean to lay such a heavy tax on the importation of ideas, but when they tax prohibitively the necessary luggage of the professional man, they tax in effect the culture which he brings. "The significant thing," I heard a European say, "is that your Government seems to be unaware of what it is doing; or, if it is aware, that it attaches no importance to a wilful repudiation of what leavens the wisdom of a nation." What the United States makes from its small inquisitions is inconsiderable; what the individual professor loses is very considerable to him; and what the United States really loses, when it deters its scholars from going abroad, is perhaps more than can be measured in the medium of exchange now current in the Custom House.

WALTER S. HINCHMAN.

Groton, Mass., August 25.

AN ALLUSION TO BLAKE.

TO THE EDITOR OF THE NATION:

SIR: It has never, I believe, been pointed out that Browning's "Transcendentalism: A Poem in Twelve Books," is a criticism of William Blake and a parody, in title and general method, of Blake's "Milton: A Poem in Twelve Books." Both of these poems are absurdly short by contrast to the pretentious length of their titles. In "Transcendentalism" there is a personal reference to Blake's idol, Jacob Boehme:

As German Boehme never cared for plants
Until it happed a-walking in the fields,
He noticed all at once that plants could speak,
Nay, turned with loosened tongue to talk with him.

In the last lines of the poem, too, there is a distinct word-picture, exactly in the style of Blake's engravings:

So come, the harp back to your heart again!
You are a poem, though your poem's nought.
The best of all you showed before, believe,
Was your own boy-face o'er the finer chords
Bent, following the cherub at the top
That points to God with his paired half-moon wings.

But even without the evidence of parody and personal allusion, we should recognize at once that Browning's poem is a remarkably plain statement of Blake's poetic evolution and of his greatest fault:

But here's your fault; grown men want thought, you think:
Thought's what they mean by verse, and seek in verse:
Boys seek for images and melody,
Men must have reason—so, you aim at men.

For, even more than the difficulties that arise through the loss of the key to Blake's symbolism, his ever-increasing tendency

. . . to speak these naked thoughts
Instead of draping them in sights and sounds,

robs us of much that would otherwise have been poetry, and leaves us to struggle with the "stark-naked thought." Browning is to be thanked, in this poem, for a criticism of a fellow-poet which is more searching and perhaps, too, even more usefully suggestive than the criticism of Wordsworth in "The Lost Leader." At any rate, the reference to Blake is indubitable.

Literature

THE PRAGMATIC SYSTEM.

Some Problems of Philosophy: A Beginning of an Introduction to Philosophy. By William James. New York: Longmans, Green & Co. $1.25 net.

A posthumous work on philosophy by the late Prof. William James must be received by all students of philosophy, especially by all American students, with peculiar interest and respect. A virtue has gone out from James's pages, not only intellectual, but moral and humane; the aspiration of a great intelligence struggling, in a sense desperately, toward a more real and fair understanding of man and world. There have been few even amongst professed philosophers in this latter day who have believed in philosophy, its influence and its advance, so warmly as he. He seemed to cry "On" to all his fellow-thinkers. No one felt more the uncompleted, fragmentary character of all extant science—forever more and never all. No one had a more childlike expectancy in the depths of his mind. He has left us only a fragment; but it is a fragment that adds notably to the substance and design of his philosophy.

Once again, of course, the vivifying touch of his style is felt:

Philosophy, beginning in wonder, . . . is able to fancy everything different from what it is. It sees the familiar as if it were strange, and the strange as if it were familiar. It can take things up and lay them down again. Its mind is full of air that plays round every subject. It rouses us from our native dogmatic slumber and breaks up our caked prejudices. Historically it has always been a sort of fecundation of four different human interests, science, poetry, religion, and logic, by one another. It has sought by hard reasoning for results emotionally valuable. To have some contact with it, to catch its influence, is thus good for both literary and scientific students. By its poetry it appeals to literary minds; but its logic stiffens them up and remedies their softness. By its logic it appeals to the scientific; but softens them by its other aspects, and saves them from too dry a technicality. Both types of student ought to get from philosophy a livelier spirit, more air, more mental background. "Hast any philosophy in thee, Shepherd?" This question of Touchstone's is the one with which men should always meet one another. A man with no philosophy in him is the most inauspicious and unprofitable of all social mates.

The volume consists, broadly speaking, of a general introduction, and a study of three problems. The introductory chapters include an extended defence of philosophy, a concrete description of the nature of metaphysics, and a dismissal of the hopeless "problem of being," so-called, that is, the question why the sum of things and its total arrangement came to be. "Our business," he proceeds "is far more with its What than with its Whence or Why." The three problems concerning its What to which he then addresses himself are (1) the relation of thoughts to things, or "concepts" to "percepts"; (2) the question whether the universe is one indivisible nature or system, "the only genuine unit in existence," or a mere collection of different existences not wholly controlled by one another, and (3) the question whether true novelty here and there bursts into being or whether the present always unfolds by a mechanical fate from the past. Upon the second and third hangs, in James's opinion, the question of human freedom. With the third, the problem of novelty, he discusses the ancient difficulties in the notions of infinity and continuity, and in the notion of cause. Under the first problem, we have the conflict of rationalism and empiricism, under the second that of monism and pluralism, under the third that of determinism and indeterminism (or "tychism") applied to nature as well as to human lives. Yet it is striking that, for the author, these are all one problem and one conflict. The problem is that of control—rationalism, for instance, is a doctrine according to which reason can find out the principles that control the world. "Rationalists prefer to deduce facts from principles." Monism, again, is just the doctrine that each particular fact is controlled by the mass of fact. Determinism, or the denial of "true novelty," is the doctrine that what has been controls what is. In each subject, James rebels against this tyrannous control. He stands across the path of the masterful philosopher, bent on "strong government." He believes that experience gives the lie to arrogant theory; proclaims novelty in the present, initiative in the individual, and light in particular facts. Thus his faith in experience as the source of knowledge is the basis of his whole philosophical position. This faith has never, in his opinion, been carried far enough. The conceptions with which earlier empiricists were accustomed to work were, he thinks, already tampered with by rationalism. "Most empiricists have been half-hearted." They did not look freshly at experience and take true note of its living flow, its trembling alternatives, its indescribable strangenesses and originalities. To do this is to make a more radical departure than theirs from the intellectualism which has tried to cut and stamp the facts of life with its hard and angular concepts

Thus far, in our own form of sum-

Digitized by Google

mary, we have only James's familiar mode of looking at our situation in philosophy. Quite new in this volume, however, is the strict order and method of the exposition, beginning with the deepest problem and carrying it into developments and consequences that are often ranged and numbered in a manner foreign to his accustomed philosophical style of informal comment. We see here, not chiefly the impressionist, but that intent analyst who was not infrequently to the fore in the "Principles of Psychology." In the treatment of contending views, too, there is somewhat more of a judicial procedure, including a respectful unfolding of the enemy's thought. New also (besides much detail) are the discussions of infinity and of cause, the elaborate argument to prove the breakdown of intellectualism, and the telling defence of philosophy against the assailants who would brand it as unprogressive and unpractical.

On the last of these topics a few words must be quoted:

> The opposition is unjustly founded, for the sciences are themselves branches of the tree of philosophy. As fast as questions got accurately answered, the answers were called "scientific," and what men call "philosophy" to-day is but the residuum of questions still unanswered. At this very moment we are seeing two sciences, psychology and general biology, drop off from the parent trunk and take independent root as specialties. . . . It does not follow, because some of these questions have waited two thousand years for an answer, that no answer will ever be forthcoming. Two thousand years probably measure but one paragraph in that great romance of adventure called the history of the intellect of man. The extraordinary progress (in science) of the last three hundred years is due to a rather sudden finding of the way in which a certain order of questions ought to be attacked, questions admitting of mathematical treatment. . . . To the spiritual questions the proper avenue of approach will also undoubtedly be found. They have, to some extent, been found already. In some respects, indeed, "science" has made less progress than "philosophy"—its most general conceptions (those of science) would astonish neither Aristotle nor Descartes, could they revisit our earth. The composition of things from elements, their evolution, the conservation of energy, the idea of a universal determinism, would seem to them commonplace enough—the little things, the microscopes, electric lights, telephones, and details of the sciences, would be to them the awe-inspiring things. But if they opened our books on metaphysics, or visited a philosophic lecture-room, everything would sound strange. The whole idealistic or "critical" attitude of our time would be novel, and it would be long before they took it in.

On the whole, the interest of the book centres in the asserted breakdown of intellectualism, or rationalism. First we have what can be said in laudation of concepts; then the author opens fire on their claims to supremacy. On the good side, they open up an immense perspective of practical consequences and adapt us to an immensely wider environment; when compared with each other, they proceed to disclose unsuspected relations which also give practical guidance; and they have a third merit, that of enriching life. "Their relation to percepts is like that of sight to touch. Sight, indeed, helps us by preparing us for contacts while they are yet far off, but it endows us in addition with a new world of optical splendor, interesting enough by itself to occupy a busy life. Just so do concepts bring their proper splendor. The mere possession of such vast and simple pictures is an inspiring good. They arouse new feelings of sublimity, power, and admiration, new interests and motivations." On the harmful side, when taken at their face-value, they simply falsify reality. They break a living whole into parts and then represent the whole as nothing but those parts added together. They cut our flowing life into bits and pin them on a fixed relational scheme. Thus activity, continuity, self, in short, life, escapes the conceptual view of things. Nothing happens therein; concepts are timeless and can only be juxtaposed and compared. "The concept 'dog' does not bite; the concept 'cock' does not crow." "The deeper features of reality are found only in perceptual experience." While classic philosophy has at all times inclined to say, "Distrust sense-perception; follow reason," James says, "Distrust reason; look to perception for the heart of truth." For our own part we regret that he has stated the matter as though a prevailing habit of short-sighted analysis were a vice inherent in concepts themselves. Continuity, activity, happening—not to mention biting and crowing—are all concepts. If there is in them something not capable of analysis, then we have only to remind ourselves that this is true of all concepts whatever. It is expected to be true of them. The author holds further that reality, when stated with the aid of concepts and of logic, turns out to be self-contradictory and thus discredits the aid we have employed. But may it not prove that, wherever this is the case, there has been some needless ineptitude in the concepts or some needless assumption in the logic? With certain concepts and certain assumptions, no doubt, his thesis is made good.

In the present confusion of tongues and tenets in philosophy, the volume will encounter, no doubt, all degrees of assent and difference. But we cannot conclude our study of this striking literary bequest without asking ourselves what are the undeniable gains in philosophy, as distinguished from psychology, that we owe to James. Within the sphere of controversy there are, of course, various specific contributions from him, such as the revolutionary and, we believe, wholly original theory of "the function of cognition." But however strong the evidence that this and others are in substance permanent additions to knowledge, our question here relates to forms of furtherance that all will admit. Of these there are many, but one stands forth as chief. He said, as it were, in the old words to the thinking world, "There are more things in heaven and earth than are dreamt of in your philosophy"; more things and more rich chances of things; more in the universe at large (for this is the meaning of his pluralism, "tychism," "piecemeal supernaturalism"); more in the mind (subliminal consciousness, etc.); more in the possibilities of social life (the value of ethical and other social experiments); more in character and human capacity ("The Powers of Men"). Nay, there is more in your own daily experience than the theoretic routine of your thinking will suffer you to see. Be not so sure that you know what your experience will bring forth; look at it for what it is, regain the innocence of the eye, do not by prejudgment rob it of its deep colors before it comes. Be not so enamoured of your boundary-lines; there is more in this wild world than they can possibly confine—no one, we conceive, has ever taught this lesson with the inborn force and fire of William James.

CURRENT FICTION.

Mother Carey's Chickens. By Kate Douglas Wiggin. Boston: Houghton Mifflin Co.

Whether or not Mrs. Riggs has in this story, as her publishers vaunt, pictured "the ideal American mother," she has certainly written a pleasant and wholesome story for boys and girls. It deals with just the sort of impossibilities children delight in. The charming house which stands ready in its Eden for the impoverished Careys is like the sugar-plum dwellings of fairyland. Such stately mansions do not really rent at sixty dollars a year even in the most abandoned parts of New England. But never mind: there are, roughly speaking, such good turns of fortune as befell the Careys in their need. And there are, we doubt not, somewhere or other such adorable family circles as that of the Careys themselves.

Mother Carey is the still young and lovely widow of an American naval officer. His death has left her almost without means; and the family must leave their city house and city way of living. Fate directs them to Beulah and the wonderful Yellow House. Its owner is an American diplomat, long an absentee. He has tender memories of the Yellow House, but his life has led him into hard and worldly paths, and he is an unlucky member of what Mrs. Riggs calls "a family rhomboid."

Digitized by Google

In other terms, there is no simple warmth of relation between him and his wife and daughters. Now Mother Carey's eldest daughter, Nancy, is an enterprising chicken. Soon after the Careys take the Yellow House, Nancy writes the consul a letter which wins his heart. It is true that, coldly regarded, the letter is such as a ten-year-old might have been forgiven for—virtually a begging letter—and Nancy is fifteen. However, it wins the consul. The sixty dollars rent is eliminated, and on the Careys is bestowed virtual ownership of the Yellow House, which, with no money to do it with, they proceed to make beautiful. We ought perhaps to commend Mrs. Riggs for abstaining from the "back-to-the-soil" motive. If they had gone into some little old farmhouse, and beautified it, and halved their table expenses by keeping a cow and chickens and growing their own vegetables, their experience would have been comparatively commonplace in these days. As a matter of fact, they remain little city people gracefully condescending to rural conditions—carrying, as it were, a light into that darkness. To them the country is a place where good-hearted but rather ridiculous people live, and where trees and crimson ramblers grow in uncommon profusion. When the worst pinch comes, the girls start a little summer school, and the oldest boy becomes clerk and delivery boy in the local "store"; they have to get money to buy milk and eggs and vegetables with! And they are finally delivered from their poverty not by their own ingenuity, but by the immemorial succor of a legacy.

But the tale is, we say, a pleasant one, a frankly sentimental celebration of motherhood as it may be. All the crabbed persons turn sweet under her influence, and in the end everything is as lovely for everybody as anybody could desire. We confess to an impression of Nancy as, like all Mrs. Riggs's heroines, something of a minx.

Tales of the Town. By Charles Belmont Davis. New York: Duffield & Co.

This is another collection of amiable bachelor tales quite in the same vein as Mr. Davis's "The Lodger Overhead," but with a greater stress on the life of the theatre. They are not very deep or very affecting or very funny, but they are all eminently readable, partly because there is always a story to tell and partly because it is told in pleasantly crisp and unaffected language. There is also less insistence here than in the earlier book upon tiger-skin rugs and heavy fur coats and a nonchalant use of taxicabs. For this we are grateful. The first story in the book is also the one that comes nearest to dealing with a very real human trait. The little country bride, who comes to New York and develops a taste for magnificent hats that go badly with her modest beauty and her young husband's income, has her little tragedy and surmounts it. But even here the emotional climaxes are not high.

Fenella. By H. L. Stuart. New York: Doubleday, Page & Co.

Mr. Stuart tells us regarding his hero Paul Ingram that he had broken with the old tradition of fiction writing:

> In all the stories I had read the character seemed to start, full-fledged, on the first page. All the action of the book develops it and shows it up. Now that might be literature, but it wasn't life. What was the reason? Not a mistake; because the best men do it. No. But I think unconsciously they are following the line of least resistance. They start the first chapter under a disadvantage: with the last one in their heads.

Here and there in "Fenella" the indications are that Mr. Stuart has set out to do what Paul Ingram did or what Arnold Bennett is doing. But the old methods assert themselves in the end. The new principle evinces itself in a broad canvas painted in with a great amount of detail, and in a fondness for digression. Chapters are given to the depictment of characters whose part in the general machinery of the book is only incidental, and these characters are, for the most part, very successful. But it is in his chief personages that Mr. Stuart fails to live up to Ingram's standard. Fenella, Paul Ingram, and Sir Bryan Lumsden confront us at the beginning, ready made; if anything, they are more vivid when we first meet them than when we leave them. Having said that, we must immediately add that Fenella is a charming, and, allowing for the exigencies of plot, a lifelike conception. For one thing, she is that rare being, a great dancer without a temperament, and her food is what most of us eat and not the bones and gristle of hapless men. Ingram is not so well drawn; he is too real for melodrama, and a bit too melodramatic for Fenella's company. Allowing for certain languors of pace, we find the book readable. It is certainly a serious, dignified piece of writing.

OLD PENNSYLVANIA TRADERS.

The Wilderness Trail; or The Ventures and Adventures of the Pennsylvania Traders on the Allegheny Path, with some New Annals of the Old West, and the Records of Some Strong Men and Some Bad Ones. By Charles A. Hanna, Author of "The Scotch-Irish." With 80 maps and illustrations. In two volumes. New York: G. P. Putnam's Sons. $10 net.

These two volumes of nearly 900 octavo pages deal chiefly with the traders and trading paths of western Pennsylvania and Ohio from 1692, when the Dutchman, Arnold Viele, led the way, to 1752, when the destruction of the English trading station among the Miami brought to a head the contest between France and England for control of the Ohio Valley. The Indian tribes chiefly concerned, the principals or the objects in every intrigue and murderous raid, were the Iroquois, the Delawares, the Shawnee, the Miami, and the Wyandot, under such chiefs as Demoiselle and Newcomer, and largely influenced by such traders as Chartier and Croghan.

The first four chapters are devoted chiefly to an account of the native tribes originally occupying the "debatable land," an entire chapter being given to the devious wanderings of the Shawnee. As is well known to students of American history, the confederated Iroquois of New York claimed the tribal dictatorship and held the balance of power for England until the French flag went down at Quebec. It is not so commonly known, however, that their political dominance was of recent origin, dating only from their first obtaining guns through contraband trade with the Dutch of Albany about 1630, and was built up by a systematic policy of wholesale incorporation of captives to such an extent that as early as 1660 it was estimated that more than half their warriors were of alien origin. An important point is the fact that nearly all of these incorporations were of tribes of closely cognate stock, and therefore easily assimilated, as the Huron, Neutral, Erie, and Susquehanna. In regard to the relative position of the Delawares, whom our author derisively calls the "petticoat Indians," there has been much misunderstanding and considerable warmth of argument. The last word is probably with Hewitt, our best authority on Iroquois custom, and himself of that blood, who states that "women" was a figurative term used to designate, not a conquered tribe, but a tribe taken under suzerainty or protection, but not admitted to representation in the league council. Even the kindred and allied Tuscarora, refugees from North Carolina, held this relation to the league and were never admitted to equal representation in the league council. The Hurons, Neutrals, Erie, and Susquehanna (Conestoga) were conquered and destroyed as tribes, their council fires extinguished, their territories seized, and themselves deported bodily and parcelled out among the villages of their conquerors, whose tribal names they were compelled to assume. The Delawares, on the contrary, retained their own territory, tribal organization, name, and council fire, surrendering only the right of foreign relations, including the making of war or peace and the sale of lands. It is probable that the Delawares entered into this relation voluntarily, as a matter of self-preservation, after the conquest of the

Digitized by Google

Susquehanna in 1675 had rendered the Iroquois supreme from Lake Huron to the Chesapeake, with the powerful English alliance to back their claims. The Delaware suzerainty lasted until their withdrawal to the Ohio country brought them into the neighborhood of the French, under whose encouragement they soon asserted their complete independence, replying to an insolent message from the Iroquois in 1757: "We are men, and are determined not to be ruled any longer by you as women, so say no more to us on that head."

In regard to the tribal identification, it is probable, as stated by early French writers, that the Erie took their name of "Cats" from the abundance either of the raccoon or of the wildcat in their country. The two animals were frequently confused in nomenclature, and according to Gayarré, the "cats" of Cat Island, near Biloxi, were raccoons. The Carantouan of Champlain were probably the Onnontioga, about the present Binghamton, N. Y., conquered and incorporated by the Iroquois. Gatschet's etymology of Sawokli, like some other guesses by the same writer, is very doubtful. The Assiwikalae, from whom Sewickley, Pa., takes its name, were the Hathiwikala, or Absentee Shawnee, one of the five (not four) original subtribes of the Shawnee, but always in history keeping somewhat aloof from the others. It is quite possible that they were the Sawokli, or Souikila, incorporated with the Creeks. The "Sauna" on the upper Roanoke, in 1670, are not the Chowanoc, but the Sara, or Cheraw, the Xuala of the De Soto narrative, formerly the most important tribe of Piedmont Carolina. The Chowanoc of Chowan River were entirely distinct from the Shawnee. The name of Savannah River is not derived from the Spanish word for "prairie," as asserted by Gatschet, but from Savanna, or Savanogi, the Creek name for the Shawnee, who still had three villages upon that stream as late as 1715, and probably later. Taken altogether, the chapters upon the Shawnee and the Susquehanna are the best that have yet been written. It is also quite possible that the Rickohockan, or Rechahecrian, of Virginia history are the fugitive Erie, although Lederer's map of 1670 should seem to place them to the southwest, in Cherokee territory. The Gachoos, Capitanasses, and Ioteccas of the Dutch map of 1614, are, respectively, the Erie (Gahkwa), Onondaga, and Juniata. Several names remain to be identified in the Ohio region, the probability being that the tribes were exterminated by the all-destroying Iroquois.

The chapters on the early traders of the Pennsylvania frontier are particularly interesting, containing much valuable documentary information not easily accessible. Two whole chapters are given to George Croghan, who had so much to do with holding the Ohio tribes to the English interest. The gradual withdrawal of the tribes to the westward between 1720 and 1750 brought them finally under French influence. The main trading paths and travel routes between East and West, with all their Indian towns and camp stations, are described in detail. Valuable biographic sketches are given of the principal chiefs and leaders, including the Chartiers and the Montours, of whom Madame Montour was reputed to be the daughter of the great Frontenac. Her son held the unique distinction of drawing a salary of £300 from Virginia as interpreter, while at the same time there was a standing offer from Canada of £100 for his head. Considerable attention is given to the Moravian missionary explorers.

The author's Scotch-Irish bias occasionally leads him afield, particularly in his frequent severe strictures upon the Pennsylvania Quakers, who, in view of their well-known peace principles and generally friendly relations with the Indians, and in a government of their own creation, may be forgiven for having hesitated to take up a war urged upon them by a restless border population of different stock and religious tenets, whose indiscriminate hatred of all Indians is exemplified in the Conestoga butchery, the murder of Logan's family, and the atrocious massacre of the unarmed and unresisting Moravian Christians at Gnadenhuetten. "James Adair, the Scotch trader," while of remote Scottish origin, was a native of the neighborhood of Ballymena, County Antrim, Ireland, where his ancestors had resided for at least 120 years before his coming to America. While a large proportion of the Pennsylvania traders were of Scotch-Irish stock, the list as published contains also a number of genuine old Milesian names, such as Crowley, Kelly, Devoy, McGuire, McLaughlin, Reardon, Denis Sullivan, and Terence O'Neal.

The valuable series of maps includes reproductions of every one of importance, Dutch, French, and English, for the region under discussion, down to the close of the Revolution, supplemented by a clear-cut author's map, the most complete of the kind yet published, showing every trading trail and Indian town, with date, as far west as the present Fort Wayne. The fifty-three fine illustrations, many of them from photographs by the author, add much to our understanding of the descriptions in the text. It is to be regretted that the numerous footnote references were not brought together into a compact bibliography, but the ample index is all that could be desired. The make-up of the book is in keeping with its scholarly excellence. The edition is limited to one thousand copies, and the type has been destroyed.

The Mother of Goethe. By Margaret Reeks. New York: John Lane Co. $3.50.

The author of this handsome volume has conscientiously studied the portrait of her subject as found in Goethe's autobiography. Much of the material drawn upon is furnished also by the letters of the Frau Rat, who enjoyed commenting fully upon the experiences of her life in and about the old Goethehaus. Another source of the book is indicated by the author in her quotations from "Wilhelm Meister," "Hermann and Dorothea," and "Erwin and Elmire," which to any one who knows of the companionship that existed between the young mother and her children, are most significant. Married at seventeen to a man more than twenty years her senior, she made her children her friends, and confided to them all her little joys and sorrows. Thus one has reason to assume that the portrait contained within the pages of this book is trustworthy.

Born into a prominent burgher family of the rich old town of Frankfurt, Elisabeth Textor was probably brought up much in the manner in which Olympia describes the education of girls in her youth in "Erwin and Elmire"; and it is likely that she was married, as was the custom for those girls to marry, before she knew her own mind. There is no doubt that her innate good sense and her *Frohnatur* helped her to accept the situation with good grace. It brightened the spooky atmosphere of the rambling old house into which she had come as its mistress. When Elisabeth became a mother this same *Frohnatur* stood as a buffer between the rigorous father and his intelligent, but not too docile, offspring. The son undoubtedly derived more inspiration and enjoyment from the hours when he listened to his mother's friendly chat or to her rich fund of stories, than from the methodical instruction imparted to him by the father, whose hobby was teaching those about him, but whose pedagogical system was of a kind to make the young idea withdraw into its shell. Elisabeth Textor reigned in undisputed sovereignty not only upon the "fableseat" placed as a birthday gift under a pear tree in their garden, which, as the author tells us, was on that February day a mass of delicate "pink" bloom, but even more so in the hearts of her children.

In some parts of this life of the mother the author dwells with unjustifiable length upon incidents properly belonging to the biography of the son. The two chapters entitled Billeting and Hätschelhans have little to do with the remarkable woman, though her admirable tact in the dispute between her all-too patriotic husband and Count Thorane is mentioned. It is curious that the

name of the distinguished French guest of the Goethehaus should be persistently spelled in this book with a final *c*, although both Goethe in his autobiography and Gutzkow in his "Königslieutenant" have a final *e*. Not until Goethe receives the call to Weimar does his personality cease to dominate the canvas of his mother's life. The latter part of the book conveys a far more direct impression of "Frau Aja." One wishes that her letters, those spontaneous expressions of herself, were more frequently drawn upon. One of the most charming is addressed to the Duchess Anna Amalia of Weimar. The two mothers had much in common; the one with her good sense and invincible humor, the other with her various intellectual gifts —she was a scholarly musician—knew how to make the best of every day. When the counsellor's infirmities grew upon him, the wife joyfully assumed the reins of the house and bore his whims with patience. In her widowhood, too, she did not give way to unreasonable grief. Replying to a letter from the duchess, who had inquired what she was doing, she says: "Just to make the best of the present and not keep thinking how things might be different, that is how one gets best through the world, and to get through (all things considered) is the chief business." She remained the same sensible, good-humored "Frau Aja" from the time the name was bestowed upon her when the old house was ringing with the shouts of Goethe's fellow-students, to the Saturday afternoons when, in her age, she gathered about her the young girls of her acquaintance. Wonderfully stimulating must have been the influence of this genial matron whose mind and hands were busy to the end. To her clavier-playing, which she had practised with her strict husband, she added other accomplishments, among them the making of Brabant lace. She was a clever chess-player, a great reader, and an enthusiastic theatre-goer, extending her patronage from the stage to those of the profession that managed to enlist her sympathy. Her criticism of Frankfurt audiences at the performance of "Hamlet" is delightful, and her censure of her townspeople for seeking entertainment in "Bacchanalia," which "look like tedium as one drop of water is like the other," was probably only too well justified.

The book appeals to a popular taste; yet one might have been spared phrases like "sweet singer" when applied to Schiller. Typographical errors mar some pages. The illustrations are good. That the figure of the son too frequently interposes itself between the reader and the subject of the book, is after all excusable; "Frau Aja" herself would not have had it otherwise.

Notes

We learn from Sturgis & Walton that M. A. DeWolffe Howe's "Life and Labors of Bishop Hare" will soon appear.

From the same press is promised "A Ship of Solace," by Eleanor Mordaunt.

"The Spell of Holland" is a new volume of travel which Burton E. Stevenson has placed for publication with L. C. Page & Co.

Sudermann has written a collection of stories, long and short, under the title of "The Indian Lily." It is advertised by the publisher, B. W. Huebsch, as a cycle of womanhood.

The same house announces further, "Love and Ethics," by Ellen Key; "The Fool in Christ," translated from the German of Hauptmann; the autobiography of the late Tom L. Johnson.

The Abbey Co. promises for early in October "Legends of Long Ago," translated by Dr. Charles Hart Handschin from the German of Gottfried Keller's "Sieben Legenden."

A new Social Service series will be inaugurated this autumn by the Appletons. The first volume entitled, "Citizens of Tomorrow," is by Dr. W. B. Forbush.

The Clarendon Press announces "Richardson's Novels and Their Influence," by Dr. F. S. Boas; "Jane Austen," by Dr. A. C. Bradley, and "Description in Poetry," by A. Clutton Brock.

Small, Maynard & Co. promise shortly six new novels: "The Knight Errant," by Robert Alexander Wason; "Her Husband," by Julia Magruder; "The Marriage Portion," by H. A. Mitchell Keays; "The Loser Pays," a story of the French Revolution, by Mary Openshaw; "The Incorrigible Dukane," by George C. Shedd, and "One Way Out," by William Carleton. In juveniles their list includes: "The Land We Live In," by Overton W. Price; "Harmony Hall," by Marion Hill; "The Young Timber-Cruisers," by Hugh Pendexter; "The Young Gem-Hunters," also by Mr. Pendexter; "The Sultan's Rival," by Bradley Gilman, and "Grandmother Goose Stories," by John Howard Jewett.—Miscellaneous: "The Librarian at Play," by Edmund Lester Pearson; "The Log of the Easy Way," by John L. Mathews; "The Story of the Aeroplane," by Claude Grahame-White, and "The Sonnets and Ballate of Guido Cavalcanti," translated by Ezra Pound.
