One is irresistibly tempted to classify this as nature study (human nature, to be sure), so much more comparable is it to those engaging life histories of bears, coyotes, and wild mustangs from the pens of our zoölogical biographers, than to any accepted type of Wild West fiction. While the picturesque and mirth-enlivened Wyoming of "The Virginian" no longer exists—we have Mr. Wister's own word for it, and still less accessible is the New Mexico of "Santa Fé's Partner"—did it ever exist outside the easily stimulated imagination of Mr. Janvier?—the Arizona of "The Texican" is still open to exploration. To be sure, times have changed in "Geronimo County" since the day when Pecos Dalhart came out of an oppressively civilized Texas to enlist as free lance in the guerrilla cattle-war between John Upton of Tonto Basin and Isaac Crittenden of Verde Crossing. The authority of the law has superseded

> The good old rule, the simple plan
> That they shall take who have the might,
> And they shall keep who can;

and the ingenious artistry of the "running iron" is less in requisition among its cowboys. But a very brief sojourn in any small Arizona town will familiarize the visitor with such a physical type as "Old Crit," "tall, gaunt, and stooping, his head canted back to make up for the crook in his back." And in the eye of the plainsman to-day as he looks over the effeminate town product, there is to be recognized a curiosity devoid of all admiration, very closely akin to the expressions, both facial and verbal, with which Pecos in jail warded off the ingratiating reporter who thought to make copy of his woes. "He turned on the reporter and scowled. 'Go take a run and jump at yourself,' he said." It is when he approaches the cowboy in this attitude of amused and sympathetic observation that Mr. Coolidge is at his best. He has found nothing so hilarious or so rich in theatrical effect as the other two above-mentioned authors discovered in their happy hunting grounds; and as for his way of telling his story, he only speaks right on in unpretentious fashion with occasional boyish lapses into the vernacular. Yet he seems to us to have hit a good deal nearer than the others the real feelings that are at the bottom of the esoteric quality of Western humor.

BROWNING'S POPULARITY.

The Early Literary Career of Robert Browning. Four Lectures, by Thomas R. Lounsbury. New York: Charles Scribner's Sons. $1.20 net.

Professor Lounsbury's lectures at the University of Virginia on the Barbour-Page Foundation are justified by the biographies which contain a mass of mythical statement on a few events in the poet's career. Contrary to prevailing opinion, and indeed to Browning's statements, the reception at first accorded his poetry was cordial. "Pauline" (1833) doesn't count. It was issued anonymously and for two decades was forgotten. "Paracelsus" (1835), one of his finest studies in character and sensation, did not have a large sale. No poetry produced in the fourth decade of the last century did have a large sale. But it received no contemptuous notice and did evoke glowing predictions of his future achievements. Forster's review in the *Examiner*, usually described as "the great event in the history of 'Paracelsus,'" was in reality no more influential than William Johnson Fox's in the *Monthly Repository*, or Leigh Hunt's in his *Journal*. *Fraser's Maga-*

Digitized by Google

zine somewhat aggressively proclaimed the poem superior to Taylor's "Philip Van Artevelde," the work which had attained highest critical repute in that decade. Browning's biographers have simply not looked into the matter. No work created a profounder impression than "Paracelsus" among the awakened spirits of the time. Contemporary notices of "Strafford" (1837) reveal how high was the anticipation of it raised by the previous publication, and how keen the disappointment. Of "Sordello" (1840) Professor Lounsbury says: "Perhaps there is no instance in literary history of an author who proceeded to destroy his own reputation with more systematic endeavor. . . . Certainly never were efforts of that sort attended with more overwhelming success." He recounts some of the familiar stories, such as that of Douglas Jerrold, who, after starting on the book, sank back in despair on his sick-bed with the exclamation, "Oh, God, I am an idiot!" But more valid are the estimates in the leading authorities. Not a favorable word can be found for the poem, even in the obscurest quarters. Thus began the eclipse of Browning's reputation. "Pippa Passes" (1841), poetry of a high order, was ignored. "Dramatic Lyrics" (1842) and "Dramatic Romances and Lyrics" (1845), containing his work of the most sustained excellence, were received with indifference. The general public, even of the highly educated, Professor Lounsbury infers, had been turned against Browning by their disappointment over "Sordello."

As for the plays, the records prove that they were unsuccessful, maugre the poet's protestations to the contrary. "Strafford" was for five performances kept on the stage only by the combined drawing power of the greatest actor and actress of the time, Macready and Helen Faucit. More contested is the fortune of "A Blot i' the 'Scutcheon," which, according to the poet's treacherous memory of events, was prematurely cut short in a career of triumph. In reality it was performed but three nights in all, and to dwindling houses, was then withdrawn for old plays, and was not again acted during the remaining sixteen weeks of the season. Moreover, on its revival by Samuel Phelps, it was presented only eight times during the entire season of 1848-9. As a writer for the stage Browning certainly was not successful. But Professor Lounsbury is not content with establishing this fact. He proceeds to argue that Browning was no dramatist at all. Part of his criticism is just. The poet was interested in poignant situations, not in the succession of events, nor in the plot or action. He depicted individual states of soul, not the interplay of various characters. The dialogue is frequently hard to follow. But it is not a catholic criticism that applies to "A Blot i' the 'Scutcheon" standards that properly apply to "As a Man Thinks" or "Mid-Channel." Browning wrote poetic dramas, not realistic transcripts from everyday life. The common-sense attitude that finds "A Blot i' the 'Scutcheon" ridiculous would look upon "Philaster" as a patchwork of silly romantic situations, and would characterize the tragic Othello as a drivelling idiot, because even an ordinary man could have seen on five minutes' reflection that Desdemona's unfaithfulness was a physical impossibility. In other words, Professor Lounsbury's judgments, suggestive as they are, leave out of account some elements necessary to a perfectly valid conclusion.

Indeed, behind the whole investigation lurks an animus that for some may negative its truly valuable results. Professor Lounsbury has been so sorely annoyed by Browning's obscurity that he has set out to prove that this obscurity alone blighted for thirty years a promising reputation. The present immense vogue of the poet he attributes largely to the artificial interest created by Browning societies, which are nevertheless hurting the poet by centring attention on the most unpoetic parts of his work. Yet there is a tonic quality in these eminently sensible views, couched as they are in a lucid, vigorous style, touched with humor and irony. They should especially fall into the hands of devotees like the feminine enthusiast who exclaimed after listening to a reading from her adored poet: "If we did not know how splendid this whole thing is, what a horrible bore we should think it to be." Such enthusiasts will accept not one of Professor Lounsbury's critical opinions, but they cannot controvert the facts he has adduced.

Ecce Deus. By William Benjamin Smith. Jena: Diederichs.

The distinguished mathematician and philosopher of Tulane University has been devoting many years to the study of the origins of Christianity, and has gathered together an immense amount of material more or less ready for publication in defence of the thesis, already promulgated in the first edition of his "Der vorchristliche Jesus" (1906), to the effect that the Jesus of the New Testament was not a man like Buddha or Confucius, but God or a God (it is not perfectly clear what *deus* means as applied to Jesus) like Mithra, the God of a secret cult whose existence may be traced to pre-Christian Jewish circles. The attack on Arthur Drews, the first part of whose "Christusmythe" was handled mercilessly by German radical critics, induced Professor Smith to waive for a while the intended logical order of the publication of the vast stores of accumulated material and to come without further ado into the debate, taking up the cudgels with the avowed purpose of showing the critics what the fundamental question at issue really is, and of indicating, by select examples, the kind of evidence he has completely at his command in unpublished manuscript in support of his somewhat surprising contention. Hence "Ecce Deus" now, and hence the German dress.

The reader should bear in mind that Dr. Smith professes an interest not only in religion but in the Christian religion, "our religion," as he allows himself to say. To be sure, he is careful not only to distinguish sharply between religion and ethics (a separation which is not conspicuous in the Jewish prophets or in the utterances commonly ascribed to Jesus), but also to inform us in a highly ornate passage that the Himalaya summits of ethics were not reached in the New Testament, and that no such dizzy heights of pure morals tower above us there as in the second book of Plato's "Republic." The reader should likewise bear in mind that the volume is avowedly an attack upon the historical method of such scholars as Wellhausen, Schmiedel, and Harnack, and that even in the learned appended discussions of such points as "the pillars of Schmiedel," "the silence of Josephus and Tacitus," "Nazareth," and "Judas Iscariot," the audience to whom he speaks is ever before him.

The drift of the book, stated dryly in the reviewer's own language, seems to be about this: Traditional theology accepts as credible the extraordinary events commonly called "miracles," and believes that Jesus is both God and man, a credulity and belief which no unprejudiced modern man (for whom alone the work is intended) can share. Unitarian theology is intellectually as deficient as the traditional, for it is impossible to explain the worship of Jesus *quasi deus*, if Jesus were a Jewish teacher who said some beautiful things about God and man, waiving the fact that most of the sayings attributed to him are equalled in Jewish thought and surpassed in Greek. Now, as matter of fact, there is no thinkable *tertium quid* between Jesus as Man and Jesus as God. It follows that if he was a man, Christianity is inexplicable; if he was a God, the hypothesis of an historical man Jesus is superfluous. Again, as matter of fact, Jesus was no more man than his early rival Mithra.

So convinced is Dr. Smith of the truth of his thesis that he ventures to affirm that if there were no positive evidence for the existence of the pre-Christian Jesus cult, it would be necessary to postulate the fact in order adequately to account for Christianity. At the same time, he is aware of the possible rejoinder of his critics, that the positive evidence hitherto adduced for the Jesus cult is meagre, that the argument from silence is a two-edged sword, that the

Digitized by Google

interpretation of the New Testament, apart from the Gospels, is special pleading, and that, above all, the Gospels themselves purport to narrate the sayings and doings of an historical person like Isaiah and Jeremiah. The last point is confessedly important, for the Gospels exist as literary documents. But existence is not interpretation. The critics have been unable to reach a consistent method of interpretation and have as a result of their failure lost themselves in the mazes of subjectivity. What do the Gospels intend? To the Tulane professor it has been given to know the clue to the exegesis of the Gospels. To be sure, he has had some predecessors, but none so rigorous, thoroughgoing, and scientific as he. The clue is allegory. The Gospels are not the evident reminiscences about a man but the occult annals of a God. In the Gospel of Mark, for example, when rightly that is allegorically interpreted, there stands forth in its purity, unsullied by the human spots found in the Fourth Gospel, Jesus the God of a secret cult. As Dr. Smith insists, it is a question of method. "Ecce Deus" is dedicated to the *Manes* of Origen.

The most annoying thing in this amazingly clever book is the persistent aroma of finality which envelops the discussion in general and the exegesis in particular. This finality is to the older historical method the only heresy of which a scientific student is capable. However, due allowance must be made for the polemic and popular trend of the argument.

Kansas in the Sixties. By Samuel J. Crawford. Chicago: A. C. McClurg & Co. $2 net.

This is a plain, unvarnished frontiersman's narrative of war and peace; it is also an interesting contribution to a period in the history of his State, which is too little known. No one can put the book down without feeling that he has been close to a remarkable figure, a State-builder of rugged personality, indomitable will, and no little power. To understand Kansas, either in its *Sturm und Drang* period of the fifties or in the sixties, one must know something of the character of its men. Gen. Crawford reached Kansas after the battle for Free Soil had been won, for he did not cross the boundary of Kansas Territory until March 1, 1859, just a month after John Brown had left Kansas soil forever. The Territory was then looking forward, after five years of trial by fire, to an era of peaceful development, only to become itself, in part, the battleground of a far greater and more terrible civil war than it had yet experienced. How rapidly things moved in this virgin territory appears from the fact that Crawford, the young immigrant, was deemed a perfectly qualified Kansan by December, 1859, for he was then chosen to the first State Legislature. In May, 1861, he got leave from the Legislature to raise a company for the defence of the Union, and from then until November 8, 1864, when not yet thirty he was elected Governor of Kansas, he was steadily in the field, retiring as Colonel of the Second Kansas Colored Infantry to become the head of a State of which he had been a resident, but little more than five years.

That Gen. Crawford was a gallant soldier, every one in Kansas knows, and the outsider cannot fail to be convinced of it by this narrative. Not that there is anything of the swashbuckler about the author; but the vigor of his personality and the number of his accomplishments speak for themselves. Particularly stirring is the story of his colored regiment and the risks of cold-blooded massacre they took when they volunteered. Gen. Crawford writes with much of the intensity of feeling of the sixties. If there are still unreconstructed Rebels, here is an unreconstructed Northerner, and we confess to have found the acquaintance refreshing in these days when so many would have it appear that there was nothing more at stake than a polite difference of opinion as to whether one's servants should be paid or unpaid. But if the ex-Governor can still deliver ringing volleys at his quondam enemies in gray, it cannot be overlooked that his feelings sometimes carry him away. His recollections of some of his battles would have been much strengthened by a more careful consultation of the records. Thus his account of his troops firing over Gen. Lyon's body at Wilson's Creek is incorrect. His account of the battle of Prairie Grove, for another instance, is open to far more serious criticisms. It is well, therefore, to read his battle accounts for their stirring stories of brave deeds rather than for historical truths.

The latter part of Gen. Crawford's book relates to his civilian experiences; but even here the military intervenes, for one of his first acts as Governor was to visit Washington and the troops of the Army of the Potomac. Moreover, as he resigned from the army to become Governor, so he resigned as Governor in November, 1869, to become colonel of the Nineteenth Kansas Cavalry, a six months' regiment raised to make a winter campaign under Sheridan against the hostile Indians of Kansas. Though few know it, Kansas under Gov. Crawford was compelled to place troops in the field to aid the regular army against Indians, for four successive years, 1865, 1866, 1867, 1868-69. Gen. Crawford writes as one familiar with Indian brutalities, with little or no sympathy for the red man; yet he was a leader in the effort to drive out traders who supplied them with whiskey and guns, and he helped to defeat the scandalous efforts to rob some tribes of their lands. This entire phase of his book makes sad reading, with its record of bloodshed and governmental blundering. But here, too, the historian of the future will find much of value.

Problems in Railway Regulation. By Henry S. Haines. New York: The Macmillan Co. $1.75 net.

This book is in a sense a continuation of the author's previous volumes, for although it treats to some extent the same subject matter as is to be found in "Restrictive Railway Legislation" and "Railway Corporations as Public Servants," this treatment serves merely as a summarized introduction to the discussion of the urgent problems of the present day. The six preliminary chapters of an historical character show that the author has supplemented his practical railway experience with a thorough study of transportation history, and that he is possessed of rare skill in presenting vividly and concisely the salient facts in the formation, extension, reconstruction, and regulation of our railway net. Doubtless because of the author's service with the "Plant System" and his interest in the South, more attention is given to Southern railway development than is usual among transportation historians, and much new light is thrown upon this neglected section of the country.

The problems treated are eight in number—incorporation, finance, construction, operation, traffic, discrimination, rate-making, and labor. Whether the reader agrees with the writer's conclusions or not, he will be impressed by the calm handling of topics, by the total absence of bias, and by the modesty with which personal opinions are expressed, and he will be brought into familiar touch with all the questions that are the subject of present controversy.

Problems of incorporation arise largely in connection with reorganization, merger, and consolidation. Separate State Governments are impotent in respect to such transactions as are revealed in these gradual concentrations of corporate power, but the Federal Government may say how the franchises shall be exercised in interstate commerce. The benefits of such unification of management are to be derived from suitable traffic arrangements authorized by Federal authority rather than by merger of the corporations themselves. Financial problems have to do largely with questions of capitalization and the limitation of earnings. Here the author takes a sound position, but one which in the light of Supreme Court decision can only be regarded as heterodox, that any physical valuation of our entire railway system seems impracticable; that in the event of inordinate profits to certain railways from what appear to be

Digitized by Google

reasonable rates when levied by competitors, the excess over a reasonable return is to be taken by the treasury through a graduated tax; that interference with existing capitalization would create injustices that would more than offset any advantages to be gained thereby, and that Federal supervision should intervene, if at all, only with respect to the issue of new securities and then reluctantly and tentatively because of the danger that its policy will be subject to political influences.

Discussion of the problems of traffic, discrimination, rate-making, and labor all leads in one direction, a plea for a certain degree of liberty for the railways in the making of rates, and permission to establish traffic associations under Federal jurisdiction. In the light of the recent sweeping rate decisions of the Commission, the issue is no longer between shippers and railways as to reasonable rates, but rather between railways and the Commission as to reasonable profits. Materials and supplies are controlled by the industrial Trusts. Wages are fixed by the brotherhoods and the Federal board of arbitration. In the recent rate cases, labor for the first time aligned itself in a common cause with the managements and demanded that rates should be adjusted to the trade-union wages scale. As a result of the Commission's present authority and its exercise, tariffs are becoming hardened on the existing rate basis. Capital is imperatively demanded for improvements. In the midst of these conflicting demands and requirements, the only relief is to be found in a reduction of the cost of transportation, and the possibilities of this policy as a source of future profits are still problematical.

A few errors have crept into the book. The date of the formation of the Massachusetts Railroad Commission is given as 1879, which is an obvious misprint for 1869. The "commodities clause" does not prohibit railway companies "from engaging in mining or producing any commodity entering into interstate traffic"; it merely prohibits railways from transporting in interstate commerce commodities which they have mined or produced. It should have been stated that the figure of average capitalization per mile for the United States in 1908, $71,819, includes duplications due to the holdings of the securities of one railway by another. The figure of net capitalization was $57,201. The English road engineer's name should be Telford, not Telfair. The statement that cost of performance per traffic units "has been increasing since 1902" is a little misleading because, according to the author's own statistics, the expense per ton-mile was higher in 1904, and per passenger-mile in 1907, than it has been since. Finally, there is danger of misconstruction of the statement that cost of railway plant to date "is a fact established by the records." It is true only where intelligible records are available.

American Socialism of the Present Day. By Jessie Wallace Hughan, Ph.D. New York: John Lane Co. $1.25 net.

John Spargo, who writes an introduction to this work, uses moderation in saying, "Miss Hughan makes what I venture to predict will be widely and generally recognized as a very valuable contribution to the literature of Socialism." There are evidences here not only of prolonged and minute investigation, but also of sound mental digestion. Miss Hughan has, indeed, produced a most scholarly and dispassionate treatise. Though she has not aimed at any of the graces of style, we find, when most needed, great clearness of diction. Seldom, for example, does one walk amid the pitfalls of Karl Marx's dialectic with so sure a tread. Those who have looked in vain to others for an interpretation of Marx may advisably entrust themselves to her guidance.

Miss Hughan sets out to answer two questions: "Does there exist, or to what extent does there exist, a consistent Socialist movement in the United States? Only after such a movement is clearly identified can we proceed to inquire, What are its principles and tactics, its strength and its weakness, at the present time?" She shows that such a party does exist, though it is not so easily identified as in European countries. In England, the name Socialism is comparatively little used, but the thing itself is clearly in evidence, chiefly in connection with the Labor party. On the Continent, on the other hand, sixty years of controversy around the points raised by Marx and Engels have evolved a scientific doctrine. In the United States there has been no continuous evolution of either measures or doctrine. Not until 1892 was there anything that could properly be called an American Socialist party, and even now, declares Miss Hughan, the current saying that Socialists are "of 57 varieties" reflects the prevalent impression, both popular and academic. Since, however, both the Socialist party and the Socialist Labor party have an accredited place in the socialist movement of the world, each being represented in the International Socialist Bureau, they must be taken, through their official utterances, as the spokesmen of American Socialism.

An interesting distinction between this country and Europe is pointed out:

> The acknowledgment of leadership is foreign to the principles of Socialism, which emphasizes the class rather than the individual, and economic rather than personal forces. Such hero worship as that of Lassalle by the German workers of the last generation is repudiated by American Socialists; and many of the internal polemics which appear to outsiders as serious discussions are in reality merely a rough discipline administered to would-be leaders who forget their place as servants of the organization.

To the student of the philosophy of history this distinction might perhaps be construed as a reflection on the intelligence of the Socialist party in the United States. Yet it is by no means certain that if a Liebknecht or a Bebel, to say nothing of a Lassalle or a Marx, had arisen in this country the personal equation would have played a more insignificant part here than in Germany. It may, indeed, have been a sound instinct which, in view of the material actually at hand, has made the Socialist party in America minimize the idea of leadership. Leadership of a sort there has, of course, been.

The part played in American Socialism by Marx's theories is discussed by Miss Hughan with clearness and not a little shrewdness. Not his theory of surplus value, but his economic interpretation of history, with the consequent doctrines of the class struggle and the fall of capitalism, forms, in our author's opinion, the basis of scientific Socialism. "The apparent ignoring of surplus value in American propaganda is not to be ascribed to such a repudiation of this doctrine as that of the Fabians Hudson and Shaw, but to a realization that the Socialist movement is founded upon economic determinism and the class struggle rather than upon the analysis contained in 'Capital.'" In other words, the American Socialist, if we read Miss Hughan aright, loves not "Das Kapital" less, but the "Communist Manifesto" more—a generalization which we suspect comes pretty near the truth.

Life and Memoirs of John Churton Collins. Written and compiled by his son, L. C. Collins. New York: John Lane Co. $3 net.

It seems but yesterday, though in fact the event dates from September, 1908, that we were shocked by reading the news of the tragic death of one of England's most militant and vital scholars. Professor Collins's body, it will be remembered, was found in a channel near Lowestoft under circumstances that strongly suggested suicide. In the present memoir his son gives reasons for supposing that the death was accidental. Professor Collins, though ordinarily of buoyant temperament, was subject to intermittent and inexplicable fits of insomnia and mental depression. When he left Birmingham on the holiday from which he was never to return, "he seems to have been, if not very, at least mildly depressed." But no thought of death, apparently, was in his mind. We may quote at some length from the reminiscences of William MacKay, both because they show the normal state of Collins's mind, just before the fatal

Digitized by Google

event, and because they give perhaps the most vivid picture of the man to be found in the present memoirs:

The Professor was at his best when he was illustrating and expounding the writers whom he loved. As he "reeled off" long quotations with marvellous verbal accuracy, with perfect enunciation, and with a curious haunting undertone as of music, one could not but envy those students whose high privilege it was to hear him from week to week in the lecture-room at Birmingham. His memory was prodigious. One night the conversation turned on Swift. He asked me if I remembered the conclusion of Taine's chapter on the Dean. He leaned farther back in his chair, took his pipe from his mouth, and with half-closed eyes turned to the ceiling, he repeated, without once stopping for a forgotten word, the whole of that magnificent passage. He seemed to derive some acute pleasure, as of a physical kind, from the act of reciting the ringing periods of the eloquent Frenchman. The sentences cover two or three pages of Taine's "English Literature" . . .

The night before that upon which he met his death, Professor Collins spent with me. We were alone . . . And there opposite me as I write these memories is the basket chair in which he liked to sit huddled up, pipe alight, head leaning back, as he inveighed against the charlatans or gave shape to his appreciation of the great ones. His attacks and his appreciations were alike remarkable for clearness of statement as for beauty of phrase.

The next night, contrary to his wont, he took a sleeping draught and slept out of doors. Later, while wandering perhaps half unconscious in the dark, he fell into the water.

The present memoir is a worthy portrait of a man who made many enemies by his outspoken criticism of slovenly work, but who had also the warmest friends. The book suffers less from the indiscriminate inclusion of uninteresting letters than do most of the swollen biographies now written in England, but it might still be reduced somewhat without disadvantage. We get a striking picture of the scholar's enormous activity as lecturer and writer, of his fight for recognition ending in the professorship in the University of Birmingham. Despite his inveterate bookishness, he kept also his interest in life, especially, it may be added, in the shady side of life. Those who read his article in the *National Review* of December, 1905, on the "Mersham Tunnel Mystery" will not be surprised to know that, like some other good and great men, he was powerfully attracted by the mysteries of crime and imposture, and was, for instance, so far absorbed in the intricacies of the Tichborne case as to seek the acquaintance of the claimant. In 1903, he helped to found a society commonly called the Murder Club, which is still in existence and the objects of which, though secret, are easily surmised. He sketched the plot of a detective story which has since been written out by A. C. Fox-Davies and is soon to be published as "Rastchuk's Revenge."

Professor Collins got to know most of the celebrities of his day, and the pages of the present memoir are not lacking in entertaining stories and observations. Some of the latter are not free of causticity, as witness this entry in his diary:

With Browning I was miserably disappointed; there was marked *vulgarity* about him, particularly in his accent and in the tone of his voice, & a certain indescribable savor of *sycophancy* of a man eager to be of a grade to which he did not belong; but the poet was there—the poet's keen eye—the poet's heart—obvious in his remarks and descriptions.

Notes

The "Episodes" to "Vathek," which it was feared had been lost, but which were discovered by Lewis Melville, will be published by Stephen Swift & Co. Mr. Melville will write the introduction, and the translation from the French, in which the "Episodes" were written, will be made by Sir Frank T. Marzials.

University life in England in the early eighteenth century is said to be well pictured in a forthcoming volume to be printed by Messrs. Bell for the Cambridge Antiquarian Society, entitled "Cambridge Under Queen Anne"; it represents in part the literary remains of the late J. E. B. Mayor.

Andrew Lang has written a "Short History of Scotland," in one volume, which Blackwood promises for next month.

The beginnings of civilization are sketched by Miss Florence Holbrook in "Cave, Mound, and Lake Dwellers, and other Primitive Peoples," a new book announced by Heath & Co., who also have in hand Dr. E. D. Daniell's "Latin Drill and Composition."

McClurg & Co. will shortly publish a new book, by Herbert N. Casson, on "Ads and Sales."

The Penn Publishing Company of Philadelphia announces its removal on January 1 to Nos. 218-226 South Eleventh Street.

The "Pervigilium Veneris," edited with a translation into English verse by Elizabeth Du Bois Peck, is issued by the Elm Tree Press of Woodstock, Vt., in an edition of one hundred and twenty-five copies, eighty-six of which are for sale at $5 each, postpaid. The book is printed from type on Van Gelder hand-made paper, and the Latin text is illuminated with a large initial in four colors, based on that in the Codex Thuanus, and with two Byzantine ornaments, also in four colors, designed by Dela P. Mussey.

A timely publication is a reprint from the Century Co. of Robert Hichens's "Spell of Egypt," without the illustrations by Jules Guérin and at a correspondingly lower price ($1.25 net).

A neat illustrated edition of Percival Lowell's "Soul of the Far East" comes to us from Macmillan. Looking at the original date of copyright we are surprised that it goes back to 1888. The book has remained so alive in memory that one needs such a reminder that he read it more than a score of years ago.

The "Memoirs of W. W. Holden" (Lawson Monograph II; Trinity College Historical Society) present the writer's own version of affairs in North Carolina during his two terms as reconstruction Governor. They reveal the author's limitations and the difficulties before a Republican Governor in a Southern State under the Congressional plan, a side of reconstruction history for which the records are none too abundant.

Houghton Mifflin Co. has brought out a popular edition of Henry M. Stanley's "Autobiography." In its present form it contains sixteen illustrations and an excellent map.

To Everyman's Library, E. P. Dutton & Co. add this month forty-seven volumes: Biography: Irving's "Life of Mahomet," with introduction by Prof. E. V. Arnold, and Oliphant Smeaton's "Life of Shakespeare."—Classics: Aristophanes's "Comedies," Vol. II, the final volume, and Horace's "Complete Poetical Works,' with introduction by Prof. John Marshall.—Essays and belles-lettres: Bagehot's "Literary Studies," two volumes, with introduction by George Sampson; "The Federalist," by Alexander Hamilton and others, with introduction by Prof. W. J. Ashley; Rousseau's "Emile, or Education," translated by Barbara Foxley, and Isaac Taylor's "Words and Places, or Etymological Illustrations of History, Ethnology, and Geography," with introduction by Edward Thomas.—Fiction: "Old St. Paul's," by Harrison Ainsworth, with introduction by W. E. A. Axon; Balzac's "Country Doctor," with introduction by George Saintsbury; Disraeli's "Coningsby," with introduction by Langdon Davies; Dostoieffsky's "Prison Life in Siberia," with introduction by Mme. Stepniak; Mrs. Gaskell's "Silvia's Lovers," with introduction by Mrs. Ellis Chadwick; Hawthorne's "Twice-Told Tales," with introduction by Ernest Rhys; Bulwer Lytton's "Rienzi," with introduction by E. H. Blakeney; George Sand's "Devil's Pool and François the Waif," with introduction by Ernest Rhys; J. von Scheffel's "Ekkehard: A Tale of the Tenth Century"; Tolstoy's "War and Peace," in three volumes; Turgeniev's "Virgin Soil," translated by Rochelle S. Townsend, and Whyte-Melville's "The Gladiator," with introduction by J. Mavrocordato.—History: Mommsen's "History of Rome," four volumes, translated by W. P. Dickson, with a review of the work by Prof. E. A. Freeman.—Oratory: "Select Orations," from Demosthenes, with introduction by C. Rann Kennedy.—Philosophy and theology: Aristotle's "Nicomachean Ethics," translated by D. P. Chase, with introduction by Prof. J. A. Smith, and David Hume's "Treatise on Human Nature, and Other Philosophical Works," two volumes, with introduction by A. D. Lindsay.—Poetry and drama: Ibsen's "Ghosts," "An Enemy of the People," and "Warriors of Helgeland," translated by R. Farquharson Sharp, and Sir Walter Scott's "Poems and Plays" two volumes, with introduction by Andrew Lang.—Reference: "Atlas of Literary and Historical Geography," Vol. II, America. Eric Smith's "Dictionary of Dates," for readers of literature and history, and Walter P. Albert F. Calvert has for many years devoted himself to the artistic exploration of Spain, and his series of illustrated monographs on Spanish cities is long and well known. Pursuing his former methods and making use of a good deal of his former material, he has now, in two handsome quarto volumes ("Spain"; Dutton), undertaken a comprehensive survey of the chief artistic monuments of the entire kingdom, including Galicia and the Balearic Isles. A compact letter-press accompanies the profuse illustrations, but the latter are confessedly the main reason and attraction of the work. A novel feature is the reproduction in color of a group of water-colors by Trevor Haddon. The larger number of these have to do with Granada and the Alhambra, and of most of them one would say that either the note is too low or that they have been dimmed in the reproducing. But several are adequate and charming, and the sketches done at Ronda and Seville and Cordova are vividly truthful. The whole work is ambitiously planned, and the achievement must be pronounced satisfying. Mr. Calvert's volumes make an undeniably strong appeal to lovers of historic Spain.

Ezra S. Tipple of the Drew Theological Seminary, has with his "Lady" (who might well have been left out of the account) made a pleasant book of pilgrimages to "Some Famous Country Parishes" (Eaton & Mains): the homes of Keble, George Herbert, John Fletcher (of Madeley), Baxter, Tennyson (father of the poet), and Kingsley. The influence of the quiet rectories of England upon her scholarship and literature is a story full of charm and quaintness still to be told. The present unpretentious volume touches on that theme lightly, but is for the most part in the vein of the ordinary book of summer travel. The descriptions of the places are clear, and the characterizations of the men are just, so far as they go.

In "The Province of the State" (London: P. S. King & Son), Sir Roland K. Wilson maintains the Spencerian theory that the only valid reason for the existence of a state is the certainty of continual strife if every man were to be judge in his cause. Access to this "justice shop," as he calls it, should be absolutely free, and the expense it would entail should be made up by the curtailment of the action of the state in other directions. The *bête noire* of the author is popular education, provided by the state; even the earliest and most limited of the Education Acts is pronounced to have been a step in the wrong direction. There is scarcely any attempt made to sustain the theory on theoretical or philosophical grounds. The argument is nearly always an argument of convenience.

Miss Ida M. Tarbell has evidently forgotten that where there's a will there's a way. In "The Tariff in Our Times" (Macmillan), she opens her brief preface (one of the few portions of the volume that have not already appeared in magazine form) with this assertion:

> It takes no extended examination of any period in the last fifty years—the term covered by the book—to convince an unprejudiced student that as far as the tariff is concerned public opinion has never been fairly embodied in the bills adopted. If the popular understanding of protection as expressed in our elections had been conscientiously followed, there would be to-day no duties on iron and steel products, on cheap cottons and cotton mixtures, and certainly none on a great variety of raw materials, probably including raw wool. . . . This volume is an attempt to tell in narrative form the story of this defeat of the popular will.

If this were true, no stronger indictment could be written of popular government. There has not been a time in a great many years when Miss Tarbell has not held a brief for the people, and, like a true advocate, she has never failed to sublimate her client. It could be devoutly wished that the people were as pronounced in their attitude to the tariff as she implies. As a matter of fact, their feeling appears, on the whole, to have been one of bovine indifference. No one, we suspect, will look for science or philosophy in this book. Its merit—and a very considerable merit it is—lies in the entertaining character of the narrative. The pages bristle with personal allusions; the dry bones in the valley of our economic past have been clothed with flesh and blood. Yet Miss Tarbell is as artless as she is artful: she knows how to make the best use of her material, but her motive is always sincere, her zeal always unaffected, and her search for facts always indefatigable.

A highly important and very welcome contribution to the history of the war of secession is "Die Deutschen im Amerikanischen Bürgerkriege," by Wilhelm Kaufmann, a volume of 610 pages, with 36 maps and plans, which has just been published by R. Oldenburg in Munich. The patriotism of the German Americans at the outbreak of the civil war and their earnest efforts to save the Union have been generally appreciated; but there has been much unjust criticism of their conduct as soldiers, and fatal mistakes have been attributed to them of which they were wholly innocent. Thus, the severe defeat of the Union army in the battle of Chancellorsville in 1863 by Stonewall Jackson was ascribed by the press to the cowardice of the German troops, and this view was maintained for about twenty years, until Gen. Doubleday in his full and faithful account of the combat showed its utter falsity. Kaufmann also proves conclusively that if Hooker, the commander-in-chief, had listened to the advice of Sigel, Schurz, and other German officers under him, he would have won the victory. Carl Schurz urged that the accused should be tried by court-martial for their supposed offences, but no heed was given to his request. The book contains also many interesting communications concerning the personal relations of the German generals to Abraham Lincoln.

The fourth volume of "The Vulgate Version of the Arthurian Romances" (Carnegie Institution), edited by H. Oskar Sommer, contains the Second Part of the prose "Lancelot del Lac," and brings down the narrative through the adventures of Mordred. It was at this point that Paulin Paris ended his modernization of the romance in his "Romans de la Table Ronde," giving in an appendix merely a partial analysis of the concluding division, known as the "Agravain," which is to appear as part iii of Dr. Sommer's edition. As was observed in an earlier notice of this work, the volumes containing the "Lancelot" are much the most important of the whole series, for this branch, unlike the other branches of the cycle, has not been printed since the sixteenth century. The text is an exact reproduction of that which is found in the British Museum MS. Additional 10293, without change even of capitals or punctuation. Variant readings from the other manuscripts of the romance in the British Museum are occasionally given, and the pagination of these manuscripts is systematically indicated except where the texts were too different, so that it will be easy to consult them for any passage in the present edition. Furthermore, head-lines and side-notes enable the reader to follow the narrative readily. Dr. Sommer has also given in an appendix a variant version of the curious story of the False Guinevere, who for a time ousted the genuine Queen from her throne and Arthur's affections, and an extract from the very condensed narrative of this part of the romance found in MS. Royal 19, C. XIII. It is to be observed that for the greater part of the narrative covered by this volume the text of MS. Additional 10293, as Dr. Sommer himself notes, represents only one of two parallel versions that are extant. Until the other is also printed, it will, of course, be impossible to say which of the two versions represents best the romance in its original form. Here is a good opportunity for the Romance departments of some of our larger universities. As regards the contents of the present volume, they are of very unequal quality. The "Lancelot" is evidently a composite work, and whereas the story of the False Guinevere is one of the most interesting episodes in the romance, the latter part of the volume—that which follows on the prose rendering of Chrétien's "Conte de la Charrette"—is insipid beyond belief. There are many indications that this part of the "Lancelot" was a late addition. Along with the continuation of "Merlin," it was probably the latest portion of the vast cycle of romances which Dr. Sommer is editing. The present volume shows the same typographical excellence as its predecessors. We notice, however, one error, on p. 186, where two lines of the text have been made to exchange places.

John Bellows's "French and English Pocket Dictionary" has now been enlarged and brought out for desk use as a "Dictionary of French and English, English and French" (Holt), revised by William Bellows, with the assistance of Auguste Marot and Gustave Friteau. By elaborate typographical signs a great deal of information is conveyed in brief compass. Thus a dot (·) after a word indicates that the last letter is silent but subject to *liaison*; two dots (¨) indicate that the last letter is not even pronounced in *liaison*. The work requires some familiarity with the system of signs, but is extremely ingenious, and, when understood, useful.

Yale University has just received from one of its graduates, Owen F. Aldis, a col-

Digitized by Google

lection of first editions of American authors, together with many manuscripts, which is said to be probably the largest and most comprehensive of its kind in existence. It contains nearly six thousand volumes. Of these several hundred are of the Colonial and Revolutionary periods, the rest are nearly complete collections of the writers of belles-lettres in the nineteenth century. Among its treasures are the only perfect copy known of Charles Brockden Brown's "Alcuin"; all the rarer books of Bryant except the "Embargo of 1808"; probably the best collection of Cooper in existence; Washington Irving complete; a copy of Poe's "Al Aaraaf" and a copy—one of three copies known to exist—of "The Murders in the Rue Morgue"; every rare item of Whittier except one early pamphlet on slavery, two later ones, one broadside, and one or two London pamphlets.

Sir Hugh Gilzean Reid, whose death is reported at the age of seventy-five, was connected with several newspapers in Scotland and elsewhere, and was one of the founders of the Institute of Journalists. Besides "Studies and Sketches of Landseer," he wrote biographies of Disraeli and Garfield.

A plea for Anglo-German friendship, in the *Contemporary Review*, is from the pen of Noel Buxton, who writes with knowledge and self-restraint. England's rôle in the controversy over Morocco has aroused intense bitterness in Germany. How long, asks Mr. Buxton, are the two nations to continue snarling at each other across the North Sea? He proceeds to argue that the only way out of an increasingly menacing situation is a *rapprochement* between England and the Empire. Nothing in the Anglo-French *entente* stands in the way, unless it is the British intention to justify Germany's complaint that the *entente cordiale* is not a mere arrangement for self-defence, but a combination to thwart and humiliate the Kaiser's government. Mr. Buxton finds that no valid reasons exist against a friendly arrangement with Germany; and the mechanics of the thing is simple: "The anncuncement of the agreement, a couple of royal visits, a few hints to the press, and a speech by a popular minister—these would turn the public mind, without shadow of doubt, from enmity to a cordial attachment in three months."

La Revue prints a number of interesting letters from the poet Béranger to Jules Michelet. Readers of those gay *chansons* in which the Gallic spirit is so characteristically revealed are apt to forget that the private life of the author of the "Roi d'Yvetot" was almost exemplary, and that his passionate faith in democracy and the Revolution never wavered. At any rate, we find the French Anacreon writing to the philosopher-historian letters of a most serious and sober judgment on men and things. Béranger was Michelet's elder by eighteen years, but he addresses the latter as "cher et illustre maître," and in one exceptionally ardent communication which begins "cher et incomparable maître" he calls Michelet "the Rembrandt of history," and informs him that the last two volumes of the "History of the French Revolution," after being fairly devoured, had been lent to Lamennais. It is a collocation of names that the French like to think typical of themselves only.

The art of controversy is on the decline but still shows occasional flashes of its ancient vigor. In the *English Review* for November there is a lively bit of give and take on the subject of Thomas Carlyle, between Frank Harris and Alexander Carlyle, a kinsman of the author of "Sartor Resartus." In the February number of the *Review* Mr. Harris had published "Talks with Carlyle," being the account of several conversations with the Sage of Chelsea, dating back to the years 1877-78. In these talks, Carlyle is represented as revealing his most secret thoughts and sorrows to a young literary aspirant, then quite unknown. This and other reasons have moved Carlyle's kinsman to describe Mr. Harris's talks with Carlyle as imaginary and to present his case in a brief paper that begins promisingly with a citation of the good old Scottish proverb, "Leears should hae gude memories," and concludes with the expression of belief that Satan and Mr. Harris would make an excellent pair of collaborators. Between the beginning and the end we find a complete armory of descriptive epithets—"liar," "defamer," "libeller," "vile calumniator," "basely ungrateful," "cynically brutal." The interest of Mr. Harris's reply consists not so much in the fact that he reveals a pretty little talent of his own for scarification, nor yet in the emphatic reassertion that Carlyle did unbosom himself to this young and fervent admirer. Mr. Harris vouches for the truth of Froude's story that Carlyle used to beat his wife, maintaining, at the same time, that no true admirer of Carlyle would be influenced thereby in his estimate of the genius of the man. "Passionate lovers know well that such petty violence is more than common," says Mr. Harris. It was only the well-groomed public that gloated over the fact, "as evidence of its own superiority to Carlyle."

Carlyle's "Cromwell" is the subject of a well-informed paper in the *Mercure de France*, by Henri Mazet, who supplements his interesting analyses of Cromwell and Puritanism with a comparison between the English revolutionists of 1649 and the French revolutionists of 1793. As individuals the Englishmen fall far behind. They were not only wanting in "the winning grace and the chivalric altruism and the broad horizon of our constituents," but they had some very positive vices, greed being not the least among these. The Feuillant is a more agreeable figure than the Presbyterian, the Montagnard than the Independent, and the *émigré* than the cavalier. But when you take the two nations in mass, there is no comparison. Then the Frenchmen of the Revolution appear in the light of cowards or madmen. Through cowardice the Terrorists slew and through cowardice the nobles let themselves be slaughtered like sheep. Whereas the Puritans, with all their narrowness, uncouthness, fanaticism, and hypocrisy, did reveal the two necessary qualities of success, energy, and *sangfroid*. Thus we are brought back to the familiar classification of the race psychologists. What is not so familiar is the apparent thesis, in the mouth of a modern Frenchman, that the Revolution was a modern failure.

The plea for the construction of an international air map for aviators made by the Frenchman, Charles Lallemand, at the Portsmouth meeting of the British Association, and the animated discussion aroused by it, occupy a prominent place in the *Geographical Journal* for November. The remaining work of the Geographical Section at this meeting is described by Prof. A. J. Herbertson of Oxford. The problems which Africa still presents to the explorer are stated by F. R. Cana, and notes upon an ancient map of early American discoveries are given by O. A. Derby.

Science

NATURAL HISTORY IN AUSTRAL-ASIA.

SYDNEY, October 23.

More than seventy years ago the Australian Audubon arrived in Australia with a mission to observe, capture, and describe the birds indigenous to the island-continent. Originally an undergardener at Windsor Castle, John Gould was no novice in ornithological science. He had published "European Birds" that gave him a European reputation. He was now to reap still more glorious laurels. So completely did he accomplish his task that subsequent observers have added but little to the achievement. While Gould, between 1838 and 1840, described 682 species, another alien, Gracius Broinowski, only twenty years ago, described but 700. To this date only 800 species have been recorded. Gould's truly magnificent work was issued to about 150 subscribers at a cost of £150 a copy, and now it can be procured for neither love nor money. Broinowski's admirable work, originally costing eight guineas, is also rapidly passing into the unprocurable stage. To fill the places of these two classics, the enterprising publishers, Whitcombe & Tombs, have produced, at the low price of a guinea, a book of Australian birds that satisfies all reasonable demands.* The plates are numerous and excellent; many of them are colored; and all, when compared with Gould's or Broinowski's works or with personal observations (the present writer is a devoted haunter of the bush), are found to be faithful likenesses. Gould is sparingly corrected, and it is wonderful how seldom the great old naturalist stands in need of correction. A more indispensable or a more trustworthy treatise is not likely to be soon produced.

A charming companion volume we owe to J. A. Leach. Though it costs little, it is remarkably complete.† Illustrations of above 80 per cent. of all known species, both colored and plain, make of it a perfect "pocket book for field use." Running notes at the bottom of the page add to its attractions and its utility. The author and his in-

troducer, who is director of education in Victoria, are enthusiasts for their subject, and they are bringing up the children of Australia to be bird-lovers like themselves. They seek to clear their feathered pets of the charges strangely brought against them by English-bred immigrants. None of the Australian poets is in general more true to nature than Gordon, and yet he can sing of his adopted country as one,

> Where bright blossoms are scentless,
> And songless, bright birds;

and the calumny conveyed in these uninspired words has been perpetuated. Mr. Leach and Mr. Tate triumphantly appeal to the bell-bird, the harmonious shrike, with its powerful, swelling notes, the warbler, the wren, the Australian lark, that exquisite mimic the lyre-bird, and above all that glorious songster the (Australian) magpie. The inability of immigrants to perceive the beauty of the songs of Australian birds was due to the lack of associations. Gordon loved the English birds because he had heard them from infancy, and, even more, because he was saturated with the poems that had been dedicated to them; but memories and associations were wanting to clothe the wild-wood songs of Australian songsters with beauty. On the other hand, native-born Australians are disappointed with the songs of the nightingale, and contrast the thrush, the blackbird, and—no, *not* the skylark—by no means to their advantage, with their own songsters.

Australia claims to be the most highly developed of the bird-regions of the world. Three of the four families at the head of the avifauna are stated to be absolutely confined to this continent. Unique and archaic forms of bird-life are here found. Other species reach here their highest development. The emu, Australia's solitary wingless species, is the second largest living bird. The mallee fowl ranks among nature's wonders. The black swan, partly through Mill's "Inductive Logic," has advertised Australia all over the world. The Australian eagle is the largest in the world. The parrots and cockatoos are of gorgeous plumage and almost unique. When Mark Twain visited Australia, the bird that he, as a humorist, naturally most wanted to see was the laughing jackass. To the English immigrant like Marcus Clarke the kookaburra bursts into "horrible peals of semi-human laughter"; but Mr. Tate finds the laughter of this "feathered comedian" to be infectious and he confesses that, "innumerable times," the strange bird has provoked him "into an outburst as hearty and as mirthful as its own." The lyre-bird, with its splendid tail, is also the sole survivor of a grand species, and it is the prince of mockers. The marvellously beautiful birds of paradise are found only in Australia or its adjacent islands. Like these "birds of God," the bower-bird and the mound-bird are unique.

An instructive account of the protective coloring of both birds and animals mediates a transition to a book on animals, generally so-called; but, indeed, we are still mainly among the birds.‡ The author, Dudley Le Souëf, who is a naturalist by right of inheritance, is director of the zoölogical gardens at Melbourne. In his rambles through a great part of Australia the author has made hundreds of observations that will be welcome to naturalists and delightful to all readers. In the deeply shaded gullies and the densely timbered ranges of Victoria he found snakes in abundance, and they are still numerous within seven miles of Sydney, as the writer of this letter can bear witness. Yet he has never seen in them "anything approaching" the fascination of birds. Mr. Le Souëf must have been unlucky in his experiences. There can be but few rural Australians who have not observed that notable phenomenon. Nor has he ever seen a snake swallow her young. This again has been repeatedly observed by good observers. Yet his snake-lore is abundant. Raising an issue maintained by Darwin and opposed by Wallace, he cites a writer who has seen the dance of the lyre-bird, when the female seemed to be silently choosing her mate. At the same time the male birds were observed to advance and recede, turn, bow, whirl, hop, and run about the ground. While they thus behaved, they repeatedly raised and lowered their tails, visibly admiring them as they turned back and gazed; and they whistled beautifully. Is not this true sexual selection? Mr. Le Souëf has also much information to communicate, from direct observation, of those rare surviving links between the mammals and the reptiles or the birds—the platypus and the echidna.

These are scientifically described by A. H. S. Lucas.§ Isolated from the rest of the world for the greater part of its geological history, Australia has witnessed the unique evolution of a large number of mammals and other animals. Though these have often a foreign origin, reaching back to an age when there was a land-bridge to the islands of the Malay archipelago, and though they sometimes retain traces of an Asiatic, Indian, American, African, or Indian physiognomy, they have been completely differentiated in Australia. The dingo (a dog) is the most highly organized. The sea-bear, sea-lion, and sea-leopard are specialized. The dugong, still common in the waters of Queensland, is the original of the mermaid, and its human resemblances have been magnified by illustrations and stories. The carnivorous opossums excepted, the marsupials, the products of isolation, survive in Australia alone, and yet the anatomist has discovered a structural link between them and the other theria. The egg-laying mammals are curiously compared with the higher mammals and minutely described. The snakes and lizards are scientifically delineated, and, like all the other species, their visual aspects are brought vividly before the reader by means of well-executed illustrations. A more complete or a better manual of the subject does not exist.

The Animals of New Zealand have one character in common with the animals of Australia: they consist mainly of birds. While, in the work thus named,‖ the mammalia are described in less than 30 pages, the birds receive more than 300, the reptiles 15, and the amphibia only one. Well may Mr. Drummond say that the fauna of these islands of the Far South abounds with contradictions and surprises and is full of eccentricities. There are no four-footed animals that divide the hoof. The only land-mammalia are two bats. The sole reptiles, the lizards, are few, but one is absolutely unique and of ancient lineage. The avifauna is most remarkable for its wingless species. The gigantic moa has been extinct, possibly, for hundreds of years, but the notornis, its contemporary and congener, though supposed to be extinct, has been found so recently as 1898. The kiwi is known as the most remarkable bird of New Zealand, and is a striking anomaly. The most unbirdlike of living birds, it accumulates the characters of several orders; it borrows its head from the waders, its legs from the gallinæ, and its wings from the moa or the ostrich.

In a large and handsome volume, devoted to the flowering plants of New Zealand, the authors have classified these in accordance with Engler's evolutionary ideas, and they reject the systems of Bentham and Hooker.¶ The New Zealand flora, like its fauna, is largely unique, and is a study of development produced by isolation. Three-fourths of the flowering plants at this land's end of the world are met with nowhere else. Only in Chili are lianes and epiphytic growths found in equal abundance. Large considerations determine certain problems. Thus, a characteristic feature of the sombre and cathedral-like New Zealand forest is its dense and tangled undergrowth. How explain that? We can at least arrive at its origin. The existence of an Antarctic continent has now (it is considered) been definitely proved by means of the researches of New Zealand botanists, and these incline to believe that the ancestral species of New Zealand are of

continental derivation. Now, the undergrowth in the sub-Antarctic islands of New Zealand (as has been shown in the *Nation*, January 19, 1911, p. 70) is still denser and more entangled than that of the primeval forest in New Zealand. What more natural than to assume that the New Zealand undergrowth had its origin in those islands, unless, indeed, we assert that the undergrowth of the islands had its origin in New Zealand?

We have no space left to review the companion volume on the plants of Australia, by W. R. Guilfoyle.** Those treated of are chiefly trees, shrubs, and climbers, and, like all the volumes of the series, this one has directions for their cultivation. It is nobly illustrated. Taken all together, these books form the nucleus of what might be called the Australasian Naturalist's Library. J. C.

Two science books are added this month by Dutton to Everyman's Library: Robert Boyle's "Sceptical Chymist," and "Naturalist in Nicaragua," by Thomas Belt, with introduction by Anthony Belt.

A bulletin is in preparation by the Department of Agriculture on the distribution and migration of herons, cranes, and rails, similar in scope to the one recently published on the shorebirds.

The first International Eugenics Congress will be held next summer at the University of London.

A new theory to explain the rings of Saturn is urged by Professor Birkeland of Christiania, who holds that they are produced by electric radiation from the planet, and are "renewed, so to say, every instant."

Dr. Eugene Wasdin, a widely-known surgeon in the United States Marine Hospital service, died on Friday of last week, aged forty-two. He was stationed in Buffalo at the time of the assassination of President McKinley and was one of the surgeons that performed the operation and attended McKinley during his illness. Dr. Wasdin had been decorated by the King of Italy for his researches in the suppression of yellow fever in that country.

Thomas Hall, the inventor, whose keyed typewriter won a prize at the Paris exposition of 1867, died in Brooklyn on Sunday, at the age of seventy-seven.

Frederic Cope Whitehouse, whose hobby for many years was the irrigation of Egypt, died in this city a week ago, at the age of sixty-nine. He was graduated from Columbia College with highest honors in 1861 and later studied in France, Germany, and Italy. For his efforts to regulate the River Nile he was made commander of Osmanieh and grand officer Medjidieh. In 1882 he discovered the depression in the Egyptian desert known as the Wadi Raiyan, and wrote many papers advocating its use as a storage reservoir.

****Australian Plants.** 15s. All the volumes here reviewed may be procured from Whitcombe & Tombs, Little Collins Street, Melbourne, Australia, or from the same publishers, Addle Hill, Carter Lane, London, E. C.

Drama

Molière's "Les Femmes savantes," edited by Murray P. Brush, is in Macmillan's list.

The Irish Players, of the Abbey Theatre, Dublin, made their first appearance in this city, in Maxine Elliott's Theatre, on Monday evening, and won a positive but not an overwhelming success. Their ability as actors seems to have been exaggerated, but it is possible that they may appear to better advantage in later representations. In light comedy or in the quieter passages of domestic drama, they exhibited a delightful naturalness, their diction, dress, deportment, and gesture being perfectly characteristic of the peasant class which they represent. But in more exciting episodes they reveal the need of artistic training to supplement the resources of natural intelligence. Their general freedom from self-consciousness, exaggeration, and staginess is their greatest virtue, but of perfect naturalness upon the stage, as of some other very good things, there may be too much. There is no doubt that the effect of their work could be much improved by the use of a little legitimate artifice. A mistake was made in not beginning with a more weighty and significant programme. Of the three pieces presented, "The Rising of the Moon," "Birthright," and "Spreading the News," the first and third, both by Lady Gregory, are of very light calibre. "Birthright," by T. C. Murray, is a genuine bit of domestic tragedy, assigned to Ireland and described according to Irish conditions, but not, so far as its incidents or temperaments are concerned, peculiarly characteristic of that country. Bat Morrissey, a harsh, hard-working, narrow, unimaginative farmer, is enraged with his eldest son, Hugh, because the latter loves sport rather than labor, and aspires to be a gentleman, having inherited a certain refinement from his mother, who adores him and always defends him. Bat is further angered because his favorite younger son, Shane, has made up his mind to go to America. Matters come to a crisis when a sudden frost menaces the farm, and the best mare on the place breaks her leg, while Hugh is away merry-making. Suddenly, Bat decides to disinherit Hugh and send him to America in Shane's place, keeping the junior at home as his prospective heir. Maura, the mother, strives in vain to keep Hugh and his father apart, but they meet, and, in a passionate scene, Hugh learns his fate. Immediately he is filled with hatred of his brother, whom he assails with the utmost bitterness for supplanting him. Finally, there is a terrible fight, in which Hugh is strangled to death and Shane flees. This is a gloomy tale, only relieved by the mutual love between Maura and her first born, but it is well and powerfully told and almost from the first grips the spectator with a sense of impending calamity. The character-drawing is uncommonly clear and consistent, and the part played by inherited disposition in bringing about the final catastrophe is indicated with skill, logic, and dramatic force. In many respects the play is a superior work, and it is, on the whole, well acted, though not brilliantly. Sydney J. Morgan furnished a rugged sketch of the old father, and Eileen O'Doherty a very truthful study of a fond, foolish, and thoroughly subdued old Irish woman. The actual fratricide was a striking bit of realism.

At a meeting of the Egypt Exploration Fund, held at Burlington House, November 10, Dr. A. S. Hunt gave the following description of the newly discovered fragment of a satyric play of Sophocles. We quote from the London *Times* of November 11:

When found, the papyrus in question was, as usual, much broken up; in fact, the various fragments were not even all obtained in the same year. But they had fitted together remarkably well, and as now arranged made up the first sixteen columns of the play, accounting for over 400 lines, of which about one-half were complete or easily completed, and many more sufficiently well preserved to be intelligible. Since the length of a satyric drama seemed to have been considerably less than that of the ordinary tragedy the amount recovered might well represent as much as the half of the original whole. The play was the "Ichneutæ," or "The Trackers," of which practically nothing beyond the title was previously known. It was based upon the familiar myth of the exploits of the infant god Hermes—his theft of Apollo's cattle and his invention of the lyre. Apollo, in an opening speech, announced the loss of the cattle, for which he had vainly sought, and offered rewards to the finder. Silenus then appeared with his attendant Satyrs, and proposed to join in the search. Encouraged by Silenus, the chorus started out on the quest—they were the "Trackers" from whom the play was named. They soon discovered traces of the cattle, leading to the entrance of a cave; but here they were alarmed by curious sounds which they did not understand—the notes of the newly invented lyre with which Hermes was amusing himself down below. Silenus upbraided them for their timidity, and at length himself knocked at the barrier, and a nymph emerged. In answer to their questions, she explained that she was the nurse of the child who had been lately born to Zeus, and whose abnormal growth was so startling, and told them of his invention of the lyre. But she stoutly defended him against the imputation of being concerned in the theft. They remained unconvinced; some cowhide admittedly had been used in making the lyre, and there were the telltale tracks on the ground. While the dispute was in progress Apollo returned and accepted the evidence offered by Silenus and the Satyrs as entitling them to the promised reward. Here the papyrus broke off; no doubt in the sequel Hermes appeared on the scene and appeased Apollo by the gift of the lyre, as narrated in the Homeric hymn.

The long association between Sir Herbert Tree and Mr. and Mrs. Arthur Bourchier comes to a close in December with the revival of Offenbach's "Orphée aux Enfers" at His Majesty's Theatre, in London. Mr. Bourchier will resume management at his old theatrical home, the Garrick. This he has arranged to do about the beginning of February, soon after the termination of Oscar Asche's tenancy of the house. He will have a new piece by Alfred Sutro, who provided him with one of his most enduring successes, "The Walls of Jericho." The play bears the title of "The Fire Screen," and contains four acts, dealing with modern English life. Mr. Bourchier and his wife, Violet Vanbrugh, play the principal parts, and with them will be associated Kate Cutler and J. Fisher White.

The new Liverpool Repertory Theatre was formally opened on the 11th instant, with a performance of "The Admirable Crichton." This is the fourth repertory theatre in the United Kingdom, the other three being at Manchester, Dublin, and Glasgow. Similar

Digitized by Google

enterprises exist in two Australian cities, and a beginning is soon to be made in Canada. The case of Liverpool is interesting, since the new theatre is a citizens' theatre. The venture, technically speaking, is the property of a company called "The Liverpool Repertory Company, Limited," registered under the Companies (Consolidation) act, 1908, with a nominal capital of £25,000. Of 20,000 shares offered for subscription to the public at £1 each, with a dividend limited to 6 per cent., no less than 13,000 have been taken up, there being 1,100 shareholders representing all classes of local society.

The well-known actress, Miss Darragh, for some time leading lady with Miss Horniman; Basil Dean, who worked with Miss Horniman from the beginning of her Manchester venture, and the Liverpool Playgoers' Society appear to be the founders of the new venture. The lady, the gentleman, and the society, in order to ascertain the feeling of the Liverpool public on the subject, ran a repertory season at Kelly's Theatre in the spring of this year, and during six weeks produced ten plays, including "Strife," and works by Barrie, Masefield, and Sudermann. They made a net profit of almost $4,000. Naturally, this induced them to go ahead. The company was formed, shares were issued, and the Star Theatre in Williamson Square was bought, redecorated, and enlarged, and perfected by the introduction of mechanical appliances similar to those that have proved successful at the Deutsches Theater, Berlin. A winter and spring programme has been arranged, which is to include: "Justice," "The Critic," "The Cat and the Cherub," "Katawumpus" (at Christmas matinées), and plays by Granville Barker, Haddon Chambers, McEvoy, Gilbert Murray, Pinero, Sutro, and others.

Marie Löhr, one of the most popular of the younger English actresses, will pay her first professional visit to the United States late in 1912.

Music

Memoirs of Theodore Thomas. By Rose Fay Thomas. New York: Moffat, Yard & Co. $3 net.

The entire musical world joins in deepest sorrow over this terrible bereavement. The passing away of the illustrious Theodore Thomas is an irreparable loss to our art, for scarcely any man in any land has done so much for the musical education of the people, as did he in this great country. The purity of his character, the firmness of his principles, the nobility of his ideals, together with the magnitude of his achievements, will assure him everlasting glory in the annals of artistic culture.

When Theodore Thomas died, on January 4, 1905, there was a great outpouring of affection, grief, and honor for the departed orchestra chief, and thousands of telegrams and letters of condolence were sent to the widow. Among them was Paderewski's tribute, just cited, which in a few words explains why Thomas was so widely esteemed both as an artist and as a man. These words form the concluding paragraph of the Memoirs which his second wife, Rose Fay Thomas, has just given to the world. They might equally well have been placed on the title-page as the text for the 569 pages of Mrs. Thomas's fascinating story. Theodore Thomas's life was for several decades the life of a musical frontiersman, of a pioneer who had to put forth Herculean efforts to cut his way through the thickets of ignorance, indifference, and prejudice which covered this continent when he crossed the ocean as a boy of ten. If there were no red Indians for him to fight, as he grew up, there were plenty of white enemies, as treacherous and cruel as any savages; newspaper writers and others who, instead of aiding him in his great cultural work, did all they could to discourage it.

Young Thomas had publicly appeared in Germany as a "wonder-child," and the blind King George of Hanover was so much impressed with his violin-playing that he offered to pay for the boy's education. Luckily, the lad preferred to emigrate to America. New York, in 1845, was a town of two-story houses with pigs roaming the streets and eating up the refuse. Musically, matters were no less primitive; the only thing the boy could do was to play at parties and balls. It was characteristic of him that, instead of doing such work in a perfunctory way, he made it serve in lieu of practising studies and exercises. As a player in theatre orchestras he became familiar with the works of Shakespeare, Goethe, and other great poets. Having heard Jenny Lind and Henrietta Sontag, he endeavored to reproduce the luscious quality of their tones on his instrument, which resulted in his being pronounced, some years later, "America's most accomplished violinist." With William Mason and other musicians he rehearsed and played, for fourteen years, the best chamber music. There was no profit in this (Mason, in fact, had to meet deficits annually), but it gave Thomas his mastery of the string choir of the orchestra and his deep insight into the classical school of music.

That he was a born conductor was shown by the manner of his début, in 1860. One evening, when the audience was already seated at the Academy of Music, word was received that the conductor was ill. Would Thomas take his place? He did take it, though he had never conducted before, nor seen the opera to be sung (Halévy's "Jewess"), and with perfectly satisfactory results. He continued his connection with the opera for two years, and then appeared at the head of a concert orchestra in the field in which he did his great pioneer work. This soon ceased to be local, and became national. Theodore Thomas was not only one of the first to give New Yorkers their musical education (in the beginning he found it inadvisable to put more than one movement of a symphony on a programme), but he soon extended his mission to a number of other cities by establishing his musical "highway" which included, on the outward trip, New Haven, Hartford, Providence, Boston, Worcester, Springfield, Albany, Schenectady, Utica, Syracuse, Rochester, Buffalo, Cleveland, Toledo, Detroit, Chicago, and on the homeward trip Cincinnati, Dayton, Springfield, Columbus, Pittsburgh, Washington, Baltimore, Philadelphia. In later years, when Chicago became his home, he brought the same influences to bear on other cities, including St. Paul, Omaha, St. Louis, Nashville. Mrs. Thomas cites remarks from newspapers in these cities, all agreeing that never before had such splendid performances been heard there.

Boston was one of these towns. It is not now generally remembered that for twelve years Thomas supplied that city with its best orchestral pabulum. In 1893 Mr. Higginson offered him the conductorship of his great symphony orchestra. It was just what he would have liked best: a cultivated city, an excellent orchestra, no stooping to conquer, but, on the contrary, a law that there must be a symphony on every programme. But he had in the meantime established his orchestra in Chicago, and although the undertaking was at that time in a state verging on collapse, loyalty to his musicians and gratitude for those who had aided him induced him to decline the Boston offer—an offer which, it may be added, had in it the quality of reparation, because it was the establishment of Mr. Higginson's orchestra which, by cutting off Boston and other New England cities from Thomas's profitable "highway," had made it necessary for him to rely chiefly on New York. But conditions in New York had become unfavorable, because of the competition of rival organizations, and, particularly, of the German opera, which absorbed the interest of the same class of music-lovers who had previously given him their patronage.

New York's loss was Chicago's gain. At first that city was by no means prepared to give a profitable welcome to one with such high ideals; but Thomas's iron will triumphed over all obstacles. In the annals of music there are few chapters so interesting as those in which Mrs. Thomas relates how the great conductor gradually enlisted the sympathies of the captains of industry in that city, persuading them, with the aid of his friends, not only to pay the necessary deficits, but to erect for him a special building, Orchestra Hall, which now remains as a monument to his ideals and his perseverance. Thomas was not only an executive musician; he also was thoroughly expert in the scientific aspects of his art. His Notes

Digitized by Google

on the Construction of Music Halls, which take up four pages of this book, contain invaluable instructions for architects who may be called upon to build homes for the rapidly increasing number of orchestras in this country. Unfortunately, he died shortly after the new hall had been completed; died of pneumonia only a few weeks before he was to have returned to New York as conductor of the season's last Philharmonic concert. On this occasion his thousands of admirers were planning to give him an ovation such as few mortals had ever received—an ovation which they hoped would help to allay the bitterness he had felt at having been obliged to leave the metropolis after educating the public up to "concert pitch."

It was certainly a cruel fate; but it was only one of the many tragedies of his career. For years his concerts did not cover expenses, but he took the deficits on his own shoulders, always paying his players conscientiously. In 1876 he was nearly $20,000 in debt. He hoped that his concerts in Philadelphia during the exposition would recoup him; but the vast throngs were not interested in music. His indebtedness was so greatly increased that the sheriff sold all his possessions, including his splendid library of valuable annotated scores. Luckily this was obtained by Dr. Franz Zinzer, a man who was not only a philanthropist but a humorist. He rented the scores to Thomas for $100 a year, and wrote to his wife, "if you lend him one of the works, tell him to take good care of it."

The Chicago Columbian Exposition ended even more disastrously. The story of it is told dramatically by Mrs. Thomas. One of its compensating incidents was that it brought Thomas a number of interesting letters from prominent European composers and conductors. These are included in the volume, as are many of those he received at other times. From the smallest of these composers up to Liszt and Wagner, all expressed their gratitude to him for bringing out their works in the New World. He was constantly doing this in advance of European conductors, and those of the composers who had the opportunity to hear his orchestra testified that there was none better in Europe. Rubinstein, for instance, remarked in 1873: "Never in my life have I found an orchestra and a conductor so in sympathy with one another, or who followed me as the most gifted accompanist can follow a singer on the piano." Whenever Thomas went to Europe he was also cordially welcomed and entertained by the great musicians. Of his experiences on these trips he fortunately left a record in the form of diaries—brief but extremely pithy and pungent. They give an insight into the keenness of his judgment that will surprise his most intimate friends. Equally delightful, though in a different way, are the letters he wrote to the woman who became his second wife, the author of these Memoirs. They reveal the affectionate, domestic side of this great character, his love of nature, his kindliness when he was not needlessly irritated, his sufferings, during his "highway" tours, in the wretched hotels of the time, and a hundred other things, to which the author adds her own observations made during years of real companionship.

Mrs. Thomas has written the most important, the most interesting, the most instructive, the most romantic book ever published on music in America, a book which moves to tears as well as to laughter, brimful of anecdotes and with flashlights on music in nearly all its phases. It is one of those books which make a reviewer sigh at the end of his columns because of his inability to convey to the reader an adequate idea of its worth.

Giulio Gatti-Casazza, the present manager of the Metropolitan Opera House, used to be known in Milan as the "Tedesco," because he produced so many German operas at the Scala. When he came to New York a foolish attempt was made, by persons apparently unfamiliar with his record, to create the impression that he would make the Metropolitan the home of Italian opera, to the exclusion of Wagner. It cannot be denied that he has shown a certain prejudice against French opera; but Wagner has been particularly favored under his régime, having had more performances each season than even Verdi or Puccini. The latest evidence of his interest in German opera is the production, last Saturday, of Thuille's "Lobetanz," an opera which has held its own in Germany for thirteen years, but had never been heard in America. Kurt Schindler, a pupil of Thuille at the Royal Academy of Music in Munich, suggested it to him; and when he heard it abroad he became enthusiastic over its musical charms. The scenery was ordered in Berlin; Alfred Hertz rehearsed the score, and conducted it *con amore*. The principal singers in the cast were Gadski and Jadlowker. The libretto is by the well-known German novelist, Otto Julius Bierbaum. It belongs in the realm of mediæval romance, and has real poetic merit. Lobetanz is a strolling fiddler who wins the love of a princess, is accused of witchcraft, thrown into prison, taken out to be hanged, but pardoned, because, by his fiddling, he revives the apparently lifeless princess, who becomes his bride. Musically, the first two acts are rather dull. The third, on the contrary, has not one tiresome bar. The dungeon scene, in which the fiddler makes the prisoners join in a dance of death, is as grewsomely realistic as any of the music written by Berlioz or Liszt. The royal procession to the scene of execution, headed by forest horns, is exquisite, and extremely droll is the finale, in which once more the fiddler shows the power of music by making all, including King, hangman, and judges, indulge in a merry waltz, this time a dance of life and love.

The Symphony Concerts for Young People will give the first concert of their fourteenth season next Saturday afternoon in Carnegie Hall. The New York Symphony Orchestra, under the direction of Walter Damrosch, will play at five of the six concerts this season; the junior and senior orchestras of the Music School Settlement being the performers on the afternoon of March 2. According to the custom of several years, the first programme will be devoted to music of the classic German period, including two numbers of Beethoven. Mr. Damrosch will give a brief analysis of each composition, explaining its musical construction, and playing the principal themes on the piano. The soloist on Saturday will be David Mannes. The programme includes Symphony No. 6 (the Pastoral, Beethoven; violin solo, Romanza in G, Beethoven (David Mannes); overture, "Oberon." Weber. On December 16, the orchestra will have the assistance of a quartet from the choir of the Musical Art Society in presenting a programme of Christmas music from many lands.

Chopin died at the early age of thirty-nine, of consumption. In view of this fact, a movement has been started in London to commemorate the great composer in a novel way. It is intended to endow a bed in some sanatorium or convalescent home for pulmonary complaints, to be called "The Chopin Bed," and to be kept solely for professional pianists who may need help of the kind.

Art

The Invention of Lithography. By Alois Senefelder. Translated from the original German by J. W. Muller. New York: The Fuchs & Lang Manufacturing Co. $5.

Whatever the reason may be for the publication of this book at the present time, one may regard with satisfaction this new tribute to the memory of Senefelder. He was not only the inventor of lithography, but, as several have pointed out—for example, the late Louis Prang in his introduction to the catalogue of the exhibition of lithographs at the Grolier Club in New York, 1896, and Georg Fritz, "Handbuch der Lithographie," 1901—he also realized virtually all processes of the art, excepting those based on photography. His treatise dealt not only with various possibilities of pen, crayon, and "touche" drawing, but with color printing, transferring, and transfer-paper. It ends with a reference to the substitution of metal plates for the Solenhofen stone; that method is in vogue to-day in aluminography. Mr. Muller's translation is very apparently done with great care and conscientiousness. In fact, his loyalty to the original leads him to use the literal rendering "cold needle" for *Kaltnadel* (p. 99), instead of "dry point," and *Herr* Bartolozzi, on the same page, looks a bit droll. One need not insist on such an occasional misprint as Pol-

Digitized by Google

ten for Pölten (p. 70), but Andre for André is used consistently. What is more surprising is the statement, in the translator's preface, that the original German edition appeared in 1821. The 1821 issue is the unchanged second edition of the "Vollständiges Lehrbuch," which made its first appearance in 1818. Moreover, the first edition was accompanied by a *Sammlung von mehreren Musterblättern*, a collection of sample plates illustrating the various processes described. One is led to believe that Mr. Muller and his publishers did not know of this, as it would have been natural to issue reproductions of these plates with the translation. An English version by "A. S." appeared in London as early as 1819. This does not vary essentially from the present one, except in some omissions and in not always so faithful a rendering of the original.

Senefelder laid a solid foundation; to-day, as Friedrich Hesse says, in his recent work on color printing ("Die Chromolithographie," 1906), "no other graphic process, excepting photography, is applied in such a multiplicity of ways as lithography." And into the field of the photomechanical processes, chromo lithography has entered to a remarkable extent. Lithography represents a signal instance, among the older reproductive processes, of a coöperation with processes based on the initial action of the camera. Almost from the beginning, painters used lithography as a means of original expression, a painter's art. Such striking contrasts of manner and method as the verve of Gavarni, the exuberant richness of Isabey, the joyous lightness of Whistler, the unctuous sweep of Sargent, the silver-point delicacy of Legros, and the sonorous technique of Menzel, well emphasize the wide range of possibilities inherent in the grease crayon and the stone or transfer-paper. Yet apart from Pennell, Sterner, Haskell, Mielatz, A. B. Davies, John Sloan, and Glackens hardly an American artist of to-day is doing even an occasional lithograph.

The special autumn number of the *International Studio* is devoted to "Peasant Art in Austria and Hungary." There are five essays by native experts and about a hundred plates, many colored, presenting eight hundred objects. The peasant art of Austro-Hungary is really no more homogeneous than the people that produce it. The present album will afford many puzzles and much entertainment to the collector of peasant wares. Of this singularly varied product the most attractive in one reader's opinion are those Dalmatian and Croatian textiles in which Venetian and Levantine motives predominate.

Sales to be held in Paris shortly include Corot's Femme à la Perle.

A Winter Salon for paintings and sculpture will be held from January 21 to February 28 at the Grand Palais, Champs Elysées.

Three paintings have been purchased by the French Government from the Autumn Salon: Jacque Martin's Fleurs et Fruits d'Automne, René-Juste's Avant la Pluie, and Louis Paviot's Roses Blanches.

Philip Gengembre Hubert, the architect, who came to this country from Paris in 1849, died at his home in Los Angeles, Cal., in his eighty-first year. He designed a number of large apartment houses in New York, being the originator of the coöperative apartment.

Finance

WALL STREET, MR. ROOSEVELT, AND THE TRUSTS.

When Wall Street, after stocks had begun to rise from the sharp decline of the first half of last week, was looking about for explanations, it found before it Mr. Roosevelt's article on the Trusts. The article was long. The excerpts published in the newspapers consisted mainly of Mr. Roosevelt's defence of the Steel Trust (especially as regarded its purchase of the Tennessee Coal in 1907) and his assertion that the present relations of government and Trusts are "not satisfactory" and that "the effort to prohibit all combinations, good or bad, is bound to fail." It was on the basis of these paragraphs that Wall Street said it was Roosevelt's article that caused last Friday's rise in stocks.

But the question which aroused some curiosity among those who had read the whole of the *Outlook* article was whether Wall Street had read the whole of it. For there was a good deal more contained in it. It denounced the Circuit Court's decision in the Tobacco Trust dissolution. It urged that the actions of Trusts like the Standard Oil and American Tobacco should be, "if possible, punished in the persons of the chief authors and beneficiaries of the wrong." It also argued that a government commission should undertake "supervision, regulation, and control of these great corporations," and that this control should "indirectly or directly extend to dealing with all questions connected with their treatment of their employees, including the wages, the hours of labor, and the like."

This was a pretty comprehensive programme. Possibly it is awkward for Mr. Roosevelt that stocks should have risen on its publication; but the stock market might not have read the whole paper. Or perhaps the market might have been in line for going up because of other influences, and applauded the article merely because stocks were going up when it was published. Or, it is remotely conceivable that Wall Street is politically fascinated with Mr. Roosevelt—as it was in 1904 and in June, 1910—and may feel like trying him again for President. But that very hypothetical question again rested largely on the question, what Wall Street would think of that part of the *Outlook* article which it had not read.

The one certain thing about the incident was that it gave a somewhat new turn to the Trust controversy, in which every one is now engaging. In the closing days of 1907, when all the world was discussing the "currency situation," the man who did not have a new and complete solution of the problem up his sleeve was looked upon as a poor-spirited creature, hardly fit to engage in discussions at the street-corner or on the elevated train. Very much such a state of things has now been created in the "Trust situation." It was discussed to a large metropolitan audience, two weeks ago, by the Federal receiver of a New York street railway system; it was discussed to a still larger one, this week, by a college president, a lawyer, a United States Senator, and a member of the Stanley committee. No private citizen, at his office or his club, is permitted to be without a final opinion on the subject, and it was altogether to be expected that Mr. Roosevelt would join the controversy.

Boiled down, his declarations, so far as they contribute anything new to the controversy, propose two things only—that bad Trusts be utterly demolished, and that good Trusts be placed under intimate supervision of a government commission, to see to it that they do not become bad Trusts. It is true, the article declares with very great emphasis that "it is absurd to treat the size of a corporation as in itself a crime." But this was merely to repeat what has been already said, with much greater clearness and precision, by President Taft, by Attorney-General Wickersham, by the Circuit Court opinions in the Tobacco Trust dissolution matter, and by the Supreme Court. It is a settled question; the *obiter dictum* of the lower court in 1908, concerning the two express wagons, is entirely dead.

Mr. Roosevelt's attitude towards the admittedly wicked Trusts involves his attack on the Tobacco reorganization plan, which is denounced as "miscarriage of justice." Wall Street, which had received that decision with every symptom of relief, oddly ignored, in its response of last week, that part of the article. Mr. Roosevelt's emphatic conclusion is that a Trust guilty of conduct such as the Tobacco Trust's "should be absolutely disbanded."

But this is not wholly clear. Just how disbanded? By separation into single factories as units? By discharge of all workmen and shutting-down of the business? The proposition is more vague and indefinite even than the proposition of the independent tobacco people, and that was vague enough. The court and the attorney-general, unfortunately, could not stop with vague suggestions. They were required to formu-

Digitized by Google

late or approve a concrete plan. In doing so, they were compelled to ask whether the Anti-Trust law was designed to exterminate a business because of its past objectionable practices, or only to prevent its resorting to them again.

They also had to keep always in their mind the fact that decision on the form of dissolving the confessedly wicked Tobacco Trust would have to serve as precedent in the conceivable case of a Steel Trust dissolution, and that respect for continuity in judicial interpretation required them to give at least some heed to the *pro rata* distribution plan fixed for the Northern Securities. Incidentally, it is to be remarked, concerning that leading precedent, that it was established under the Roosevelt Administration, and that the form of dissolution was insisted on by his own attorney-general, whose attitude was in every respect what Mr. Wickersham's has been.

As for the government commission idea, it remains to see how the serious financial community will take it. The plan will surely receive its share of Congressional discussion. It offers in some regards an easy way of shelving an awkward question. It would also offer some interesting possibilities of future dictation of prices of commodities by a Federal board; the suggestion which financial circles took so ill when Judge Gary fathered it, before the Stanley committee. Mr. Roosevelt would have this only for "monopoly prices." But there is the whole discussion open again; for when do prices become "monopoly"?

THE MARRIAGE PORTION

Second Printing

By H. A. MITCHELL KEAYS

Author of "He that Eateth Bread with Me," "The Road to Damascus," etc.

$1.35 *net;* by mail, $1.47.

One of the widely discussed novels of the year. Its alertly realized setting is a university community "not a thousand miles from Cambridge." "There are many complications and passionate dramatic situations that hold the reader's attention."—*Boston Transcript.* "Her books are for adults—that is, for grown persons with grown minds."—*Chicago Tribune.* **A novel for the discriminating.**

HER HUSBAND: The Mystery of a Man

Second Printing

By JULIA MAGRUDER

Author of "A Heaven-Kissing Hill," "Princess Sonia," etc. With illustrations by Lucius Wolcott Hitchcock. $1.35 *net;* by mail $1.47.

The most amazing story since "The Masquerader." During its serial publication even in abbreviated form it has aroused intense discussion. Enid Lothian is a poignantly alluring heroine and her husband is a character that will live in the memory. **A popular book for all kinds of readers.**

THE KNIGHT-ERRANT

A Novel of To-day. **Second Printing**

By ROBERT ALEXANDER WASON

Author of "Happy Hawkins," etc. Illustrated by Hanson Booth.

$1.25 *net;* by mail, $1.37

The story of a rich young man who sets forth for his lady's sake to prove his worth in the world, and of the adventures that befall him from New York to San Francisco and the phases of life that he learns to know. Mr. Wason's humor, which the *Nation* has called "American humor in its best estate," flashes everywhere. "An unusual book. Reality is there in character, situation, and psychology. The Lady Barber is an admirable creation."—*N. Y. Evening Post.* **An appropriate gift for anyone able to appreciate a novel that is out of the ordinary.**

ONE WAY OUT

Fifth Printing

A Middle-Class New-Englander Emigrates to America

By WILLIAM CARLETON

$1.20 *net;* by mail, $1.32

The narrative of a salaried man with a family and what he did when he "lost his job." Few books have ever done so much to stimulate effective thinking among the American people. "A notable brief for democracy that everybody ought to read," says the *Nation.* "A good specific for discouragement, and a very genuine inspiration to healthful, courageous living," says the *Outlook.* **A valuable gift for a man, especially a young man.**

THE INCORRIGIBLE DUKANE

An Immediate Success

By GEORGE C. SHEDD

Author of "The Princess of Forge," etc.

Illustrated by Stanley L. Wood. $1.25 *net;* by mail, $1.37

In this breezy story of a ne'er do-well the author has achieved a Western story of a new variety. "The story is told with power and spirit, and teems with the sunny optimism and irrepressible good spirits of the 'incorrigible,' so that the reading is a pure joy throughout."—*Wilmington Every Evening.* "Dukane is charming and he is all the more interesting because his story is thrown against the glowing background of the great free West."—*Oakland Tribune.* **A splendid gift for any man.**

THE LOSER PAYS

A story of the French Revolution **Just Published**

By MARY OPENSHAW

Author of "The Cross of Honour."

Decorative wrapper, $1.25 *net;* by mail, $1.37

"Of the many novels written around the French revolution, Mary Openshaw's 'The Loser Pays' stands out with prominence, having qualities of vividness and dramatic intensity that do justice to the time and make it live again."—*Chicago Post.* ***A rare novel—entertaining and worth while.***

THE GARDEN OF THE SUN

An Able Novel

A Story of Army Life in the Philippines

By Capt. T. J. POWERS, U. S. A.

Illustrated. $1.25 *net;* by mail, $1.37

"Two things," says the *Nation,* "distinguish this story from the general run of military novels—vivacity of dialogue and beauty of description. The final chapters form a dramatic climax to a novel which deserves serious attention as an important contribution to modern American fiction." **Men and women alike are entranced by it.**

THE BIG LEAGUE

The Best Baseball Book

By CHARLES E. VAN LOAN

Decorative wrapper and frontispiece by Author Covey. $1.00 *net;* by mail, $1.10.

"Are you a fan?" asks J. B. Kerfoot in *Life.* "Then it may interest you to learn that baseball nines make first-class material for light fiction. Also that a young man has turned up who can do the trick. These nine stories are all good ones. And any small boy will tell you that nine hits in nine times to bat is going some." **For males of all ages from 9 to 90.**

Clever, illuminating, and humorous essays.

Literary Pilgrimages of a Naturalist

By WINTHROP PACKARD

$2.00 *net; by mail,* $2.20

A nature book of a new variety. A naturalist's rambles among the haunts of Hawthorne, Thoreau, Webster, Whittier, etc. *Illustrated.*

Digitized by Google

The Nation

NEW YORK, THURSDAY, NOVEMBER 30, 1911.

The Week

Everybody must sympathize with Mr. Roosevelt in the embarrassment and even pain caused him by the repeated bringing forward of his name for the Presidency. Nothing that he does or says fails to be perversely misunderstood and twisted into an appearance of willingness to be a candidate next year. Purely in self-defence, therefore, he authorizes his friend, the editor of the Philadelphia *North American*, to announce that he is not and has not been at any time a candidate for the Presidential nomination next year. He has "repeatedly discouraged suggestions of this character," not only from his friends but from "potential political leaders," and has refused to accept pledges of active support, including "even delivery of delegates." And finally he declares emphatically that he wishes "talk of his supposed candidacy to cease." Thus there can be no doubt of the Colonel's overwhelming desire to keep his name off men's lips and especially to prevent its being mentioned at the Republican Convention next year. This being so, it is a pity that some friend does not tell him exactly how to attain his purpose. Let him leave off his pained protests and profuse deprecation, and adopt from Gen. Sherman the one precise and unmistakable formula for denying that he is a Presidential candidate: "If nominated I will not accept, and if elected I will not serve."

The one thing hitherto lacking to stamp the Panama incident of 1903 as the most creditable performance in human history has now been supplied. It has long been known that this country's part in the matter was an act unsurpassed for nobility, wisdom, and uprightness by anything in the records of the nation, from Washington to Lincoln; but we do not remember that in the certificate of character given by Mr. Roosevelt to himself he included the other party to the transaction. This is now furnished, however, by Federico Boyd, Minister of Foreign Relations of Panama, and ex-member of the revolutionary junta. He says:

> The independence of the Isthmus, in which I took part as one of the principal actors, was accomplished with its own resources only and with its own elements, without any material aid from foreigners, pecuniary or otherwise, and was planned and prepared exclusively by its own people three or four months before, with admirable caution, precision, and good judgment.

A pretty point in Señor Boyd's statement may be found to lie in the word "material"; it is an innocent little word, and will not suggest to everybody the fact that the kind of aid Mr. Roosevelt did give in preventing Colombian forces from landing within fifty miles of the Isthmus was such as to make the execution of the plan prepared with such "admirable caution, precision, and good judgment" as easy as rolling off a log.

A pause by the House Committee investigating the Steel Trust, until further instructions shall be given it by the House itself, is eminently proper. Since the inquiry began, the Government has started its suit against the Steel Corporation, and this obviously alters the situation in two ways. First, the original resolution authorizing the investigation limited it to matters not the subject of Government activity in the courts. But the suit since undertaken by Attorney-General Wickersham is very broad, covering many of the matters into which the committee had previously been looking, such as, for example, the acquisition of the Tennessee Coal and Iron Company. If the investigation along such lines is to be pursued, specific authorization by the House ought certainly first to be asked. And, secondly, even if it were given, the fact would remain that no witness who might afterwards have to answer in court, ought to be asked questions by the committee that would prejudice the case or possibly incriminate himself.

Politically, the death of ex-Senator Dryden is worth a passing remark only because of his connection with a peculiarly sordid era of Republicanism in New Jersey. During all the years when Bryan was making that State securely Republican, its politics became commercialized to an extent scarcely equalled elsewhere. The party was financed as an excellent investment. Its rewards and honors were at the disposal of the men who put up the money. Never was the opportunity for political talent as it used to be understood, so limited. To be able to speak, to debate, to initiate wise policies, to inspire public confidence went for nothing compared with ability to pay. With this debasing régime the late Senator Dryden was closely identified. Happily, even in his lifetime the offence and burden of the system became intolerable to the people of New Jersey. His failure to procure re-election to the Senate, even though his party was in control of the Legislature, marked the beginning of the end of that mercenary period of Jersey politics. And fortunately there is no likelihood of its return. New Jersey may to-day have a nonentity as one Senator and an ass as the other, but at any rate she is not represented by a money-bags.

Resignation of a Chicago police captain on the eve of trial for neglect of duty in reference to gambling and vice is capable of no other interpretation than confession. The investigation being conducted by the Civil Service Commission has thus reached the usual result of such inquiries. It has confirmed the general belief in the direct relation between police officers and this class of law-breakers. The Chicago investigation was hardly needed for this purpose, but it ought to have a valuable effect in making the undisturbed continuance of such conditions in Chicago impossible hereafter. In this respect Mayor Harrison is setting an example for his successors. In sublime disregard, not only of his own previous record through three terms, but also of the avowed sentiments of many of the most powerful political leaders who supported him in his last campaign, he has steadily refused to yield to the stream of appeals from politicians urging him to set aside the charges against the captain. He has also refused to discuss the vice investigation with a delegation of business men which asked that resorts might be permitted to remain on one of the most prominent streets of the city. It is pleasing to learn that his action in this instance has been upheld in a communication signed by thirty individuals and firms.

Digitized by Google

"Business is improving." So report the leading trade reviews, but they must be mistaken. We know, because we have been told so, that business is dead. Business men are everywhere dazed or paralyzed or frightened out of all semblance of enterprise. The Sherman law did it, Wickersham did it, Taft did it, and even Roosevelt couldn't stop it. Nobody is buying or selling because it is well known that everybody who engages in commerce of any kind is at once sued by the Government and, if possible, put in jail. All these things being established by the mouth, not of two or three witnesses, but of millions who cannot lie or even exaggerate, the effrontery of these trade journals in declaring that business is improving is almost inconceivable. They ought to be sued for defamation of the good name of calamity-howlers.

What does Mr. W. J. Burns expect to accomplish by talking to a convention of bankers about the intimidation of witnesses in the McNamara case, and what object did the American Bankers' Association expect to serve by having him address them? Mr. Burns is a great detective, and he would do much better to keep to that rôle, which is quite incongruous with the habit of indiscriminate haranguing concerning the cases he handles. We do not mean to impugn his statements, but the place to lay information about the attempted bribery or intimidation of witnesses is before the court which is conducting the trial or before some other competent authority.

The picturesque has clashed with the patriotic in San Francisco, where a hotel manager has notified his Chinese servants that the cutting off of their queues will be followed by dismissal. "I pay for the queues," he declares, "and must have them." His patrons are habituated to the æsthetic effect of the custom, and thus business adds its weight to opposition to a Chinese reform. On the other side stands patriotism, bidding the California Celestials imitate the courage of their brethren at home. They are thus in the position of Launcelot debating the question of leaving Shylock's service. "Cut," says conscience. "Cut not," says expediency. As a compromise it has been suggested that the queues be cut off, and then attached to the caps worn by the men in such a way that no one would suspect the truth. This seems to meet the moral difficulties nicely.

In declining to be further considered as a candidate for president of Princeton University, Dr. John M. Finney of Baltimore has acknowledged allegiance to an ideal which exercised greater sway over the minds of men a generation ago than it does to-day—at least in this country. One needs only to think how the imaginative literature of even twenty-five years ago had for one of its favorite types the skilful and masterful physician living up to the gospel of personal service. Science was then in the first glow of its rebirth; as applied to the healing art there seemed no limits to what science could do for humanity, and the man who unselfishly went about the high business that concerns life and death impressed himself strongly on the minds of men. The popular ideal of success to-day is that of the executive man, of the man who can direct others rather than work with his own hand. Hence it is quite out of the usual that a man to whom has been offered the headship of a great institution, with all its manifold opportunities, should prefer to remain at his old business of ministering with his own hand to the needs of the sick of a large city or directing the work of a great hospital and training-school for doctors.

When two well-coached elevens like Yale and Harvard, skilfully handled on the gridiron by capable and even chance-taking quarterbacks, play sixty minutes of football without score and with the only opportunities to score in the hands of one or at most two individuals, the most enthusiastic devotees of the game must admit that there is something radically wrong with the rules. The feeling is general that the rules committee at its next session must devise a playing code which will provide for team rather than individual scoring. But whatever action the rules committee takes, it is to be hoped that its members will not listen to the tempter in the form of the old-timer who would return to pushing and pulling and the old massed attack. A long step in advance has been made, and it would be a serious mistake to fall back upon the old aids to scoring. A way will have to be found at least to double the chance of the man carrying the ball, as against the merely clever kicker, for a game without a touchdown is a dull day's sport. Nor should the players be compelled to stake their one chance for victory on the skill of an individual.

After an inquiry into the disaster at Austin, Pa., where some eighty persons were killed and a village wiped out, the coroner's jury has returned a verdict of gross negligence against George C. Bayless, president of the paper company, and Frederick N. Hamlin, its superintendent. Hamlin and Michael C. Bailey, an employee in charge of the dam at the time of the break, have been held for the December court in $1,000 bail, charged with involuntary manslaughter. A warrant has been issued for Bayless, whose home is in New York State, on the same charge. It is fitting that this great calamity should not be merely a nine days' wonder, but held up as a warning to the people of Pennsylvania and other States. That there was ground for searching investigation is shown by the statement of A. K. McKim, inspector of dams in New York, the criticisms of the construction of the dam which Professor McKibbin of Lehigh University and Alfred D. Flinn, engineer of the Board of Water Supply of this city, made at the inquest, and the fact that the dam is known to have failed partially as long ago as January, 1910. We are glad to note that Mr. Bayless states that he will not take advantage of any legal quibbles and will surrender himself for trial without extradition.

That the production of distilled spirits in this country during the fiscal year which ended on June 30 last was the greatest on record, must be a disappointing showing to those who have felt great confidence in the efficacy of the prohibition and anti-saloon wave which swept over the country a few years ago. The total was 175,000,000 gallons, and exceeded the highest previous total, that of 1907, by 7,000,000 gallons, or about 4 per cent. However, this is a smaller percentage of increase than that which has taken place in the population of the country.

There were three distinct publics whom Sir Edward Grey had to consider in his long-awaited speech on Great Brit-

Digitized by Google

ain's rôle in the Morocco controversy. These were the German public, the French public, and the British public. From every point of view, the British Foreign Minister's speech was successful. Opinion in the House of Commons rallied almost solidly to the support of the Cabinet. The German press has been stirred neither to wrath nor joy by Sir Edward's explanations; but the very absence of violent comment in the German press is itself a remarkable victory. In France, the newspapers are disgruntled with the purely English standpoint from which British policy seems to have been guided. But it is difficult to see what other position a British Minister could have taken without justifying the German contention that the British Government has been meddling with business that was not its own. For Sir Edward Grey to have declared that England acted in the matter as an ally of France would have been to precipitate the crisis which, after such long delay, has at last been happily avoided. The British Government takes the stand that its interests as a signatory to the Act of Algeciras gave it the right to intervene in the discussions between Germany and France. That is a legalistic argument which the German Government cannot question, although it is clearly understood by all parties concerned that it was not so much England's threatened interests in Morocco as her friendship with France that shaped her conduct.

English Conservatives have made many attacks upon Ambassador Bryce, for his alleged share in the Canadian reciprocity negotiations, and the other day Mr. F. E. Smith, the rising Unionist member of Parliament, had some pretty severe things to say of the Ambassador in the House of Commons. This drew from Prof. A. V. Dicey of Oxford a letter to the London *Times*, in which he not only made a handsome defence of his former colleague, but set forth the true and sound doctrine of ambassadorial immunity from such assaults. Professor Dicey does not at all agree with Mr. Bryce in politics, but he knows high merit when he sees it, and wrote the just word about the eminent ability of the Ambassador and the extraordinary success he has had in "cementing the friendship between England and the United States." But where the Oxford professor is peculiarly weighty is in his exposure of the gross unfairness of any attack of the kind of which Mr. Smith had been guilty. Members of the diplomatic service cannot defend themselves. The rule of silence is imposed upon them. But this, of course, is upon the theory that they are responsible only to the Government, which in its turn is responsible to the people and to Parliament. Why attack an agent whose hands are tied when you have before you his principal whom you can compel to give an account of himself?

Mr. G. K. Chesterton, who believes in reform but dislikes Royal Commissions and investigating committees of all kinds, will take malicious delight in the recent appointment of an associate censor of plays in London. When the question of the censorship was being investigated some time ago by a Parliamentary committee, those opposed to the present system repeatedly cited one play then running in a London theatre as an illustration of how indecency, more or less veiled, will be tolerated in a play of absolutely no artistic merit, while serious plays which grapple honestly with an unpleasant subject will be put under the ban. The play cited as a horrible example was "Dear Old Charley," a roaring farce of the song, dance, and "girl" type. The author of this play is the newly appointed associate Censor. Mr. Bernard Shaw is said to have nearly fainted on hearing of the appointment. It is difficult to see why, since the incident is one of those unexpected topsy-turvy conclusions which one would believe impossible outside of a Bernard Shaw play.

Italy's deprecation of intervention between herself and Turkey in connection with her adventure in Tripoli has been rapidly dissipated. The unexpectedly vigorous resistance of those whom she had destined for easy conquest has evidently set her to reflecting, with the result that she has the happy thought that intervention need not be hostile to her. On the contrary, why should there not be a friendly intervention, with the purpose of breaking the news to Turkey that Italy has won the contest and that nothing now remains but the signing of a treaty setting forth the result in black and white? Of course, the Italian newspapers do not put it quite so baldly. They merely express wonder at the "state of doubt and irresolution displayed by European diplomacy," and point out that the Powers have one common interest which outweighs all others—that of avoiding further international complications by preventing a rising of Turkey's enemies in the Balkans against her. Just who is to provoke such a rising they modestly refrain from mentioning, but they do show impatience at Turkey's obstinacy in making the seizure of Tripoli cost so much more than had been anticipated. The Powers must understand, they declare, that Italy has the right to escape from a position which Turkey, simply because she is uninjured in the body of her empire, feels no necessity of relieving. And so, the conquest that was to be speedily and gloriously accomplished by Italian arms must in reality be made by the Powers.

A case of scientific hardship, and perhaps of injustice, is brought to attention by Professor Cockerell of the University of Colorado in a letter to last week's *Science*. He refers to a document put out by twelve Portuguese naturalists, lately of Lisbon, who were expelled from their university positions by the new Government, and also exiled from their country, on the ground that they were Jesuits. Five of them went to Brazil, three to Belgium, two to Spain, and two to Holland. For the high value and promise of the scientific work of at least some of them, Professor Cockerell vouches. Knowing nothing of the grounds assigned by the new régime in Portugal for banishing these professors, he does not allege that there was no justification for it, but he does insist upon the tragic aspect of it for the men themselves. "Our books, our periodicals, our instruments, our manuscripts, even those most personal, all are lost." There was little comfort in what the Minister of Justice is said to have remarked to one of the arrested scientists: "If your collections are lost to you, they are not lost to science." But some of the collections were made for special purposes which other hands will not be able to attain; some were not labelled; others bore marks intelligible only to their original owners. Professor Cockerell suggests that some scientific association take the matter up.

THE WOOING OF WALL STREET.

Friends of Senator La Follette have before now made their appearance in financial centres of the East for the purpose of showing what a much misunderstood man he is. If the great propertied interests would only cease looking at him through distorting lenses they would see that he held in his hand, not a torch, but an olive-branch. No greater friend of solid business men exists. All this has been set forth in a general way by the spokesmen for the Wisconsin Senator, on tour in the haunts of high finance, and now it appears that his agents have been making direct advances to Wall Street. The latter's first impulse is, naturally, to ask indignantly whether these proposals are honorable.

Wall Street has long been used to the wooing of Presidential suitors. They make their appearance about a year in advance of what they would like to think the happy day—namely, the Presidential election. It might seem that a veteran maiden like Wall Street would become a little indifferent to these recurring visits of the fairy princes of politics. But no, though old in years, Wall Street is young in heart, and in this matter ever displays what the novelists and dramatists call "the springtime of the sex-instinct." To delight in being wooed, however, is not the same thing as ease in being won. Wall Street enjoys the pursuit of the well beloved, but Wall Street is now undeniably coy, not to say cautious. Its ardent affections have been so sadly betrayed in recent years! Political lovers, sighing like a furnace with devotion, have been detected in a secret hankering after the fair one's money, intending neglect and cruelty after the wedding had been gone through with. And we could not be surprised if the old rules of the fairy tale were now revived and enforced, and the various candidates for the hand of the princess compelled to answer three questions, on pain of being beheaded if they answer wrong.

The time has been when the political support of Wall Street was a tremendous asset for any party or any candidate. It was not simply a question of raising campaign funds, though Wall Street's resources on call would undeniably, as the divinity student said of works of supererogation, "do no harm.' But there was also, and often quite legitimately, the advantage of having it known that the men in charge at headquarters of the great commerce and industry of the country regarded a party's platform as satisfactory and believed its nominee for the Presidency "safe." Now, no one is more clearly alive to the change which has come over the spirit of this dream than Wall Street itself. As a subordinate matter, corrupt-practices acts have made a great difference since the day when Mark Hanna used to summon New York directors of leading corporations and demand campaign subscriptions. It is now illegal for corporations to subscribe anything; and even individual subscriptions have to be made public. All this must be a great comfort to Wall Street in these days when it is so convenient to make a virtue of poverty! The main thing, however, in the politico-financial change referred to, is the altered view about the desirability of having Wall Street on your side at all, or the disaster involved in having it decidedly against you. The open enmity of Wall Street would nowadays appear to be thought a political aid of great value. At least, so we should be compelled to infer if politicians are always sincere. According to them, there is no more joyful news which an emissary can carry back to a candidate than the information that Wall Street had come out positively against him. Indeed, it is credibly reported that "an important political personage" has been heard to say within recent weeks that if Wall Street kept on attacking him, it would reëlect him.

Wall Street, however, is justified in being rather cynical about all such protestations. If its hostility is so coveted, why is its friendship so assiduously sought? Even the aspirants for high office who have made most political capital out of professed antagonism to big business reveal a sneaking desire, when the pinch comes, to get into touch with big business and do some advantageous little business with it. Wall Street has a vivid memory of how this was so in 1904, and will be very apt in 1912 to go on the principle of once bitten, twice shy. Even the overwhelming compliment paid it by the suit of La Follette for its favor will not make it lose all its prudence or forget to look pretty closely to the marriage settlements.

For a parallel to the love-making (by proxy) of the Wisconsin Radical to Wall Street, the annals of romance would be searched in vain. One recalls his terrific Senatorial excoriations of the men of great wealth, his reading out of the names of magnates who create panics at will and cause the fortunes of honest merchants and manufacturers to crumble and disappear in a night, his fierce denunciations of the iniquities that go on in that "mere speck on the map of the United States which is called Wall Street," and then one reads that an embassy from La Follette has been breathing sweet nothings into the ear of this same Wall Street! Was there ever such a case of the attraction of opposites?

ORIGIN OF THE ANTI-TRUST LAW.

It is probable that no questions have been more frequently asked, or as a rule more unsatisfactorily answered, in the controversy over the Trusts, than these: What did the legislators who passed the Anti-Trust Law of 1890 really have in mind? Did they intend to disrupt such trade combinations as the Standard Oil or the United States Steel? And if they did, then why did we have to wait twenty years before the law was put into force?

Now it is plainly necessary to see what were the conditions of 1890. In the first place, there was then taking place a rapid increase in cost of living. Even the daily papers had begun to make the rising price of necessaries a "feature" of their news. The "Trust movement," in what was then deemed a formidable shape, had preceded this rise in prices. The Republican party's national platform of two years before had declared its "opposition to all combinations of capital, organized in form of Trusts or otherwise, to control arbitrarily the conditions of trade among our citizens," and had called upon Congress for legislation to obstruct their activities. Senator John Sherman, when introducing the Anti-Trust Law in March, 1890, thus described the existing situation:

> Associated enterprise and capital are not satisfied with partnerships and corporations competing with each other, and have invented a new form of combination commonly called Trusts, that seeks to avoid competition by combining the controlling corporations, partnerships, and individuals engaged in the same business, and placing the power and property of the combination under the government of a few individuals, and often under the control of a single man called a trustee, a chairman, or a president.

Digitized by Google

By way of showing what view the Congress of 1890 took regarding these combinations, we quote Mr. Sherman further:

> If the concentred powers of this combination are entrusted to a single man, it is a kingly prerogative, inconsistent with our form of government, and should be subject to the strong resistance of the State and national authorities. If anything is wrong, this is wrong. . . . I do not wish to single out any particular Trust or combination. It is not a particular Trust, but the system I am at. . . . Congress alone can deal with them, and if we are unwilling or unable, there will soon be a Trust for every production and a master to fix the price for every necessary of life.

This statement of the actual position of affairs and of the general purpose of the Anti-Trust Law was concurred in by virtually all the Senators who joined in the debate of 1890—even by those who desired a different remedy.

Thus the origin of the statute is perfectly clear, and it ought to be manifest that the Congress which enacted it had in view precisely such conditions in American industry as have since arisen. But this being so, the question why such combinations as the Standard Oil and the American Tobacco were not prosecuted and convicted fifteen or twenty years ago, seems on its face to be even more perplexing. Prof. Henry R. Seager of Columbia University, reviewing the history of Anti-Trust litigation in the current *Political Science Quarterly*, ascribes the absence of such results to indifference of the responsible public officers. "Three successive Presidents and five successive Attorneys-General" after 1890, he believes, "were seriously remiss in their duty." He continues:

> The truth is that neither Harrison nor Cleveland nor McKinley was fitted by training or conviction to lead the struggle against the powerful corporate interests opposed to the enforcement of the law, and that their Attorneys-General were even less fitted for such a task.

In this explanation there may be some force; but it does not state the case with completeness. For there are other explanations. One, which Professor Seager cites as somewhat modifying his judgment on the three Administrations, is based on the failure of suits against the Whiskey Trust and the Sugar Trust, instituted by the Harrison Administration. It is now fully recognized that those prosecutions failed because of serious blunders by the Government prosecutors in conducting them; but the failure had its discouraging effect.

But Professor Seager does not fully allow for the fact that, during the half-dozen years which followed the enactment of the Anti-Trust Law, it began to look as if the big corporate combinations were falling to pieces of their own weight. The Cordage Trust had gone completely bankrupt in the panic of 1893; the electric combination had narrowly escaped. So far from extending their domination over trade, many of the largest Trusts were forced to curtail their financial activities. Investing circles looked askance at them; a Trust found it all but impossible to raise new capital, and as a matter of fact, prices of their products were declining on the markets, because of hard times and overproduction. Even the general public ceased for the time to concern itself with the dangers of concentrated control of industry. The railway rate agreements were then chiefly resented by the consumer and the small business man, and it was not in the least illogical that the successful prosecutions of that period, under the Anti-Trust Law, should have been directed against the railway associations.

Nor does Professor Seager, in our judgment, take sufficient account of the circumstances which arose around 1899, and which were bound, sooner or later, to spur even a reluctant Administration into action. The extraordinary financial boom and stock-promotion mania which then broke out in the United States were instantly utilized for the re-incorporation, in a highly concentrated form, of almost every branch of American industry. It was not merely recapitalization. It took the shape of combination of existing combinations, through the medium of the New Jersey holding-company law. The $3,500,000,000 reported as the total capitalization of new industrial companies during 1899 alone, represented extremely rapid extension of the movement to get whole industries under the sway of the board of directors of a single corporation. Adopted by the railway financiers, this same remarkable movement led directly to the Government's challenge, through the Northern Securities prosecution of 1902. From a purely economic and historical point of view, it was inevitable that suits against the great combinations in production and manufacture should follow.

We do not ask whether the dangerous possibilities which underlay that movement could or could not have been obstructed by some other machinery than the Anti-Trust Law of 1890. That is a problem which stands by itself. We have only endeavored to show that the long delay in the full application of the law was due to peculiar circumstances of the day, and that, wholly contrary to the assertion so often heard in discussions of the matter, the legislators of 1890 had in mind exactly the conditions under which the prosecutions of the past few years have been instituted. What they could hardly have foreseen was the amazing rapidity with which, when the financial depression of 1893 had spent its force, the predictions of the Congressional debate of 1890 were fulfilled.

SECRET TREATIES.

One of the beneficent after-effects of the recently terminated negotiations between France and Germany concerning Morocco will be, from present indications, an important restriction upon the power of Ministers to enter into treaty relations with foreign Governments without the consent or the knowledge of the elected representatives of the people. The newspapers have recounted the peculiar situation that has arisen in France as a result of the publication of the secret terms of the treaty of partition which M. Delcassé concluded with Spain in October, 1904. Because of this treaty, the French Government finds that no sooner has it settled its Moroccan difficulties with Germany than it has a Spanish-Moroccan problem on its hands. Spain's behavior during the entire course of the German negotiations had been received with extreme irritation in France. The Government at Madrid seemed to be pursuing a policy of fishing in troubled waters. Its designs on the important Atlantic ports of Larache and Arzila have been regarded as an attempt to take advantage of French preoccupation with Germany. But when the Paris *Matin* gave the secret treaty of 1904 to the world, it was apparent that the Spanish Government was insisting only upon its rights. In that agreement M. Delcassé had conceded a Spanish sphere of influence covering roughly about one-quarter of the Moroccan Empire, extending to within thirty miles of the capital, Fez, and embracing virtually the entire Mediterranean coast of Morocco and

Digitized by Google

part of the Atlantic coast. Arzila and Larache fall well within the Spanish sphere.

The details of so highly important a document, as it now appears, were known only to M. Delcassé and to the British Government, with which in 1904 France was just entering into the present *entente*. Neither the President of the Republic nor M. Delcassé's colleagues in the Cabinet had complete knowledge of the terms of a treaty affecting the vital interests of the country. And as Ministries in France change rapidly, there is little opportunity for new Cabinet Ministers to put themselves in touch with the past history of their several departments. The French Constitution requires that the President of the Republic shall submit all treaties to Parliament as soon as the best interests and security of the state shall allow. After seven years this important document has been laid before the Chamber, but not till the enterprise of a Parisian newspaper had forced the hand of the Government. For seven years the French people have been unaware of the nature of an agreement to which the nation's honor had been pledged, and whose after-effects have brought the country to the brink of war on more than one occasion. For it was M. Delcassé's activity in Morocco that brought about William II's visit to Tangier and initiated a state of Franco-German tension of which the latest phase has just been passed through. As early as 1902 M. Delcassé had drafted a secret agreement with Spain, where a change of Ministry prevented its being signed. In that treaty Spain was even more generously treated than in 1904. She got Fez and a large area to the south. Evidently, during those early years M. Delcassé was not so much interested in Morocco *per se;* he used it as so much ready change to buy the friendship of a Power in his ambitious scheme of a general anti-German alliance.

Now that the tension of anxious fear which has held the three leading European Powers in its grip has been relaxed, men have begun to ask everywhere whether it is right that nations should be brought to the threshold of war by Ministers playing the game quite after the fashion of the Family Compacts of eighteenth-century diplomacy. The first outbreak has come, rather unexpectedly, in Germany, and has taken the form of a demand that no treaty affecting the acquisition or transfer of German colonies shall be valid without ratification by the Reichstag. In so far as this is a gain for the elected representatives of the people, it is, of course, a gain for publicity. In the British House of Commons there is to be a formal debate on the conduct of the Foreign Office during the troubled days of the Franco-German negotiations. Public opinion, spurred on by recent revelations, of more or less authority, regarding the narrow avoidance of war with Germany and England's unpreparedness for the conflict, now feels that the arbitrament of peace and war and of the fate of the Empire should not be left in the hands of a Cabinet Minister or even a Cabinet full of Ministers. And now the question has come up with particular severity in France, where Parliament is apt to show no hesitation in exacting punishment for a Minister's mistake.

Secret treaties are an anomaly in modern times and amidst democratic institutions. Their usefulness under any circumstances may be questioned. It is a poor secret-service system which leaves any Government in ignorance of any dangerous agreements or alliances directed against itself by other Governments. Most often it is its own citizens that a Government succeeds in keeping ignorant of measures affecting their vital interests. A nation may wake up some day to find its honor pledged by a self-sufficient Minister to a measure which the conscience and the judgment of the nation may abhor. The power of declaring war is limited in all Constitutional states to the representatives of the people. Even the German Government can declare war on its own initiative only in case of invasion. But so long as a Minister or a group of Ministers may, in pursuit of their own schemes, bring on a condition of affairs from which war is the only way out, this important reservation of power in the hands of the people becomes only a sham.

SENTIMENTALISM AND CRIME.

Mr. Beattie desired to thank the many friends for kind letters and expressions of interest, and the public for whatever sympathy was felt or expressed.

This is the message given out by the minister who attended the Richmond wife-murderer, along with Beattie's written confession of his crime. And upon whom had these "kind letters," these "expressions of interest," this "sympathy," been bestowed? Not merely upon a murderer; not upon a man who, in a gust of passion, or perhaps deliberately but under extreme provocation, had taken the life of another human being; not even upon a man who, having committed a crime, had grimly taken the chances of punishment. The murder had been carefully planned, in cold blood; the victim was lured away to a lonely spot and deliberately killed; and the slayer had promptly returned to the home of her mother, from which he had just taken her, with a circumstantial lie about her having been shot by a highwayman. And yet, to the very last, the newspapers which have been spreading the details of this case before the public have been telling of all sorts of "sympathy" and "interest" in this brutal and cowardly murderer, one of the forms it has taken being that of consideration for his tender years. He was a mere "boy" of twenty-five, and doubtless would have grown into a fine man after a while, if he had not happened to think it would be a nice thing to murder his wife before he got through sowing his wild oats.

The mushy sentimentality of which this case has furnished a somewhat extreme illustration is a more serious element in our national life than most people realize. In the matter of homicide itself, we have no doubt that it constitutes one of the chief reasons of our country's most unenviable preëminence. Just what the ratio is between the United States and England, for example, or between the United States and Canada, our statistics are too imperfect to determine; but there is no question that murders among us are many times more numerous, in proportion to the population, than they are in either of those countries, or in any country with which ours could be compared. But it is not in this regard only—serious as it may be—that the prevalence of a sentimental laxity of thought in relation to criminals is productive of disastrous consequences. We don't bother, indeed, about the poor devils who are being convicted and sentenced every day, without anything in their cases to give them notoriety; but no sooner does a case figure conspicuously in the newspapers than it is turned over in every con-

Digitized by Google

ceivable way on its sentimental side, and the monstrousness of the crime is lost sight of in the "human interest" of the criminal. The wrecker of banks is a stanch comrade and a "dead game sport"; the wife murderer is not half bad when you get to know him; the debaucher of city councils, and blackmailer of outcast women, and all-round corruptionist, is really a sterling fellow who did what he did simply as the agent of forces which he found already in the community. And in reinforcement of all these particular pleas for charity comes that universal plea in the shape of an *argumentum ad hominem:* "Can you be sure you would have done any better if you had been in his place?"

Now, all this good-natured feeble inquiry into the psychology or the biography of the criminal, or into one's own possibilities of good and evil in connection with his act, is both foolish and pernicious. We do not succeed in knowing very much about the man in the end, and it is not our business to try even if it were possible. There are millions of people in the country whose virtues and failings, attractive or repulsive qualities, are every bit as interesting, and every bit as much our concern, as those alleged to belong to a Beattie or a Patrick, a Ruef or a Morse. All that really concerns us in regard to these particular persons is the nature of the crime charged against them, and the question whether they were guilty of it or not. If a man did commit an atrocious murder, if he did steal or misappropriate money of which he was the custodian, if he did buy councilmen and levy blackmail, the only thought that we need expend upon the matter is the thought of the heinousness of that offence, and the desirability of a particular punishment as a means of dealing with it. Unless we are really going to call into question the atrocity of deliberate murder, the culpability of betrayal of financial trust, or the abhorrent character of systematic bribery and corruption in politics, consideration of the alleged amiable side of the convicted criminal's character, or of the potential weakness of our own, works nothing but confusion of counsel. There may be something in it; there is something in almost anything. But it is precisely the kind of thing that robust common sense brushes aside as not only idle but mischievous.

Yet the most serious consequence of this shallow sentimentality is not to be found in its immediate effects upon action in specific cases. More deplorable is its inevitable weakening of profound instincts that have their root in ages of human experience—of real and effective sentiments in regard to crime. More than in police and juries and judges, society finds its protection from crime in the instinctive association of it with feelings of abhorrence and with the stigma of universal disgrace. To be a thief is to be not only punished but despised and shunned; to be a murderer is not only to subject one's self to the danger of death, but to be detested and cast out by all men. Children no sooner learn the meanings of the words than they acquire along with them those sentiments of abhorrence which, far more than any calculation of chances, make the very thought of the commission of these crimes impossible to the vast majority of mankind. To trifle with this inherited defence—not merely of society against evil-doers, but, what is even more important, of individuals against temptation to evil—is no light matter. And yet precisely this is what the whole tribe of sentimental dabblers in the side issues of crime are constantly doing.

THE CRAFTSMAN'S PRIDE.

Is the world to be saved by the modern play or the modern novel? Mr. Bernard Shaw and Mr. H. G. Wells have taken, at different times, different sides on the question. Mr. Shaw's claims for the drama, as voiced during the recent controversy over the censorship in England, were charmingly comprehensive, being limited virtually by the boundaries of the visible universe. If you don't allow us to expose vice on the stage, men will be vicious in private. If we can't dramatize drink, or cruelty, or the poor-law, or the iniquitous franchise, drink and cruelty and a degrading poor-law and an iniquitous franchise will prosper in silence. This was based on the simple assumption that, outside of the theatre, no agency of publicity and no force for progress is to be found. Parliament, church, press, art, science, the magazines, books, all were relegated to the scrap-heap when Mr. Shaw chose the drama as his own vehicle of expression.

And now comes Mr. Wells and says the novel is the thing. His claims are not quite so cosmic as Mr. Shaw's, and a good deal less bumptious. He does not in so many words exclude every other form of human endeavor from the game. But the craftsman's pride in the all-sufficiency of his own particular trade is quite apparent in the novelist's Declaration of Rights which he formulates in the *Fortnightly Review.* The novelist must be allowed to write about anything he pleases:

> We are going to write about it all. We are going to write about business and finance and politics and precedence and pretentiousness and decorum and indecorum, until a thousand pretences and ten thousand impostures shrivel in the cold, clear air of our elucidations. We are going to write of wasted opportunities and latent beauties, until a thousand new ways of living open to men and women. We are going to appeal to the young and the hopeful and the curious, against the established, the dignified, and the defensive. Before we have done, we will have all life within the scope of the novel.

Mr. Wells's manifesto rings true. Mr. Wells is a man of talent and of courage. The plan he announces is not unreasonable. That is proved by the fact that the English novel, since its origin, has been doing just what Mr. Wells is so dreadfully determined to do.

And there comes our quarrel. In these manifestoes of the modern school there is not only a ludicrous tendency to overlook the existence of anything out of one's own literary puddle, but an equally ludicrous tendency to assume that the world was made yesterday. The dramatist with a purpose or the novelist with a purpose seems to forget both his contemporaries and the past. Nothing outside of the contemporary novel exists, and nothing before the contemporary novel existed. Mr. Wells insists upon being allowed to write novels about Problems, as though the high tradition of English fiction during the nineteenth century were not a militant humanitarian and reforming tradition. After Dickens and Reade and Eliot and Disraeli's political novels and Thomas Hardy what sense is there in speaking as if English fiction were just rising from the Miss Braddon and the Duchess stage? Mr. Wells is welcome to write about business, but he might recall Mr. Osborne, Mr. Sedley, and Mr. Bulstrode. He may write about politics and recall Coningsby and Lothair; write about precedence and recall Lady Kew; write about pretentiousness and recall Rosamond Vincy; write about de-

Digitized by Google

corum and recall Jane Austen. If Mr. Wells can write about wasted opportunities and make us forget Hardy's Jude, or write about latent beauties and make us forget "The Woodlanders," he is at liberty to try.

Nor is there any peculiarly modern problem that Mr. Wells can be rightfully sequestrated from. Woman-suffrage, child-labor, eugenics, divorce, the high cost of living, coöperative laundries—no man of judgment will question the novelist's right to attack any subject, at his own peril. And this peril consists in the fact that after the novel is written, people may not read it. Their reading or not reading it will not in the last resort depend upon whether they believe coöperative laundries a proper subject for fiction, but upon whether they find the book interesting. Possibly, coöperative laundries can be humanized. Dickens humanized Mrs. Mantalini's mangle. And when you have done the trick and put the vital spark in your book, your theoretical opponents will read it just the same. We cannot imagine the most ardent defender of corporal punishment refusing to read about Dr. Squeers, or the most resolute of freethinkers boycotting the story of Mr. Wardle's Christmas dinner. The true artist will kidnap his readers and make them cast aside their dogmatism and their inherited appetites. That the true artist will write about anything is apapparent from the fact that he has always done so. But he has always thought of human nature first.

Mr. Wells's position is in its main contentions sound enough. What we protest against is the subtle spirit of arrogance which marks the modern attitude toward all persons who are not novelists, or, having been novelists, are now dead. Mr. Bernard Shaw has his own opinion as to the influence of the novel upon human progress. The Socialist cart-tail orator has his own. Miss Chrystabel Pankhurst has hers. The Archbishop of Canterbury has his. The editor of the London *Times*, to whom Mr. Wells, Mr. Shaw, Miss Pankhurst, and the Archbishop of Canterbury write letters, has his. There is no legal penalty against the maintenance of such opinions. No Sherman law will be invoked against Mr. Wells's attempt to monopolize all life for his novels. Let him go ahead and do so if he can—in the light of reason.

LANGUAGE AND LETTERS IN GREECE.

ATHENS, November 7.

Coming up from the Piræus last evening by the steam tramway, your correspondent stood next to a young man who, hanging on to a strap by one hand, held in the other a paper-covered volume to which he gave his undivided attention. His book was a modern Greek translation of Sophocles's "Œdipus at Colonus," and his visiting card, which he used as a book-mark, gave his occupation as that of a *mechanikos*, or engineer. Your correspondent wondered whether he could find on the Brooklyn Bridge of an evening a mechanical engineer reading "King Lear," or even "Hamlet."

The publication which just at present is being most widely advertised in Athens is a series of translations from the classics, to which perhaps the "Œdipus" in the tram-car belonged. You can get a complete set of all the great authors for a hundred and twenty drachmæ, or about twenty-four dollars, and you can pay on the instalment plan only ten drachmæ a month. This advertisement, with a complete list of the volumes already published, is printed on the back of the bill-of-fare at a large restaurant on Patisia Street, to which, as French is not spoken, few foreigners resort.

As every one knows, next to their religion and their ecclesiastical obedience to the Ecumenical Patriarch, whom a speaker in the Boulê last week called "the true king of the nation," the Greek people, most of whom live outside the little kingdom of King George, find in the glorious literary tradition of antiquity their chief bond of union. It was this that made the recent controversy over the language more than a mere *querelle des Byzantins*. It was this that gave the demonstrations on behalf of the *katharévoussa*, the literary language, which everybody writes and nobody speaks except in a public capacity, their irresistible momentum, a momentum to which the National Assembly and the Government of M. Venizélos had to yield last spring. The Constitutional amendments then passed (which prohibit any attempt to alter the official language, as employed in the Constitution and the laws, and declare the text of the Holy Scriptures to be unalterable and forbid their translation in any other linguistic form, except by authority of the Great Church of Constantinople) were dictated not by mere prejudice, but by an ardent desire to maintain a great tradition and the unity of the nation. As a Greek writer in *L'Hellénisme*, a monthly review published in Paris, observed last spring:

> The dialects are many, the *katharévoussa* is one. They mean anarchy—for none of them has any claim to precedence over the others—whereas the official existence of the *katharévoussa* dates from the emancipation of Greece. They are elements of dissolution, while it is the symbol of union—and that is the only issue with which Hellenism at present can concern itself.

Another writer in the same periodical admits that an Athenian professor, when he comes down from his desk, naturally drops into the popular tongue; but, he asks, does not a Bavarian professor do the very same thing? He admits that the linguistic divergence between the educated and the ignorant is too wide, but believes that it is growing less, year by year, and that the advent of a great literary genius, should such an one appear, would greatly expedite the process.

Another champion of the literary language urges that in coining the new words necessitated by a century of development and invention, the Greeks could not have done better than to draw upon the rich stores of the old language. He aptly cites two such words formed from the old stock. Is *proespéris*, he asks, more shocking to the ear than "five-o'clock-tea," pronounced in French manner, and is *biopalestis* as bad as *struggleforlifeur*? That, surely, was a home thrust.

The Assembly has begun the discussion of certain alleged scandals in connection with the appointment of professors at the university, which may not be without interest to advocates of a change in the methods of appointment at American universities. One of the laws passed under the new régime, *i. e.* virtually the dictatorship of Venizélos, provided for the institution, in each faculty, of a committee of professors to pass upon the qualifications of candidates for vacant chairs and to make recommendations to the Minister of Education, who should retain, as heretofore, the ultimate power to appoint. The committee for the Faculty of Medicine has now made its recommendations, which have evoked a storm of criticism in the press. It is charged with nepotism and gross favoritism, with promoting one of its own members to a more desirable chair, with promoting the nephew of one of its members from an instructorship in general pathology to a professorship of clinical pathology, with leaving another chair vacant, in order that a young member of the favored clique may grow old enough to stand the comparison with other candidates, and finally with having rejected a candidate, who, of all Hellenes since Aristotle, is the most learned in the field of physical science. After these and similar allegations had been presented to the Boulê at its session last evening, the Prime Minister, who spoke very earnestly and avowed his unshaken belief in the good faith and honorable intention of the faculty committee, and in the necessity of such a committee, admitted that mistakes of judgment might have been made, professed his inability,

Digitized by Google

without expert assistance, to choose, and suggested that every one who had anything to allege for or against any of the candidates should communicate it to the Government in writing.

It is impossible for an outsider to form an intelligent opinion in this controversy, but it is evident that neither a faculty committee, nor a council of ministers, nor a representative assembly, can satisfy all the friends of more than a hundred candidates for eight professorships. S.

Correspondence

DE SENECTUTE.

TO THE EDITOR OF THE NATION:

SIR: The Golden Treasury preserves for us an obscure little poem, "To-morrow" (No. CCVI), garnered from the "Scripscrapologia, or Collins' Doggerel Dish of All Sorts," Birmingham, 1804, and characterized by Mr. Palgrave as "truly noble." The author, John Collins, staymaker in Bath and subsequently actor and reciter in London and the provinces, is amply dealt with in the Dictionary of National Biography. The poem (though perhaps hardly deserving Mr. Palgrave's praise) is not without interest as one of the last relics of a family of "Wishes" which flourished in the heyday of classicism.

In the materialistic eighteenth century, philosopher and poet alike were inclined to take Bubb Doddington's advice:

> Void of strong desire and fear
> Life's wide ocean trust no more;
> Strive thy little bark to steer
> With the tide and near the shore.

When, therefore, the waning days reminded them that old age was near, they fashioned for themselves an ideal consistent with the quality of their spirit:

> You've play'd and lov'd and ate and drank your fill,
> Walk sober off. . . .

In prose this ideal was summed up in Bacon's familiar "Old wine to drink, old friends to trust, and old authors to read." In poetry (with reminiscences of Horace and the Sabine farm) the ideal fell into shape in Cowley's "Wish" for

> A small house and large garden . . .
> And a few friends and many books, both true,
> Both wise, and both delightful too!
> And since love ne'er will from me flee,
> A mistress moderately fair,
> And good as guardian angels are,
> Only belov'd and loving me.

These sentiments are amplified in Pomfret's "Choice," a poem which, in spite of its genuine worth and of Dr. Johnson's declaration that "no composition in our language has been oftener perused," is omitted from Palgrave, from Ward's English Poets, and from such recent collections as Manly's, Bronson's, Cunliffe's, and Newcomer's. It is needless to say that the quiet, meditative beauties of the poem are not adequately reflected in the brief topic sentences quoted herewith:

> If Heaven the grateful liberty would give
> That I might choose my method how to live;
> And all those hours propitious Fate should lend
> In blissful ease and satisfaction spend;
> Near some fair town I'd have a private seat,
> Built uniform, not little, nor too great:
> Better if on a rising ground it stood;
> On this side fields, on that a neighboring wood.
> . . .
> A little garden, grateful to the eye,
> And a cool rivulet run murmuring by;
> On whose delicious banks a stately row
> Of shady limes or sycamores should grow.
> At th' end of which a silent study placed
> Should be with all the noblest authors graced;
> Horace and Virgil in whose mighty lines
> Immortal wit and solid learning shines . . .
> I'd have a little vault, but always stored
> With the best wines each vintage could afford.
> . . .
> That life may be more comfortable yet,
> And all my joys refined, sincere, and great;
> I'd choose two friends, whose company would be
> A great advance to my felicity. . . .
> Would bounteous Heaven once more indulge, I'd choose
> (For who would so much satisfaction lose
> As witty nymphs in conversation give?)
> Near some obliging, modest fair to live. . . .
> If Heaven a date of many years would give,
> Thus I'd in pleasure, ease, and plenty live.
> And as I near approach the verge of life,
> Some kind relation (for I'd have no wife)
> Should take upon him all my worldly care,
> Whilst I did for a better state prepare.

This degenerated, in the hands of Dr. Walter Pope, into "The Old Man's Wish":

> If I live to grow old, for I find I go down,
> Let this be my fate: in a country town
> May I have a warm house with a stone at the gate,
> And a cleanly young girl to rub my bald pate.
> Near a shady grove and a murmuring brook,
> With the ocean at distance whereon I may look;
> With a spacious plain, without hedge or stile,
> And an easy pad-nag to ride out a mile.

Dr. Pope's "Wish," which the author enlarges into further details of Horace and Petrarch, roast mutton, Burgundy and "stout humming liquor," was evidently popular, for it reappears in most eighteenth century miscellanies, and Benjamin Franklin avers that in his youth he "had sung that wishing song a thousand times."

To an autumn of equally substantial satisfaction aspired the author of "The Spleen":

> A farm some twenty miles from town,
> Small, tight, salubrious and my own; . . .
> A chief of temper formed to please,
> Fit to converse and keep the keys,
> And, better to preserve the peace,
> Commission'd by the name of niece.
> One genial room to treat a friend. . . .
> Thus sheltered, free from care and strife,
> May I enjoy a calm through life. . . .
> With trips to town, life to amuse,
> To purchase books and hear the news;
> To see old friends, brush off the clown,
> And quicken taste at coming down.

Finally, we meet the familiar phrases again in J. Collins's "To-morrow":

> In the downhill of life, when I find I'm declining,
> May my fate no less fortunate be
> Than a snug elbow-chair will afford for reclining,
> And a cot that o'erlooks the wide sea;
> With an ambling pad-pony to pace o'er the lawn. . . .
> With a porch at my door, both for shelter and shade too,
> As the sunshine or rain may prevail;
> And a small spot of ground for the use of the spade too,
> With a barn for the use of the flail. . . .
> And at night may repose steal upon me more sweetly
> By the sound of a murmuring rill;
> And while peace and plenty I find at my board,
> With a heart free from sickness and sorrow,
> With my friends may I share what to-day may afford,
> And let them spread the table to-morrow.

A house, a garden, a mistress, a friend, a bottle, and a book—the ingredients are after all not unusual, and the recipe for an agreeable old age not restricted to the eighteenth century. It is not so much that these amiable Augustan gentlemen meditated these things in their hearts as that they typified the mood of their period by putting them into poetry. They harnessed winged Pegasus to a picnic hamper, and thought not ill of it. When the mood passed, the chorus of comfortable themes passed with it. The Romanticist "dreamt not of a perishable home."

POLITICAL OFFENDERS IN PHILADELPHIA.

TO THE EDITOR OF THE NATION:

SIR: Your issue of November 9, commenting on the results of the elections in Cincinnati, Philadelphia, and Cleveland, says:

> Who would have thought a couple of years ago, that without any particular revelations of machine wrongdoing, or any specifically sensational causes, Philadelphia and Cincinnati should rise up and drive out the boodlers and gangsters?

It is true that we have not yet put in prison any of the political offenders who, until December 4, will be in control of the city government of Philadelphia, but since January, 1910, the Tax Payers' Committee on City Finances has been persistently collecting evidence and presenting it to the public in the courts. Five or six suits have been heard, and as many more are pending.

In the suit brought against the Filbert Paving Company, we won a decisive victory, and the company was obliged to make restitution to the city. In what has been termed the "paving suit," charging conspiracy between the city officials and E. S. Vare, the street cleaning contractor, the court ruled that we had not established such conspiracy, but stated that the evidence showed clearly that, had Vare lived up to the specifications of the contract awarded him, it would have cost him $1,000,000 more to clean the streets in the year 1910. A suit has been brought against the director of public works and John R. Wiggins & Co., contractors, charging conspiracy to defraud the city in building police stations, fire, and bath houses. Evidence was produced before the Catlin Commission showing the purchase by members of the City Council of large tracts of land adjacent to one of the projected boulevards, and the sale of these lands to the city at extortionate figures. The *North American* charged, and offered to prove before the Catlin Commission, that Mayor Reyburn and his director of public safety were bankrupts when they took office, and that their financial condition was relieved by loans from contractors and others desiring favors from the municipality. On the day set for the hearing of this charge the Catlin Commission suddenly adjourned until after election.

These are only a few of the more prominent revelations which have been made during the last year and a half or two years, and it seems to me that knowledge of conditions here would have shown the error in the statement as quoted from your issue of November 9.

THEO. J. LEWIS,
Treasurer of the Committee.

FRANCE AND SPAIN IN MOROCCO.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for November 9, in an editorial on the Franco-German agreement, there are some statements which seem to call for correction. I quote from this article the following:

> She consents in return to a French protectorate over Morocco, with its larger area, larger population, and much greater natural resources, and having the enormous advantage, above all, of giving France the solid north coast of Africa from beyond the Straits of Gibraltar to Tripoli. To France the question of proximity is an important factor in colonial policy. The French are a colonial but not a colonizing Power. The Frenchman will not emigrate too far over-seas.

It is quite probable that Germany would accept such an agreement, but we can be quite sure that Spain would not. It is at least highly improbable that Spain would permit France to take territory that has been Spanish since the Middle Ages because Germany was willing that France should have it. This agreement would concede to France a part of Morocco which even that optimistic leader of the "Moroccan party," Eugène Etienne, has never hoped for. It would ascribe to France an ambition and an intention repudiated by every French Cabinet in the last decade which has stayed in power long enough to be heard on the subject.

Melilla has been a crown possession of Spain since 1506, Ceuta has been Spanish since 1688, and Spain has added to her territory about these cities, only recently, as a result of her war in Morocco. Furthermore France has repeatedly officially recognized the predominant interest of Spain in the Rif and in the Djeballa, in the district from the Moulouia west at least as far as Ceuta. This leaves a small strip on the east between the Moulouia, the natural boundary, and the present boundary between Algeria and Morocco. On the west it leaves open only the question of the future ownership of the territory between Ceuta and Cape Spartel, although the secret clauses of the Franco-Spanish agreement of 1904 undoubtedly fully cover the matter.

The statement that "The French are a colonial but not a colonizing Power" sounds well, but is not true. This idea has been accepted in our time by the world generally without much question, because, before 1904, England repeated it so constantly and so emphatically. And England wanted to believe it. The history of France abundantly disproves the theory. The colonies of France in distant lands have played too important a part in history to be ignored. No European Power will or can colonize in lands where the white race cannot successfully combat climatic conditions. There is no more reason for saying that the French are not a colonizing Power because they have not placed large colonies in their Congo possessions or in Anam, than in saying that England is not a colonizing Power because she has not done the same in Uganda.

Algeria and Tunisia offer to French colonists the richest and most desirable lands open to French colonization, and a climate in which Europeans can live and thrive. The French colonies in these countries are increasing rapidly in numbers and in prosperity, and politically there is every reason why France should seek to develop these colonies even if it were at the expense of possible colonies in other quarters of the globe.

COMPULSORY COMPOSITION.

TO THE EDITOR OF THE NATION:

SIR: The comment in the *Nation* for November 2 on Professor Lounsbury's article on compulsory composition, apparently assumed that the course aims solely at helping the student to gain a mastery of English sufficient for everyday needs. Such an assumption is not at all warranted. "Practical composition," if one may use the term, from its very nature cannot constitute a course by itself. For people learn this kind of composition largely by writing about topics which in the natural course of events come to occupy their thoughts; by writing repeatedly, moreover, on the same kind of subject matter; and, to some extent, by reading. If compulsory composition, therefore, were to follow a purely practical aim, it would soon largely cease to exist as a separate course. Its instructors would, peradventure, be set at criticising the written work done by students—perhaps during their whole time at college—in connection with other courses. If such work were found insufficient, it would be increased; indeed, to take the place of the present classwork in composition, there would perhaps be instituted a required course in intensive reading which would yield plenty of coherent subject-matter—not necessarily of a literary nature—for writing, and also help the student to learn, as other people do, something of composition from books.

The compulsory course does not then by any means aim solely at practical composition, but rather at introducing the student to composition in general and giving him some practice in it. It attains its end by instructing the student in the general principles which appear in *all* composition, be it of humble or high degree; and by having him write, in accordance with them, themes on various and necessarily more or less disconnected topics. It might be added that any criticism—and there is certainly a great deal of it—which does not take clearly into account the aim of the course, must always be largely beside the mark. It is more and more frequently asserted that the student may write fairly good English in his required compositions, and yet relapse into his own proper dialect in connection with other courses; that his work neither measures up to practical needs nor receives very deeply the imprint of composition principles; that to claim the little he learns to be better than nothing is an admission of failure; and that, in short, the course involves a large expenditure of money and energy for too small a permanent result. All of this may be true, and nevertheless the fact remains that the course achieves its end—that of bringing the student into touch with general composition. Obviously, any criticism which could claim to be constructive would have to be directed at the aim itself. It would have to argue, for example, that this aim was too vague and general to be worth while, and that compulsory composition would do well to pursue a purely practical end and go through some such transforming process as that described above.

G. R. ELLIOTT.

Madison, Wis., November 13.

Literature

CHRISTMAS BOOKS FOR CHILDREN.—I.

The publishers of children's books are earnestly attempting to cover the whole range of human thought, and, after a careful examination of nearly three hundred books, it has become evident to the reviewer that they aim to satisfy school boards. What the libraries call "non-fiction" is as plentiful as the story books.

"The Story of the Roman People" (Houghton), by Eva March Tappan, is a satisfactory elementary account of Rome, giving the young reader, by means of mythology, legends, and history, an excellent idea of Roman belief and citizenship. The book is copiously illustrated with cuts from famous statues and paintings. Elsa Barker's "Stories from the New Testament for Children" (Duffield) is charmingly written, and mingles Bible text with narrative in an agreeable fashion. There is no didacticism in her manner.

The arrangement of material in E. L. Elias's "In Tudor Times" (Crowell) is altogether satisfactory. One of the best ways of reaching a comprehension of any age is through the dominant personalities of the period. The author has here divided his study into five phases: The Kingship, The Church, The Sea, The Court, and The Renaissance. Under each, his separate chapters are biographical records. The same author's "In Stewart Times" is arranged in a similar manner. The books are illustrated with portraits. A general history of England (Doubleday, Page) has been written by C. R. L. Fletcher and Rudyard Kipling. That is to say, Mr. Fletcher has written the usual account, greatly embellished with marginal notes, while Mr. Kipling has conceived some spirited ballads, which, interspersed throughout the pages, lend a thrill to the narrative. A handsome edition of "The Story of France," as told by Mary MacGregor, has been imported by the Frederick A. Stokes Co.

Sociology is a study that may be presented to children in diverse ways. The manners of the times are revealed in Plutarch's Lives, a retold version of some of these having been prepared by W. H. Weston (Jack), the discursive reflections of the original being omitted. The cover design is attractive. Eva March Tappan's "When Knights Were Bold" (Houghton) very ably pictures the Middle Ages. The illustrations are of interest, and the text is unique.

Every country has its age of fable, but not all fables are as familiar to us as they might be. We trust that the very tasteful edition of Æsop, issued by the Century Company, will win its way into unfamiliar channels. No book of the season is more deserving of wide circulation. We would emphasize its beautiful typography, and the effective manner in which Boyd Smith's line drawings are set upon the page. The De Vinne Press has outdone itself. As an addition to the Knighthood Series, John H. Cox has retold the Song of Roland, under the title of "A Chevalier of Old France" (Little, Brown). The narrative is concise,

Digitized by Google

retaining some of the old French tone. Another version of King Arthur has been made by Henry Gilbert, to the accompaniment of Walter Crane's color drawings. The volume is attractively printed (Jack), but the text simply adds one more unit to consider in determining which is the best. Lanier's Malory and the late Howard Pyle's Arthur books are too well known to be easily replaced. Let tribute be paid to Mr. Pyle, whose work for children was always of the highest and the most sincere; he understood chivalry.

Turning to biography, we find the field, as usual, deplorably weak. As a connecting link with history, "First Voyages of Glorious Memory" (Macmillan) will find willing readers in high-school classes. Frank Elias has selected his material from Hakluyt. McClurg & Co. have an inexhaustible series in their "Life Stories for Young People." The volumes are all translated from the German by George P. Upton, and this year they comprise "Eric the Red and Leif the Lucky," "Columbus," "Cortes," "Pizarro," "Penn," "Franklin," "Washington," and "Maximilian in Mexico." These short biographies, intended for German youth, are enthusiastically introduced by the translator, who commends them for their condensation. Even though not written for juvenile readers, many a boy will enjoy Sir C. N. Dalton's "The Real Captain Kidd" (Duffield), which attempts to vindicate the pirate. We doubt, however, whether romance wants him vindicated. Miss Mary Gay Humphreys has done an excellent piece of editing in her "The Boy's Story of Zebelon M. Pike: Explorer of the Great Southwest" (Scribner). She has taken his diaries and reports, and blended the details with a certain amount of necessary narrative of her own. Some of the illustrations are taken from the Catlin canvases. We believe that the audience for this will be among adults rather than among young people, who rarely care for original documents. Frederick Trevor Hill's "On the Trail of Grant and Lee" (Appleton) shows how the two families crossed each other in their different careers for many generations; and then, in a most direct and effective manner, gives fair treatment to the great civil conflict in which the two generals figured. Southerners will welcome the impartial manner in which the subject is treated. "A Life of Grant for Boys and Girls" (Crowell) has been written by Warren L. Goss. The author is a veteran, and hence there is a personal note running through the book. Both truth and fiction figure in "The Boy's Life of Edison" (Harper), prepared from the larger authoritative "Life," and greatly illuminated by the personal touch of the author, William H. Meadowcroft, an assistant in the Edison Laboratory. What young inventor will not thrill over the sleepless nights spent by the wizard of electricity, watching his work mature into success! A most apposite biography is "Charles Dickens and his Girl Heroines" (Appleton), by Belle Moses, in which the career of the great novelist is sympathetically followed. Her method of treatment will be an incentive to read the stories, since she analyzes simply and picturesquely.

No one should be brought up in ignorance of "The Land We Live In," and Overton W. Price's book of that name (Small, Maynard) will be a source of pleasure to the grown person as well as to the boy. The illustrations are numberless, and are effective, but the text principally will do much to awaken one to an understanding of our wastefulness in forest product, in farming, and in mining. Especially poignant is the constant comparison made with Germany. Harry Chase Brearley, in his entertaining book, "Animal Secrets Told" (Stokes), shows us how we pass over the simplest observable things, even when they are brought under our very eyes. He deals with the ears, mouths, and noses of our animals, and describes how the process of selection has modified their forms. It is a book of "Whys" agreeably answered. "The Monkey Folk of South Africa" (Longmans) tell their own stories in F. W. Fitzsimons's volume. The illustrations alone attract the attention, and the titled paragraphs contain many exciting incidents. The author is director of the Port Elizabeth Museum.

"The Book of Baby Beasts" (Doran), as drawn by E. J. Detmold, will please many youngsters. The reproductions are admirably done, and the text is filled with simple incident, while the verses are out of the ordinary. We congratulate the publishers on the clear typography of the volume.

Sterling Craig, in the pernicious informational story style, has told the "Secrets of the Hills" (Crowell), Ronald, a city boy, taking a vacation among the mountains of Scotland. The illustrations are largely direct and excellent, but, unless a writer can tell the romance of geology without leaning upon such artificiality, he had better leave the rocks alone. S. E. Forman's "Stories of Useful Inventions" (Century) is fascinating, inasmuch as those articles most useful to man are followed through their various stages of evolution. The match, the stove, the plough, and the reaper, besides a host of other topics, are treated effectively. A volume, much the same in scope, is Rupert S. Holland's "Historic Inventions" (Jacobs), which combines some of Samuel Smiles's qualities. There are sixteen chapters, each one a romance in the path of progress. The book is up to date, the final consideration being "The Wrights and the Airship." While on this subject, it were well for us to note another book, "The Romance of Aeronautics" (Lippincott), in which Charles C. Turner, holder of the Royal Aero Club's aviation certificate, traces the progress of flight from the very earliest times. Boys have done much to aid in the advancement of this doubtful sport, and they will read this thick volume with avidity. In fact, they will find it much more welcome than the numberless stories which the publishers are bringing forth, in which the heroes and heroines go through impossible adventures aloft. There is no reader that will not welcome "The Boys' Book of Warships" (Stokes), in which J. R. Howden becomes the historian of a period from the Egyptians to the latest superdreadnoughts. The book is more fully considered from the side of the English navy than of the American, but should not be missed on that account. It is fascinating, and its statistics are accurate. It is filled with technical knowledge. There are many stories dealing with warships and with life at Annapolis.

ISLAM TO-DAY.

Aspects of Islam. By Duncan Black Macdonald. (Lamson lectures on the Religions of the World.) New York: The Macmillan Co. Price, $1.50 net.

The Aspects of Islam presented in these lectures are such as are of especial interest to missionaries in Moslem lands. In discussing them, the author draws not only on a wide acquaintance with books, but on his own observations during a year recently spent in the East, and enlivens the treatment with abundance of anecdote and reminiscence. For a more thorough dealing with many points touched upon in the lectures, he could refer to his earlier works, "The Development of Muslim Theology, Jurisprudence, and Constitutional Theory" (1903), and "The Religious Attitude and Life in Islam" (1909).

The central problem of Mohammedanism, from the missionary point of view, is Mohammed, and the chapters on his life and character, the doctrine of the person of the prophet, and the attitude of modern Moslems toward him, are therefore the most important in the book. Professor Macdonald makes much of the abnormal in Mohammed's temperament: "The fundamental thing in him was that he was a pathological case"; this sums up in a word "his essential personality and character"; had he not been a pathological case, he might have been a great poet; because of "the essentially pathological state of his mind" he had contradictory notions about the relation between God and the world; above all, this accounts for his revelations. Byzantine writers disposed of Mohammed by calling him an epileptic; Weil labored to explain him in the same way; others diagnosticate the prophetic infirmity as hysteria, while Sommer defines it as "psychogene Erregungszustände," which makes everything clear! The latest English biographer, Margoliouth, bids us study Swedenborg and Joseph Smith; Professor Macdonald recommends us to psychical research: "the clue to Muhammad" is to be found in the ways of trance-mediums and the phenomena of hypnotic states.

Mohammed certainly fell into trances, of which traditions purporting to come from his own household give sufficiently circumstantial descriptions; he saw visions and heard voices, and took these experiences for objective and supernatural reality; what came into his head in these states or when he emerged from them was for him divine revelation. There is no doubt that his steadfast faith in his mission and the divine authority of his message through years of rejection and opposition was rooted in such experiences and sustained by their recurrence. Paul, also, saw visions, heard voices, had raptures in which he was caught up to the third heaven—

Digitized by Google

whether in the body or out of the body, he could not tell; his whole career was determined by the vision on the road to Damascus; Krenkel proved to the satisfaction of many that the thorn in the flesh was epilepsy; he was, as a Jewish author has recently reminded us, clearly a "pathological case." For that matter, without going to all lengths with Lombroso, it is well known that genius is frequently attended by a high degree of nervous instability, and from the point of view of what James called the "medical materialist," prophetic visions are classifiable hallucinations and the mystics are all hysterics. But when the neurologist has given his best opinion about what was the matter with Paul or Mohammed, the problem of the origins of Islam or of Pauline Christianity remains for the historian exactly where it was before. Admit that Mohammed was obsessed by his ideas, where did the ideas come from? What gave them such power over him? How came he to take them for a revelation from the one true God—where did he get *that* idea? How did these ideas develop in his own mind? How are they unfolded in his prophesying and lawmaking and realized in his religious community or commonwealth? These are the questions which are essential to a comprehension of Mohammed, and on them it is vain to look to abnormal psychology for light. Goldziher, in his "Vorlesungen über den Islam," recently reviewed in these columns, dismisses the pathological inquiry with a word of Harnack's, *apropos* of Paul, about maladies which only afflict "supermen." It would be hard to say wherein his understanding and appreciation of Mohammed suffer thereby.

Professor Macdonald's judgment of Mohammed's character is extremely unfavorable. He was not "in his beginnings a self-seeking insincere impostor. He was *a pathological case*. His revelations came to him in trance, and like all trance-mediums he had strangely perverted ideas; but an impostor he certainly was not." But "there can be no shadow of question that in those last years [at Medina] he forged the awful machinery of divine inspiration to serve his own ignoble and selfish purposes. How he passed over at last into this turpitude is a problem again for those who have made a study of how the most honest trance-mediums may at any time begin to cheat."

When Mohammed, after ten years of prophesying at Mecca, shook off the dust of the unbelieving city and betook himself to Medina, circumstances which he could not have foreseen, but which he skilfully used, enabled him to become the head of a religious commonwealth in which he was arbiter, law-giver, and leader, with divine authority. Modern writers often underline the contrast between the prophet of Mecca and the theocratic despot at Medina. They overlook the fact that Mohammed's model of a prophet was not an Amos or a Jeremiah, but Moses; it was only at Medina, as the theocratic head of a people, that he realized his own ideal of his calling. His adversaries were rebels against God, and deserved no better fate than Korah and his rout. He could not bid the earth open and swallow them up, but he used the natural means at his command with good effect, and, we have no reason to doubt, in the belief that he had the best of precedents.

He did some things that outraged the heathen sense of right and honor and made even his own followers shake their heads. The revelations—before or after the event—which warranted these doings were plainly suggested by his own desires; we are inclined to think the apology worse than the offence. It is such utterances, doubtless, that the author has in mind when he charges Mohammed with "forging the awful machinery of divine inspiration." That mediums often turn out swindlers is, however, hardly an explanation. Years of prophesying at Mecca had accustomed Mohammed to take the thoughts and impulses which came over him, not alone in trance states, but in full consciousness, as the mind and will of God revealed by his spirit in his prophet, and to give them out as such. His success at Medina had strengthened him in the conviction that he was the chosen instrument of God for the triumph of the true religion and the discomfiture of its foes. Elevated to a unique position as the representative of God, it is not strange that he should exempt himself from rules laid down for common men; for example, in the matter of the lawful number of wives. The refinement of self-scrutiny which should have led him to question the source of his inspiration because the revelation fell in too neatly with his own wishes is the last thing we should expect of him. All this may not alter an objective judgment of his conduct; but it shows how easy it was to do as he did without conscious and deliberate fraud. His lapses illustrate, not the temptations of Mr. Sludge, but the mental and moral dangers of being a prophet—dangers obviously the greater the more unquestioningly the prophet believes in himself.

In matters of theology, as the author remarks, Moslems stand much nearer to Christians than is commonly imagined; but he does not dwell on the historical reasons for this resemblance. In the chapter on Theology and Metaphysics he illustrates the peculiar dialectic of the Moslem development of the doctrine of God rather than the points of agreement with the Christian doctrine or the characteristic differences. Two lectures are given to the Mystical Life, the emotional experience of religion as cultivated by the Sufis and the various orders of dervishes, and the place of mysticism in orthodox systems of theology, a subject by which Professor Macdonald has always been strongly attracted and of which he is a sympathetic interpreter. The large space given to these phenomena is justified by their intrinsic interest and by their peculiar importance to missionaries, whom it behooves to know not only how Mohammedanism satisfies the intellect of its adherents by its scholastic theology, but how it answers their spiritual needs.

There are some interesting pages in the book on present conditions in the Moslem world and the outlook for the future. Professor Macdonald thinks that "unless all signs deceive, there lies before the Moslem peoples a terrible religious collapse"; but to discuss these views would lead us too far. By way of conclusion, it may be said that, as a popular presentation of some salient features of Mohammedan belief and life, the volume may be read with instruction by a wider circle than that to which it is primarily addressed.

CURRENT FICTION.

The Exception. By Oliver Onions. New York: John Lane Co.

This sturdy protest against the vandalism of the iconoclast suggests that sober British respectability is getting back its breath again, and that audacity on the rampage is no longer to go unchallenged in English letters. Whatever the augury for the future of the English novel, the vehicle of the present rebuke is a manifest reversion to type—a deliberate return upon the safe old opinions of virtue, of marriage rights, of verbal decorum, and the safe old literary practice that reflects the actual surface of life (rich texture and weathered hue, not thin, bright pattern of conventionalized design such as theorists fabricate).

The theme is the precise vindication of that same conventional morality that it has been so much the recent fashion to decry. And it is upon the much derided reluctance of the Anglo-Saxon tongue to deal plainly with certain matters that the plot hinges. Berice Beckwith, honestly trying to confess to the man she is about to marry the shameful secret of an earlier intimacy, can find no words beyond these: "*He was my lover. . . . Do you understand?*" A year later, under sharper stress and sterner self-compulsion, she drives the knowledge home with the self-same words: "*My lover—my lover—take the words in any sense you like, only . . . say you understand!*" The episode was seven years past with her "vernal season"; death had apparently made an end of consequences. She had out-grown even her

Digitized by Google

penitence, granted herself an absolution based on the original assumption of her precocious youth that "Life . . . owed her exceptional treatment by reason of her being Berice Beckwith." In London after her marriage, "among people whose ideas . . . were not the ideas of Cotterdale and Ridsdale," she finds more reassurance in the "gentler code of the novelists and the playwrights"—"the new spirit . . . that dealt with such things with a lenience infinitely taking and sympathetic." Yet with all the tenacious vitality of an ugly fact, this "old central fact of her life" survives and in other memories than her own; she finds herself continually confronted with it in other people's opinions. For the knowledge of this illicit relationship is as a touchstone on which every character in the book is tried, and a mutual recognition of it, tacit or expressed, becomes the determining factor in her relations with each one. In the end she sees "clearly enough . . . that she had only been one of the countless exceptions who, well warned beforehand, must still needs go through the deeps of suffering and the shallows of hopelessness merely to discover that they were not exceptional after all." Proposed in cold blood, the enterprise smacks not a little of the morbid and the didactic; in execution it affords some excruciating moments, but none that lacks sincerity and lifelikeness. Characters are finely distinguished, conversations gain in naturalness by subcurrents of unexpressed meanings, and the emphasis falls on certain elements of sanity and delicacy in the public mind that betoken health. All this is refreshing; we had almost said, original. It is something, indeed, to have pinned down in tangible and reputable terms the elusive fallacies that plague us all when we read the novel or witness the play in which the shackles of convention are jubilantly struck off—"the whole ordered handicap . . . disorganized, that the rebelling heroine may run her go-as-you-please."

Love in a Little Town. By J. E. Buckrose. New York: G. P. Putnam's Sons.

This is not an improvement upon "Down Our Street." Indeed, we suspect, with the suspicion born of long experience, that it is an earlier book now presented to the American public as a reward for appreciating Mrs. Buckrose's delightful sketches of "our street." There the writer was content with her characters, and the slightest pleasant shadow of a story to pull them together. Here she is more determined to tell a tale, and the result has a flavor of artifice, especially in the latter part of the narrative. But the people in it, the best of them, almost deserve to have lived in "our street." If the Mrs. Wallerby of this tale is not quite the peer of the delicious Mrs. Bean, she is hardly less amusing, and real, in her own way. And all of the little group at the "White House" are worth knowing. When it comes to the persons of superior station, the Lady Eleanours, the Warde-Pendleburys, the Captain Osbornes, and the rest, we find ourselves in a thinner atmosphere. These are the conventional snobs, ingrates, and money-worshippers who represent aristocracy in melodrama. One sees Capt. Osborne deserting Celia when the world turns its back on her, one sees Lady Eleanour intercepting Celia's letter to Wayne, with the painful stiffness of puppets condemned to play their parts in the distressful scene. Celia herself is a winning heroine—like one of Mrs. de la Pasture's sweet little girls, but with the saving graces of common sense and humor. In short, this is a pretty story which (unless at the verge) is successful in avoiding silliness.

The Great Offender. By Vincent Brown. New York: Brentano's.

The lady with a past here falls into new hands, those of the widow of a vicar of the village into which the lady was bold enough to come as wife of one of the village circle. Never did sinner fall into more tender, pious, sensible, humorous keeping. The seventy-years-old mother, with her two strapping sons, her pony, her dog, her garden, her little figure, her dear old face, her reassuring smile, her converting tea, her diverting chocolates, becomes genially familiar as she unfolds her own story. It is written avowedly to show a better way than the prevailing way of treating a despised woman. Given an old lady whose forte is mothering the young of both sexes, and whose ability to turn them from evil is co-extensive with her smile and her applications of Christian doctrine, nothing could be simpler than Mrs. Custance's method. But with full appreciation of her motives, her courage, and her patience, we must think that her subjects yielded rather easily to her treatment and that not every dear old lady would have such success. However, there is no reason for not taking hints in kindliness from this text-book, even if the impression survives of a treatment prescribed not by a woman, but by a man, as he would like that a woman should prescribe.

My Ragpicker. By Mary E. Waller. Boston: Little, Brown & Co.

The squalor which forms the background of this little romance is barely surpassed by Gorky's "Night Asylum":

> Here the "business," the sorting, was carried on. Even at that early hour the sheds and court were filled with the morning's gleanings from which arose—not the perfumes of Araby, I assure you. A trio of loathsome hags, cadaverous, ash-gray, like those three ancient virgins of Greece, were hovering around the larger piles, vulture-like over the carrion! Meanwhile, a half-dozen of dirt-encrusted, half-naked imps swarmed like vermin on the smaller heaps.

Yet, unlike Gorky, the author finds a ray of hope even in this low stratum. In the heart of Nanette, the youthful ragpicker, half-starved though she is most of the time, and never having known a mother's love, there is a little inexplicable faith which finds a mother's arms in Nôtre Dame, "Our Lady of Paris." Her faint but real joys while working at dawn under the shadow of the cathedral are well caught by the author. But the plot as a whole will make readers hang the head for shame that they have been tricked into such melodrama—a melodrama coming from sentimentality and absurd coincidences.

THE MEDIUM OF EXCHANGE.

The Purchasing Power of Money. By Irving Fisher. New York: The Macmillan Co. $3 net.

Few persons are more successful than Professor Fisher in putting old wine into new bottles. He has taken the most hotly debated of all economic questions, and, by the use of arguments long familiar to special students, has produced an imposing work. While in innumerable instances it is easy to recognize the author's indebtedness to earlier economists, as well as to contemporaries, it can be said of him, as of Handel, that though he may borrow freely, he always repays with interest. Interest with him takes the form of a patient elucidation, such as can be found in few other writers on this subject. Mr. Fisher frankly admits that the main contentions of this book are at bottom simply a restatement and amplification of the old "quantity theory" of money. With certain corrections in the usual exposition of that theory, it may still, he declares, be called fundamentally sound. What has long been needed is, in his judgment, a candid reëxamination and revision, rather than a repudiation. The great merit of this book is its exhaustiveness. The theory of the purchasing power of money may perhaps best be described as an hydra-headed monster, so manifold are the aspects which one must keep in mind in eliminating error from one's conclusion. Mr. Fisher's aim has been to bring each of these aspects into bold relief, and he has effected his purpose admirably.

The quantity theory has been one of the most bitterly contested theories in economics, largely, we are told, because the recognition of its truth or falsity affected powerful interests in commerce and politics. It has, as is pointed out, been made the basis of arguments for unsound currency schemes:

> It has been invoked in behalf of irredeemable paper money and of national free coinage of silver at the ratio of 16 to 1.

Digitized by Google

As a consequence, not a few "sound-money men," believing that a theory used to support such vagaries must be wrong, have drifted into the position of opposing, not only the unsound propaganda, but also the sound principles by which its advocates sought to bolster it up. These attacks upon the quantity theory have been rendered easy by the imperfect comprehension of it on the part of those who have thus invoked it in a bad cause.

Personally, our author believes that few mental attitudes are more pernicious than those which would uphold sound practice by denying sound principles because some thinkers make unsound application of those principles. At any rate, in scientific study there is no choice but to find and state the unvarnished truth.

The equation of exchange, as Mr. Fisher states it, is this:

$$MV+M'V'=\Sigma PQ.$$

In common speech M represents actual money and V the velocity of its circulation (that is, "the efficiency of money"). M' stands for bank deposits subject to transfer by check, and V' for the average velocity of circulation. Turning to the goods side of the equation, we have to deal with the prices of goods exchanged and the quantities of goods exchanged. The average price of sale of any particular good, such as bread, purchased in the given community during the given year, may be represented by P (price), and the total quantity of it purchased by Q (quantity); likewise the average price of another good (say, coal) may be represented by P', and the total quantity of it exchanged by Q'; the average price and the total quantity of a third good (say, cloth) may be represented by P'' and Q'', respectively; and so on for all other goods exchanged, however numerous. The right-hand side of the equation is therefore the sum of terms of the form PQ, that is to say, a price multiplied by a quantity bought. This side of the equation is abbreviated by the use of Σ the symbol in mathematics of summation.

With the extension of the equation of monetary circulation to include deposit circulation, the influence exerted by the quantity of money on general prices becomes, it is admitted, less direct; and the process of tracing this influence becomes more difficult and complicated. It has been argued that this interposition of circulating credit breaks whatever connection there may be between prices and the quantity of money. This would be true, Mr. Fisher admits, if circulating credit were independent of money. But the fact is, he contends, that the quantity of circulating credit, M', tends to hold a definite relation to M, the quantity of money in circulation; that is, deposits are normally a more or less definite multiple of money. All this recalls J. S. Mill's admirable discussion of the value of money in the third book of his "Principles of Political Economy." Mill points out many qualifications "with which the proposition must be received, that the value of the circulating medium depends on demand and supply, and is in inverse ratio of the quantity; qualifications which, under a complex system of credit like that existing in England, render the proposition an incorrect expression of the fact." The care with which Mr. Fisher weighs these qualifications constitutes one of the chief merits of his work. He does not ignore, for example, Mill's contention that "money, no more than commodities in general, has its value definitely determined by demand and supply. The ultimate regulator of its value is Cost of Production." This particular aspect receives acute treatment from Mr. Fisher in one of his chapters on Indirect Influences on Purchasing Power. He finds that gold production will always tend toward an equilibrium in which the marginal cost of production will (when interest is added) be equal to the value of the product. If the purchasing power of gold is above the cost of production in any particular mine, it will pay to work that mine. If the purchasing power of gold is lower than the cost of production of any particular mine, it will not pay to work that mine. Thus the production of gold increases or decreases with an increase or decrease in the purchasing power of gold.

In the chapter on Disturbance of Equation and of Purchasing Power During Transition Periods, we are reminded of Walter Bagehot's article (now a classic) in the London *Economist* of December 30, 1871, entitled "The Great Rise in the Price of Commodities." Fisher here works out in interesting fashion the consequences of belated changes in interest rates. Here is one of his lines of thought in epitome:

> Borrowers, unable to get easy loans, blame the high rate of interest for conditions which were really due to the fact that the previous rate of interest was not high enough. Had the previous rate been high enough, the borrowers never would have overinvested.

The reverse happens, in periods of contraction of loans and deposits. It is readily admitted by our author that the factors in the equation of exchange are continually seeking normal adjustment, but seldom finding it. "Since periods of transition are the rule and those of equilibrium the exception, the mechanism of exchange is almost always in a dynamic rather than a static condition."

Certain minor defects in this book remain to be mentioned. The author shares with the great majority of economists a tendency to lapse into a pedagogical style. The line drawings used to illustrate the text would be more suitable in a primary instruction book, and mathematical formulæ could often have been dispensed with.

Napoleon and His Coronation. By Frédéric Masson. Translated by Frederic Cobb. Philadelphia: J. B. Lippincott Co. $3.50 net.

The Life of Napoleon. By Arthur Hassall, M.A. Boston: Little, Brown & Co. $2.50 net.

Under the title "Le Sacre et le couronnement de Napoléon," M. Masson added in 1908 another volume to his long shelf of interesting books of curious and copious information about Napoleon I. The translator of this volume would have done well to retain a literal rendering of the French title, for M. Masson has told a great deal more about the consecration than about the coronation. The book is valuable, not so much because it pictures all the dramatic details of the pompous spectacle in which Napoleon set a crown upon his own head, but rather because four-fifths of its pages are devoted to a careful analysis of Napoleon's reasons for wishing to be consecrated, of his diplomatic moves to persuade the Pope to perform the ceremony, and of his resulting relations with the Papacy and with the French people. The book is thus really a contribution to the history of church and state in France.

Napoleon was not content with the Senatus-consultum of May 18, 1804, establishing him as hereditary emperor, nor with its confirmation by the people in the favorable *plébiscite* of 2,962,458 to 2,567 votes. Incidentally, it is interesting to note that Napoleon juggled the figures. The "ayes" from the army and from the navy were 120,302 and 16,224 respectively. Displeased with these military figures, either because they showed the numerical strength of his forces or because he deemed it inexpedient to gauge their enthusiasm with mathematical accuracy, with his own hand he changed the army and the navy "ayes" to 400,000 and 50,000, and then altered the addition of the total to 3,574,898 in his favor; the 2,567 votes against him he left unchanged. But he did not wish his Empire to rest merely on his sword and on the votes of the Senate and people. He wanted it to seem to have the firmer foundation of Divine Right. He wanted to be a sovereign like other sovereigns. He wished as the Anointed of the Lord to be above ordinary mortals. All these things he hoped to procure, in a measure at least, by a consecration performed by the hand of the Pope. By holding back in secret the result of the *plébiscite* until the eve of the religious ceremony, and by conducting the consecration and the coronation together in Notre Dame with the assistance and approving presence of the Pope, Napoleon hoped his Empire might seem to be

Digitized by Google

established upon both popular and Divine Right.

The coronation of Josephine M. Masson considers a whim on Napoleon's part. For centuries in the history of France no queen (except Marie de' Medici, for whom there were special reasons) had been crowned. Napoleon also tried to conceal from the Pope the fact that he and Josephine had never been properly married. It was useless. Pius learned it at the last moment from Josephine herself, and refused to perform the consecration ceremony until a religious marriage had been duly concluded.

M. Masson gives all the interesting minutiæ of the costumes, the decorations, the fireworks, the balloon with a fiery imperial crown attached which was released before multitudes in Paris and which sailed to Rome in forty-six hours, the gifts to the Pope and to the people —and the cost of it all. Was it worth it? M. Masson is inclined to think not. His reasons are interesting, but too long to be summarized here.

Mr. Hassall has courageously attempted to cover the whole of Napoleon's career within the small compass of about eighty thousand words. To do this successfully, however, requires literary skill and a first-hand acquaintance with the psychology of Napoleon's mind as revealed in his correspondence and in the skilful perversions of the St. Helena memoirs. Mr. Hassall does not give marked evidence of either. His narrative is clogged with dates and irritating repetitions, and appears to rest on material which, though otherwise excellent, is wholly secondary. There are good illustrations. But the volume can scarcely be held to be so satisfactory as the recent little biography by Johnston or as the sketches by Seeley in the old, and by J. H. Rose in the new, Encyclopædia Britannica.

The Tudor Drama. By C. F. Tucker Brooke. Boston: Houghton Mifflin Co. $1.50.

The tale here taken up has been told before, but it becomes increasingly possible in these days to tell it well, and Mr. Tucker Brooke has produced a volume which will be read with interest not merely by the professed scholar, but by all who feel any curiosity concerning Shakespeare and the dramatic traditions in which he so splendidly found his account. The title of the book is justifiably interpreted to cover a sketch of the beginnings of mystery and miracle (the author values the distinction) and of morality plays, all of which, though of earlier origin, were the characteristic forms of English drama at the opening of the Tudor period. And, similarly, the culmination of the study is constantly found in Shakespeare, who, though his greatest achievements fall in the reign of James, is here regarded as the last of the Elizabethans, continuing their sane and comprehensive grasp of life into an age less exalted and less universal, the drama of which, with all its brilliance, was, through Puritan opposition and gradual divorce from the serious concerns of contemporary life, falling into the dust and putrefaction upon which the doors of the theatres eventually closed.

Whether the break between Tudor and Stuart drama be as clean and sharp as the author contends is proper matter for reflection; it must be granted, at any rate, that a defensible thesis has been set up and supported, especially in the concluding chapters on realistic comedy and the nature of the Elizabethan drama, both with learning and with critical powers more than usually penetrating. Quite apart from the question how far the thesis ought to be carried, there are striking gains in unity and a sense of vivid movement to be got from passing under review the literary types of a more restricted field, as may be observed in the chapter on the transitional interlude. And the method of presentation by means of types, if it has a weakness in that so impressive a play as "Othello" comes off with but scant notice, gains much from the author's manifest knack of setting up categories that are truly organic. In the chapters on the history play this power is exhibited at its subtlest, and it leads to some nice critical distinctions in the treatment of romantic comedy. Some may question, however, whether these matters are not pushed a little too far when "The Merchant of Venice" is so widely set apart from the stream of romantic comedy which has its headwaters in "Love's Labor's Lost" and "The Two Gentlemen of Verona," or when a new category, the heroic play, based on purely native practice, is erected.

But Mr. Tucker Brooke treats neither type nor influence in a rigid manner. He is quick to point out overlappings and he does not limit himself to obvious imitations. The reader is not allowed to forget, to choose but one instance, that while the example of the Roman dramatists made for precision of outline, their exuberant love of excitement and ornament deepened the native tendency toward romantic fancy. The book is written with a certain liveliness of style which is not unattractive, but which sometimes gives to a critical dictum an undue air of finality. The present reviewer feels that the denunciation of "Mankind" as an utterly wretched thing might stand some modification. Coarse buffoonery in lieu of plot it often has, but there is also something of the moral fervor and worldwide scope of "Piers Plowman"; revived on the modern stage, it has been found capable of moving an audience, let us hope somewhat above "the intellectual range of fifteenth-century rustics," with not a little of the strange power of "Everyman." But to disagree on points like this is to testify to the stimulating qualities of the book, qualities which are gained by no scanting of the fulness of the record. A novel hypothesis is contributed to the discussion of the "War of the Theatres," and succinct and helpful bibliographies are appended to the several chapters.

The Record of an Adventurous Life. By Henry Mayers Hyndman. New York: The Macmillan Co. $1.75 net.

Mr. Hyndman's career illustrates the unquenchable restlessness at the bottom of the English heart. Though English society be petrified by conventionalism, individual Englishmen, from the days of the Elizabethans to our own, have been drawn to the ends of the earth by the allure of adventure and of the unconventional.

Born in 1842, Mr. Hyndman had the usual upper middle-class training, took his degree at Trinity College, read for the bar in London, was one of the greatest cricketers of his time, and soon discovered that he had no inclination for the law.

So he roamed on the Continent, became enchanted with Italy, followed Garibaldi as war correspondent in the war of 1866, and then returned to London. The sight of the poverty there roused in him, a born Radical, at first indignation, and later the resolve to devote his life to reforming society, until such hideous inequalities between rich and poor should be impossible. He knew Mazzini, Garibaldi, and George Meredith, wrote in the advanced journals, and was coming to be recognized as a rising disputant, when he went off to Australia for his health. During the next decade he roved widely, wrote Radical leaders for Melbourne papers, visited India, saw something of the United States, invested in Utah mines, returned to London, and had contacts high and low: but all the while he was nursing his indignation at social conditions.

It happened in 1880 that, on a voyage to New York, he first read Karl Marx's "Capital." That book revealed to him the "scientific" basis of Socialism, gave him a creed, and fixed his emotions in a definite channel. Thenceforth, Hyndman was one of the leaders of British Socialists. He drew inspiration from Marx in person. He founded *Justice*. He worked with William Morris on one side, and with the Central Land League of Great Britain on the other. Wherever there was agitation, there was he. After the West End riots he was tried, but acquitted. He stood on a Socialist platform for the House of Commons. He spoke for India. He denounced the Boer war. For years he has been in the inner circle of International Socialism. In short, he has, in true British fash-

Digitized by Google

ion, relished adventure, whether among strange peoples in far-off lands or in new undertakings among his own people.

The last half of Mr. Hyndman's memoirs, therefore, may serve as a document in the history of British Socialism: but they are throughout interesting because of the glimpses they give of prominent men in both hemispheres, and because of their side-lights on history and of their anecdotes. They show celebrities from a different angle, and they inform those who are not Socialists as to the earnestness and intelligence of those who are. Mr. Hyndman writes with dash, careless of his style, as becomes an agitator and publicist accustomed to move his hearers by the substance rather than by the form of his utterances. We welcome this portrait which he paints of himself as a real addition to Victorian autobiography.

Notes

In "The American People: A Study in National Psychology," the second volume of which is issued by Houghton Mifflin Co. this week, A. Maurice Low expresses the belief that immigrants to this country have raised the intellectual level of native Americans.

"The Sins of the Father" is the title of a story of Thomas Dixon the Appletons announce for early spring.

The De La More Press will publish shortly a book on Siam, by W. A. Graham, who is adviser to the Siamese Minister of Lands and Agriculture.

Aylmer Maude will write introductions for "Father Sergius" and "Hadji Murad," two posthumous volumes of Tolstoy; Mr. Nelson is the publisher.

A new edition of the "Collected Works of D. G. Rossetti" is in preparation by Ellis of London; William M. Rossetti has revised and rearranged, and furnishes some matter which has never before been printed.

Aleyn Lyell Reade of Liverpool has almost ready the second part of his "Johnsonian Gleanings," which is said to contain an account of Johnson's relations with his negro servant, Francis Barber; the book is being published by subscription.

The Clarendon Press (Frowde) announces "The Rowley Poems" of Chatterton, reprinted from Tyrwhitt's third edition, with an introduction by Maurice Hare.

Prof. Charles F. Richardson, who last June retired from the headship of the English department at Dartmouth, will devote some years to writing a "History of American Periodical Literature from Colonial Times to the End of the Nineteenth Century."

Volumes IV, V, and VI of "The Complete Works of William Shakespeare," in nine volumes, being a portion of the World's Classics Edition (Oxford University Press; Frowde) have just reached us. Volume IV contains "King John," "Richard the Second," and "Henry the Fourth," both parts. Volume V has "Henry the Fifth" and "Henry the Sixth," the three parts. In volume VI are "Richard the Third," "Henry the Eighth," "Venus and Adonis," "The Rape of Lucrece," "Sonnets," and the following pieces traditionally associated with Shakespeare's name: "A Lover's Complaint," "The Passionate Pilgrim," "Sonnets to Sundry Notes on Music," and "The Phœnix and the Turtle."

We have to acknowledge the receipt of two more volumes in the series of Scott's novels which the Oxford University Press (Frowde) is publishing: "Peveril of the Peak" and "The Fair Maid of Perth"; both are illustrated.

To the Dent-Putnam series of Classiques Français, handsomely bound in flexible leather, three new volumes have been added: "Les Chansons de Béranger," selected by Comte Serge Fleury; "Pensées Choisies de Pascal," with Préface by Emile Boutroux, and "Essais Choisis de Montaigne," with Préface by Emile Faguet. All three volumes have brief bibliographies, and the Béranger and Montaigne have a few notes. The series is edited by eminent scholars and has value for the serious reader; in form it is specially suitable for gift-books.

From Williams & Norgate, London, we have received a volume of the speeches and messages of King George, under the title of "The King to His People." They are taken largely from the reports in the *Morning Post* and the *Times*, and range from the Prince's imperial tour in 1901 to utterances of the crowned King as late as July, 1911. The scope of the topics touched on is considerable.

"Peter and Wendy" is the title J. M. Barrie has given to his narrative version of "Peter Pan" (Scribner). The story as now written carries beyond the end of the play, and has a satisfactory or "happy ending."

Under the title of Dr. Johnson and Fanny Burney" (Moffat, Yard), Prof. C. B. Tinker has brought together in a single convenient volume all "the Johnsonian material in the works of Miss Burney." The design is excellent, and even those who own and read Miss Burney's "Memoirs of Doctor Burney," not to mention the "Diary and Letters," may welcome this skilfully detached portrait of the great Dictator. For proof of the correctness of the portrait the editor, in his "Introductory Essay," calls attention to its similarity to the Johnson of Boswell. It is pleasant, after the note of praise sounded by Professor Alden in eighteenth-century anthology (reviewed in the *Nation* last week), to meet in the present editor another warm Johnsonian; for we have been hearing a good deal of foolish disparagement of Johnson recently from F. Frankfort Moore and others of like prejudices. We are inclined to think that Johnson's reputation rests more on his own actual literary achievements, and less on his mere personality, than Professor Tinker seems to believe; but we will not quarrel with any confessed Johnsonian on that point. The book is furnished with reproductions of pictures and facsimiles taken in part from the extraordinary collection of R. B. Adam of Buffalo.

"Forty Years of Friendship," the correspondence of Ellis Yarnall and the late Lord Coleridge (Macmillan), is creditable to both. Yarnall, descended from several generations of Pennsylvania Quakers, became a High Church Episcopalian, an early devotee of Wordsworth, and a sympathizer with the conservative intellectual life of England from the third decade of the nineteenth century on. He remained, however, a patriotic American at heart, and during the Civil War he opened the eyes of his upper-class English acquaintances, including John Duke Coleridge, as to the cause of the Union. Intrinsically, this is the most important matter broached in the volume. Neither correspondent had any marked talent for "epistoling," as Coleridge calls it; but both wrote freely enough their opinions on books and events. Only occasionally, as when he refers to Prince Albert's parsimony, does Coleridge indulge in that intimate gossip about celebrities which we look for in the intimate letters of men placed in his high station.

It is an ill job to gather out the best poems of a poetical people and please every one, and so Sir George Douglas's "Book of Scottish Poetry" (Baker & Taylor), following his earlier selection—a better one—in the little blue-covered Canterbury Poets, does well, and yet could have done better. The editor's clue has been race only and not subject; any one of the northern stock wherever or of whatever he wrote might be included. The result is certainly odd. It takes a Scot's sense of family to recognize a Scottish product in the Earl of Southesk's "Pigworm," and the case is scarcely better with Robert Buchanan's far worthier "Wake of Tim O'Hara." Drummond's Italian grace can be saved for Scotland only by his being "of Hawthornden," and in Thomson's "Seasons" it is hard to find a Scottish mark. Again, that more than a hundred pages are given to Burns and Scott, whom surely all those who use this book must have, is a strange waste; yet due to a weakness before which anthology-makers seem always to fall. Here it has involved that Stevenson should have only a single scrap, his "Requiem," instead of some of his poems in "Lallan" or that lyric cry which echoes in the hearts of all Scottish exiles, "Blows the Wind To-day?" Of John Nichol there is not even so much, nor of William Bell Scott, George Macdonald, or Walter C. Smith. Alexander Smith is steadily coming to his own, but while we are thankful to have here the grave and sombre majesty of his "Glasgow," we miss the haunting cadence of "Barbara." The older poetry is handled more fairly, and we have a really good selection in above two hundred pages, from the nameless singer who lamented "Alysandyr oure King" to a discreet extract from Alexander Scott of Mary's court. The running glossarial notes are, in general, compact and good.

Prof. Alexandre Moret of the Musée Guimet has written that rare thing, a thoroughly interesting book on ancient Egypt. "In the Time of the Pharaohs" (Putnam) is a collection of very distinct and bright little studies which appeared separately in the *Revue de Paris*. As one of the best of the younger Egyptologists, the accuracy of his scholarship is beyond question. But he has, besides, an imagination, an æsthetic feeling, and a vividness of style which put these essays in the same class with the popularizations of Maspero and Petrie. Outstanding among them are those on the restoration of Egyptian temples, which look eternal as the hills, but are now crumbling to utter

Digitized by Google

ruin; on the diplomacy of the Pharaohs with the Syrian governors and kinglets, which handles the old matter of El-Amarna very pleasantly and lightly; on Egypt in the times before the pyramids and the origins of civilization—one of the few really intelligible and unbiased popular statements of that problem; and on that primitive magic of the Egyptians which so humanizes them and brings them, seemingly so remote, within the sweep of our folk-lore. The translation by Madame Moret is generally excellent and is made rather piquant by some Americanisms, odd from the pen of a Frenchwoman. The book throughout is enjoyable.

"In the Land of the Pharaohs" (Appleton) is a Nationalist history of Egypt, by Luse Mohamed, an Egyptian of half Nubian origin, and extends from the fall of Ismail to the assassination of Boutros Pasha. Some matters in it are fairly dealt with, notably the long and bungling dilatoriness of Mr. Gladstone from the bombardment of Alexandria to the fall of Khartum, and the case of the Egyptians, in the true sense, is well urged against the Turko-Egyptian and Circassian pashas. Another good point is the respect paid to Artin Pasha. But against Lord Cromer he is rabid, descending to common name-calling, and there and elsewhere his voice is evidently that of the educated man who has not received a government appointment. That Mustapha Kamil is his hero is only fair and right; it would be well for Egypt if there were more with Mustapha Kamil's business sense and energy. But it is especially when he comes to the still glowing ashes of the assassination of Boutros Pasha that the fatal weakness in the Egyptian situation appears. "Egypt for the Egyptians," is an excellent cry; but how absolutely by that is meant "Egypt for the Moslems" is plain from the treatment here of "that regrettable incident" (p. 344). We are still far from the new Egypt. Another—a minor but a significant point—is also amply proved by this book, as by most others of its kind. When an Oriental learns to write easily in a Western language, he appears to forget his own language, with his own religion and law. This writer calls an Arabic word Turkish (p. 260); he does not know the relation in law between slavery and marriage (p. 264), and he regards "hadith" as a sacred legal book (p. 269).

Prof. W. E. Dodd's "Statesmen of the Old South" (Macmillan) contains essays, originally lectures, on Jefferson, Calhoun, and Jefferson Davis. Two theses appear interwoven: first, that Jefferson stood for radicalism, which declined under Calhoun and developed into "conservative revolt" under Davis, and, secondly, that in each stage of the progress the South reached its ends through an alliance with the West. But it is not clear that Davis's conservatism was the opposite of Jefferson's radicalism. The secession leader was conservative on Constitutional interpretation and in his opposition to the policy of checking the growth of slavery. But he was as democratic as Jefferson in regard to the suffrage. It seems hard to doubt that both men were equally radical on the points on which the earlier leader was notoriously radical; and both were equally conservative in matters in which the later leader was notoriously conservative. On the other hand, we must not make too much of Jefferson's support by the West of his day, or of Calhoun's and Davis's desire for Western coöperation in 1845-1855. Jefferson's power rested primarily on Virginia's control of Kentucky (her own daughter), North Carolina (weak in leaders of her own), Tennessee (daughter of North Carolina), and Georgia (who had no other resource but to follow a Southern lead). These five States in 1800 had forty of the seventy-three Republican electoral votes, and needed only one large Northern State to make their supremacy assured. New York was selected for that purpose, and Burr received the Vice-Presidency. From that time the alliance between the South and the North was much more important than the alliance of the South and West.

But this does not mean that Professor Dodd's essays are not interesting and suggestive. They are well written and abound in vivid portrayal of character. They are especially valuable in their frank revelation of how the political game was played. Unlike many other writers, the author makes us realize how completely the statesmen of the past were the politicians of their time.

An index of twenty-two pages is required to contain the names of persons mentioned in Marian Gouverneur's "As I Remember" (Appleton). While the volume could have been somewhat reduced by the omission of familiar historic facts and of commonplace witticisms, its length is due in the main to wealth of material rather than to prolixity. Mrs. Gouverneur's memories go back to the first quarter of the nineteenth century, but even this lapse of time is extended by her knowledge of events still older, for some of which she is able to present quaint memorials. There is a letter, for instance, from a certain Miss Blackwell to Mrs. Gouverneur's grandfather, which, beginning formally with "Miss Blackwell's compliments to Capt. Hazard, and desires to know how he does," descends in a postscript to the more human "Let me see you on Sunday. Burn this." The striking feature of the volume as a whole is the number of personages it reintroduces who have more than a merely social prominence, despite the fact that it is essentially a Who's Who of New York and Washington society during the last hundred years. The vividness of many a well-known incident is heightened by recollections of persons who were intimately associated with it. The duel of Hamilton and Burr seems very near when we read of conversations with a daughter of Hamilton, in which she speaks of the less familiar tragedy of the killing of her brother in a duel, three years before the larger event, upon the same spot. One of the best anecdotes in the book relates to an episode which occurred during the war of 1812, at a dinner in Canada, at which both American and British officers were present. One of the latter offered the toast: "To President Madison, dead or alive." An American offered the response: "To the Prince Regent, drunk or sober." As one turns Mrs. Gouverneur's pages, one gets an impression of quiet but far-reaching changes, both material and social, in the two cities which she particularly treats. Her incidental references to these changes, noting rather than discussing them, add to this feeling. There comes an increasing consciousness of opulence, display, and sophistication, as the narrative carries its readers from the days of Martin Van Buren, William L. Marcy, and A. T. Stewart to those of Garfield and Arthur. Mrs. Gouverneur's fitness to write such an account is attested no more thoroughly by her nearness to President Monroe, who was her husband's grandfather, and by the presence of such guests as Charles Sumner, Caleb Cushing, and Stephen A. Douglas at her wedding, than by her simple and limpid style.

The Rev. T. Scott Holmes, chancellor and canon residentiary of the Cathedral Church of Wells, has written a scholarly volume on "The Origin and Development of the Christian Church in Gaul during the first six centuries of the Christian era" (Macmillan), being the Birkbeck Lectures for 1907-1908 in Trinity College, Cambridge; his work is based upon a careful study of sources, and within its own range is both instructive and interesting. Unfortunately, as is apt to be the case in such local histories, the author has conceived his task too externally and superficially, and has devoted too little space to the inner development of Christianity in Gaul. The early chapters deal principally with the persecutions of the second to the fourth centuries, and not enough is said of other and more important matters. The great Irenaeus, for instance, perhaps the most permanently influential of all the theologians of the early church, is dismissed in four pages, while whole chapters are given to such men as St. Martin of Tours, Priscillian, Hilary, Sidonius Apollinaris, and St. Columbanus. Evidently the author has failed altogether to realize the significance of Irenaeus's contribution to Christian history. He first formulated the theological principles which have been dominant in Catholicism both east and west ever since his day, and the services of all who came after him in Gaul pale beside his. But we know little about his life, and it is with the external fortunes of the church and of its leading men that the author of this volume is principally concerned. This is the radical defect of a work otherwise admirable.

Among the more important articles in the eleventh volume of the Catholic Encyclopedia (Robert Appleton), the following may be particularly mentioned: New York, with pictures of old St. Peter's Church, of St. Patrick's Cathedral, and of some of the most noted of New York's bishops; Oxford and Paris, both beautifully illustrated; Nominalism, by the well-known historian of mediæval philosophy, Maurice De Wulf; Numismatics, with a number of good plates; Painting, Paleography, and Paleontology; Penance, an article of great interest and value; St. Patrick, St. Peter, and St. Paul, in the last of which the elaborate bibliography contains Protestant books almost exclusively; Pentateuch, in which modern critical theories are rejected, but at the same time are reproduced with considerable fulness; and finally a very instructive article on Periodicals, containing an account of the most important Roman Catholic journals of Europe and America. This brief list suggests the wide range of topics dealt with in the present volume as in all the others of this great work.

"The Germans" (Bobbs-Merrill), by I. A. R. Wylie, differs from most attempts of a foreigner to formulate impressions of and pass judgment upon a country which he visits, in that it is the work of an English woman who for the past six years has made her home in Karlsruhe, and, after overcoming certain insular prejudices, has come to feel a warm sympathy for things of her adopted home. To her credit be it said at once that she has found out what is "typically German," and that her observation, naturally less penetrating in matters of politics and commercial expansion than in matters of social organization and home life, has been extensive and accurate. She writes in the tone of familiar correspondence about the work and the play which make up the year among the various classes in a staid and somewhat remote little capital city. She is aware of the difference between the Prussian and the South German, and much prefers the latter, without in the least underestimating Prussian primacy in the Empire. She deplores English hostility and suspicion as groundless, as the fear of possible decrepitude in an old empire, which, having already reached its zenith, apprehends eclipse by the rising star. Miss Wylie may be mistaken as to the pacific tendencies of German diplomacy; it is difficult to expand peacefully upon a world in which most of the desirable locations have been preëmpted; but certainly so benevolent a book based upon such intimate experience—"ordinary experience, the most difficult to obtain," as she calls it—is a genuine service to international peace and good will. The volume is adorned with excellent miscellaneous illustrations.

The series of Scrittori d'Italia, which is in the hands of Gius. Laterza e Figli of Bari, Italy, has lately been increased by two new volumes: Giovanni Berchet's "Opere," Volume I, Poesie, edited by Egidio Bellorini, and Giambattista Marino's "Epistolario, seguito da lettere di altri scrittori del seicento," edited by Angelo Borzelli and Fausto Nicolini, Volume I.

In 1906, Paul Thureau-Dangin's "St. Bernardin de Sienne" was translated into English by the Baroness von Hügel, a deplorable piece of work which was duly animadverted upon in these columns. Of that translation we have now received a "new and revised" edition (London: Philip Lee Warner). Beautifully printed, and embellished with illustrations after the Old Masters, which have been carefully selected and learnedly annotated by G. F. Hill, the volume is a most attractive one, and, so far as its external appearance goes, it is worthy of the highest praise. Unfortunately, however, the "revision" of the text has been scarcely more than nominal, and the reprint is, for all practical purposes, quite as faulty as the original.

Prof. R. T. Holbrook is known to scholars as the editor and translator of the mediæval French farce of "Patelin" and as the author of an interesting thesis on "Dante and the Animal Kingdom." He now adds to his Alighieri contribution a splendid volume on "Portraits of Dante from Giotto to Raffael" (Houghton Mifflin), artistically illustrated with almost countless clear and beautiful reproductions, some in color, at least two of them novelties. The work is, however, far from being a mere picture-book. It is a collection of all accessible evidence bearing on the origins and the authenticity of the important Dante portraits down to 1512, accompanied by intelligent and judicial discussion. There is also a rapid characterization of some hundred other presentments of the poet; and, at the close, a comprehensive bibliography and an index. In point of fact, we have only one somewhat trustworthy description of Dante's appearance—that of Boccaccio, who wrote, not from first-hand acquaintance, but after consultation with several persons who had often seen the illustrious exile; and only one at all reliable likeness, the Bargello fresco by Giotto, who presumably had known Alighieri before the banishment, although he painted him doubtless some fourteen years after the poet's death. Another portrait, famous in its time for its lifelike quality, was that made in Santa Croce by Taddeo Gaddi, now unhappily destroyed. According to Professor Holbrook, the miniature in the Palatine manuscript, which strongly resembles Giotto's fresco, derives from it. This miniature, or something similar, he takes to be the source (together with Boccaccio's pen picture) of the Naples bust, the imaginative creation of a great but unidentified fifteenth-century artist. From the bust, he believes, were copied the so-called "death-mask"—which, indeed, is strikingly akin to it, and, as is now well known, is not a mask at all—and the unprepossessing Riccardian illustration. The Michelino painting in the Duomo reveals a type, of unknown origin, different from Giotto's and from the Naples bust, but found in some other portraits. The Bargello likeness and the "death-mask" naturally receive the most abundant comment, but many other faces, really or hypothetically intended for Dante, are adequately treated. Professor Holbrook is to be congratulated, not only on the fulness of his material, but also (even if one does not accept unreservedly all his conclusions) on the good sense he has displayed while dealing with a most elusive theme.

Colorado is now circled by an automobile road a thousand miles in length, crossing several ranges of the Rocky Mountains and winding its way through most of the cities. Radiating from it are side trips to various mining towns and summer resorts. Of this road Eugene Parsons gives a description in "A Guidebook to Colorado" (Little, Brown). The remaining 370 pages of his book are filled with information relating to the State's sixty counties, from Adams to Yuma, in alphabetical order—information useful to tourists of all classes, health-seekers, hunters, or intending settlers. Historic and prehistoric matters are duly considered, county seats and mountains described (with a number of tempting illustrations); while crops, mines, and mineral springs come in for their share of attention. Distances from place to place are noted in the appendix; also, the altitudes of peaks. In short, it is a book that no one bound for this national playground can afford to be without.

"The Spell of the Rockies" is the title of another excellent volume on Colorado, by Enos A. Mills (Houghton Mifflin). It is not a book for motorists, but for those who prefer to go afoot, to admire nature at close range and to climb the grand peaks, on which this writer seems to be thoroughly at home; one of them, Long's Peak, he has ascended no fewer than seventy times. For twenty-four years he has studied the glaciers of this range, and incidentally he has seen much of animal life. In two chapters on the habits of beavers, he tells among other things of an attack on a colony of them by a coyote. He notes the curious fact that these animals before the white man came did their work mostly in the daytime, but now have learned that it is safer to work at night. The author relates some hairbreadth escapes he has had from avalanches, forest fires, and other dangers of the mountain ranges. His remarks on electric storms will interest many; but the most fascinating of his pages are those relating to the crests of the Rocky Mountains, their crags, and snows, and showers. Airmen will find much of importance to them in his chapter on Mountain-Top Weather and the dangers they must expect to encounter from air currents, counter currents, and maelstroms.

Dr. Benaiah Longley Whitman, a widely-known clergyman, died on Monday at Seattle, aged forty-nine. He was pastor of the First Baptist Church of Seattle, formerly was pastor of a large church in Philadelphia, and for four years was president of George Washington University at Washington, D. C. He was the author of "Elements of Ethics," "Elements of Sociology," "Elements of Political Science," and "Outlines of Political History."

The death is reported from Berlin of Prof. Oswald Helder-Egger, the palæographer, in his sixty-first year. He leaves a work upon which he spent thirty-six years of labor—"Monumenta Germaniæ Historica."

Dr. Wilhelm Jensen, the German author, died in Munich on Friday of last week, aged seventy-four. He studied at the Universities of Kiel, Würzburg, and Lübeck, becoming doctor of philosophy. Afterwards he was on the editorial staff of the *Norddeutsche Allgemeine Zeitung*, the semi-official newspaper of the German Government, being once imprisoned for his utterances. He retired from newspaper work in order to devote himself to authorship, and was soon a prolific writer.

Science

THE NATIONAL ACADEMY OF SCIENCES.

WORCESTER, Mass., November 23.

The United States suffers certain disadvantages with regard to the pursuit of science in being so large that it contains no national intellectual centre to which all scientists may rally in national societies. New York can never be to this country what Paris is to France. No more can Washington; yet both of these cities possess certain indubitable advantages. The National Academy of Sciences, which holds its annual spring meeting in Washington, could hardly preserve its national character without holding an ambulatory meeting in the autumn. This meeting has just been held on November 21 and 22, in New York, which has proved itself to have great advantages as shown by the rec-

Digitized by Google

ord-breaking attendance of above sixty members. The meeting was held at the Public Library, a most convenient as well as magnificent abode for such a meeting, on account of its central situation and its nearness to various clubs, particularly the new Chemists' Club and the Century Association, whose hospitality was kindly extended to the members. In addition, the many scientific institutions situated in New York afford many points of interest, and the visit to the Rockefeller Institute and the reception at the American Museum of Natural History were greatly enjoyed. Two such institutions as these would be hard to equal in any city in the world.

This meeting was certainly a biological session, and did not lose in popular or scientific interest thereby. Twenty papers were read, including eight by non-members. No paper was presented on astronomy, one each on mathematics and botany, two on chemistry, two on physics, three on geology, and eleven on biological subjects. Simon Flexner, director of the Rockefeller Institute, in a paper on "Modes of Infection in Infantile Paralysis," described the ravages of this fatal disease, of which upwards of twenty thousand cases have occurred in this country up to last summer within the last three or four years. Many of these cases, in which paralysis does not ensue, are still important, because they may spread infection. Until the last two years the method of spreading the disease was not understood, and its infectivity was unknown. This has now been established by experiments made exclusively upon animals, the disease being transmitted to monkeys. The result on monkeys early showed that the germ, which has been identified but not seen, being too small to be filtered out, and of ultra-microscopic size, when introduced into the brain passes to the membranes about and follows the nerve fibres and the spinal cord. The nerves of smell, closely related to the brain, form a channel of communication between the upper mucous membrance and the brain, so that the germ could be discovered in the nose, which undoubtedly affords one means of getting out to the external medium. The question thus arose whether the germ could get into the organism in the same way, and this was found to be, next to direct inoculation, the easiest manner of communication. These results have been verified in the case of spontaneous disease in the human patient. In this disease prevention will be enormously more easy than cure.

Prof. Jacques Loeb, in a paper on "Oxidations in the Cell," attempted to study the rôle of oxygen in supporting life by means of the careful determination of the temperature coefficient and the control of the supply of oxygen in two cases, those of segmentation and of the heart-beat. The conclusion was that not all the oxygen was consumed in producing the work of segmentation, but that some was disposed of in other processes. Dr. Alexis Carrel, also of the Rockefeller Institute, read an extremely interesting paper on "Manifest and Non-Manifest Life of the Tissues," in which he described how life may be preserved outside of the body, either as latent, in which case the tissue does not grow, or manifest, in which there is an actual growth of tissue, or alternate, in which one process alternates with the other. For instance, a piece of skin or spleen may be maintained in vaseline or other solution a few degrees above the freezing-point for several weeks, and may be shown to have life by being transplanted and cultivated. Pieces of artery, heart, or spleen may be kept for five or six days in cold storage and then cultivated as well as ever, and after several weeks may be used in human beings. In the case of manifest life, the growth and multiplication of the cells are very striking. Tissue maintained in a blood plasma will grow for ten or fifteen days, but eventually dies. This is prevented by Dr. Carrel's method of removing it from the plasma, washing out the waste products, and again putting it in cold storage and then in the nourishing plasma again. By means of these alternations, growth can go on for fifty days with no evidence of senility of the tissue. These results produced a profound impression, which was shared by a paper by Dr. R. G. Harrison of Yale University, on "Protoplasmic Movement in Embryonic Cells," in which a similar method was used. Dr. E. G. Conklin of Princeton University, in a paper on "Cell-Size and Nuclear-Size," examines the cause of senescence and rejuvenescence, by measuring the relative size of nuclei and protoplasm in many cells in gasteropods and ascidians, and finds that functional action does not depend on the relative volume of the two, but on the rate of exchange between nucleus and protoplasm. Anything that hastens metabolism hastens rejuvenescence, and this is most rapid when the nuclear membrane has just been dissolved so that change of substance is most easy. It is then that the most carbon-dioxide is given out by the egg.

Prof. T. H. Morgan of Columbia University presented an elaborate study of "Sex Limited Inheritance," showing the results of breeding on various unit characters in sheep, poultry, and flies. Many interesting results were described —for instance, if a black cock is crossed with a barred hen, in the first generation, all the sons are like the mother, and all the daughters like the father. In the reverse case of the father barred and the mother black, all the off-spring are barred. In the next generation, there are no black cocks. In the case of the fruit fly, if a female with red eyes is crossed with a male with white eyes, all the offspring have red eyes, while if these are inbred, the females have red eyes and the males white. As a result of these experiments, Professor Morgan communicated a very simple formula, which would seem to take the place of Mendel's Law. The next two papers also had to do with the question of heredity. Prof. C. B. Davenport of the Cold Spring Laboratory of the Carnegie Institution described "Recent Advances in the Study of Eugenics," by the method of sending a corps of disciplined field workers out to make judicious inquiries and obtain physical traits, these being illustrated by reports on inheritance of feeble-mindedness. The effects of inbreeding are shown, for instance, on one island in Maine, where all the inhabitants have the same family name. Dr. Henry F. Osborn of the American Museum of Natural History discussed "The Problem of Continuity or Discontinuity in the Origin of Unit Characters in Heredity." In the last thirty years, we have become familiar with Mendel's idea of the formation of unit characters which are inherited not as a blend or flux, but as distinct unit components, as well as with the idea that evolution is not gradual, but discontinuous, or progressing by leaps. The study of the inheritance of the mule is an excellent opportunity for the investigation of such questions, since his ancestors, the horse and the ass, have been thoroughly separated for three hundred thousand years. While the exterior appearance of the mule is derived largely from the ass, for instance the limbs, he has the skull of the horse, but the teeth of the ass. He obtains his psychology from his father, but the kick from his mother, the ass. Out of eleven characters of the teeth in the mule, only two show the character of the horse. It is shown that a large number of characters developed slowly and by interbreeding and segregation. It is concluded that certain gradual developments of unit character are just as important, as, or in the bones more important than sudden jumps.

In geology, Prof. J. F. Kemp of Columbia University presented a paper on "New Data on the Bed-rock Channel of the Hudson River," in which he showed how borings at Storm King made for the new aqueduct under the Hudson, prove the bed-rock to lie between seven hundred and nine hundred feet below the surface, while the borings made at the Pennsylvania Railroad tunnel at New York give a less depth. The depth above was attributed to glacial erosion. In the second paper on the "Source of the Saratoga Mineral Springs," Professor Kemp described the chemical history of the waters for the last sixty years and was inclined to supplant the old theory, which holds them to be the remains of an ancient sea, with the theory of volcanic origin, a volcanic plug being present in the neighborhood.

Prof. B. B. Boltwood of Yale University described the "Proposed International Radium Standard," being prepared by Mme. Curie, by which the strength of all radium preparations may be tested by comparison of the effects of their gamma rays. The standard of a weight of twenty-two milligrams (about one one-thousandth of an ounce) has a value of about two thousand dollars. Prof. M. I. Pupin of Columbia University presented an interesting study, both experimental and mathematical of "Conductors Rotating in an Alternating Magnetic Field." This subject, of particular importance in connection with the transmission of power and in telephony, has never been systematically examined. It possesses great mathematical interest on account of its being an exemplification of the method of treatment of differential equations introduced into astronomy by G. W. Hill, and great physical interest, because of its possible explanation of certain peculiarities of the spectrum of luminous bodies. Certain very remarkable effects similar to resonance were observed and photographed, and it was shown that under certain conditions an unstable state supervenes, in which a very small current may be converted into such a large one as to destroy the machine. It is not to be supposed that this large current comes from nothing, as the power has to be put into the machine to drive the armature. The possibility of a very remarkable telephone relay is suggested.

At the business meeting of the Academy, announcement was made of the generous gift by Sir John Murray of a fund for the foundation of a medal to commemorate the scientific work of his friend, Alexander Agassiz, late president of the Academy. Many social events were enjoyed and the Academy adjourned after a rather short, but very successful session. ARTHUR GORDON WEBSTER.

This week Holt brings out "The Evolution of Animal Intelligence," by Prof. S. J. Holmes.

"The Wonders of Bird Life" (Lippincott) is a cheap abridgment of John Lea's "The Romance of Bird Life." The nine chapters are devoted to such themes as Sitting, Defence of Home, Make-believe, Sport and Play, and Courtship, themes discussed in so popular a manner that the book is to be recommended only to children and insatiable nature lovers. Such readers will hear of the chick's six call-notes and their precise meaning, of a chick two and a half days old that cuddled under the body of a fox terrier, of the stork that does *not* bring children into the world, though it plays tag with boys, and of a goose that worsted a fierce sow by pulling its right ear very hard.

F. C. Constable, a member of the Society for Psychical Research, has adopted an unfortunate order for his book on "Personality and Telepathy" (Kegan Paul). Leaving his real evidence for the second part of the volume, he assumes, in defiance of the consensus of scientists, that telepathy is a fact, and proceeds to establish for it a philosophical basis. If the skeptics of this generation become the believers of the next, the philosophers will make such changes in their systems as are necessary. Mr. Constable's discussion of this part of the subject is premature, and his effort to justify his position by the authority of Kant is futile; no amount of philosophical reasoning can do more than assert the possibility of telepathy. Concerning the evidence which follows, a few examples will show that it furnishes nothing particularly new. "I was sitting alone in the drawing-room . . . when suddenly I experienced an undefined feeling of dread and horror. . . . The next morning I received a telegram telling me of the death of a very near and dear cousin." Three startling tales may be immediately rejected. The narrator of the first is not certain even of the year—he states "about the year 1841." The second is told by an uneducated sailor; the events he describes are said to have taken place twenty-five years previously; he was fifteen at the time. The third begins, "I well remember a singular circumstance I have often heard my father relate, which occurred to himself." The gem of the collection and the happening on which the writer lays the utmost stress is an alleged thought transference from Mrs. Piper, in this country, to another medium, Mrs. Verrall, in England. It is interesting to observe that three days elapsed between the suggestion of "spear and sphere" to Mrs. Piper and the reception of the Greek "sphairos" and the Latin "volatile ferrum" by Mrs. Verrall. The question which comes to one's mind, however, is, "Were the transatlantic cables idle during that time?"

Drama

After the three different representations given in this city by the Drama Players of Chicago it is tolerably clear that the future of the organization depends almost entirely upon the sagacity of its directors. Two facts concerning the company have been proved pretty conclusively: one, that it is abundantly capable of fulfilling most of the requirements of modern drama; the other, that it will need much intelligent schooling before it can hope to prove satisfactory in artificial comedy or poetic tragedy. A radical mistake was made in beginning operations here with so unsympathetic and insignificant a work as Ibsen's "Lady from the Sea," which, after the first night, when the house was packed, was played to very slender audiences. This was not because the acting was bad, for it was, on the whole, uncommonly good, but because the play itself was hopelessly unattractive. In "The Learned Ladies," Prof. Page's English version of Molière's "Les Femmes savantes," the actors, with one or two exceptions, were altogether modern that is to say, slovenly, in speech and manner. Their interpretation had spirit but no style. Some acquaintance with the arts of diction and gesture is essential to the profitable revival of stage classics. It was only in Pinero's fine, caustic comedy, "The Thunderbolt," that the Players did themselves full justice, and partly justified their enterprise. Their performance—with the possible exception of a single character—was as effective as that given last year in the New Theatre. If less theatrically brilliant in one or two places, it was, perhaps, more truthful as a realistic class study, and more remarkable as an example of swift, neat, and sure co-operative acting in the complicated climaxes which the author has contrived with such infinite ingenuity. Some of the individual characterizations—the James Mortimer of Herbert Kelcey, the Stephen of Sheldon Lewis, the Phyllis of Effie Shannon, the Col. Ponting of Edward Emery, and the Helen of Hedwig Reicher, for instance—were really vital and consistent studies. The principal scenes were received with enthusiastic applause, and the curtain fell upon an emphatic success. But the house was only about two-thirds full. The moral is sufficiently obvious. If they had opened in "The Thunderbolt" the Drama Players might have taken New York by storm. In this case the performance and the play were equally good, which could not be said of either of the preceding experiments.

The Irish Players, from the Abbey Theatre, Dublin, are the victims of the injudicious and unjustifiable hubbub raised over their performances by a few misguided enthusiasts. This has raised expectations which have not been and are not likely soon to be realized. Within certain limits—those of a narrow and particular realism—they are clever natural actors much in need of artistic training. They may be said to constitute the beginnings of a national theatre, inasmuch as they are, in the main, Irish representatives of phases of Irish life, but they are not representatives, in the broad sense, of Ireland or the Irish. And this seems to be true also of the plays of J. M. Synge, in whom the descriptive and poetic faculties were much more strongly developed than the dramatic. His plays are founded chiefly on his observations of life and character in the isolated Aran islands, observations which were strictly local and have little general or contemporaneous application. His poetic vision, keen appreciation of Nature in her wildest and roughest moods, and cultivated literary sense enabled him to invest the inhospitable rocks and their unsophisticated inhabitants with a wild charm which cannot be exerted upon the stage. In the written sketches his personages are vital, convincing, and attractive in their semi-barbaric simplicity; before the footlights they are inconsistent and often incredible. The veracity and fascination of the sketch vanish in the elaborated study. There is a striking instance of this in "The Well of the Saints." This play is a variation of a very old fable. Two old blind beggars, Martin Doul and his wife—ignorant, lazy, selfish, envious, but humorous—vary their conjugal bickerings with speculations on their personal appearance. Each draws a flattering mental picture of the other, and in this dialogue the literary skill of Mr. Synge is admirably displayed. A wandering friar—a grotesque creation—restores their sight with some miraculous water, whereupon they are instantly and cruelly disenchanted. After mutual revilings they

Digitized by Google

separate, and Martin, when he finds that he is expected to work, deplores his fate with fervent blasphemies. Presently he and his wife become blind once more, and when the friar offers to cure him again, he contrives cunningly to spill the holy water rather than be the subject of a second miracle. The piece has its notable merits. Its characterizations are life-like, its humor racy, and its satire keen, but it is slow in action and greatly overladen with irrelevant small talk, which the players made more tedious by their monotonous utterance and wooden behavior. In Bernard Shaw's reckless burlesque, "The Shewing Up of Blanco Posnet," they were completely out of their element, actually contriving to conceal the humor which is its one redeeming feature.

The most obvious remark to be made about "The Playboy of the Western World," which has been the excuse for so much noisy advertisement, is that it is no wonder decent Irishmen should decline to regard it as a truthful picture of Irish life. If it could carry with it any conviction of reality, it might well be denounced as a national libel, but it is too extravagant to be taken seriously. Had it not been for the somewhat artificial reputation of Mr. Synge as a dramatist, it would scarcely have made so much stir. Doubtless, it is, in many respects, a gross misrepresentation, but the author probably had no other intention than to illustrate what used to be called the "wild Irishman" in his most impulsive, emotional, inconsequent, and irresponsible mood. The special sting of it consists in the suggestion that the Irish peasantry would be apt to hold a parricide in high esteem as a hero. It is true that Christy Mahon has not actually killed his ill-tempered father, but he thinks that he has, and is treated, by men and women alike, as a valiant lad, solely on that account. When his sire, who has only been stunned, overtakes him in his flight, the heroine—who has fallen in love with him on his relation of his supposed crime—and all the rest turn upon him and ridicule him as a cowardly, lying impostor. Then he tries to kill his father in earnest, in order to regain his promised bride and his renown, but this time his fickle admirers seize him for delivery to the police lest they should be held as accomplices in the murder. In the end he goes off with his father, who has again recovered, boasting that hereafter he will be the head, and not the butt of the family. Sober criticism would be wasted on such a yarn as this, but the play has a value altogether independent of its leading incidents. The dialogue is often wonderfully effective in its quaint, forcible, picturesque imagery, while the character-drawing is strikingly veracious in all minor details. Mr. Synge declares that almost every word and phrase he has used is taken direct from the peasant speech, but it is permissible to doubt whether his English is always the exact equivalent of the original Gaelic. As for any possible inner meaning of the piece, to be discerned beneath the external form of fantasy, that is not suggested either by the dialogue or the players; and need not be considered. A play must be judged upon its surface value.

Preparations are proceeding steadily for Max Reinhardt's colossal production of "Œdipus Rex," which Martin Harvey will present in Covent Garden, London, on January 15. He has engaged Lillah McCarthy for the part of Jocasta. In view of the novel lighting effects which are to be a prominent feature of the spectacle, an entirely new electrical plant will be installed.

Sir George Alexander has now definitely decided that his next production at the London St. James's will be J. B. Fagan's adaptation of Robert Hichens's novel, "Bella Donna." Mrs. Patrick Campbell has been selected for the part of Mrs. Chepstow, who ultimately becomes the wife of Nigel Armine. For himself, Sir George Alexander reserves the character of Meyer Isaacson, the London specialist who deserts his patients in order to follow his friend Armine up the Nile and probe the secret of his mysterious illness. The rest of the play becomes in essence a duel between him and the woman for the life of Nigel Armine.

Music

The Wind-Band and Its Instruments. By Arthur A. Clappé. New York: Henry Holt & Co. $1.50 net.

Sound in the Organ and the Orchestra. By Hermann Smith. New York: Charles Scribner's Sons. $2 net.

Although there are famous bandmasters and great organists, their concerts are seldom commented on by the musical critics, who have so much to say about orchestral concerts and piano recitals. Why this difference in their attitude? So far as wind-band concerts are concerned, Mr. Clappé's book furnishes a complete answer to that question, although he does not ask it. The plain truth is that neither the bandmasters nor the composers have yet found out the artistic potentialities latent in the wind-band. Perhaps this is not to be wondered at, as it is only since the early part of the last century that some of the most important wood-wind and brass instruments could be used and combined with artistic results. In the days of Shakespeare, "Noise" was the English designation for a band of musicians. For centuries the tone of many wood and brass instruments was too coarse, and the intonation too inaccurate, to make it possible to associate them in orchestras with the string instruments; and by themselves they served only for the army and the dance hall. It was not till the time of Antoine Sax, who died in 1894, that evolution from these chaotic conditions became apparent. There has been further progress since his day, but much remains to be done. While the instruments themselves are now satisfactory, the ideas regarding their combinations are still in a chaotic condition, every bandmaster being a law unto himself. The nearest approach to established order is to be found among government or military bands, yet even among them there are wide divergences and no standards.

Mr. Clappé, after surveying the situation, has come to the conclusion that the bandmasters alone cannot bring order into this chaotic condition. The composers must help them:

> If only they can be brought to consider the wind-band seriously, and, recognizing its potentialities as an art factor, be induced to write works suited to its genus, taking into account its remarkable variety of voicing, its infinite shades of tone-color, order will result.

Pending the arrival of such a composer, bandmasters must help themselves as well as they can. Mr. Clappé's book will prove of much use in this struggle. As he was sometime teacher of music at the West Point Military Academy, his remarks are based on actual experience. He devotes separate chapters to the different groups of instruments, tells the most important things to know about their history, their construction, acoustics, technique, and their combinations with other instruments. The more unusual instruments (some of which are undeservedly neglected) are described, as well as the ordinary flutes, oboes, clarinets, horns, trumpets, trombones, and so on. Drums, cymbals, and other instruments of percussion are also discussed, and there are chapters on the Bandmaster, Tone Color and Tone Building, Formation of Wind Bands, etc. Tables are given as to the numbers of various instruments used in foreign and American bands, with suggestions as to which are best.

The case of the organ is different from that of the band. Some of the greatest composers have written masterworks for that instrument. If the concerts given on it do not receive more attention, this is largely due to imperfections of the organ. Generally, these are supposed to be inherent in the nature of the instrument, but the author of "Sound in the Organ and in the Orchestra" scouts this notion. He points out that, particularly in England, the "voicers" seldom possess a critical knowledge of the instruments they are called upon to imitate with the organ pipes, and that this is the principal reason why those accustomed to orchestras find organs insipid. The greater part of Mr. Smith's book is taken up with the discussion of acoustic problems. He subjects to destructive criticism some of the leading physicists and propounds a "suction" theory to explain the mechanism of sound production. It is too involved to discuss here, but is worthy the attention of men of science.

Special historic interest attaches to this season's performances of Wagner's swan-song, "Parsifal," the first of which will be given this afternoon. It is the last complete season during which the Metropolitan will be the only opera-house in the world, excepting Bayreuth, at which this sublime work can be heard. The copyright on it expires next year.

The Flonzaley Quartet's three New York concerts are scheduled for Monday evenings, December 4, January 18, and February 26. The New York series will include the string quartet in F, by Maurice Ravel, one of the most promising composers of the neo-French school.

Kurt Schindler has made a change in the schedule of the MacDowell Chorus, so far as the concert of February 12 is concerned. It was announced long ago that on that occasion Wolf-Ferrari's "La Vita Nuova" would be sung; but as it is now made known that this choral work will be produced at the Metropolitan Opera House at an earlier date, Mr. Schindler has decided to give in its place Beethoven's "Meeresstille," Hugo Wolf's choral ballad, "Fire-Rider," Saint-Saëns's "La Nuit" for soprano solo and women's chorus, and the bridal chorus from Chabrier's "Gwendolyn." The Beethoven number is for four voices and orchestra. At the first concert, on December 11, Liszt's masterpiece, "The Legend of St. Elizabeth," will be heard. It will be presented by a chorus of 250 voices, a boy choir, and the Philharmonic Orchestra, with Gertrude Rennyson, Clarence Whitehill, and the well-known basso, Robert Blass, in the principal solo parts. At Budapest, in October, "St. Elizabeth" was the crowning feature of the five-day Liszt Centenary Festival, and it figures prominently on the programmes of other Liszt festivals this winter in Europe.

Arthur Smolian, well known for his musical criticism, died recently in Leipzig at the age of fifty-four.

Art

The Domestic Architecture of England during the Tudor Period. By the late Thomas Garner and Arthur Stratton. Illustrated in a series of photographs and measured drawings of country mansions, manor houses, and smaller buildings. With historical and descriptive text. New York: Charles Scribner's Sons. Part III.

If the chief architectural glory of France is in her mediæval cathedrals, the special pride of the English builders may well be in their domestic architecture, and particularly in that of the period from Henry VII to James I, inclusive. For in no other country of these periods is there such a wealth of dwellings, not only of the nobility but of gentlemen and wealthy commoners, so completely national in style and so pervaded by the spirit of domestic privacy and comfort.

On the later phases of this English architecture abundant books have been written, among which the well-known monumental work of Gotch and Brown on "The Architecture of the Renaissance in England" takes the first rank. There are the classic lithographed volumes of Nash on the mansions of England. Belcher and Macartney, Reginald Blomfield, Loftie, and Papworth, among others, have described the later or Palladian architecture of the seventeenth century. The same is not true of the architecture of the Tudor period. "Simple in character and reminiscent of an age which was rich intellectually and artistically and marked a new era in social progress, Tudor architecture has remained little more than a name, whereas buildings which could be classified under the far-reaching name of Renaissance architecture, early or late, have been studied, advertised, and eagerly sought in all directions."

These words in Mr. Stratton's preface make clear the need of this work, which has now been brought to completion, the two earlier parts having appeared somewhat more than two years ago. The fact to which Mr. Stratton calls attention becomes the more surprising when one reflects that the very qualities of picturesque charm which make the English domestic architecture of the Renaissance worth studying, are those which it inherited from the preceding Tudor period. After conceding to Inigo Jones, to Christopher Wren, James Gibbs, William Chambers, and the Adams their full meed of distinction, it still remains true that the Palladian or neo-classic Renaissance styles never afforded expression which was spontaneous or congenial to the British taste. Their formal regularity of planning and simplicity of mass were alien to British ideals. The Italian architects had been developing the use of the classic orders, entablatures, and carved ornament for nearly two hundred years before these began to appear in English architecture in anything like their correct form. The peculiar charm of the manor houses of the Elizabethan and Jacobean styles—their picturesque irregularity of plan and mass; their projecting oriels and bay-windows, their bewildering variety of roofs and gables, their clustered chimneys, their mullioned and transomed windows full of leaded glass; and within, the long "gallery" or hall, the panelled wainscoting, the oaken stairway with carved balustrade—is to be found at least in embryo in the houses of the earlier Tudor period.

The ecclesiastical Gothic architecture, of which this style was an outgrowth, had in England developed away from its French prototypes and taken on an English aspect; but it was still linked to all the other Gothic schools by a common faith, by a common ritual, and by the common discipline of the monastic orders. In the perpendicular style it had culminated in a purely English development, but with this came a slackening and almost a cessation of church building, activity being transferred under new social conditions to the field of domestic architecture. In this new application Gothic architecture underwent a complete transformation. It produced a marvellous array of houses, schools, and college residences, homes of scholars, gentlemen, clergy, and nobles, pervaded throughout by an atmosphere of dignified comfort, of contented and generously-housed domesticity, of homeliness.

The work before us presents illustrations of 252 buildings of this period. More than 150 of the illustrations show general views, either in full-page plates or in cuts in the text: the remainder are examples of details. Thirty-three counties are represented by manor-houses, priories, colleges, hospitals, guild halls, and gate houses. The selection of examples is at once judicious and comprehensive; it includes all varieties of material and treatment, and covers the whole range of chronology and style, from the strongly Gothic work of the fifteenth century to the nondescript but picturesque early Renaissance of Elizabeth's reign. That such important edifices as Haddon Hall, the Hampton Court of Wolsey's time, Montacute House, and Hengreave Hall receive less extended notice than one would at first expect, is due to the fact that so little real Tudor work has survived untouched in them. On the other hand, besides noble houses like Compton Wynyates manor in Warwickshire, with its varied construction of stone, brick, and half-timber, and its picturesque sky-line silhouetted against a superb background of great trees; Athelhampton Hall, and Lower Marney Hall, with its vast entrance tower and eight-storied turrets of brick, scores of lesser edifices are included which would otherwise be unknown to any but the most travelled English architect, and many of which offer to the student and designer admirable suggestions of refined composition and detail. This is true of the plates of details—chimneys, carved panels, ceilings, fireplaces, etc., and of the carefully drawn elevations, quite as much as of the large photographic views of buildings. These illustrations are accompanied by adequate descriptive notices, and the whole is preceded by an admirable historical introduction, which is a model of clear statement and sound scholarship. The work is amply provided with classified indexes and other convenient devices for reference. Paper and printing also are worthy of high praise.

"The Bargain Book," by Charles Edward Jerningham and Lewis Bettany (Frederick Warne & Co.), brings together a varied mass of collector's lore. Bargains, finds, the auction-rooms, thefts, are some of the topics, and there are illustrations. The compilation is wholly uncritical; the intent is less to present facts than to furnish good stories, and the book will surely interest all victims of the collecting mania. The authors do not share the prevailing scorn of the wealthy American amateur. They condemn bravely that blackest of London institutions, "the knockout"—con-

Digitized by Google

spiracy of dealers to control the great auction sales. We liked the idiosyncrasy of the collector who had a passion for sarcophagi. "A marble sarcophagus was his bath; another, in stone, his bed; and a third, in the area, was his dust-bin." A set of chronological tables of artists, *fabriques*, etc., is added for the benefit of the inexperienced.

The Egypt Exploration Fund during the coming season will take up again the excavation of the Osireion at Abydos, a great subterranean building connected with the Temple of Seti. Its excavation was begun in 1902-1903, by the Egypt Research Account, when it was found that the building, at first thought to be the tomb of King Meneptah, the supposed Pharaoh of the Exodus, is in reality a hypogæum, or subterranean temple, probably intended for the performance of the mysteries of Osiris. The excavated part consists of a broad way descending to a great hall, out of which open a large chamber and a passage or second hall leading in the direction of the Temple of Seti. The manner of junction of the subterranean Osireion with the Seti Temple now remains to be found, and discoveries of great interest are expected.

The "Heures de Milan," or that part of the "Très Belles Heures de Notre-Dame" which is in the library of Prince Trivulzio at Milan, has been reproduced in a work issued in Brussels; the editor is Georges Hulin De Loo.

Finance

STRAWS IN THE WIND.

Now that the extraordinary November recovery on Wall Street has become an established fact, the time has come again to cast up accounts as to good and bad in the situation. It is not difficult to learn the good points when stocks are going up. Our cotton crop is by far the most magnificent showing of the kind in history; it not only insures this year's trade, but puts an end to talk of exhausted fertility of our cotton belt. Our foreign credit balance bulwarks the home money position. Morocco is settled. Several Southern railways have increased their dividends. The corn crop is much better than was once expected. Our export trade has broken every October record but one. Business has been assured, by the highest political and judicial authority, that "mere bigness does not constitute monopoly."

This is a formidable list of credit items. How, then, about the debit side? It is quite as formidable. The Steel Trust is on trial for its corporate existence. Steel prices are lower than ever: so are cotton goods prices and the generality of railway earnings. Congress is about to reconvene; a Presidential election is impending. Radicalism and political unsettlement are in the air; even England is about to be torn up again with a struggle over Irish home rule.

So that there are bad things as well as good in the "situation"; and one odd thing about it is that the gloomy arguments are exactly the same as prevailed in the late days of October, when Wall Street was convinced that no improvement could come to finance and industry in the face of them. But, if that is strange, it is stranger still that the "bull arguments" also are exactly the arguments which constitutional optimists advanced, timidly and half-shamefacedly, when Stock Exchange prices were at bottom. This makes it somewhat difficult to draw the moral. Are events and conditions good or bad, according as stocks are up or down? Or were the bad points of October not so bad as Wall Street thought at the time, and the good points considerably better?

There are, however, some new incidents of the past week or so which bear on the question of financial sentiment. That a distinct turn for the better has occurred in the most representative American industry is abundantly witnessed by the week's sudden inrush of railway equipment orders in the steel trade. That this should have happened in immediate sequence to the beginning of suit against the Steel Trust, is no more remarkable than the fact that the stock market acted similarly. Both finance and trade discovered, in the space of about forty-eight hours, that the fortunes of American industry do not depend on political incidents or on the form of industrial incorporation.

Mr. King of the Jones & Laughlin Steel Company, in his interview of last Friday, reflects alike the conventional and the practical attitude in this matter. Politics, he explains, in the entirely orthodox language of finance, "is the one great element of uncertainty," and "Presidential elections create caution." But what is the conclusion? Only this: that "the people are realizing that fundamental conditions are sound" and that "I cannot help feeling confident of an expansion in general business."

This is a noteworthy example of the actual attitude of the practical man towards the notion that prosperity depends on nothing but politics. There was another curious incident last week which might seem to point in the opposite direction, but which possibly, on examination, will be found not to have done so. When Chancellor Day sat down, after his speech at the Economic Club dinner in New York on Wednesday, he received a round of thunderous applause which compelled him to rise from his seat and bow in recognition. The speaker had set forth that the promoters and managers of Trusts were all men of sterling integrity and disinterested character; that regulation of great corporations by the law was a blow at the country's welfare, and that the anti-Trust law itself was an absurd and meaningless statute, drawn up by a group of careless lawyers and fussy politicians. In all probability, after the response of his audience, he went back to Syracuse University with the tidings that New York city stood in a body behind his opinions on the question. Nobody could have blamed him for thinking so.

The true explanation, however, is just a little different, and has a wider bearing than the sentiment of a Hotel Astor banquet. The 1,400 diners were ready to applaud a good speech, and Chancellor Day's was undoubtedly a good one; but more than that, they meant to recognize an expression of unqualified and unswerving opinion on a public question where every one else seemed to be hedging. It was applause for the *credo quia impossibile*, but it was also applause for the contrast with the other eminent orators who explained that while they thoroughly believed in the anti-Trust law, it ought to be altogether changed. It would, therefore, have been perfectly safe to predict equal and probably greater enthusiasm, had there been one more speaker, to align himself with equally unswerving resolution for the anti-Trust law as it stands and as the courts are interpreting it, without revision, emasculation, or administration by Government commission.

It is somewhat to be regretted that the American Bankers' Convention did not discuss the Aldrich currency plan. It certainly did not do so, unless the listening to three speeches, the submission of a committee report, and the unanimous adoption of the plan without suggestion or criticism, are to be called discussion. The reason why the omission of debate was unfortunate is not that ex-Senator Aldrich's plan is bad in principle and ought to be rejected. It is a very remarkable plan, and in its main provisions an undoubtedly sound one. Its defects, if it has any, are in the particulars, some of which are decidedly debatable, from the standpoint primarily of banking knowledge and experience.

On these points—such, for instance, as the manner of choosing the central organization's officers, their relation to the Government, the tax on circulating notes and the limit to their issue, and the use of notes as reserve money for the individual banks—the practical hard sense of bankers from the country at large would have been of considerable value. As matters stand, the present plan merely bears the same more or less perfunctory endorsement of the Bankers' Association as a number of altogether different banking and currency reform plans have hitherto borne. The greater interest will, therefore, centre now on the form in which the proposition will eventually emerge from the committee-

rooms of Congress to which it will presently be referred.

BOOKS OF THE WEEK.

Ames, E. W. Readings in American History. Books I and II. C. E. Merrill Co.
Andrews's Practical Course in Botany. American Book Co. $1.25.
Annals of Fairyland. The Reign of King Cole; the Reign of King Herla; The Reign of King Oberon. Illus. by C. Robinson. Dutton. $1.50 each.

Gift Books of a Lasting Character

A NEW

Variorum Edition

OF THE WORKS OF

William Shakespeare

Edited by
HORACE HOWARD FURNESS

This is the most exhaustive edition of the plays of the great dramatist, containing, as its name implies, a record of the notes and textual readings of all the editions that have preceded it. Dr. Furness has also added new notes, and articles on the text, date of composition, sources of plot, etc., of the different plays.

The SIXTEEN VOLUMES which have thus far apeared are:

ROMEO AND JULIET
HAMLET (two volumes)
MACBETH
Revised Edition by
HORACE HOWARD FURNESS, Jr.
KING LEAR
OTHELLO
THE MERCHANT OF VENICE
AS YOU LIKE IT
THE TEMPEST
A MIDSUMMER NIGHT'S DREAM
THE WINTER'S TALE
MUCH ADO ABOUT NOTHING
TWELFTH NIGHT
LOVE'S LABOUR'S LOST
ANTONY AND CLEOPATRA
RICHARD THE THIRD
Edited by
HORACE HOWARD FURNESS, Jr.

"Encyclopædic and exhaustive."
—Dr. WILLIAM J. ROLFE.

"To the honor of the American branch of English literature."
—RICHARD GRANT WHITE.

"Splendid alike in conception and execution."—*Atlantic Monthly.*

"Indispensable to every student of Shakespeare."—*The Nation.*

Royal octavo. Cloth, gilt top, uncut edges, $4.00 net, per volume. Half Morocco, gilt top, $5.00 net, per vol.

The Glory That Was Greece

A Survey of Hellenic Culture and Civilization

By J. C. STOBART, M.A.

Late Lecturer in History, Trinity College, Cambridge.

"The Glory that was Greece,
And the Grandeur that was Rome,"
EDGAR ALLAN POE.

The author's aim is to present to the general reader a fully illustrated survey of that great civilization of antiquity from which all the culture of modern times not only traces its historical descent, but still to a large degree draws its inspiration. Such an object requires not a dull chronicle, but a general lively picture of Greek life and thought in every department. Social customs, religion, art, and literature —each activity of a highly cultivated race must be discussed and illustrated, to explain the peculiar greatness of the people. 200 illustrations. Cloth, gilt top, $7.50 net.

A Woman's World Tour in a Motor

By HARRIET WHITE FISHER

This is a striking account of a remarkable tour of 23,000 miles in a motor car, made by Mrs. Clark-Fisher. The first of its kind ever undertaken and completed by a woman. Her experiences in many lands, among strange peoples, and in circumstances of hardship, danger, delight, and humor, make this unusual book fascinating alike to the motor lover and the traveller. Profusely illustrated. 8vo. Cloth, $2.00 net. Postpaid $2.25.

Life of James McNeill Whistler

By ELIZABETH R. and JOSEPH PENNELL

A Popular Priced Edition of the Only Authoritative Life of Whistler

This is not only a new edition, but really a new book

The Pennells have thoroughly culled the material in their former edition and added much new matter, which for lack of space they were unable to incorporate in the elaborate two-volume edition recently published, and which is now out of print. It is fully illustrated from 96 plates reproduced after Whistler's famous paintings. Crown 8vo. Whistler binding, deckle edge, $3.50 net. Three-quarters grain levant, $7.50 net.

Eighteen Capitals of China

By WM. EDGAR GEIL, M.A., LL.D., F.R.G.S.

Dr. Geil's recent researches have brought to light much matter of great interest bearing on the conditions in China, the attitude of the people, the governors and soldiers, and his work contains much information never before collected in this way. 100 illustrations and 12 maps. Square 8vo. Over 400 pages. Cloth, gilt top, $5.00 net. Postpaid $5.20.

The Encyclopaedia of Sports and Games

Edited by the EARL OF SUFFOLK and BERKSHIRE
American Sports especially treated by American writers

The compilation of this work and the bringing it up to date has been done at a cost of $60,000. It gives all available information upon games and sports.

SPECIAL FEATURES

New pictures on every branch of sport. Over 2,000 illustrations in all, many elaborate action photographs in color, special articles by experts. A natural history of all the birds and beasts of the chase.

Every branch of sport and outdoor games thoroughly described.

Complete in 4 large octavo volumes. Richly bound in cloth, gilt top, $12.00 net.

The Sensitive Plant

By PERCY BYSSHE SHELLEY

Shelley's beautiful poem of fancy, dressed in a most attractive holiday attire, especially designed by one in entire sympathy with the great poet's work. Eighteen full-page illustrations by Chas. Robinson, in color. Exquisite colored decorations on each page. Handsomely boxed, 8vo. Cloth, gilt top, $4.50 net.

The True Daniel Webster

By SYDNEY GEORGE FISHER, Litt.D., LL.D.

The author has given us a true history of the life of this great man, telling facts without fear or favor, and has also gathered in this volume many portraits and scenes never before published, together with much entirely new information. 24 illustrations, 8vo, cloth, gilt top, $2.00 net; postpaid $2.15.

In Chateau Land

By Anne Hollingsworth Wharton

Again, as in her "Italian Days and Ways" and in "An English Honeymoon," Miss Wharton takes a merry party of friends upon a pleasure trip. This time it is through the storied châteaux of Touraine that the travellers journey. Twenty-five full-page illustrations in duo-tone. Large 12mo, decorated cloth, gilt top, $2.00 net; postpaid $2.15.

The Nation

NEW YORK, THURSDAY, DECEMBER 7, 1911.

The Week

Mr. Taft has devoted his Presidential message exclusively to the Trust question. This is unusual for the initial message of a Congressional session, but not without a precedent. President Cleveland similarly excluded from his message of December 6, 1887, all topics except tariff reduction. The President has plainly written his message *con amore*, and with a deep sense of responsibility. As long ago as February, 1898, he handed down as presiding judge of the Circuit Court the highly important decision under that law, against the Addyston Pipe and Steel combination, which had endeavored to fix arbitrary prices and parcel out the country among its constituent members—a decision subsequently upheld in all particulars by the Supreme Court. It may therefore be said that the President has a right to approach the general question now, as much in the mental attitude of a judge as of the Chief Executive.

What Mr. Taft has to say of the manner of dissolving convicted Trusts is of much immediate interest. The tobacco independents, in their petition to the Circuit Court, had declared the existing plan unjust, because it still left large companies in the field, formed from the disintegrated holdings of the Trust. But this contention, the President rejoins, "results from a misunderstanding of the Anti-Trust law and its purpose." That law is not intended "to prevent the accumulation of large capital in business enterprises in which such a combination can secure reduced cost of production, sale, and distribution," but to break up a clearly monopolistic combination. As for the still more familiar argument that "the present pro-rata and common ownership in all these companies, by former stockholders of the Trust, would insure a continuance of the same old single control of all the companies in which the Trust has by decree been disintegrated," the President points out that if any or all of the shareholders, in the new companies thus formed, were to attempt by concerted action to control the market, "its prime movers and all its participants would be at once subject to contempt proceedings and imprisonment of a summary character," for violation of a court decree "whose inhibitions are set forth with a detail and comprehensiveness unexampled in the history of equity jurisprudence." And, beyond even this, "only a short time will inevitably lead to a change in ownership of the stock, as all opportunity for continued coöperation must disappear." We believe that the President here sets forth a fact which is perfectly well known and recognized by all unbiassed business men.

For a thoroughly discredited and disliked body of men, the Congress of the United States receives a great deal of attention from the press. We say discredited and disliked on the authority of the comic writers and artists in the newspapers who invariably hail the adjournment of Congress with a loud sigh of relief, and the intimation that the country can now settle down to business. The jest about the two prodigal sons of whom one landed in jail and the other was elected to the House of Representatives, is coeval with the other comic tradition that when a man's neighbors are at a loss what to do with him they send him to Washington. In the mouth of the professional humorist this accusation no longer surprises any one, because good jokes are rare and a serviceable quip is almost impossible to kill. But this conception of the American lawmaker has in recent years passed outside of the funny column and really found an echo among people quite without the sense of humor. The wish that Congress might suspend operations for a half-dozen years and give the country a rest has been seriously uttered. And how completely tired we are of this assembly of empty talkers, selfish log-rollers, and disturbers of business is attested by the fact that when Congress reassembles no newspaper gives more than three or four pages to the utterly unimportant and dispiriting event.

From various parts of the country comes the report that "they won't take Roosevelt's 'no.'" Who "they" are it is easy to guess, and there is also no difficulty in understanding why they will not take what they have not been offered. There has not as yet been an actual "no"—nothing more than a "please don't." That this is not daunting the bluff spirits of the West is evident in the remarks of the president of the Theodore Roosevelt Club of Nebraska, Col. John O. Yeiser. He says of his fellow-Colonel that he, "although a big man, is not big enough to throw any obstacles in the way" of the movement to nominate him and elect him, "because we have the votes." This is the kind of strong meat on which the Nebraskans feed, but Col. Yeiser is weaker when he comes to speak of a possible alternative. The nomination and election of Roosevelt are to be put down as certain, but, afterwards, "if he wants Taft to have it, he can refuse to qualify and let Taft hold over." This argues an unfamiliarity with the Constitution which we should not have expected in any member of a Theodore Roosevelt Club, much less the president. Col. Yeiser evidently believes that Presidents, like dog-catchers, continue in office until their successors come to demand that they give up the keys.

Whether Gompers knew or did not know that the McNamaras were guilty may possibly never be determined. But that he had any substantial reason for believing them to be innocent, it is impossible to maintain. "As I was parting with John J.," said Gompers when the collapse came, "I remember he took my hand and said, as near as I can remember: 'Take this message to the laboring men of the country: This is a damnable put-up job and we are innocent.' I saw no reason for doubting their word." And this is the sum and substance of Gompers's plea. On the strength of the accused men's own assurance that they were innocent, and nothing else, Gompers went before the country, not simply demanding a fair trial; not simply gathering funds for the making of a competent defence; but asserting, without a shadow of ground, that the charge against the McNamaras was the result of a diabolical conspiracy, declaring that the whole case was a "frame-up," filling the minds of thousands of workingmen with falsehood and hatred. Over

Digitized by Google

against the tremendous probability of guilt which the facts presented by Burns carried with them, and over against the absolute certainty that a long series of terrible crimes had been committed in the real or supposed interest of union labor, the head of the Federation of Labor placed the simple word of the McNamaras; and on this foundation, so far as in him lay, he committed the workingmen of America to the championship of these murderers, and to the denunciation of their accusers as the most infamous of human beings.

Inasmuch as the Controller Bay charges, over which a tremendous row was made a few months ago, were of the most damaging character if true, it would have been in better taste if Mr. Brandeis and Mr. Amos Pinchot, in advising the Graham Committee to discontinue the investigation, and Mr. Graham in his remarks apropos of this, had given more prominence to the refutation of the accusations and rumors of dishonesty and less to the alleged change of policy on the part of the Administration. Mr. Brandeis states tnat he found no evidence of illegality or bad faith by any Government official in the Controller Bay matter, though he regards the action taken by the Government as having been "opposed to the best interests of the people." He, and Mr. Graham, and Mr. Pinchot as representing the National Conservation Association, are entirely satisfied with Secretary Fisher's conclusions concerning Alaskan resources; but they fail—so far as we have observed—to make any acknowledgment of the fact that the Secretary's report concerning the significance of the Controller Bay land-grants was in absolute contradiction of the views that had been so loudly urged by the President's accusers, quite apart from any question of good or bad faith. The address made by Mr. Fisher on his return from Alaska did not "constitute a clear departure from the Administration's former policy," though Chairman Graham says it did; it simply constituted a more definite formulation of that policy and a judicial survey of the past and present of the Alaskan problem. A similarly judicial statement on the part of those representing the Conservation cause would have been more creditable than the Parthian fling with which they retire from the attack.

Official tabulation of the election returns in New Jersey shows that the State which Gov. Wilson caused his party to "lose" so disastrously on November 7, was really carried by the Democrats. The total vote by counties, as now compiled, was Republican 157,084, and Democratic 160,184. The Legislature was made Republican solely by the overturn in Essex County, which, of course, elects its Assemblymen on a general list, not by districts. How plain the betrayal was by the Smith machine in Essex may be seen from the fact that even in 1909 the Democratic vote was 27,999, while in the last election it fell to 23,360. But the entire footing of all the counties shows that the Democrats had a majority of 3,100. This is only about 11,000 below the majority which the Democratic candidates for the Assembly had in 1910, though Wilson for Governor carried the State by 50,000. Looking purely, however, at the vote on the Legislative ticket this year, it appears that the Democrats were in a majority—a thing which, except for 1910 under exceptional conditions, they had not achieved for twenty years. It should seem that Gov. Wilson might bear up under that calamity!

Senator Guggenheim's voluntary withdrawal, nearly two years in advance of the end of his term in the Senate, from the contest for reëlection will be subject to varying interpretations. There are those who will insist that he still holds the State of Colorado in the hollow of his hand and could, therefore, have retained his seat in the Senate had he seen fit, and those who will have it that he has seen the handwriting on the wall as have Aldrich and Hale and Wetmore and all the rest. Mr. Guggenheim's friends insist that he has been an unselfish patriot in the Senate, and really sacrificed large personal interests in order to advance the public weal. But the hard-hearted public, remembering what came out about the methods the Senator used in entering the Senate, will not feel depressed by the news of the retirement. Whether Mr. Guggenheim has or has not divorced himself from his private interests; whether he did or did not seek and obtain tariff favors for his pet industries in the Payne-Aldrich law, the fact remains that the people of this country do not believe that a man of this type ought to be in the Senate, and that his going nearly marks the end of the régime of the multi-millionaire Senators who used to make the Senate famous as a rich man's club.

Philadelphia has entered this week upon a chapter of her history, the development of which will be watched with interest throughout the Union. The first event in that chapter is announced in the shape of Mayor Blankenburg's appointments to four of the five chief positions under him in the city government. Not within the memory of any man of ordinary age has a new Mayor of Philadelphia been greeted with the kind of comment that Mr. Blankenburg's choice of his Cabinet has evoked. "In every instance," says the Philadelphia *Ledger*, "there is in the personality and record of the man an earnest of that honesty, efficiency, and absolute independence which are the foundation stones of the structure of businesslike municipal administration which the new Mayor is to build." "The records of their lives," says the *Record*, "justify the hope that they will come up to the expectations of the new Mayor, and aid him in the great work he has undertaken." It is felt on all hands that this work is nothing less than the redemption of Philadelphia.

To achieve success in this great undertaking will require a combination of ability and hard work and good judgment, as well as uprightness of purpose, and we must not whistle until we are out of the woods. But it may be noted at once that these appointments of Mayor Blankenburg's have not only been made with the evident purpose of getting a first-rate man for each post, but that there is in them no trace of that spirit of compromise with the spoils idea which has marred, and even wrecked, so many of the most promising of reform administrations in American cities. In this great matter of rescuing city government from the grasp of machine politics, there is no room for compromise. You have got to choose between regarding an appointment as a means of getting somebody that you want for the city's service and regarding it as a means of giving somebody a city "job" because he wants it or some organization wants him to have it.

The retirement of Mr. John D. Rocke-

Digitized by Google

feller from the presidency of the Standard Oil Company, even though it coincides with the formal dissolution of the giant aggregate of companies which he created, does not arouse the interest such an act would have excited ten years ago, or even five years ago. Public interest of late has not centred in Mr. Rockefeller as the head of Standard Oil, but in his personality and his non-commercial activities. Report has it that Mr. Rockefeller has regarded himself as an ill-used man, as compared with other men of exceptionally great wealth. These others were allowed to live down their enormously profitable past, but Mr. Rockefeller never was. He might go on displaying as much fervor in distributing his millions as he displayed in gathering them together—public opinion still thought of him as the original Octopus. But of late a certain change has, after all, taken place. Apparently it is Mr. Rockefeller's golf, rather than his gifts to Chicago University, that has impressed itself on the public. At any rate, while it would be still unsafe to speak of the founder of Standard Oil as a greatly-loved personality, he does appear in a more human form than people were once inclined to allow him—like another person of fable.

The bulletins that keep coming from the Census Bureau, making comparisons between 1904 and 1909, tell a monotonous tale of growth that looks like the story of a prosperous country. The latest to hand is the report on confectionery—and why confectionery should not be regarded as a barometer of consumers' ease, just as iron is considered the barometer of business feeling and prospects, it would be difficult to say. In the five years from 1904 to 1909 there was a general advance in confectionery. Capital invested increased from $43,000,000 to $68,000,000, or 44 per cent.; value of products advanced from $87,000,000 to $134,000,000, an increase of 55 per cent. As the population grows only about 10 per cent. in five years, percentages like this—and something like them is shown in nearly every line—seem to indicate, even after all allowance is made for rising prices, a constant rise in the standard of living among the people. Very little of the $134,000,000 worth of confectionery turned out by our manufacturers was eaten by multi-millionaires.

Indiana poetry will seem in a bad way if James Whitcomb Riley sticks to his intention of writing no more. The reason he alleges is by no mean conclusive. If his right hand is incapacitated for further rhyming, there is his left, and why should he think it impossible to dictate verse? It would be a bold critic who should assume to detect from internal evidence what lines Milton wrote and what ones he dictated. Will an American give up where an Englishman succeeded? This is not the spirit which we have been accustomed to think of as inspiring Indiana's literary artists. One can understand Mr. Riley's feeling in the matter, but what are his publishers about? It is inconceivable that they should be guilty of such gross neglect of moral and financial duty as is suggested by the poet's announcement. Unless American literary enterprise has suddenly broken down in a most unexpected place, all the resources of stenography, phonographs, dictaphones, and we know not what else will be immediately put at the disposal of the Indianapolis muse. Poetry may some time fail us, but never for mere want of the means of getting it transferred to paper.

Mr. Sydney Brooks's article, "The Truth About Cuba," in the *Independent*, is based upon two visits which he has recently made to the island, and upon many conversations with politicians, planters, business men, railway officials. Cuba's economic condition and outlook, Mr. Brooks pronounces to be excellent. Great progress has been made, although, as he says, the wonderful natural resources of the island have only begun to be developed. Politically, Mr. Brooks is compelled to be more guarded. While he does not credit all the rumors that float about Havana—justly remarking that every Government, including the American during intervention, has for years been declared corrupt on the evidence of gossip—he admits that political grafting has been going on and that "more than one concession has been granted without a due regard for the public interests." He also perceives the danger arising from the apparent purpose of President Gomez to "keep all offices and power in the hands of a particular group." Nevertheless, Mr. Brooks takes a generally hopeful view both of the present situation and the prospects. His conclusion is that the Cuban Republic, considering everything, has justified the confidence reposed in it by the American Government.

Canada commends our chalice to our own lips in her explanation that she cannot interfere with the recent order of the Ontario Board of Censors prohibiting the exhibition of moving pictures showing the American flag, owing to the fact that the matter is not Federal, but provincial. Ever since the formation of the Union, we have puzzled foreign Governments by similar declarations. It has all been so simple to us that we have felt a sense of injury when a nation whose subjects have been the victims of a mob, for example, in one of the States, has failed to be completely satisfied with our elaborate setting forth of the Constitutional reasons why the Government at Washington can neither exact damages from the citizens guilty of the crime, nor allow the foreign Government to bring pressure upon the State in whose jurisdiction the affair took place. The victims, we have almost had the appearance of saying, should have thought of such a possibility before they entered our dual form of sovereignty.

The full report of the recent address of the Dean of St. Paul's, in which he stigmatized the twentieth century as the spendthrift heir of the nineteenth, bears out the rather sensational extracts from it first printed. Taken in connection with some remarks of Lord Curzon upon the Government's bill for manhood suffrage for England, it makes one wonder how able men can still treat democracy as anything but an established fact. The Dean pours scorn upon the infallibility of the majority, and the ex-Viceroy is terrified by the idea of such a leap in the dark as manhood suffrage would be. But no one contends that the majority is infallible, and all sensible men agree that the suffrage should not be extended without careful consideration. It is a long time since Robert Lowe pointed out the altered situation in his "Now we must educate our masters." The problem is no longer how far democracy shall be permitted to extend its authority, but what means shall be employed to make and keep it worthy of its supreme power. Not whether to have democracy, but how to utilize it, is the real question.

THE M'NAMARAS AND AFTER.

The astounding turn in the McNamara trial last Friday stirred questions in every mind. Why did the two brothers decide to plead guilty to infamous crimes? What were the real motives of their counsel, lawyers who were fully conscious that they were defending, not merely two indicted men, but the whole cause of organized labor? Did they feel that it was better to sacrifice two guilty individuals, rather than face the damning revelations which the actual trial might bring in regard to the complicity of labor-union officials in a systematized conspiracy to destroy property on an enormous scale and to commit murder? These questions cannot be positively answered as yet, but the very fact that they spring to the minds of all thinking men shows how deep and widespread is the conviction that the officers of the law in California had at last got their hands upon plotters who, in the name of organized labor, were deliberately perfecting and operating a system of terrorism and crime that makes the blackest deeds of Camorra or Mafia appear trivial.

As for the District Attorney at Los Angeles, he has placed the whole country in his debt by his attitude. To all suggestions of compromise he was adamant. He was urged to accept a plea of guilty from one of the brothers and to let the other off, but he stood firmly in the position that both were guilty, that the proof against both was overwhelming, and that, if they dared not face an honest jury, the only thing for them to do was to confess their crimes. Particularly admirable was his response to those who approached him in a tremor of apprehension about the indirect consequences of the prosecution, and who begged him to consider the effects on "society." Mr. Fredericks tersely said: "I am not running society." He was in office simply to make the law a terror to evil-doers. It was his sole duty to see to it that, so far as lay in his power, no criminal should go unwhipped of justice; and all the mushy pleadings about the danger of a social reaction and the peril of class antagonisms he put aside as having absolutely nothing to do with the case.

Such a clear-cut conception of the function of the sworn officers of the law it is refreshing to encounter. For there has already been expressed—and we shall doubtless hear much more of it—a great deal of foolish sentiment about the McNamara affair. People of Socialist sympathies, who call themselves social reformers because they have vague and weak suggestions to make in connection with the inevitable hardships of the human lot, who mistake benevolent emotions for reasoned or practicable plans of action, are telling us that what we have to deal with is not individual crime but a state of social "war." They point to the evidences of bitter feeling among certain groups of workingmen and argue that, as we may be headed for an Armageddon in which all our institutions will perish, the only safe course is to be very patient with criminals and show ourselves very considerate and conciliatory with men who incite to crime, and who profit by it, lest the pillars of society totter and fall.

Well, the proper answer to all such well-meaning but harmful persons is that, for the present and in their sense, we are not running society. One thing at a time. If anything can be done to make capital and labor see eye to eye, by all means let it be done at the fitting occasion. Any opportunity that offers to either employer or workman to confer together amicably in order better to understand each other and to devise means of securing their common interests, should never fail to be embraced by one or the other. But at this moment we have a sterner business in hand. A series of atrocious crimes have been committed, and we have just got into a position where there is every prospect of being able to run down and punish their infamous perpetrators. Every man who keeps his eyes open has known for years that violence and a deliberately plotted system of terrorism, going to the length of brutal murder, have been the accompaniment of strikes and the winked-at method of certain labor unions. At last we are in a way to lay bare this foul conspiracy. The two wretched men who admitted their crimes at Los Angeles on Friday are but tools in the hands of others. Who sent them on their errands of destruction and death? Who supplied them the money for their murderous work? To these questions the proceedings at Los Angeles and the investigations of grand juries in California and Indiana now bid fair to give us an answer, and are we to be stayed from pressing for it by mawkish appeals in the name of "society"?

If it be said that we are threatened with social war, we have at least the right to insist that the rules of war shall be observed. No poisoned wells! The only conceivable war which, in a free democracy, can be fought out between one interest and another, between capital and labor if you please, is one in which the weapons shall be arguments, organization, votes. Both parties to that war, if such it must be called, ought to be ready to drop everything else and unite against the criminals whose only hope is terrorism and whose only reasonings are torch and dynamite. It is alleged—the McNamaras are reported to have asserted—that they did their fiendish work in the name of a "principle." What is this principle? Are there labor leaders who dare avow it? Have any of them, directly or indirectly, been accomplices in the McNamara crimes or others like them? That is what we look to the prosecuting officers to bend every effort in order to tell us. We must lay the axe to the root of the tree. It is objected that to entertain such sentiments is to cherish the spirit of "vengeance." We ought, it is said, to weep over the misguided criminals instead of making them feel the sting of the law. In that way we would show our profound concern for "society." But pure self-defence is never vengeful; and a society that cannot protect itself against dastardly criminals has got beyond concern and is a fit subject for lamentation and burial—for it is dead and gone.

THE PRESIDENT'S APOLOGIA.

In the long and frank interview which President Taft gave to Mr. Francis E. Leupp, and which the latter was authorized to publish in last week's *Outlook*, we have something that, from every point of view, is of deep interest. In his free and informal talk, Mr. Taft touched upon many controverted matters. In regard to them he made explanations and took positions which might be, and doubtless will be, sharply challenged. But we prefer at present not to go into these things—not to follow the President in a review of the acts of his Administration thus far. What strikes us, rather, is the value of the interview as a human document. It is perhaps the most self-revealing utter-

Digitized by Google

ance that has come from Mr. Taft. In his free and familiar conversation with Mr. Leupp, the President lets us see his real, inner quality. This is of more importance, just now, than any discussion of his outer successes or failures. For the country is at this moment seriously debating the Presidential succession; and the question whether Mr. Taft is to be renominated or not, and whether, if renominated, he is to be reëlected, will turn very largely upon the popular estimate of his personality, of his fitness for the work of a party leader and a national executive. Upon all this the interview throws much light.

So far as his amiable personal characteristics are concerned, the general impression is here confirmed. We see once more, as we have often seen before, Mr. Taft's unaffected simplicity, his modesty, his hatred of anything that looks like clamor, his patience, his calmness, his philosophic poise. All these are admirable qualities, but the doubt remains whether in Mr. Taft they combine with others in a way to give the nation altogether what it desires and needs in the Presidency. He has firmness, but has he the steady push of the born executive? Does his tolerance make him tend to be slack? Has he a vivid and instinctive sense of a given political situation, with a prescient knowledge of the way to deal with it; or is he too often compelled to appear in the rôle of one earnestly laboring to repair damages which a surer insight and a more resolute attitude would have prevented from being inflicted at all? Answers to these queries can be found in Mr. Leupp's interview by any attentive reader.

The easy-going and almost happy-go-lucky way in which the President has prepared too many of his public utterances, stands confessed in what he himself, with amazing frankness, says of his ill-starred Winona speech. He "dictated that speech to a stenographer on the cars between two stations." Then he glanced at it only sufficiently to "straighten its grammar," whereupon it was given to the press, with the unhappy result which all know, including the President. He now says that if he had got the speech ready "two or three weeks before, and revised it deliberately, *as I ought to have done*," he would have made several passages read differently! This is almost pathetic. Here was easily the most important speech which the President was to make in the course of his whole tour, yet he delayed its preparation and tossed it off lightly at the last moment without once thinking, apparently, how it was going to fall upon the ear of the people and mar so sadly his political fortunes. Surely, dilatoriness and carelessness in a President were never more glaringly exhibited or more terribly punished.

But behind this laxness lay a graver fault. Mr. Taft was playing with fire but did not know it. The Payne-Aldrich tariff was visibly inflammable and explosive, politically, yet the President of the United States was the only man who appeared not to be aware of it. There can be no doubt that the outcry which followed his Winona speech was a startling surprise to him. He never knew that the gun was loaded! But ignorance of this kind is almost fatal in a political leader. If he does not know by instinct, or cannot discover by careful inquiry, what the people are saying of a capital measure, the inevitable result is that he will make such blunders as Mr. Taft has made, and, too late, wake up to what he has done and seek to retrace his steps. But this necessarily gives to his course an air of uncertainty and vacillation. Worst of all, it robs him of the appearance of being sure of himself and certain of his ground, or of having a full command of the material with which he has to deal. It is of the essence of high statesmanship in a democracy to be able to know the times and seasons, to grasp the skirts of circumstance, to perceive what effects will follow what causes, and never to seem to misunderstand hopelessly the people whom one is trying to lead. But Mr. Taft's own story of his dealings with tariff revision, with the confessed divergence between his position now and the one he blithely assumed two years ago, is enough to show how deficient he is in all that.

It may even be said that some of Mr. Taft's virtues swell, like immoderate valor, into a fault. His lofty indifference to the political consequences of doing what he thinks is right, all must praise. His calm readiness to retire to private life, if the people so will, is a fine trait of character. Yet in this very nobility and philosophic detachment there is a peril—a peril, that is, to one who aspires to be a great leader in a democracy. Such a man ought not, indeed, to be greedy for high office, but he ought to have an instant and quickening sense of the immense things which can be done in high office. The possibilities of service and of leadership ought to fire him. There should be in him a kind of infectious enthusiasm, as he contemplates the appealing opportunity, so that he can make others see the gleam as he does and be eager to follow it with him. In a word, a President of the United States has to be something more than a philosopher. It is for him to stand forth as an inspiring leader, capable of winning not merely cold approval but warm devotion, and of raising a shining standard to which an acclaiming multitude will repair. That Mr. Taft has thus far shown either the eminent sagacity or the consuming energy needed for the task of leadership thus described, not even his best friends can assert. And the conviction is slowly becoming established that he will not be able to do so in the future.

EX-SENATOR EDMUNDS AND THE ANTI-TRUST LAW.

The article on the origin, purposes, and meaning of the anti-Trust law, written by ex-Senator George F. Edmunds and published in the December *North American Review*, is highly important. Mr. Edmunds, at the age of eighty-three, is the only surviving member of the very remarkable Senate Judiciary Committee which drew up the law of 1890 in its present form, and which included, besides himself as Chairman, such other eminent and experienced lawyers as Senator Hoar of Massachusetts, Senator Evarts of New York, Senator Vest of Missouri, and Senator Pugh of Alabama. The publication of Mr. Edmunds's article happened to coincide with the testimony of Mr. Seth Low before the Interstate Commerce Committee of the Senate, giving the results of a poll of one thousand business men on the question whether the law should be retained or amended.

Briefly summed up, Mr. Low's poll of the thousand manufacturers, merchants, and bankers showed a heavy majority of opinions that the anti-Trust law should not be repealed, but with an even larger majority favoring the judgment that the Sherman Act, as now interpreted, is not clear and workable, that a Federal commission should be created to su-

Digitized by Google

pervise trade combinations, and that return to old-time competitive methods of business is not feasible. Now it is, of course, true that polls of business men, like "straw votes" in politics, have their limitations as accurate reflection of public sentiment. But we think it highly probable that the Civic Federation's canvass represents with sufficient correctness the present trend of opinion in the circles to which the inquiries were addressed. It is to precisely these shades and varieties of business opinion that Mr. Edmunds's article is directed.

Mr. Edmunds fully confirms the view as to the circumstances of 1890 and the general purposes of the legislators, which was set forth in the *Nation* a week ago. He goes with great detail into the nature of the discussion, in committee and on the floor of Congress, concluding with the reminder that the bill as eventually enacted, in the form in which the Judiciary Committee had reported it, received a unanimous approving vote in both houses of Congress. Of much importance is his description of the amendments or alterations proposed in the debate and of the reason for their rejection; including the House amendment defining illegal contracts as those only which were "entered into for the purpose of preventing competition." This introductory part of Mr. Edmunds's narrative is most convincing witness to the thoroughness and care with which the measure was prepared and the high judicial spirit in which it was debated. It leaves no reasonable ground for the favorite assertion of opponents of the law, that it was a crude and hasty bit of "happy-thought" legislation, enacted by political opportunists and constructed with no eye to the longer industrial future.

But the question of larger interest is, what opinion this eminent statesman, whose span of life has enabled him intimately to observe the construction, enactment, and application of the law, has formed on its suitability to the conditions of to-day. First, Mr. Edmunds disposes once again of the extraordinary contention of a year ago that, because the law forbade contracts in restraint of trade, therefore it prohibited plain and ordinary partnerships or corporations. He says:

> The Judiciary Committee believed that the well-known principles guiding the courts in the application and construction of statutes would lead them to give the words of the act a beneficial and remedial rather than an injurious and technical one hurtful to any honest trade. . . . It was believed that the time-honored maxim of the law, "*haeret in litterâ haeret in cortice*," and the Holy Scripture, "for the letter killeth, but the spirit giveth life," would aid the executive and judicial authorities in construing and applying the statute justly in all cases as they should arise. . . . The fear that some literal construction of the words "restraint of trade" in the act might lead to the sacrifice of some just, fair, and wholesome business arrangements may be safely dismissed, for if the principle and purpose of the Constitution and act have any foundation at all, there can be no such restraint, because such conduct is not restraining, but is promotive of and beneficial to the public interest.

Here we have the "rule of reason," asserted by the chief author of the act as a definite part of the purpose and expectation of the legislators who enacted it.

The ex-Senator believes that "no case founded on the Act has been finally decided by the courts adversely to the contracts or conduct of parties accused, in which such contract or conduct did not offend against both the letter and the spirit of the Act, as well as against the sound public policy underlying both the provisions of the Constitution and the Act of Congress touching the subject." He believes as strongly that the continued application of the law is necessary to restrain or remove the evils against which it was originally directed. Combinations to dominate trade, crush out fair and useful competition, and absorb into a few hands the business of the country, have been conducted on such a scale, since the enactment of the law, "that the result is the unnatural and unequal distribution of wealth and power, which the experience of centuries has shown to be among the great evils that affect civilization and true progress." It was exactly these great and growing evils which were dealt with by the Act of 1890.

Finally, what of "amendments to make the law clear," or a "Federal commission to supervise industry"? Mr. Edmunds has not a word to say regarding them. All of his exposition is opposed to them. The absolute consensus of the Judiciary Committee was, he says, that "it was quite impracticable to include by specific definition" such words as "trust," "restraint," or "monopolize," and that "these were truly matters for judicial consideration." And if business is disturbed, what then?

Well; if the "business interests" of the great and widespread combinations, as now carried on, are crushing out smaller enterprises and monopolizing industries that should be fairly and equally open to all, and controlling and enhancing the prices of almost everything needed in every household, and must suffer from the enforcement of equal laws necessary to the welfare of the whole people, it is the consequence of their evil doing, and must be borne, and every honest and fair enterprise will survive for the good of all.

THE CHANCE THEY GET.

What European diplomats say concerning Mr. W. Morgan Shuster is quite true. He isn't a diplomat, and he is stronger on finance than on tact. When this young American was made Treasurer-General of Persia he must have dreamed great dreams. Here was an ancient people that had cast off the bonds of political superstition and set out in the ways of progress. It had won its freedom unassisted, and when the Shah who had been sent packing about his business came back, supported by foreign intrigue, to trouble the peace of the country, he was beaten a second time. The first difficult steps of parliamentary government were being mastered. The reëstablishment of public order was under way. What, with such a people, might not an ambitious and energetic administrator hope to accomplish? Mr. Shuster had been called to set the country's finances in order, and he took it for granted that the Persians meant to be as thorough in that process as they had been in sweeping out the old monarchical system. If Mr. Shuster went at his task in a mood of high enthusiasm, determined to do the very best he could for the Government that had hired him and for his own reputation, it was exactly the spirit in which an ambitious and clean-cut young American business man goes about his work.

But the reality was that young Mr. Shuster, from the moment of his arrival in Persia, was a Parsifal in a garden inhabited by all the Kundrys of diplomacy. He had imagined that his business was to go straight ahead, and raise as much money as he could for the Persian exchequer, and put the new régime on a foundation of financial independence. He has now found that the process of going straight ahead is made impossible by an entire mass of such non-financial considerations as spheres of influence, political balances, Russian rights,

Digitized by Google

British rights, diplomatic propriety, banking conventions, Russian susceptibility, railway agreements, consular treaties, and what not—all summing themselves up in the simple fact that Russia and Great Britain had combined to destroy independent Persia and did not desire a prosperous and progressive Persia, because that would postpone the pleasant consummation. No, Mr. Shuster has no tact or diplomacy. A wiser man would have shrugged his shoulders and tried to do his best under the inescapable limitations and kept his place. Mr. Shuster has kicked up a row and will probably lose his place. But he has done a greater service for humanity in lifting the mask from the "protecting" Powers in Persia. He has forced Russia and Great Britain into the open, forced them to reveal the grimace behind the applauding smile with which Europe welcomes the East's attempts at progress, forced general recognition of the fact that what European diplomacy desires is not a rejuvenated, progressive, prosperous Orient, but an Orient going from bad to worse towards the end which is subjugation.

What chance has constitutional Turkey received at the hands of civilized Europe? There is no lack of criticisms nowadays against the Young Turk régime. Dr. E. J. Dillon single-handed has produced one furious indictment after another. The Young Turks are despots, they are parish politicians, they have allowed the Empire to go to pieces, they have displayed no capacity for the high task they have arrogated to themselves. All this might be true, and yet one can only ask what chance has constitutional Turkey had to put its house in order? The lessons of self-government and political stability are not learned in a day, even under the best of circumstances. England needed several centuries of struggle, revolution, and head-cutting before it mastered the art of combining liberty with prosperity. Young Turkey has had just three years to find itself. But what have been the conditions under which it has worked? No sooner had the Hamidian incubus been thrown off than civilized Europe began to swoop down on its prey. Austria-Hungary seized a brace of provinces; Bulgaria, with Russia's encouragement, broke away; Italy and Austria began an active game in Albania; and Italy is now carrying the banner of civilization into Tripoli. Dr. Dillon accuses the present Young Turks of criminal incompetence in leaving Tripoli defenceless. But with Bulgaria and Albania to watch and the uprising in Yemen on its hands, what could the Government at Constantinople have done to safeguard a distant and isolated province? Merely to have kept alive under such conditions is an achievement of which any new Government might be proud.

At the present moment, the best conscience of the civilized world rejoices at what is going on in China. Whether the revolution triumphs completely or the throne succeeds in saving something out of the wreck, one thing is sure, that a new era has opened in China, that a great nation has definitely pronounced for modern democracy and modern progress. But will China be allowed to work out her fate? Will the world make allowance for the fact that 400,000,000 people cannot clean house without a certain amount of travail and embarrassment? The answer is that, from different quarters, there already comes an uneasy stirring among the Powers. Civilization's appetites are flaming up, and once more we shall learn of the brown man's and the yellow man's burden—which is the white man's lust for mastery.

MONUMENTAL REALISM.

The Arnold Bennett who has just left us after a brief but triumphal progress from New York to Chicago, stands out as the author of three big books. The general reading public has probably been chiefly impressed by the bigness of quantity. But there are enough critics who have found in him bigness of the other kind. Mr. Bennett is a veteran at the writing game, but his present reputation is founded on the "Old Wives' Tale," and the two published volumes of his "Clayhanger" trilogy. In these three books he has displayed a method of minute realistic detail that is studiously undramatic in plot and studiously unemotional in development. His ambition, as evidenced in his novels and as expressed in his critical opinions of the great writers of the past, is to see life clearly and to see it—and there comes the uncertainty with regard to Mr. Bennett: whether it is his ambition also to see life whole or only to see it minutely. Both in the mere physical bulk of his latest books and in their preoccupation with the souls of people, rather than their acts, this Englishman has invited comparison with the giants of an earlier age. In the opinion of more than one enthusiastic critic, he easily takes his place with the writers of other "big" books, with Balzac, with Tolstoy, and with the early eighteenth century English realists. To decide whether he deserves the place, we must rid ourselves of the impression which mere bulk and a serious purpose are bound to produce, even in the professional critic. The question is whether Mr. Bennett's subject matter, which is of every day, goes well with the spread of his canvas, which is epic.

Novels longer than "Clayhanger" have been written and will continue to be written from time to time. But it may be said at once that the pulse of vitality must beat in them much stronger than it does in "Clayhanger," if they are to take their place with the literature that lives long. We cannot set any bounds to the length of a novel because we cannot see any bounds to its capacities. Because the author is at liberty to pour into the novel anything and everything—prose and poetry, drab reality and imagination, history, philosophy, criticism, anecdote, autobiography, argument, and preachment; because he can people it with any number of men and women endowed with any amount of emotional variety; because he can multiply incident and situation at will—for these reasons "Tom Jones," "Vanity Fair," "War and Peace," "Les Misérables," and "Père Goriot" are possible. You can write a novel of epic length if you give it epic food, and that means a crowd. Seven hundred pages of drab analysis of a single ordinary man cannot, for all its truthfulness, make "Clayhanger" alive, for the reason that the book simply has not bone and muscle enough to carry the fat. There are dull stretches in Balzac, in Tolstoy, and possibly in "The Newcomes" and "David Copperfield," but they are the flat interludes between periods of splendid emotion. You skip these dreary periods because you are in a hurry to get to the delectable feast. But in "Clayhanger" there is little to skip from or to. The plain stretches on endlessly; you walk till you get tired; then you rest and walk on again. If it is psychological dissection you are after, one mood is as good

Digitized by Google

as another. And therein consists one objection to the "Clayhanger" method. The writer has attempted to do a novel of analysis on a scale that will tolerate only the novel of magnificent creativeness.

But "Clayhanger" is true! Well, it is true in the sense that it gives us a vast succession of veracious detail. But, after all, is it the business of the artist to draw up catalogues or to create something that is single, harmonious, rounded out, whole? Artists may create in a flash or may create with patient and minute craft, but the required result is the same—a living individualized man or woman, a concrete, individualized Form. For minute craftsmanship can never be its own object, and Clayhanger's sensations in putting on a new suit or procuring the use of a study-room all to himself simply will not bear the pagefuls of analysis Mr. Bennett brings to bear upon the subject. We can readily allow pages of psychological analysis to such tremendous crises of the spirit as Dostoievsky can evoke in "Crime and Punishment"; we can allow it even to Jean Valjean, because—well, there is no other word for it—we feel that such moments are "big," are truly fraught with eternity; whereas the boy Clayhanger's emotions as he leans over the bridge-railing and pitches stones into the water are not.

To the extent that Mr. Bennett in "Clayhanger" is true to his ideal of an impassive and minute realism, his work leaves us comparatively cold. To the extent that he forgets and permits himself a dip into old-fashioned emotion, into old-fashioned dramatic situations, he has made the book real. When one has put down "Clayhanger," the two chapters that stand out clearest in the memory are the magnificent early chapter which describes the pitiful experiences of the infant factory-slaves of early industrial England as Edwin's father had lived them, and the chapter in which that same father dies. In both places, Mr. Bennett has been deeply moved, has written with passion and with tears, and has attained effects that are never attained, unless you are stirred by the deeper things. The matter is simple: while we are what we are, the putting on of a new suit of clothes will remain a less important thing than a death-bed, and no matter in what dazzling psychological phenomena we may dress the former event, it will still be the same. Of course, in saying this, we may be the slave of the old-fashioned romantic literature, which the new realism relegates to the scrap heap; but as a realist, Mr. Bennett must acknowledge the reality of prejudice.

Thus, one's objections to a Clayhanger trilogy in two thousand pages are based on what we take to be two fundamental errors in Mr. Bennett's method—the belief in psychological thread-spinning for its own sake and the belief that emotion has no place in the creative artist's soul. The great realists have never been ashamed to shed tears. Balzac did it over the death-bed of old Goriot, as Thackeray did over the death-bed of Col. Newcome, as Dickens did over the death-bed of Nell, as Tolstoy did over the death-bed of Prince Andre—a scene in which he has put enough psychological verity, one feels tempted to say, to carry an entire "Clayhanger"—as Turgenieff did over the death-bed of Bazaroff, as Hardy did over the death-bed of Jude. The "big" books have always been written about such big things as birth and love and death.

ANATOLE FRANCE—MAETERLINCK.

PARIS, November 24.

The literary event of the season has come, curiously enough, from the law courts. Twenty-seven years ago, the writer who signs Anatole France furnished the publisher Lemerre with a brief history of France. Neither the writer nor his name was then what it has since become; and the book may be safely regarded as one of the later tasks of his "hack" period. The publisher never brought out the volume; but now—under the shadow of a great name—he proposes to do so. Naturally, Anatole France of to-day refuses to be credited with work which belongs to another existence of his. His lawyer, Raymond Poincaré, had the happy thought to ask a consultation from an expert in the writing of history, Prof. Ernest Lavisse. Anatole France, Poincaré, and Lavisse are all three of the French Academy; and so the Third Civil Chamber had an unusual literary treat when the case came up. The words of Lavisse have permanent value:

> It is not permissible that an historian should be obliged to publish a history written by him twenty-seven years ago. During so long a space of time, the world has changed—the historian as well. . . .
>
> In every civilized country, the legislator has been busy drawing up bit by bit, with an incoherence which the lawyer will have to bring into order, a Labor code. Forty old statutes of labor corporations are by way of becoming international laws. This surely is something new.

Along with the social question, the religious question has come uppermost—and it is far graver than it was judged to be by Voltaire and the Voltairians, who are an anachronism nowadays. These are only examples chosen among others of transformations going on before our eyes.

Now the historian is a man who lives the life of his time and gives particular heed to the phenomena in which that life makes itself manifest. He is invincibly stirred to look with a livelier curiosity in the past at the phenomena which he observes in the present. And, to come back to our examples, the historian here and now will be preoccupied with social and religious things far more curiously than he would have been a half, or even a quarter, of a century ago.

While the world changes, the historian changes also. The man that he is now has not remained the man that he was. Experience of life has given him new lights and feelings. As he understands the present better, he understands better and sometimes otherwise the past. I have seen with my own eyes a very great transformation going on in an historian of our times. When M. Duruy became Minister of State, he had already published the two first volumes of his "History of the Romans." He had written the third, which remained in manuscript during his ministry. The day he ceased to be Minister, he took the manuscript from its drawer; the old paper had yellowed; its author began reading—he was not content with it. This beginning of the history of the Roman Empire struck him as mediocre and cold. It was because, for years together, he had seen the reality of history; he had known personally those who make history—he had been one of them. He rewrote the volume. Between the two volumes from before his ministry and those which followed it, you feel that experience of life has intervened.

Now each one of us, if only he has intelligence and feeling, grows rich by his own experience; and when he goes to his years far back, he is astonished at how poor he was then. And who, in our day, has more intelligence and sensibility than Anatole France? To ask a man like him to publish a work of his youth is to deny him the right to have lived.

The publisher offered to put on the first page of the book the date when it was written. The lawyer Academician accepted on condition that there should also be printed on the cover—"Published against the will of M. Anatole France!"

The award of the Nobel prize for literature to Maurice Maeterlinck takes us back nearly twenty years. His work, of course, is French literature; but, in accent as well as in thought and feeling, it belongs to Belgium. After all these years, it is not too much to say that Maeterlinck is a name to conjure with far more in England, and particularly in America, than in France—and, doubtless, more in Sweden.

In fact, the Nobel prize must go, by the will of the founder, to Idealist work. Now the ideal in literature was still out

Digitized by Google

of fashion in French literature when Maeterlinck began; and it must be said that his particular cult of the ideal has few faithful even now. Of his first verses the Belgian Rodenbach, who was already known to Paris, said to reassure French readers: "These poems give the impression of a moonlit landscape seen sadly from behind the pale blue window-glass of a verandah!"

The first real attention was called to the Belgian newcomer by his little plays—of blind men, and "Pelleas and Melisande"—given at the little theatres where exotic drama was the fashion. The young men of the *Mercure de France* also swept him within the limits of the newer world and freer air which they have been trying to bring to the France of routine. Long afterwards, in these last years, opera-goers have sometimes heard Maeterlinck's thought to music even newer; and Madame Réjane has found a public at her theatre for the phantasmagoria of the "Blue Bird." The books which Maeterlinck has written—his humanized bees and the latest news from death—have had a sort of Figaro audience in the press, and, doubtless, readers fit though few elsewhere. But it must not be thought that Maurice Maeterlinck has won to himself the reading world of France or any considerable portion of it.

His public is still restrained to the young who are without tradition in either form or substance of literature. And his thought and fancy are alike un-French to a high degree. The conventional, the material, the matter-of-fact, and, most of all, the critical literature of those who try to turn their backs to the past without first assuring themselves of light and leading before them will still prevail in France until men and women cease to resemble Queen Bess in their intellectual motion:

Backwards and forwards and sideways did she pass—
Making up her mind to face the cruel looking-glass!

S. D.

Correspondence

DIRECT LEGISLATION IN CALIFORNIA.

To the Editor of The Nation:

Sir: The struggles of the people of California with their Constitution during the past year have been so notable as to be worthy of record in the *Nation*.

In November, 1910, the people voted on and adopted eight amendments to the Constitution aggregating about 4,400 words. Eleven months later in October, 1911, they voted on twenty-three amendments to the same Constitution, aggregating above 15,000 words. The Constitution so amended was adopted in 1879 and was of the voluminous legislative sort, aggregating above 22,000 words. The significance of these figures may be better appreciated if we recall that the entire Constitution of the United States, without the amendments, amounts to about 4,000 words. Restated, in terms of the Federal Constitution as a unit, California has by popular vote in less than a twelvemonth, in two elections and by thirty separate enactments, amended a Constitution five and one-half times as long as the Constitution of the United States by matter nearly five times as long. I submit that this is "going some." I have a feeling that California has probably captured another record. But at least the endurance record remains to be contested for.

One of the amendments just adopted contains 3,600 words, and three of them above 2,000 words each. They range—I had almost said from grave to gay—but at any rate from initiative, referendum, and recall, judges included, to woman suffrage and the prescription of a thirty-day compulsory recess for the Legislature, after the main grist of the bills has been introduced. The whole structure of the State has been vitally altered, and it would be interesting to know to what extent it represents the real intelligent will of the electorate.

Of course, there are obvious physical, if not intellectual, limitations on the effective digestion of such a mass of legislation by four hundred thousand electors. As an aid, the secretary of state, under authority of law, sent to each registered voter a broadside thirty-eight by twenty-five inches in size and a supplemental sheet nine and one-half by twelve and one-half inches, containing the proposed amendments, together with arguments for, and in some cases against them. These sheets were densely printed on both sides in nonpareil type. Figures and specifications convey no idea of the repellent, not to say impossible, nature of this huge double-faced broadside, packed with scores of thousands of minute words as close together as the linotype could stick them. No doubt this was profitably referred to here and there, and without some such assistance the vote would have been a mere farce; but the writer has not yet discovered anybody who claims to have deciphered the entire sheet, nor is it conceivable that one voter in ten can by any possibility have read even the 15,300 words of the amendments themselves.

As bearing upon the amount of intelligent volition which such law-making involves, it is important to note that but one of the thirty-one amendments submitted in the year, involving as they did, and as it may well be believed they would, the government of the State in almost every aspect, was defeated. Everything else that was proposed went, though by varying majorities.

The official returns of the vote are now complete, and enable one to form some estimate, though not a very satisfactory one, of the extent to which a civic revolution represents deliberate public opinion. The total vote of the State for Governor at the election in November, 1910, when the first eight amendments were adopted, was 385,713. The vote at the recent election ranges from 246,487 down to 193,778, or, say, from 64 to 50 per cent. of the gubernatorial vote in the preceding November; the average vote on all the amendments being about 54½ per cent. of the standard. That the vote would have fallen far below this but for the interest taken in the suffrage amendment is undoubted. But, as it is, 55 per cent. of the people have, under circumstances of the utmost disadvantage and necessary unintelligence, passed a small volume of legislation on such other topics, besides the matter already mentioned, as weights and measures, city and county government, eminent domain, legal procedure, compensation for accidents, the civil service of the State, its public utilities commission, changes in school text-books, elections, justices of the peace, railway passes, clerks of courts, and exemptions from taxation. The woman suffrage amendment was carried by less than 1½ per cent. of the less than 64 per cent. of the electorate who voted on it. Some light is thrown upon the probable working of such wholesale popular legislation by the fact that, with the exception of one virtually non-contentious amendment (as to appeals in criminal cases), the largest vote (77 per cent. of the total cast on it) was given to the provision for the recall of all elective officers (which includes judges)—a measure which, whatever one may think of its merits, would, I suppose, quite generally be admitted to be in an experimental stage. Evidently, in California there are other things besides the guns that have no doubts, or none worth mentioning.

There is some occasion for encouragement in the fact that one relatively unimportant but vicious amendment authorizing peace officers and members of the Railroad Commission to accept passes from railways did manage to be defeated by a majority of 6,000 in a vote of 206,000, after having been denounced by the entire press and all the intelligent opinion of the State. While defeat is better than passage, its narrow escape from becoming fundamental law under even these circumstances is not calculated to exalt one's confidence unduly in direct legislation by the multitude.

Howard L. Smith.

Palo Alto, Cal., November 27.

THE SHERMAN LAW.

To the Editor of The Nation:

Sir: The editorial on "General Laws" in your issue of November 23, commends the Sherman law for "its wide scope and careful use of legal terms." I am unable to reconcile this statement with the one quoted below from the *Harvard Law Review* for November. Speaking of the two recent decisions of the Supreme Court in the Standard Oil and Tobacco cases, the writer, Mr. Robert L. Raymond, says:

These decisions, when they came, justified those who believed that the logic of facts was stronger than the logic either of theories or even of tolerably well-settled law. In the two great recent cases, the Supreme Court effectually changed existing law. Confronted by a crisis, the judges had to choose between intellectual consistency and the practical demands of a difficult situation. In preferring the latter they merely obeyed a characteristic trait of the English-speaking race.

What advantage, may I ask, is there in the "wide scope and careful use of legal terms," if the law in which they are employed was not capable of being executed, was in fact an impracticable law. The logic of events in the twenty years since the Sherman law was passed has so thoroughly demonstrated this truth that argument ought to be unnecessary. The conditions

Digitized by Google

of modern industry were such that whenever and wherever unregulated competition became a destructive force, trade combinations in some form were sure to arise. No statute could prevent them, for two of the strongest economic forces, cupidity and necessity, dictated them. Necessity knows no law, and where fear of failure in business is in conflict with fear of the law, the latter has but little effect on conduct. What is now needed, Senator Edmunds to the contrary notwithstanding, is an administrative act, which shall put into the hands of a commission, made up of able men who have had business experience, the proper regulation of all trade combinations. If this is combined with a carefully drawn Federal franchise, for all who are engaged in interstate commerce, we shall have gone far towards settling the problem of "the Trust."

ROBERT MATHEWS.

Rochester, N. Y., December 1.

"A MODEST PROPOSAL."

TO THE EDITOR OF THE NATION:

SIR: The methods of the spelling reformers remind one of Sandy, who, when his frayed buttonholes would no longer retain the buttons, removed the latter, and sewed on larger ones. Will not the results in both cases prove equally desirable?

The point of the whole matter is this: there is a discrepancy in the English language between spelling and pronunciation. Hitherto it has been taken for granted, so it seems, that the whole fault lies with the spelling. Now it is certainly possible to regard the pronunciation as at least equally to blame. Is it not then equally rational to propose that the pronunciation should be accommodated to the spelling? Is it not as well established as any law of Gresham or Ricardo that, as regards permanence, pronunciation cannot be compared with written forms? It is a truism that the spoken English of Shakespeare's time would be unintelligible to modern ears; whereas, the same printed page appeals to the eye now as then. Hence the logic of the lexicographer, who says:

> Much less ought our written language to comply with the corruptions of oral utterance, or copy that which every variation of time or place makes different from itself, and imitate those changes, which will again be changed, while imitation is employed in observing them. . . . To change all would be too much, and to change one is nothing.

If, then, there is a discrepancy, why may it not best be removed by modifying that element which admittedly is least resistant to change? Those who have heard German savants pronounce Locke, after the analogy of Dante, should be convinced that the proposal is not impracticable. German is held up to us as a *Mustersprache* in the matter of phonetic spelling; but is it spelling or pronunciation which makes *Gnade* phonetic, and gnat unphonetic? As a matter of fact, even the latest German spelling is far from being phonetic; but, if the discrepancy is slighter than in English, it is due largely to the persistent tendency of the Teuton to pronounce what he sees. If Germany has led the way in phonetic spelling, it must not be overlooked that even more emphasis has been placed upon uniform, grammatic pronunciation. This is for many reasons a primary desideratum, and, when attained, little will be heard about phonetic spelling.

ALBERT J. R. SCHUMAKER.

Upland Lawn, Pa., November 29.

BARGAINS IN SICILY.

TO THE EDITOR OF THE NATION:

SIR: The ruins of Messina are now being taken to pieces, and there is an opportunity to buy beautiful fragments of carving—columns, cornices, etc.—such as could be used with great effect in gardens and terraces. These are actually being thrown into the sea, to make room for new earthquake-proof cement structures. Also there are wood carvings. The cost of transportation is, of course, great, but many beautiful bits are being irretrievably lost for lack of any one to take an interest in them. The contractors in Messina themselves deplore this, but lack the funds to find a market. If any architects or dealers in America wish to find more definite particulars, I should be very happy to put them in connection with the people who have this work in charge.

MARY MOSS.

Villa Nielo, Taormina, Sicily, November 11.

JONATHAN EDWARDS.

TO THE EDITOR OF THE NATION:

SIR: The essay on Nietzsche (*Nation*, September 21 and 28) called attention to the growth of the principle of sympathy in the eighteenth century: "The man who effected this great revolution, partly by virtue of his own genius, and partly as spokesman of his time, was John Locke, whose 'Essay Concerning Human Understanding,' published in 1690 as the result of eighteen years of reflection, became the Bible, so to speak, of the next century." It is quite striking that this same important book was the occasion of intellectual activity in the greatest thinker in America in the eighteenth century. Allen, in his life of Jonathan Edwards, says:

> The intellectual impulse came from the philosophy of Locke, whose "Essay on Human Understanding" Edwards read when he was but fourteen years old. The impression left on his mind was a deep and, in some respects, an abiding one.

In his early years Edwards established all his theology on this principle of sympathy. The results of this important thinking will be found in the "Notes on the Mind." He begins with the study of excellence, and comes to the conclusion that excellence, the highest good, is existence. In vain he tries to think of nothingness, and, in a very beautiful phrase, he speaks of nothing as "that which the sleeping rocks do dream of." The supreme law of existence is love:

> We are to conceive of the divine excellence as infinite general love, that which reaches all, proportionately with perfect purity and sweetness; yea, it includes the true love of all creatures, for that is His spirit, or, which is the same thing, His love. And if we take notice when we are in the best frames meditating on the divine excellence, our ideal of that tranquillity and peace which seems to be overspread and cast abroad upon the whole earth and universe naturally dissolves itself into the idea of a general love and delight everywhere diffused.

Meditating on the divine excellence! How that phrase rings with Platonism! For it is quite familiar to all students of Jonathan Edwards, and the observation is impressively made by Allen, that Edwards, in his first years as a student, was a Platonist.

To this early position on the principle of sympathy, he returned as a man of fifty in his essay on the "Nature of Virtue." True virtue, he declares, is love for being in general. The foundation of our existence is the infinite sympathy of God for man, the foundation of all virtue is the illimitable love of man for God.

So in his last work and in his first, when he was removed from a stormy parish and a parochial controversy, when he lived in quietude in New Haven and Stockbridge, he made central and positive in his thought, "the divine excellence," "the love for being in general," the principle of sympathy.

WARREN S. ARCHIBALD.

Pittsfield, Mass., November 24.

DICKENS IN FRANCE.

TO THE EDITOR OF THE NATION:

SIR. French interest in Dickens is at present manifesting itself in two unexpected ways at Paris. "Pickwick" has been a daily attraction for some weeks at a moving-picture show, while an adaptation of "David Copperfield," by Max Maurey, which has just been put on at the Odéon, appears to be the most promising of the newest productions of the legitimate theatre. The former is, of course, only one item of an evening's programme, but the latter deserves consideration as a serious effort to adapt the novelist to the French stage. It is viewed in this light by the press of Paris, which, with surprising unanimity, accepts the new play as a faithful rendering of the matter and manner of Dickens, and prophesies for it a long and successful career.

There can be no doubt that the play makes a very direct and simple appeal to the audiences which have filled the Odéon Theatre since its first presentation. Most of those present must be entirely unacquainted with Dickens. Their approbation was, therefore, called forth by the humor and pathos of the play itself, and not by any recollection of the novel.

One naturally asks how adequately such a production represents in its new form and language the mind of the master who made it, and how faithfully it follows the work from which it professes to be taken. It is difficult for one not a Frenchman to know how things English look to French eyes, and still more difficult to know how far the spiritual vision of the one race corresponds to that of the other. One thing is certain, however: the new version is not caricature.

In considering how faithfully the adaptation follows the original, it must be remembered that a dramatization of the whole of the novel in one play of reasonable length is an impossibility. Maurey decided to deal only with David's neglected boyhood. In doing so, he borrowed, however, incidents from later chapters of the novel, made an excursion into "Oliver Twist" for the fourth act, and inserted some details which, though possibly Dickensesque, are certainly not from Dickens. David gives a certain unity to the whole which justifies

Digitized by Google

the title, but Micawber, in a desultory way quite in keeping with his desultory character, is actually the more prominent figure.

The acting was, of course, excellent, but was the Micawber of the Odéon the Micawber of Dickens? The Paris newspapers found him true to life. Having seen the same actor very recently in two rôles of Molière, I must confess to some doubts, but perhaps there is, after all, some resemblance between Molière and Dickens which has escaped the observation of most people heretofore.

CHARLES HARRIS.

Paris, November 24.

Literature

HOLIDAY BOOKS.

Dickens looms large in the holiday lists, owing, no doubt, to the approaching centenary. As elaborate an edition of any of his novels as we can recall for the general public is Dutton's "Pickwick" ($7.50 net), in two volumes of nearly full quarto size, in natural linen and gold, and with 123 illustrations by Cecil Aldin, of which twenty-four are colored plates. The page is handsome. Mr. Aldin's pictures, if placed side by side with the traditional illustrations for Dickens, are modern and realistic. They follow the original tradition in the detailed presentments of the powerful characters, but do not strive after the grotesque. His interiors are charmingly done. Less ambitious efforts are the "Pickwick," "Nicholas Nickleby," "David Copperfield," "Oliver Twist," and "Martin Chuzzlewit," in single volumes of plain red buckram, with the colored illustrations by "Phiz" and Cruikshank, published by the Oxford University Press in conjunction with Chapman & Hall. The type is clear, the paper light. From Doran come four thin, richly illustrated volumes of Christmas stories by Dickens and Irving. The titles of the American author are "An Old-Fashioned Christmas Eve" and "An Old-Fashioned Christmas Day," and the illustrator is Cecil Aldin. The Dickens narratives are "A Christmas Tree" and "The Holly-Tree Inn." The illustrating is done by H. M. Brock (50 cents each). "A Tale of Two Cities" appears in The Burlington Library (Little, Brown, $1.25 net), as does "Cranford." Each of them contains twenty-four colored illustrations, those of the former being done by Sep. E. Scott, and of "Cranford," by Evelyn Paul. The volumes are of suitable size and weight for holding in the hand.

There are further two editions of the perennial "Christmas Carol," one by Crowell ($1.50 net), and the other by Doran ($2 net). The Crowell edition is more soberly bound than its companion, and its illustrations are in color from special drawings by Ethel F. Everett. A. C. Michael illustrates Doran's volume. Of a different sort is the Memorial Edition of Forster's "Life of Charles Dickens" (Baker & Taylor, $7 net). The two large volumes do not amplify the text, their size being due to their hundreds of portraits, facsimiles, and other illustrations. The whole has been collected, arranged, and annotated by B. W. Matz. The portraits form an impressive gallery, embracing most of the prominent persons of the Victorian era in both England and America. Many of the pictures are published for the first time.

Further issues in the Burlington Series of classical reprints (Little, Brown, $1.25 net each) are "The Imitation of Christ," in which the pictures are reproduced from paintings by the old masters, and "The Essays of Elia," admirably illustrated by Sybil Tawse. The plan of these volumes makes them eminently suitable for holiday purposes. Each volume has twenty-four illustrations in color.

No more charming holiday book has been published this season than "The Romaunt of the Rose" (Holt, $5 net) in Chaucer's English version. The text is handsomely printed in double columns, with a sufficient Glossary at the end. But the pictures are the thing. These consist in reproductions of twenty water-color drawings by Keith Henderson and Norman Wilkinson of Four Oaks, which by their blithe decorative beauty and symbolic seduction really bring the observer into the proper mood to meet the author half-way:

> Nowe this dreme wol I ryme a-right
> To make your hertes gaye and lyght,
> For Love it prayeth and also
> Commandeth me that it be so.

The colors have come through the process of reproduction remarkably clean and clear.

George Edward Collins's colored drawings for White's "Natural History and Antiquities of Selborne" (Macmillan, $4 net) are both ornamental and useful. Only a few of them portray the birds whose habits the author observed so lovingly, but they reproduce the village and country of Selborne, and so add much to the vividness of the scenes in which the quiet drama of nature took place. The book is one of the best products of the retired country parsonages of England, and is not likely to be replaced by any of the noisy or romantic swarm of nature books now falling from the press.

Those looking for a gift-book of religious tone will find what they desire in "Happiness" (Revell, $1.50 net), the latest volume of Dr. Hugh Black's Friendship Series. It is printed with decorative borders. A dedication to Sir William Robertson Nicoll tells how the writing of the series was begun.

Two editions of Dana's "Two Years Before the Mast" attest the continued popularity of that great and real story of the sea. One is brought out by Macmillan ($2 net), with a brief Introduction by Wilfred T. Grenfell and full-page color illustrations by Charles Pears. The other (Houghton, $1.50 net) shows the excellent work of the Riverside Press, and is happily illustrated in color from drawings by E. Boyd Smith. There are, besides, maps showing the course from Boston round Cape Horn to California, and a key to the rigging of a ship which will help to make plain sailing for the unnautical reader. R. H. Dana, 3d, son of the author, contributes an Introduction and a concluding chapter, called Seventy-six Years After, which give a good deal of information about the book and about the later history of the men concerned in it. A sentence or two from the Introduction will show the spirit in which the editor writes:

> In the winter of 1879-80 I sailed round Cape Horn in a full-rigged ship from New York to California. At the latter place I visited the scenes of "Two Years Before the Mast." At the old town of San Diego I met Jack Stewart, my father's old shipmate; and as we were looking at the dreary landscape and the forlorn adobe houses, and talking of California of the thirties, he burst out into an encomium of the accuracy and fidelity to details of my father's book. He said: "I have read it again and again. It all comes back to me, everything just as it happened. The seamanship is perfect."

Lovers of "Lorna Doone" will be glad to see the Author's Edition of the romance in two small volumes with limp leather covers and a number of illustrations in photogravure from photographs of the Exmoor country (Putnam, $3). The book contains a facsimile of Blackmore's "Preface to Putnam's Exmoor Edition," dated June, 1890.

Some years ago those who have the scent for what is rare and fine were charmed by a little book called "The Roadmender," signed by the pseudonym of Michael Fairless. The story, with its religious musings and poignant symbolism, has not been forgotten, and is perhaps best read in the neat, unadorned form in which it first appeared. For those who prefer it in less modest style, it is now issued by Dutton ($2.50 net) with a number of attractive color illustrations by E. W. Waite.

Among the most attractive of McClurg's series with colored illustrations pasted on full-page dark-paper inserts is John Galt's "Annals of the Parish" ($1.75 net). Those who are not familiar with that volume of eminently dry and Scotch humor may be directed to this edition.

Though in no sense designed as a holiday book, the Oxford edition of Southey's "Life of Nelson" (Frowde) is neatly printed, and is supplied with maps, plans, and other illustrations. Lippincott's have another edition of "Nelson," in larger form, with Introduction by John Masefield and designs by Frank Brangwyn. ($2.50.)

Three editions of Tennyson's "Princess" appear in holiday dress. Two are issued by the Putnams, both in bindings of navy-blue cloth with gilt lettering and simple designs. The smaller ($1.50 net) is in some respect the more attractive, having rough unruled pages and head and tail pieces of neat device to mark the divisions of the poem. The illustrations by Frederick Simpson Coburn, which are uniformly in a dark brown tone, seem particularly happy. The larger Putnam edition ($2.50 net) has pages ruled with green and some half-dozen highly colored illustrations by Everard Hopkins, two of which at least are garish; but the numerous other illustrations in black and white, by the same artist, have a pleasant quaintness and fancy. Much more pretentious is Bobbs-Merrill's "Princess" in folio ($3 net), for which they have called in the aid of Howard Chandler Christy. He has furnished frequent marginal drawings, some of them slightly colored, in addition to several full-page illustrations, very much colored. Some of the latter are undeniably pretty and some are gorgeous, yet in every instance the princess has the tilt always ascribed by Mr. Christy to the American chin. Tennyson's "Idylls of the King" is also brought out as a handsome gift-book (Doran). Devices of golden crowns and interlinked hearts decorate the dark-blue cover of this thick quarto; the pages of cream color have wide margins with occasional fancy initials. But the chief thought seems to have been given to the elaborate illustrations. Eleanor Fortescue Brickdale,

Digitized by Google

who is responsible for them, has striven to reproduce the bright blues and reds and gold of mediæval art. The purples and violets with which she is lavish are very evidently meant to cast a proper poetic spell on the scenes; at times the drawing is a little stiff. ($5 net.) Another volume of Tennyson, published by Putnam ($1.50), gives "In Memoriam," with illustrations by Frederick Simpson Coburn.

Sheridan's "School for Scandal" is again made the object of a publisher's particular care, being issued this time in quarto, with a cover of rose and old gold. The illustrations, many of which are delicately colored inserts, in the manner of the best prints of the eighteenth century, seize upon the most picturesque situations in the play. The original costumes, so far as they are known, have been copied (Doran, $5 net).

Broadway, which has always evoked interest and admiration from foreigners and which Americans are learning to view with something of the artist's detachment, has been well caught in typical bits in a volume taking its title from the street. The text is furnished by J. B. Kerfoot, literary critic of *Life*, and while at times sentimental, bears witness to the author's feeling that below and beyond the appearance of this great highway lies a secret of civilization worth searching for. Forty-three drawings by Lester T. Hornby emanate from the same mood. Care in selection, as much as anything, has made many of them little gems. (Houghton Mifflin, $2 net; also a large paper edition, limited to 450 numbered copies, 400 for sale; bound in board with paper label and uncut edges, $10 net.) "There used to be an old Frenchman," Mr. Kerfoot tells us, "who kept an unacknowledged restaurant in a lost corner of that part of Westchester County that is now the Borough of the Bronx; and a good many years ago two young men" (who one of them was is it hard to guess?) sought him out. With some reluctance he consented to serve them. "And now, Messieurs, what will you have to drink?" They had not thought to drink at all, but, discreetly as they supposed, ordered some claret, which the old man greatly commended, and "that cost (he somehow made the statement do duty at once as an apology and a diagnosis) six dollars the quart."

"Ah! what a wine that was!"

L'addition duly followed. It read:

Two lunches at $1.00	$2 00
One bottle claret	75
Total	$2.75

Years have passed and "I think of that old Frenchman . . . and know that Broadway is not a robber of the guileless and a passer-off of spurious wares upon the unwary. It is smilingly giving to its children glimpses of their hearts' desires. Only it is wiser in its generation than the old Frenchman. It does not give its trick away. It charges them for what they think they want."

A book of unusual charm is "The Lure of the Garden," by Hildegarde Hawthorne, illustrated in full color by Maxfield Parrish, Jules Guérin, Sigismond de Ivanowski, Anna Whelan Betts, and others. The frontispiece is a lovely painting, made by Hobart Nichols, of rhododendrons on Professor Sargent's place in Brookline, Mass. The text brings together in pleasant narrative and description much of what gardens have meant to our ancestors in this country and Europe, both in actual life and in literature. Austin Dobson's "Garden Song" is the first of a series of poems on gardens and flowers which are fittingly included. In the cover design the publishers have shown admirable restraint. (Century, $4.50 net.)

Helen Archibald Clarke, who has tried to construct Browning's Italy and his England, Longfellow's country and Hawthorne's country, now turns to "The Poets' New England." It is largely an out-of-doors book describing as much as possible through passages chosen from our poets the bits of country and city which have made strong appeal. Numerous reproductions of photographs, some of them remarkable views, illuminate the text. On the cover is a highly-colored, idealized scene of river and farmstead. (Baker & Taylor, $2.50.)

Thomas B. Mosher's holiday books carry the familiar combination of a creamy paper, pretty initials, occasionally eccentric cover designs, and, above all, a fashionable slenderness. Hence Maurice Hewlett's "Earthwork Out of Tuscany," with its 250 pages, is something of a departure. In Mr. Mosher's traditional manner are Hewlett's "A Masque of Dead Florentines"; Oscar Wilde's "Sphinx"; "Poems," by Francis Thompson; "Sonnets and Songs," by the late Arthur Upson; "Chrysanthema," by William M. Hardinge; Emerson's "Threnody and Other Lyrics"; Whittier's "Snow-Bound," and Stevenson's "Will o' the Mill."

The twenty-seven plates in Edward Penfield's "Spanish Sketches" flame with agreeable color; that is the first impression. When one looks beneath the color he finds vivid characterization, with that touch in it of the Velasquez ruggedness that we have come to look for in Spanish physiognomy and Spanish landscape. (Scribner, $2.50 net.)

G. K. Chesterton's "Five Types" has been put into dainty form—square page, rough edges, and soft cover—by Henry Holt & Co. ($1.)

"The Sensitive Plant" of Shelley receives elaborate decoration at the hands of Charles Robinson in an edition brought out by Lippincott. On the cover of olive green is the plant itself, resplendent in gold. No more than a stanza is printed on a single page, and often the text appears only on alternate pages. This leaves ample room for the colored illustrations, several of which are truly beautiful, even though they are as vague as the symbolism of the poem. For sheer color-scheme the one which faces the stanza "A Lady . . . Like a sea-flower unfolded beneath the ocean," is excellent ($4.50 net).

"Stories from Hans Andersen," with illustrations by Edmund Dulac, is one of Doran's most sumptuous productions. The large type adapts it for youthful readers, but the illustrations will attract their elders as strongly. Indeed, there is in many of the pictures a representation of the more terrifying inhabitants or aspects of fairy-land that only the more mature mind can look at with equanimity. The volume is thus as useful for arousing memories as for creating first impressions. The plates are large, and elaborately drawn and colored, and many of them, as is the way with good illustrations, almost tell the story themselves. ($5 net.)

"The Ingoldsby Legends" (Macmillan, $2 net), is well made and clearly printed, and, despite its more than 500 pages, does not burden the reader who likes to carry his volume in his hand. The illustrations, by H. G. Theaker, are, for the most part, less rollicking than one expects, as if the figures in them were a little stage-struck. This is not true, however, of the plate depicting the excited call of the Baron for his boots in "Gray Dolphin," or of the one exhibiting the thumps and the bumps caused and shared by Blogg and his dog in "Mr. Peters's Story." In other respects, the pictures are as satisfying as the rest of the book.

Giambattista Basile's book of folk-tales is issued by Macmillan in John Edward Taylor's translation as "Stories from the Pentamerone." The selecting and editing are the work, well done, of E. F. Strange, and Warwick Goble has furnished illustrations of happy fairy-land quality. The colors are clearly reproduced. The book is suitable for children or adults. ($5 net.)

William N. Porter has made a collection of Japanese *hokku* poems, each a little stanza of three lines, giving as it were a fleeting glimpse into some mood of nature or some human emotion. These he has arranged under the twelve months of the year, and has printed the Japanese and his English version in parallel columns. ("A Year of Japanese Epigrams"; Frowde.) The illustrations are by Kazunori Ishibashi. We quote two of these tiny jewels:

> The nightingale's sweet trill,
> The splash of ripples on the shore,
> And all the rest is still.
>
> All things must pass, and soon
> Its nest will hide the cuckoo, and
> The clouds will hide the moon.

Coles Phillips, the illustrator, has gathered between boards a number of his pictures, some of which have appeared in periodicals, and has named the collection "A Gallery of Girls" (Century, $3 net). It makes an attractive gift book. Each of the full-page drawings is in vivid color and done in Mr. Phillips's skilful style. Charles Dana Gibson's picture book for this season, the eleventh in his series, is entitled "Other People" (Scribner, $4 net).

"Siegfried and the Twilight of the Gods" (Doubleday, Page, $5 net) is conspicuous among *éditions de luxe* because of its imaginative and beautifully executed colored pictures. There are thirty of them (all full-page), by one of England's best illustrators, Arthur Rackham. While different from the stage pictures, they are nevertheless in harmony with the spirit of Wagner's poems. The translating of the book into English has been done by Margaret Armour in a way which makes reading it a pleasure. Many lovers of Wagner regard "Siegfried" as the best of his dramatic poems.

THE MAKER OF ITALY.

The Life and Times of Cavour. By William Roscoe Thayer. With illustrations and maps. Boston: Houghton Mifflin Co. $7.50 net.

This is the most important work upon the making of modern Italy which has been published in English, and the most complete critical study of Cavour which has appeared in any language. Italian Risorgimento history, 1815-1870, divides itself into two periods which overlap each other. The first, of which Mazzini was the prophet and Garibaldi the hero, is an uninterrupted story of con-

Digitized by Google

spiracy and unsuccessful revolt against despotic government and foreign oppression; and this has hitherto proved the most attractive to the historian. The second period is that of social and economic reforms, of education in parliamentary government, and of keen participation in the struggles of European diplomacy and in the wars of the great Powers, the period in which the solid foundations of the Kingdom of Italy were laboriously laid and in which the education of Italians in the duties of citizenship in a free country was begun. This work of national regeneration was initiated by Piedmont and was extended through her, not by conquest but by consent, to all the other parts of Italy; and its success was due in an extraordinary degree to the genius and labors of one man, Count Camillo Benso di Cavour. Italy owes more to him than America owes to Washington or Germany to Bismarck, and his biography, which Mr. Thayer has now given with a master's hand, of necessity embraces the complete history of the early years of this constructive period. The student who would understand the Italian nation of to-day and appreciate the moral and economic forces through which, with steadily increasing vigor, it contributes to the world's progress—and Italy's power for good is far from being justly recognized in America—must first decipher the history of these vital years of her formation.

Twenty years ago Mr. Thayer published two volumes on the earlier period of Italian history, 1815-1849, under the title, "The Dawn of Italian Independence," and since then he has been continuously engaged in the preparation of the present work upon the years 1850-1861. There are no traces of haste in the work; on the contrary, it is not too much to say that it is characterized throughout by a maturity of judgment which among writers on the Risorgimento in English is to be found only in the works of Contessa Martinengo Cesaresco. No Italian since Chiala has studied Cavour's own writings in twenty-five and more volumes with equal appreciation and thoroughness. Mr. Thayer is completely saturated with Cavour's thought; Cavour's ideals are his ideals; Cavour's methods are his methods; Cavour's enemies are his enemies; and at times, in the light of published evidence to which the great statesman in his own day had no access, Mr. Thayer is more Cavourian than Cavour himself. He has vividly reproduced the Italian spirit of the time with its clash of systems, its rapidly maturing ideals of constitutional liberty and independence, its conflict of parties, and its readiness for heroic sacrifice. He has followed with particular minuteness the intricacies of European diplomacy in which Cavour was the master mind from 1858 to 1861; the Italian question was a European question, Italy was the storm centre of the period, and Mr. Thayer's analysis of the motives and vagaries of French and English as well as Italian diplomacy is so keen and thorough that his volumes must serve as a permanent source for studies not only of Italian foreign relations, but of the international relations of the great Powers from the interview at Plombières to the death of Cavour.

Cavour, born in 1810, was forty years of age before he attained a position of prominence, but the principles and methods which guided his later life were clearly developed in youth and early manhood. These chapters of the biography are based principally upon Cavour's letters and diary given in Domenico Berti's volumes, but they exhibit a psychological insight into Cavour's moral fibre of which Berti was altogether incapable. When but twenty-three years of age, Cavour defined in his correspondence, as Mr. Thayer states, the theory of right political method:

> That method which, he was destined to prove, may, in the hands of a master, be far more effective than revolution. It is the method of the highest Opportunism—not the Opportunism of Louis Philippe, bent only on keeping his throne, nor even of Bismarck, making unnatural alliances with political opponents for the sake of passing an unessential measure; but the Opportunism of a statesman whose acts all tend to the desired goal, although like the wise pilot he may lay his course to port or starboard, to catch a favoring wind or to ride out a gale. Opportunism has come to mean drifting, without chart or compass; Cavour meant by it that, having dedicated his life to certain principles, he would seize every means, use every tool, gain now an inch and now an ell, in endeavoring to make those principles prevail. To justify this method we must appraise the ideals by the goal arrived at; they may lead to mere Jesuitry, or, as employed by a Lincoln or a Cavour, to the crowning achievements of statesmanship.

From the summer of 1835 down to 1848, Cavour was chiefly occupied with the management of family estates at Leri, Grinzane, and Santena. His methods in agriculture and in his private commercial undertakings marked him for leadership in whatever sphere he might move. His bent, even in these earlier years was for public life, but fortune thwarted him:

> Denied the career of his preference he accepted the next best, accepted it manfully, without sullenness or whimpering, and threw himself into it with his whole energy. And his reward was not merely to amass wealth; it was to gain from practical experience knowledge of the conditions of his own land—most necessary knowledge, which must precede any wise leadership in the impending revolution; for this was to be, as he foresaw, in its essence a social revolution.

In this last sentence, Mr. Thayer has touched the key-note of Italian Risorgimento history. Conspiracy, political revolution, and the red-shirt played a vital part in the liberation of the peninsula from despotic government, and constantly urged the Italian people forward towards unity; but great constructive statesmanship, capable of forcing on the most far-reaching social and economical reforms, was indispensable, if a stable nation was to be created out of chaos.

Cavour entered the Piedmontese Parliament in 1848, and two years later, he became Minister of Agriculture and Commerce. From that time for eleven years, he was the commanding figure in Piedmont and in Italy, and during the last years of this period he triumphed in the international arena as the master diplomat of Europe. He is well characterized in this biography as "the most practical finance minister of modern times," and his herculean labors in carrying through progressive legislation, and in educating the Subalpine Parliament in the efficient use of its functions are accurately and strikingly portrayed. One of the most vital reforms was in the relations between Church and State. In the tremendous combat over ecclesiastical privilege and encroachment which ensued between the liberal forces in Parliament and reactionaries backed by the uncompromising power of the Papacy, which did not hesitate to use spiritual, as well as temporal weapons in the struggle to preserve its temporal "rights"—here, particularly, the courage, firmness, and wise moderation of Cavour determined the issue and brought victory to the cause of liberty and progress. In the account of this struggle in its various phases, Mr. Thayer, with a Lutheran fervor and pungency of phrase, allows no quarter to the Papacy. The extreme anti-Clericals—priest-eaters, as they are termed in Italy—will find much to delight them in these chapters, but other readers will perhaps wish that Mr. Thayer had taken a calmer tone. In view of the violence of his attacks against the hierarchy, he must be credited with much tact in his preface when acknowledging his indebtedness in the preparation of his work to a number of distinguished gentlemen whose names he gives, and to "certain clericals and eminent Jesuits." Had he divulged the names of these latter, he might have waked some morning to read in the official *Osservatore Romano* that their reverend heads had been smitten with the Vatican's major excommunication.

Cavour's first great move in the sphere of international politics was made in 1855, when he managed to effect a treaty of alliance for little Piedmont with France and England and sent about 18,000 Piedmontese troops to fight by the side of the French and English in the Crimea. It was an audacious step, requiring great sacrifices of men and treasure and offering but a vague hope of reward:

> But posterity looks back to it as one of

Digitized by Google

the most brilliant strokes of statecraft in the nineteenth century. . . . It opened the door of possibility, and that opening warranted the cost and the risk. Cavour knew that, however the Crimean war ended, it must break up the system which had crushed Liberalism since 1815. Then reorganization would follow, and it would be fatal for Piedmont, both on her own behalf and as the champion of the oppressed peninsula, not to take part in the new ordering. Convinced that progress depended upon the extension of liberty, and that liberty's hope dwelt in England and in France, Cavour believed that Piedmont must be identified with the Western Powers, for they could not decently ignore the precedent of such a partnership.

Mr. Thayer's account of the Congress of Paris is one of the strongest chapters of his work. As he points out, the confidence which Cavour won in Italy as champion of the Italian cause of liberty and nationality "would of itself have warranted the Crimean venture." Furthermore, the sympathy of Napoleon III, which was shortly to prove the determining factor in Italy's future, also resulted from it. Cavour's biographer evinces little admiration for the French Emperor:

> This bastard Napoleon, who so imposed on his contemporaries by his sphinxlike reserve. . . . He had a keen eye for the main chance, he could sanction the most brutal crimes (witness the massacres of the *coup d'état*), and then, with amazing inconsistency, he would risk immoderately for what seemed to the world the caprice of a visionary. The truth is that he was a doctrinaire of the less common sort, being intermittently importuned by his principles, as periodic drunkards are by their craving for drink.

At the interview of Plombières, in 1858, Cavour persuaded Napoleon III to join Piedmont when occasion should present itself to oust Austria from the Italian peninsula. Cavour's struggle during the first months of 1869, to provoke Austria into declaring war, is one of the most thrilling pages of diplomatic history, and full justice is done it in these volumes. An account of the Franco-Italian campaign against Austria in the plains of Lombardy follows, and then Mr. Thayer enters the diplomatic labyrinth which extends over the period of the annexation of Central Italy, the expedition of the Thousand, the invasion of the Papal Marches, and the conquest and annexation of Southern Italy. He is at his best, as Cavour was at his best, in the intricacies of diplomatic conflict. He never forgets that Italy is but a part of Europe and that the solution of the Italian question in its different phases depended in great part on the shifting and readjustment of European influences. He keeps in mind at every step the changing interests and sympathies of the great Powers, giving the best account that has been written of Cavour's three years of victorious struggle with the chancelleries of Europe. Garibaldi and the Party of Action were never able to understand the European situation; they believed that twenty-five millions of Italians, differing though they did in the various states in temperament, civic education, and traditions, shackled though they were by Austria in the north, by the Papacy in the centre, and by the Bourbon dynasty allied to Russia in the south, could nevertheless defy the Governments and armies of Europe. Garibaldi and Mazzini created as many difficulties for Cavour as did the foreign diplomats, but the great statesman, now encouraging and utilizing, now checking the revolutionary forces, managed always skilfully to turn their energy and enthusiasm to the benefit of the national cause. Mr. Thayer judges Mazzini and Garibaldi in their relations with Cavour severely, but in the main justly. Garibaldi always acted as if he were above the law—no Garibaldi has ever been known to pay taxes in Italy—and since his death his noble and heroic figure has generally remained above the laws of historical criticism. His name has become symbolical of Italian glory and patriotism, and no biographer of Garibaldi has succeeded in resisting the fascination of his character and in describing with impartiality his human frailties and errors. But Mr. Thayer in the present work, with frankness and sincerity, has subjected him to the common canons of criticism, and in so doing has performed a notable service to Italian historical studies.

The last paragraph of the writer's conclusion is a strong but not exaggerated statement of Cavour's claims to immortality:

> It is because Cavour, by the rare blending of reason and disciplined emotion, guided to victory the most marvellous and difficult struggle for freedom recorded in modern times, that his name will be cherished by generations yet unborn and by races yet uncivilized. Whoever fights for liberty anywhere, fights for the uplifting of mankind everywhere. . . . Among the champions of liberty, since the beginning, none had a nobler vision of her beauty, none confided in her more loyally, none served her more wisely than Camillo di Cavour.

CURRENT FICTION.

Adrian Savage. By Lucas Malet. New York: Harper & Brothers.

The high praises of Latin love and of the "diverting and captivating" people who are "born on the humane, the amiable, the artistic side of the channel" are herein set forth in contradistinction to a "revelation . . . of the blighting effects of a sea-frontier and a Puritan descent." Truly a sombre background they are made to provide—"those uncomfortable middle-class Anglo-Saxons"—that the sprightly artificiality of the dear French people may be thrown into advantageous relief.

Adrian, in his polished perfection, is the direct descendant of the *beau idéal* of nineteenth-century French romance. To be sure, an English father has been postulated for him, but he owes to his paternity little save (possibly) a strain of pugnacious loyalty—judicious ballast for an otherwise volatile nature—and (certainly) the cousinly obligations that draw him, all unwilling, oversea into Stourmouth society and the ill-fated *affaires* Smyrthwaite. His steadfast devotions are directed to the centre of all adoration, *la belle* Gabrielle, an exquisite young French widow in whom a madonna-like preoccupation with her deliciously polite little Bette unites with a modish affectation of independence to baffle the masculine mind. Adrian, finding her no less alluring than difficult of approach, is perpetually arrested in graceful attitudes of disconcertion—now "bounding on to his feet, his expression eloquent of the liveliest repudiation and reproach," now "drumming with his closed fist upon the region of his heart." He, constantly adoring, is himself adored, though turning a decently oblivious shoulder, by the ecstatic figure of Joanna Smyrthwaite. Alas, poor deluded Joanna, with her conscience, her diary, and her Mrs. Browning quotations!

Upon *la belle* Gabrielle's other hand stands a grotesque little embodiment of French excess in René Dax, the "Tadpole," both vicious and childlike in his deformity as in his genius—cartoonist, poet, madman. Between him and the lady to whom he makes adroit overtures through her little daughter, intervenes the alert, bedizened person of the French "spinster with a past," Anastasia Beauchamp, the indomitably young, whose single state is solaced by "memories" and enlivened by a thousand confidential and sympathetic offices. In her wake follow two humble transatlantic guests at this erotic symposium, the "slightly unfinished," literary Bywater, and the "black and white artist," Lenty B. Stacpoole, both a bit dazzled and walking delicately lest they ignorantly offend against some sacred old-world convention. On the opposite side of the picture, behind Joanna, as it were, loom the bulky outlines of two lusty English lovers, Joanna's buxom sister, and her rapacious Challoner, while the lurking apparition of a third Smyrthwaite — "brother Bibby" — illustrates how the prodigal fares on either side the Channel, here succored against his will by the cynically humane René Dax, there violently murdered by his prospective brother-in-law.

The carefully pointed contrast is quaintly furthered by an imitative English rendering of polite French conversation. "'Stay, madam!' he cried, joining his hands as in supplication. 'Stay, I implore you, and permit me a few min-

Digitized by Google

utes' conversation. By this you will confer the greatest benefit upon me; for so, and so only, can misunderstandings and misconstructions be avoided'"—thus Adrian preludes his declaration. Mrs. Harrison has always an uncommonly amused eye for the antics of the amorous male. A Thackeray-like note of affectionate raillery robs the praises of the polite hero of overt absurdity, although the composition as a whole is something of an anachronism, treating twentieth-century life in the manner of an earlier school, and expresses in full the peculiar talent of its author, a talent oddly compounded of a smouldering imaginative vein and an urbane humor.

Her Roman Lover. By Eugenia Brooks Frothingham. Boston: Houghton Mifflin Co.

That the author is a disciple of Henry James is evident; and the influence of Mr. Howells shows occasionally. But devotion to good masters is not so necessary as a knowledge of human nature for the making of a satisfactory novel. The plot of the story, which is well handled, is not very different in its central idea from that of "The American." The scene is modern Rome. A young Italian of good family is in love with an American girl of New England birth and ancestry. More unreal characters than these two it would be difficult to find in modern fiction. Gino Curatulo is a foolish cad; Anne Warren is absolutely flat and uninteresting. Curatulo is described as a passionately amorous person; yet when he is alone with his fiancée his wildest deed is to "kiss her fingers one by one." There is but one passion which Miss Frothingham successfully describes, and this she decidedly overdoes. She harps on the one string of jealousy until her audience is nearly deafened. Curatulo's jealous rage makes him insult Anne repeatedly, and finally causes him to jilt her. With an impetuosity for which the reader is entirely unprepared, Anne pursues him to his home. Here he replies to her importunities with repetitions of his former insults, and saying, "You shall have something to remember, maiden that I have called Puritan!" kisses her "madly, on her eyelids, her lips, her throat." After a struggle she escapes to the street, to find her father and a long-suffering American lover awaiting her. A virulent attack on the clergy of the Roman Church comes as an unexpected blemish. Alice Barber Stephens's delicate and graceful illustrations of this novel are worthy of especial commendation.

The Amazing Adventures of Letitia Carberry. By Mary Roberts Rinehart. Indianapolis: The Bobbs-Merrill Co.

Amazing is the word, to which might be added exultantly humorous. The volume contains three tales. The first and longest relates the adventures of Letitia and her two spinster friends in the wards of a hospital, where the heroine succeeds in unearthing as stupendous a mystery of crime and mischance as often encumbers a detective story. The adventure, to tell the truth, is a bit too complicated and the humor a little overlaid. The two shorter tales, which carry the three maiden ladies into regions of bewildering romance and audacity, are as provocative of laughter as anything we have read for many a day. The last adventure, particularly, is a little gem of extravagant drollery.

Cap'n Warren's Wards. By Joseph C. Lincoln. New York: D. Appleton & Co.

Of the first novel published by a character in this story it is said "there was something in its humanity, its simplicity, its clearly marked characters, which made a hit." These same features, already familiar in Mr. Lincoln's work, mark this, his latest story. And although it is with regret and misgiving that the reader sees the old Cape Cod captain depart for New York and stay there through the story, yet most of his surroundings bear definitely on the very definite business he has in hand, and he is not the mere rustic in town which has been darkly expected. Receiving word while on his native cranberry bog that he has been appointed guardian to the two children of a long-estranged brother, lately deceased in New York, he is naturally greatly mystified. To investigate the matter he goes to New York and there finds a financial tangle, and a haughty niece and nephew, surrounded by such self-seeking friends as plenteously abound in the cities of fiction. But Cap'n Elisha, aided by honest lawyers and cheered by descendants of mariners from Maine, is more than equal to the emergencies that confront him. His genial heart and his shrewd head are a combination against which guile and worldliness and greed fight in vain. A Thanksgiving dinner on Cape Cod ends the story—without ending the diners, let us humbly hope. It is the captain's deep-water flavor and salty sayings and amphibious shrewdness that give the book its quality.

The Jugglers. By Molly Elliot Seawell. New York. The Macmillan Co.

This little story of a company of French players in the time of the Franco-Prussian war tinkles gayly along from Picardy to Paris. In the Paris of the siege and the Commune black shadow falls, sparing, however, brave Diane and the man she loves, but leaving the pang that attaches to beholding heroic sacrifice made by the unheroic.

Miss Seawell has imparted a French crispness alike to comedy and tragedy in this tale. Her compression is the more masterly, inasmuch as the characters are by no means drawn from standard types. They might have been analyzed and accounted for, which would have spoiled them. From aristocrat juggler to bourgeois priest, they range—from sturdily honest music hall singer to the rascal in whom a share of conventionality is forgivable.

TWO BOOKS ON NAPOLEON.

Blücher and the Uprising of Prussia Against Napoleon, 1806-1815. (Heroes of the Nations.) By Ernest F. Henderson, Ph.D. New York: G. P. Putnam's Sons. $1.35.

With Napoleon at Waterloo and Other Unpublished Documents of the Waterloo and Peninsular Campaigns. Edited by MacKenzie MacBride. Philadelphia: J. B. Lippincott Co. $3.75 net.

It is nearly a century since Waterloo was fought and won, but the war of the military critic and the historian still goes on. Mr. Henderson seeks, as he says in his preface, "to establish Blücher in his rightful position as the peer of Wellington in all that concerns the overthrow of Napoleon. . . . Without his brave endurance at Ligny, in spite of the non-arrival of the promised reinforcements, Wellington would have been overwhelmed at Quatre Bras and there would have been no Waterloo." On the other hand, E. B. Low, in one of the papers edited by Mr. MacBride, takes as his text Emperor William's address to the recruits in Hanover informing them that their ancestors had, with the assistance of Blücher and the Prussian army, "saved the British under Wellington from destruction." Mr. Low then points out that the Hanoverian troops under Col. Hake fled in a panic from the position on the field of Waterloo to which they had been ordered by Wellington; and that for this their colonel was promptly and properly cashiered by court-martial and the men were distributed among the other cavalry regiments. He also declares that had Wellington not made a stand where he did in front of Waterloo, but retired further toward Brussels, "as he was entitled to do on discovering that the Prussians had failed to fulfil their engagement by joining him at the first attack, the whole army of Blücher must have been destroyed" and suffered "a fate compared with which the débâcle of Sedan would have faded into insignificance" (p. 201). The truth lies, as usual, between these two extreme views. Neither of the volumes can be regarded as a big gun in the controversy. Neither makes any great contribution of important new material, and neither is provided with the careful and convincing citation of authorities which is absolutely essential for any satisfactory determination of the thousand and one disputed questions

Digitized by Google

in regard to the details of Quatre Bras, Ligny, and Waterloo.

Mr. Henderson's lack of documentation is due to the plan and limitations of the series in which his hero appears, and cannot, therefore, be made a reproach to him. His pages show, however, by his carefully guarded statements, that he has conscientiously consulted the best authorities. He does not pretend to any original criticism or technical military knowledge. He has depended chiefly on certain good German biographies of Blücher. In the vexed questions of the Waterloo campaign, he has adopted generally the Prussian views of von Lettow-Vorbeck ("Napoleons Untergang," 1904). He mentions also his indebtedness to the writings of other high officers in the Austrian or Prussian armies, in comparison with which "purely literary works like those of Houssaye, for instance, who is an academician and not a military man, seem very puny." This is dismissing the brilliant Frenchman a bit too cavalierly. Mr. Henderson passes rather lightly over Blücher's defeat at Ligny, and, in trying to excuse his hero by blaming Wellington for giving Blücher hopes of assistance which were not realized, we think he has been unduly severe on the English general. But aside from such occasional partiality toward his hero at the expense of the reputation of others, he has written a good biography. It is clear, simple, and very readable. It is adequately provided with sketch maps for the military events, and is well illustrated by an unusual number of rather rare pictures. The first quarter of the book gives a spirited survey of the first seventy-one years of Blücher's life as soldier, farmer, and gambler. The remaining three-quarters deals with the three momentous years from the Prussian rising in 1813 to the triumphal entry into Paris in 1815. Such an allotment of space to the last part of his life may seem ill-proportioned. It is, nevertheless, correct. Blücher's importance in history, and his right to stand among its heroes, rests on his energetic leadership of the Prussian troops during these three years, when he had already passed his allotted three-score years and ten.

Mr. MacBride's volume is a collection of miscellanies. Their general purport is the glorious military career of certain Scots in particular and of the Scots Greys in general. There are interesting extracts from hitherto unpublished journals by two Gordon Highlanders, Nicol and Robertson. They were valiant soldiers whose simple journals cover a campaign with Abercrombie and Moore in Egypt, the terrible retreat through Spain and the disembarkation at Corunna, and the famous charge at Waterloo which broke up D'Erlon's closely packed battalions. Nicol's journal also covers his adventures as a prisoner in Spain and France from 1809 to 1811. The editor has added translations of the diaries of Jardin Ainé, Napoleon's equerry at Waterloo, and of another alleged eye-witness spoken of as one of Napoleon's aides-de-camp; the latter is hostile to Napoleon and is, we believe, of very dubious authenticity. The most picturesque chapter is the naïve account of Waterloo by the last survivor of the Scots Greys who took part in the battle, Sergeant-Major Dickson, exactly as he related it in 1855, after several glasses of toddy, in the coffee-room of a Fifeshire inn. His description is singularly fresh and vivid, as if it had all happened only the day before. It is printed by the editor with the same solemn seriousness with which it was doubtless related by Dickson in 1855. But if it were subjected to a rigid analysis, according to the canons of historical criticism and with our present knowledge of the battle, many of the gallant major's best points, we suspect, would have to be rejected as the unconscious exaggeration of a good narrator, or as the incorporation of things not actually seen by himself during the battle, but only heard of from others afterwards. Nothing grows in repetition and retrospect so much as an old soldier's story of the great fight of his youth. Mr. MacBride has also included two papers by the late E. Bruce Low; one describes in detail the heroic defence of Hougoumont by the Coldstream Guards, under Sir James MacDonell; the other, from which a quotation has been made above, defends Wellington and his troops against the excessive claims of the Prussians to the honor of the victory at "Belle Alliance," as the Germans insist on calling the battle of Waterloo.

The Rise of the Novel of Manners. By Charlotte E. Morgan. The Columbia University Press. New York: Lemcke & Buechner. $1.50 net.

It is possible to question the value of a thoroughgoing "scientific" examination of the evolution of the novel, but, the value once admitted, the humblest forms of fiction, if they have ever had real vitality, become significant. From this point of view, Miss Morgan makes a mistake in declaring that "the popular fiction, generally speaking, had no literary merit; and, as it had no other aim than immediate success, it rarely possessed more than ephemeral interest, so that on the whole it may be regarded as a *negligible* factor." If it had "ephemeral interest," if it achieved "immediate success," it is not "negligible." Miss Morgan's contempt for chap books, contemporary stories of crime, travel, and adventure, ignoble flying pamphlets, and miscellaneous journalistic riffraff makes her narrative weak in one of its most important links.

In quite another connection we are similarly offended by the use of the word "negligible" where "neglected" seems to be the proper term. After noting the numerous editions of Sidney's "Arcadia" in the seventeenth century and admitting that references to it are "legion," Miss Morgan ventures to assert that "so far as our own fiction is concerned, the influence of the 'Arcadia,' although it remained a popular book for so long, due [*sic*] in part, perhaps, to the prestige of Sidney's name, is a *negligible factor*." This kind of negation is, in the first place, in the highest degree perilous. There is no possibility of proving the truth of such an assertion. On the contrary, every investigation of the matter is almost certain to produce evidence tending to refute it. When an important work like the "Arcadia" is widely read over a long period of years, there is an overwhelming presumption that it will be widely influential. Already, in fact, there is considerable proof that it was not a negligible factor; and we have no doubt that, when the problem is carefully worked out, Professor Raleigh will be sustained in his declaration that its "influence reached down to the second birth of the novel in England"—to the "Pamela" of Richardson.

Miss Morgan rightly regards her contribution as rather a preliminary survey than an exhaustive description of the area chosen. She attempts merely a "succinct account of the more important types of prose narrative between 1600 and 1740" without any profound researches into their origins or a very consecutive tracing of their evolution—an undertaking, indeed, that requires the skill of a man who can drive a dozen protean and unruly horses abreast with a dozen as unruly foals careering about his chariot wheels. We suppose that it is due to a difficulty in driving that the "Gargantua" of Rabelais (died 1553) appears (p. 44) among the comic romances "more or less closely modelled" upon the "Don Quixote" of Cervantes (born 1547), and that—a less confusing case—the works of the Duchess of Newcastle (1624?-1674) are treated in the chapter on the novel from 1700 to 1740. In her conclusion, Miss Morgan distinguishes three main divisions in the movement of fiction through her period: the division from 1600 to 1660 is characterized by romance largely adapted from foreign sources with no English originals of literary significance; the second division from 1660 to the close of the century, by the vogue of realistic stories developed from French and Spanish *novelle*; the third division, in which Defoe and Swift appear, by a more decided bent toward sentimentalism, didacticism, domesticity, and realism, due to a complex of moral, political, social, and economic causes.

Miss Morgan's work will be useful to

Digitized by Google

students of fiction not only for what it accomplishes but also for its revelation of the necessity of further researches. With this purpose in view, she has wisely devoted about one-half the volume, or nearly 130 pages, to bibliography and index. The bibliography includes: 1, Works of General Reference; 2, Works of Special Reference; 3, Sources of Bibliographical Information; 4, A list of Prose Narratives first printed in English between 1600 and 1740; 5, A list of the most important Reprints; 6, A list of Collections; 7, An alphabetical list of the More Important English Writers between 1600 and 1740. The bibliography is by no means complete, and the bibliographical references in the text are not infrequently misleading, because they are given without any warning of their incompleteness; for example, the Dictionary of National Biography and the catalogue of the British Museum list many other editions of Greene's pamphlets than those listed on page 18. The index, furthermore, though fairly extensive, omits innumerable names and titles which occur in the text. In spite of its shortcomings, the bibliographical apparatus doubtless constitutes the most valuable half of the volume, and these easily corrigible defects should receive attention if a new edition is issued.

The Wilderness of the Upper Yukon. A Hunter's Explorations for Wild Sheep in the Sub-Arctic Mountains. By Charles M. Sheldon. Illustrated. New York: Charles Scribner's Sons. $3 net.

A Search for the Apex of America. High Mountain Climbing in Peru and Bolivia, including the Conquest of Huascarán, with some Observations on the Country and People Below. By Annie S. Peck, M. A. With numerous Illustrations. New York: Dodd, Mead & Co. $3.50 net.

So far as any book professes a scientific aim, it should pass the test of fixing the reader's attention upon the subject rather than the author. This the volume of Mr. Sheldon does, but we imagine that few readers of Miss Peck's pages will be as deeply interested in the work of her mercurial and aneroid barometers,' hypsometers, sphygmographs, psychrometers, and clinical thermometers (which had the habit of getting left behind or out of order at critical moments) as in the personal fortunes of the author, and especially her trials and tribulations in dealing with stupid, insubordinate, and faint-hearted assistants of the sterner sex.

Mr. Sheldon's purpose in the Yukon region was primarily a study of the color variations and habits of wild sheep, though he picked up by the way a great deal of information on other forms of animal life and on the configuration of the region. A portion of the volume covers a trip up the MacMillan River in company with the well-known hunter and naturalist, F. C. Selous, who has himself included an account of this trip in his "Recent Hunting Trips in British North America." The two men had different aims, however, and the duplication is not sufficient to injure Mr. Sheldon's narrative. One will certainly not blame him for repeating in substance the sketch which Mr. Selous gave of Mrs. Hosfall, the half-Indian wife of an English trapper who is bringing up a family of bright, healthy, and well-trained children amid direst privations.

Mr. Sheldon concludes from his studies on the field that the habits of all wild sheep on this continent north of the range of the Ovis Canadensis of the Rocky Mountains are substantially identical, the slight variations being due to local, topographic, and food conditions. The diverging type of horns seen in the first specimens of the Ovis Stonei brought from the Stikine River region does not constitute a distinctive characteristic. The diverging horns are found to a greater or less extent wherever sheep exist, and later specimens from the Stikine region furnished the more common narrow type. Mr. Sheldon is also skeptical as to the sufficiency of the basis on which some have sought to make a three-fold classification by differences in skull characters. The differences seem to him too slight, on present evidence, for separation into anything more than very weakly marked sub-species. The sheep do not seem to roam very widely, and a destructive enemy will exterminate those of a given range, rather than drive them to another. The disappearance of flocks near mining camps and lines of travel, where hunting has been common, does not, therefore, mean any material increase in numbers elsewhere. Mr. Sheldon points out at some length what he takes to be serious difficulties in the theory of protective or concealing coloration. In another volume, he expects to enter into a more detailed study of the scientific side of his subject.

As already intimated, Miss Peck's volume makes its appeal rather as a story of personal adventure than as a contribution to scientific knowledge. It would not be fair to her, however, not to mention her complaint that the scientist who accompanied her in her attempt to ascend Mt. Sorata, in 1903, never furnished her with a transcript of such observations as he made, up to the point where the project was abandoned. As the gentleman in question is no longer among the living (she does not once name him in her book and we shall be equally reticent here) it does not seem worth while to take up the question how far she succeeds in throwing the burden of the failure upon him. Readers are rather weary of the bickerings of explorers at present. Her main achievement was the ascent, in 1908, of the north peak of Mt. Huascarán, in the Peruvian Andes, which has a height of slightly less than 22,000 feet, as determined later by triangulation. Thus, she says, "my ten long years of effort had culminated in the conquest of a mountain at least 1,500 feet higher than Mt. McKinley, and 2,500 feet higher than any man residing in the United States had climbed." While Miss Peck stopped near the goal in an unsuccessful attempt to make an observation with the hypsometer, one of the Swiss guides slipped away and preceded her to the summit, a wholly inexcusable breach of professional etiquette and ordinary good manners. The narrative closes with an intimation that she has not yet lost her ambition to find the apex of the hemisphere and possibly surpass the highest record yet achieved.

The Greek Commonwealth: Politics and Economics in Fifth Century Athens. By Alfred E. Zimmern. New York: Henry Frowde. $2.90 net.

Mr. Zimmern has written one of those lucid, unpedantic, yet thoroughly learned books for which classical philology must thank French initiative and example, and which English readers associate gratefully with the name of Gilbert Murray. The number of French names in the index of modern writers is noticeable, although Eduard Meyer and Willamowitz-Möllendorff inevitably give the Germans a slight arithmetical preponderance. Francotte, Cavaignac, and Glotz are the leading authorities, and the logical coherence and formal charm of the book show where the author has been to school. The mood of the hour is to extend relations in every direction, and thus to come to a better understanding of exceptional nations, such as, for example, the Jews or the Greeks, by elucidating that which they have in common with other men, and Mr. Zimmern's book is an excellent essay in the gratification of this mood. It does not pretend to make any fresh contribution to the mass of facts, nor even to offer any great number of novel combinations. It is therefore free from *parti pris* and is the fruit not only of knowledge, but of good sense and discretion. Where one side of a disputed question is adopted in the text, material for forming an independent opinion is offered in the ample and entertaining notes. It does not follow that all scholars will be entirely satisfied with all the author's judgments, but it does follow that the general reader can come to little harm.

The study opens, as books on Greece are apt to open, with a description of the geography, the soil, and the climate of the country, and these chapters are so freshly written that they are among the best in the book. The second division,

Digitized by Google

entitled Politics, summarizes the present state of information and belief in regard to the origins of Greek institutions with their psychological corollaries, and ends with a translation of the "Funeral Oration." The reconstruction of fifth-century politics benefits by the author's determination to keep Plato and Aristotle out of it. As he judiciously remarks, "It is as unsafe to rely upon them for the facts of the fifth and preceding centuries as it would be to rely upon Carlyle and Ruskin for the facts and spirit of English life before the Great Reform bill and the Industrial Revolution."

The third and longest division deals with Economics, and contains a number of interesting essays on the peculiar civilization and culture of the Greek state, with its public splendor and private poverty in distinction from our modern situation in which every man consoles himself for the ugliness of his city by establishing his idea of beauty in his own house. Two of the most important chapters deal with slavery and should be useful in dispelling the vulgar error which views Athenian society as an economic aristocracy similar to that of our Southern States before the war. This error was, of course, exploded long ago by a German, but who except the scholars is the wiser?

Mr. Zimmern closes his book with an outline of the Peloponnesian war somewhat remarkable in that it follows Thucydides's statement of the *casus belli*, in defiance of Mr. Cornford and Mr. Grundy who have been insisting that Thucydides knew nothing about it.

The First American Civil War. First Period, 1775-1778. With chapters on the Continental or Revolutionary Army and on the Forces of the Crown. By Henry Belcher, Rector of S. Michael-in-Lewis, Sussex; Fellow of King's College, London; Chaplain to the Forces. Two volumes. New York: The Macmillan Co. $6.50 net.

It not infrequently happens that the traditional names used to designate great movements or periods of history are misleading, and it is rare that they are altogether satisfactory. Yet the substitutes which historians have sometimes ventured to offer for them are most often even more unsatisfactory. "Renaissance," for example, may not be exact, but at least it means something, and is therefore much better than "Close of the Middle Ages," which means nothing. And one may suspect that any attempt to replace "American Revolution" with some other name, such, for instance, as "War of Independence", or "American Civil War," will prove to be a failure also. It has often been pointed out that the American Revolution was not revolutionary at all, but the reverse,—an attempt to conserve essential principles of English liberty. This is of course good Whig doctrine; and, judging from the title of Mr. Belcher's book, one might suppose him to be a good Whig, intent merely upon affirming for the thousandth time that American patriots joined with their brethren in England to thwart the despotic designs of George III and his Tory friends. But nothing, as it happens, could be farther from the truth. Mr. Belcher, a sound Tory himself, is grateful to George III for breaking the power of the Whig aristocracy, and has no end of clever sarcasms at the expense of men like Burke and Pitt, Hancock and Adams, whom American school books treat with so much respect. And so, while Mr. Belcher doubtless uses the term "Civil War" partly in order to emphasize the opposition between Patriots and Loyalists, one suspects that his title is after all only one of the many sprightly sentences which he delights to turn for the laudable purpose of shocking complacent American prejudice.

The American Revolution is one of those events which look large only when seen from some distance. Viewed in perspective its importance is seen to lie mainly in the great things that came out of it: it has the distinction of being the initial event in a series of events which within a century were to transform European society, and, more especially, it prepared the way for the most momentous experiment in democracy which the world has seen. So regarded, perhaps we may still call it a revolution. But in itself, one must confess, it does appear rather petty. It produced comparatively few heroic figures or great actions. Certainly it is not difficult to find in it much flimsy argument and fustian rhetoric, much base intrigue, much sordid motive, and cruel reprisal. Now, in dealing with the causes and general significance of the Revolution—something above half of the present instalment is devoted to the events before 1775—it is mainly upon these superficial aspects of the movement that Mr. Belcher fixes; the rioting and the smuggling, the tar and feathers, the wanton destruction of property, the possession of slaves by men who themselves so ardently desired liberty, furnish occasion for much wit, and sarcasm, and apt Latin quotation. The American grievances, he thinks, were slight enough—the pretexts used by smugglers and intriguers to further their own ends; and the erstwhile heroes, always excepting Washington, of whom Mr. Belcher has a very high opinion, are reduced to very small scale, indeed. Like S. G. Fisher, Mr. Belcher destroys without remorse all our idols, and, being a clever and well read man, possessed of strong prejudices, held in reasonable restraint by a sense of humor and the desire to be fair, a man to whom expression comes easily, and one who writes without fear and without too much research—why, he has produced a sprightly and entertaining if somewhat rambling and unorganized account of the preliminaries of the American Revolution.

Perhaps the central enigma for the historian of the Revolution to resolve is this: how, out of conditions that always seemed hopeless, success came at last. Now, our grievance against Mr. Belcher is not that he has dandled, so irreverently, all the cheap shoddy of our heroic age before our eyes, but rather that he has done so little to show how results of world-wide importance could have come from so much provincial small-mindedness. Of course, it is well to know that there was much smuggling; and that is well known already; but it is better to know—Mr. Beer's books would have helped Mr. Belcher here—why smuggling was so persistent and general a practice that it had ceased to be regarded as an offence. Every one knows, presumably, that the stamp tax was light; but the stamp tax is of less importance for an understanding of the Revolution than the Sugar Act and the Currency Act, neither of which, we believe, is mentioned by Mr. Belcher. "When the hurly-burly was over," we are told, "the little hypocrisies of Whig opportunism entirely vanished." But this is to miss the very important point that the conservative leaders worked throughout to prevent the radicals from dominating the movement: to maintain their privileges from British oppression on the one hand, and from the encroachments of the propertyless classes in the colonies on the other, was the principal dilemma of the "Whig opportunists." If Mr. Belcher had understood this he would have understood why Washington, for example, hated the Loyalists with so bitter a hatred; the Loyalists were hated not so much because they sided with England as because they first helped to get the colonies into a mess and then left them in the lurch. Until 1776 Peter van Schaack and John Jay worked side by side on the same committees in resistance to British measures. But Van Schaack, although convinced that the British measures were unconstitutional, was not willing at the last moment to resort to force to maintain colonial rights. Jay naturally regarded him as a traitor to his own principles, and thought that by his action he made it peculiarly difficult for Jay and his party to check the radical movement. It is not probable, but it is possible, that if the Loyalist leaders had never resisted British measures, or having resisted them had stuck to it, the war might have been prevented. It is certain that in that case there would have been less riding on rails.

Perhaps we have said too much about the introductory part of Mr. Belcher's work; for, as we may reasonably ex-

Digitized by Google

pect two more volumes covering the period from 1778 to 1783, it will be when completed primarily a history of the war itself. About one-half of the part now published is devoted to a description of the two military services and to an account of the military events from the campaign on Long Island to the Battle of Saratoga. Here Mr. Belcher is more at home, and his work becomes far more consecutive and better ordered. He desires to defend the British army against the charge of being the "scum of the earth," and he is reasonably successful in doing so. The chapters in which he shows from what classes the army was recruited, how it was organized and maintained, and those in which he explains the incredible failure of Howe to take advantage of his opportunities, are the best in the book. The explanation of Howe's actions follows the usual lines, although certain traits in his character and the personal animus of Germaine's conduct are emphasized more than is usual. Whatever the explanation, we are enabled to see once more that Howe might have ended the war almost any time from 1776 to 1778. This conclusion is made too absolute perhaps by discrediting the effectiveness of the colonial resistance. Even Washington—so great as a man—is not credited with exceptional ability as a general. The main point, however, is now well established, and certainly it is a point of cardinal importance in any attempt to explain the success of the American Revolution.

CHRISTMAS BOOKS FOR CHILDREN.—II.

Among the reprints we welcome a sumptuous edition of "Tom Brown's School Days," with illustrations by Louis Rhead, who spent some time at Rugby making them, and with an introduction by W. D. Howells, who now seems to be sponsor for every famous juvenile published by the Harpers. E. Boyd Smith is quite the fashionable artist these days; he illustrates anything and everything, from the Century Company's tasteful "Æsop" to Capt. Marryat's "The Children of the New Forest" (Holt). We are glad to be assured that in no way is the text abridged, and the color plates, with their predominating delicate tones of blues and greens and reds, are full of action and excitement. Scarcely a season passes that another "Gulliver's Travels" is not placed upon the market. This time (Dutton) the cover design, all blue and gold, is very inviting, while the illustrations by A. E. Jackson are more stereotyped than fanciful, as they should be. We are assured by the title page that the text has been adapted for the young. "Robinson Crusoe" (Stokes) also comes to us in new dress, pointing to the fact that there is still sale for Defoe, notwithstanding the modern fiction flowing from the presses. This is an importation. The gentle face of George MacDonald appears on the wrapper of a new edition of his "The Princess and the Goblin" (Caldwell), a fairy tale that never stales and that defies imitation, like "Alice in Wonderland." The modern color pictures are not of the best, but with them are included the old woodcuts which add a delightful flavor to the book. Another MacDonald reprint is "Ranald Bannerman's Boyhood" (Caldwell), which has the quality of appealing to the adult reader as well as to the child.

At last Andrew Lang has come to the end of his tether regarding the horde of folk-tales with which he has been regaling the young through a perfect rainbow series of books; by Mr. Lang we also mean his wife. In the same sumptuous form as heretofore, this year we have received "The All Sorts of Stories Book" (Longmans), wherein he competes with Dumas in "The Sword of D'Artagnan" and with Poe in the "Story of the Gold Beetle." There is the history of the true Robinson Crusoe, and "Monte Cristo" is shortened in dexterous fashion.

We turn with pleasure to a rich cover design bearing the title, "The Sunset of the Heroes" (Dutton), whose author is W. M. L. Hutchinson, and whose illustrator is Herbert Cole. In the prologue we are told how the apple brought war to Troy Town, and thereafter are narrated the dire consequences. Of heroic character and of service to the lovers of opera, as well as of interest to the older child, is Mary Blackwell Sterling's "The Story of Parzival: The Templar" (Dutton), based on the poem of Wolfram von Eschenbach. The author is ambitious to have her version used in the schools, for she not only explains the meaning of the story in an introduction, but she also gives a key to the six themes of Parzival, and points out the ethical teaching and the relation to ancient tradition. There are copious notes. And while we are on the subject of the opera, it were well to notice Anna Alice Chapin's "Königskinder; or, The Royal Children" (Harper), which has been very appropriately turned into a story for children. Lovers of the opera will find the music motives, which are scattered through the text, of especial interest.

There are never too many books of fairy tales, and "A Child's Book of Stories" (Duffield), fairly well selected by Penrhyn W. Coussens, and illustrated by Jessie Willcox Smith, in charming color pictures, will be a sumptuous gift for any child of six or more. The assortment is historical in scope, including some of the best-known of Aesop, Grimm, Andersen, D'Aulnoy, and Perrault. The book is thick, and will bulk well on the Christmas tree. Anatole France, with the kindly assistance of Mrs. John Lane as translator, has written a fairy tale entitled "Honey-Bee" (Lane), and it is pleasant to find that his purpose is to counteract the want of imagination which generally confronts the youthful world.

Those who are on the lookout for plays will find several collections. Guy Pertwee is the author of "Scenes from Dickens" (Dutton), a timely volume for this season, and one wherein the original text is used as much as possible. Edwin Bateman Morris, with a thorough appreciation of the ways of college youths, has published a series of "College Comedies" (Penn), where he attempts to give some idea of the life in college during the four years. Millicent and Githa Sowerby have written some "Little Plays for Little People" (Doran), while Ruth Arkwright is the author of some charming playlets, "Brownikins and Other Fancies" (Stokes), containing music by J. W. Wilson and pictures by Robinson.

The "Go to Sleep" stories (Stokes), by Stella G. S. Perry, are full of somnolent matter, and Miss Ethel Brown's "The So-and-So Family" (Dutton) contains pictures which the artist drew when she was only nine years old. This latter book is one of the cleverest we have had this season and will please the adult reader. The realism is particularly striking. We recommend Lucy Fitch Perkins's "The Dutch Twins" (Houghton), with simple text and very soft drawings. This is an ideal book for the nursery.

There is only room to mention a few volumes of fiction. The deluge is enormous this year, and the series continue to the ninth and tenth degrees. For boys we would draw attention to Hayden Carruth's "Track's End" (Harper), the *édition de luxe* "Treasure Island," with illustrations by N. C. Wyeth (Scribner); Arthur Stanwood Pier's "The Jester of St. Timothy's" (Houghton), Walter Camp's "Old Ryerson" (Appleton), William W. Canfield's "The White Seneca" (Dutton), and countless stories by Barbour, Dudley, Stratemeyer, and Tomlinson.

For girls we would mention Etta Anthony Baker's "Fairmount Girls in School and Camp" (Little, Brown), Mrs. Wiggin's "Mother Carey's Chickens" (Houghton), Mrs. Burnett's "The Secret Garden" (Stokes), and many volumes of the series class issued by the Lothrop Co.

Notes

A translation of Wilhelm Boelsche's "Das Liebesleben in der Natur" has been announced by Doubleday, Page & Co.

Ellen Key's rejoinder to the critics of her theories of love and marriage is to be published immediately by Huebsch, under the title, "Love and Ethics."

Donald Evans's volume of poems, entitled "Discords," is promised for this week by Brown Brothers of Philadelphia.

The following new publications of Houghton Mifflin Co. are issued this week: "A Little Pilgrimage in Italy," by Oliver M. Potter, illustrated by Yoshio Markino; Vol. II, completing A. Maurice Low's study of "The American People," and "The Truth about Chickamauga," by Archibald Gracie.

Theodore Christian's "Other Sheep I Have," announced by Putnam, is written in the interest of church union.

To the series of Cambridge Manuals of Science and Literature, Putnam will shortly add "The Moral Life and Moral Worth," by W. R. Sorley.

The Henry Bradshaw Society of London has in hand the second recension of Quignon's Breviary; the Colbertine Breviary; the second volume of the Stowe Missal; a facsimile edition, by Edmund Bishop, of St. Willibrord's Calendar, in MS. 10,837 of the National Library at Paris, and an edition of the "Liber Festivalis."

"The Fair Ladies of Hampton Court" (Little, Brown), by Clare Jerrold, tells in a series of chapters the lives of the frail and beautiful women who surrounded Charles II, and whose portraits, painted by Lely at the command of the Duchess of

Digitized by Google

York, now hang in Hampton Palace. The anecdotal side of Charles's reign has been a good deal written-up of late, but the present volume goes over familiar ground with decent sprightliness. The portraits are well reproduced.

The episode of George III and Hannah Lightfoot is one of those exasperating legends that the regular historian hates to touch. That George, when Prince, did at a very early age have some flirtation or *liaison* with this girl of the people, a good many years his senior, there can be no doubt; but the nature of the relation, its consequences to George and to the lady, are so involved in loose and contradictory tradition that there seems, unless new documents come to light, to be no way of arriving at the truth. The story has been told at length by Mary L. Pendered in a substantial volume called "The Fair Quaker" (Appleton). All the evidence is here, all the conjectures, and an honest suspense of mind on the part of the author. The book is unfortunately much padded. The infamous Miss Chudleigh, Duchess of Kingston, has been much written up of late, and there was no need in the present work of retelling her life at length, simply because rumor has named her as the go-between in the Prince's escapade.

A. C. Benson's latest volume of essays, "The Leaves of the Tree" (Putnam), takes rather a new form for the author, and with advantage. Between an Introductory chapter and an Epilogue he gives eleven character sketches of men whom he has known more or less intimately. Owing to his associations as son of Archbishop Benson, dignitaries of the church figure largely in the collection, which contains four bishops —Westcott, Wilkinson, Lightfoot, Wordsworth—besides Charles Kingsley. All these sketches are interesting and cleverly turned. The chapter on Matthew Arnold is, in our opinion, decidedly the weakest of all, for Arnold was just the sort of personality that Mr. Benson is constitutionally incapable of understanding. This incapability extends so far that Mr. Benson does not even seem to be familiar with Arnold's works. Otherwise, he would not have called "Balder Dead" a play, nor, in the face of Arnold's great sonnet, would he have said that Arnold "did not care for Shakespeare." There is in this chapter, also, a touch of the common ineptness of the smaller critics who first deny the existence of standards and then proceed to criticise dogmatically by a standard of their own. Mr. Benson is at his best in the portrayal of such whimsical characters as Professor Newton and the librarian, Henry Bradshaw. Here he is delightful. The Introductory chapter and Epilogue are a little marred by the infusion of Mr. Benson's insipid piety.

The considerable amount of Andrew Lang's prose writings has tended to divert attention from him as a poet. Yet his verse, which has just been reissued in a convenient little volume ("Ballades and Rhymes"; Longmans, Green), shows a kind of vitality to which the present generation might well give heed. Some of it is graceful trifling such as Austin Dobson and Locker Lampson are expert in, and none of it has any apparent message other than to please; but in it all is a real poetic flavor coming as much as anything from the consciousness that poetic moments are rarely to be forced. Ever since Kipling hammered out his hard lessons the feeling has got abroad that poetry is real, is earnest, only if its tone is downright. Mr. Lang's appeal is all the other way, and is furnished by his complete assimilation of past traditions, especially the classics, and his dependence upon them to insinuate color and give perspective to the treatment of present themes. His verse is full of delicate echoes which are too well managed to sound academic. For him Apollo is still lyric and the world, at least of poetic feeling, still animated by the sunny sprites of pantheism. The success of his experiments may be taken as a warning that of all literary forms poetry the least can be rudely cut off from its traditional trend.

There is a fine futility in George Hamlin Fitch's "Comfort Found in Good Old Books" (Paul Elder & Co.), which discusses the "best sellers," from the Bible and Homer to Boswell and the "Rubaiyát." Intended for persons of an early defective education, the volume contains such sparkling bits of information as that "the great plays of Shakespeare are little read" in the same breath with the assurance that people "go to them for comfort and sympathy in affliction as they go to the great books of the Bible." Further on, the author counsels the recently bereaved to seek consolation in Omar Khayyám. The book should make a well-nigh universal appeal. Dante students, for example, will be interested to learn that the "Divine Comedy" was "struck off at white heat," and foreign critics may be set agog by the question, "Who taught Dumas the perfect use of French verse?" However, the artistic press-work and illustrations make it a suitable holiday present for a lukewarm friend.

To write a book about Paris—old or new—and fail to convey its sounds, its *nerves*, its smells, is to transliterate a lyric and omit all rhyme and rhythm. This is precisely what G. Duval has done in his attempt to translate the glamours of the history playground of France ("Shadows of Old Paris," Lippincott). Shadows, in a literary sense, always connote impressions, colors, *nuances*. Parisian shadows above all others, when they pretend, like these, to glimpse the rambles of François Villon, the burlesques of Scarron, the peripatetics of Marmontel, and the Palais Royal of Louis XV, must fairly flow with the style and the passion that have rendered the word *gaulois* so inimitable and so eternal. It is in all these needs—and these alone—of a book on Paris, that the volume is wanting. Data there are a-plenty. The author apparently has studied and garnered, far and wide, with the result of an occasional contribution to the anecdotal storehouse. But the command of the author over the spirit of the facts he has so sedulously assembled, is non-existent. The best that the book can find to say about Maître Villon, for instance, is: "that rare and delightful poet, that incorrigible scalliwag (sic), the boldest and merriest of these impossible rapscallions." And in an attempt at atmospheric conversation at an old inn, the author commits the crime—typical of the entire book—of having the Comte Saint-Armand say to Voiture: "Odds fish, man, have a drink." The illustrations, by J. Gavin, are clever in technic and of sufficient atmosphere.

The conception of "A Concordance to the Poems of William Wordsworth" was announced less than four years ago by the Concordance Society. With the unpaid assistance of about sixty persons, in recording the quotations, arranging them, and reading proof, Prof. Lane Cooper has been able, in two years of actual labor, to prepare a volume of 1,136 pages, with double columns, containing about 210,000 references (E. P. Dutton & Co.). Everything depended on his method, and his method was admirable. Not the least part of his service is that he has described his plan in the preface, for the benefit of future compilers. The Concordance will be useful in large libraries, for readers who wish to identify quotations from Wordsworth; and no other English poet, except Shakespeare, is so often quoted. Certainly Pope no longer holds second place. It will be a help also to students of our language, for it is the largest systematized record of English words and phrases actually employed by one man between 1787 and 1847. And it will, of course, be especially valuable to readers who have a particular interest in Wordsworth. In examining the Concordance, one is struck more forcibly than ever before with the modernness and plainness of the poet's vocabulary. The fact stands out that after 1796 or 1797 he practiced very consistently his theory of poetic diction, avoiding archaisms and special forms. A whole chapter in literary history might be written on the basis of his use of the word *liberty*, as disclosed in the Concordance. At first it has a political significance, with definite revolutionary shading, but gradually he came to use it in a merely personal sense, or, at certain periods, as an attribute of English institutions. Put whereas he uses *liberty* ninety-one times, he uses *nature* about 550 times; and to observe the meanings he attaches to this word is to learn much about his philosophy.

The compilers of the Concordance have done their work with a carefulness which is beyond praise. The list of *errata* is marvellously short, and many of them are but slight. An examination of about ninety references has failed to reveal others. The basic text is the one-volume Oxford edition of Wordsworth, a choice justified by the extreme accuracy of Thomas Hutchinson's editing. Mr. Cooper must have hesitated, however, before renouncing the advantages of a chronologically arranged text. He has wisely included not only the latest, but the earliest, versions of "An Evening Walk" and "Descriptive Sketches," and also several poems and the exquisite stanza from "Louisa," which Wordsworth rejected in his revised works. Mr. Cooper and his collaborers deserve great credit for the skill and patience with which they have performed their self-sacrificing task. Their enthusiasm must have been kept alive by the editor's animating belief that "the notion of discarding any large section of Wordsworth's writings as if they were of relatively little value, or unnecessary to the comprehension of the rest, is as pestilent an error as the same notion would be if applied to Lucretius or Plato."

Pierre Ponafidine, author of "Life in the Moslem East" (Dodd, Mead), is Russian Consul-General in Constantinople, and formerly held similar positions in Teheran, Tabriz, Bagdad, and Meshed, with a total of thirty-six years in

Digitized by Google

all of Oriental experience. Of the depth of his knowledge and the accuracy of his observation there can be no question, and he has produced a most informing and entertaining book, heartily to be recommended as an unpretentious study of various phases of life, religion, and custom in Mesopotamia, Persia, and Arabia. He knows Persia especially well, and in consular courts has learned that seamy side of life which tends to make pessimists of lawyers, Oriental or Occidental. Years of residence, too, in Meshed—a sanctuary of refuge—have not tended to lighten his views. He is especially strong on the woman question. Yet he has kept his balance fairly, in spite of the many startling and repulsive details of criminal and family law with which officially he has had to deal. A sense of humor and a liking for outdoor life have evidently helped. Thus, his chapter on Arab horses is full of vitality and the clear air of the desert blows through it. Scattered throughout, too, are quite valuable bits of recent history—concerning the brief empire of Ubeidullah the Kurd, the almost briefer tobacco monopoly which led up to the revolution, and a cholera epidemic in Bagdad. Unfortunately several chapters are included in which his knowledge is by no means first-hand. But an even greater drawback to usefulness is that the proofs have not been read by the author or by the translator, his wife, or apparently by any one who knew anything about the subject. In consequence the proper names and the scraps of Arabic and Persian are sometimes deformed out of all recognition, and can never be trusted. This carelessness has invaded the English text. It must be by misprints that an Arabic phrase (p. 18) which means "the chain of the saints of Allah" has been rendered as "the chain of the sacred gods"—something to give cold shudders to any Moslem. There are forty-one excellent and fresh illustrations.

As the feminine genius who incarnated the spirit of the French Revolution in its earliest, purest, and most idealistic stage, Madame Roland has always possessed a strong fascination for English-speaking peoples. Her personal beauty, her ardor and disinterestedness, have enhanced her prestige, and a legend has grown up around her which her sufferings and premature death by the guillotine have served to sanctify. Even the question of her attitude, involved in that of the Girondins, towards the September massacres and the execution of the King, has not been able to affect her popularity. Nor does M. A. I. Taylor, in his "Life of Madame Roland" (Brentano's), present much that will materially alter such heroine-worship, though he lifts it wholesomely from the slough of sentimentality, and presents a humanly passionate person. The labors of Claude Perroud, the latest editor of her Memoirs and letters, on which Mr. Taylor has largely based his own book, have done nothing to fasten upon either of the Rolands, man or wife, any responsibility for the excesses committed during the former's brief tenure of power. At most he was weak and incapable of strong resistance, while she, if anything, was too unpliant, too outspoken in the expression of her likes and dislikes. Had she been disposed to conciliate Danton, she might, Mr. Taylor thinks, have done much to change the course of events. It is on her private life that most light has been shed by later revelations. That she had a lover among the men who formed the inner circle about her husband and herself has always been known, or at least pretty strongly surmised. But precisely who this lover was has remained doubtful. We know now that he was François Buzot, the young, ardent, and visionary member of the Convention who was responsible for the idea or the principle of some of the severest repressive measures adopted by that body, if not for the measures themselves. To her husband, although she continued to live with him, she confessed her love for Buzot, and to the latter she wrote letters from her prison. Though maintained on a high moral and sentimental level, this passion for a man who has been described as a "younger Roland" strikes the one discordant note in Madame Roland's character. It is hard, after reading Mr. Taylor's account, to rid oneself of the impression that she needed the constant stimulation of a passionate love affair. Roland was old, and his wife, tiring of him, cast about for a new emotional prop or support. Such should seem to be the story in a nutshell. But much here must be attributed to the age, far more "advanced" in many of its ideas even than the present, for which spiritual freedom seemed as indispensable to individual self-respect as did political liberty to the dignity of mankind collectively.

George Macaulay Trevelyan has had the happy thought of selecting a volume of "English Songs of Italian Freedom" (Longmans). He has prefaced the anthology with an Introduction, and notes at the head of the poems explain the circumstances under which they were written, or to which they refer. How keenly Mr. Trevelyan feels the present situation may be judged from the closing words of the Introduction:

> The "red, white, and green" has become one of the least honorable of the "commercial assets" waving over a militarist and financial Europe. Yet sometimes, somewhere, for a little, ideals stir the masses of men, and at all times the tourist in Italy will do well to remember that but sixty years ago it was death to show these three colors, that the thought of the hidden flag was the sacrament of a great faith and of a pure and mighty brotherhood, and that English poets, the like of whom are no longer found in the world, felt their hearts throb at the sight of that foreign flag.

"The Romantic Story of the Mayflower Pilgrims, and Its Place in the Life of To-day" (L. C. Page) is a well-written and tastefully made book. The author, A. C. Addison, has read the authorities industriously, and gives in small compass an attractive résumé of the essential incidents of the Plymouth settlement. To some extent he magnifies his subject. He knows that thirteen years before the landing at Plymouth, Jamestown had been settled, but apparently he has slight appreciation of the fact that the Virginia colony, too, contributed in important ways to the transplanting of Anglo-Saxondom to America. Though his interest in the men of Plymouth is a trifle excessive, it imparts a glow to his narrative. The life of the Pilgrims, in England and Holland, as well as in the new world is elaborately and graphically described. One vivid passage, Mr. Addison states, he wrote while locked in a prison cell, in which three hundred years ago members of the band were incarcerated. So far as possible the fortunes of each individual of the company are followed out, and the dates of birth and death assigned. The many illustrations have great excellence.

Dr. Poumiès de la Siboutie, whose "Recollections of a Parisian" (Putnam) are edited by his daughters and translated from the French by Lady Theodora Davidson, was a notable medical practitioner in Paris during much of the first half of the nineteenth century. Born in the year 1789, in Périgueux, he came to the capital in the heyday of the Empire, and entered upon his professional career in 1815, at the time of the occupation of the allies. He boasts that he lived "under six sovereigns, two revolutions, and a republic," and his reminiscences of the events which he witnessed are interesting and often illuminating, as he mixed much with all classes of society. Of the great Revolution, he naturally remembered little himself, but he came from time to time in contact with many of its survivors, whose subsequent fortunes would make an interesting study in the mutability of human affairs. The wild Jacobin become a solitary eccentric living in a garret; the thief of a Queen's diamond necklace sunk to the position of ticket-taker in the Odéon Theatre; the bloody Barère, talking harshly of the Convention at a bourgeois dinner table—these are some of the transformations. Dr. Poumiès, being a good bourgeois, favored the Revolution of 1830, and deplored that of 1848, which overthrew his favorite monarch, Louis Philippe. Among the leaders of the second movement, he does not hesitate to affirm the dishonesty of such men as Louis Blanc and Ledru-Rollin, and the incapacity of Lamartine. Of the latter as a man of letters, he has little to say, save to deprecate the bad effects of his "Histoire des Girondins." Indeed, he evinces little sympathy with the major literary movement of the period. His favorite poets were the forgotten Lemercier, Jasmin, and the Abbé Delille. Vigny repelled him because of his excessive conceit. Sometimes these reminiscences reveal the author as a prosperous family practitioner, priding himself on his taste in literature and the soundness of his judgment in all matters. Many of Dr. Poumiès's anecdotes of the more exalted personages mentioned in his pages have the note of respectful distance, and some of them are credited as coming from friends of the great men concerned. But a sort of sublimated back-stairs gossip, as much of it is, the book is not without value as the record of a long life lived in exciting times, by a man of good heart, observant in his habits, and shrewd, within certain limitations of class prejudice, in his judgments of men and events. Dr. Poumiès died in Paris in 1863.

The "New Schaff-Herzog Encyclopedia of Religious Knowledge" (Funk & Wagnalls) has reached Volume XI, which includes titles from Son of Man to Tremellius. The twelfth and final volume is promised early in 1912. The editors are Samuel Macauley Jackson and George W. Gilmore. They are maintaining the character of the work with even excellence. The articles record progress and convey information, but do not advance new theories nor extend knowledge. The spirit is tolerant and catholic, with a leaning to conservatism, especially in doctrinal theology and Biblical criticism. Noteworthy articles in the present volume

Digitized by Google

are Sun and Superstition, by George W. Gilmore; Theological Education, by Ferdinand Cohrs; Theological Seminaries, by various authors; Swedenborg, by Frank Sewall, and Ecclesiastical Symbolism, by Stuart Chambers. In the article on Theological Libraries there is much valuable information as to where notable collections and important and rare volumes on religious subjects may be found in the various theological seminaries and universities of America.

"The Superstition Called Socialism" (Lippincott) declares its author, G. W. De Tunzelmann, "appeals to the rational thinking man or woman, and is not addressed to the emotionally unstable individuals who are swayed from side to side by mere rhetoric." Yet the 372 pages that precede these words raise a doubt as to Lloyd George's title, bestowed upon him by the writer, as "the first gentleman in Billingsgate." "It would be an insult to the memory of men of the stamp of Ernest Renan and John Stuart Mill," Mr. De Tunzelmann exclaims "to refer, on the same page, to the ignorant and vulgar outpourings of men whose intellectual capacities are measured by the fact that the inconsequences of Karl Marx, and even more obvious sophistries, present themselves to them as rational argument." The present chancellor of the exchequer could scarcely hope to do better than this. Mr. De Tunzelmann rides, armed cap-à-pie, through many domains. His first feat is the demolition of Karl Marx; his last a castigation of the Asquith ministry. The materialistic determinists get it hot and heavy, and Prof. Haeckel is assailed with peculiar virulence. Our author strikes so hard and fast that it is not surprising that many of his blows fail to draw any blood. Yet his book is not wholly a bundle of futilities. Ever and anon one encounters remarkably shrewd characterizations.

The sixth annual congress of the Società Nazionale per la Storia del Risorgimento Italiano, held in Rome from the 23rd to the 25th of October, ratified the transfer of the permanent seat of the society from Milan to Rome, a step which places the society in close touch with the National Commission for Risorgimento History. The new president is General Pedotti, formerly minister of war. The most notable feature of the congress was the presentation of the first volumes of the Biblioteca Popolare di Storia del Risorgimento Italiano, a collection of biographies which the society voted to found four years ago. The first volume is a life of Vittorio Emanuele by Attilio Simione, the second a life of Cavour, by G. Bragagnolo and E. Bettazzi. They are published by L. F. Cogliati (Milan) in 16mo, are well printed, and well illustrated, contain about two hundred pages each, and are sold for one franc the volume. These first biographies have been writtten with substantial correctness, and because of their simple style should prove useful to foreigners.

The death is reported from Rochester of the Rev. Dr. Howard Osgood in his eightieth year. He was professor of Hebrew in the Rochester Theological Seminary, resigning in 1900; was a member of the Old Testament Committee on Bible Revision, and prepared Leviticus and Numbers for the Schaff-Lange Commentary. A number of articles in the *Baptist Review* bore his name.

William Max Reid, who died recently in Amsterdam, N. Y., aged seventy-two, was a member of historical and scientific societies, and wrote several books, among them: "History of St. Anne's Church and Queen Anne's Chapel," "The Mohawk Valley—Its Legends and Its History," "The Terrible Mohawk," and "The Story of Old Fort Johnson."

From St. Louis comes the report of the death of John Pierre Frieden, S.J., who was born in Luxembourg in 1844, and came to this country in 1869. Since 1908 he had been president of St. Louis University.

The American Journal of International Law for October, just issued, opens with a noteworthy paper by Ernest Nys on Codification as applied to this particular branch of the law. It interestingly supplements other papers and addresses of recent date that have appeared in previous numbers and in the *Proceedings* of the society whose organ this quarterly *Journal* is. M. Nys goes back to Bentham, and cites his cooperation with the makers of the laws enacted early in the century by the South American republics after their achievement of political autonomy; it is a chapter in the life of the greatest of law reformers not generally known. He quotes from a discourse of Portalis, 1804, a criticism on codification as a whole that reads as though it might have been James C. Carter's text for the elaborate pamphlet he printed, several years before his death, in opposition to a codification of the general law, wherein he asserted that laws once codified always tend to remain; that they tend to rigidity, in spite of progressive ideas. In England, Bentham's own country, while consolidation of statutes has largely taken place, actual codification has been confined to the colonies, conspicuously to India. The final act of the last Hague Conference, cited by M. Nys, no doubt illustrates the tendency or drift towards the formulation of codes; it expressed the view that the preparation of regulations relative to the laws and customs of naval warfare should figure in the programme of the next conference.

There is also in this number a paper on Military Tribunals and Their Jurisdiction, by the late Gen. H. W. Halleck, which was discovered among his notes. Gen. Halleck, author of a work on international law which is so well thought of that in England edition after editon, carefully edited, has been issued, had considered the appropriate scope and jurisdiction of courts-martial and military commissions, especially in places remote from the field of actual military operations. His deduction was, that persons of whatever rank, profession, or occupation might, in time of war or public danger, be subjected by Congress for military offences to the jurisdiction of courts-martial; but that, though military commissions might investigate and report, might present facts and make recommendations, they never should impose any finding or sentence.

There could be no better way to put a check upon source hunting than for a former expert in the science to protest against its abuses; and Prof. R. E. Neil Dodge's brief sermon, reprinted from *Modern Philology*, will no doubt be listened to as authoritative. He gives a beautiful example of one of the half-likenesses which have lured to destruction many a neophyte. With the opening of Gray's "Elegy" in mind let the reader glance at the following lines from Robert Greene's "Menaphon":

> When tender ewes brought home with evening sunne
> Wend to their foldes,
> And to their holdes
> The shepheards trudge when light of day is done . . .

and he will see what snares are abroad. Mr. Dodge discovers that Sir Sidney Lee, for all his experience, sometimes yields to folly, as particularly in looking for the original of the fiery horse of "Venus and Adonis" in Du Bartas's "Semaines." But why, asks Mr. Dodge, should not Shakespeare have copied the horse found in Pulci's "Morgante Maggiore"? It, too, has its "ears pricked up" and a "broad breast." And the moral is pointed that Sir Sidney in reading Pulci has done a little skipping. Mr. Dodge's sermon is, of course, welcome at this time, but that it will not be entirely curative is proved by the evidence of his own practice. In correcting a slip made by Prof. A. H. Upham, he cannot refrain from urging a doubtful source of his own for the quotation cited.

Science

Elementary Aeronautics. By Albert P. Thurston. New York: The Macmillan Co. $1.25 net.

This book belongs distinctly in the technical class. The author, formerly engineer to Sir Hiram S. Maxim, is now lecturer in aeronautics in East London College. The volume is for the most part a résumé of the results of experiments in an aerodynamic laboratory, presumably that of Maxim, although the name of the laboratory is withheld. Wherever the experimenting was done, it would have been better for the author to have made full acknowledgment, especially as some of the experiments are of no little interest, and for a description of them to have scientific value it is essential that every particular be made known.

In the first chapter, which deals with normal and inclined planes, there is an excellent table giving the pressure of an air current on a surface perpendicular to the direction of the current. The pressure is expressed in pounds per square foot for velocities from one mile per hour to one hundred and fifty miles per hour. The velocity is also given in feet per second and meters per second. The constant of air resistance used in forming the table, which is determined by experiment only, has a good average value, hence the air pressures given are at least approximately correct. This table should replace, in aeroplane calculations, the erroneous one of Smeaton, which is still to be found in so many engineering works. The second chapter contains a long discussion

Digitized by Google

relating to aerocurves and is illustrated by some remarkably interesting photographs. These show the stream lines in air when it is flowing past bodies of various shapes. In another chapter on manual and automatic control, the stability of the aeroplane is treated at some length with many drawings. The discussion of propellers is good; it is illustrated with more stream-line pictures, little jets of smoke having been photographed to show the drift of air in the neighborhood of turning propeller blades. A description of instruments and apparatus used in the aerodynamic laboratory, which follows, would be the most valuable part of the book if it were not so short. The various types of aeroplanes are shown in a manner little different from that in many other books.

The aeronautical engine is the subject of the closing chapter. The author has made some instructive classifications, among which is one relating to the means employed to reduce the weight of motors. Lightness in construction of the motor has been responsible for breakdowns which have caused many fatal accidents; the following summary explains how the weight can be lessened:

(1.) By increasing the number of cylinders.

(2.) Placing the cylinders radially, so as to reduce the length and weight of crank-case.

(3.) Forming the cylinders of turned and very thin steel tube.

(4.) Using spun metal or electrolytically-deposited jackets.

(5.) Designing the engine so as to be independent of a fly-wheel.

(6.) Using the highest grade materials with increased machining, and a general attention to design.

(7.) In some cases, combined inlet and exhaust valves are used.

Dr. Woods Hutchinson's "A Handbook of Health" is brought out this week by Houghton Mifflin Co.

"Life in the Sea," by James Johnstone, is a forthcoming addition to the series of Cambridge Manuals of Science and Literature (Putnam).

In a style unadorned, but clear and effective, "Science and the Criminal" (Little, Brown & Co.), by C. Ainsworth Mitchell of Scotland Yard, explains the uses of physical science for the capture and identification of criminals and the detection and verification of crime. Of systems of identification he thinks the finger-print system by far the best, and his account of the classification by which any finger-print may be readily identified is most enlightening, though it is also the one point in the book that is not finally clear. For the personal opinions of handwriting experts he has scant respect; their function, useful enough, is to point out the similarities and differences which would escape lay observation. Very interesting chapters are those on the use of the microscope to detect forgery, the composition of inks, and the use of chemical reagents to determine the age of writing; and, in particular, the chapter describing the serum test, discovered about 1900, to identify the several species of animal (including human) blood. The final chapter illustrates the complexities of food inspection. If the test of milk is high, many honest cows will be rejected; if low, all the good milk will be watered to correspond. Again, the maker of non-alcoholic wines faces this dilemma; if he uses preservatives to prevent fermentation after the bottle is opened, he violates the law; if not, he may be prosecuted for selling fermented liquors without a license. Altogether, the writer justifies his contention for the employment of a few men of scientific training in the detective department, while showing that we are far removed from the days when Lord Coke and Sir Matthew Hale charged their juries against disbelief in witchcraft, and an expert witness for the prosecution was the author of "Religio Medici."

We should have called attention before now to the handsome and admirable treatise of Dr. Ronald Ross on "The Prevention of Malaria" (Dutton), a book which even the laity will find instructive. The author is well known for his share in forming our present views of the part played by the mosquito in the spread of the disease a matter which is somewhat insistently dwelt upon, although, it may be admitted, with ample justification. In the first part of the work we have an excellent account of the historical side of the question, together with the fundamental facts and observations on which medical men now base their attitude towards this disease. Then follow chapters giving in detail the effect of malaria on the individual, its influence on the community, and the preventive measures at our disposal. All this is well done, and, save in a few statistical spots, makes entertaining reading. Our only criticism would be that a little more should be said about the technical methods by which the plasmodium and its relations to the mosquito are recognized and studied. It is difficult for the reader whose experience is limited to regions comparatively free from the disease, to appreciate the importance of the malaria problem. Dr. Ross believes that between a quarter and a half of the population in many, if not, indeed, all, malarious countries, require medical treatment, and he starts his preface with the assertion that "malaria is, perhaps, the most important of human diseases." The estimate of the economical losses involved is appalling. These questions are discussed in the section on the relation of malaria to the community, in which the various conditions governing the amount of malaria are considered from many points of view, and with much ingenious argument. Considerably more than a third of the book is made up of chapters contributed by a score of special writers (Howard, Gorgas, Boyce, Celli, etc.), each describing the prevention of malaria in some limited region or under peculiar conditions, as in the military service (Melville, Fowler). These chapters to some extent renew the discussion of questions already treated in the main text, but often from rather a different point of view. In an appendix Ross makes some suggestions regarding a new terminology of cytogenesis and gives a list of all the "malaria-bearing anophelines" thus far recorded. He also gives an extended bibliography of nearly 260 titles arranged chronologically. There is no index, but this defect is measurably diminished by a detailed table of contents.

The purpose of "Aeroplane Patents" (Van Nostrand), by Robert M. Neilson, as he states in the preface, is to give useful hints and data concerning patents to inventors and to manufacturers of heavier-than-air flying machines. Mr. Neilson has had ten years or more experience in patent work; and though engaged chiefly with British patents, he also includes many United States patents.

Prof. George Davidson, for thirty years head of the United States Coast and Geodetic Survey on the Pacific Coast and a member of the principal geographical societies of the world, is dead in San Francisco. He was born in Nottingham, England eighty-six years ago, and came to this country in 1832. He entered the Coast Survey Service in 1845. He was in charge of the transit of Venus expedition to Japan in 1874, and did much similar work for the Government. He wrote many papers on special topics.

Drama

JONSON'S COMEDY OF HUMORS.

English Elements in Jonson's Early Comedy. By Charles Read Baskervill. Bulletin of the University of Texas, No. 178.

Since 1850 much light has been thrown upon the "sources" of modern literature, notably of Shakespeare and his contemporaries. Nor has this study been in vain; we certainly know the Elizabethan drama much better than the mid-Victorians knew it. Still it is very far from enough to be able to say that Shakespeare in his "Merchant of Venice" cunningly amalgamated two distinct stories, with traces of a third, or that Ben Jonson plundered the classics with uncommon dexterity. We need to know how poets and dramatists wrought, that is, under what impulses from without. In the case of Shakespeare we shall probably remain ignorant; our supreme dramatist had the supreme gift of keeping himself to himself. But Ben and his "tribe," ever in the limelight, caught up the movements of the age and carried them on. To study Jonson from this point of view, then, is the object of Dr. Baskervill's treatise. The plays carefully, perhaps exhaustively, analyzed, are: "A Tale of a Tub," "The Case is Altered," "Every Man in his Humor," "Every Man out of his Humor," "Cynthia's Revels," "The Poetaster"—in brief, Jonson's comedy of "humors." Our author's aim is to demonstrate that Jonson, admittedly the most "classic" among the dramatists of his age, was nevertheless thoroughly English in aim, spirit, method, following clearly recognizable national impulses, or trends, which reached their climax about the end of the sixteenth century. We lay stress upon the word

Digitized by Google

"trend"; it is the author's chosen term, haunting the entire volume and occurring no less than five times on the first page of the Preface. Doubtless it is the aptest word the author could have used.

What, then, was the particular trend which Jonson obeyed and carried to the limit in his "humor" comedy? To answer the question even in the broadest sense, one must sum up the Tudor age as a whole. It was an age of ferment, a bewildering medley of noble impulses and ignoble, of clear strenuous thinking and of extravagance, of grand creation and of melancholy failure. And amid this welter of seeking and finding and losing stand out three forces sharply defined and dominant: Material Science (in the sense of the discovery of new worlds and the readjustment of this earth in the solar system), the Renaissance, the Reformation. The discoveries of new continents with strange peoples and the re-discovery of Greek and Latin literature, art, and philosophy opened boundless vistas of sensuous or supersensuous ecstasy. One cannot read a page of Tudor imaginative English without catching the pulse-beat between the lines. On the other hand, the Reformation, through its rupture with the easy-going, mediæval church, set man in the immediate presence of his Creator, to answer, without help of priest and confessional, the searching question: Whither am I going? This conflict between sense and conscience is clearly expressed in Marlowe's "Faustus."

In England the conflict was peculiarly intense because of the innate disposition of the English mind toward seriousness. Even in the pre-Christian epic of "Beowulf," one feels, to quote an irreverent critic, the forty-parson power of King Hrothgar's lamentations. And all through Old-English and Middle-English literature, the abiding note is that of moral seriousness. English poetry of the Norman and Plantagenet reigns may be on occasion scurrilous, even coarsely blasphemous, but it never moves with the perfidiously smiling, nonchalant mien of French satire. As Neville of Geneva used to say of Rousseau's vicar: "Mais, Messieurs, le Vicaire Savoyard reste tout de même vicaire." The English poet in his worst estate remains the preacher. Only one exception is known to us, Chaucer with his Gallic *esprit* and his Italian *grazia*. To appreciate this, one has only to contrast "Troilus and Cressida" with the "Vision of Piers the Plowman."

To this sermonizing tendency let us add the mediæval liking for symbolism and allegory. In no other country did the love of allegory strike such deep roots or thrive so persistently. For the Tudor period a sure evidence is the vogue of the "moralities." For a later period there is the "Pilgrim's Progress," still the most cherished book, after the Bible, of all English-speaking peoples.

Before the end of the long reign of good Queen Bess things came to a crisis. The Renaissance was drifting into pedantry or into dilettanteism, the Italianate Englishman of fashion became a mere puppet of foppery or of sensuality, the Protestant became the Puritan. Foibles and vices were attacked with increasing severity by a swarm of critics ranging in worth from Wilson and Sidney to the Martin Marprelate pamphleteers. What Jonson did was to shift the centre of battle to the popular stage. Not that he was the first in chronological order; he was preceded by Lyly, Chapman, and the author of "Sir Thomas More." But he was the chief, by virtue of his knowledge, his power, and the courage of his convictions. In the matter of dramatic form and method he was, in consequence of his classic reading, directly under the influence of the "character sketch" as we find it in Theophrastus and kindred writers and of the stock characters of Plautus and Terence. Indeed, he took not a little of his substance from the classics. Nevertheless, his animus and his *motifs* were characteristically English.

It is our author's merit to have revealed for the first time with clearness and fulness Ben Jonson the Englishman by eminence. As reviewer we have merely tried to give to our readers a few very general hints in preparation for the first three chapters. We have not the space for the remaining chapters, which consist of a detailed discussion, one by one, of the six plays mentioned above.

In a work of this kind there is of necessity much repetition; the same fact or principle must be applied anew at each shift of scene. Yet the work as a whole is not tiresome, but rather stimulating. And painstaking accuracy is evident throughout. We might enter a correction here and there; but that would scarcely be worth the while.

Yet we do wish to enter most energetically one general caveat. Jonson being by eminence the dramatist of "humors," the word humor naturally recurs at every turn. Our author has been at great pains to discuss the origin and spread of the term and to define it in its plenary use. What, then, is a humor? Those of us who have read "Every Man in his Humor" have a general understanding of what is meant. But can we give an exact definition? No more than we can define a story, a drama, a ballad. Having read stories and dramas and ballads, we know them when we see them. Yet no sooner do we attempt to construct a formula than we discover some flaw. Even so is it with humor. No definition that we have ever seen but breaks down when tested. Granted that Bobadill is a humor, is Falstaff also a humor of "brag," is Othello a humor of jealousy, Macbeth a humor of ambition? Assuredly not, to our way of thinking; yet they might be, for aught we can learn from all the writers upon humorous drama. The question is too vexed and complex for adequate discussion here. We must content ourselves with indicating a few general criteria. First, a genuine humor play does not present real men or women but rather abstractions, types more or less allegorical or symbolical, *formelhafte Wesen*. Next, these types are nearly always, if not quite always, caricatures. Next, each type has its badge, its own peculiar phrase or action, which is for the reader or spectator the token of recognition. Further, this phrase or action is frequently repeated, sometimes *ad nauseam*. Lastly, the humor dramatist is always seeking to preach, or to teach, or at least to attack.

Now the genuine dramatist does present real men and women, creatures of flesh and blood, and he does not aim to teach. In the words of Hamlet, he merely holds the mirror up to nature. His teaching, if there be any, is only in the Aristotelian sense of Çatharsis. At page 24 our author observes: "And yet, when this is said, we readily recognize the opposition of Jonson's work to all that Shakespeare stands for." True enough, yet it was Jonson himself who wrote: "He was not of an age but for all time." Shakespeare was and is for all time precisely because he created men and women who have found a home wherever there is soul and imagination, even in remote Japan. And with Shakespeare will stand—*longo intervallo*—Marlowe, Beaumont and Fletcher, Massinger, Webster, and others, whereas Jonson's didactic abstract humors have long ago been shelved in the curiosity shop.

Further, our author alludes in two places, pp. 28 and 68, to Chaucer's "Prologue" as consisting of "character sketches." The context shows that he has in mind "the character sketch of the so-called Theophrastan type." This we deny. True, the Tabard Inn Company is sketched rather than drawn at full length, and the individuals are characters in the sense in which we speak of the characters of any story or play. But that they bear the faintest resemblance to the abstractions of Theophrastus or to the standing types of Latin satire, is impossible. Chaucer's Knight and Squire, Clerk of Oxford, Prioress, Wife of Bath, are the most individual creations in modern literature before Shakespeare. They are not even class representatives, nor did Chaucer offer them as such. They are merely a group of real men and women, products of fourteenth-century English life.

In truth, the demarcation between the real and the symbolical, typical, conventional is all-important in literary evaluation, whether we deal with the

Digitized by Google

fourteenth or the sixteenth or the twentieth century. To illustrate with a living writer, Arnold Bennett, within the pale of the Five Towns, depicts the real; outside that pale he strays into the typical and conventional.

"Fröken Julie," a tragedy of naturalism, by August Strindberg, is translated by Charles Recht; Brown Brothers of Philadelphia will issue the translation, with the title, "Countess Julie."

In spite of the pretentious appearance given to it by its fine paper, broad margins, admirable type, and excellent illustrations, the "Great Love Stories of the Theatre" (Duffield), by Charles W. Collins, is no very valuable addition to stage annals, whether considered as literature or as history. It is well enough written, and shows an intimate acquaintance with standard and some less generally quoted authorities, but contains nothing new, and in effect is little more than a scandalous chronicle revised for the doubtful benefit of the hasty modern reader. In a brief preface the author says that each story has been chosen for its human appeal, or its psychological value; but the appeal, as a rule, is of a vulgar sort, of which the special psychological significance is not easily discernible. He has no fresh light to throw upon Nell Gwyn, Woffington, or "Perdita" Robinson, while it is difficult to see by what process of reasoning the crazy follies of the notorious "Becky" Wells could be rightfully included in any category of great loves. Nor is it easy to say what cause is served, save that of meretricious gossip, by insisting upon the least charitable construction of the discreet relations that existed between Anne Bracegirdle and William Congreve. There is more justification for retelling the sordid story of Maurice de Saxe and the Favarts, since comparatively few persons have much notion of the true character of the brilliant soldier whom Scribe glorified with a halo of romance in the popular play of which Adrienne Lecouvreur is the heroine. Unfortunately, such an exposure cannot be made without casting some damaging reflection upon the pathetic figure of the gifted Adrienne herself. A certain psychological problem, perhaps, is involved in the blind passion of Otway for the abominable Barry, and the reprint of some of the dramatist's letters confers some borrowed literary prestige upon this particular chapter. The truest woman in the book is Dora Jordan, whose histrionic genius and conjugal fidelity to her royal lover distinguish her honorably from almost all others in the long list of theatrical paramours. Hers is the one story which might profitably have been told more fully. The temporary enslavement of Alfred de Vigny by that coarse enchantress, Madame Dorval, is one of those uninstructive episodes best committed to a kindly oblivion. The title of Mr. Collins's volume is a misnomer. In it he has confused the meanings of "great" and "notorious."

In the past week, the Irish Players in Maxine Elliott's Theatre have done much to justify their claim to be considered a National organization. They are not skilled actors, their performances lacking the artistic finish necessary to the perfection of stage realism, but, if they sometimes fail to express the whole truth of nature, they never exceed it, and their representations, within the limits of their artistic resources, are wonderfully life-like. With the stupid conventional Irishman of the theatre, they have nothing in common and their public exposure of this myth is in itself a great service. In "The Building Fund," a humorous, but somewhat bitter comedy by William Boyle, they were very successful. The piece is a study of miserly cunning and heartless selfishness. Mrs. Grogan, an old widow with a little money, is at the point of death. She has been gripingly penurious all her life, suspects her son, who is as grasping as herself, and all her relatives and neighbors are plotting to rob her, and is tormented by the thought that she cannot take her wealth with her. Accordingly, at her last gasp, she bequeathes all to the priest, whom she makes sole executor. It is a sordid story, in which all the personages, even to a long-suffering niece who ministers to the old woman, are actuated by the basest motives, but it is told effectively in perfectly characteristic dialogue and is veracious in humor and situation. The acting was good—especially that of Sara Allgood as the old woman—but the piece left an unpleasant impression, while it often provoked laughter.

The "Kathleen Ni Houlahan," of W. B. Yeats has been played here before. It is a gem in its way, a bit of poetic allegory, simple but eloquent in narration, and glowing with patriotic spirit. In it the Genius of Ireland, symbolized by an old woman, enters a farmer's cottage (in 1798), and by the narration of her wrongs lures a lover from the arms of his prospective bride to join the standard of revolt. It is a stirring episode, well becoming the boards of a National theatre, and revealed a finely imaginative piece of acting on the part of Sara Allgood, who appeared as the mystical figure. "The Workhouse Ward," of Lady Gregory, is a bit of robust Irish humor, in which Messrs. Sinclair and O'Donovan were seen to great advantage. It is eminently Hibernian, but scarcely demands criticism. On Monday evening Synge's "The Riders to the Sea," which has been recently described in the *Nation*, was played with the simple and natural sincerity which is the chief charm of these performers. This is a work which would do honor to any stage. Although it is extravagant to claim a place for it among the great classic tragedies, it is, in its ever-deepening pathos and its constant sense of impending and inevitable catastrophe, as truly tragic, as it is, in its pregnant and imaginative diction, truly poetic. Moreover, it might be an actual page from the book of life. Fancy here is the slave of verity, whether in suggesting the wild terrors of rock and sea and storm, or in painting the quiet despair of the bereaved mother, who in receiving the corpse of the last of her six sons—all victims of the pitiless waters—has no more tears to shed, the fountains of grief having run dry. The whole history of these poor fishers is summed up with terrible point in that last utterance of Maurya: "A clean burial . . . a fine coffin . . . and a deep grave. What more can we want than that?"

"The Witness for the Defence," by A. E. W. Mason, which was produced in the Empire Theatre on Monday evening, has many more literary than dramatic merits. The dialogue is of excellent quality, and the characterization is well done, even when it is not altogether consistent. There is a scene of intellectual conflict between two lawyers, which is equal to anything of its kind in modern drama. But the character of the play and the personages is not always sympathetic. Stella Ballantyne, driven to desperation by her husband's brutality, kills him. A former lover, Mr. Thresk, a chance visitor, knows the truth. Afterward, in court, he suppresses part of it, and procures the wife's acquittal. By and by, Stella wins the love of a gallant young officer, and Thresk, when appealed to, repeats his former testimony. But when he learns that Stella is about to remarry and realizes that he still loves her himself, he tells her that she must confess the whole truth—that it was she and not an imaginary robber who killed her husband—or he will reveal it himself. She replies that she will rather commit suicide, but, in the end, she does confess, and as the young soldier is stanch, all ends happily. Thresk, who is the real hero, lies twice, and only becomes a stickler for the truth when his own interest is touched. The heroine, however virtually blameless she may be, persists, until she is driven to the wall, in acting under false pretences. Herein lies the real weakness of the play. Neither of the protagonists excites zeal. But there are several telling situations, a certain amount of suspense, and much bright talk. And the representation, as a whole, is uncommonly good, although the emotional requirements of the heroine are far greater than the artistic resources of Ethel Barrymore can supply.

A version of Thackeray's fairy-tale, "The Rose and the Ring," was given recently at Cambridge, England; it had never before been played on the professional stage.

Thomas Hardy's "The Three Wayfarers," in which London is much interested just now, was dramatized by Mr. Hardy in 1893, from the story in Wessex Tales entitled "The Three Strangers," first published in 1883. The scene of the shepherd's dancing party, whither the three wayfarers—the escaped sheep-stealer, the hangman who was to hang him, and the sheep-stealer's brother—come, one after the other, is said by the London *Times* to be "the high ground two or three miles to the north and northeast of Dorchester, beyond the Frome meadows, and not far from Slyers Lane."

Chapters of Opera. By Henry Edward Krehbiel. New York: Henry Holt & Co. $2.50 net.

Only a few weeks ago, we commented on the surprising number of books containing the plots of operas that publishers evidently find it profitable to print. In the meantime, several others have been submitted for comment. Gladys Davidson has evidently aimed at presenting a larger number of plots than any of her predecessors and in this she has succeeded, but mainly by including a number of operas that are not performed now, and are not likely to be performed, in England or America—such operas as Gramman's "Melusine," Mannen's "Acté," Missa's "Muguette," Pizzi's "Rosalba," Adam's "Nuremberg Doll," besides others by Brüll, Bungert, Kretschmer, Förster, that are heard only in Germany and there very seldom. The story of Spohr's "Jessonda" has no practical value for opera goers to-day, nor has that of Schumann's "Genoveva," which has never been a success anywhere; yet a portrait of Schumann serves as frontispiece to the second of these two volumes! "The Girl of the Golden West," which is a *succès de Caruso*, is included, but not that of last season's real success, "Königskinder." In all cases, the plots only are given, without biographic or historic information, and in the table of contents the large type makes conspicuous such misprints as "Favourita," Lörtzing, Rubenstein. On the other side of the ledger must be placed the important facts that the plots, so far as we have examined them, are clearly told and accurate, and that the best light operas by Sullivan, Strauss, Suppé, and others are included.

Filson Young confines himself to Wagner. In England his book has already passed through six editions and it deserves this success, for his way of telling the plots of Wagner's operas, from "The Flying Dutchman" to "Parsifal," makes them exceptionally interesting. He tells them in the past tense, thus converting them into real short stories; and the narratives follow the sequence of events as they appear to the audience. Wagner often wrote stage directions in his scores which are not included in the poems, but which are necessary for a complete understanding of the situation, and these Mr. Young has not overlooked. The postscript includes an attempt to classify the operas and music dramas as to their poetic and musical merits—an attempt not entirely successful; also, an interesting eight-page chronology, in which the more important events in Wagner's life and creative activity are placed in juxtaposition with other interesting occurrences of the same dates in musical and general history.

Wagner was the first librettist who had the courage to publish his texts as bound books. If the present interest in opera stories continues, we may soon expect a general following of his example. From Dodd, Mead & Co. we have the bound poem of Horatio Parker's $10,000 prize-opera, "Mona," a consideration of which may be deferred till after its production at the Metropolitan. Bound as separate volumes also are what seem to be the beginning of a series of famous operas to be treated in this fashion, "Aïda" and "Carmen," both with introductions by W. J. Henderson. Mr. Henderson has at least a hundred times expressed his conviction that operas are far inferior in artistic work to concert music, but in these little books he is condescendingly amiable to the masterworks of Verdi and Bizet. The enthusiasm over them the reader himself must supply for the most part, but he will find much information concerning the creation of these operas, the circumstances attending their production, and their reception by the public and the critics. While the introductions take up only a score or so of pages, Mr. Dent has devoted nearly a hundred to another masterwork, "The Magic Flute." His little book has not the distinction of covers, but it is worth preserving. It was prepared in connection with performances of Mozart's opera to be given this month at Cambridge, and the author hopes it will eventually form part of a book dealing with all Mozart's more important operas. Mr. Dent is thoroughly posted on his subject. Considerable space is devoted to the Freemasonry which forms the groundwork of this opera. "It may well be wondered," the author remarks in conclusion, "why Mozart's Masonic brethren did not secure him a more dignified funeral; the reason probably was that owing to the disease (malignant typhus) of which he died, it was necessary to dispose of the corpse as quickly as possible."

Mr. Krehbiel's "Chapters of Opera" appears in a new edition, which is not only more compact and more convenient to hold, but also contains an appendix of twenty-two pages, giving complete lists of the operas performed in the seasons 1908-1911 at the Metropolitan and Manhattan Opera Houses and at the New Theatre, as well as in Brooklyn's new Academy of Music. Brief comments are added, but the new operas are not described as the more important ones of preceding years are in the body of the book. Portraits of Destinn, Gatti-Casazza, and Toscanini have been added. Besides being an entertaining account of the history of grand opera in New York from its earliest days down to the present time, Mr. Krehbiel's book has an excellent thirty-page index which makes it invaluable for reference.

Macmillan has in preparation "Style in Musical Art," by Sir Hubert Parry, and C. L. Graves's "Post-Victorian Music."

One of the most interesting events of the musical season will be the concert to be given in New York on December 13 by the Theodore Thomas Orchestra of Chicago, under the direction of Frederick Stock. When Thomas died the first plan was to try to procure a European "prima donna conductor," at any cost, as his successor, but wiser counsels prevailed, and the orchestra was entrusted to Frederick Stock, who has justified the choice. The compositions which this orchestra will play are Beethoven's "Coriolan" overture, Strauss's "Don Juan," and Brahms's second (and best) symphony. The soloist will be Albert Spalding, who will give the first performance here of Elgar's violin concerto. Concerning the conductor, the following further information will be read with interest:

Mr. Stock was born in Jülich, Germany, on November 11, 1873, the son of a bandmaster in the German army. Under him he began his musical studies, entered the Cologne Conservatory at fourteen years of age, was graduated as a violinist, and then took up seriously the study of theory and composition under Engelbert Humperdinck, Heinrich Zollner, Gustav Jensen, and Franz Wüllner. In 1895 he came to America to become a member of the Chicago Orchestra. Mr. Stock has written a considerable number of works in the larger forms—overtures, symphonic poems, a set of symphonic variations which have been repeatedly played in Chicago, and were brought forward by Franz Kneisel at the festival of 1906 in Worcester.

Art

IN THE NATIONAL GALLERIES.

LONDON, November 27.

Two recent events in the national galleries here are worthy of note. One is the loan exhibition of Alfred Stevens's work at the Tate Gallery in connection with the presentation to the trustees, on behalf of the Alfred Stevens Memorial Committee, of a bust of the artist by Lantéri and a cast of the great chimney piece at Dorchester House. The other is the opening of the Tudor and Stuart Rooms, which have been redecorated and rearranged, at the National Portrait Gallery.

Alfred Stevens is still comparatively little known in England, and hardly known at all anywhere else. It is a common mistake of the critic to confuse his name with that of the Belgian Alfred Stevens. It can scarcely be said that he received no recognition in his lifetime. There are many successful sculptors and decorators who might have envied him his chance at St. Paul's and Dorchester House. But, on the other hand, it is true that he never received what is regarded as official recognition in England. His neglect by the Royal Academy remains to-day one of the chief crimes counted against it, and he lived and worked in an age—he was born in 1817 and died in 1875—when the Academical hall-mark was all essential in the eyes of the average British patron of art. Besides, Stevens has left a very small amount of completed work—that is, work known to be his. His

Digitized by Google

poverty in the beginning forced him to do many things for which an artist rarely receives due credit himself. When he was young, during his student years abroad, part spent as assistant to Thorwaldsen in Rome, part in wandering from one Italian town to another, he copied old masters for the dealers. Later, on his return to England, he designed stoves and fire irons for a firm to whom they brought more fame than to him. Fate seemed against him in other ways. His delightful little lions that used to perch on the railings in front of the British Museum were long since removed with the railings. His Wellington monument was first erected and stood for years in the Consistory Court at St. Paul's, for which it was not designed but where it was immensely impressive; then, largely through the clamor of his admirers, it was set up in the place for which it was designed under an arch between the nave and the transept. Most of his other important decorations were for private houses where they have been seen only by the few. Even many people who knew and admired the Wellington monument and the British Museum lions had never heard of him as a painter, and I remember the astonishment and excitement of the critics one press day several years ago, when a fine portrait by him was included in the Winter Exhibition of Old Masters at Burlington House. To-day, there is less excuse for not knowing his work. It has been much written about, examples have appeared now and then in exhibitions, and, better still, a characteristic series has been got together for the permanent collection of modern British art at the Tate Gallery. There he is represented by one or two portraits and cartoons, and by numerous drawings which give a good idea of his scope and powers, many being notes and studies for the great monuments he either executed or planned. To the present exhibition owners of his works have lent more paintings and studies and several models.

Nobody who sees this collection can doubt that Stevens deserves the wider recognition that is at last coming round to him. His work, in no matter what medium, has the distinction, the style, which the modern artist so rarely seeks, and so seldom achieves when he does seek it. It is too late in the day to describe the Wellington Monument, with the grave simplicity, the dignity that recalls Italian monuments of the Renaissance. There is likewise a feeling of the old masters in his portraits, in their gravity, their quiet color, their serenity, the ugliest Victorian fashions borrowing dignity from his treatment of them. And he is the old master again in his studies, the greater number in red chalk, which are really working drawings for his own use, and not done in the manner of the young old masters of to-day, merely to astonish by the cleverness of the imitation. The truth is that Stevens never got very far away from the Renaissance, though I believe the decorations in one or two private houses which I have never seen show the influence also of Pompeii. Many of the now most famous artists of the last century began by an equally close study and perhaps closer copying of the old masters; as it was said of them in Paris, their work smelt of the Louvre; but those who had anything in them developed from this stage of their art a distinct style of their own, their own manner of expressing what they had to say. Stevens, distinguished as he was, did not ever succeed in quite emancipating himself, though he was fifty-seven or eight when he died. The reason was probably because for so many years he could not devote his time to his own development, carrying the old tradition on still further, but was in the employment of others as designer or teacher. However, if his originality was less marked than that of some of his contemporaries, his accomplishment was great. He was a giant compared to the popular Victorians who are to-day forgotten, towering head and shoulders above the Academicians who could find no room for him within their ranks.

At the National Portrait Gallery, it is not so much the Tudor and Stuart portraits that call for special attention as their rearrangement. The portraits are as they were, as they have been described—except that some look unexpectedly cleaned up, or it may be the effect of the new decorations. As is well known by this time, they are as a rule of more value historically than artistically, though here and there are a few fine originals. They have been very well hung, the careful chronological sequence adding to their interest, and the different periods have been divided with some feeling for dramatic grouping. I believe the idea has been to make this arrangement as permanent as possible. But if the much-needed additions to the gallery, for which the pulling down of the old St. George's Barracks should give the chance, are ever made, it is to be hoped that there will be some rehanging; for, as it is, the walls in places are far too crowded for comfort to the student, whether of history or of art. But more striking than the new hanging is the new decoration. The director, who is young at his post, has evidently determined to do something that has not been done before, at least in London. He has had the intelligence to see the mistake of clinging to custom, as in that biggest of the Turner rooms at the Tate Gallery—which time so far has only made the more distressing—and also to avoid the commonplace of the new wall decorations in the new rooms at the National Gallery. But he has not had quite the independence to adapt boldly the better examples given of late years in some private galleries and big exhibitions both at home and abroad. He has escaped the official mistakes and commonplaces on the one hand, and, on the other, the risk of being accused of too close adherence to unofficial innovations, by painting or staining the walls black. Now black is far from being a bad background for the very early paintings; it seems rather but an extension of the black frames of so many pictures of their date. When it comes to the Lelys and Knellers, it is less in harmony. But, in any case, much depends on the quality of the black, and in this respect I can hardly make my compliments to the director. No matter how many coats of paint, or how deep a stain, he may have used to cover the panelling of the walls, the result strikes me as thin, not rich, while the mere fact that the panelling is so plainly revealed distracts the attention of the nervous, who see in it but an unpleasant reminder of increased danger in case of fire. Then, below the black is a wide line of white, which is repeated in the frieze and ceiling, and the violent contrast hurts the eye. It is all very well to rely upon time, with its power, to tone things down, but the tendency is to abuse this reliance in London. The big Turner room at the Tate shows that time, even in a town of dirt and fog, unless it has a good foundation to work upon, is not always kind. Experiment, I admit, is healthier than blind obedience to custom, but I am not so sure that the healthiest place for experiment is a national gallery where there is no money to spare when experiment leads to failure. How time will treat these new rooms remains to be seen.

N. N.

Dana Estes & Co. announce "A History of Painting," in eight volumes, by Haldane Macfall, with a Preface by Frank Brangwyn. The work is designed for the amateur rather than the technical student, and carries the subject from the beginning of the Italian Renaissance to modern times. It is to have two hundred full-page mounted plates in color, which, to judge from the samples we have seen, will furnish a notable example of the new style of illustration.

Royal Cortissoz writes an introduction to the "Annual of the Society of Illustrators" (Scribner). The eighty-five full-page illustrations, reproduced for the most part in two printings, with a tint block background, are arranged alphabetically under the artist's name, beginning with Edwin A. Abbey. As it happens there is no Howard Pyle in this number, the first of an intended series. The plan gives promise of some historical value in the study of American illustration.

In the Master Painters series Doran issues three volumes, "Titian," "Reynolds," and "Van Dyck." The texts are put together from the writings of Ruskin, and there are the usual reproductions in color of several of the artists' paintings.

Digitized by Google

A miniature edition of Turner's "Liber Studiorum" (Stokes) contains fascimiles of the seventy-three published plates and twenty-six additional cuts of unfinished plates or of drawings intended for that famous series. Since the small scale of the reproductions reduces these prints to tone, effacing the etched skeleton, the book will better serve as a pictorial index for those who know their "Liber" than as an introduction.

"Underground Jerusalem" (London: Horace Cox) is a translation of a brief sketch by a French archæologist, Père Vincent, of the work of the expedition of 1909-11 on the hill of Ophel. By means of its excavations the history of ancient Jebus can be traced back for 3,000 years before the birth of Christ. Burial caves have been discovered in which were tombs containing bodies, and, among other things, fragments of early Canaanitish pottery and some bullets for slinging. But the most interesting result was the bringing to light of the admirable work of Hezekiah, at the time of the war with the Assyrians, in supplying the city with water by means of a tunnel from the Virgin's Well to the Pool of Siloam. When the explorations are completed a full account of them will be published by Constable & Co., in which the names of the members of the expedition, now kept secret, will be given.

David C. Preyer's "The Art of the Vienna Galleries" (L. C. Page) is a well-planned book, and, save for slovenly proofreading, well executed. The Vienna galleries are strongest in the Flemish and Dutch schools. It is precisely here that Mr. Preyer's knowledge and enthusiasm are greatest. In the matter of contested attributions he goes farther than is usual in a manual of this sort and generally with good judgment. Besides the three public galleries, the Liechtenstein, Czernin, Schönborn-Bucheim, and Harrach collections are treated. The Lanckorowski, which contains interesting pictures, is omitted. Mr. Preyer's sympathies are obviously for realistic and romantic art, precisely the art most in evidence at Vienna. Outstanding prejudices and perfervid admiration take the book out of its perfunctory class Your reviewer reads with some amazement that Zurbaran is a "weak imitator of Caravaggio," and is not reassured at learning that Boecklin is "the greatest landscapist of the nineteenth century." Again Mr. Preyer's tenderness for the melodramas of Max Klinger is significant of a taste for extremes. On the other hand, it is precisely this gusto that makes our author a good critic of Rubens.

To the National Gallery at London the late Edwin A. Abbey has bequeathed his picture, Crusaders Sighting Jerusalem; to the Metropolitan Museum his drawings to illustrate Shakespeare's comedies and tragedies, his painting of Hamlet, and his portrait of his mother-in-law; and to the Boston Museum of Fine Art his original drawings for "The Deserted Village."

Important excavations on the Palatine were begun by Dr. Giacomo Boni early in October in the Palace of Domitian. Excavating was carried on here as long ago as the sixteenth century by Farnesi, but nothing important has been done since the eighteenth century. From the sixteenth to the eighteenth century excavating meant principally stealing marbles with which to enrich museums; Dr. Boni's work is directed to discovering the whole plan of the palace, which was that of a typical Roman domus, enlarged to meet the requirements of the chief of the state. Work on the row of rooms forming the front of the Palace, corresponding to the vestibule, has revealed the system of drainage, and ha turned up a large number of architectural fragments. In the atrium a huge octagonal basin has been uncovered, the existence of which was unsuspected. It measures sixty feet across, is two and a half feet deep, and was originally lined with marble. The bottom of the basin had been broken through by the excavators of earlier centuries in their search for marbles, and a mass of pottery from the priscan-archæological strata had been brought up and then thrown back as rubbish with which to fill in the whole. Dr. Boni has now taken it out, and will later carry on deeper excavations in this stratum. In the triclinium everything had been long ago levelled to the earth, but a beautiful marble pavement covering two hundred yards had been left undiscovered beneath a few inches of earth. Although the northern nympheum was already known, the pipes through which it was supplied with water have just come to light. The southern nympheum remains to be excavated; a part of it lies beneath the now abandoned nunnery, which was built upon the spot some forty years ago. This modern building must be demolished if the complete plan of the palace is to be determined

Finance

THE MARKET AND CURRENT EVENTS.

No one can doubt that the past week has been a week of incidents; yet the peculiar fact about it is that financial markets have made virtually no response. Beginning with the speech of Sir Edward Grey on Anglo-German relations, on Monday of last week, and ending with Friday's extraordinary news from Los Angeles, Saturday's $6,100,000 deficit in New York bank reserves, and last Monday's application of the tobacco independents for the Supreme Court to reverse the decree of dissolution in the Tobacco Trust case, it was possible to say of all these occurrences that the markets did not know what to do about any of them. All of them, as a matter of fact, had to do with actual events long past, and this week's developments were less in the nature of new incidents in the chapter than of a clearing-up of facts regarding older occurrences, some of which were surrounded with mystery at the time. It is not always possible for markets to "reflect" such belated explanations.

Sir Edward Grey's speech, taken along with the German Foreign Minister's speech of two weeks earlier, shows exactly why Europe's financial markets were plunged into such disorder and apprehension in midsummer, and again in the early autumn. Whether war between France and Germany, or between Germany and England, was at any time actually imminent, will always remain a matter of debate. But that the situation in July was such that a Palmerston or a Napoleon III might have taken some step, after which war would have been inevitable, can no longer be doubted. The more cheerful present view is that war was averted, that the fact itself is proof of the improbability of such a war, even under aggravated circumstances, and that therefore the future is guaranteed. Yet the fact remains, and the foreign markets seem to recognize it, that bad blood has been stirred up by the story of last July's diplomacy—not less so when something not wholly unlike the lie direct is exchanged by the English and German Governments, in their respective versions of the incident.

The New York bank position is quite universally believed to be a temporary matter. The deficit in reserves—the first since the panic of 1907—was apparently due to requisitions for cash, over December 1, by outside banks which merely wished to reserve in that form, at New York, a part of their deposits with New York banks, so as to report it for themselves as "cash on hand." In any case, the "secondary reserve," in the shape of the large foreign credit balances of our banks, remained. The petition of the tobacco independents to the court of last resort was merely a step in obtaining what many legal and financial observers believe will be the final rejection of the request for establishing new and confusing precedent in the Anti-Trust law. None of these incidents admitted of positive "reflection" on the Stock Exchange. Still less was it possible for Wall Street to draw conclusions as to the financial bearing of the McNamara confessions. No clear-headed observer of preceding incidents, between the Los Angeles outrage and last Friday's startling news, has doubted the guilt of the two accused labor leaders. Their confession merely averted their conviction by the jury. But what the consequences, for good or ill, will be on the labor question itself, and how the public mind will on longer consideration be impressed by the marble-hearted cynicism with which these two scoundrels and their counsel publicly describe the crime, are not such easy questions to answer. But perhaps they are not problems for the market.

One other incident of the week, which the market passed almost without notice, deserves a word. It would probably not occur to most people that there was any connection between the bewildering plan, now under way to finance the New York Street Railway reorganiza-

Digitized by Google

tion, and the undoubtedly widespread public irritation over the Tobacco Trust dissolution plan as approved by the Circuit Court. There is, however, a very interesting connection. The intricate tangle in the affairs of the Metropolitan, and the rascally practices which inspired the wish for severer punishment for the Tobacco Trust and its managers, were the work of one and the same gang of unprincipled capitalists, who had very much to do, jointly and severally, with giving American finance its evil name of half a dozen years ago.

The intelligent man who re-reads the story of the successive street railway "combinations," "leases," "mergers," and "amalgamations," finds himself divided between the two impressions of the financial absurdity of the whole performance and its brazen unscrupulousness. An air of burlesque finance has certainly surrounded it, from the day when a $50,000,000 property was leased to a four-mile trolley concern in the Bronx, to the day when Ryan publicly stated that Metropolitan was bankrupted by the franchise tax (which it had never paid), and the later day when the reorganizers discovered that Metropolitan stock would have to be assessed, but that shareholders of the holding company could not put up the money, because their own shares were non-assessable. Each successive episode suggested Rollo in Wall Street, or high finance according to Bernard Shaw, or "Major Spilsbury" and "Beattie" in the Paris financiering of the Shipbuilding Trust.

But a sense of the financial absurdity of the whole affair is bound to be superseded by the just indignation which arises on every review of the manner in which these rich adventurers stripped the unhappy outside investor in the course of the undertaking. When it is further remembered that the same group of financiers was behind the sharp practice by which the original owners of the tobacco companies were cajoled into selling out to the Trust, and behind the outrages perpetrated in the trade itself, it is easy to understand why so many people have thought the penalty imposed on the Tobacco Trust inadequate. Yet this frame of mind, however excusable under the circumstances of the case, is not the safest in which to approach a problem of law and precedent. Mr. Roosevelt's demand for "complete disruption"—suggesting apparently that the collection of enterprises be somehow smashed to atoms—is a little like application of lynch law to corporations.

The case of the defendants is admittedly aggravated; feelings of honest men are revolted by the story. But the Anti-Trust law provides against just one thing—conspiracy in restraint of trade—and it nowhere intimates that dissolution shall be regulated according to the good or evil practices of the restrainers. The general rule of dissolution, fixed even for such a Trust as this, must be applied, in the ordinary course of judicial procedure, to all other Trusts which are found repugnant to the law. This is why perfectly right-thinking and independent men believe that the Attorney-General and the Circuit Court were right in fixing a form of dissolution for the Tobacco Trust which followed the principle established with Northern Securities and Standard Oil, and which would stand as a leading precedent if the Steel Trust were to be dissolved. That is the view of the matter which must be kept in mind, in awaiting the Supreme Court's decision on the petition of the independents.

A Survey of Constitutional Development in China

By HAWKLING L. YEN, Ph.D.

(Columbia University Studies in History, Economics and Public Law, No. 104)

An attempt to present, mainly for the occidental reader, the important constitutional changes that have occurred in the gradual development of the Chinese state.

8vo. *Paper covers,* $1.00 *net*

The Economic Principles of Confucius and His School

By CHEN HUAN-CHANG, Ph.D.

(Columbia University Studies in History, Economics and Public Law, Nos. 112 & 113)

A most elaborate and thorough description of the economic and social philosophy which lies at the bottom of Chinese civilization. The point of view is that of comparison between occidental and oriental theory. The author has had a unique preparation for this gigantic task of interpreting Chinese culture to western readers.

In 2 vols. 8vo. *Paper covers,* $5.00 *net; cloth,* $6.00 *net*

4th Ave. & 30th St. **LONGMANS, GREEN, & CO.** NEW YORK

THE BOOK OF BURIED TREASURE

By RALPH D. PAINE

This absorbing book, the outgrowth of travel and research, tells the facts regarding great treasure hoards known to have been lost or buried, their whereabouts, and the pirates or others who lost or hid them. It tells also of the results of present-day treasure-seeking. Entertaining as fiction—and true. (*Crown* 8vo. *Copious illustrations.* $2.50 *net; postpaid,* $2.72.)

GOOD CHEER

The Romance of Food and Feasting

By F. W. HACKWOOD

Author of "Inns, Ales and Drinking Customs," etc.

A diverting holiday book presenting its subject from the historic and picturesque sides. Roman banquets, royal feasting, baronial profusion, cooks and epicures, the aesthetics of dining, diet, etc., etc., are among the subjects treated. (*Demy* 8vo. *Gilt top, deckle edges and 24 illustrations.* $2.50 *net; postpaid,* $2.72.)

STURGIS & WALTON CO.

The Nation

NEW YORK, THURSDAY, DECEMBER 14, 1911.

The Week

It is not necessary to take too seriously the reported stampede to Roosevelt among the Republican National Committeemen in Washington on Monday, for, after it is all over, it clearly appears that Mr. Taft still holds the trumps. He controls the reorganized committee of arrangements of the next Convention, with a chairman favored by him, and a substantial majority of the whole committee support him. What is visible is the split in the party, the existence of which everybody knows; it is bound to be displayed at every party gathering from now on, and is, among other things, the best possible evidence that the process of freeing the Republican party from the domination of protected interests and politicians of the Mark Hanna type goes on apace. But, so far as Taft is concerned, not only does Mr. Taft control the Southern delegates, as Mr. Roosevelt controlled them four years ago, but those of free foot, who would like to be Insurgents, find themselves face to face with this sentiment from no less a person than Theodore Roosevelt (February 25, 1909): "No man of better training, no man of more dauntless courage, of sounder common sense, and of higher and finer character has ever come to the Presidency than William Howard Taft." Shall it now be solemnly confessed that Mr. Roosevelt was wrong and that the party blundered? Surely, his party could never be so false to Oyster Bay—and, besides, Oyster Bay was never known to be anxious to run for office when everybody was prophesying its party's defeat.

Any man's declaration that he is not a candidate for President of the United States is like the plea of not guilty in a court of justice. The right to withdraw the plea and to substitute one of guilty with mitigating circumstances, is always recognized. Nothing, for instance, could apparently be more emphatic than Mr. Underwood's statement, "I am not a candidate for the Presidential nomination, and I am not going to be." But, without questioning the sincerity of Mr. Underwood's disclaimer, one may look back over the history of Presidential denials and find at least six reasons that will justify a change of heart: (1) The emergence of conditions which did not exist at the time the denial was made, and which, of course, put an entirely different complexion on the matter; (2) the unanimous demand of the people, before which every statesman must bow; (3)the vital interests of the party, which must always be placed above one's personal interests and inclinations; (4) ultimate, though not belated, recognition of the fact that no man is too big for the Presidency of the United States; (5) a stampeded Convention; (6) the act of God. The business of running for President of the United States is one of the few subjects on which a man may eat his words without ceasing to look his fellow-citizens in the face.

There is one paragraph in the President's message on foreign affairs which will stir the reader's mind to reminiscence. The paragraph has reference to a recently concluded commercial treaty with Japan. Japan? Where has one heard that name before? Ah, yes, that was some time ago when a Japanese fleet was stealing its way with covered lights into San Francisco harbor; when Japanese emissaries were taking soundings in the Gulf of Mexico, the Bering Sea, and off the Ninety-sixth Street pier in the North River; when the Japanese Government had bought up by secret treaty every available naval harbor and coaling station on the Pacific Coast of Mexico, Peru, and Chili, and had refrained from entering into a similar agreement with Bolivia only because Bolivia is very much like Switzerland. Where is Japan now? We sit now in the cold, gray dawn of the morning after and can only wonder at the nightmare panics and alarms that followed one another at intervals of a few months, without cause, without reason, without any other source than Capt. Hobson's and Mr. Hearst's mental and moral indigestion. To think now of war with Japan is laughable; yet there were times when men of sense feared the worst. Of such stuff are most international panics and perils made.

Besides the three conspicuous subjects of the parcels post, the postal savings banks, and the proposed readjustment of postage rates by increasing that on magazines and newspapers and reducing letter postage to one cent, the Postmaster-General's report touches on other matters of public interest. The recommendation is renewed that the franking privilege be discontinued, and that instead of this utterly vague and unlimited power to use the mails without charge there be substituted "the use of special envelopes and stamps in the free transmission of official mail, such envelopes and stamps to be furnished on requisition through the agency of the Post Office Department." This proposal of reform certainly does not err in the direction of being too radical; the franking system as it is bears altogether too close a resemblance to the flagrant free-pass abuses which have been got rid of in recent years. To show that the wiping out of the deficit was accomplished without curtailment of postal facilities, the Postmaster-General mentions a number of facts that are interesting, such as the introduction of carrier delivery in 186 additional cities, the establishment of 2,516 new rural routes, and a considerable increase in the average salaries of carriers and clerks. In the direction of improved administration, the most notable point made is the reorganization of the railway mail service, which has not yet been completed but of which, says Mr. Hitchcock, "the final result will mean a tremendous saving to the Government, accompanied by important benefits to the employees of the service." One of the features of the improvement is the recruiting of the railway mail service solely by promotion from among the trained employees of the post offices.

It is to be hoped that the New York Chamber of Commerce will give its emphatic approval to the project placed before it last week, looking to the establishment of an international commission on the cost of living, upon the initiative of the United States. The difficulty and importance of the inquiry alike make the coöperation of the leading nations of the world essential to its successful prosecution; and it was a

Digitized by Google

happy inspiration that led Prof. Irving Fisher of Yale to propose the scheme, and to sound prominent economists, in this country and Europe, as to the desirability of such a plan. His inquiries have met with the most cordial response on all sides. Some look forward to remedial governmental measures as a possible or probable outcome of the inquiry; but, irrespectively of any such prospect, it is felt that a really thoroughgoing research into the facts will be sure to prove of the highest practical importance, as well as of great scientific value.

The indications are that the meat-packers' trial in Chicago will witness a further extension of the great American principle of trying a case twice, once after the jury has been selected and once before. Of this principle, the proceedings in the Los Angeles trial, now happily brought to a close, offered an extraordinary application. When talesmen were being examined by counsel, they were asked substantially, "If we should argue that the *Times* building was blown up by gas, what would you do?" or, "If we should argue that the *Times* building was blown up by dynamite, what would you do?" Such questions reduce criminal practice to admirable simplicity, since it is an obvious advantage to begin a case with the knowledge that the jury is going to find for your client. And so in Chicago: Have you any views on Government regulation of commerce? Are you a farmer, and thus a natural enemy of pork-packers? Are you a salesman or small merchant, and thus an enemy of Trusts? Are you an ultimate consumer, and thus prejudiced against high prices? Such attempts to try the case while selecting the jury are all the more inexcusable because they are obviously ineffective. When quizzing and cross-quizzing have stopped, when challenges for cause and peremptory are exhausted, you get twelve men into the box whom you might as well have picked the first day or two, so far as their final verdict is concerned.

The statement by the officials of the Federation of Labor is cleverly written and takes certain positions that are to be commended. It puts on record an explicit expression of satisfaction in the vindication of justice in the case of the McNamaras, and declares that their "grave crime" teaches the salutary lesson of the "futility of resorting to violence." On the main question, however, of the violent championing of the McNamaras by the labor leaders, and their violent denunciations of all and sundry who thought the men might be guilty, the statement is necessarily labored and weak. No explanations after the fact can alter the mischief that was done before it. We are now told that "the most cautious reasoners" among the organized workers had convinced themselves that the *Times* building in Los Angeles was destroyed by an explosion of gas. But if they had been really cautious they would have waited for the evidence, and not have filled the air with cries about a "frame-up" and perjured testimony. They may have been cautious reasoners, but they were most incautious speakers. It is too late for them to assume a judicial attitude, and ask for a suspension of judgment. They did not suspend their judgment for an instant, and by their reckless folly marked themselves out as unsafe leaders. They now speak as men chastened by the event, and with their authority and even their official positions imperilled; and if the public does not now credit their solemn asseveration that they never dreamed that the McNamaras were guilty, whom have they to blame but themselves? Mr. Burns continues to assert that some of them long ago knew the McNamaras to be guilty.

Monday's estimate of this season's cotton crop, by the Agricultural Department, was for 14,885,000 bales. To appreciate exactly what that means, it must first be pointed out that 13,800,000 bales is the largest crop ever previously picked, and that even that crop (in 1908) had been underestimated by 900,000 bales in the Government's December forecast. This great "cotton year" has followed a series of years in which the cotton belt's story was curiously different. Not very long ago, the spinners of the world used in one season 12,400,000 bales of American cotton. That was obtained from the large crop of 1908; and it was then estimated by the late Thomas Ellison, the Liverpool statistician, that, under normal conditions of yield and price, the spinners would require 12,438,000 bales in the following year, and about 200,000 more in the next. But the American cotton crop of 1909 was only 10,500,000 bales; in 1910 came a more successful harvest, but with a yield of only 12,100,000. As a consequence, cotton went to 16 cents a pound in 1909, and in 1910 it sold at 20 cents, a figure never before touched in American history, except in the paper-inflation period and the wild-cat bank days of 1835 and 1836. The necessary outcome was hard times in the spinning trade, thousands of cotton-mill employees out of work in Europe and America, and high cost of clothing to the masses.

Such prices, in accordance with a rule of human nature, induced the South to plant in 1911 the largest acreage on record. The 15,000,000-bale crop, exceeding all others by a million bales, resulted. It is doubtless more than the spinners can consume in a single twelvemonth; indeed, up to the present date the New England mills have used less cotton than a year ago—unquestionably because the buyer of clothing has not yet forgotten the lesson taught him by the experience of the past two years, that it is possible to make the old suit of clothing last a good deal longer. But with cotton now at 9 to 9½ cents, instead of 20, a change in this regard is bound to come. In due course, the old way of doing things will be resumed by the consumer, mills will again run at full time, and prosperity will return to a great American industry. The other side of the matter concerns the cotton-producer, who complains that the fall in cotton prices has brought down the value of his crop almost to cost of production. Numerous expedients of relief have been suggested—most of them, we are sorry to say, so utterly repugnant, not only to political economy but to ordinary common sense, that they have been discarded as soon as proposed. We have seen only one which was practicably workable or economically defensible, and that is the tentative plan of the New York syndicate to arrange for such advances of funds to planters as should avert the necessity for a sudden and wholesale "unloading" of their crop, the moment it had passed through the ginneries. There are possibilities of beneficent reform in the cotton market, if this plan is made effective; but it would need the most judicious management.

The finding of the joint navy and army board which examined the wreck of the Maine in Havana harbor confirms the report of the Sampson Board and seems to establish beyond all cavil that the explosion was an external one. It will be remembered that several of the officers of the Sampson Board, including Rear-Admiral Chadwick, were convinced against their own prepossessions that it was an external explosion. He and his associates of that board must feel gratified that the laying bare of the wreck has clearly proved how careful on the whole was their work. By a process of elimination, they arrived at the conclusion that the disaster could not have been due to internal causes. They seem to have erred only in the exact location of the explosion, which appears to have been ten or twelve frames further aft than the Sampson Board had thought. Again, the Vreeland Board finds that the explosion was not caused by a torpedo, but by some "low form of explosive" which eliminates the possibility of a torpedo or some instrument charged with a high explosive, like nitro-glycerine, and points towards a submarine mine charged with gun-powder.

Beyond this, it appears, the Navy Department will not give out further details of the Vreeland report, and what it has published is, of course, of no value whatever in revealing the authors of the explosion. Apparently, the Maine's destruction bids fair to remain one of the world's great mysteries. If the Vreeland report is correct, the deadly mine must have weighed hundreds of pounds and required the efforts of many men to get it overboard and anchored in just the right place. Yet no one has ever been found who knew anything about it or saw anything suspicious. After thirteen years and the complete downfall of the Spanish power in America, no one has confessed anything and the United States is as much in doubt as to whether Cubans or Spaniards, officials or men in private life, were responsible as when the news of the disaster was received. If it was a conspiracy, it has been one marvellously well safeguarded by those involved, and with each year the chances grow less of ever obtaining the actual facts.

President Taft's refusal to interfere in the case of five young men dismissed from West Point for drunkenness ought to discourage a time-honored manœuvre. When a cadet or a midshipman is deemed by the authorities at West Point or Annapolis to have so far transgressed that nothing but dismissal is to be thought of, then, in the minds of his relatives and friends, the fight is only begun. The scene of conflict is shifted to Washington, and every appeal and form of pressure that can be conceived of is brought to bear upon members of Congress. In the present instance, no fewer than five United States Senators lent their influence against the upholding of discipline at West Point. The President's reply was comprehensive. He not only refused their request, but told them that he would veto any bill to restore the cadets. Doubtless the five Senators retired in good order, if not with all the honors of war.

To Mr. Andrew D. White's suggestion that the Russian Government be invited to debate the passport question before the Hague Tribunal, there is at least one weighty objection. Recourse to The Hague should be had when diplomatic measures have failed. If it were a question of going to war with Russia over the passport question or going to The Hague, right-thinking men would prefer the latter course. But that is not at all the alternative we face. As has been stated before in these columns, the argument of those who favor the abrogation of the treaty of 1832 is just this: the treaty does not justify Russia's treatment of the American Jew, but if Russia insists that it does, then do away with the treaty. It would be a question for The Hague if this country, while insisting upon all the benefits accruing to it under the treaty of 1832, nevertheless demanded that Russia should meet our views in the matter of passports. It is not a question for The Hague if this country decides to forego any advantages that may accrue to it under present conditions by bringing the treaty itself to an end. A denunciation of the treaty by Congress would supply the State Department with a powerful weapon for negotiation. During the year that must elapse before notice of termination becomes effective. Russia could undoubtedly be brought to see reason.

It is difficult to follow all the ins and outs of the new suffrage agitation in England, but one capital fact stands out. It is that, for the first time, a responsible and influential Minister of the Crown has come out squarely in favor of giving the ballot to women on the same terms as to men. Mr. Lloyd George did this in a speech at Bath, in which he linked woman suffrage with the humane causes which he has at heart, saying, among other things, that "if women by their presence on the register saved us from the infamy of a single war they would have justified their vote before God and man." What Lloyd George committed himself to was advocacy of an amendment to the Government bill for manhood suffrage, next year, including the vote for women. The Premier has definitely pledged himself, in case such an amendment is carried, to make it a Government measure along with the rest of the bill. The so-called Conciliation bill, which even the militants had agreed to accept as a payment on account, would have enfranchised about a million women; the amendment which Lloyd George now favors would give the vote to six or seven millions.

It is already apparent that, whatever may be the effect on his personal fortunes, W. Morgan Shuster's stand against Russia's throttling tactics in Persia has been of service to that country. Lord Morley's statement in the House of Lords last week makes it plain that the better conscience of Great Britain has been roused against slavish adherence to a compact which Russia seemed determined to turn into an instrument for undermining Persian independence. It is also not improbable that the British sporting spirit has been impressed by Mr. Shuster's single-handed fight against what professional diplomats have regarded as the inevitable. At any rate, while Lord Morley was still under the necessity of deploring Mr. Shuster's lack of tact, he joined with Lord Curzon in expressing admiration for the young official's energy and motives. It is hard to imagine that Russia's renewed assurances that she has no designs on Persian independence were not forced by recent events at Teheran. That is one distinct gain. Another is England's declaration that she will not sanction the ex-Shah's return to power.

THE "PRESIDENTIAL PRIMARY."

Now that the Republican National Committee has met in Washington, there has been much talk about ways and means of getting an expression of "Presidential preference" from the voters of the party. This has been caused partly by the fact that the machinery for a Presidential primary has been set up by law in five or six States. And in Congress Senator Cummins has introduced a bill to bring about the election of all delegates to National Conventions by a direct primary. His measure fixes the date of such primary as August 1 in each Presidential year. This alone would make it certain that the proposal of the Iowa Senator is not intended to go into effect in 1912, since the Conventions will undoubtedly be called for a day in June or July. It is doubtful if Senator Cummins will even press the matter at this session. Indeed, the whole subject is thus far treated in a tentative manner only. As six-sevenths of the States have made no legal provision whatever for any such test of party sentiment on the Presidency, the National Committee cannot include the device in its "call" for next year's Convention. In Ohio it has been proposed to try the matter out by voluntary agreement, and the President's friends are said not to be averse to doing so; but even there the plan is enveloped in doubt, and except in the handful of States where the statutes have provided for a Presidential primary, we shall doubtless hear little of it as a practical matter.

Nevertheless, the movement has a genuine interest. It indicates an honest and growing dissatisfaction with the methods at present employed to elect Presidential delegates. And with the coming all over the country of direct-primary laws for the nomination of State and city officials, as well as Representatives and Senators, what more natural than that the nomination of a President, too, should be thought of as something about which it would be well to give the members of the party a more direct voice? The National Convention, as a means of placing candidates for the Presidency before the people, is plainly an improvement over the old way by Congressional Caucus. But the Convention, in its turn, has come to appear to many to have gone stale and to be losing authority, so that plans for freshening it up and restoring its prestige stand a good chance of getting a hearing. Of these, the suggestion of a Presidential primary appears to be most in favor.

A scheme for carrying it out was embodied in the reform legislation of New Jersey, enacted last winter. Section III of the Geran law provides that "all delegates and alternates to the National Convention of the political parties in this State shall be chosen at primary elections." The Secretary of State is to be notified by the chairman of the State Committee, "on or before the fifteenth day of April in the year in which a President of the United States is to be elected," of the number of delegates to be chosen, which number shall then be certified by the Secretary of State, before April 20, to county clerks. The latter are then to put the established primary machinery in motion. Candidates for the position of delegate may be grouped together, and "may also have the name of the candidate for President whom they favor placed opposite their individual names, or opposite such groups, if they so request in their petitions, under the caption, 'Choice for President.'" Moreover, the Geran law provides that in the Presidential primary, as freely as in that of the State, citizens can by petition get placed upon the primary ballot the names of independent or rival party nominees for delegates. How this plan will work in New Jersey, remains to be seen, but its intent is obviously to give the voters the opportunity to make their Presidential preferences known with more clearness and effect than ever before.

Some are confidently predicting that, by the time four years more have rolled round, the Presidential primary will have become universal. A good deal will depend, however, upon the success or failure of the method in the half-dozen States which resort to it this year. Perhaps even more will depend upon the way in which next year's National Conventions conduct themselves. If they are suspected of being boss-ridden, or are plainly manipulated, the impetus given towards an entirely new order of things will be marked. But, on the other hand, if the Conventions bear genuine marks of free conferring together and unforced voting, it will be generally thought that there is life in the old institution yet.

One report which came from Washington bears on the proposal to have Presidential primaries, in a way that may be malicious, but it is at least interesting. It is said that Mr. Roosevelt's friends are against the idea of primaries. This is not because they "distrust the people"—perish the thought! But if the Colonel's name were to be put forward in a primary as early as May or June, it would compel him to say explicitly whether he wanted it done or not. His friends feel that this would be awkward—for them. What they are figuring upon is a stampede to Roosevelt in the Convention. That could be much more easily engineered for an unwilling candidate than a primary campaign. We give the rumor for what it is worth, and will only remark that, if there is any truth in it, the result will be to make the Taft managers even more careful than they were in 1908 to see that their delegates can be guaranteed, not only to "stand hitched," but to be proof against a half hour's yelling for Teddy.

THE RAILWAY SECURITIES REPORT.

Much was expected from the very able commission which President Taft appointed to inquire into governmental regulation of the issue of railway securities, and its report meets the hopes inspired by the men. President Hadley and his associates, Messrs. Judson, Strauss, Fisher, and Meyer, have shown not merely that they know how to dig into a complicated matter, but that they can present the results of their investigation in an orderly, lucid, and convincing manner. The very style of the report is interesting. Seldom in an official publication does one meet with such pungent phrasing. There are many crisp expressions that tempt to quotation. For example:

> We are told that if it was possible to standardize food by a Pure Food law, it ought to be possible to standardize railroad securities by a securities law. It is possible—to the same extent and no more. The Pure Food law enables a man to know what he is buying. It does not certify that the thing he buys is good for him. That is left to his intelligence. The Government cannot protect the investors against the consequences of their unwisdom in buying unprofitable bonds, any more than it can protect the consumers against the consequences of their unwisdom in eating indigestible food.

It is, however, the substance of the report that is the main thing, and this is of great value. It goes deeply and

Digitized by Google

with expert knowledge into the whole question of railway financing and the relations to it of both Federal and State Government. With patience and close scrutiny it takes up one after another of the "happy-thought" solutions of the problem which have been offered, and shows in detail how they would be either unworkable or mischievous. To some this will seem the most valuable service done by the report. It disposes of many nostrums. What it recommends is done cautiously. It clearly sees evils and earnestly seeks remedies, but nowhere is it under the delusion that a vast complex of established interests, in which the future of the country is bound up, can safely be cut through by an improvised legislative sword.

One thing that stands out in it is its strong appeal to the States to do their duty in the matter of regulating the issue of railway securities. With only one important exception, all American railways are State-chartered. In reference to corporations of their own creating, the States may make any kind of laws they choose. If they desire stringent regulation of railways they can have it. They can, if they please, allow the issue of stock for less than par. They can dictate the bookkeeping of the companies; can compel them to the most absolute publicity. In all these ways and others, the States have powers which they have not exercised, and obligations to which they have not risen. The Commission's report is, in its way, as stirring a summons to the States as was Mr. Root's famous speech. In our opinion, it is made thereby the more wholesome.

The Commission, however, is not averse to an exercise of the power of Congress over interstate commerce. The diversity of State legislation being what it is, and the bringing of State railway charters and the methods of State railway control into something like uniformity being necessarily a slow labor, the report favors the invoking of Federal authority. Only, it would be very careful to draw the line between what can be done by statute and what cannot, between reasonable expectations and wild dreams. In the matter of the so-called "physical valuation" of existing railways, for example, the Commission points out that, if this is undertaken, it should not be with the idea of reducing the amount of outstanding securities or preventing new issues simply because the total "exceeds the physical value of their properties." The Commission declares that any attempt in this way to "scale down old securities" would be both illegal and inexpedient, would tend to great direct loss, and, by its destruction of confidence in American railway investments, would inflict indirect loss that would be "immeasurable." Moreover, it adds, "such a readjustment would become archaic almost from the outset, because an adjustment of securities based upon the values of to-day might be totally erroneous to-morrow."

What, then, would the Commission have Congress do? In a word, make all the stock and bond transactions of railways as open as day. It would not favor Government authorization of securities, because that would tend to create the impression of a Government guarantee of values, and this, as the report asserts, "no administrative authority can safely give." But every scrap of information relating to securities the railways can be compelled to turn over to the Interstate Commerce Commission, and this is the main recommendation of the report. It would have complete publicity given to actual facts regarding every share of stock and every bond—how they were issued, what was the consideration for them, the amount of the proceeds, and how they were used, the names of the parties concerned. Many other details and stipulations the Commission would insist upon having made public, as respects all the financial transactions of railways, including the disposition of surplus, the aim of the whole being to put an intending investor and the public in possession of the fullest possible knowledge. It is to this kind of systematized information that the Commission pins more hope than to any scheme of Government "standardizing" or guaranteeing of railway securities. We have but hinted at the broad scope of the report. It should be read entire by any who wish to see trained intelligence and perfect candor applied to a great governmental problem.

CANADA AND "CONTINENTALISM."

On this side of the line, the reciprocity proposal was viewed almost wholly as a question of economics. When Mr. Taft, opening his campaign of education in the notable speech he made at the press dinner in this city, spoke of Canada being at "the parting of the ways," the idea of firing the hearts of the people of the United States with the prospect of the absorption of their neighbor to the north was as far as possible from his thoughts. But with that want of sensitive imagination which has on so many occasions involved him in almost fatal embarrassments, he made use of a phrase eminently fitted to alarm patriotic Canadians, while all that he wished to impress upon the people of this country was that the opportunity for tariff reciprocity, if not seized at this time, might not again appear, owing to the possible or probable growth of the system of Imperial preference. But the speech was one that he had deliberately written and read; and *littera scripta manet*. When the time came for an appeal to Canadians to rally round their flag and reject the overtures of Yankeedom, Mr. Taft's unlucky phrase did yeoman service for the anti-reciprocity men. Fortunately for them, what the President's innocent words merely permitted them to infer by construction had been grossly bellowed out by the Speaker-designate of the House of Representatives; and the Canadian alarmists would have been either more or less than human if they had not taken the utmost advantage of these real or supposed evidences of the annexation spirit. Nor can there be any doubt that the appeal to the sentiment of Canadian individuality, as well as of Canadian loyalty to the mother country, was a decisive influence in bringing about the anti-reciprocity victory.

Whether annexation was really regarded by any considerable number of Canadians as a practical danger, as in any sense imminent in case reciprocity was adopted, it would be difficult to say. Probably many of those who made the greatest outcry about it would answer, if closely questioned, as one distinguished Canadian did who visited this country after the election.. "Do you think there was really anything in the annexation cry?" he was asked. "There was nothing in it," was the reply, "but it was very useful." And yet the matter cannot be disposed of in an epigram. The case is not very different from that of the Channel tunnel question, which has been coming up in England, at intervals, for something like half a century. It would be a notable convenience, it

Digitized by Google

would be a considerable economy, and a great many people have demonstrated to their own entire satisfaction that it would not constitute any danger to England, as "compassed by the inviolate sea"; but so long as there is any standing-ground for the belief—and in the opinion of some very able judges there is—that the tunnel would, under conceivable circumstances, make invasion possible, Englishmen will have none of it. What the reciprocity campaign has really brought out is the unsuspected presence of this same kind of intensity in Canadian sentiment. Probably comparatively few Canadians really feared that reciprocity would bring annexation in its train; but hundreds of thousands showed their intense attachment to Canadian independence and individuality by rejecting a proposal which, rightly or wrongly, they felt would weaken its defences.

In an article in the *Nineteenth Century and After*, under the title "The Defeat of 'Continentalism' in Canada, from a Canadian Standpoint," this sentiment of Canadian patriotism is represented largely in the light of an extreme distrust and dislike of the United States, or rather of certain traits which are regarded as peculiarly characteristic of this country. According to the writer of this article, Rudyard Kipling's message to the people of Canada was the real keynote of the campaign. "It is her own soul that Canada risks to-day," Mr. Kipling declared. And he went on to speak of our enormous number of murders, of our "haste and waste" in dissipating our resources, of the inevitable result which must follow if Canada pawned her soul to us, in the shape of conformity to "the commercial, legal, financial, social, and ethical standards which will be imposed upon her by the sheer admitted weight of the United States." This message, says the *Nineteenth Century* writer, "was printed not as a paragraph, not as a column, but filled an entire page in many of the leading Canadian newspapers," and he ranks it as one of the most notable public utterances of recent years. What the writer himself thinks of Yankeeland, he makes no effort to conceal; it is quite plain that he regards us as eaten up with corruption, as wholly devoid of sentiment or idealism, and as given to lawlessness in a degree almost inconceivable in a civilized people. This state of mind diminishes, of course, the trustworthiness of his testimony as to what actually took place in Canada; but, after all allowance is made for this, one finds in the article only an extreme manifestation of what, in more reasonable fashion, must have been operative in the minds of a great number of Canadians.

How sensible Americans should feel about all this, and how they do feel about it, is an interesting question. For our own part, we strongly suspect that, take the whole population—even though it includes some few who are not sensible—the result of a campaign in which annexation of Canada was the issue would be very different from what the sapient Champ, in a recent utterance, confidently declared. He unhesitatingly asserted that in such a campaign the annexationist would beat the anti-annexationist ten to one. Our confidence in the sober sense of the American people forbids such a conclusion. We believe that every day of discussion would strengthen the hands of those who hold to letting well enough alone; who feel that we have enough to do to work out the problems of our present vast and diversified population and territory; who are conscious that, along with the qualities of which the nation is justly proud, there are others in regard to which it has ample reason for serious misgivings; who see no reason why a free, prosperous, contented, and progressive nation alongside our border should be asked to merge its individuality with ours, adapt its institutions and customs to our system, and throw overboard its own traditions and preferences. It is not necessary to subscribe to the indictment made by a prejudiced Britisher in order to recognize that we are not the model of perfection; and even if we were vastly nearer perfection than we are, the idea of recasting into our mould another people, having their own excellences, their own distinctive qualities, good, bad, and indifferent, would offer no attraction to a well-balanced mind. On the contrary, we have reason to rejoice that some variety of political and social development, some difference in the tone and temper of individual life, has been supplied by the accidents of history in this vast continental area covered by English-speaking people. An all-absorbing Continentalism is as little to be desired by the United States as by Canada.

THE REAL AWKWARD AGE.

Who nowadays has a kind word for the middle-aged man? In Chicago they have just organized a league to war against the cruel practice which makes it difficult for the man of forty-five to procure employment. Such a practice, if generally accepted, would be enough to condemn any economic system which made it necessary. And yet there is in it negative recognition at least of the fact that the man of middle age does exist. No such hint meets us in the general run of daily news, in science, in literature, or on the stage. In the famous controversy precipitated by Professor Osler, it was the armies of the young and the old that engaged in fierce combat. Dr. Osler having said that the world would be just where it is to-day if all the achievements of men above forty were wiped out, people immediately began to draw up lists of men who did great things when they were above seventy. Between lay a significant but unnoticed gap. The quarrel between youth and old age is constantly breaking out anew. One day youth scores with a Cabinet Minister of thirty-two. The next day old age comes back with a golf champion of seventy. The Sunday supplements alternate between women who are grandmothers at thirty and men who grow a new set of teeth at seventy-five. The romances of January and May are never-failing in the news. But the humdrum experiences of the middle-aged attract no one's attention.

Thus in the debates between crabbed age and youth the middle period has been virtually abolished. It is assumed that when a man ceases to be young he is old; when he ceases to be sprightly he becomes automatically venerable; when he ceases to be fiery and ambitious, he sits by the fire and bores people with his reminiscences. So, the modern stage and the modern novel know only two kinds of lovers, the young lover who is romantic, and the aged lover who is tragic. The middle-aged lover needs only to be mentioned to be ridiculous. His is the time of life when the hair begins to grow thin without assuming the prestige of gray locks or a fine bald forehead; when a man no longer expects to become president of the company and has not yet laid up a secure investment in stocks and bonds; when a man has lost his taste for musical comedy and has not yet

Digitized by Google

learned to read Carlyle's "French Revolution" by the family lamp. The middle-aged man to-day is in the awkward age.

And yet one need not go to the census figures to realize that there must be many men between the ages of forty and sixty living at the present time. The middle-aged man, like those other uninspired figures, the plain citizen and the man in the street, is the main burden-bearer of our civilization. He is the father of sons and daughters just old enough to make him worry over college fees and boarding-school bills. He is just old enough to have his sons and daughters scoff at his views as quite old-fashioned, but he is not old enough to impose those views on his youngsters without resorting to argument. He is the keystone of modern suburban development, being in a noticeable majority on the commuters' trains and at taxpayers' meetings. He is the man to whom the influence of gold production on prices is not an academic question. He is, in fact, at that age when few questions are academic. Youth can solve the Trust question with a beautifully comprehensive theory. Old age can discuss the question from the standpoint of history. But this common, middle-aged citizen envisages the problem under the concrete aspect of rent, grocers' accounts, telephone rates, and life insurance. Naturally, he is not a romantic figure. In an age where the grandfathers and the grandchildren divide the attention of the world between themselves, he is just the undistinguished, routine, bill-paying father.

If society takes so little notice of the middle-aged man, it must be because society to-day has little patience with anything that is not extremely one thing or another. To-day Conservatism is respectable and Radicalism is respectable, but if you wish to hurt a man's feelings you call him a Moderate; Mr. Shaw calls him a snivelling Liberal. In business, Mr. George W. Perkins has abolished the middleman. In the broader social field, Mr. Debs has abolished the middle classes. In society they have abolished the middle initial, writing H. Jerome Jones where we used to write Henry J. Jones. It takes a man of real courage nowadays to say a good word for the once popular golden mean.

FORMING PRIVATE LIBRARIES.

The number and variety of books found in the shops at this season must be the wonder of all beholders. Much might be said of the handsome editions, with their elaborate illustrations, some of them in color, many real gems, if others are tawdry—stretches of river and farmstead, glimpses into lovely old gardens, splendid ruins, some highly successful interpretations of symbolic poems, and new ways of looking at things all about us, such as Mr. Hornby's etchings of Broadway. But what particularly strikes us is the sheer extent of the output. Bewildering it must seem to many, and the doubt will be what to do with so many books. Taken together with those issued in recent years, they include, in convenient form, over and above a host of novelties and superannuated nothings, virtually every important work that survives since the world began; not only all the masterpieces of European literature, in the broad sense of the word, but a great many lesser books which are useful for sketching in the background of the various periods. The last few years have seen a brave attempt to reclaim the best thought of the Orient as well; in fact, it would be hard to mention a country some of whose works the bookmakers have not been concerned to bring out in English translations.

Much has been heard of the demoralizing effect of too many books, and we do not deny it. The deal of trash for every good book that appears cannot fail to do harm, mainly in diverting people from what is excellent. Yet there are rare possibilities in the present situation. The chance to form valuable private libraries was never so great as to-day. Generally it is thought that no library is a thing of pride which does not boast a rare first edition or so, a few curious old miscellanies, and, let us say, a volume of Horace's odes wherein an eighteenth-century ancestor has written his own translation of "Integer vitæ." On the other hand, many prized collections have had great gaps in them which would seem scandalous to-day. The fad of bibliophiles has put an undeserved cheapness upon modern reprints. True bookishness, in point of fact, is not always antiquarian; for the majority of mankind it ought to be enough that for moderate expense they can have beside them what the great minds of all ages have thought and felt. This, rather than any desire for the old or merely curious, was what spurred on Petrarch in his perilous journeys in quest of classical writings. To-day the labor of book-hunting is not what it was then, and yet there is often weariness of the flesh in it. Books come to us too lightly, and in our surfeit we let slip the chance to surround ourselves with what is truly good.

We suspect that many readers lack a library because they do not know how to make a beginning of it. The desire for it is often there, and plenty of pathetic cases still exist of men, like the brothers in "What Every Woman Knows," purchasing five yards of the world's best literature. Publishers are willing—somewhat too willing—to give advice. Strange to say, the masses have been better directed in this matter than those with thicker purses. But it remains for scholars to draw up longer lists of inexpensive but good editions of works, ranging from ancient to modern times, to which the library-builder may turn with confidence. A single public lecture has been known to start men reading. Yet too often the impulse is short-lived for lack of sufficient understanding of the implements. There are, of course, such inclusive series as Everyman's Library, but each year sees a number of new collections, and the reader's confusion grows. With expert assistance one ought to be able in a few years, at a very moderate expense, to assemble a general library of literature, philosophy, and history, and with a few science books to boot.

But would men read, once they had the proper books? Love of good books may be inborn, but in no small measure it can be acquired. Like one's fondness for pictures, it may grow from a habit into a very active enjoyment. Many will recall their puzzlement, even boredom, upon first visiting a gallery in Europe, and then from an increasing familiarity with the pictures the feeling of friendliness that came as if from old acquaintances. It would be hard to determine how much in the appreciation of art is genuine, or truly understanding, and how much rests upon manifold associations with the objects viewed. But the initial *rapprochement* is the main thing, and that is a mechanical process. Travel-worn business men are known to have thanked God

Digitized by Google

vociferously upon reaching a European town that owned no gallery; and yet to the galleries they do go, and willy-nilly carry away some knowledge. It is true, we believe, that this particular class knows more about pictures than about literature. Yet the book habit should be the easiest of all to form. We have no illusion that by artificial means people can be turned of a sudden into a clerk of Oxford who would rather

> have at his beddes heed
> Twenty bookes clad in black or reed,

than a comic supplement. There are nevertheless plenty of families whose capacity for good literature is not extinct, and who with the proper kind of help would take pride in having a library. And who shall say that with the knowledge that they had directly at hand the main ideas which have made their present existence what it is, they would not browse a bit, until from the habit there came a wholesome curiosity?

Correspondence

GREEK AT OXFORD AND IN AMERICA.

To the Editor of The Nation:

Sir: Of those who were present at the meeting of the Oxford Convocation on November 28, few will ever forget the occasion. Not only was the assembly of scholars impressive, but the number of members who had come up to vote on the proposed statute (intended to relieve honor students in mathematics and natural science from compulsory Greek at the entrance examinations) showed how deeply the graduates are interested in the subject. Since the matter had received much discussion in previous meetings and in the press, only four speeches were made, two on each side, all of exquisite moderation and urbanity. The fact that on previous occasions the motion has been opposed by scientists so distinguished as Sir William Osler, regius professor of medicine, is perhaps no less surprising than that yesterday it was supported by men of letters like President Warren, professor of poetry, and Sir Gilbert Murray, regius professor of Greek. And probably the failure of the proposed statute, considering the conservative tendency of convocation, was surprising only because of its decisiveness—a vote of 595 to 360. But perhaps the most striking characteristic of yesterday's meeting, as of the whole discussion in the press, was the attitude towards Greek almost universally expressed or assumed. Supporter and opposer of the motion alike are interested in the preservation of the Greek influence, and differ in tactics rather than in sentiment.

It is, of course, dangerous to suggest that Professor Murray, devoted as he is to Greek studies, is standing on insecure ground. Yet to many his exchange of questions with his interrupters seemed beside the issue. Obviously, as his hearers were ready to admit, he is at least as sincere as they in his wish to preserve the Greek influence. But granting, as most men who are acquainted with the science students would willingly grant, that a few months of compulsory Greek grammar is not conducive to anything like the "Greek spirit," is that a proof of the utter uselessness (to borrow a favorite word of the scientists) of Greek for the scientist? Professor Murray rightly maintains that the intellectual salvation of the illiterate man does not rest in Greek grammar, but in English—meaning, perhaps, that the science student is illiterate?

The real case for Greek for the scientist does not rest only in its occasional usefulness to him as a scientist, but on its constant importance to him as a man. In America we are a little too apt to regard Greek as the proper food for future teachers of Greek, and for them only; is it all a fallacy that the British Government finds its best candidates for the civil service among the students of Litteræ Humaniores? Though the great majority of science students and engineers, trained in the technical schools and in the newer universities of England, must of necessity be without Greek, it is not too much to hope that a small minority of them, trained in the two universities that have always supplied most of England's leaders, will have the benefit of Greek as well. If, as one of yesterday's speakers remarked, Greek is contrary to the spirit of the age, then let us have Greek as an antidote to the spirit of the age, or to that part of it which we cannot admire!

But here Professor Murray, playing unwillingly, as one feels, the rôle of devil's advocate, says with utter frankness and truth that a few months' cramming in Greek grammar is no antidote. In deference to his weighty authority, the question becomes a choice, not between Greek grammar for the science student and the lack of it, but between Greek grammar and some other method of approaching Greek. It is generally admitted that the Oxford "Greats School" (Litteræ Humaniores) owes its prestige largely to the fact that it requires, in addition to a knowledge of details, a mental grasp and power of reflection in philosophical or in historical fields. It should seem quite practicable to offer the science student who chafes at Greek grammar the alternative of a certain amount of this type of training, which may be acquired from the study of history and of English translations of classical texts. This type of work would appear, it may be noted, more congenial to the scientist's mind than would Greek grammar; it would give an elementary training of a humanistic nature (more than the present requirement can pretend to give); and since such training would best be given in the university, it would not debar scientific students from coming up from schools where Greek is not taught. Not the least consideration is the practical one. Professor Murray disclaimed the idea that his concession is "a sop thrown to an angry crowd"—*i. e.*, the threats of a royal commission to reform the University from without. Granting, with him, the inadvisability of retaining the stumbling-block of Greek grammar for scientific students reading for the honor degree, I venture to suggest that such a provision as I have outlined would have a very fair chance of finding favor with a royal commission.

For the question is not closed. There is no little measure of truth in the cry of the *placets* that the ranks of the *non placets* were swelled yesterday, as frequently, by large numbers of clergymen who came up from the country to vote—men of undoubted sincerity and integrity but men in less immediate touch with Oxford than the regius professor of Greek and Congregation (the resident body), both of whom are in favor of the change. Sooner or later the question will arise again if indeed it is not taken up by a commission. What seems to me to have happened is this: the non-resident members of the University have illogically blundered into a logical position from which a modification of the requirement of Greek for scientific students can be made. If Congregation had had its way, it is doubtful whether any form of Greek could ever again have been instituted for the science men. And though Oxford should and will develop strength in science, her scientists should be men of broader ideals than those who have merely a technical education.

For the American universities the matter is instructive. America's need for the Greek influence is as great as England's; but her methods must be different. The ideal of Oxford and Cambridge, for better or for worse, is aristocratic; it aims at the training of leaders, not of average men. For this reason, Oxford or Cambridge without Greek would be like a beautiful and ancient palace, hung with ancestral portraits, whose names the present occupants had not the curiosity to learn. It would be pardonable for the footman or even for the butler to know nothing about the deeds and the ideals of "the family's" forefathers; but on the family itself rests the responsibility of working out the ideals under which it has been brought up, modifying them as new conditions arise. In the American university, for better or for worse, the ideal is democratic. Leaders emerge from the ranks from time to time, but that is of secondary importance; we look to our universities for a force to raise the general level of the nation. If Greek is to be an influence in this force, it must come not only through the specialized work of scholars, but through a wider knowledge of Greek ideals among "all sorts and conditions of man"—not necessarily acquired by a first-hand acquaintance with Greek texts. Cannot the American universities find a larger sphere for Greek than the classroom of the specialist? William Chase Greene.

Balliol College, Oxford, November 29.

GOVERNMENT BY EXECUTIVE DISPENSATION.

To the Editor of The Nation:

Sir: The scheme of government by executive permission or dispensation, in lieu of government by law, which was inaugurated by the combined action of the Steel Trust and President Roosevelt in the Tennessee Coal and Iron matter, is evidently bearing fruit and gaining in popularity. A novel and somewhat startling application of it is found in the following news item clipped from the telegraphic columns of the Detroit *Journal* of this date.

Louisville, Ky., December 1.—"I want a permit to kill my family and then commit suicide," was the unique request made to City Court Attorney Robinson recently by John M. McCord, No. 222 South Eighteenth Street.

Before Robinson could recover from his surprise, McCord continued: "My wife is ill and without medical attention. My chil-

Digitized by Google

dren are starving, and our landlord has ordered us out of our home. I can't get work and I guess we'd all be better off dead." . . .

Robinson turned McCord over to the police, who made an investigation and found his statements correct. The family will be amply cared for and McCord will be given employment so that the children may have a Thanksgiving dinner like other children. The sick wife will also be looked after and given proper medical attention.

In the instance here reported the reluctance of the authorities to assume such extraordinary functions resulted in saving the impoverished family from threatened extinction and in tiding them over the impending crisis.

Possibly a similar reluctance on the part of the President in the former case might have saved the Tennessee Company from being swallowed up, and at the same time have averted the threatened panic by less objectionable means. At all events, no one has ever explained satisfactorily why a loan to the embarrassed company would not have been quite as effective for the purpose as its absorption.

It is evident from even our slight experience with it that this scheme of granting governmental absolution from sins about to be committed, which is now being called for as a political panacea for existing ills in connection with the Sherman law, would not be entirely satisfactory, but would involve some peculiar difficulties of its own. Thus in the Tennessee case a President with only an ordinary degree of inspiration would be considerably staggered by the task of determining with certainty whether a panic was about to take place, how disastrous it would be, whether the proposed infraction of law would serve to avert it, whether the remedy would not be worse than the disease, etc., etc.

The fact is, we are not provided with a class of experts qualified to administer that kind of government. On the whole, notwithstanding the present clamor for it, the outlook for this peculiar scheme of government in this country is not promising, and the prospects are that we shall have to continue worrying along in the same old way for some time yet, submitting patiently to the inconveniences inevitably incident to all government by law.

HERBERT L. BAKER.

Detroit, December 1.

COMPULSORY COMPOSITION.

TO THE EDITOR OF THE NATION:

SIR: In my judgment the opinion of Professor Lounsbury on the matter of "compulsory composition in colleges" deserves deep consideration. I can speak from experience of "English A" in Harvard University—one of the most exacting freshman composition courses in any college, and compulsory. At the time I thought it wholly admirable as just the training needed by young men (though most students disliked it cordially). I am since convinced, however, that my power of expression was no greater after the training than before, except as it would naturally gain with the wider scope come with college life and increased maturity. That spontaneity suffered I am certain, and I well remember the lapse of time that was necessary to outgrow the rigidity of style and dry rhetorical precision acquired in the course, where conscious form was everything and facility dwindled to the vanishing point. It is contended, I know, that the course is for *manner* and not for *matter;* that the manner shall furnish an effective vehicle at a (presumably) later time when one has something to convey. But in practice the reverse is true; and I found my adopted manner of expression to stand somehow in the way of ideas. Theories aside, this was the pragmatical discovery.

Facility of expression is all-important, and can be got, if ever, only by continual voluntary intercourse with good books and persons of cultivation; and by voluntary writing. This, or it must spring from the native need of expression which will find its way by the short cuts of talent and genius.

A STRAW BALLOT.

TO THE EDITOR OF THE NATION:

SIR: The colleges of Ohio have been conducting, through their college papers for the past few weeks, a "straw ballot election" for President for 1912. The result of the balloting thus far is especially interesting for two reasons: first, because Ohio's Governor is one of the leading candidates for the Democratic party, and secondly, because Woodrow Wilson is the choice of the voters in all of the colleges that have thus far reported. The vote in Oberlin College has just closed as follows: Wilson, 261; La Follette, 82; Taft, 60; Roosevelt, 17; Harmon, 13; Hughes, Folk, Bryan, 2 each; a number of other candidates, including Clark, 1 each. There was no prescribed list of candidates submitted to the students. They were free to select their own, but were asked to give reasons for their choice. If the reasons for selecting candidates at the national conventions were always as intelligible as those given by many of the Oberlin students, the independent voter would go to the ballot box with a more honest enthusiasm than he often has on election day. The following is typical:

I vote for Wilson because he has a good political philosophy, is clean, honest, has made a good record as Governor of New Jersey, and commands the respect of the intelligent press and independent voters of the country. Moreover he is, what many of the "reformers" are not, sanely progressive.

Oberlin College, December 3.

THE PANAMA CANAL.

TO THE EDITOR OF THE NATION:

SIR: In reading a work of José de Acosta, a learned Jesuit of the sixteenth century, I chanced upon an opinion concerning the practicability of cutting a canal across Panama. It occurs in "The Natural and Moral History of the Indies," Bk. iii, chap. 10 (Seville, 1590; translated into English by Edward Grimston, London, 1604, and reprinted by the Hakluyt Society, 1880):

Some have discoursed and propounded to cut through this passage of seaven leagues, and to ioyne one sea to the other, to make the passage from Peru more commodious and easie, for that these eighteene leagues of land betwixt Nombre de Dios and Panama is more painefull and chargeable than 2,300 by sea, wherevpon some would say it were a meanes to drowne the land, one sea being lower than another. As in times past we finde it written, that for the same consideration they gave over the enterprize to win the Red sea into Nile, in the time of King Sesostris, and since, in the Empire of the Ottomans. But for my part, I hold such discourses and propositions for vaine, although this inconvenient should not happen, the which I will not hold for assured. I beleeve there is no humaine power able to beat and breake dewne those strong and impenetrable mountaines, which God hath placed betwixt the two seas, and hath made them most hard rockes, to withstand the furie of two seas.

C. E. ANDREWS.

Amherst, Mass., December 5.

WILLIAM PENN AND JOHN TOLAND.

TO THE EDITOR OF THE NATION:

SIR: One of William Penn's indirect contributions to the advance of liberal thinking seems not to have been noticed by any of his biographers. In 1705 John Toland, whose "Christianity Not Mysterious" had appeared nine years before, and who had since been the object of much consequent abuse for the freedom of his opinions, was in unpleasant pecuniary straits. During the preceding year, Shaftesbury, then exile for economy's sake in Holland, had failed to pay Toland the customary instalment of his pension. Toland, in some way or other, had formed the acquaintance of William Penn, and there is extant a letter which he wrote to the Quaker on June 26, 1705 (see Toland's "Miscellaneous Works," 1747, Vol. II, p. 337), asking for a recommendation to the lord treasurer, Godolphin. Penn, however, made his appeal to Harley instead, to whom he sent on August 24 another letter from Toland, with the suggestion that the Deist had been "kept too long upon expectations" (Hist. Mss. Com., Portland, Vol. IV, p. 230). The result of this was the almost immediate engagement of Toland to write "The Memorial of the State of England," and his long—though always somewhat precarious—attachment to Harley's service.

Toland was again in touch with Penn two years later (Hist. Mss. Com., Portland, Vol. VIII, p. 279), although there is no evidence that their relations were ever in any way close.

China's Story in Myth, Legend, Art, and Annals. By William Elliot Griffis, D.D. Boston: Houghton Mifflin Co. $1.25 net.

By accident, rather than by design—for that would have been a publishers' miracle—the autumn season has produced an unusual number of good books on China. Of the half-dozen selected here for review, none can be dismissed as trivial or unimportant, while a careful reading of all of them would constitute a fairly adequate equipment for any one who proposes to follow faithfully the course of the revolution. The essays contained in Mr. Little's "Gleanings" constitute the stray leaves of a busy Englishman's studies during a half-century of residence and travel in China. As a merchant, the author naturally gave his attention chiefly to the problems of China's material development, though some of the papers, which are literary and philosophical, show him to have been much more than a business man. He learned the language and went freely among the common people; in the course of many journeys, he probably obtained a better knowledge of the face of the country than any European of his time; and the outcome of this preparation provides information and reflections nowhere else to be found. Two features characterize this collection in a way that marks its chapters already as a little quaint: one of them, the reiterated complaint that the Chinese decline to accept the utilities of the Western world, and the other, the ogre of Russian predominance which looms up now and then, both serve to emphasize the change which has come over the Far Eastern situation since the fall of Port Arthur. As trade competitors, he regards Americans as more formidable to British primacy in the East than Germans—which is *not* the burden of our Consular Reports—though he cannot see "any necessary conflict of international interests in China; the field is so immense that there is room for the occupation of all the spare capital of both Europe and America for a century to come in exploiting the undeveloped resources of this huge empire."

Mr. Little has much to tell at first hand of the province of Szechuan, the Far West of China, where the present revolt first broke out. He made a notable attempt some score of years ago to introduce steamers into this region up the Yang-tse gorges. The effort ended in failure, but not in loss, for the Chinese, in order to end a troublesome matter, bought up the enterprising promoter's steamer and all his belongings. A magnificent water supply from the Tibetan Mountains renders this one of the richest districts of China. Its people do not, however, rank high in the estimation of cultured Chinese; they are mainly the descendants of immigrants who swarmed in during the seventeenth century from the lower Yangtse Valley, after the long wars following the Manchu conquest had depopulated the whole province. It gives us a new notion of the so-called "unchanging East" to learn that the whole population of this area, the size of France, is as recent in its origin as that of eastern Canada. Mr. Little's fair and friendly estimate of the value of mission enterprise in China is the only chapter of this volume which has never before been printed. Though deploring the tendency of missionaries to impose dogma upon the common people, he thinks well of the results of their work as a whole, and tells us out of an abundant personal experience that their converts are much the most trustworthy class to be found in the country. It is the example of Christian living, he concludes, rather than preaching, that counts with the natives, who are about the most shrewdly watchful folk on earth.

Mr. Little's opinions upon this subject are entitled to more respect than those of the Englishman whose "Chinese Appeal to Christendom Concerning Christian Missions," purporting to be written by a Chinaman, is a self-confessed deceit. "Lin Shao-yang," in a letter to the London *Spectator* last September, writes: "I plead guilty to the charge of being a European resident in China, and throw myself on the mercy of the court." His "Appeal," being a forgery in so far as it pretends to represent Chinese opinions, demands very slight consideration. Its author shows no knowledge of Chinese and little of missionary literature, basing his charges against all evangelizing enterprise upon the reports of one mission during a single year. There are plenty of criticisms of missionary methods to be made, especially if the mistakes of the past, which are now avoided by the great majority of missionaries, come up for review, but they must be presented by an honest man to command respectful notice.

A sufficient answer to the animadversions of this anonymous critic is Miss Burton's "Education of Women in China," a fairly comprehensive account of what has thus far been accomplished by mission schools for the instruction of girls in the Empire. The author, after a six months' visit in China in 1909, returned to this country to "learn from the best available authorities the character of such education for women as existed before the entrance of Western influences, and to trace the history of modern education, using, as far as possible, original sources." Her personal acquaintance with the country seems to have been limited to the eastern provinces, but, though a larger experience might have added to the value of her record, her knowledge of the subject amply qualifies her to write a book of considerable interest and usefulness. While we are inclined to distrust her conclusion, that there were virtually no educated women in the land a generation ago, the fact remains that they were few and that foreigners never came into contact with them. Until recent years missionaries met with much opposition in their endeavors to establish girls' schools, but the good sense of the people has generously approved of their efforts after some acquaintance with the results. One of the most striking evidences of the *volte face* in the China of to-day is the eagerness with which parents now seize upon chances to get their girls into school. Indeed, it threatens already to become a mania with the sex. The new woman, drunk with the wine of her new learning, has begun to reel a little and doesn't know where to stop. A pathetic instance of this is given in the story of a lady of high rank who could think of no better way to display her accomplishments than by singing the ragtime "Waltz Me Around, Willie" to a room-full of dignified and ceremonious guests. China's great need at present is a few central women's colleges to provide teachers for the schools which the Government has ordained but cannot equip with instructors.

The eagerness of the "liberty girls" in an awakening nation is, according to Professor Ross, more likely to be controlled by the mission than by Government schools. His "Changing Chinese" relates some fantastic anecdotes about the young females of the upper classes who have boldly claimed their right to be seen and heard in public, but difficulties of this sort are inevitable in a transition age. "Toward spring," he tells us in a happily chosen analogy, "the water of a frost-bound Northern lake becomes so deoxygenated that if a hole is cut in the ice, the fishes press so frantically to the life-giving air that some are pushed out on the ice. Nevertheless oxygen is good for fish. Just so when foreign example breaks a hole in the rigid custom that confines Chinese womanhood, the eager rush of young women toward the life-giving liberty and knowledge may leave some of them clear outside their native element." This book is the contribution of a trained observer. Without their advantage of long residence in the country, he surpasses even such admirable students of Chinese life as Mr. Holcombe and Dr. Arthur Smith, in applying the principles of sociology to a subject that has never, heretofore, been treated by an expert. He does not find the Chinese either antipathetical or peculiar. Here is a single sentence that is more to the point than most of the wisdom that has reached us from the whole aggregation of treaty-port residents. "The theory, dear to literary interpreters of the Orient, that owing to

Digitized by Google

diversity in mental constitution, the yellow man and the white man can never comprehend or sympathize with one another, will appeal little to those who from their comparative studies of societies have gleaned some notion of what naturally follows from isolation, the acute struggle for existence, ancestor worship, patriarchal authority, the subjection of women, the decline of militancy, and the ascendancy of scholars." Dr. Ross, who is a professor of sociology in Wisconsin University, has made these items the chief topics of examination in his survey of China as it is, and the result is one of the most informing and readable books of its kind that has thus far appeared.

A volume of somewhat the same sort, "The Coming China," by Joseph King Goodrich, deals with conditions in that country from the standpoint of a resident of long experience in the East. His summary of past history, while inadequate, reveals the essential causes of Chinese distrust of Europeans. As a merchant his unsparing condemnation of the opium traffic and its promoters—a business that has found plenty of apologists in his class—is noteworthy, but it hardly seems necessary to commend Chinese at the expense of Japanese character. Here is a story of the real ambition of the latter, which leads to surmise:

> The writer has seen a map called "The New Great Japan," upon which the boundaries of that Empire are made to include Korea [it was drawn before the annexation], Manchuria, practically all of Eastern Siberia and to the west as far as Lake Baikal, and all the rest of the Chinese Empire. Since this map was not published secretly, it may well have come into the hands of the Chinese, who would naturally have their worst fears confirmed thereby, although it is unnecessary to say that it was not an official publication, yet things of this kind do not, in Japan, spring solely from the overwrought imagination of an individual.

While the greater part of this book reveals the use of fresh materials, there are a few chapters which must have been written some years ago and need revision. It is rather foolish at this date to quote Lowes Dickinson's "Letters from a Chinese Official" as the work of a Chinese. There are a few slips, such as placing Perry's second expedition in 1857, and an occasional failure to find the proper source of information, as revealed in his ignorance of Bland and Backhouse's remarkable "Life of the Empress Dowager," but the work has as a whole great merit and is written throughout in the best spirit for bringing Americans to understand China.

Dr. Griffis's "China's Story," compiled with the same admirable intention, is a volume of a more elementary sort by a student of Asiatic affairs who, though long away from those countries, continues his honorable record as an interpreter of their cultures. His moderation in setting forth some episodes in the history of the last century deserves high commendation. European readers might complain of a rather exaggerated appreciation of the part played by America in this record, but such criticism would not be likely to discover any actual misstatements in his narrative. An erroneous impression may result now and then from efforts towards extreme condensation. The return by America of her unexpended share in the Boxer indemnity, for example, was not made, as implied, at the close of the peace negotiations, nor was the "fund" invested by the Peking Government for the education of Chinese boys abroad; it is allocated as it becomes due. For an account of China which aims chiefly to be brief and readable the book may be described as a success. A number of well-selected photographs adds to the value of this useful little work of reference.

CURRENT FICTION.

Jean-Christophe in Paris: The Market-Place; Antoinette; The House. By Romain Rolland. Translated by Gilbert Cannan. New York: Henry Holt & Co.

Readers who hoped that these final chapters in the life of a German musician would not be so formless as the first four chapters published last year with the title "Jean-Christophe," have hoped in vain. The author sticks to his former plan of trying to present the inedited history of a soul. No spiritual adventure is too trivial to be remarked, and no sentiment that is sincere requires apology. The result to the reader is a world which seems strangely archaic and recalls that literary age in Germany when two men, having made the great discovery of a mutual sympathy, would look into each other's eyes and cry out in unison—so perfect was the sympathy—"I love you." As is generally the case with relentless explorers of the soul, M. Rolland is the victim of his thoroughness, and at no place more than at the outset of this volume. For even the musical soul of Jean-Christophe might be expected to summon some show of resistance from his admittedly robust body to the clangorous onslaught of Paris. The picture he makes on his first walk about the streets, with tears of sensitive revulsion running down his cheeks, his face twisted with grief, shows a human being, as it were, wrong side out. The problem of crystallizing the inmost workings of the soul even the ranging suggestion of poetry has not mastered without calling in a sturdy, variegated framework of outward facts: Subjective matter needs objective support, in literature as elsewhere. And in the account of Jean-Christophe the reader never ceases to retort that this is not the whole story. The point is best illustrated by the episode of Antoinette, a girl barely twenty, who for six years struggles for the sake of her younger brother's education. The author fixes attention entirely upon the struggle of her soul, and though her attic is near the Jardin des Plantes, she is never seen getting an instant of physical joy from its trees and flowers—all is suffering sustained by pluck, all is therefore melodrama. If M. Rolland, with his sure grasp of the least articulate of human feelings and his faculty of extracting romance from the pursuit of mere ideas, could only have collaborated with, let us say, Balzac or Flaubert!

The plot of the story is no plot at all: Jean-Christophe has reached Paris, having fled from his little town on the Rhine after an altercation with the police, and proceeds in his honest, downright way to take a reckoning of the intellectual and spiritual activity of the French. His own message is held in abeyance while with open mind he searches for great ideas in others—but in vain. Direst poverty fails to make him compromise with the truth, and after discovering that France is meretricious through and through, he is about to work out his salvation from within, when he comes upon Olivier, the brother of Antoinette, and it is revealed that they love each other. In Olivier's frail body dwells a subtler mind than the German's, though not less honest, and through him Christophe's notions are tempered to sanity. He is now in complete possession of his powers and his musical creations begin to grip the thoughtful.

The Beacon. By Eden Phillpotts. New York: John Lane Co.

The materials of which this tale is built are a trifle over-familiar to readers who are on easy terms with their Phillpotts. The *Nation* has often expressed respect and liking for his studies of life, as it is seen faithfully upon Dartmoor, and as it is thereby seen in the large. We cannot help knowing and delighting in this moor-country, its flat lands and quiet rills, its storm-swept tors, its mists and its passions. It is not a place to tire of, but its people, we now feel for the first time, are capable of becoming tiresome. In the present tale, as usual, Dartmoor, a high tor, a woman, and two men, stand in the foreground. Barely a pace or two back lowers a grisly ancient whose distinction (without real difference) is that he is even closer kin to primitive man than are the chief persons. Herein lies the charm of these moor folk. We are of like passions, the springs of our action are much the same, but we live under a mask. The rustic New Englander, for instance, is a relatively conventional person. He has the grimness and canniness of the moor people, but his inner experience is his

Digitized by Google

own—unconfessed even when betrayed by chance. The most striking trait of Dartmoor humanity, on the other hand, is its explicitness. If one man hates another, he tells him so, and gives his reasons. Or if he loves a married woman, he is equally unabashed. The most searching home-truths are habitually exchanged at the bars of these uncouth inns. And yet outward deeds of violence are rare. The desperate man, instead of shooting up the town, tells everybody what he thinks of them and of life, and, if he means business, quietly drops himself into a tarn, and there an end. Such is the fate of the grisly ancient in this tale—though he commits murder first, it is true, by way of marking his superiority to the Dartmoor rabble. Of the two other men the woman marries the weakling, and presently loves the strong fellow. Mr. Phillpotts has told the story before: this rendering of it is saved from superfluity by the extraordinary and moving dénouement—a consummation as striking as that of "The Whirlwind." In detail, the book has the usual excellences of clearness and picturesqueness. There are pernaps fewer than common of those passages of emotional prose in which the writer paints his favorite landscape. And, on the whole, one gets the impression of a hand which, without flagging, begins to work a little mechanically with a stiffening material.

Rose of Old Harpeth. By Maria Thompson Daviess. Indianapolis. The Bobbs-Merrill Co.

In spite of the wholesome, not to say goody-goody atmosphere of this story, its chief interest is to the literary pathologist. It is symptomatic of two ailments prevalent among writers of rural romance—the proverb disease and the rustic-virtue obsession. The plot is hoary with years. Rose is about to give herself in marriage to the villain in order to prevent him from foreclosing a mortgage on the family farm. In the traditional manner she is rescued by the hero, who discovers that the soil of the estate in question contains enough cobalt to wipe out the mortgage and leave the family wealthy. Needless to say, he marries Rose. But to the development of this plot Miss Daviess gives little attention. Her chief concern is to portray the inhabitants of Harpeth Valley, their goodness and their wit. Undoubtedly they are good. Compared with the Harpethites, the farmers of New Hampshire as pictured by the late Denman Thompson, were monsters of vice. In Harpeth Valley there are no cynics, no drunkards, no angry men. The people talk in proverbs—not epigrams, not paradoxes—but clumsy platitudes framed with obvious and painful effort. On nearly every page occur such remarks as "Don't you suppose a piece of hemp twine would turn into a gold cord if you tied it around a bundle of true love?" "They are some women in the world, if a man was to seal up his trouble in a termater can and swoller it, would get a button-hook and a can-opener to go after him to get it out."

John Temple. By Ralph Durand. New York: The Macmillan Co.

A seldom trodden byway of history, the Portuguese attempt to conquer Southeast Africa in the sixteenth century, furnishes the background and much of the action of this novel. John Temple, an English adventurer, captured by the Portuguese in India, is compelled to join Francisco Barreto's expedition against the African prince Monomatapa. The "Sao Raphael," on which he sails from Goa for Mozambique, is wrecked on the African coast far to the south, and the survivors reach the Portuguese outposts only after terrible hardships. Temple distinguishes himself on this march and is rewarded by a captaincy in Barreto's army. He takes part in the disastrous expedition up the Zambesi, and as a solitary envoy to the court of Monomatapa, he terrifies that potentate into receiving him as an equal. A heroine and a love story are somewhat perfunctorily dragged into the action. In the "foreword" the author tells us rather naïvely: "I used the novel as my medium because the tale, though true, seemed too romantic for sober history. The reader will easily distinguish which is fact and which is fiction if he remembers this: that all that is best in the book is fact." The strongest part is the account of Barreto's expedition; here the author seems to forget all about his love story, and his narrative is spirited and effective.

JOHN OLIVER HOBBES.

The Life of John Oliver Hobbes: Told in her Correspondence with Numerous Friends. With a biographical sketch by her father, Morgan Richards, and an Introduction by the Right Rev. Bishop Welldon, Dean of Manchester. With portraits and illustrations. New York: E. P. Dutton & Co. $4 net.

As a remarkably intense, active, and confident literary performer in a lacklustre period, Mrs. Craigie is a figure of interest. With Kipling, Louis Stevenson, W. E. Henley, she did her smaller part to keep alive the sluggish nineties, to show English fiction still capable of a gusto, and not a mere relic in the hands of the curious. She was not a great artist; but she was a real one, and her spark of genius was faithfully cherished to the end.

Pearl Richards was born in Chelsea, Mass., in 1867. A grandfather and both great-grandfathers were American parsons. Her father was a business man, and a business chance settled him in London shortly after her birth. Londoner she became. Americanism could never be more than a graceful sentiment with her. One might derive her vivacity or her religious sense from the American blood; but these, like her literary tastes, are more properly of French origin, certainly developed under French influences: so that where she is most un-English, she is almost equally un-American. Even her knack at advertising seems to have expressed rather the thrift of the bourgeois than the push of the commercial lady. In an early letter to her publisher, T. Fisher Unwin, she encloses a draft for an advertisement, and adds: "Instead of putting 'second edition,' why not put something or other *thousandth*? Stevenson and Barrie and Hall Caine and all those much praised people are advertised that way; and if it impresses the public, why not do it? I have no nice scruples about timidity in these matters. I write books—not for Art's sake—but because I want them to be read. They *are* read, and I do not see why I should make a secret of it." Very likely, if Mrs. Craigie had written for bread she would have been more squeamish about self-advertising—such is the paradox of authorship. Squeamish she never was about anything.

She was known and esteemed by those two survivors of a stronger time, Meredith and Hardy. For the rest her intimacies had to do with minor though more or less respectable figures—Edmund Gosse and Clement Shorter, and, more particularly, George Moore. With the last-named expositor of "realism" she not only had a correspondence of some length, but a collaboration in "Journey's End in Lovers' Meeting." This was a dramatic success, and undoubtedly whetted Mrs. Craigie's appetite for such success. The conjunction was not without its meaning. George Moore has never been a caterer to the "jeune fille"; and Mrs. Craigie, as wife and divorcée, had passed fairly beyond that category. Precocity had always been her portion; and it is impossible to ignore the fact that her nature held a strain of morbidness, whether physical or "psychological." She was born a decade too early to find acknowledged place among the ranks of the now popular "neurasthenic," but she had her affiliations with the Marie Bashkirtseff-Mary McLane sisterhood. Her self-consciousness and self-confidence approached morbidity. She firmly believed herself to stand among the hierarchy of literary art in her own generation, and she unhesitatingly predicted that her work would have its hearing from posterity. This form of heightened self-regard is not always a sign of genius: it very often accompanies the possession of little or no ability of any sort. But, other things being equal, it is a most powerful incentive to good work. Novels, plays, special articles, newspaper

Digitized by Google

correspondence, reviews, lectures, all belonged to her output; and for the last fifteen of her thirty-seven years there was not an instant's slackening in its flow.

Mrs. Craigie had the real passion for excellence. Large as her product was, it is that of a careful and often painful workman. But it is not perfect, and the workman should have been able to perceive its limitations and to welcome honest criticism. This Mrs. Craigie could never do. Consequently she hated critics as a class for their unreasonable habit of exercising their reason. Her letters are full of what professes to be contempt and is really a wincing regard for the judgments of the professional commentator. "The critics do not trouble me in the least," she cries. "They never did. I work for the public—not a little coterie. The *Times* man is, at all events, a student and a well-read critic." Which means that the *Times* man has praised her, and that the other critics have troubled her by failing to praise her—unreservedly. They are therefore to be sweepingly denounced as "illiterate and vulgar." Three of these critics of the London of 1899 were, we believe, Mr. Shaw, Mr. Archer, and Mr. Walkley. The truth of the matter is frankly hit off in a letter to Mrs. Craigie, written not long before her death, by Mr. Moberly Bell of the *Times*. The *Times* reviewer, after giving high praise to "The Flute of Pan," had unluckily added: "but she can do and has done even better work than this." She at once writes a long letter of remonstrance to her friend Bell, who retorts: "There is one thing, and only one thing, that the Omnipotent has absolutely failed to create: He has made good women, bad women, clever women, silly women, selfish women, and heroines of self-sacrifice, but he has never yet made a woman who could stand—I will not say adverse criticism, but—one note of deviation from absolute and unqualified praise of any of her literary efforts."

It is not a happy life which is here recorded. Nor is it an altogether engaging personality which these numerous letters reflect. Mrs. Craigie's father, who contributes a biographical sketch marked by good sense and good taste, admits that "some people disliked her violently at first sight." Her nature was strongly outlined and colored. "No one could overlook her or be indifferent to her; she either instantly attracted or strongly repelled." Her work also is of this quality. Its virtue is mental rather than emotional: it is faceted with a hard brilliance, and its ray falls coldly upon the green and tender shoots which, in spite of crabbed seasons, are always budding forth on the gnarled stock of human nature.

Aspects of Religious Belief and Practice in Babylonia and Assyria. By Morris Jastrow, jr., Ph.D. Professor of Semitic Languages in the University of Pennsylvania. New York: G. P. Putnam's Sons. $2.25 net.

This volume comprises six lectures, delivered on the foundation of the American Committee for Lectures on the History of Religion, and the eighth volume published by the committee, Professor Jackson's lectures on the "Religion of Persia," delivered in 1907-08, not being included in the publications.

Professor Jastrow is so well known as an authority on Babylonian-Assyrian religion as to guarantee the scientific value of any contribution which he makes on that subject. The present volume is less formally scientific and more popularly readable than his "Hand Book on the Religion of Babylonia and Assyria," published in 1898. Like the German translation of that work, by the author himself, now in process of publication, this shows considerable advance on the earlier publication in general knowledge of the subject, due to discoveries made in the intervening period, both in the field and in the interpretation of documents already in hand.

The most valuable chapter is that on Divination, especially divination by the liver. Here Dr. Jastrow speaks as a master. The theory underlying liver divination was this: The liver is the seat of life, which is, or in which is, the soul. A god identified himself with the offering made to him. The soul of the god must, therefore, express itself in the liver of the animal offered. Being altogether materialistic in their conception of the life principle or soul, the Babylonians expected to find that expression in certain outward phenomena in the liver—peculiarities of form and appearance, lesions, abnormalities, or markings of any description. With mathematical exactitude, they built up a pseudo-science of the interpretation of these forms and markings, partly by using principles of interpretation familiar in sympathetic magic, the right side suggesting right or favorable omens, the left the opposite, a long hepatic duct, indicating length of life or reign, and the like, partly a series of observations, based on events on the principle of *post hoc, propter hoc*.

Professor Jastrow devotes his first chapter, entitled Culture and Religion, to a general survey of the development of civilization in Babylonia and Assyria. With regard to the Sumerian question and the Amorite theory, he adopts an attitude of compromise. With high compliments to Halévy, he yet does not think that this scholar has disproved the existence of a Sumerian language or of a Sumerian people; but, on the other hand, he does not believe that the Sumerians were necessarily older than the Babylonian Semites, or that they were the originators of the Babylonian civilization. The two peoples developed side by side, according to his view, the Sumerians predominant in southern Babylonia, the Semites in the north, and it was the interrelation of the two which produced the remarkable civilization of Babylonia. (We do not think this quite explains all the phenomena of script and religion. Attention should also be called to the evidences of other occupations and civilizations revealed by excavation.) Similarly, while not accepting Clay's view of the Western Amorite origin of Semitic-Babylonian civilization rather than the reverse, Professor Jastrow admits that "in accounting for the later and for some of the earlier aspects of the Sumero-Akkadian civilization this factor of Amurru must be taken into account" (p. 26); and, in support of this, points out the fact, already noted, that "the earliest permanent settlements of Semites in the Euphrates valley appear to be in the northern portion" (p. 27), suggesting an immediate connection with Syria rather than with Arabia. Assyrian civilization, as distinguished from Babylonian, he believes to have been largely influenced by the Hittites. In the matter of the new Astral-Mythological theory, represented especially by Winckler and Jeremias, Jastrow, with all courtesy, declines to compromise. The astral mythologists, be it said, are the men who would trace not only the myths and legends of the earlier chapters of Genesis to Babylonian-Assyrian sources, but also virtually all Hebrew traditions, including the legends of the patriarchs, and much if not most of Hebrew history. In the accounts of some of the greatest historical personages in the Old and New Testaments, among others David and Jesus, they find "reflections of an astral mythology and an astral theology which were developed in the priestly schools of the Euphrates valley" (p. 413).

In his discussion of the Pantheon (Lecture ii) Professor Jastrow seems to us to overlook the tribal and local nature of some of the Babylonian and Assyrian gods, all of whom he reduces to manifestations of the sun, moon, stars, and meteorological phenomena. This connection does, in fact, lie in some of the names, like *Shamash*, sun; *Sin*, moon, etc., and doubtless, as organized into a Pantheon, the Babylonian gods became largely, if not entirely, expressions of heavenly phenomena; but originally not a few of them were, we believe, merely tribal gods, without special astral or meteorological significance. Dr. Jastrow, it may be added, has carried this treatment of the Babylonian gods over into the Old Testament field. He continually refers to Yahaweh (by the way, he writes this consistently *Jahweh*, a vicious transference of a German transliteration which does not represent to the English read-

Digitized by Google

er the true sound of the letters) as a storm god. This, we submit, is not correct. Yahaweh was a personal, tribal god, who became the Hebrew national god. Various traits and attributes are ascribed to him, among others, meteorological traits and attributes; but he is not confined to those attributes, and is in no sense a personification of those traits, nor did he ever become so; in which the Hebrew religious development differs very much from the Babylonian.

The book is well and abundantly illustrated, a novelty in the volumes of this series. Dr. Jastrow has provided also, evidently with much labor, chronological lists, a study of which, as it seems to us, can only serve to convince the reader of the uncertainty of all things Babylonian. To begin with, Dr. Jastrow belongs to the very late school, so that all dates are placed at their lowest possible term. Down to 753 B. C. he prefixes a *circa* to every Babylonian date. Before the time of Hammurabi, "*c.* 1958-1916," he indicates an uncertainty not only as to dates, but even as to the order of the names on his lists, so that, for example, of the thirty-seven rulers of Lagash, from *circa* 3050 B. C. to *circa* 2200 B. C., which he enumerates, the position in sequence of seventeen is marked as conjectural. We doubt whether it is worth while to burden the student of comparative religion with a discussion of Babylonian dates, so long as the present uncertainty regarding them prevails, least of all in a popular work like this.

The book is well indexed, and, barring a little carelessness in proof-reading, admirably published.

Martin Luther: The Man and his Work. By Arthur C. McGiffert. New York: The Century Co. $3 net.

The Life and Letters of Martin Luther. By Preserved Smith, Ph.D. Boston: Houghton Mifflin Co. $3.50 net.

It would be hard to imagine two books on the same subject, in similar compass, and written from essentially the same point of view, more unlike in their treatment than these two new volumes on Martin Luther. Professor McGiffert's book is the work of a practiced hand. It was written originally for the popular audience to which a great illustrated magazine naturally and properly addresses itself, and this original form is essentially reproduced in the handsome volume before us. It is furnished with numerous and appropriate illustrations very beautifully done, and adding really material interest to the text. The narrative flows easily from beginning to end, as if the author had thought it all out long beforehand and were simply telling his story out of abundant material completely in hand. There is not a reference to authorities, not even the slightest vestige of a bibliography. We are left wholly in the dark as to the author's special studies for this work, and are free to read it with the quiet assurance that he has studied widely and thoroughly, and made up his picture of the man and his accomplishment from more than a mere monographic research into this and that detail.

Dr. Smith's work, on the other hand, impresses one at once, as it was doubtless intended to do, with the extent and seriousness of the writer's special preparation. His introduction to the world of scholarship was a study of "Luther's Table-talk," prepared as his thesis for the doctorate in 1907, and his time since then has been largely spent in these more extended Luther studies. There is a fine spirit of youthful enthusiasm visible throughout. The effect of a long German training shows itself in a method which continually reveals the processes of the author's own researches. There is frequent reference to the sources of his narrative, though it is seldom that the page is overburdened with footnotes. There is an appendix of fifty pages in which, following the order of the chapters, are given a very elaborate bibliography and a brief selection of letters.

Precisely why this book should have been called a "Life and Letters" is not clear. One might fairly have expected from such a title an examination of Luther's extended correspondence, but nothing of the sort appears. The only fitness of the title seems to come from the considerable use of letters as a means of telling the story of Luther's life. This is by no means an original method. The letters have almost all been published in more than one edition, and Luther's biographers have never been slow to avail themselves of these treasures. Dr. Smith's selections are judiciously made, and the translations are refreshingly spirited. The author has sought to reproduce the spirit of the originals, serious where the subject is weighty, and vivacious where, as in the Table-talk, the overburdened mind of the great leader of men sought relief in playful humor or good-natured badinage.

Both the authors here in review have realized to its full extent the complicated nature of the man they are trying to describe. Neither of them can often be accused of falling into the vulgar error of seeking to explain or to defend him on the ground of individual utterances. They have seen clearly that there is hardly any accusation ever made against him which cannot be supported by some word out of his own mouth. Equally they are aware that every kind of laudation that has been so lavishly poured out upon him can be justified in the same way. The method of matching phrases seldom advances very materially our historical appreciation of any man, and never was this more true of any one than of Luther. In both books we are led on to see the development of his attitude towards the great questions of his time in its manifold reactions. From the thoughtful and contemplative scholar, shy and self-distrustful, yet from the beginning profoundly impressed with a few great truths, we see him advancing to the stage of positive assertion, then of defence, and then, as his word found a wide response in the hearts of his people, we are led to feel with him the burden of an ever-increasing responsibility. That was the time of trial, and the only wonder is that his great spirit so seldom found itself betrayed into self-contradiction or even into sophistical self-deception.

Comparing the treatment of several critical moments of Luther's life by the two authors, we get the best illustration of their different methods. Dr. McGiffert is concerned more with the general effect and the ultimate outcome. A careless reader might get the impression that he has smoothed his way too easily over the many difficulties that beset the conscientious scholar who wishes to do full justice to the mingling of motives here displayed. A more careful reading, however, dispels this doubt and convinces us that he has mastered the detail of controversy before venturing upon his narrative. Dr. Smith, on the other hand, gives us as full reference to the sources of opinion on the one side and the other as his space will allow. He fortifies his conclusions with interesting selections from Luther's own words and holds the balance fairly between conflicting opinions. If we take, for example, the two most difficult of all the episodes of this character, the Peasant War and the Hessian bigamy case, we shall be struck with the difference of method and yet similarity of attitude and conclusions. Neither author is willing to admit conscious lack of rectitude in Luther's action, yet both refuse to gloss over the obvious shiftiness and sophistry of his explanations.

We predict for these books pretty nearly the fortune their authors would wish for them. Dr. McGiffert's volume should take its place as the most convenient and trustworthy treatment of Luther which the general reader can now find in the English language. It should take its place by the side of Köstlin's smaller book, with the advantage that it is more free from confessional bias. Dr. Smith's study should find its place among scholars as a handy guide to further reading.

Venice and Venetia. By Edward Hutton. With fourteen illustrations in color by Maxwell Armfield, and twelve other illustrations. New York: The Macmillan Co. $2 net.

This is another volume of the series which Mr. Hutton is writing on Italian

Digitized by Google

travel and which began with "The Cities of Umbria" in 1905. It is, in our opinion, the best of them all. The first chapter, in particular, is a masterpiece, sober, balanced, and logical, and presenting what is, in some respects, a new view of European history: so simply written that it offers no difficulty to the least learned, yet worthy of careful consideration by the professed historian. Its conclusions will probably be disputed, and rightly so, for truth is complex and elusive and can only be ascertained after long study and friction of various minds. If we accept its point of view, we can explain Venice to ourselves as a logical phenomenon, geographically, ethnically, and historically. Mr. Hutton has certainly never before written anything one-half so interesting to the serious student.

The remainder of the volume follows the same lines as did its predecessors, and is, in fact, a kind of glorified guide-book. Fourteen chapters are devoted to Venice and her islands, six to the lesser towns of the Veneto: Treviso, Padua, Vicenza, Verona, and the rest. The work has been thoroughly done, even to the map at the beginning of the book, where the divisions of the *sestieri* are duly marked, a feature which we do not remember to have found in any other modern map. With all its charm of style and brilliant impressionism, this is, perhaps, the most complete guide to Venice ever published. The chapters on art, which, in the majority of books, appeal only to the connoisseur, are here made interesting to the general reader. The subject is not treated in a vacuum, but we are helped to understand the Venetians through their art. Take the following, for example:

> When Venice expresses herself, whatever language she uses, we realize at once that we are face to face with a living personality at one with itself. It is to this personality that we owe the Venetian School of Painting. Precisely what I mean will become evident if for a moment we glance at the Republics of Florence and Venice as personalities. We shall then see that the great men of Florence were always greater than their city, whereas Venice was always greater than her greatest men. Florence was incapable of absorbing, often of using, her greatest sons; she sends Dante into exile, she cannot keep Leonardo, Michelangelo she fails either to understand or to comprehend. Galileo she allows to be imprisoned. Venice, on the contrary, lets not one of her sons escape, she is so profoundly living that she absorbs their energies and they enrich her.

We pass on to deal with that which is bad in the book. We mean the colored illustrations. Illustrations ought to illustrate the work of the author; these contradict it. We have only to read some of Mr. Hutton's word-pictures and then to look at Mr. Armfield's brush-pictures to realize how deplorably. It is not that the artist lacks manual dexterity, but his painting is, apparently, a feeble imitation of the Japanese. Surely, Europe should be pictured for Europeans by artists whole-heartedly of European tradition. We should have supposed that Mr. Hutton was valuable enough to his publishers to enable him to have a voice in the choice of illustrations for his books. Until he asserts himself, the only salvation for his readers seems to lie in tearing out the colored illustrations and having the volume rebound without them.

Notes

The Putnams have in the press a student's edition of John P. Mahaffy's "What Have the Greeks Done for Modern Civilization?"

As agents of the Cambridge University Press, the Putnams announce: "Studies in Fronto and his Age," by M. Dorothy Brock; "The Epistle of Paul the Apostle to the Galatians," edited by A. Lukyn Williams, and "Life in Shakespeare's England," a book of Elizabethan prose compiled by John Dover Wilson.

A. D. Lindsay, a young Scotchman, has written a guide to "The Philosophy of Bergson" which Doran is bringing out.

William Allen Butler's "Retrospect of Forty Years, 1825-1865," announced by Scribner, is edited by his daughter.

"The Personality of Napoleon" is the title chosen by Dr. J. H. Rose for his series of Lowell Lectures to be given next spring at Boston.

Bunyan's copy of Foxe's "Book of Martyrs" is an item in one of the sales being held these days at Sotheby's.

In our review, November 23, of "Following the Conquistadores," by H. J. Mozans, the price was given as $3 net. It should be $3.50. The book is published by D. Appleton & Co.

The first £100 prize offered by the British Academy has been won by Walter de la Mare, who is the author of "The Mulla-Mulgars," "Verses for Children," and of a forthcoming volume announced by Constable, "The Listeners, and Other Poems."

Two more holiday editions of Dickens have come to swell the list of those already mentioned. One is an unpretentious but quite festive volume of "The Chimes" (Putnam). For this F. S. Coburn has furnished illustrations, some of which are reproduced in color and others, not the least charming, in line. The other volume is a large "David Copperfield" (Doran), with abundance of full-page color-plates from pictures by Frank Reynolds, R. I.

"A Book of Winter Sports" (Macmillan) consists of introductory chapters of text by the Rev. Hon. Edward Lyttelton and Sir H. Lunn, followed by a series of clever pictures of tobogganing and other winter scenes by Reginald Cleaver.

Harper Brothers have reprinted in one volume the late Dr. W. M. Thomson's "The Land and the Book." By the use of somewhat thinner paper, this book of 1,200 pages has been made almost as handy as either of the former separate volumes. Outside of this, the only change is the addition of a colored plate and the displacement of a map. The book is something of a classic, and its republication, fifty years after its original issue, in this more convenient form, will be welcomed by all Bible students.

The wondrous flora of China and the suitability of nearly the whole of it to our Atlantic States is demonstrated in a very interesting manner by Ernest H. Wilson of the Arnold Arboretum in the *National Geographic Magazine* for November. In advocating the introduction of new plants he says that they may add in the near future millions of dollars to our wealth. "The possibilities are incalculable." A timely article is that on "Tripoli: A Land of Little Promise," by A. L. Vischer, who thinks that the accounts of her former prosperity are greatly exaggerated. The great Rainbow natural bridge in Utah, "the largest and most remarkable known," and now made by Government a "national monument," is described by J. E. Pogue, and some glimpses of Japan, with several photographs in color, are given by W. W. Chapin.

The author of the second part of "The Compleat Angler" and the translator of Montaigne is remembered in versifying for the malodorous "Scarronides," a burlesque of Virgil which Pepys found "extraordinary good" and which was, indeed, exactly to the taste of Restoration wits. But Professor Sembower, in "The Life and the Poetry of Charles Cotton" (Appleton), makes no comment on Cotton's prose style or his merits as a translator. His attention is directed to Cotton's lyric poetry, yet even here he is curiously reticent about J. R. Tutin's edition of his lyrics, issued so late as 1903. The biographical sketch in the first chapter of the monograph is expanded to sixty-odd pages by plentiful interlarding of already known facts with copious conjecture. Some interesting suggestions are offered concerning similarities between Cotton and French poets, chiefly Malherbe, de Viaud, and Racan, which may be of use to some future student ambitious of a doctor's hood, in his researches into the influence of French poetry on the English lyric in the seventeenth century. The present study will hardly draw this forgotten singer from the obscurity that has so securely hid him for above two centuries.

Sir Walter Runciman—not the Asquith cabinet minister, but his father—followed the sea in his youth and heard so often from old English sailors that "Boney was a d——d good fellow after all" that from his earliest years he became interested in the great Corsican. As his reading widened, his fervor increased, until at last, like the Psalmist, when musing on the wickedness of man, his heart was hot within him and he spake with his tongue. Hence the "Tragedy of St. Helena" (Stokes). It traverses much the same ground as Lord Rosebery's excellent volume, but with less insight and more vehemence. As the author contemplates "the atrocious crime of Napoleon's captivity," the enormities of Sir Hudson Lowe, "a monomaniac, pure and simple," and the odious incapacity of the Tory Government, he can only exclaim (p. 178), "What a gang of puffy, mildewed creatures were at the head of British affairs in those days!" Besides the chapters on the St. Helena episodes, the au-

Digitized by Google

thor devotes a chapter to Josephine, in comparison with whom Bonaparte is purity itself. In another chapter he discusses Napoleon's religious notions and quotes one of the Emperor's alleged St. Helena conversations which he regards as the most "beautiful panegyric on the divinity of Christ that has ever been pronounced!" To him all the St. Helena statements, so far as they are favorable to Napoleon, are trustworthy. He rejects the conclusions of recent critical scholars—"skeptics who were not only not there to witness all that went on, but some of whom were not born for many years after Napoleon and his contemporaries had passed on." Sir Walter wishes to praise Napoleon; unconsciously he has paid him the greatest tribute possible: he has believed everything that the great exile at St. Helena cleverly tried to make posterity believe.

"Behind Turkish Lattices" (Lippincott), by Hester Donaldson Jenkins, is a simple but pleasant little book of sketches. It covers such phases as babyhood, school life, marriage and divorce, housekeeping, amusements, occupations, religious observances, and, based as it is upon nine years of intimacy with Constantinople, it can really be trusted, at least for the things which Miss Jenkins has observed for herself. But unfortunately the observer in the East almost always goes on to ask questions, and takes the information then received as correct. That is a vain imagination; even among ourselves we do not look to the man in the street for sound opinions in theology or law. He would, probably, so confronted, say impatiently that he did not know, or derisively refer us to an encyclopædia. But the Oriental, most unhappily, always knows, and so the great ball of travellers' misinformation rolls up. In truth, gray hairs are no hindrance to prayer; the jinn, for Moslems, are far from non-existent—that is, not the obstacle to marriage with them; the Ottoman Sultan has not had fully legal wives for centuries; a woman may not marry immediately after divorce; making an image of a thing without life is not forbidden, etc. Miss Jenkins should read for herself some Turkish texts on these subjects. She knows too much not to know a great deal more. There are twenty-four very good pictures

"Social France in the XVII Century" (Macmillan) was apparently written as a thesis in fulfilment of the requirements of a higher degree, and it bears all the earmarks of a painstaking academic performance. The author, Miss Cecile Hugon, "Sometime Scholar of Somerville College, Oxford," offers a fairly comprehensive survey of the period in question, but she gives little that is novel in the way of facts or of their interpretation, although her avowed purpose is to combat the idea of a perfect unity, both social and intellectual, in the France of this seventeenth century. Nor is her acquaintance with first-hand authorities as complete as it should be. In dealing with country conditions and with the anarchy that ruled in certain of the provinces, the writer makes no mention of Fléchier's most valuable book, "Les Grands Jours d'Auvergne." Again, in treating the intellectual and religious life of the time, she seems not to know a writer so significant as Saint-Evremont. As to the arts other than literature and the theatre, she devotes a few paragraphs to painting and engraving, but says nothing of music, although the seventeenth century was the age of Rameau, Lulli, and of Couperin, whose star is now so much in the ascendant in Paris. In short, Miss Hugon's book gives little of significance that the reader of French literature could not extract as well from the better-known plays, letters, poetry, and memoirs of the period, or from standard studies on special phases of her subject. A word of praise should be said for the illustrations which are all made from contemporary paintings and engravings, the latter including a number of Abraham Bosse's delightful representations of the life of the Parisian bourgeoisie.

In the preface to the "Life of James Cardinal Gibbons" (John Murphy Co.), issued to commemorate the fiftieth anniversary of his ordination to the priesthood, Allen S. Will alludes to the difficulty of writing a biography while its subject is still living, but insists that in its preparation he found no obstacles of the kind that might naturally be expected to arise. It is fair to say that the impression produced by his book is such that the reader is inclined to believe Mr. Will. His experience in newspaper work has given him a saving sense of proportion and a true instinct for actuality. His book is pleasant reading, and sets before us a very human and likeable personality. It has been the good fortune of Cardinal Gibbons to enjoy through his long life as primate of the American hierarchy not merely the respect, but also the genuine good-will of his non-Catholic fellow-citizens. And in running through Mr. Will's pages the reason is easily seen. An all-embracing charity and tolerance for persons, a clear-sighted, uncompromising tenacity in purpose and principle, together with an utterly modern—perhaps one might say American—frankness and directness of speech and action, are qualities which appeal strongly to the ordinary man; and with these qualities Cardinal Gibbons has been liberally dowered from the first. If one were limited to a single adjective which should distinctively characterize his influence upon men and movements of his time, "eirenic" would come as near the truth as any. Priest at twenty-seven, bishop at thirty-four, arch-bishop at forty-three, cardinal at fifty-two, he has for a generation headed the Roman Catholic Church in America, and has in his lifetime seen its marvellous growth under conditions of a freedom with which he has many times expressed his unqualified sympathy. Many important phases of American Catholic history find place in Mr. Will's biography, of which the cardinal may truthfully say *pars magna fui*, as for example the Knights of Labor dispute, "Cahenslyism," and the controversy over "Americanism." Not the least valuable quality of Mr. Will's work is his accurate and authoritative use of original sources in dealing with these matters which were so fiercely debated twenty or thirty years ago. The account of the Conclave in 1903 which elected the present Pope is especially interesting, inasmuch as it is virtually first-hand evidence and also because it discloses the part played by Cardinal Gibbons in overcoming the reluctance of Cardinal Sarto to accept election. These things belong to history, but one is disposed rather to linger upon the many anecdotes in the book which fill in details of personality. As characteristic as any is the following:

It is related of him that on one occasion, when passing through the streets with a visitor, they came to the door of a beautiful church, from which a large congregation was beginning to emerge. Archbishop Gibbons was saluted so often and gave so many salutes in return that his companion was moved to remark:

"You seem to be well acquainted in this parish?"

"Ah!" he replied, "these are our Episcopalian friends."

In his preface to "Love and Letters" (Sherman, French & Co.), Frederick Rowland Marvin quotes some lines of Fletcher's to the effect that his library is a glorious court where he hourly converses with the "old sages and philosophers." Perhaps it is, but this is in a rather higher strain than the matter of the present volume will bear. The nearer Mr. Marvin comes to being serious, the nearer he comes to being mawkish and silly. His occasional attempts to express a thought rudely interrupt the amiable and irresponsible flow of his bookish chatter. A taste for "curious" literature and a habit of collecting odd scraps of information have made of him an amateurish follower of Robert Burton, without much modifying the pure Philistinism of his original endowment. So, after fiddling along for eighty-eight pages about the loves of the poets, the impotence of men of letters, morganatic marriages, Greek courtesans, etc., with every indication of keen relish in salacious detail, he bursts on page eighty-nine into a short paragraph celebrating the "Supreme Affection" worthy alone to be called love: "Resplendent with the golden light of the City not builded with hands, it wears upon its brow the ineffable smile of its Creator." This praise of marriage is doubtless well meant, but it seems in this connection a little indecent. Of tea, books, tobacco, and the moderate cup he discourses divertingly enough in spite of the dizzying incoherency of his style, but even here he is not secure from an occasional lapse into morality. This note of discord is due to a confusion in Mr. Marvin's mind between the intellectual dissipations of a well-domesticated epicurean and the ffuits of culture.

Of the many volumes on sport in India, few are so well-balanced as "Stalks in the Himalaya" (Lane), by E. P. Stebbing. The sportsman of any land will delight in the details of the hunting expeditions, and the traveller in these regions will find his memory refreshed by the vivid descriptions. The author is animated by an admirable enthusiasm for scenery and sport, tempered with a desire for moderate and judicious killing. In these pleasant hunting tales he leads us from the hot, placid stream of the lower levels, the haunt of wild buffaloes and marbled cats, upward until the stream becomes a mountain torrent which foams, darkly shadowed, through the narrow valleys, skirting gigantic rocks. Here the Himalayan bears, the serow, and the pheasants quench their thirst. Finally the birthplace of the stream, where its waters gush from beneath two great arches of ice, marks the end of the glacier which stretches up to the summit of the highest peaks upon the earth. Here we meet the snow leopard, the Markhor goat, and that most magnificent of wild sheep, the bharal. The writer's many "thumb-nail sketches" of bits of

Digitized by Google

scenery and of animals are so crude as to be painful.

T. W. Rolleston's "Myths and Legends of the Celtic Race" (Crowell) is designed for the general reader for whom the heroic saga of the Celts looms vaguely as something one ought to know about. The fact is that few even of the very well-read could tell you offhand the story of Deirdre, the Irish Helen, and her ill-fated love for Naist, or of Cuchulain (Cuchullin), the Irish Achilles, and this in spite of Lady Gregory and Mr. Yeats, whose work in this field Mr. Rolleston does not mention. This vagueness about the Celtic heroes and heroines is due, of course, mainly to the fact that they have lacked a *vates sacer*. Tennyson's "Voyage of Maeldune" is labelled "An Irish Legend," but it was too slight to impress that wonder-voyage on the popular imagination. Another cause for their obscurity is that their names are so hard to pronounce, and even the members of the Gaelic League do not seem to have agreed how they shall be spelled. Guinevere herself, as Gwenhwyvar, which is her real name, could not have become a household word. We are apt to forget what a service the Latins did the Greeks in making us feel at home with their names or something resembling their names. But perhaps the cause lies deeper in the character of the saga itself. It is almost always a fairy saga, teeming with monsters and transformations. One wearies, though the Celts never wearied, of all this magic and illusion, and like the Greek Odysseus in the society of Calypso, we long for the normal. Who would linger over the adventures of a hero whose Berserker rage is such that his followers must "plunge him in a vat of cold water which had been made ready, but the water boiled around him, and the staves and hoops of the vat were burst asunder?" This is the lad Cuchulain. For this reason we do not recommend a consecutive reading of Mr. Rolleston's exhaustive work. His divisions of the saga and comparison of Gælic and Cymric legend are clear and interesting. The Irish were never, like the Cymry, romantic or sentimental. Religion and loyalty were their two ruling passions. The Celtic heroines go into battle, and more often than not woo the reluctant heroes. Deirdre is the most womanly of them all, and if she could be put into an opera like Parsifal, she might yet be rescued from comparative oblivion. The heroic traditions do not go very far back. The adventures of Cuchulain are supposed to have taken place about the time of the birth of Christ. The Ossianic Cycle falls in the third century A. D., and the bardic literature that preserves it is said to have been composed about the ninth or tenth century. Mr. Rolleston provides a useful glossary and index. The illustrations are grotesque, rather than impressive, and might well have been omitted.

With rare selective skill, Don C. Seitz, the author of "Surface Japan: Short Notes of a Swift Survey" (Harper), has reproduced in full-page color-pictures the common aspects of Japanese life. Bordered pages carry thumbnail sketches from Hokusai, side by side with dainty vistas of flowery fields, tea gardens, rice-ditch irrigation, and toil by day and night. The happy boy with a slice of watermelon, the two kittens on the samisen (three-stringed banjo), the tribulations of the baby that has put his hand in the cold bath, and the look of pity and amusement on the mother's face are inimitable. The text reveals a witty, whimsical, keen observer, who can appreciate a strange people, even while he prefers his own; he makes an old subject fresh and piques the interest even of the reader of many books on Japan.

"Pins and Pincushions" (Longmans) is the title chosen by the authors, E. D. Longman and S. Loch, for their serious study of the history of the pin from ancient to modern days. The word itself they try to derive from the Latin *spina*, a thorn, contrary to the usual opinion that it comes from the Latin *penna*. It is true, at any rate, that thorns were used for the purpose from earliest times, and it is interesting to learn that "quite recently, Gipsy Lee of Aldeburgh, in Suffolk (aged nearly a hundred years), wrote to her great-niece, living near Southwold, in the same county, asking her to send her some pin-thorns, as they were not procurable in her own neighborhood." Hairpins were not always bipeds, but became so, the authors think, when the fashion arose of "wearing the hair in curls close to the head." "In 1347, 12,000 pins were delivered from the royal wardrobe for one of the French princesses." About 1600, English pinmakers sent a petition to Lord Burghley asking for protection, since the cheaper varieties from abroad were throwing their men out of work. A little earlier than this we find that 1,000 white pins cost 8d., or about 75 cents. A chapter or so is given to the importance of pins in magic and witchcraft. A piece of bacon stuck full of pins was sometimes hung in the chimney to keep off witches, and the custom still persists in certain parts of England of trying to get revenge upon a person by sticking a waxen manikin with pins; earlier the same purpose was aimed at by using a poor toad. One of the ways to prove that a woman was not a witch was to prick her, in the hope that she might feel it—a method, be it said, that gave her greater chance of escape than the practice of throwing her into a pond and concluding that if she sank she was human, but if she floated she was the devil's own.

A book to prize is "Some Old Flemish Towns" (Moffat, Yard; $4 net), written and pictured by George Wharton Edwards. Coats-of-arms of the various cities, reproduced in color and reinforced against a rich dark blue background by artistic gilt lettering, make the cover itself a treasure. For some reason travellers are wont to pay less heed to Belgium than to Holland, feeling perhaps that it is neither one thing nor the other. Lying between the frontiers of Holland and France, it is often taken to be merely a mixture of French vivacity and Dutch picturesqueness. Mr. Edwards soon dispels such suspicions and reveals below the modern veneer of industrialism the ruggedness of the older civilization. As an artist who spent his student days there, Mr. Edwards knows the choice out-of-the-way bits and has the pride in their antiquity which is found to-day in the heart of every peasant. Fortresses and castles still stand that go back to before the ninth century, and popularly the towns retain their individualities. Dwellers for any length of time in that land will recall the song which reminds Ghent of its past glories and which the people sing lustily. The reader's interest is sure to be about equally divided between the gossipy text and the pictures. Some of these are in color, the frontispiece of a Flemish lady in the old costume being as pretty and decorative an insert as we have seen in a book for many a day; the majority are photogravures.

In "English Country Life" (McClurg) Walter Raymond tells how he settled down in a little village of Sutton to enjoy life and study rural types, and then treats us to a rare collection of anecdotes and character sketches. He is the true Spectator; but of the village tavern, instead of the London coffee house. He loves and understands nature without being sentimental about it, and he can sketch a vagabond with a touch of George Borrow's strange whimsicality. And there is over all an atmosphere of country freshness. The charm of the author's work is enhanced by the admirable printing and binding of the book, which contains also some tasteful illustrations in color.

As a rule, books of travel are interesting and novel in proportion as the author devotes himself to describing people and events, rather than landscapes, buildings, and the stock "sights" familiar to every tourist. Therein lies the secret of Borrow's charm, and Harry A. Franck, in "Four Months Afoot in Spain" (Century), has caught the manner of his predecessor. Only Borrow's religious cant is lacking, an omission which few will regret. For the rest, the formula is much the same. In his pages throng the muleteer, the torero, the hedge-priest, the blind beggar with his Lazarillo, and many another picaresque vagabond with whom he hobnobs with the freemasonry of the road. All these converse entertainingly and sometimes profoundly. They unwittingly lay bare the strength and the weakness of Spain. Those who have read "A Vagabond Journey Around the World" know with what resourcefulness the author solves his financial problems. To one who had earned his way through the Orient it was comparatively easy to spend four months in Spain on $172. It was merely a matter of denying himself luxuries which, for a traveller of Mr. Franck's stamp, would have deprived travel of all romance. Once on the way, neither pecuniary nor other worries disturb his care-free soul. Not even Kipling has better than he expressed the philosophy of the true "tramp royal":

> The joy of travel is not in arriving, but in setting forth, in moving onward; how fast matters little, where, even less, but ever on and on, forgetting, for the supremest satisfaction, that there is a goal to attain. Let a man wander away into unknown lands smiling with summer, his journey's end little more than conjecture, his day of arrival a matter of indifference, and if he feel not then the joy of the open road he may know for a certainty that he is a hug-the-hearth, and no gypsy and a vagabond.

In this happy-go-lucky spirit Mr. Franck traversed the provinces of Andalusia, Castile, Leon, the Asturias, the Basque country, Aragon, and Navarra, missing little worth the seeing. One thousand miles were covered afoot, as many more by train. The book contains ample evidence that its author is not always a vagabond, but one who in the intervals between his gypsy-like jaunts is a thoughtful student. But

Digitized by Google

on the whole it is plain that he better appreciates the art of the torero than that of the painter. Mr. Franck's style, if a bit too slangy, is vivid and picturesque. The accompanying illustrations are as unhackneyed as the text.

The death is reported from Paris, in his fifty-seventh year, of Maurice Montégut, who as a youth gave promise of literary power. Before he was of age he had published two volumes of verse,—"La Bohème sentimentale" and "Les Romans tragiques"—and a dramatic poem, "Lady Tempest." Since then he has written voluminously in most of the known types of literature.

Science

The Putnams, as agents of the Cambridge University Press, announce "Mathematical and Physical Papers," Volume VI, by Sir William Thomson, arranged and revised by Sir Joseph Larmor; Volume VI is devoted to voltaic theory, radioactivity, electrons, navigation, and tides.

According to a paper published recently by Marcel Baudouin, after a study of remains found at Vendrest in Seine-et-Marne, the ills of neolithic man were much what human ills are to-day. He discovered evidence of fractures, some of which had been set, cases of trepanning, deformed crania which were caused by the sort of coiffure then the style, and bone malformations. As might be suspected, the dental caries were only one-tenth as frequent as to-day.

The stockman's side of the dairy problem is well presented in "Dairy Cattle and Milk Production," by C. H. Eckles (Macmillan). The questions it discusses are as yet, over any given area, even near our cities, very imperfectly understood by the majority of farmers, but the book goes far to throw light on such subjects as the choice of breeds, the building up of a herd, the management of the cattle, and economic feeding. The tone of the book is scientific throughout, while at the same time its advice can be followed by any farmer with a little education and an intention to improve conditions. Presenting the experiment-station point of view and the results of research in clear and available form, this book should be of use to the younger generation of milk-producers.

In the Transactions of the American Philosophical Society at Philadelphia, C. P. Olivier publishes his studies of 175 parabolic orbits of meteors, a paper presented to the faculty of the University of Virginia for the degree of doctor of philosophy. The first observations were made in 1898, and above 6,000 are recorded, of which about one-third were made at the Lick Observatory. His results are painstaking and the summary announces proof of intimate connection between Halley's Comet and the Eta Aquarids. Stationary radiants appear to be rare, if they exist at all, and the change in position of the Perseid radiant from day to day is fully confirmed. He finds that the Orionids do not seem to have a stationary radiant, and that of the Leonids shows no appreciable change of position from day to day. Negative evidence seems to indicate that the existence of the so-called Alpha-Beta Perseids, except in August, is unconfirmed. By observing in a clearer atmosphere, meteors of the fourth magnitude are raised to the majority, while formerly more of the third magnitude were seen. Yellow meteors have the briefest visibility; red and orange somewhat longer times, while green and white are seen longest of all.

"Principles and Design of Aeroplanes" (Van Nostrand), by Herbert Chatley, is a pocket edition which gives the fundamental principles of the aeroplane in very simple language, and is useful for those who desire to know something about aviation without too serious study. The various parts of the aeroplane are shown and explained by diagrams and are discussed in short chapters; the chief fault lies in the fact that the information is almost too brief. Little books of this type should be encouraged in this country; in Europe they are far more common. There are doubtless many who would like to carry the information such a volume imparts to aviation meets or when travelling.

In a recent *Monthly Weather Review*, George W. Mindling and Andrew H. Palmer treat the question of artificial heating in its effect upon the climate of cities. Mr. Mindling's paper is founded upon statements by Reginald P. Bolton, president of the American Society of Heating and Ventilating Engineers, as to possible modification of weather conditions by the enormous fuel consumption in New York city. His contention is that the rapidly increasing consumption of fuel has reduced the number of days with a temperature at zero or below, and has increased the number of cloudless days. He also thinks it has lessened precipitation, particularly in winter months, as well as relative humidity of the air—the latter about seven per cent. Mr. Bolton's computations show that the amount of heat artificially produced in the city is sufficient to raise the temperature of the air nearly five degrees, Fahrenheit, a mile above the whole city—326 square miles. Mr. Mindling examines each of these statements in detail, and concludes that it is not the heat produced within buildings which is chiefly accountable for the higher temperatures in the heart of cities. The materials used in walls and pavements are contributory causes, as are differences in drainage and surface character. Natural movements of the air are obstructed by the position of buildings, and reflection of solar energy from walls counts for much in sheltered spaces. Many other proofs are adduced; and careful tables are compiled to show that conditions in villages and small cities follow much the same variation as New York with its far greater consumption of fuel. Mr. Palmer finds that half a century ago Luke Howard, an early observer, wrote that the temperature of London must not be taken for that of the climate, partaking as it does of artificial warmth, "induced by its structure, by a crowded population and the consumption of great quantities of fuel in fires." He quotes startling statements from Eaton and others, as to the amount of heat liberated in the city, and its effect in raising temperatures of the free air. To challenge these remarks, Mr. Palmer has made careful studies of weather reports, particularly at Blue Hill, in order to find, if possible, any change in the climate of Boston, artificially produced. Such he fails to discover, and data from the archives of the Paris Observatory fail equally to show any heating effect from the increasing amount of fuel burned. Negative results are reached also in the matter of precipitation. And his conclusion is virtually the same as Mr. Mindling's, that, "judging from the evidence available, the heat generated by great cities is not changing their climates in any appreciable degree."

Under the comprehensive title, "Birds in Literature" (Worcester, Mass.: The Davis Publishing Co.), Miss Abby P. Churchill presents short quotations from many of our best-known nature writers concerning some hundred species of American birds. The arrangement is alphabetical with reference to the birds: for example, the list is headed with the American bittern, with a quotation from Torrey. Next comes the crow blackbird, about whose habits and voice we find pertinent paragraphs by Merriam, Parkhurst, Burroughs, Nuttall, Miller, Emerson, and Lowell. Although nothing could be more disconnected, and, for serious bird work, useless, the volume has a decided literary charm. After a perusal of several volumes of extracts from old-world avian literature, we are glad to realize that there is sufficient material among our American authors for a similar anthology. The dozen stiff-limbed, glaring-plumaged birds portrayed in color plates might well have been omitted.

Archibald Cary Smith, one of the best-known yacht designers in this country, died last Friday, at the age of seventy-four. He designed the Mischief and Priscilla, which contended for the America's cup, the Meteor for Emperor William, and a number of steamboats. He was also noted for his marine paintings.

Sir Joseph Dalton Hooker, the surgeon and naturalist, died in London on Monday, at the age of ninety-four. In 1839 he accompanied Sir James Ross in an Antarctic expedition which continued until 1843. In 1847 he went to India to study the flora of the Himalayas, and later travelled as a naturalist through Eastern Bengal, Syria, Palestine, Morocco, the Rocky Mountains, and California. In 1865 he became director of the Royal Gardens at Kew. His writings include "Botany of the Antarctic Expedition," "Handbook of New Zealand Flora," "Himalayan Journal," "Students' British Flora," "The Rhododendrons of the Sikkim Himalaya, Morocco, and the Great Atlas," and "The Flora of British India."

Drama

Percy MacKaye's play in three acts, entitled "To-morrow," is promised by Stokes for January.

Louis N. Parker's comedy "Disraeli" has been published (Lane), and makes interesting reading. It is a great pity that Mr. Parker, with his gift of invention, his mastery of stage methods, and his considerable literary skill, should be so ready to sacrifice sense to cheap theatrical situation. With a little more thought, more respect for his subject, and more ambitious purpose, he might have written an historical comedy of dramatic and artistic consequence, instead

Digitized by Google

of a smart theatrical piece, in which much veracious detail is lost in a mass of almost grotesquely absurd incident. Many of his personages are deftly sketched, and his dialogue is often exceedingly good, with plenty of snap and point, and a fair sprinkling of wit. Some of Disraeli's utterances are so characteristic that it is exasperating to come across others so tricky, purile, or inane. In this case, the excuse cannot be made that the vulgarization of the hero was necessary to meet the requirements of the impersonating actor, for the temperament and style of Mr. Arliss, for whom the part was written, are far better adapted to the interpretation of intellectual acumen than of any sort of heroics.

"The Marionettes," an English adaptation by Gladys Unger, of a French comedy by Pierre Wolff, which is now to be seen in the Lyceum Theatre, is the rehabilitation of one of the oldest of theatrical themes according to modern French ideas, and is too essentially Gallic in spirit not to suffer in the process of transplantation. In London it profited greatly by the personal charm of Marie Löhr and the ripe and polished skill of Sir John Hare, who found a most congenial part in the character of a simple, kindly, shrewd old uncle, the good genius of the heroine. Here the burden of the play—which, however, is well enough acted—rests mainly upon the shoulders of Madame Nazimova. Briefly, the tale is of a devout, timid, little convent-bred country girl, married, by parental command, to a gay young marquis, who soon tires of her shrinking modesty, ends by detesting her, and seeks recreation among the gayer and less scrupulous beauties of his bachelor acquaintance. Then the marquise transforms herself, by some subtle feminine magic, into a dazzling butterfly, arch, brilliant, provocative, and implacable. She encourages a lover to the danger point, and, at the crisis, has the satisfaction of finding her husband, desperate, ardent, and humbly remorseful, at her feet. The inevitable reconciliation follows. The whole play, in spite of its cleverness, is hopelessly artificial and theatrical in its plot and its personages, and offers no opportunities for acting of the higher and sincerer sort. Nor does Nazimova succeed in giving plausibility to the part of the heroine, Fernande, who is a bundle of radical inconsistencies. But she does furnish another proof of her own wide versatility, her rare power of diverse impersonation. The romantic ability displayed in her assumption of the shy novice—a character utterly different from anything she has yet attempted—was extraordinary. Her whole personality was subdued to the new conditions. Her conception was, perhaps, too artful to be entirely natural, but the executive expression of it was perfect in the minutest detail. As the dashing coquette she was, of course, in her own artistic element, and in the love scenes, where she was required to suggest the conflict between the impulse of pique and the dictates of her better nature, she played with subtlety and genuine feeling. But her performance only demonstrated anew the rich variety of her theatrical faculties. Beyond doubt she is a wonderful and most interesting performer. Whether she is a great actress is a question to be settled hereafter, when she has grappled with the deeper and nobler emotions of humanity.

The Irish Players, now in Maxine Elliott's Theatre, were seen to uncommon advantage in "Mixed Marriage," by St. John G. Irvine. This proved to be an exceedingly realistic comedy—culminating in unexpected, artificial, and unnecessary tragedy—showing the mischief wrought in Ireland by religious bigotry, and urging the virtues of toleration. The principal male character is a Protestant workman, who is willing to ignore his religious prejudices, in forming a strikers' combination against employers, but becomes a raving fanatic when asked to consent to his son's marriage with a Roman Catholic. When the family has been broken up by his violence and obstinacy, in spite of the active intervention of his wife as a persistent peacemaker, the intended bride is accidentally shot and killed in a riot, which is the direct consequence of his conduct. Nevertheless, as the curtain falls, he declares himself unrepentant. The final tragedy is ineffective and inartistic, because it is manifestly an expedient, not logically dependent upon the action or conflict in the drama, but three-fourths of the play consists of a vigorous and humorous exposition of the follies and perils of bigotry, and a most veracious study of Irish character. It is the most significant drama and the most truthful and significant reflection of Irish life and character yet given by these players.

Charles Hawtrey is going to revive Richard Ganthony's notable play, "A Message from Mars," for the Christmas season at the Prince of Wales's Theatre in London.

Gertrude Kingston, when she assumes the reins of management at the Little Theatre in London, means to start a theatrical school upon a large scale. Lectures by experts on dramatic literature, old and new, are to be a principal feature.

It has been announced already that Lillah McCarthy is to play the part of Jocasta in "Oedipus Rex," the first performance of which is to be given by Martin Harvey at Covent Garden Theatre, London, on January 15. Among other engagements are those of Louis Calvert for Creon and H. A. Saintsbury for Teiresias.

Among those English critics who are the most consistent supporters of the modern decadent drama almost any stick is good enough wherewith to beat a censor. Poor Mr. Redford, the Examiner of Plays, was vigorously abused for hesitating to grant a license for "La Vierge folle" of Henri Bataille, and abused worse than ever when he finally made up his mind to do so. This is the tale of an old married man—husband of a devoted wife—who seduces an innocent young girl, who finally kills herself with the pistol with which her brother would avenge her honor.

M. Trarieux's new play, "La Brebis perdue," which has just been produced at the Comédie Française in Paris, is a dramatization of Balzac's "Le Curé de village." Véronique Graslin, a beautiful and accomplished woman, has been married to a hideous old miser. She has the reputation of a saint. Actually, she is the mistress of a young peasant, Tascheron, who—at the end of the first act—tells her that he has borrowed a large sum of money, and makes arrangements to flee with her at midnight. But Tascheron has not borrowed the money; he has stolen it, and in stealing it has been the death of old Graslin and a servant. In the beginning of the second act, Véronique is a nervous wreck in her own home. Tascheron is in jail awaiting execution, and police are trying to discover the woman who has been his accomplice after the fact. Véronique's saintly reputation has been her shield against suspicion. Now she tries to save Tascheron from death, and even offers to marry the prosecutor if he will procure some mitigation of sentence; but her intercession is in vain. Then the Abbé Bonnet, the village priest who has been called to the murderer, enters her drawing-room, with the announcement that Tascheron is dead, after making full confession. What that confession was he dare not tell the friends assembled round the couch of the wretched Véronique. She knows; and the great moment in the play is when she stretches out her arms with a half-smothered cry of despair, and recalls the Abbé Bonnet as, last of all, he is leaving the room. A powerful scene ensues, in which the Abbé bids her to live and to devote the remainder of her life to real instead of conventional charity. In the presence of her little circle of devoted friends, she unfolds her terrible secret. Then she goes forth with the Abbé to labor among the poor in Tascheron's village, near Tascheron's grave on the hill.

Music

Musical Composition. By Charles Villiers Stanford. New York: The Macmillan Co. 90 cents net.

Among the hundreds of composers in this country there are not a few who might derive benefit from a perusal of this volume by one of the leading English (or, rather, Irish) composers. To the thousands of students in our conservatories, as well as in the increasing number of universities and colleges which are adopting music as a regular course qualifying for a degree, Stanford's "Musical Composition" will be invaluable; not as a substitute for the textbooks on harmony, counterpoint, form, and instrumentation now in use, but as complementary to them. For a quarter of a century Mr. Stanford has taught young men, some of whom have risen, and some of whom are rising, to eminence in their craft. In instructing them he has learned how to teach. He has also studied the methods by which the great composers were taught, or taught themselves, so far as the scant records permit; and he is thus enabled to present a series of illuminating chapters on technique, rhythm, melodies and their treatment, form, color, and the treatment of voices, different from those to be found in any other book.

Within comparatively recent times it has become the policy to put harmony before counterpoint. Mr. Stanford gives good reasons for his belief that the initial training should be horizon-

Digitized by Google

tal, and not perpendicular, and he gives illustrations showing the advantage of studying counterpoint (the interweaving of melodies) first, and through it of mastering harmony. Unlike most theorists, he not only states rules but explains why some of them are seemingly arbitrary; the forbidding of certain melodic steps, for example, being due to the fact that in early times such music was written only for unaccompanied voices which found it difficult to take such steps. While advising that students be made to study the strict model counterpoint, he relaxes sufficiently to urge the wisdom of letting them occasionally write music in any unfettered style, "to keep the engines of the brain oiled." For the study of rhythm he recommends as the best material the songs of Schubert, "which provide an amazing series of all sorts and kinds of figure in a short space."

The first attempt of a budding composer usually takes the form of writing song. He does not know that "to write a good song is one of the most difficult tasks which a composer can set himself." Sir Villiers gives his reasons for this statement—reasons which, if generally known, might have two much-desired effects: they would tend to reduce the excessive yearly output of new songs on the one hand, and on the other, they would emphasize the truth that musical genius is not to be measured with a yard-stick, and that there may be infinitely more of it in a short song by Franz, Grieg, or MacDowell than in a long symphony or oratorio—an admonition greatly needed, especially by musical critics and professional musicians in general.

Beethoven's sketch-books, in which one can trace his improvements in melody, rhythm, and harmony, in some cases through more than a dozen changes, are specially recommended by the author for study, and he finds a great deal to enlarge on in the advice Wagner puts into Hans Sachs's mouth in the "Meistersinger." Particularly interesting are the pages in which Wagner's indebtedness to Spohr in the matter of chromatics is dwelt on, as well as his gradual emancipation therefrom. The followers of Debussy, who are so proud of his use of the whole-tone scale, will not be pleased with what Sir Villiers has to say on this subject. For details we must refer to the book, but here is the substance:

> The student of some interesting modern developments will also speedily discover that the adoption of the so-called whole-tone scale as a basis of music is, except upon a keyed instrument tuned to the compromise of equal temperament, unnatural and impossible. . . . It is a curious commentary upon this question that Wagner, in the opening of the third act of "Tristan" (bars 6 to 10) experimented with the whole-tone scale, and drew his pen through it, as was to be expected from a composer whose every work proves the writer to have had the pure scale inbred in him.

Of the Liszt Centenary concerts so far given none has made a deeper impression than the performance of "The Legend of St. Elizabeth" by the MacDowell Chorus, under the direction of Kurt Schindler. The chorus had been increased by the addition of a boy choir; the soloists were satisfactory, and Kurt Schindler conducted the difficult oratorio with a skill and a deep insight into its spiritual and dramatic qualities that stamped him as a great leader. He had also wisely made some excisions, but hardly enough of them. As a two-hour oratorio, "St. Elizabeth" makes an entertainment equal in interest to any work of its class except the passions of Bach and two or three of Handel's oratorios. That it should have been neglected by local choral societies is hardly to be regretted in view of their usually slovenly productions. The MacDowell chorus is a new organization and from it we may safely expect performances which will ere long make the word oratorio cease to be a danger signal to those in search of an evening's entertainment.

When Sir Edward Elgar three years ago produced his first symphony, all England, with patriotic pride, proclaimed it a masterwork, and, in the number of performances it had in one season, it broke all symphonic records. By contrast, when he conducted his new second symphony, last May, there was a small audience to hear it, the critics damned it with faint praise, and little more was heard of it. Nevertheless, Walter Damrosch, who had placed the first symphony on one of his programmes and afterward repeated it, had the courage of producing, last Sunday, the second, also. He deemed it expedient to expatiate for nearly half an hour on the correlation of the whole symphony with one of Shelley's poems—an ailiance which the composer himself, who is not a believer in programme music, had not intended or indicated, although he had chosen two lines of the poem as a motto. The conductor's talk served to interest the audience in the moods which the four movements were supposed to express, and also helped to distract attention from the poverty of invention which characterizes this score, as it does most of Elgar's works. Wagner complained a number of years ago that Berlioz, by teaching so many new tricks of orchestration, had made it possible for composers who have little or nothing to say, to do it with such brilliancy and variety of coloring that an audience is easily deceived and made to hail a shallow new piece as a masterwork. Elgar has learned this art thoroughly; he is a master colorist, and in listening to his music one cannot but enjoy the alternate delicacy and richness of his tints; but all the time one misses real inspiration. Were his gift of creating new melodies as conspicuous as his skill in orchestration he would be one of the great masters.

Only eight operas will be performed this season at the Scala in Milan, Italy's leading opera house. They are Humperdinck's "Königskinder," Wagner's "Meistersinger," Bellini's "Norma," Nicolai's "Merry Wives of Windsor," Mascagni's "Isabel," Rimsky-Korsakov's "Ivan the Terrible," Gluck's "Armida," the "Ariane et Barbe Bleue" of Dukas, and "Loreley," by Catalani. The Milanese will be lucky to hear Chaliapine in the Russian opera included in this list.

Art

THE PRESENT STATE OF ART.

Ethnologists have a handy way of classifying mankind by the longness or shortness of the head, and in the uncertainty that has beset me as a critic I have sometimes wished that so impersonal a test might be applied to artists. Spiritually at least, I am confident that the painters of the great periods would show a startling preponderance of long heads. Your Titians, Claudes, Rubenses, Constables, Millets, Wattses, Manets seem to have been patient, well-conducted men of a considerable shrewdness and intellectuality, at peace with a *bourgeois* world, and quite devoid of that cultivated instability which we too much dignify by the name of the artistic temperament. In fact, until very recent times the artistic temperament seems to have been proper only to the irritable race of poets. The troubadours had it, or at least so pretended, and the whole line of despairing rhymesters finds an authentic forefather in Petrarch. A kind of short-headedness, indicating a surplus of the moonshiny qualities, was permissible and even expected in poets centuries before the painters ventured to regard themselves as erratic geniuses. The first of this type apparently was the mercurial Leonardo da Vinci, yet he contrived to enlist wealthy patrons in his sublime vagaries with the astuteness of a new-style promoter. Mind is, after all, the ruling part of him. But let us accept him as the real transmitter of the artistic temperament, and we shall have to jump more than three centuries before we find his example generally followed. The full-fledged conception of the painter as a self-sufficing genius in a world unworthy of him is a dogma of quite recent romanticism, and, incidentally, the romantic apotheosis of the artist heralded some of the worst art the world has ever seen.

Of course, a kind of roundheadedness, a state in which impulse and intellect, because both are weak, balance comfortably, has ever been the rule. But the world has probably never produced artistic roundheads so generously as about two generations ago. For a time the demand kept pace with the supply: those were the golden days of the Institute of France, the Royal Academy, and the Hudson River School. Then came sudden revolt and disgust. It became imperative for the artist to detach himself from the roundheads. Unhappily, the tradition of longheadedness had been broken. That of shortheadedness

Digitized by Google

was still very much alive, and for a generation past most artistic heads of any account have been worn short.

I.

The reader who has had the patience to follow this phrenological metaphor will now understand the singularly isolated position of the modern artist. Rejecting the banalities of the schools, he paints as if he were the only man in the world. The rare critic or patron who looks in on him praises this individualism. The painter is warned not to compromise; he becomes ashamed to own a master or an influence. By single-handed effort he must not merely find what he has to express, but also discover for himself the immensely delicate and complicated procedures of his art. Contrast this condition of unaided individualism with that of those old artists who at a tender age fully commanded the traditional resources of their craft, and throughout served a general taste that they both shared and led. Surely, it is not surprising that we have so many bad artists; that we still have any good ones at all is an eloquent testimony to the indestructible vitality of the creative impulse.

I must repeat that the superiority of the old masters did not imply isolation. Their mastery of vision and execution made them better, not worse, interpreters of widely shared feelings. They got inspiration from pretty much the whole of the life about them. Only the poorer sort were specialists. What was Titian's specialty; or Rubens's? The modern painter, on the contrary, is generally a specialist in landscape. And here, I believe, his choice is often less temperamental than forced. Nature is the logical solace of the man who finds himself ill-adjusted to society, and landscape painting is in many cases rather an evasion and a retreat than a true vocation. Admitting that a deep concern with nature is characteristic of our time, the actual production of landscapes is out of all proportion to the real interest in the subject. Whoever doubts this wide discrepancy between the preferences of the artists and those of their natural patrons need only inquire, How many landscapes are painted? how many sold? Of this overproduction Eugène Fromentin justly remarked that it constituted "an extremely curious problem in political economy." I may add in sociology.

Finding himself shut off from the common concerns of his times, the landscape painter often attempts a still more radical evasion. Under the spell of bare vision and fearing to blunt the keen edge of impression with memory of any sort, the artist sternly isolates his times of seeing and painting. By a voluntary effort, the personality is all but reduced to a succession of visual and executive states without apparent coherence. The picture becomes merely the swiftest possible record of something momentarily seen. The slightest infusion of memory will spoil the picture. If the eye or hand for a moment flag, the creative spell is hopelessly broken. The artist may, to be sure, pull himself together, but that means only that a new picture has supervened. Painting of this sort inevitably savors of the sketch. There is no time for details, and painters of this type often profess to see and render not objects, but an all-enveloping irradiation of light. Such, of course, is the meaning of Monet's Haystacks and Cathedrals; they are mere recorders of evanescent effects of illumination. In fact, the essence of impressionism lies, not in technical recipes of any sort, nor yet in subject matter, but in this endeavor to isolate and enhance the creative moment, preserving at all costs the innocence of the eye and reducing the life artistic to a series of keen but disconnected emergencies.

This, I believe, has been the ideal and measurably the practice of most of the strongest artists since Edouard Manet. Lest I seem to impute unfairly this dogma of the isolated impression, let me cite a pair of witnesses. The etcher, Cadwallader Washburn, in a recent number of the *Print-Collector's Quarterly*, writes charmingly of his boyish appreciation of nature:

> My mind, clear, free, and deeply enthralled with Nature, was destined to receive impressions exceptional for the absence of affectation. Nature appealed to the impressionable boy with all her intimate charms, untrammelled by association of ideas or of preoccupation by Art and her attributes.

The difficulty is, Mr. Washburn continues, to maintain this ingenuous attitude. This confessional passage is confirmed by Professor Ostwald's parting counsel in that suggestive little book "Letters to a Painter." In words that Manet himself might have uttered, Professor Ostwald concludes:

> The artist must continually force his eyes and his consciousness to lay aside the habit of the mental transformation of visual impressions, so necessary for the practical side of every-day life. He must train himself to see only patches of color without regard to what they really represent.

Such is the modern theory of artistic vision. I have not hesitated to develop it at some length since it is fundamental, and productive of all the specific spiritual and technical qualities of our art. Clearly the painter, as executive minute-man, cannot be a traditionalist, and must make once for all the waiver of traditional merits implying, with reflection, delay. Among such jettisoned qualities are fine and complicated arrangement, and any grace of color not attainable by first intention. Patience in the past has meant the revision of first intentions. To the modern artist this would mean mixing several pictures on one canvas. His patience consists in the courage to abandon an unpromising beginning and start fresh. How consistent this attitude is appears from the fact that the need of swift and uninterrupted execution has evoked an appropriate technique—the much vaunted direct method. Here nothing is implied that need affright the layman. To paint directly is merely to lay colors alongside of each other and not on top of each other. The latter procedure involves waiting for the under coat to dry. Such delay is abhorrent to modern notions of the picture. Time is of the essence. Señor Sorolla is said occasionally to let the sun go down upon one of his big canvases unfinished, but not often. The innocence of the eye, swift execution, the direct method—these are our modern contribution to the theory and practice of painting. What is new, however, is less the doctrine than its formulation and general acceptance. There have been many swift and ingenuous painters in the past—Hals, Velasquez in certain phases, the fantastic Greco, the luminous Guardi. These precursors of the direct method are tactitly excepted from the ban that forbids traditionalism. In short, the new theory of the picture has naturally not been wholly rigid. Yet the tendency of the past generation, emphasized today by the Post-Impressionists, has been towards an individualism wholly self-sufficing and anarchical.

II.

The criticism of this theory involves a purely æsthetic and a merely technical inquiry—is momentary vision æsthetically the best? Is memory the foe of the painter or his friend? is the most satisfying art a composite record of many states subordinated to a single continuous intention? or is it the product of an isolated ecstatic moment? This is the line of æsthetic approach. The technical issue is simpler: is the direct method of painting—the method of Zorn and Liebermann, of Sorolla and Besnard, of Wilson Steel and Childe Hassam—essentially adapted to modern needs of expression and superior to the historic methods now disused? As if to answer these questions, Kenyon Cox has published the six lectures recently delivered at Chicago on the Scammon foundation.* For years nothing so clear and cogent on general principles of art has come under the eye of the present writer. Let me quote with occasional interpolations that definition of the classic spirit which is the arraignment of most modern painting:

> The Classic Spirit is the disinterested search for perfection [this would seem ambiguous—a Post-Impressionist could sail under that device], it is the love of reasonableness and self-control [the im-

**The Classic Point of View.* By Kenyon Cox. New York: Charles Scribner's Sons. $1.50 net.

Digitized by Google

pressionist might claim these qualities for his keen observations and swift notations], it is, above all, the love of permanence and of continuity. [Here we part company with the seekers for transient effects and studied discontinuity.] It asks of a work of art, not that it shall be novel and effective [presumably, however, the Classic Spirit is not committed to the *genre ennuyeux*], but that it shall be fine and noble. It seeks not merely to express individuality or emotion, but to express disciplined emotion and individuality restrained by law. [Such doctrine is poison to the neo-romantic artist.] It strives for the essential rather than the accidental, the eternal rather than the momentary—loves impersonality rather than personality, and feels more power in the orderly succession of the hours and the seasons than in the violence of earthquake or of storm. And it loves to steep itself in tradition. It would have each work connect itself in the mind of him who sees it with all the noble and lovely works of the past, bringing them to his memory and making their beauty and charm a part of the beauty and charm before him.

This eloquent *credo* of Mr. Cox leaves me little to do by way of further criticism of the modern theory of the picture. Memory, he insists, is at every point an enricher of art. Creatively, the work is the better the wider its associations. More surprisingly yet, Mr. Cox feels that such associations are as well a distinct aid to appreciation. Rankest heresy this. That the vision of the feeblest work of art should shut out all other impressions whatsoever is law and gospel among painters today. Why, the inevitable and clarifying analogies that come to a critic are frequently set down to lack of essential sympathy and culpable failure to keep his eye on the object. Mr. Cox's statement will seem violently reactionary. I expect to see him mocked as a hopeless academic. That will only show how far we are sunk to-day in neo-romantic individualism. To every great artist from Giotto to Constable such assertions of the dignity of traditionalism and the need of social approval would have seemed truistic. I know that Professor Saintsbury and other critics believe that in comparatively recent times we have made the momentous discovery of the self-sufficing human soul. I shall have more confidence in the value of that discovery when I find any anarchical genius display the depth, richness, and range of the least of the humble giants of the past. When I do find a modern of this breadth I find an avowed traditionalist. There is Delacroix delving in the Venetians and learning daily from that Rubens who, while repelling, enthralled; Watts sitting at the feet of Titian, Raphael, and Michelangelo; Millet bred out of Virgil and the Bible, adorer of Poussin and Correggio; even Manet, highest type of the individualist painter, craved recognition, and sobered his extraordinary vision in communion with Velasquez. And at home, if we especially prize the interiors of Tarbell, is it because he has tempered his irritably intense vision under the influence ot such serene intimists as Chardin and Vermeër? Nor can I believe that the lovely spacing of Homer Martin was attained without some reflection on the designs of Claude. And carrying the theme into the field of letters, have we not all marked the waning of the anarchical star of Shelley and the steady ascendency of that devout traditionalist Keats? No, the individualists are of yesterday, and they have produced absolutely nothing to warrant the assumption that the relation of the artist to himself and his world has altered for the better. In fact, all visible evidence points the other way, and the fact that such evidently just and humane thinking as Mr. Cox's should be on the defensive is merely the sign of a general waiver of social standards and of a particular flaccidity of æsthetic opinion.

I cannot leave the dogma of the work of art as the vivid expression of a momentary state without noting that it is merely a tardy echo of a famous literary fallacy. It was Edgar Allan Poe who, with customary lucidity, made the logical application of the romantic doctrine of unchecked individualism. In the admirable lecture on "The Poetic Principle" Poe maintained that there can be no such thing as a long poem since the creative impulse is brief in the poet, and attentive ecstasy brief in the hearer. This brilliant generalization—on the whole, the most trenchant dictum of romantic criticism—had only the defect of identifying art with lyrism. Nobody will question the value of the lyrical mood, but no sensible person will follow Poe in tolerating the "Iliad," as after all a series of rather decent short poems. Similarly, it should be possible to admire the nervous beauty of a Manet without blindness to the thoughtful and elaborate perfection of Puvis's Wood of the Muses or Raphael's School of Athens. Moreover, if any comparison is to be made between the lyric and the epic perfection, the epic will appear more admirable as more broadly human, more various in appeal, and far rarer in occurrence. It was the enormities perpetrated in the name of the epic that exasperated Poe, and, concededly, lyrical failure is less appalling. But this obvious advantage that lyrism shares with all less ambitious emprises is more than offset by the fact that the epic *manqué* rarely fools anybody, whereas many of us spend our entire lives in a condition of emotional befuddlement by the false lyric.

III.

I hope I have not seemed wholly to condemn the current fashion of vivid isolated vision. On the contrary, I regard it as the beginning of artistic righteousness. I see, too—and here I could wish a more sympathetic attitude in Mr. Cox—that the recent fetishism of the retina was a quite natural and necessary reaction from a pitiful dispensation that had virtually forgotten how to see. But I am also convinced that impressionism in the broader sense is a juvenile phase—a means not an end, and that a really adult painter will regard the hard won innocence of the eye merely as one indispensable item in a comprehensive human equipment. There is no reason why the present neo-romantic individualism should not become a disciplinary stage to a genuine and idiomatically modern classicism. But before this ascent is effected, there must be much unstiffening of anarchical dogma, all the more stubbornly because unconsciously held.

Establish the spirit and it will readily find its own methods. Indeed, the present direct and opaque method of painting exactly meets the needs of him who has nothing more to express than what may be quickly seen and brusquely asserted. At all periods of oil painting, the direct method has been used for sketches. It is only of late that what are in conception and execution sketches have been offered as definitive works of art. On this whole matter of technique, Mr. Cox has an instructive chapter in which he analyzes the methods of Titian, Rubens, and Paolo Veronese. That we should return to some form of monochrome underpainting with transparent glazes above is his conclusion. It is noteworthy that Professor Ostwald, who approaches the question from the point of view of optics and maximum color effect, agrees with Mr. Cox that the finest qualities of oil painting imply building up with transparent colors upon a proper preparation. And, as if to confirm the view, the accomplished painter-critic, Roger E. Fry, has recently advocated tempera as more fitted than oils to the brittle method by which reflected light is now usually rendered. Actual experiment in England, Bavaria, and Austria seems to bear him out. Into these strictly professional mysteries, a layman must enter cautiously.

I cannot agree with Mr. Cox that the direct method is in itself flimsier than the double painting he advocates. In all of art, I can think of no painting more tonically satisfying as to mass and place than that of Manet. And I doubt if any weakling in the direct method would develop strength by adopting the perfect formula of Veronese. My eye agrees with Mr. Cox's in feeling much of modern landscape painting bleak and chalky in effect. The restlessness of the method is undeniable. I take something less than complete pleasure in such able work as that of Ernest Lawson, surely one of the most skilful devotees of impressionistic vision and the direct method—it is because I think he scores too many points in a picture and asserts trifles too brusquely. Here,

Digitized by Google

too, the method may not be at fault. Monet's London pictures and lily pools are of serenest charm, though directly painted. Still, on the whole, there is virtue in Mr. Cox's plea for painting in two stages. That would force delay, and at least open the possibility of reflection. It would revive certain lost beauties of transparent color, make for suavity, and offset the tendency towards strident assertiveness. That our few really imaginative painters have declined to live by the shibboleth of directness is significant. Albert Ryder, A. B. Davies, Brush, have experimented widely, and often build up the color, with the gradualness of a lacquer technique. Alden Weir shows in his latest and best work an interesting dualism. His landscapes, I believe, are directly painted; his figures show an elaborate interweaving and overlaying of color that cannot be described as a direct process. Cottet, as his art has broadened, shows a similar development. In short, the experimental period dominated by Manet and Monet is likely to end in more subtle and traditional ways of achieving the glow of broken color and procuring effects of specific illumination. The desire for a more complicated and thoughtful beauty will send men back to the approved and civilized technical formulas as it once sent Constable, Delacroix, Millet. And these examples sufficiently prove that an intelligent traditionalism is often the shortest road to artistic self-realization.

IV.

This essay would be incomplete without a word on the newest development in Paris, where a stale art is being violently rejuvenated.

The Post-Impressionists have carried the current dogma of æsthetic anarchy a point further, and thus have attained a logicality at once complete and absurd. Already art had been reduced to a vividly quick transaction between the individual soul and nature. Now nature is abolished and the soul communes spasmodically with itself. Color, for Matisse and his disciples, is no longer representative of anything in nature, but is an immediate symbolic expression of an inner emotion. Beyond this, the Post-Impressionists seek utmost simplicity and continuity of contour. They realize with Stendhal that the spectator has "only a certain quantity of attention," and they grasp at that modicum with resolute vehemence. Literalism of whatever sort is their abhorrence. Knowing this work only in fragmentary examples, I am loath to follow Mr. Cox in his sweeping denunciation of the movement. Matisse, whose more ambitious things strike me as so many gravely compiled puerilities, seems to me also a powerful and original draughtsman. I think he will so impress any person who is content to judge the work without prejudice: by its feeling. Gauguin, though pitifully uneven, had decorative moments of rare primitiveness and effectiveness. Cézanne, who hardly is of the group, in his grasp of mass and saturation of color had objective and undeniable merits of a high order. Yet, broadly speaking, the movement seems to me based on false and confused axioms and to have produced no works of art worthy of the accruing critical pother. The theory of immediate personal expression in unnatural color seems to be based on false analogies. A seraph is red, or a Tibetan love-god, for a sound ecclesiastical reason. The convention is social. Of conventions improvised in the void of isolated personality I am distrustful. Such symbolism partakes of caprice. It is at best mildly clever, like Arthur Rimbaud's famous reading of the colors of the vowels. And Post-Impressionism is not even constant to its own solipsism. It substitutes for the anti-traditionalism of the true impressionists a cult of barbaric simplicity. The outlines of neolithic cave-man, the paintings of the African Bushmen—these are the latterday Grecian examples. This cult of the primitive is, as Prof. Irving Babbitt has interestingly noted in "The New Laokoön," one of the plainest stigmata of romantic hypertrophy of the ego.

In its disgust with prevailing cheap naturalism I thoroughly sympathize with the new movement; I conceive it may revive some simpler and more energetic forms, but I fail to see in it any large hope. The ailment of modern art is isolation from the choicer social forces, and a consequent overvaluation of the mere idiosyncrasy of the artist. There have been good and promise in the impressionist movement only because the artist, though eschewing social discipline and support, yet has had the restraint of a fanatical fealty to certain natural appearances. This single remaining external discipline Post-Impressionism seeks to abolish. I need hardly argue that the cure for exaggerated individualism of whatever sort is not a more exclusive self-consciousness, but a generous conformity to the best feelings of our fellow-men. As Fromentin, surveying the art of France, nearly fifty years ago, wrote: "We must hope for a kind of miraculous purification in the atmosphere of society or in the air of studios." And possibly the studios must take the initiative, for while our society is merely ignorant and without standards, our artists, the average and the extreme alike, are largely committed to standards either partial or palpably false.

Frank Jewett Mather, jr.

Princeton, N. J.

"Meissonier" and "Puvis de Chavannes" will soon be added by Stokes to the Masterpieces in Color series.

"Memoirs of the Life and Works of Jean-Antoine Houdon," by Charles Henry Hart and Edward Biddle, will be brought out shortly by the De Vinne Press of New York on hand-made paper with plates. Two hundred and fifty numbered copies will be printed at a subscription price of $15 net—after publication, $20 net.

"Albrecht Dürer," in the Great Engravers series, edited by A. M. Hind (Stokes), is a squarish book neatly bound in cartridge boards and containing seventy-five good process facsimiles. Of these something more than a third are of woodcuts. A brief chronological note gives the main facts of Dürer's life. This attractive little album is equally eligible for the table of the amateur or the shelves of the young student.

The monument which Jacob Epstein is making for the tomb of Oscar Wilde will be erected next spring at Père Lachaise.

Thomas Ball, the sculptor, died on Monday. He outlived all the American sculptors who attained prominence in the last half of the nineteenth century, and reached a greater age than any of his contemporaries. He was born in Charlestown, Mass., in 1819, and was the son of Thomas Ball, a house and sign painter. Mr. Ball first turned his attention to painting, and in 1851 took up sculpture, his earliest work in that line being a bust of Jenny Lind. From 1865 to 1897, he lived in Florence, being a member of the colony that included the Brownings and Hiram Powers. He then returned to this country, and in 1898 took up his residence in Montclair, living in a beautiful Italian villa. Mr. Ball's work as a sculptor is shown in many of the cities of the United States, the most notable examples being the equestrian statue of Washington in the Public Gardens at Boston, the Lincoln emancipation group in Washington, a statue of Gov. Andrew at the State House in Boston, a statue of Daniel Webster in Central Park, a statue of Edwin Forrest as Coriolanus in the Actors' Home, Philadelphia, a statue of Josiah Quincy in front of the City Hall at Boston, a statue of Charles Sumner in the Public Gardens at Boston, and a large figure of Washington in Methuen, Mass. Mr. Ball completed in 1905 a work of art on which he had been laboring for fifty-two years—a painting entitled "Christ in the House of Martha and Mary." This picture he started about the time he had decided to abandon painting for sculpture. The picture now hangs in the Couper home, as does a painting of Mr. Ball's mother. The sculptor wrote an autobiography, "My Threescore Years and Ten," which was his chief essay in the literary field, although he was the author of several lyrics and minor poems.

The death is reported from London of Adolph Grose, the sculptor and etcher. He was born at Dijon, France, in 1837, but went to England and became a British subject. For his paintings, Stoning of St. Stephen and Amende Honorable, he won medals at the Salon in 1867 and 1868, respectively.

Tony-Robert Fleury is dead in Paris; he was once president of the Société des Artistes Français.

Prof. Hugo von Tschudi, the director of the Bavarian National Galleries at Munich, is dead at Cannstadt, aged sixty. Until 1909 he was director of the National Gallery at Berlin. Among his numerous writings is a life of Mendel.

WALL STREET AND THE ANTI-TRUST LITIGATION.

Many signs of the day have indicated that Wall Street markets are as deeply interested as they ever were in the problems raised by the anti-Trust litigation; but there are also signs to show something like a change in attitude towards the question. No doubt the fact that Stock Exchange prices rose violently after the news of the Steel Trust prosecution, instead of breaking disastrously, is somewhat responsible for the more tolerant view of the Attorney-General's activities. This made it harder, at any rate, to make effective use of the Anti-Trust law as the bugbear of finance.

But this calmer mood also gave opportunity for the financial community to turn over again in mind certain former convictions of its own on the subject. The Wall Street of 1902, if one excepts the great promoting and banking interests, was hostile to the huge company amalgamations, both because of the disappearance, in the mergers, of prosperous independent corporations much favored by investors, and because of the enormous financial power acquired by individuals. The Wall Street of 1903 and 1906 and 1909 was genuinely mistrustful of them, because it saw the controlling interests engaging their corporations in the most dangerous sort of financial experiment, with exceedingly bad results. The Wall Street of 1908 was alternately perplexed and irritated at Judge Gary's theory that supply and demand ought no longer to govern prices of commodities, but that some one should fix them arbitrarily with the promise that prices should be fair. These reflections of the past are perhaps instinctively recalled, now that even the Steel Trust's legality has been challenged and the markets continued undisturbed.

Even more contributory, perhaps, to the changing view of the Anti-Trust law has been the final settlement of the question how Trusts must be dissolved. So long as the possibility existed that the Tobacco Trust dissolution might be so prescribed as to break the combination of companies into minute parts, and thus provide precedent for similar treatment of the Steel Trust, investors of every sort were bound to be uneasy. The independent tobacco interests urged such a form of dissolution unsuccessfully on the Attorney-General and the Circuit Court; last week they made their last application to the Supreme Court itself, presenting a petition for the reopening of the case, the review of the Circuit Court's decree, and the admission, as parties in the case, of the independent manufacturers known as the American Leaf Tobacco Board.

On Monday of the present week, the Supreme Court denied the independents' petition. The Chief Justice tersely stated the reason for that refusal, in the following memorandum:

(1.) One who is not a party to a record and judgment is not entitled to appeal therefrom.

(2.) The action of the court below in refusing to permit the movers to become parties to the record is not susceptible of being reviewed by this court, on appeal or indirectly, under the circumstances here disclosed by the writ of mandamus.

(3.) The general nature and character of the interest which the movers allege they have in the papers filed is not in any event of such a character as to authorize them in this proceeding to assail the action of the court below. This is more obvious in this case since the act of the court which is assailed has been accepted by those who are parties to the record.

A moment's consideration ought to show why this attitude towards such petitions is absolutely necessary. The tobacco independents had not sued the Tobacco Trust; they were neither plaintiff nor defendant in the case. The Government on the one side, and the Trust, its corporate members, and its individual promoters on the other, were the only parties formally in the case at any stage of the litigation. But if the Supreme Court were to set up the precedent of reopening, at the behest of outside parties, a suit which had been settled in the lower court, and in the settlement of which both plaintiff and defendant had acquiesced, an endless vista of irregular and protracted litigation, in a thousand other conceivable cases, would be opened.

Two arguments have been advanced in favor of stretching rule and precedent in behalf of the tobacco independents. One was that the Circuit Court's decree of dissolution did not create, as the Supreme Court had ordered, "a new condition which shall be honestly in harmony with and not repugnant to the law." The other was that the independents had had no other way to get a hearing in a decision affecting their own trade interests. To the first, the sufficiently obvious answer is that a court of proper jurisdiction and the prosecuting officer of the Government had agreed that the existing plan of dissolution is in harmony with the law. To the second, it must be said that any independent manufacturer had the opportunity, under the Anti-Trust law, to enter suit for damages against the Trust and to introduce all his evidence in that suit. And to this may well be added President Taft's remark of last week upon the subject:

Those critics who speak of this disintegration in the Trust as a mere change of garments have not given consideration to the inevitable working of the decree, and understand little the personal danger of attempting to evade or set at naught the solemn injunction of a court whose object is made plain by the decree and whose inhibitions are set forth with a detail and comprehensiveness unexampled in the history of equity jurisprudence.

But whether Wall Street as a whole is or is not changing its attitude towards the Anti-Trust law, the attitude in certain circles of large finance has not changed at all. An interview with President Vanderlip of the National City Bank, on "What is the matter with business?" was published last week by the *Outlook*. It took the ground that all the present financial and industrial unsettlement is due to the anti-Trust litigation, and that very much worse conditions in finance and trade are immediately impending as a result of it.

It would be interesting, to Wall Street at any rate, to know when the interview was given—whether, for instance, in the last week of October, when the Steel Trust suit was entered and financial markets looked for a coming catastrophe, or three or four weeks later, when a rush of postponed orders descended on the steel trade, the stock market had risen 15 or 20 per cent., and when people began to say that business might be near the turn. This question would be unfair but for Mr. Vanderlip's flat assertion that "it is pretty generally agreed that business has ahead the most serious situation since you or I have been observers"—with the single exception made of the Bryan campaign of 1896. On Thursday evening, October 26, that was perhaps the actual opinion of the community, and it lasted just four days. As a statement of what was generally agreed in the manufacturing centres, in the distributing markets, or in Wall Street, four weeks ago, two weeks ago, or this present week, it is singularly beside the fact.

But President Vanderlip may be right, and people like Mr. King of the Jones & Laughlin, and Mr. Topping of the Republic Steel, may be wrong. We have often enough seen false starts in trade activity and senseless "bull movements" in Wall Street. The true philosopher, having fixed his own opinion of the future, stands on it, unmoved by such transient influences as these; and that may easily be the case with the interview in question. But it did not stop with this. It was its further statements—that the enforcement of the Anti-Trust law, beginning in earnest in 1902, "raised the sign 'No Thoroughfare' across the path of business"; that "vastly greater damage to the people and the country is resulting from the assault upon the economic laws of business," through the Sherman law, "than from any incidental restraint on the principle of competition"; that "to compel us to reduce the size of our industrial units would hopelessly handicap us in the race with our commercial rivals," and that the law would "force business to wheel arounu in its tracks

Digitized by Google

and return to the status of fifty years ago"—which caused in Wall Street, first astonishment and then something like derision, over Mr. Vanderlip's line of thought.

There was a Wall Street group in 1903, when Northern Securities was defeated in the suit but when a brilliant crop report was issued, whose immediate comment was, "What is the use of a bumper wheat crop *now!*" There was a probably larger group in 1907, when a world-wide panic, following world-wide overstrain on capital, had swept over Egypt, Japan, Chili, and Germany, and at last had broken on Wall Street, whose only explanation was that "Roosevelt did it all." When Mr. Justice Lacombe's two express-wagons (forgotten during fifteen months after the rendering of the opinion which referred to them) were revived to frighten the stock market of February, 1910, there was a similar group to cry out that no corporation, and no partnership, could escape prosecution under the law of 1890. But all that seems now as far away as the "Prosperity Leagues" and "Reëmployment Days" of 1908. None of it, even at the time, expressed the general sentiment of serious men, either in or out of Wall Street. Even the Stock Exchange grew somewhat sheepish afterward about its indulgence in such absurdities, and it gives the reader a curious feeling when he sees the same things in sober print to-day.

SEVEN GREAT STATESMEN

In the Warfare of Humanity with Unreason

By ANDREW D. WHITE

LL.D., L.H.D., PH.D., D.C.L.

Member of the Royal Academy of Sciences, Berlin. Late President and Professor of History at Cornell University.

"Seven brilliant monographs in which are set forth in most engaging style the social, political, and religious conditions of the times, of the men treated and of the influences such men had upon such times. It is true that they are but sections of history, but they are most illuminating—beacon lights by which the student may not only learn what to read of the great struggle begun in the sixteenth century, through which men have come into the light and liberty of the twentieth century, but how to read it.

"No better preparation for an earnest study of the history of the past 400 years of Continental Europe could be engaged in than the reading of these intensely interesting monographs.

"In their breadth and scope, in the rapid survey of contemporaneous conditions, in the wealth of knowledge of the times considered and of cognate subjects, there is much in these monographs to recall that prince of the monographic art —Macaulay and his Essays. . . . There are to be found such simplicity and lucidity of style, such subtle analysis so engagingly expressed, that the reader is lured to the turning of the next leaf and to continue to do so until the end of the division is reached.

"It is a valuable contribution to history." —*Brooklyn Eagle.*

THIRD EDITION NOW READY

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

First Edition, October 1st; Second Edition, November 21st; Third Edition, March 1st

Fully illustrated with portraits and other illustrations. With copious notes and bibliography. $5.00 net. Postage 26 cents.

The Nation

NEW YORK, THURSDAY, DECEMBER 21, 1911.

The Week

Mr. Taft's action in the matter of the Russian treaty is characteristic. The terms in which he gave notice of our intention to do away with the agreement of 1832 yield no excuse for ill-feeling on the part of the Czar's Government. In stating that this country has completely outgrown the conditions prevailing at the time the treaty was framed, he gives temperate statement to an undeniable fact. To the man in the street, of course, there is a distinction without a difference in the method of the treaty's abrogation. But in diplomacy it is to be presumed that manner still counts. This does not mean that the observance of all the proper forms will leave the Russian Government quite content. In the spirit of its communications with our own Government, as in the utterances attributed to M. Sazonoff, Russia's Minister of Foreign Affairs, and other high officials, it is quite apparent that irritation does exist at St. Petersburg. And it is as well that it should be so. It is one thing to avoid unnecessary injury to the feelings of another Government; it is another thing to make it quite clear that we have a grievance, and that we are bound to have it rectified. As a matter of fact, results are in sight. M. Sazonoff is already credited with admitting that, while the present passport regulations cannot be changed, perhaps there *has* been injudicious application of those regulations on the part of Russian consuls abroad, who have refused their *visé* to "a large number of persons who in reality were acceptable."

The action of the House in passing the "dollar-a-day" pension bill, by a vote of 229 to 92, was a great folly, the chief responsibility and reproach for which must fall upon the Democratic majority. True, all the Republicans but eight voted for the bill, and eighty-four Democrats, including their leader, Mr. Underwood, against it, but the party in control of the House has the blame, as well as the praise, for what the House does. And this cowardly surrender of the Democrats to the pension machine, this breaking away of frightened or scheming members from the advice and example of the party leaders, this act so full of insincerity and recklessness and the lowest kind of politics, cannot fail to shake the belief in the sanity and firmness of the new Democratic control and injure the standing of the party with the country. It will be set down as the first great Democratic blunder, on a national scale, since the election of 1910.

Mr. Underwood may well be disquieted by the signs that the Democrats in the House are getting out of hand in the matter of extravagant appropriations. He has expressed his fear that, unless some check be put to present tendencies, this Congress will prove to be the most lavish on record. After $75,000,000 for pensions, it is now proposed to vote $40,000,000 or $50,000,000 for public buildings. Mr. Underwood's protest against this, when he appeared in person before the House committee, resulted in getting just two members on his side. The rest went with the Republicans in favor of going in for the old flag and a big appropriation. Yet there is no doubt that all these Democrats would be ready, at a moment's notice, to make glowing speeches in the House in praise of economy in the abstract. This makes a difficult situation for a leader like Mr. Underwood. It also points unmistakably once more to the viciousness of our system of financial control in Congress. There is no man or committee with power to say what money-bill shall be passed and what shall not. It was a fatal mistake to take away years ago from the Appropriations Committee the general control of the spending by the House.

The Vice-President's flag is gayly flung to the breeze in Tuesday morning's Washington dispatch to the New York *Tribune*, setting forth the Hon. James Schoolcraft Sherman's desire and determination to be the Republican candidate for Governor of New York in 1912. His reasons for such desire, we must acknowledge, are ample and convincing. He is tired of merely presiding over the Senate's sessions, he is anxious to obtain an office which will make greater demands on his executive ability, he is seeking a vindication for the humiliation he received at Saratoga a year ago. The announcement, however, would have been more interesting if the reasons why the party should give him the nomination had been set forth, instead of the reasons why he wishes to get it. If parties were given to the practice of romantic magnanimity, a motive might be found in the circumstance that Mr. Sherman is one of the few men whose nomination would give Gov. Dix a fighting chance for a second term.

The Secretary of the Treasury's annual report, submitted to Congress on Monday, gives the first place of consideration to currency reform and the forthcoming Monetary Commission plan. Mr. MacVeagh is sanguine as to the prospects of early enactment of the pending reform proposals into law; he believes that the Commission's report will be so complete in suggestion and material that, "whether Congress shall adopt the recommendations of the Commission as a whole or not, there need be no further postponement of legislation." The country, he thinks, "has now largely and mainly agreed" on the direction of reform; "the nation has eradicated partisanship from this great business and social question," and "the persistent difficulties of monetary reform have almost entirely disappeared." In this statement of the case there is very much truth, and even people who doubt the probability of the enactment of such a law on the eve of a Presidential election, and who think that thorough and prolonged debate of any such measure is not only inevitable but most advisable, are aware that never since the Specie Resumption Act of 1875 has the outlook been so favorable for the judicious solution of this great problem within a reasonable time.

On one aspect of the contemplated legislation the Secretary has a weighty comment. "It is indispensable," he writes, "that the new law shall deny with great precision to any bank included within its provisions, whether national or State, the right to own stock in any other independent bank." He adds:

Digitized by Google

There is no immediate danger to be apprehended from such holdings; but now is the time to protect for the future the independence and individuality of the banks, and to forestall in their case the general tendency to the formation of undue combinations and Trusts.

Mr. MacVeagh might have gone so much further as to say that, unless a clearly prohibitory provision of this nature is inserted, the enactment of any law for the centralization of the banking resources of the country would be extremely doubtful. It is the imagined possibility of control, by a few strong banks or financiers, of the new system's extensive credit machinery, which has been the most formidable obstacle all along in the path of successful banking and currency reform. Such misgiving has found a voice not only among the people at large but among the interior banks, and the recent controversy over the holding-company device, whereby some of our powerful metropolitan banks held virtual controlling interest in a group of other banking institutions, was not calculated to allay it.

Secretary Meyer's advocacy of the sale or abandonment of nearly all the navy yards of the Atlantic Coast and their concentration in one great institution on Narragansett Bay can be readily defended on the ground of economy and efficiency. But already there is the greatest outcry against it on purely selfish grounds. The New York and Brooklyn Congressmen are "up in arms." The city of New York would like to get the navy yard out of the way, to use its valuable lands and docks for the purposes of peaceful commerce. The city badly needs more and better facilities for its ever-growing steamship traffic, and the navy yard as a yard has many disadvantages. But the Congressmen fear the political results of the move. Thousands of workmen might emigrate to Rhode Island, and think of the loss to Brooklyn trade which would result! It is a perfect illustration of the widespread popular attitude towards the Government so carefully fostered by the pension system and the protective tariff.

It is refreshing and decidedly wholesome to have the alleged economies of production by gigantic Trusts sharply and aggressively challenged, as by Mr. Brandeis last week before the Senate Committee on Interstate Commerce. A great deal of easy-going assertion and slipshod thinking is current on the subject, and the air of superiority with which the assertions are usually put forward makes them go down with great numbers of people without any thinking at all. It is seldom that any attempt is made to furnish particulars which would substantiate the claim; and serious quantitative statements—anything that would even tend to show how great this alleged gain is, or whether the tendencies making for the gain were not already in full operation before the monopolizing process set in—are virtually never attempted. Moreover, there is an habitual confusion of thought—whether accidental or designed—between the issue of large-scale production as against small-scale production and the issue of monopoly against competition; to hear some of the Trust people talk, one would almost think that those who are skeptical about the necessity of the Steel Trust aim to abolish everything larger than the little old-time forge. Mr. Brandeis has plenty of competent economic opinion behind him when he asserts the underlying and permanent advantages of competition in spite of its admitted drawbacks, and earmarks the economic advantages of industrial monopoly as in large measure illusory, and also as in large measure transitory—calculated to be more than wiped out in the long run by the loss of that vitality which is an accompaniment of competition.

The stimulating atmosphere of Arizona is manifest not only in the enthusiasm with which the people of that nascent State embraced the idea of the recall of judges, but even in their way of eliminating that provision from their proposed Constitution. The vote to that effect, in the election just held, was almost unanimous; a result which, if it had taken place in the phlegmatic, if not effete, East, would be regarded as either a merely formal matter or as indicating a diminished devotion to the idea. Not so in Arizona. "The people of Arizona," says the Democratic State Chairman, "simply refused to endorse Taft's decision as to what kind of a Constitution Arizona should have, and while they voted to eliminate the recall from the Constitution, as they were obliged to do in order to gain Statehood, they showed that the recall would be placed back in the Constitution as soon as it possibly could be done." Just how this determination was shown does not appear; but presumably the unanimity with which the recall was cut out of the Constitution was a sign of the eagerness with which they look forward to Statehood as a means of getting the recall. So much may be quite true; but is it not drawing it a little strong to say that the people "refused to submit to Taft's dictation"? The President did his exact duty, and no more, in refusing his assent to a Constitution which contained among its fundamental features a provision which he regarded as pernicious; but he explicitly recognized the fact that the people of Arizona could do as they pleased about it after they had become a full-fledged State. In other words, he was not, in any obnoxious sense, "dictating" to them at all; and in so far as he *was* dictating to them, they did not refuse to submit, but on the contrary submitted absolutely.

Chicago's recovery of that portion of the lake shore long held by the Illinois Central Railroad is an event of more than local interest. A fair and amicable agreement between the city and the company will make possible the construction of a boulevard from Jackson Park north to Grant Park, the erection of the Field Columbian Museum in the latter area, and in general the development of a part of the city long neglected. Especially will the lake front, after land has been made by filling and waterways opened, be made as attractive as nature seemed to intend. The arrangement now arrived at is in pursuance of the plans long urged to beautify Chicago. The situation seemed hopeless, but the railway finally had the grace and business sense to surrender its riparian rights for the whole distance of between four and five miles south of Twelfth Street. Mayor Harrison is well within the truth in describing the event as the biggest thing that has happened in or for Chicago since the World's Fair, of which, indeed, it is in a large measure one result.

The rounding of Mr. Bigelow's long life with sleep is in the order of nature, but nevertheless brings its shock. So many had come to think of him as an invincible figure, flinging a dart at Death it-

Digitized by Google

self! His cheerful and buoyant bearing at a great age seemed to promise many confident to-morrows. Intellectually active to the last, hopeful, inquiring, far from being shut up to live solely in the memory of past days, still warming both hands at the fire of life, he showed us an old age with scarcely any of the melancholy and depressing features that often go with it. Living in the active present though Mr. Bigelow always appeared to be, he yet could not avoid being regarded as a venerable and representative type of another time. His distinguished though simple bearing, his scrupulous politeness, his somewhat formal modes of speech and writing, all had the stamp of an elder day upon them. At any time these past thirty years he would have sprung to the general mind as a specimen as fine as one could adduce of a cultivated American gentleman. Then, too, he was wonderfully identified with his city, of all of whose modern growth he had been an eye-witness. He was eminently a New Yorker. To have stood for no more than all this would have been a great achievement. But when we remember how Mr. Bigelow carried his grand manner into intellectual pursuits and public services which alone would have marked him off from common men, and when we recall the indomitable vivacity and high spirit with which he carried the burden of years, as gallant at ninety-four as another Dandolo, we begin to perceive how the loss of him takes on national proportions. When Webster died it was said that to think of America without him would be like thinking of it without Niagara. There was none of this titanic force about Mr. Bigelow, but there was a loftiness and even majesty in his character which will make his disappearance seem like the fading from a familiar landscape of a snow-crowned mountain-peak.

In the programme of a meeting shortly to be held by a learned society we note the following from a description of a paper on Nietzsche:

> The eternal value of some of his over 200 poems and the well-nigh inimitable excellence of his prose, added to his broad acquaintance with, and his original ideas on, art and history and philosophy lend to his criticisms an unnegligible if not indisputable authority. Yet Nietzsche's relation to philology in the uncommonally (*sic*) inclusive sense in which he used the term is a practically unworked mine.

There may be a deeper meaning in these words than first appears. Some of Shakespeare's most exalted if also most incoherent passages have inspired language like this, and "Sordello," along with other literary puzzles, has gone somewhat awkwardly to people's heads. But the present instance has avowedly to do with nothing more exciting than philology. Still, much can be wrought by patience, and already we begin to share the enthusiasm for the coming picture of a thousand times ten thousand scholars focussing their spectacles upon the magic of "Also sprach Zarathustra." The more one dwells upon the thought, the more one must feel that these words were all the time intended for philologists.

The House of Lords, in passing so promptly, without amendment and virtually without debate, the workmen's insurance bill, has not helped its standing with the English people. Just after the long and bitter fight for a Second Chamber with full revising powers over general legislation, we see the Lords incontinently refusing to exercise those powers. The opportunity was tempting and one might even say that the duty was plain. Lloyd George's bill, as it passed the Commons, was an infinitely complex measure, not all the provisions of which were clearly understood, and many of them had not been discussed. There was naturally a feeling among sober Englishmen that the Lords ought to go slow with so grave a piece of legislation. There is still a suspensive veto left to the Upper House, and men like Professor Dicey openly appealed for its use at this juncture. But all was in vain; and the Lords meekly did what they had previously done with the old-age pensions bill. Thus they give fresh point to the old taunt that they really have no intention of being a genuine revising body at all, but simply throw out what Liberal legislation they dare, and when a bill comes along which they fear is immensely popular, pass it without a murmur.

The coronation of George V as Emperor of India was signalized by the announcement of two highly important administrative changes, the virtual reconsolidation of Bengal under one Governor, and the transfer of the capital of India from Calcutta to Delhi. Something more than geography enters into both moves, although there are plenty of geographical reasons for the selection of Delhi. That city is situated almost exactly at the middle point of the base line of the inverted triangle which the Hindustan peninsula forms. It is a healthier city than Calcutta in the low-lying estuary of the Ganges, and much nearer to the summer capital, Simla, from which the government of India is carried on during a large part of the year. Historical associations also speak for Delhi, though the city did not come under British authority until 1803, while British Calcutta goes back to 1686. Delhi has the greater native prestige. It was the capital of the Mogul emperors under whom India attained its most brilliant development. At the height of its prosperity, Delhi contained two million inhabitants and was the most magnificent capital city in the world.

But it is the political aspect of the Durbar changes that is most important. The division of the old province of Bengal into the two provinces of Bengal and Eastern Bengal and Assam, effected six years ago under Lord Curzon's administration, was the definite cause of the outbreak of political unrest with which India has since then been troubled. The Hindu population was exasperated by the partition of what it regarded as its fatherland, and resentment against the British was accompanied by an upflare of racial animosity against the Mohammedans, who are numerically strong in Eastern Bengal. Indian agitation has centred among the Hindus, because this race supplies almost the entire educated native class from whom the professions and the native civil service are recruited. Consequently, it has been a part of British policy to win over the Mohammedan element to its support, and so to establish a counterbalance to Hindu disloyalty. The changes announced at the Durbar seek to placate both classes. In bringing the two Bengali provinces under a single head, an important concession has been made to Hindu sentiment. But in the removal of the capital to Delhi, the chief centre of Mohammedan influence, the non-Hindu element has been recognized.

A SQUARE DEAL FOR TAFT.

That there is ground for severe criticism of many of President Taft's acts may be admitted. That he has made thousands of Republicans lukewarm towards his renomination, and many actively hostile to it, is obvious. But even the President of the United States is entitled to fair play! And Mr. Taft is not getting it. During the past few weeks he has been subject not only to attack, but to gross misrepresentation. The process of belittling him has been carried to wholly unjustifiable extremes; and the result is really to belittle the men who are responsible for it. Distortion of the facts has been common, along with insinuation of bad motives. And there has been too much hitting below the belt, too much warfare against the President of the nature of sneaking ambush instead of a manly stand-up fight.

We are glad to see that something like a protest against these unhandsome methods has set in; and that a college professor has had the honor of taking the lead in it. At Madison, Wisconsin, on Saturday, Prof. A. B. Hall of the University called for fair play for Mr. Taft. Holding a chair in the department of political science, Professor Hall has to keep track of public events, and gives it as his deliberate opinion that never in the history of the country has there been an Executive who more rigorously enforced the law than President Taft. Himself a La Follette man, the Wisconsin professor has the decency thus to speak out against the kind of underhand misstatement and muttered fault-finding that have been current. Mr. Taft may not be a great President; it may not be wise for his party to nominate him again; but he is entitled, and the country is entitled, to have the case against him put fairly and openly. There has been far too much whispering and secret intriguing and cowardly assault willing to wound, but afraid to strike.

And it is now getting to be notorious, and the subject of comment in newspapers in various States, that it is the great clamorer for the square deal who is treating President Taft in a way anything but square. There are many and diverse speculations about Mr. Roosevelt's motives and possible ambition in seeking to undermine Mr. Taft. Into those it is unnecessary to go. His acts are sufficient. Take the matter of the anti-Taft meeting in Boston on Saturday night. It is known that the promoters of it had been in touch with Mr. Roosevelt. Before leaving Boston last week, he himself gave out a statement saying that he favored this movement to bring together the "Progressive Republicans" of New England, adding that it was not a question of putting forward any candidate, whether State or national. But does anybody suppose that Mr. Roosevelt is so simple-minded as to have believed that? He must have known exactly what would happen; that Mr. Gifford Pinchot would be the chief speaker and would say that Taft's nomination was impossible, and that the Progressives must rally to La Follette. The whole effect, and the whole intent, of the mass meeting was adverse to Taft, and this must have been from the first in the mind of everybody connected with it.

With this fact, however, we are not now so much concerned as with the implications of it. It does not stand alone. It goes with many other things to show that Mr. Roosevelt is deliberately allowing himself to be used against the President, and is allowing it ambiguously, equivocally, and not in the honorable and manly fashion which he has been forever advocating. No authorized statement has come from him further than an admission that he would not actively favor the nomination of Mr. Taft or of any other candidate; but there can be no doubt that his attitude goes beyond that, and is, and is understood by his friends to be, one of positive antagonism to the President. That in this he is perfectly within his rights, we do not for a moment think of denying. No one has uttered more glowing words in praise of Mr. Taft than Col. Roosevelt, but he has the right to withdraw them if he chooses to. It is not the question of his consistency that is disturbing, but of his fair dealing. Why does he not frankly state the grounds of his opposition to Taft? It is a public question. The debate is open. Let the Colonel come forward man-fashion, and tell us what he thinks. He surely cannot wish the country to believe him capable of a tortuous course, hinting a fault and hesitating dislike, and giving aid and comfort to men under cover, when all the while the square thing to do is to take a bold position in the open and meet all comers. One thing is certain, and some of Mr. Roosevelt's friends ought to apprise him of it, namely, that his present conduct is making the worst possible impression, causing many to believe, what they had never before been willing to credit, that Mr. Roosevelt's treatment of President Taft is so unfair and unmanly as to show that he is "in friendship false, implacable in hate." Some are even willing to complete the couplet and to add: "Resolved to ruin or to rule the state."

From all this, we think, President Taft's friends have little to fear except temporary embarrassment. The American love of fair play is not extinct. We go in for a great deal of political fighting, but we wish it to be with lawful weapons. In favor of any man persistently and wrongfully misrepresented and abused—especially if blows manifestly foul are dealt him—a reaction is certain to set in. Before the Presidential election is over, the people will pass upon Mr. Taft's actual merits. But for the time being there is warrant for the indignation which honest men cannot help feeling when they take note of the peculiarly despicable tactics which are employed against Mr. Taft.

RE-MAKING CITY GOVERNMENT.

The rejection of the commission form of government by Vancouver and Olympia lends emphasis to the evident suspension of judgment that has followed the first outburst of enthusiasm over the new system. This is the more notable since two of the largest cities in the State of Washington have been operating under the commission form for more than a year. It is a "home-rule" State, with a general provision allowing cities of 20,000 population and above to draft and adopt their own charters. To this law there was added by the last Legislature a general commission-charter law for cities of from 2,500 to 20,000 inhabitants. It is under this provision that the two cities named above have just refused to follow the example of Tacoma and Spokane. Whether the experience of Tacoma can be held accountable for the adverse vote it is impossible to say at this distance, but that city has not had a very happy time with its new form of government. The expenses of the city have gone up, and at a recent recall election not only the Mayor, but two of the four Councilmen, were retired. Spokane has been trying the com-

Digitized by Google

mission form for a briefer period, and it is too early to draw conclusions regarding its working there. But the results in Tacoma, particularly the eagerness with which its citizens have made use of the recall provision, have been widely published, and are undoubtedly among the forces that have brought about a pause in what for a while seemed a general turning to commission government.

At present, reckoning only the municipalities that conform to a fairly strict definition of the term, more than 160 cities have adopted the commission form. Most of these have done so in the last two years. Some account of the differences among them, and of the experiences that they have had with the system, is given in the last number of the *Annals of the American Academy of Political and Social Science*. From this report, it appears that at least five features are found in all the commission laws. The fundamental one is the exercise of both legislative and administrative authority by the same governing body. Then, each member of this body is placed in charge of a division of the work of the city. The board is small, never having more than ten members, and usually not more than five. All the members are elected by all the voters of the city, and not by wards. Finally, in addition to methods of publicity, one or more devices of direct popular control are ordinarily included, such as the referendum, the initiative, and the recall. But apart from these items, there are wide variations of faith and practice, so wide, indeed, that the term "commission form" has been found insufficient, and we read of the Des Moines plan, the Grand Junction plan, the Staunton plan, and the Lockport proposal.

One of the cardinal points of divergence among these "plans" is over the question of the joint or several responsibility of the Commissioners. In Grand Junction, Col., it is pointed out that the election of Commissioners in a body, with power to apportion the offices among themselves after the election, opens the way to log-rolling and strife; that it makes possible the choice of the most popular candidates, each of whom might be well qualified for a certain one of the offices, and no one for any of the others. "Our plan," say the Grand Junctionists, "is far more democratic." Each of the Commissioners is chosen separately as a candidate for a definite office, and thus the city gets the benefit of a corps of experts. This sounds convincing enough until one hears from Lockport, N. Y. Suppose, runs the argument, that the Commission, by a majority vote, has passed an ordinance providing for the repavement of the main thoroughfare. Suppose, further, that the Commissioner of Streets was not a member of the majority, and refuses to carry out its will. Is it not plain that nothing short of collective responsibility will solve the difficulty? And so Lockport has a City Council to act as a Board of Directors, with a City Manager, appointed by it, to look after the execution of its orders.

To the outsider this scheme has a squint backward towards the Mayor and Council organization. The Des Moines method in this matter of commission responsibility is still different, and its citizens do not display the certainty of success shown by the advocates of the other arrangements. The public in the Iowa city seem to have been actuated by opportunism, demanding, for instance, that a Commissioner should be allowed virtually unlimited right of selection of his subordinates when it had confidence in the men named, and taking an opposite position when the selections displease it. Obviously, this is an unworkable principle. The importance of the problem of collective or individual responsibility is indicated by the statement that the controversy over it has developed the most acute personal and political antagonisms that have arisen in Des Moines since the inauguration of the commission form.

To the inquiry, How has commission government worked? it is impossible to return a categorical answer. This is true even in the case of the first city to adopt it. New Orleans, as long ago as 1870, obtained from the Legislature a new charter, vesting the powers of the city in a Mayor and seven Administrators. It seems incredible that a government which went on for twelve years should forty years later hang uncertainly between a favorable and an unfavorable verdict of history, but no one can say, in the face of the conflicting evidence, whether the repeal of the charter in 1882 was wise or not. Nor is the experience of Galveston at all conclusive. As a local observer remarks, "Even without a commission form of government Galveston would necessarily have had a reform government after the storm." And in many of the later instances, success has apparently been due, in part at least, to the interest taken in the plan by the first Commissioners, who were among its most ardent advocates, while failure is attributed, in some measure, to the "bad start" given it by unfortunate choices at the initial election. There is complaint that "neither the electorate nor the Council are sufficiently impressed with the great necessity of efficiency in the selection of men for public positions." Little help is got from the saying that "much will depend upon the intelligence, the alertness, the ideals of the electorate," or in William Penn's generalization that "there is hardly one frame of government in the world so ill-designed by its first founders that, in good hands, would not do well enough; and story tells us, the best, in ill ones, can do nothing that is great or good." We must wait for more definite results of the experiment.

EFFICIENCY IN THE ARMY.

The first report of any new Secretary of War is always read with interest by the service, usually in order to see how far that official has been taken into camp by the powers that be in the War Department. Tremendous is the influence of the Chief of Staff and the Adjutant-General; they are firmly intrenched; they know the army from A to Z; they are masters of red tape and have resources of information and experience at their command to overwhelm the doubts of any gentleman who quits his law-books in Tennessee or the pastime of sending bank-wreckers to jail in New York in order to head, for a more or less brief period, the military machine. Rarely is it given to one like Mr. Root to think for himself and to see with his own eyes. Usually it is the voice of the Chief of Staff that is heard, and not that of the Secretary. It is interesting to note, therefore, in Mr. Stimson's report, whether it is due to the Chief of Staff or to the Secretary himself, that his attention has evidently been drawn to some of the real weaknesses of the service, and particularly to its costliness.

It has long been noted by observers within and without the service that in

Digitized by Google

the construction and location of army posts the one aim and object of Congress has been to place them where they will do the most good politically. Next, the object of the War Department has been to construct posts entirely unlike any other army stations that we have ever heard of. Elaborate suburban villages are created in the outskirts of great cities, planned, according to one of the most brilliant officers in the service, "exclusively for the benefit of the camp-followers"—the women and children. It being the people's money, such a thing as economy has been unknown, and the real objective—the hardening and training of soldiers—has been entirely lost sight of.

Mr. Stimson estimates that fully $94,000,000 has been spent upon our present "ineffective and expensive" system of army posts. He sees clearly that to strike at it is to invite the same political enmity which Secretary Meyer is encountering in his efforts to consolidate the navy yards. As Mr. Stimson puts it: "The source of profit which each post furnishes to neighboring communities causes a local pressure against any change in location and brings constant influence to bear towards further expenditures in that locality." Nevertheless, as he says, some steps are being taken—to save a few pennies where millions could be saved. Thus a waste of $245,000 has been cut off by changing for the third time to a system of territorial divisions for administrative purposes—a form of concentration and decentralization. The amazing discovery has been made that cavalry cannot drill in winter in the deep snows of Montana and the Dakotas, and—with almost scientific intelligence—it has been similarly discovered that if the cavalry were stationed in Texas, New Mexico, and Arizona, they could use their horses throughout the year. Finally, Mr. Stimson points with pride to another discovery—that those officers and critics were right who have for twenty-five years insisted that weak companies were a source of military weakness and economic waste, and that large regiments mean "tremendously increased morale, interest, and enthusiasm."

After this striking demonstration that the world does move, even in the War Department, is it too much to hope that later on Mr. Stimson will give us still further and more radical recommendations for cutting out waste? Some army officers believe that the cost of the service could be reduced 50 per cent., and the efficiency at the same time increased. Thus, Mr. Stimson may yet come to the conclusion that regiments should be in barracks in cities, and that the Government should not concern itself, except at foreign stations, with the housing of women and children. The necessity for this passed away with the building up of the West and the ending of the Indian wars. It has already been brought to Mr. Stimson's attention that by a conservative estimate we pay "for effective riflemen between two and five times as much as any first-class Power on the continent of Europe . . . after excluding from the comparison the higher pay and subsistence which our soldiers receive." Again, in his endorsement of the efficiency or scientific management introduced at the Watertown Arsenal, Mr. Stimson puts his finger on somewhat the same evil which has aroused Secretary Meyer in his administration of the navy. And his endorsement of the long-urged consolidation of the Quartermaster's, Subsistence, and Pay Departments into one supply department is also noteworthy.

But when all is said and done, the Secretary of War himself can do most to bring about that spirit throughout the service which will regard Government money as trust funds. In establishing a committee in the War Department to coöperate with the central Washington Commission on Efficiency, Mr. Stimson has taken perhaps the most important step towards reform. Like some of his predecessors, he has found that army retiring and examining boards do not do their duty by the Government, but consider what they think are the "vested rights" of officers rather than the welfare of the service. If he will go a little deeper into the matter he will find that this laxity is in the last analysis due to the fact that politics in the War Department has often so flagrantly overruled the findings of such boards as to give the officers composing them, quite naturally, a false idea of the trust imposed upon them. This can never be eradicated until the War Department is itself beyond the reach of influence and without respect for the "vested interests" of the politicians. So in regard to efficiency and the saving of money; the example must come primarily from the War Department itself, not from the individual officer, nor even from Congress. The powers of the Secretary of War are enormous. Let him grapple with his swollen estimates himself and insist upon his bureau chiefs cutting them far down; let him end the waste of unnecessary officers—so many of whom are now on recruiting details, detached duty, and instructing schoolboys—to mention only two of many matters that lie at his elbow. Then he will quickly find that officialdom as a whole will respond to the example of economy.

WORKINGMEN'S INSURANCE IN GERMANY.

Under the title, "The Practical Results of Workingmen's Insurance in Germany," Dr. Ferdinand Friedensburg, lately retired as president of the Senate in the Imperial German Insurance Office, has published a brochure which is nothing less than an amazing indictment of the working of the system. References to it have already appeared in the cables, but the complete translation made by Dr. Louis H. Gray, which lies before us, is even more sweeping that we had been led to expect. Dr. Friedensburg plainly writes, not to injure the service from which he has just honorably retired, but with the purpose of pointing out certain grave evils which he desires remedied. That the Reichstag, at its recent session, passed some legislation amending the existing laws, is in itself proof, were any needed, that the system so often heralded as beyond criticism is very far from being so.

No amendments can ever go to the psychology of the situation, or alter the fact that the establishment of this pension system, with its demoralization and pauperization of those classes to which it applies, is on all fours with our own military-pension experience. We are inclined to say that every kind of pension fraud known in this country is paralleled in Dr. Friedensburg's exposure. It seems to be in the nature of public pensions to make liars of all who have to do with them. As Dr. Friedensburg tells the story:

> Pension lies unblushingly involve even family life. Attempts are made, ever and again, to transform the wife into the employee of her husband, and the husband into the employee of his wife, as circumstances may demand; brothers and sisters become servants; and even children not yet four years old are alleged to be regularly employed in agricultural pursuits. In

Digitized by Google

his old age the man who has retired from active life again becomes a ploughboy, and the mother-in-law who has been received into the household is metamorphosed into a nurse-girl. This latter transformation became especially popular since, when the invalid and old-age insurance law went into effect on January 1, 1891, persons who had already reached the age of seventy could receive pensions only after proof that they had been engaged in an occupation entitling them to insurance within the three years previous.

Every child killed, Dr. Friedensburg reports, was the "sole support" of his parents, "gave his parents every pfennig he had, and himself lived on air." A farmer injured going to church to pray for rain insisted that he was engaged in an agricultural pursuit, and therefore entitled to a pension. A peasant who had infected a finger while undressing her child insisted that the undressing was an agricultural pursuit, since the child kept the geese!

Every possible device is thought of to obtain pension money. Precisely as with us, the pecuniary condition of the pensioner is not touched upon; he may, after the loss of one eye, be as well paid as before, but he draws his pension just the same, as do our millionaire military pensioners. Naturally, the cost of pensions has gone far beyond anything dreamed of. In 1886 the accidents reported were 100,159, and damages were awarded in 10,540 cases; in 1908 these figures were 662,321 and 142,965, respectively. Between 1888 and 1908 the cost of the indemnities rose from $1,475,000 to $38,775,000. To administer this vast business there were in 1909-10, in addition to a president and two directors in the Imperial Insurance Office, sixty-three high officials, besides an army of clerks, while the number of associate justices had risen from four to ninety-nine, the cost of the Imperial Office alone being $650,000. As in the Pension Bureau in Washington, the tendency is to stretch every possible point in favor of the applicant:

> Documents are searched—or, at least, should be—with the utmost meticulosity, on the chance that some point may still bear "interpretation" in favor of the insured; expert opinion is heaped on expert opinion, often with the additional requirement of tedious hospital observation of the person alleging injury, especially in the case of one of the many neuroses which it is so much the fashion to claim to be the results of accidents.

Not unnaturally, the sober business men of Germany—those who are responsible for her wonderful industrial progress—are appalled at the increasing pension burdens of a country which is staggering under the heaviest military burdens in Europe. It must soon, according to the Essen Chamber of Commerce, "reckon with a burden of about $312,500,000 each year laid upon [her] industrial activity simply and solely for purposes of social insurance." Elberfeld and Lübeck are other towns that see in the excessive character of these insurance burdens a growing menace to Germany's vast foreign trade. Moreover, Dr. Friedensburg reports, there is nowhere left a trace of that fine glow of social and philanthropic enthusiasm "which once greeted the new institution." Everybody who possibly can do so endeavors to escape from the burdens of insurance. There is endless red-tape, and endless officials travel up and down the country inspecting, "controlling," and being controlled. Insurance has developed "to an incredible extent the German evil of bureaucratic formalism." In the provinces the best voluntary social workers "have withdrawn in disgust."

Convictions for pension frauds are as rare in Germany as in this country. To try everybody who makes false claims would mean the trebling of the courts and prosecuting attorneys, and the juries as it is are untrustworthy—one has acquitted, on the ground of "involuntary" falsehood, a magistrate who perjured himself on the promise of obtaining part of the pension, to the justice of which he certified. Politically, too, the parallel with the United States seems perfect. There are increasing promises from several parties that they will "perfect" workingmen's insurance—always by widening its basis and letting down the bars, although what has been done has by no means accomplished the social revolution its authors believed certain. Social unhappiness and unrest are greater than ever before; and the workman, of course, feels the effect of the enormous financial burdens. Incalculable good, Dr. Friedensburg insists, has been accomplished; he still believes in the policy. But, as he puts it, the underlying legal, ethical, and material considerations have been hopelessly confused, and at the root of all is the way the pensions have become "an all-pervading cancer that is destroying the vitals of our state."

SCIENTIFIC WORTHIES.

To those who are whirled along in the maelstrom of politics or business, the contemplation of a life like that of Sir Joseph Donald Hooker, who died on Monday of last week at the age of ninety-four, can hardly fail to bring a pang of envy. A life of consistent and loving devotion to the pursuit of knowledge in a field to which he was drawn by the strongest predilection, and which, in the particular case of Hooker, was rendered doubly attractive by association with the work of his distinguished father; a life of tranquillity and serenity so far as regards all human relations, and yet of stirring experiences in travel and adventure, of stimulating participation in a great intellectual movement that has affected the thought of all the world, and of large and signal achievement attained through strenuous labor in his own particular domain; a life of beautiful friendships, of elevating associations with the finest minds of his time—such a life, extending from earliest manhood almost to the rounding out of a century, is surely one of the happiest, and one of the most substantially satisfactory, that the world affords.

Not long ago—in connection, we believe, with the celebration of the centenary of Charles Darwin and the semi-centenary of the "Origin of Species"—the question was mooted, and discussed in many quarters, whether America was producing a Darwin. The question, we take it, was essentially whether the conditions in our American colleges and universities, and in American life generally, were such as to favor the maturing of a great intellect and a great idea through quiet and patient brooding, through labors and aspirations independent of the mechanism of ordinary reward and recognition, through that kind of direction given to intellectual interests and to intellectual striving with which routine arrangements, however admirable, have nothing to do. But it is not only with reference to the development of a world-leader like Darwin, or the production of an achievement like the "Origin of Species," that this kind of question is pertinent. Within little more than eighteen months, three English men of science of high eminence have died, each of them at an age not far from four-score and ten—Huggins in his eighty-seventh year, Gal-

Digitized by Google

ton in his eighty-ninth, and now Hooker after passing the age of ninety-four. No one of these men belongs to the class of Darwin or Newton; but each of them made highly important contributions to the progress of science. And each of them was born to circumstances of ease and plenty, and followed, according to his own bent, with no artificial stimulus and without the spur of necessity, the researches to which his own nature impelled him. The same thing is not literally, but is essentially, true of Alfred Russel Wallace, who shared with Darwin the honor of the promulgation of the doctrine of natural selection, and who now, at the age of eighty-eight, is the last, or almost the last, survivor of that group of scientific writers and thinkers which contributed so much to making the mid-Victorian era a glorious period in English history.

The type that such men represent is one whose value to the world, as well as the felicity and satisfaction of their own lives, it is not the fashion of our day to appreciate. Partly in the sense in which Emerson meant it, and partly in a different and a more worthy sense, "things are in the saddle, and ride mankind." Not many years ago it was the dazzling achievements, or supposed achievements, of the "captains of industry," that filled the public imagination, at least in this country; in more recent times there has been a remarkable awakening to the needs of the poorer classes of the community, and attention has been centred upon the possibilities of ameliorating their situation both through governmental measures and through private exertions. But in all this—and it would be idle to imagine that the fierce pursuit of wealth and luxury and capitalistic power has surrendered its place to the cultivation of humane endeavor—the centre of attention is immediately tangible benefit, or at most a not very remote good of a distinctly material character. The most worldly and the most spiritual-minded alike have their thoughts bent on aims which make the serene though strenuous pursuit of knowledge for its own sake seem pale and ineffectual.

It is a fine tradition of which the great botanist who has just passed away was one of the finest illustrations; and it must be the hope of every man of breadth and culture that the type which he represented, and which has had many worthy representatives of lesser note, will be continued and cherished, whatever changes these new times may bring about.

GIDEON WELLES AND HIS DIARY.

It has long been known to writers on the history of the Civil War that Gideon Welles kept a diary, but it is doubtful if any of them ever had free access to it. When, two or three years ago, the *Atlantic Monthly* began to print extensive portions of it, public interest was at once aroused. Naturally this disclosure of about one-fourth of the diary did not satisfy scholars, many of whom urgently called for the whole in book form. Unfortunately, this has not been fully granted, for there are above seventy omissions in the "Diary" as here published—it begins in 1862, the second year of Lincoln's Administration, and extends into the first year of Grant's, in 1869.* Whether these suppressions are in the interest of the diarist or of the persons referred to, has not been vouchsafed to us; it is certain that they have not been made in the interest of history, for history abhors concealments, as nature does a vacuum.

I.

If the commonly accepted theory is correct, that a man without special technical training but with certain natural aptitudes and administrative ability, is best suited to be Secretary of the Navy, then Gideon Welles was well equipped for the position to which Lincoln appointed him. There were prodigious tasks for the War, the Treasury, the Navy, and the State Departments. The War Department was the most difficult to administer, and the Navy Department came either second or third. Although not the ablest of the four Secretaries, Welles was the best administrator, and, in proportion to the difficulties, the most wisely resourceful and least deserving of criticism.

His experience and talents give portions of his "Diary" great value. He had edited the Hartford *Times* for about ten years and had served seven years in the Connecticut Legislature; then in turn he was Postmaster of Hartford, State Controller, chief of the bureau of provisions and clothing in the Navy Department, Republican candidate for Governor, member of the Republican National Committee, and otherwise prominent in the councils of the Republican party from its formation. He had improved his opportunities to study public men and public questions. He was master of a style that is always clear and forceful and, in antitheses and epigrammatic criticism, is often brilliant. He was incapable of falsehood or trickery; was wholly detached from selfish schemes and unworthy ambitions; and he loathed jobbery, political spoils, and the demoralizing pleas of politicians. In these respects Seward, Chase, and Stanton were not to be compared with him, and Lincoln himself was not his superior.

On account of his strict constructionist principles, his mental integrity and freedom from opportunism, he and Seward were often in sharp conflict. In the few cases where he went wrong it was because he could not escape an almost universal contagion of passionate thinking. The popular outburst of applause of Wilkes's action in the Trent affair was too much for Welles to withstand. And more than once he was as wild as Seward in his readiness to go to war with Great Britain, although our resources were already overtaxed. He favored closing the Southern ports, instead of blockading them, so as to avoid the question of belligerency. But after the blockade was declared, he opposed making any exceptions to its strict maintenance, there must be no special privileges to pass it, and when blockade-runners were captured, if they carried the mail bags of a foreign country, these should be sent to the prize courts as a part of the evidence. He stood firmly and successfully against the wish of the Secretary of State to issue letters of marque, for he believed that they would be both useless and dangerous. His logic more than once defeated Seward's superior adroitness and special pleas of expediency. Because he held so rigidly to his principles, he was often spoken of with semi-ridicule; and if we add, rightly so, the paradox will soon become clear.

These qualities bespeak the moral man, but not the statesman, especially in time of revolution, when success is so desperately needed that principles must often yield to expediency, as laws yield to arms. While Welles kept his own counsel and resented interference, he had a prying curiosity and a ready criticism if it was not satisfied. Although wholly lacking in the philosophical and imaginative faculty to put himself in the place of others, he daily acted as if he understood their motives as clearly as their spoken words. Charity and humor were alike foreign to his nature. In his world of rigid morality, the two things that were of supreme importance were his principles and his conscience. Whoever disagreed with these was instantly condemned as being wrong knowingly and for a base purpose.

II.

Happily his attitude towards a few persons and many subjects was not much affected by these peculiarities. Presidents Lincoln and Johnson escaped for the double reason that they were his superiors and he had scapegoats for them. Except as affected by the chang-

**Diary of Gideon Welles.* Three volumes. Boston: Houghton Mifflin Co. $10 net.

Digitized by Google

ed circumstances, the Lincoln of the "Diary" is the crude, resourceful, sympathetic, and ingenious Illinois lawyer-politician described by Herndon, and very different from the Lincoln of tradition and of the over-wrought canvas of Nicolay and Hay. His strong and his weak qualities are about equally apparent. He often hesitated and sometimes vacillated. At one time he would shun responsibilities and allow others wrongly to assume them; then when others were most timid, he feared no responsibility or risk. He was conspicuously lacking in system and administrative ability. Instead of having, as Bates urged, a telegraph operator and military and naval aides at hand to supply the latest news and relieve him of all possible details, he often went about calling on his Secretaries and Generals Scott, McClellan, and Halleck, and more than once begged in vain for withheld information. When important battles were expected or were fighting, he spent long hours of anxious, idle waiting at the War Department, as if dependent on the favor of the all-thundering Stanton and the subtle pretender, Halleck. But his honesty, his eager openmindedness, his frankness in explaining his perplexities, his simplicity, his charity, and his wonderful acuteness when his natural lassitude was overcome, explain why he is the best loved of our heroes.

It has rarely been possible to define the often very important influences resulting from Cabinet councils. Were the leading ideas and policies of an Administration original with the President or with one or more members of his Cabinet? Except in the diaries of John Quincy Adams and of President Polk, there were but relatively few full accounts of Cabinet meetings, save when written opinions were asked for. The chiefs of the departments are indeed the President's advisers; but it is optional with him whether he shall call for their advice or even consider it if called for. The purpose of giving the President a Cabinet was to increase his resources. Lincoln was bound to find a method by which the wisdom of his seven Secretaries could be fused with his own. The tangle of circumstances was a good excuse for a time only. Seward and Stanton each often acted on the theory that it was important for him secretly, and without a real consultation even with the President, to develop and carry out plans of the greatest importance and leave his colleagues to blunder in darkness. If these chosen wise men were not wise enough to keep secrets and be helpful, Lincoln should have disciplined them or reorganized his Cabinet. Each Secretary, especially in a period of excitement and frequent changes, also needs advisers. The President and the Cabinet, on account of common interests and public welfare, should be the safest advisers to one another. Without this coöperation the whole Administration will suffer.

Both Lincoln's and Johnson's Cabinets perfectly illustrated what is inevitable when there is no master to gather the different reins into one strong, dexterous hand. It may shock our pet traditions, but it is true nevertheless, that President Polk was masterful and effective in his Cabinet councils, whereas Lincoln was often haphazard and ineffective with his. At first the Secretary of State, instead of the President, called the Cabinet meetings, and at odd times. After regular days were appointed, the proceedings were often a mockery. At least three of the seven Secretaries were commonly absent, and any who came might whisper with the President or with a favorite colleague about the most important questions and leave as soon as it suited his whim. Again and again Seward, Stanton, or Chase was alleged to have remained away because he wished to prevent the Cabinet from knowing his plans. We may not say that Seward was a law unto himself—but only because he was so lawless. Stanton's semi-barbarous energy and indomitable will might have been twice as successful if he had been compelled to formulate his plans, and hear them criticised in a genuine Cabinet council. This might even have lessened his violence and improved his manners. Because all the Secretaries suffered from lack of sympathetic criticism and help, they were almost constantly saying and doing injurious things that otherwise would have been hardly possible. The Cabinet crisis precipitated by the attempt of Republican Senators in December, 1862, to induce Lincoln to get rid of Seward, because he was held responsible for the lack of an harmonious and vigorous policy, was at least partly caused by the notorious complaints of Secretaries. Lincoln and one or more of the Cabinet denied the charges. The "Diary" gives ample evidence that the charges were believed by at least several Secretaries. One entry just after the crisis speaks for itself:

> Montgomery Blair is confident that Stanton has been instrumental in getting up this movement against Seward to screen himself, and turn attention from the management of the War Department. There may be something in this surmise of Blair; but I am inclined to think that Chase, Stanton, and Caleb Smith have each, but without concert, participated, if not directly, by expressions of discontent to their Senatorial intimates. Chase and Smith, I know, are a good deal dissatisfied with Seward and have not hesitated to make known their feelings in some quarters, though, I apprehend, not to the President. . . . Stanton is, by nature, an intriguer, courts favor, is not faithful in his friendships, is given to secret, underhand combinations. His obligations to Seward are great, but would not deter him from raising a breeze against Seward to favor himself. Chase and Seward entered the Cabinet as rivals, and in cold courtesy have so continued. (I. 203.)

Our diarist gives scores of glimpses of absurd Cabinet meetings and of the bickerings and almost slanderous gossipings among the Secretaries. Welles's talent for criticism and his fondness for receiving and recording evil reports were besetting sins. Every member of the Cabinet, excepting Seward, at one time or another, and some of them often, poured out his unfavorable opinions of his colleagues, and Welles strove to preserve them as if they were fine wines of ancient vintage. Montgomery Blair—who to Welles seemed to be a political knight-errant, and whose intelligence gave him the remarkable distinction of being the only member of the Cabinet who from the first had correct opinions about holding Fort Sumter and in regard to surrendering Mason and Slidell—was Welles's most generous fountain. Whenever they chanced to be by themselves they straightway fell to berating their associates. Blair despised Seward, but he loathed Stanton, and never hesitated to repeat his reasons, which would have been good if they had been as true as he believed. After he and Welles had joined in a sympathetic dialogue damning Seward and Stanton, they usually added a few touches for one or more members of the Cabinet, not neglecting the President, as evidence of their impartiality. Then Welles heroically burnt the midnight oil, making a precious record of it.

III.

One of the great objections to war is that brutality and his gluttonous brother, corruption, both thrive by it. The general facts are notorious, but the details are hard to get at. Welles presents specially valuable information and observations on such subjects as the corrupt jobs associated with the enormous and necessarily hasty naval contracts, the practices of high public officials in removing opponents and permitting the levy of forced partisan contributions on officeholders. Whenever the navy had a large contract to make there was a swarming of politicians seeking by special pleas to gain favors for their clients, their city, or State. In the hurlyburly it was impossible to detect perhaps more than a very small part of the corruption. But Secretary Welles was determined and relentless. No sooner had he gathered conclusive evidence and started to prosecute the greatest scoundrels than he became the object first of all sorts of pleas, then of warnings, then of threats, and finally of the most bitter and unscrupulous attacks. There is a fellowship and freemasonry in politics that is often carried to an extent that closely resembles the fellowship of lawbreakers and plunderers. By misrepresentation and indirection, by reminders of services rendered or by hints of oppo-

Digitized by Google

sition in the future, men of the highest supposed character were enlisted to shield the worst offenders. So strong did the united influences become that Lincoln himself sometimes felt that he had to compromise in order not to hazard interests which were really more important to the public welfare.

During political campaigns there was a constant swarming of State delegations and of members of political committees first requesting, then demanding, the removal of good and responsible men from their positions in the navy yards, so that the politicians could put their political vassals in the places of competent mechanics. If Welles's positive and inuignant "no" drove them off, they soon returned with reinforcements. As the fears of Democratic success increased, these spoilsmen—of whom Henry J. Raymond is pictured as the most shameless, but perhaps only because of his conspicuous and responsible campaign position—came closer and closer, even asking a $500 contribution from the Secretary himself and insisting on countless removals and forced contributions. If Welles then in any manner yielded with his left hand, his right hand was not allowed to record it. Only during the last years of his Secretaryship, when sympathizers with Radicals were imagined to be as unfit to hold office as the secessionists of earlier years, did Welles allow some proscription. But probably the cases were so few, and perhaps not without excuse, that they do not seriously damage his earlier example.

IV.

Lincoln, Johnson, Foote, Farragut, Preston King, Senator Doolittle, the Blairs, and Assistant Secretary of the Navy Fox, were about the only persons Welles really approved of. His sketch of Farragut is written, as Wendell Phillips would have said, with a pen dipped in truth and sunshine; it leaves nothing to be desired. Farragut was his pride, his lasting enthusiasm, his friend, and the honors were mutual. The references to President Johnson are most enlightening. Although there are but occasional sentences, and now and then a paragraph, scattered through four years, they make a vivid impression. If we focus these scattered lines and contemplate the figure, until it takes on life and renews its struggles, and if we then honestly, generously, imagine ourselves, with Johnson's antecedents and limitations, subjected to his trials, we get a new conception of the man and see perhaps the most pathetic character in American history. He was a strange mixture of strong and of weak qualities that doomed him to failure and temporary infamy. Throughout Johnson's Administration, the "Diary" continues to give interesting details of Cabinet doings and failings. And there are full and vivid pictures showing what Johnson and his Cabinet thought of the various phases of Reconstruction and of the impeachment trial.

Unfortunately Welles's narrow and unphilosophic mind usually caused him to sketch his political contemporaries with the pen of a pessimist. Except in such cases as have been noticed and when he communed with his conscience, contemplated his own high purposes or heard the grateful praise of a few close friends—and in none of these did any vain illusions lead him from the path of truth—his "Diary" indicates that he regarded this as a world of the worst possible politicians. He could not conceive of circumstances and an honorable point of view different from his own. What was his greatest weakness he believed to be his greatest strength—attributing and then judging the motives of others. Consequently his judgments were often outrageously unjust. His castigations of John P. Hale, Dahlgren, Wilkes, DuPont, Halleck, Chase, Seward, Stanton, Greeley, Raymond, and the New York press generally and individually, Sumner, Colfax, E. B. Washburne, Seymour, Weed, and many others, would more become a ranting copperhead than a dignified Secretary.

The heroic period of denunciation was when the radical devils of the impeachment trial were dealt with in "a crescendo movement of vituperation." And as for their leader, Thaddeus Stevens, he is represented as a physical and moral monstrosity, a prodigy of iniquity. But from first to last, the two favorite objects of Welles's insatiable hatred were Seward and Stanton. In the course of his service with Seward, throughout two Administrations, and almost as long with Stanton, he had hardly one unstinted commendation for either. Each of them early in Cabinet days seriously intruded upon the rights of the Secretary of the Navy. Later Seward and Stanton at least occasionally interfered with or slighted him. He waxes more and more frantic until he displays what might be called literary rabies. Was Seward absent when the impeachment trial was about to begin? It must be to escape responsibility, for he was always running off when danger arose. But, in fact, he was in New York to gather money needed to help pay President Johnson's lawyers. Even while he was patiently working out his greatest diplomatic success and the best possible solution for one of the hardest problems of his Secretaryship—the peaceable expulsion of the French from Mexico, notwithstanding our army unanimously desired war with France and the American people would have applauded it—Welles had nothing but slurs and pessimistic criticisms.

V.

The pathetic climax of Welles's almost suicidal weakness was shown in his attitude towards Grant. His early judgments were accurate. But when the angry contest between Johnson and the Radicals was at its height and Grant was an unwilling lever for the removal of Stanton from the War Department, Welles discovered more and more base qualities in the Lieutenant-General. Unfortunately, Grant did not keep his promise to give Johnson due notice before surrendering his position as temporary substitute for Stanton, after Stanton had been suspended. Welles was quite incapable of understanding how Grant's natural dulness, simplicity of character, and impressionability made it possible for him to do what men of greater intelligence could not have done without warranting some of Welles's charges. Grant's violation of his promise does not involve one-tenth the turpitude that is alleged. As Welles had made a record of Grant's almost childish notion that every law of Congress must be obeyed regardless of the Constitution, he should have foreseen that Grant would side with Stanton, instead of Johnson, if any persuasive friend like Washburne should maintain that Johnson was violating the Tenure of Office act. Welles, much more than the President, showed uncontrollable anger; and his unabridged dictionary of epithets was inadequate as he painfully watched Grant rise in the favor of the Radicals, receive the Republican nomination for the Presidency, succeed at the election, and approach the day of inauguration. And the President-elect shunned all social obligations towards the President. Johnson's feelings must be partly imagined: Welles's are altogether known.

Because of the notorious mutual hatred the committee of arrangements decided that instead of the usual procession from the White House to the Capitol, on the fourth of March, there should be two processions, side by side. But how could the outgoing President in any way countenance the incoming President without stultification? And how could President Johnson's Secretaries do less than abandon their posts at noon on March fourth? Of course, Seward and Evarts were not of that school of logic. Secretaries McCulloch, Browning, and perhaps others desired to act in harmony with the dignity of their office—to remain at their posts until their successors were appointed, then call for them with their carriages, bring them to their Departments, introduce to them their subordinates, and offer all possible assistance and good wishes before withdrawing. Thus supported, Johnson's better nature would probably have triumphed had not Welles kept alive old resentments. On the final morning Johnson balanced between going and not going to the Capitol, while Evarts and Seward in different ways suggested, and McCulloch's en-

Digitized by Google

dearing smile gently pleaded, that it was time to start. And so the last minutes of the last hour passed. As the clock struck twelve the Secretary of the Treasury sadly remarked to the Secretary of the Navy, "Well, you have carried your point."

It was a wretched incident, but typical of Johnson's Administration, so crowded with disappointments increased by persistent resentments.

VI.

Here was a period of eight years, if not of revolution, at least of revolutionary temper. It is hard to estimate, or even to overestimate, the value of a copious diary kept at such a time by a Cabinet officer. If he fails to do justice to this person or that event, it is quite likely that the failure will be due in part to contemporary influences. Thus a passage that is without value for the purpose for which it was intended—as was the case with most of the references to Grant—may truly reflect something else and become valuable in spite of itself.

One further anomaly in regard to Gideon Welles and his contributions to history: although his judgments of persons recorded in his "Diary" are usually biassed, it may well be doubted if any contemporary did so much as he to bring out important facts that would otherwise have been overlooked or distorted. During the last years of his life he wrote about a score of carefully wrought articles for the *Galaxy*. One series dealt with Lincoln's Administration in general, with additional articles on some of its special features. Short series described some important naval expeditions, and the minute history and close relations between Lincoln's and Johnson's policies of Reconstruction. Less impartial, but thoroughly effective and possessed of lasting historical value, were three articles, published in book form in 1874 under the title of "Lincoln and Seward," in answer to Charles Francis Adams, sr.'s, eulogy of Seward, which with like absurdity exalted the Secretary of State and depreciated the President. All these articles have a wealth of vivid and precise details and are most lucid and convincing.

Because it was not known that their author had kept a diary or elaborate memoranda, the fact that he gave dates, quotations, minute descriptions of conversations, and the time and place of many incidents which no memory could be trusted to retain with accuracy, his articles seemed discredited by their own rarest excellencies. Many persons must have read them with equal surprise and pleasure, and in perplexity exclaimed, "Important, if true!" Because authorities were not cited, cautious writers dared not use important statements of the truth of which they were personally convinced.

The explanation of it all was, of course, that the articles had been written directly from the "Diary," reinforced by documents and a trusty memory. But the really objectionable features of the "Diary" were wholly left out, as if its passion had been repudiated on mature reflection. The times had changed, Gideon Welles's temper had changed with them, and his wildly prejudiced judgments were gone like names writ in water.

PEREANT QUI ANTE NOS.

TO THE EDITOR OF THE NATION:

SIR: The remark made by Professor Alden, in the interesting preface to his "Readings in English Prose of the Eighteenth Century," to the effect that most of the ills thought to be characteristic of the present age were also subjects of complaint in the writings of the period represented in his book, is capable of repeated illustration. For example, any one who is slightly familiar with the tracts of the Elizabethan period knows that the present hue and cry over the high cost of living is a mere echo of many a complaint voiced in those magazines of an older age. The mood which has led to the moral upheaval of recent years is accurately reflected in that passage in the "Colloquies" of Erasmus, in which he observes that "He that steals a little money must be hanged; but they that cheat the public of their money and impoverish thousands by monopolies, extortions, and trickery and cheating are held in great esteem"; while the scandal about the "embalmed beef" supplied to our soldiers and the agitation that has led to the enactment of "Pure Food" laws would have served as illustrations for the text, "They that poison one person are hanged for it, but they that poison a whole nation with infectious provisions go unpunished." In lighter vein is the anticipation, in the "Colloquies," of the modern suffragette. A convention of women is called, at which Cornelia presides and complains that men have (political) organizations but not women. In her speech she is constantly interrupted by other women, whereupon she loses her temper, though in the next paragraph she argues with unconscious humor that since men always disagree or fight over politics the time demands that women shall show how such things may be managed peacefully. The true inwardness of this early movement for the emancipation of woman is seen in the provision that no woman should be permitted to mention her husband.

Other parallels suggest themselves, but one of the most amusing, in these days of attacks upon our Germanized scholarship, is to be found in that delightful compound of irony and wisdom, Erasmus's "Praise of Folly":

> Thus when their employment is only to rehearse silly stories and poetical fictions they will yet think themselves wiser than the best experienced philosophers. . . . Add hereunto this other sort of ravishing pleasure: when any of them has found out who was the mother of Anchises, or has lighted upon some old unusual word . . . or can, after a great deal of poring, spell out the inscription of some battered monument, Lord! what joy, what triumph, what congratulating their success, as if they had conquered Africa or taken Babylon the Great! When they recite some of their frothy bombast verses, if any happen to admire them, they are presently flushed with the least hint of commendation, and devoutly thank Pythagoras for his grateful hypothesis, whereby they are now become actuated with a descent of Virgil's poetic soul. Nor is any divertisement more pleasant than when they meet to flatter and curry one another; yet they are so critical that if any one hap to be guilty of the least slip, or seeming blunder, another shall presently correct him for it, and then to it they go in a tongue combat, with all the fervor, spleen, and eagerness imaginable.

This violent attack must have been written near the end of a college term, a time when the discouraged professor finds satisfaction neither in his efforts to make scholars of freshmen nor in his own "original contributions to scholarship," undertaken, according to his critics, primarily to win promotion for himself. Only the passage about reciting original verses needs excision to fit the satire for present use, for, of course, professors who are ambitious for scholarly reputation condescend nowadays to no such "popular" employment as writing verse.

The one ray of comfort to-day for the struggling fraternity who live by literature is that the present output of the presses is so great that only a few searchers for doctoral dissertations know that everything has been said long ago. One trembles at the thought of what might happen were publishers and editors to find out that any material they need, from a muck-raking article to a sentimental novel, might be found in ancient books, refurbished as to style and proper names, pointed with local allusions, illustrated by some famous contemporary artist, and published and advertised in modern style, thus saving all expense for author's fees and royalties.

COMMERCIAL REFORM AND LEGAL JUGGLING.

TO THE EDITOR OF THE NATION:

Sir: Recently the president of the National Civic Federation, Mr. Seth Low, sent to twenty thousand representative business men of the country a list of questions concerning their views on corporation legislation. The purpose of the inquiry is to procure suggestions looking towards the enactment of constructive laws, dealing with the business situation as it relates to the Sherman Anti-Trust act.

And what will be accomplished? Statements touching abuses sought to be remedied, and requests for individual opinions as to how best to correct them, make it certain that the Federation will collect a great variety of original matter; it will discover, in all probability, that it has gathered more than it can thoroughly sift, and, when the end comes, will find itself more confused, concerning the subject in hand, than it is at the present time.

"Too many men in public and business life," writes the editor of a daily journal of high standing in the middle West, "are blindly endeavoring to find some way to adjust to the Sherman law corporation con-

Digitized by Google

ditions which have grown up within the few years last passed. They are trying to so arrange matters that fictitious capitalization may be continued, and mergers and extensions made on this basis. Probably the National Civic Federation would like to have legislation which would not interfere too seriously with the development of big holding companies."

No reform in corporation business will ever come about until there is an end made of watered stock—this may be set down as final. When each and every share of stock in a corporation is made to represent actual value, we shall have fewer holding companies, and less opportunity and desire for monopoly. When money invested in an industry must be employed in that industry, instead of in speculation on the future of the business, then there will be few complaints regarding the scope and size of corporations—nothing can be clearer.

As to legal jugglery, it is out of this that commercial indirection and dishonesty has grown, and continued to grow. DeQuincy, I believe, wrote of murder as a fine art; the United States, it should seem, treats it as a means of testing legal acumen. In almost every State in the Union an indictment for murder—or any other indictable offence—contains words enough to fill a column of an ordinary sized newspaper, and sounds like the incoherencies of an imbecile. Here is an example:

That the said A. B. C. a certain pistol then and there charged with gunpowder and leaden bullets, which said pistol he, the said A. B. C., then and there in his right hand had and held, then and there unlawfully, purposely, and of deliberate and premeditated malice, did discharge and shoot off to, against, and upon the said D. C., with the intent aforesaid, out of the pistol aforesaid, by the force of the gunpowder aforesaid, by the said A. B. C., with the leaden bullets aforesaid, out of the pistol aforesaid, then and there shot off and discharged as aforesaid, him, the said D. C., in and upon the upper right side of the back of him, the said D. C., then and there . . .

The example is genuine, and isn't quite as meaningless as it looks; it expresses, in part, the theory of justice alluded to above, which turns a murder trial—or the trial of any weighty cause—into a game of skill between opposing lawyers. The slightest variation from statutory form loses the game, and no fact is better known than the fact that crimes of the most heinous character have many times been set aside solely on account of trivial verbal omissions in the indictment.

In Canada they do things differently—and the doing stands to their credit. An indictment there reads like this: "The jurors of our lord the King present that A. B. C., on the tenth day of May, one thousand nine hundred and ten, at the city of Winnipeg, in the Province of Manitoba, murdered D. C." Here the procedure concerns itself with the offence, not with the possibilities of legal sport.

J. H. ROCKWELL.

Springfield, Ill., December 9.

JOHANNES VAHLEN.

TO THE EDITOR OF THE NATION:

SIR: On November 30 there died, full of years and honors, Johannes Vahlen, professor of Latin at the University of Berlin. Countless Americans have sat at his feet—he continued his lectures to within two weeks of his death—and it seems, therefore, proper that the passing away of one of the greatest classical scholars of our time should receive becoming notice in the columns of the *Nation*.

Vahlen was born of humble parents in the university town of Bonn, September 27, 1830. When only eighteen years of age he matriculated at the University, and at once came under the inspiring influence of Ritschl, then in the plenitude of his powers. While still a student, Vahlen's extraordinary abilities excited the wonder of his fellow pupils. At the age of twenty-four he edited fragments of Ennius, and in the same year he became *Privatdozent* at Bonn. In 1856 he was called to Breslau as professor extraordinary, two years later he went to Freiburg as full professor, and in the very same year to Vienna, where he remained for sixteen years. On the death of M. Haupt in 1874 he became his successor at Berlin. In 1893 he was elected permanent secretary of the Berlin Academy of Sciences, a post which he relinquished only a few weeks ago. He was also a member of the famous *Ordre pour le mérite* and *Dr. iuris honoris causa* of the University of Berlin. On the completion of his seventieth birthday his pupils honored him with a volume of essays, and on the occasion of his eightieth anniversary a marble bust was presented to him, the funds having been provided by friends and pupils in Europe and America.

His lectures covered a wide range of authors, preferably Sophocles, Aristophanes, Plato, Aristotle, Theocritus, Cicero, the Elegiac poets, and Catullus, Horace, Virgil, Ovid, and Juvenal. They were exclusively exegetical and text-critical, apart from the elaborate introductions, but were stylistically so carefully elaborated as to be a source of perpetual delight. Many of the accompanying translations were so admirably done, in verse and prose, that we hope to see them printed for a larger public.

But the chief influence upon his pupils Vahlen wielded in his seminary, which for nearly a generation was unmatched in Europe as a philological training school, save that of the Bonn Dioscuri, Bücheler and Usener, fellow-students of his under Ritschl and his lifelong friends. Since G. Hermann, certainly no European scholar spoke and wrote Latin with equal purity and facility, but quite unlike that great philologian, Vahlen also wrote his native tongue with singular grace and lucidity.

Especially distinguished among his numerous publications are his editions of Aristotle's "Poetics," with the famous commentary separately published, and his Ennius, which in its revised issue will remain the definitive edition of this author, unless perchance Herculaneum should some day yield up something more than mere fragments of the father of Latin poetry.

If it be asked what was the specific achievement of his life work, we may say that he was the foremost champion, if not the inaugurator, of the conservative method in textual criticism, which insists on a penetrating exegesis of the text, in form and content, as the condition precedent to any justifiable conjectural restoration. In proof whereof he demonstrated with matchless skill and acumen that numerous so-called emendations generally accepted and, indeed, quite dazzling at first glance, often flagrantly violated the author's meaning or were incompatible with his well-ascertainable stylistic usage.

Vahlen was withal a philologist of the old school, fast disappearing, if, indeed, he may not be called its last illustrious representative. The classics were to him a vitalizing force, elevating their devotees and enabling them to rise triumphant over the sordid and materialistic tendencies of our day. He clung with an almost pathetic fervor to the ideals of his youth. Though not blind to the fact that "times change," the sequel of the adage he deliberately refused to accept. And I believe he was right. For had he yielded to the strong anti-humanistic pressure exerted upon him, had he compromised with opportunism, certainly the inspiration of his life work would not have been bequeathed untarnished to so many pupils.

ALFRED GUDEMAN.

Munich, December 4.

THE CONCORDANCE TO WORDSWORTH.

TO THE EDITOR OF THE NATION:

SIR: Your sympathetic review of the "Concordance to Wordsworth" (*Nation*, December 7) could not fail to gratify those who helped to prepare the volume, or the members of the organization that helped to publish it; yet several of the statements seem to be misleading. The work was not originally announced by the Concordance Society, but by the editor, in an independent paper read before the Modern Language Association. The Society did not undertake to provide its share of the subvention until the copy was ready for the printer. The reference to the reading of proof is likewise inexact. The burden of examining the proof-sheets fell upon the editor, who was aided in the verification of references, however, by paid assistants of his own. Three friends each generously re-read about one-sixtieth of the whole, by way of testing the accuracy of pages already corrected.

At no time was the thought entertained of adopting for the purposes of the Concordance the order of any of the texts in which a chronological arrangement of Wordsworth's poems is attempted—for the reason that, judged by a scientific standard, such attempts thus far have been failures. When the excerpting was begun, and as Professor Dowden agreed, the only possible choice lay between the last edition issued by the poet himself and the edition of Mr. Hutchinson which was selected.

Wordsworth uses the word *nature*, not about 550 times, but 395 times. The reviewer probably includes the possessive *nature's* in his estimate. But confining ourselves to the singular number, we may note that Wordsworth uses *soul* 401 times, *mind* 540 times, *man* 696 times, and *love* 761 times. So far as such statistics show anything, they go to prove that Wordsworth's main interest was not external nature, but the mind of man. The inference is borne out in many ways; for example, by the sub-title of "The Prelude," namely, "The Growth of a Poet's Mind."

LANE COOPER.

Ithaca, N. Y., December 11.

[Professor Cooper's first point is well taken. In regard to proof-reading, however, it was not clearly evident from

Digitized by Google

his Preface just how that labor had been divided among himself, paid assistants, and volunteers. It was not suggested that he should have used a different text of Wordsworth. And the reviewer mentioned the number of times the word nature occurred, not for the purpose of indicating that the poet was more interested in external nature than in man, but merely to illustrate how the Concordance might help a student of Wordsworth to trace variations in the poet's usage.—THE REVIEWER.]

RETIRING TEACHERS.

TO THE EDITOR OF THE NATION:

SIR: There has been an unseemly attack by a New York newspaper upon a distinguished scholar in public life, who some time since withdrew from the presidency of one of our leading universities, and, after twenty-five years of educational work, presented to the Carnegie Foundation an application for a retiring allowance. As is well known, the trustees of the Foundation, until some months ago, granted such retiring allowances to any reputable teacher who had completed twenty-five years of service at an accepted institution, and who for any reason had withdrawn from active educational work.

One reason alleged for the recent advance of the age of retirement to sixty-five years, except in cases of disability, is that the number of applicants for retirement on the old plan would impose too great a burden upon the resources of the Foundation. That is a question of fact with which at this moment we have no concern. But there is in a good many quarters a feeling that the administration of the Foundation is somewhat lacking in flexibility. The average college teacher in America is held very closely to his work, and is obliged to sacrifice many of his scholarly ideals to classroom routine. Teachers of this kind may be capable of producing in their riper years scholarly work of lasting value, but they are commonly debarred from bringing it to a conclusion, for the reason that they have not the leisure to devote uninterrupted effort to the task. If they must wait till they are sixty-five, they are likely to be too petrified to produce much that the world would care to preserve.

Very few college teachers can save much out of their salaries, but they may, perhaps, succeed in putting aside enough to maintain a modest existence for a few years; and more than one would doubtless be glad to live on a pittance for the sake of finishing the scholarly work to which he had devoted his scanty leisure.

Why could not the Carnegie Foundation encourage scholars of this type by telling them that after they have completed twenty-five years or more of service they have in effect earned a paid-up life insurance policy, entitling them after reaching the age of sixty-five to an annuity for the remainder of their days? In the vast majority of cases the best work that a college teacher does in the classroom is done in the first twenty-five or thirty years of service, and before the age of sixty. He should, at all events, have the choice at that age as to whether he will continue in ordinary college work or devote himself to the further investigation of the subject to which he has given his life.

This aspect of the situation has received far too little attention, and may well be considered by the trustees of the Carnegie Foundation. WHY NOT?

Middletown, Conn., December 13.

Literature

ROMAN LADIES.

The Women of the Cæsars. By Guglielmo Ferrero. New York: The Century Co. $2 net.

The Empresses of Rome. By Joseph McCabe. New York: Henry Holt & Co. $4 net.

Ferrero's brilliantly constructed volumes on the "Greatness and Decline of Rome" have been widely read and enjoyed for their literary quality; but it is well known that in his attempts to undermine the work of ages of careful German, French, and English scholarship, he has carried with him no large portion of those whose knowledge of the subject goes deep enough to give special weight to their judgment. In "The Women of the Cæsars" the characteristics of his previous method are readily apparent—his assaults on troublesome statements of Tacitus, Suetonius, or Dio, his occasional perversion of their text to serve his purpose, and his constant putting forth under the outward guise of well established fact statements for which there is no historical evidence whatever. The characters in which he goes farthest from the traditional estimate are Julia, the daughter of Augustus, the two Agrippinas, and Messalina. In the case of Livia, wife of Augustus, he denounces as absurd the suspicion transmitted by Tacitus that she had guilty connection with the successful removal of those who stood between her son and the throne. True, Tacitus does not indicate his own belief in these fugitive accusations, but before we discard them utterly we need to take a more careful account of the difference in the times than Ferrero apparently does. Most of those who take the trouble to read what ancient authors really say about Livia, rather than what a few of later date think, will be convinced that Caligula had a momentary gleam of insight when he characterized her as "Ulysses stolatus," Ulysses in petticoats.

Ferrero's estimate of Julia will be best understood in the light of a passage from the closing volume of his "Greatness and Decline of Rome": "The horrors related of Julia are undoubtedly fictions invented by her enemies. It should first be noted that such terrible accusations will seem in themselves improbable to all who believe that the average of mankind, under average conditions, are neither particularly good nor particularly bad." The closing statement may be true enough, but to take it as of any weight in determining the truth or falsity of charges against any individual is neither more nor less logical than it would be to appeal to the mortality tables of life insurance experts to settle the question whether Terentia, the wife of Cicero, a woman given to severe attacks of rheumatic gout in her thirties, lived to the age of one hundred and three, as there is some evidence to indicate. Ferrero's positive admissions as to Julia's offences go far enough to establish the entire possibility of all that he denounces as absurd and unthinkable, and he should have been content to say, what all will admit, that particular incidents in the story may be exaggerated or invented. The real ground for sympathy with Julia lies not in denying or minimizing her faults, but in recognizing the probability that a woman of keen intellect, brilliant wit, and great possibilities as a social leader, fell finally as a moral victim to the heartless way in which her person was made a mere pawn in the game of imperial politics.

As regards Messalina, the author follows the lead of Merivale in basing upon a passage in Suetonius the theory that her culminating offence of marriage with Silius was preceded by a divorce from Claudius. But Merivale's account has at least the merit of quoting *in full* the text of Suetonius upon which it rests. There is no real difficulty in the construction of the words of Suetonius, as Merivale thinks, or in determining his own attitude towards the version of the famous occurrence to which he alludes. It was simply a story that Claudius was influenced to believe that certain portents threatened danger to the husband of Messalina, and thus assisted in giving her, *technically*, another husband, in order to avert the danger from himself. The *illud omnem fidem excesserit* of Suetonius, in its context, ought to settle at once the fact that he did not believe the story, and every existing authority confirms the traditional account, which is that the marriage with Silius was actually carried through to its consummation, while Messalina was still the legal wife of Claudius. Even with Claudius a half-imbecile and Messalina a wild wanton, we may find such action hard to explain; but before we construct a new Messalina based on the rejection of this and other attested offences of her brief career as grossly improbable, we should duly consider the question whether there is not a still grosser improbability in the supposition that the uncontradicted account of her given by various writers whose fathers' lives had spanned the whole extent of her own, is nothing but a tissue of malignant falsehood.

Digitized by Google

Ferrero's estimate of the elder and the younger Agrippina tallies pretty closely with that of Baring-Gould's "Tragedy of the Cæsars," substantially interchanging the traits of the mother and daughter in important particulars, as compared with the accounts which have come down to us in the ancient texts. His handling of those texts may be illustrated by one or two references to the account which Tacitus gives of the trial of Cnæus Piso for the alleged poisoning of Germanicus, and other offences. "All the enemies of Tiberius . . . even began to repeat," he tells us, "that Piso possessed letters from Tiberius which contained the order to poison Germanicus." What Tacitus says is that he had personally heard from elderly men that during the trial Piso had in his possession a document said by his friends to contain *literas Tiberii et mandata in Germanicum*, which comes far short of an "order to poison Germanicus." As to the specific form in which the charge of poisoning was made against Piso, Ferrero asserts that "Tacitus himself says that every one thought this an absurd fable." Possibly they did, but the *every one* is of Ferrero, not of Tacitus. He simply says *absurdum videbatur*, and the tense of the verb, with no dative case to indicate anybody else, leaves the author's view unstated, and must normally be taken as referring the opinion to the Senate, before which the trial was held. Such matters may seem of little importance singly, but they represent a method the persistent use of which must hopelessly vitiate the historical credibility of any author who indulges in it. The younger Agrippina Ferrero easily acquits of every serious charge and seats upon a pedestal of honor as one of the noblest women of imperial Rome. This we are to accept not on the basis of positive evidence, for he adduces none, but simply because it is absurd to believe anything else!

We have dwelt upon the fictions of Ferrero until there is little space left for the more extended volume of McCabe, who strives for completeness even to the extent of fumbling amid the tumbling ruins of the Western Empire for shadowy "Empresses" whose very names he cannot discover. In general, he makes no such attempts to reverse historical evidence as we find in Ferrero, though he too regards as "absurd" many alleged occurrences which, while they may possibly not be true, are not without numerous parallels in every age of history. Have these writers forgotten that one of the most persistent human traits is to do the absurd? His frequent attacks on Tacitus for using the memoirs of the younger Agrippina lead one to wonder how much longer the nonsense of that particular indictment is to be allowed to clog the court of serious historical investigation. Tacitus mentions these memoirs just once, as containing a statement that the elder Agrippina had asked Tiberius to arrange for her a second marriage. We are absolutely without proof that they are the basis of any of his estimates as to events and characters of the age of Tiberius, nor, on the other hand, have we any proof that he would have been seriously misled if he had used them. We simply know nothing about them but the one statement above mentioned, and the statement in the elder Pliny, *Neronem pedibus genitum scribit parens eius Agrippina.*

Tacitus had his likes and dislikes, and they were strong. Further, his adverse judgments have led careless readers still farther afield, and to overlook his own statements of counterbalancing fact which often furnish the necessary corrective. Thus the somewhat radical revision of opinion concerning Tiberius which has slowly made its way during recent decades finds its soundest basis right in the pages of Tacitus, which would not have been the case if he had not deliberately striven after fairness. If his historical structure could but be razed to the ground, one readily sees what fine building sites would exist for "True Neros," "Real Messalinas," "Actual Agrippinas," etc. But Tacitus will be demolished only by heavier missiles than have yet been thrown. In the meantime, it is more profitable to understand him than to assail him, and to accept his estimates, with due allowance, in preference to those of modern theorizers who base their conclusions largely on their inner consciousness.

CURRENT FICTION.

The Case of Richard Meynell. By Mrs. Humphry Ward. New York: Doubleday, Page & Co.

The Elsmere case twenty years after is virtually the theme of this long story. The widow and daughter of that defeated enthusiast appear again; and his shadow is always dimly perceptible in the background of the action. Evidently, Mrs. Ward's deep interest in the condition of the English Church has grown deeper since the writing of "Robert Elsmere." She believes that the past century has been "as pregnant with the germs of new life as the wonderful hundred years that followed the birth of Christ." She does not profess to foresee what the outcome for the Church of England is to be. "Whether the old bottles can be adjusted to the new wine, whether further division or a new Christian unity is to emerge from the strife of tongues, whether the ideas of modernism, rife in all forms of Christianity, can be accommodated to the ancient practices and given a share in the material possessions of the State Church"—these are the larger themes she here attempts to deal with. But, of course, the interest of the story, as a story, depends on the vividness with which she may have been able to depict the play of human character in contact with these problems. One almost always feels of Mrs. Ward that, in this respect, she fares better than her intent. Here, for example, if we are to take her preface at its face-value, her conscious preoccupation is with her theme and not with her people. She speaks of the rapid and fruitful development of ideas in religion and philosophy during the twenty-two years that have passed since the writing of "Robert Elsmere." And she hopes that the American readers who welcomed that book "may be drawn once again to some of the old themes in their new dress." We suppose that "Robert Elsmere" owed its American welcome, not to the accident of its theological atmosphere, but to the feeling that real persons were concerned in the action. Of this book the same thing would be true. In so far as it is to be taken as a sugar-coated treatise on the Modernist movement in the English Church, the ordinary American novel-reader would regard it with tolerance or less. But the fact that Richard Meynell and several others who have their being between these covers are persons worth attending to, is the important matter.

Meynell is merely a country rector in the ecclesiastical scale; but he is at once a scholar in the modern sense, and a minister in the early Christian sense. His parish lies in a mining district, and he is the ungrudging servitor of villager and miner alike. But the creeds and forms of the English Church are dead to these people, and he sees the need of infusing new life into Church observance. He is in the van of Modernism, but believes that the national church ought to have room for all who love and serve Christ—or the ideal of which Christ is the symbol. The English preoccupation with the question of property rights comes into it all to a degree rather odd from the American point of view. That is, while Meynell is not concerned to retain his right to live at the expense of the Establishment, and has indeed long renounced that right, he is very much concerned that the magnificent possessions of the church shall not be sequestered from the use of those who are merely endeavoring to keep that great institution healthily alive, through inevitable processes of change. In Elsmere's day the whole situation had been different. The natural thing for him to do, with his opinions, was to leave the church. Meynell purposes to stay in and fight it out in the name of the thousands of Englishmen who share his modern views. His character, that of Mary Elsmere, and that of the bishop, have a good deal of life and charm. The rest of the

Digitized by Google

personæ represent one sort or other of priggishness, and are hard to bear with before the last of these six hundred pages is reached. Apart from the incidents of religious conflict, the plot is both sensational and conventional.

Mother: A Story. By Kathleen Norris. New York: The Macmillan Co.

"Mother" has been a favorite heroine among novelists recently, from Gorky to Kate Douglas Wiggin. On the whole, she has fared none too well, figuring for the most part either as a hopeless and thankless drudge, or as a sort of ever-blooming household fairy such as never was. The "Mother Carey" of Mrs. Riggs's recent tale, for example, belonged to the latter class. The "Mother" of the present story is a far more natural person, presented, as she is, without attempt at decoration. She is the busy centre and life of a respectable village family which has been brought up to "scrimp." The father is a sufficiently amiable little weak man whose only distinction is his office of pater familias. The children, half grown up, are not markedly better or worse, cleverer or less clever, than the ordinary group of children in their position—with the exception, perhaps, of the oldest daughter, a beautiful and potentially brilliant girl, ambitious socially and otherwise, who at the moment the story opens has reached the point of rebellion against the limitations of village life. To her at this critical moment comes a wonderful being in a motor-car, a famous leader of New York society. This great personage takes a fancy to Margaret Paget and engages her incontinent as private secretary. The rest of the tale, so far as it is a tale, has to do with her gradual enlightenment as to the hollowness of the world of fashion and her discovery that the humble mother she has left at home knows more of happiness than her fashionable and elaborately idle employer. And, of course—for this is a human book—there is a nice young man in reserve for Margaret, whom she has met in the great world. It is he who really opens her eyes to the relative value of things. He is a very nice young man, and beautiful Margaret is lucky enough to be chosen of him. But it is not their little affair which gives the story its oddly pleasant savor. It is the fact that Mother, with what she stands for, supplies the atmosphere, clear and enfolding, for whatever event may chance among her own people.

Interventions. By Georgia Wood Pangborn. New York: Charles Scribner's Sons.

If the purpose of the short story is to furnish a temporary escape from the real world into a pleasantly remodelled one, most of the tales in this collection are distinctly successful. The world to which we are introduced is enough like reality to make us feel at home, and enough better to give us a refreshing change. It would be ungracious to complain that some of the "interventions" seem strikingly like those of the god from the machine. Poor little "Rasselas Johnson," born to millions and boredom, escapes over the spiked iron fence that bounds the Happy Valley. In real life he might not tumble into the Vegetable Kingdom of the Princess Inez, whose father is a poet; they might not fall in love and marry to live happily ever afterward. So much the worse for life, and so much the better for the story and for Rasselas. The reader will enjoy the stories for what they are—pleasant romantic narratives told in a style at times a little sentimental, but usually simple, graceful, and restrained. Occasionally he will come across a memorable character such as old Van Ander in "Turned Out to Grass," or a strong dramatic situation such as that of Dr. Winthrop in "At Ephesus."

BROADWAY.

The Greatest Street in the World. By Stephen Jenkins. New York: G. P. Putnam's Sons. $3.50.

To try to think of Broadway as "remote from the business parts" of New York is to impose an unwonted strain upon the imagination, but such are the words which its historian uses in defining its position, geographical and other, in the days when, as one of the two principal cowpaths of New Amsterdam, it was known as the Heere Straat. Indeed, so late as the early years of the nineteenth century, the idea was entertained of doing away with Broadway. One patriot designated it as "an accidental thoroughfare," and the Commission which laid out the city as far into the wilderness as One Hundred and Fifty-fifth Street were driven by the resulting merriment of their fellow-Knickerbockers into apologizing for their optimism. In 1664, when the Dutch flag gave way to the English, and the Heere Straat exchanged the name it had borne during the forty years of its humble existence for the one by which it is known all over the world, it extended only the short distance between the bowling green just outside Fort Amsterdam, newly re-christened Fort James, and a point a little way beyond the palisade that marked the upper limit of the town, which it reached through the "land gate," situated opposite the site of Trinity Church. From Bowling Green to Wall Street is less than a third of a mile, and if Broadway had continued to creep northward at the pace that satisfied it then, it would now be displaying an ambition to reach the vicinity of Astor Place in time to celebrate its three hundredth anniversary—which, with a spurt, it might accomplish. Its growth during the remainder of its first century, however, did not promise any such achievement, as by the end of that time it had arrived only at what is now City Hall Park. During the century and a quarter preceding 1850, it exhibited something of the spirit that has animated it increasingly since that date, advancing to its junction with the Bowery at Sixteenth Street at the apex of the present Union Square. In the past sixty years it has added to its domain a stretch of closely-built territory more than twice the extent it gained in the first two hundred and twenty-five years of its existence.

All this is Broadway in New York city. Mr. Jenkins's account traces the street all the way to Albany; although the part north of the city line receives only 114 of his 468 pages. His plan is to take the street in sections, beginning at the southern end, a simple arrangement made possible by the generally northward trend of its development. In its upper portion, however, this union of geography and chronology is much less perfect.

The book is historical, but hardly a history. It is more than annals, but it is not closely enough knit to be, or to leave the impression of being, a story. It contains little generalization and less style. More positive faults are an overquoting of Irving, and statements of familiar and irrelevant facts. The most glaring instance of the latter occurs in conection with the mention of a statue of Seward, regarding whom the follower of Broadway's progress is regaled with the information that "He was the favorite of many of the delegates to the Republican Convention at Chicago in 1860, but Abraham Lincoln beat him for the nomination. Lincoln made him his Secretary of State, and he held that position during the Civil War." Perhaps the explanation in the Introduction, that the volume is the expansion of a lecture "to book size," may account for these bits of erudition. The New York *Evening Post*, *pace* Mr. Jenkins, is not located "at present at the corner of Fulton Street and Broadway." The possibilities of proofreading are exemplified now and then, the almost incredible error being made at one place of a reference to "Alfred Edward, Prince of Wales (the late Edward VI)".

But the volume is a repository of historical facts and illustrations, to which a copious index furnishes a ready key, and which is supplemented by an excellent bibliography. There are many anecdotes in the pages, but not too many, and six very interesting maps. One would like to know more exactly when and what different parts of the street became successively the centre of its activities, to be able to trace more surely the northward prog-

Digitized by Google

ress of New York. But it would be as ungracious as unjust to fail to recognize what Mr. Jenkins has done for his readers in bringing together a great mass of detail, and so arranging it as to exhibit, in a large way at least, that impressive advance.

Monopoly and Competition. A study in English Industrial Organisation. By Hermann Levy. New York: The Macmillan Co. $3.25 net.

Professor Levy's studies in English, German, and American capitalism have been of such high merit that an English translation of his brilliant essay "Monopole, Kartelle und Trusts" is most acceptable. It will bring to a wider public an acute analysis of a problem upon which, at present, too much light cannot be thrown.

The first half of the book is given to the early history of English industrial organization, in which the author disposes of the commonly accepted doctrine that the "freedom of industry" of the eighteenth century grew directly out of the restrictions of the old guild system. On the contrary, there intervened between the local trade monopolies of the guilds and the economic liberalism of the age of industrial revolution, a century of nation-wide monopolies with a distinct capitalistic impress. The competition of the eighteenth century was a revolt against the monopoly of the seventeenth. Of particular interest is the author's investigation of the Newcastle Vend, a combination in coal mining which existed in various forms for two hundred and fifty years, and finally gave way in 1844 before a competition coming from the development of transportation. This portion of the work will have an especial interest for economic historians, and in its succinct treatment will form an admirable supplement to Dr. Scott's elaborate study of joint-stock-companies to 1720.

But the general reader will rather turn to that section of the essay which bears upon present day conditions in England. Here Professor Levy's purpose is to show the peculiar influences that have shaped the development of English industrialism as it appears today, and his method is inductive throughout.

It is a striking fact that in England, where modern industrial organization was cradled, lasting monopolist combinations have developed very much more slowly than in Germany, France, or America, and are just now beginning to assume any importance. The psychological explanation, that this is due to the prevalence there of the doctrines of extreme individualism, Dr. Levy summarily rejects, and while admitting that the nation as a whole still believes that it has won free competition in industry for all time, shows by historical evidence that it was not through any lack of disposition on the part of manufacturers that they have not imitated their confrères across the seas, nor was it because their consciences have been troubled by thoughts of economic freedom. The explanation of the lack of concentrated organization must be sought in the conditions of production and sale of the commodities which are still subject to competition and of those which are not. And here a brief summary of the author's conclusions must suffice.

In the first place, in mineral deposits, from which in all parts of the world Trusts have so often got their supremacy, Great Britain has no monopoly at all. Neither in the world's market nor at home does there exist a monopoly of any mineral of importance to industry. In the case of coal, stone, and earths, manifold sources of production and facility of transportation have prevented any combination. In iron ore, dependence to some extent upon foreign supplies and the ease and cheapness of transport, which robs home ore of the protective effect of freights, make monopoly impossible. Monopoly is consequently excluded from the sphere in which it has been most marked in other countries.

Secondly, as to the "finishing trades." Free trade is a sufficient explanation of the non-existence of Trusts in a large portion of the industries producing manufactured goods, and with this should be taken into account the fact that the protective effect of freights, which is of real significance in many countries, can to an island with but a small inland area, be of little or no importance in the case of high-priced goods shipped often only short distances by water. But in many trades, independently of freight influences, competition continues to prevail, and the persistence of competition lies in this. As compared with other countries, especially the United States and Germany, the size of undertakings is relatively small, due to the fact that the need for vertical combination or "integration," as we call it, is less. And the need for integration is less, because of the failure of monopoly in raw materials, and hence of the freedom of the manufacturer from the danger of extortion on the part of furnishers of his raw products. It is easier to start competing works in England, because the amount of capital necessarily involved in an industry embracing all processes from raw material to finished product is not required by the manufacturer.

Under what circumstances then are Trusts found to exist? In the first place, the industry must be free from foreign competition, owing either to the low cost of production, reliance upon some natural facility like a water-power, the manufacture of some special quality in steady demand, traditional dexterity, or international agreement. But even then profit has a tendency to be relatively small, and there can be no bolstering of prices through the aid of monopolized raw materials. Hence even in the absence of foreign competition, a successful monopoly can only be established when the number of competing firms is relatively very small, and when fresh competition is not to be expected, except after a considerable period. Concentration of works and undertakings is the foundation of English trusts.

While Professor Levy will not pronounce a general verdict on the economic effect of actual prices obtained by English monopolist organizations, deeming such a verdict impossible in a country free from the influences of a protective tariff, he has no doubt of the monopolistic trend of these combinations; he declares that they raise prices above the competitive level and that they reveal their tendency in their practice of dividing markets. His most significant contributions to our own Trust problem are his complete demonstration of the monopolistic influence of a protective tariff, and of the control of raw materials. We may well ponder the following statement:

> A great many industries in which at present concentration has very largely reduced the number of firms, but in which foreign competition has so far prevented a monopolist combination, would under a tariff straightway be in a position to found cartels and trusts.

Moses Coit Tyler, 1835-1900. Selections from his letters and diaries. Made and edited by Jessica Tyler Austen. Illustrated. New York: Doubleday, Page & Co. $2.50 net.

An instructive example of how not to prepare a biography is furnished by the life of Moses Coit Tyler, the historian of early American literature. The reader's attention is rivetted by the necessity of piecing together bits of diary and correspondence, while his agility is tested in leaping long gaps. Time and again, however, he is asked to linger over edifying New Year's resolutions or the intimate reflections inspired by a birthday anniversary. In fact, one suspects that the heterogeneous mass of material is designed to lengthen the labors of some future biographer.

The career of Professor Tyler is typical of that generation of self-made scholars of which March and Rolfe were conspicuous exemplars. Born at Griswold, Connecticut, August 2, 1835, he in early childhood began a migration westward with his parents which closed at Detroit in midwinter, 1843. The last stage of one hundred and twenty-five miles he made tucked into a sleigh with six other members of the family, behind the incomparable horse Pompey, while an older brother, afoot, drove the cow. Even as a boy he was "determined to be a scholar at all events." But on receiv-

Digitized by Google

ing an A.B. degree from Yale in 1857, he studied theology for two years and served as a Congregational minister till his health failed. For the next three years he led a precarious existence, chiefly in England, lecturing on physical culture and other topics. In all likelihood it was his letters to the *Independent* while abroad that, in 1867, a few months after his return, helped him to a professorship of English in the University of Michigan. His professorial labors did not keep him from meditating a history of the United States, toward which he continued to read during an eighteen months' venture into journalism. His work on the *Christian Union* under the editorship of Henry Ward Beecher proved so "distasteful, exhausting, and ungrateful" that he "marched out of the office with the joy of a prisoner out of the penitentiary," more than glad to return to teaching. But the unruffled existence at Ann Arbor was disturbed in the summer of 1875, when Putnams induced him to undertake the preparation of a history of American literature for the centennial year. He soon found the subject an "unexplored territory," and determined to survey it thoroughly. "The element of time," he wrote, "is unspeakably inferior to the element of thoroughness." When two volumes came out in 1879 he noted in his diary, "It giveth me huge satisfaction." Thereafter he worked more leisurely. He dabbled in local politics—thought it "fun to dip into real life once in four years." Yet his true ambition is revealed by the fact that when called in 1881 to a professorship at Cornell, he hesitated for fear the position would hinder too much his "work as a student and writer of American history."

At Cornell he settled down for the rest of his days. The duties of his department were arduous. Many new lectures had to be prepared. His health grew more delicate. He became deeply absorbed in his religious welfare, was ordained priest in the Episcopal Church, and longed to devote all his slender energies to preaching. At the same time he lost interest in his literary researches, recounting that he "would gladly work in general American history and, above all, in ethics and theology." His life of Patrick Henry, published in 1887, did arouse him—his eyes were moist as he wrote the death scene—but thereafter he came near giving up the yet uncompleted labor for a novel or a tragedy on Bacon's Rebellion. Had not his slight volume on "Three Men of Letters" (1895) been favorably received, it is doubtful whether he would have completed the "Literary History of the American Revolution" (1897), which is now his monument. When he died on December 28, 1900, he felt that much of the things he had toiled for in life were "mere froth and scum."

Remarkable indeed is the singleness of his interests as they are revealed in the forty years of this fragmentary autobiographic record. He lived through a period of the most profound and impressive change, yet the movements of national development drew from him no expression of concern or exultation. He studied minutely the formative period of our great republic, yet the political significance of events in that epoch received scant consideration. He wrote an exhaustive history of our early literature, yet therein appreciation of literature as an art is purely incidental. In short, he seldom lingered in the world of ideas. He had a strong liking for personalities, but, conscientiously as he strove for a pleasing style, his preoccupation in intellectual matters was the scholarly ideal of thoroughness and accuracy in the establishment of fact.

The Glory That Was Greece: A Survey of Hellenic Culture and Civilization. By J. C. Stobart, M.A., late Lecturer in History, Trinity College, Cambridge. Philadelphia: J. B. Lippincott Co. $7.50 net.

The author of this sumptuous book has brought industry, enthusiasm, and skill to the difficult task of giving within moderate compass a survey of the civilization of Ancient Greece from the earliest traceable period to the absorption of that country into the Roman Empire, with less stress laid upon conflicts with foreign or domestic foes than upon the development of civil government and the arts of peace. He has produced (to use his own words) a kind of history of Greece "with statues and poems taking the place of wars and treaties." The book has the following divisions: A brief introduction—perhaps too brief—on Hellenism: The Land and Its People; chapters on Ægæan Civilization, The Heroic Age, The Age of Transition, The Grand Century, The Fourth Century, The Macedonian World; an Epilogue, a Glossary, a selected Bibliography, and a fairly copious Index. The bibliography, it may be said at once, would be better for the addition of the date of publication of each work mentioned, even though the names of the publishers are given; and the omission of Mr. and Mrs. Hawes's "Crete, the Forerunner of Greece" (1909), H. R. Hall's "The Oldest Civilization of Greece" (1901), Fowler and Wheeler's "Handbook of Greek Archæology" (1909), Adam's "The Religious Teachers of Greece" (1908), and Gilbert Murray's "History of Ancient Greek Literature" (1897), is, to say the least, strange.

The book in the main shows commendable soundness of judgment. The much-discussed "Ægæan" civilization ("Mycenæan" or "Minoan" or "Cretan," as it has been variously called) receives careful treatment, and the relations of this type of culture to the "Homeric" civilization are well and clearly brought out. While the author recognizes the impossibility, so long as the Cretan pictographs and linear scripts are undeciphered, of proving the "Ægæan" civilization to be the achievement of any of the ethnic stocks that afterward entered into the composition of the Greek nation, he believes that "the people (Cretans and other Ægæans) whose culture we have been describing were essentially the same as we know in historic times, and of course Indo-Europeans." (Does this mean that he still holds the now discredited theory of an "Indo-European race"?) Here and there occur slight slips which might easily have been avoided; for instance, the brother of Hesiod is thrice within two pages called Persis instead of Perses. At times the always lively style comes dangerously near to flippancy; and such a sentence as "It is astonishing to find the Cretan of 1911 B. C. writing, as we write to-day, with pen and ink" is likely to mislead the unwary layman into supposing that we can date the Cretan remains as accurately as that. The literature of the several periods, when it has once emerged from the darkness in which its earlier history is still, and probably ever will be, shrouded, is for the most part skilfully and sympathetically treated. The author's leanings are evidently towards the sort of interpretation of which Prof. Gilbert Murray is the chief spokesman.

Mr. Stobart has made his selection of the very numerous and varied illustrations with excellent judgment, drawing from a very wide range of sources. A few specimens are included that have not been adequately published elsewhere, or at most in works not easily reached by the layman; for example, the contemporary marble copy of the "Agias" of Lysippus recently found at Delphi, and the reliefs, now in Boston, which correspond with such curious exactness to those on the famous "Ludovisi Throne" in Rome. In excellence of mechanical execution the illustrations differ greatly; those from photographs are generally admirable, but the drawings are hardly up to the proper standard for such a work. Some of the plates in colors are excellent, but in at least two reproductions of vases the color is far too pinkish.

On the whole, this work ought to fulfil its purpose of imparting to those who cannot read Greek, and have neither the time nor the preliminary training for detailed antiquarian and archæological study, a rational conception of what is really meant by "Ancient Greek Civilization." And even the professed scholar will find it not at all unworthy of his attention.

Notes

Publications of Frederick A. Stokes Co. announced for next spring include in fiction: "Vane of Timberlands," by Harold Bindloss; "Cap'n Joe's Sister," by Alice Louise Lee; "Between Two Thieves," by Richard Dehan; "A Painter of Souls," by David Lisle; "To M. L. G.," anonymous; "A volume of short Stories," by Edna Ferber; "Eve's Other Children," by Lucille Baldwin Van Slyke, and "Stover at Yale," by Owen Johnson. —Miscellaneous: "A Negro Explorer at the North Pole," by Matt Henson; "The Boys' Book of Airships," by H. Delacombe; "The Curtiss Book of Model Aeroplanes," by Glen H. Curtiss, and "Scientific Pedagogy," by Maria Montessori.

Dr. Knut Stjerna's "Archæological Essays on Beowulf," translated and edited by Dr. John R. Clark Hall, will be brought out early next year by the Viking Club of London.

Books shortly to be published by Moffat, Yard & Co. include: "The Way of Peace," a volume of talks by Reginald Wright Kauffman, and "Foam Flowers," a volume of verse by Stephen B. Stanton.

"Deutscher Humor aus vier Jahrhunderten," edited, with notes and vocabulary, by F. Betz, is in the list of D. C. Heath & Co.

Among the spring juveniles announced by Doubleday, Page & Co. is Louise Jamison's "The Real Fairy Book," illustrated.

We have received from Luzac & Co. of London notice of a volume to be issued at Christmas, entitled "Hinduism: Its Formation and Future," by Dr. Shridhar V. Ketkar of Cornell; it is the second work in the History of Caste in India series.

Early in the new year the Century Company will publish a new novel by Anne Douglas Sedgwick, entitled "Tante."

It is pleasant to see a third edition of H. O. Taylor's "Classical Heritage of the Middle Ages" (Macmillan). Three pages of Addenda to the Bibliographical Appendix are to be noted.

A critical study of Machiavelli manuscripts, the Italian editions, and the translations of Machiavelli in the sixteenth and seventeenth centuries has been made by A. Gerber. The work was begun in a series of articles in *Modern Language Notes* in 1906 and 1907, and when complete will be illustrated with 147 facsimiles and numerous extracts from the texts. Readers who are interested in this undertaking, of which the first part, including the facsimiles and the comment on the manuscripts, is now ready, can communicate with Mr. Gerber by directing to the poste restante, Göttingen, Germany.

The Putnams, in this country, in conjunction with Dent of London, and Jean Gillequin & Cie of Paris, have begun the publication of a series of cheap volumes which are designed to include "tous les chefs-d'œuvre de la littérature française." It is, in a word, to be a companion library to "Everyman." The five volumes now in our hands include "La Chanson de Roland," traduction nouvelle; Voltaire, "Philosophie," extraits; Amyot, "Deux Vies parallèles," Alexandre le Grand and Julius Cæsar; Balzac, "Le Père Goriot"; Rabelais, Œuvres, tome premier.

In a paper reprinted from the *Journal of English and Germanic Philology*, Dr. Frederick W. C. Lieder of Harvard undertakes to fill some of the important gaps in the chief bibliography to-day of Goethe literature in England and America—that by Eugene Oswald, 1899; second edition revised and enlarged by L. and E. Oswald, 1909 (Publications of the English Goethe Society). Dr. Lieder finds the volume especially deficient in the treatment of periodical literature; titles are missing of many articles "that first helped to make Goethe known to the American public"—among them those by Edward Everett and George Bancroft, in the early numbers of the *North American Review;* by C. C. Felton and F. H. Hedge, in the *Christian Examiner;* by Margaret Fuller, in the *Dial,* and by G. H. Calvert, in *Putnam's.*

The second volume of "A Cyclopædia of Education" (Macmillan), edited by Paul Monroe, includes titles from Church Attendance to Fusion. Articles on the American College, College Attendance, College Boards, College Graduates, College Requirements, and related topics occupy sixty-eight pages, a larger space than is devoted to any other subject. The general historical introduction to the subject of American higher education is by President Charles F. Thwing of Western Reserve University. A large amount of information concerning college curricula is presented by President William T. Foster of Reed College, and Prof. Adam Leroy Jones of Columbia University. The extensive studies of the General Education Board, which have not heretofore been published, are summarized in a concise article, with accompanying map and table, on the geographical distribution of colleges and college students in America, by Dr. Eben C. Sage of the Rockefeller Foundation. The studies of Dr. Sage show that in proportion to the population the States of the North Atlantic division have the fewest colleges, while the Western division has the most. Dr. Sage includes only colleges with one hundred collegiate students or $100,000 endowment devoted to strictly college work. There are 261 such institutions in the United States, out of about 800 so-called colleges or universities. The table of the ratio of the students to population contains some interesting facts. In Massachusetts it is one to 607; in New York one to 935; in Tennessee one to 2,148; and in Louisiana one to 2,211. In discussing the problems of the college, the statement of the *Nation* that "the college is the least satisfactory part of our educational system," is quoted with approval, but it is asserted that the undenominational small college "has a place so secure and so important that all the tendencies to-day in large colleges and in professional schools are serving only to strengthen it against its real and supposed dangers."

The point of view of this cyclopedia is specifically American. No mention is made of Clare College, Cambridge, or the University of Cordova, although apparently no American institution is so humble as not to have a separate title. The educational progressive, the radical school superintendent who has no patience with Greek in a public school, and who is zealous for technical and vocational training, will find much to his mind in these pages, while the scholar of the old school will often be surprised at omission of topics which he has been trained to regard as of some educational importance. It is significant that four columns are devoted to Dancing, while two suffice for the discussion of Cicero; that Desks and Seats are allowed eleven columns, while Demosthenes, Democritus, and Euripides are not so much as mentioned. It might have been well in a publication of national scope to give greater weight to the point of view of other institutions than those with which the editor is connected; from these he has selected five times as many contributors as from the institution furnishing the next largest number of contributors.

Certainly Mackenzie Macbride, in his "Arran of the Bens" (McClurg), has said everything there is to say about that island. He extols the beauty of its scenery, declaring it to be more varied in charm than that of Italy; he traces its history all the way from the shadows of mythology, conjuring up the old Ossianic heroes and the patriots of later times who have trod its wind-swept shores and sought refuge in its caves; he describes every block of ruin, every chapel and sacred landmark, every vestige of prehistoric remains; he even ventures into geology and ethnology, discussing the mineral structure of the island and the racial origin of its inhabitants. But in all this he appears to be writing solely as a Scotchman and for Scotchmen. Some of Mr. Macbride's statements about this little island (twenty-four miles by seven) make us think of the old Dutchman who said to the tourist from over the water: "Yes, you have North America and South America, just as we have North Holland and South Holland." Each of the sixteen exquisite illustrations in color by J. L. Wingate deserves to be framed.

Abbé Félix Klein's "America of To-morrow" (McClurg), translated by E. H. Wilkins, is one of those friendly, good-natured bits of appreciation, bubbling over with good humor, at which even the most provincial American could not take offence. The author, a French Paulist father, already favorably known by his volume entitled "In the Land of the Strenuous Life," sets down in an informal and even desultory fashion his observations made during a brief lecturing tour which took him from New York to San Francisco, by the northern route, with Chautauqua and the University of Chicago as two important stopping-places. He chats about the achievements and ideals of the Roman Catholic Church, praises our universities and schools, notes with hopeful concern the pressure of the race problem on the Pacific Coast, lets politics alone, and avoids, with true French address, most of the well-known pitfalls, such as cooking, hotels, and the American voice, into which English travellers are prone to stumble.

Hugh Stokes's platitudinous assurances in the preface to his book on "Madame de Brinvilliers and Her Times" (Lane), that because Paris harbored a few poisoners in the seventeenth century, France was not altogether bad, hardly predispose the reader in his favor; yet the pages that follow give one of the liveliest and best-informed accounts of French society and civilization during that period with which we are familiar in English. Moreover, the

Digitized by Google

author's ordonnance of the lengthy and complicated story which he has to unfold, is admirable. He does not become confused in handling the tangled skeins of a mystery which has never been cleared up in all of its details, and each figure in the dual series of events involving the Marquise de Brinvilliers and the receiver-general of the clergy of France, Pennautier, is presented with life-like distinctness. The story shows a continuous increase in interest and suspense up to the final scene in which the unhappy woman expiates the guilt of her terrible triple crime. It holds the same fascination for us to-day as for contemporaries who, like Madame de Sévigné, used to write accounts of the progress of the trial to their correspondents. This is partly because the poisoned breath of the Italian Renaissance is upon characters and events. The author compares Madame de Brinvilliers to a beautiful snake. But she was none the less human. However little of ordinary femininity may be detected in the creature who poisoned through hate, she suffered like a woman, and no mean woman, but one who, though she owes something, perhaps, to the genius of her confessor, the Abbé Pirot in his marvellous account of her last hours, found somehow and somewhere within herself the capacity for true tragic expression. As she passed from cell to torture chamber, and thence, in the mean tumbril, to the parvis of Notre Dame for her public penance, and so on to the block, she might have been some barbaric queen, rather than the meanest of murderers. Turn by turn she was torn between the threats and menaces of her spiritual adviser. She suffered far more in her terrible pride than in her racked limbs and in her conscience, and though from time to time she seemed to soften and yield at thought of her salvation, there was ever the return of the tigress mood which made her intermittent concern for her soul seem half-ironic. We are today much more apt to appreciate this spectacle in all its quality of profound spiritual drama, than were the onlookers in the seventeenth century, who were principally impressed by the apparently pious end of the repentant poisoner in her prayers upon the scaffold.

Wayne Whipple's "Story-Life of Washington" (Philadelphia: John C. Winston Co.), like the same author's "Story-Life of Lincoln," is a collection of anecdotes and descriptions, some five hundred in number, chronologically arranged, and giving a kaleidoscopic view of Washington's career from birth to death. The list of authors drawn upon is catholic, ranging from Parson Weems to Henry Cabot Lodge, with particularly heavy reliance upon Irving. A few extracts from Washington's journals, letters, and state papers are also included, and a considerable number of well-known historical pictures are reproduced. The scheme of the work is not at all a bad one, and has been skilfully carried out; and while the volumes are no substitute for history, a reading of them ought to gladden the heart of any one who is still a boy.

Prof. George Cross of the Newton Theological Institution has placed English readers of theology in his debt by his "Theology of Schleiermacher" (University of Chicago Press). The central portion of the book is a paraphrase or condensation of Schleiermacher's greatest work, "Der Christliche Glaube," which has never before been translated. In 175 pages he seeks to present the argument of the original, which runs to some 1,200 pages in the best known German edition. Complete success would be too much to expect, and one who has found himself unable to understand the sketch of some philosopher in a history of philosophy, until he studied the original, may repeat the experience with this paraphrase. It is doubtful if the most studious reader would do justice to Schleiermacher's celebrated definition of religion as the feeling of absolute dependence from the page or two in which it is condensed in this exposition. On the other hand, Schleiermacher's views on less difficult subjects, *e. g.*, his critique of the doctrine of the trinity and of the two natures in Christ, are clear and forceful in Professor Cross's paraphrase. The historical and critical introduction is well written, and the presentation of the merits and limitations of Schleiermacher's system is discriminating and just.

Teachers of English as well as of French literature should be interested in J. Bezard's "De la Méthode littéraire: Journal d'un Professeur dans une classe de Première" (Paris, Vuibert, 1911). In this volume, as in his previous "La Classe de français," M. Bezard claims to give an almost stenographic report of what actually goes on in his own classes in French literature at the Lycée Hoche. Perhaps the most striking feature of the "method" is its extreme vivacity. "Notre explication," says M. Bezard, "consiste en un dialogue, où les plus bruyants éclats de rire, les observations partant comme des fusées, les plaisanteries, mêmes faciles, sont admises et recommandées." The teacher of literature in France at present evidently cannot afford to neglect any fair means of exciting interest. M. Bezard is not alone in feeling that ever since the sweeping reform of secondary education in 1902, with the immense impetus it gave to scientific and utilitarian studies, the humanities have been on the defensive. The deeper causes of that "unjust and dangerous disdain of tradition," of which M. Bezard complains, are of course international; he himself recognizes that other countries have their equivalent of the "crise du français" about which so much is being written, a crisis, M. Bezard would say rather, "of taste, of finesse, of feeling, of art itself, in a word of the most precious virtues that a civilized man possesses."

One feels throughout M. Bezard's volume the preoccupation, not to say obsession, with the *baccalauréat*—the final success or failure of his students when they appear before the examining board of the university. This preoccupation, as well as the commotion which takes place in a French family when one of its members comes up for the degree, is natural enough when we reflect how much more the *baccalauréat* means for the career of a young Frenchman than the A.B. for that of a young American, and also how much harder it is to get. Of the total number of candidates last year only 44 per cent. passed. (M. Bezard mentions with pardonable pride that 66 per cent. of his own students were successful.) Teachers of literature in this country will derive valuable hints less from what is distinctively new in M. Bezard's method—its adaptation to the present conditions of the *baccalauréat* and its conversational vivacity—than from the features of it that are more or less traditional. Ever since Rollin, not to go further back, the best French teachers have, like M. Bezard, known how to vitalize the study of literature with ideas and to train their pupils in the perception of the finer qualities of form; like him, they have refused to encourage the student in premature attempts at originality and self-expression, but have insisted on his doing his writing in connection with the careful study of masterpieces. American readers will be somewhat disconcerted by the assertion, in a passage quoted by M. Bezard without correcting, that the Pilgrim Fathers landed on "la côte baignée par l'Hudson"; also by his own picture of "une jeune puritaine de Virginie, encore rose d'une partie de baseball."

John Bigelow died at his home in Gramercy Park, New York city, on Tuesday morning. From his eminence of ninety-four years, he looked back upon almost as many years of active life in a variety of capacities equalled by few, if any. Lawyer, diplomat, public officer, journalist, and indefatigable author, he had worked with three generations of men, at home and abroad, and continued working and taking part in affairs until the last. To many he was America's first citizen, her "grand old man." He was born in Malden, Ulster County, N. Y., November 25, 1817, the descendant of an Englishman who settled in Watertown, Mass., in 1642. After graduating from Union College, in 1835, he chose the law, and soon built up an exceptionally good practice. Even at that early age, he began to write notable articles in such papers and periodicals as the *New York Review*, the *New World*, the New York *Evening Post* (of which he was later an editor, from 1849 to 1861), the *Plebeian*, and the *Daily News*. His articles on constitutional reform, published from 1845-46, in the *Democratic Review*, a political journal, published by John L. O'Sullivan, were reprinted in pamphlet form and largely circulated. Those entitled "Executive Patronage" and "Constitutional Reform" were of particular interest, and led to contributions to the *Pathfinder*, edited at the time by Parke Godwin. Mr. Bigelow became literary editor of the *Plebeian*, and increasingly prominent in the newspaper field. At the beginning of his connection with the *Evening Post* he was particularly concerned in resisting the extension of slavery into the new Territories, and found a congenial field for the exercise of his remarkable powers. In 1861, President Lincoln appointed him consul at Paris; in 1864 he became chargé d'affaires, and then envoy extraordinary and minister plenipotentiary to the Empire. His mission to France closed in 1867. By the will of Samuel J. Tilden, one of his closest friends, he was appointed in 1886 a trustee of several million dollars, to be applied to the establishment of a public library in New York city. At the time of his death he was president of the Board of Trustees of the New York Public Library, Astor, Lenox, and Tilden foundations. In his long life, Mr. Bigelow made many voyages to Europe, and had interesting acquaintance with such men as Gladstone, Thackeray,

Digitized by Google

John Bright, William Hargreaves, Laboulaye, Montalembert, and Dumas. In politics, Mr. Bigelow was a strong free trader; in religion a Swedenborgian—he was one of the founders of the first Swedenborgian church in New York city. He was a corresponding member of the Massachusetts, New York, and Maryland Historical Societies, and had received the LL.D. degree from Union College, Racine College, and New York University. Besides occasional contributions to journals, his published writings include: "Jamaica in 1850, or the Effects of Sixteen Years of Freedom on a Slave Colony," "Life of Fremont," "Les Etats Unis d'Amérique en 1863" (Paris), "The Wit and Wisdom of the Haytians," "Monograph on Molinos the Quietist," "France and the Confederate Navy," "Writings and Speeches of Samuel J. Tilden" (two volumes), "Life of William Cullen Bryant," "Life of Samuel J. Tilden" (two volumes), "Life of Franklin" (three volumes); also edited "Franklin's Works" (ten volumes); "The Mystery of Sleep," "The Supreme Court and the Electoral Commission—a Reply to the Hon. Joseph H. Choate," "Lest We Forget—Gladstone, Morley, and the Confederate Loan of 1863, a Ratification," "The Usetul Life a Crown to the Simple Life," "Some Recollections of Edouard Laboulaye," "Our Ex-Presidents —What Shall We Do for Them? What Shall They Do for Us?" "Peace Given as the World Giveth," "The Proprium, or What of Man Is Not His Own," "The Panama Canal and the Daughters of Panama," "Correspondence and Literary Memorials of Samuel J. Tilden" (two volumes), "Recollections of an Active Life," and "The Folly of Building Temples of Peace with Untempered Mortar."

William George Aston, whose death at the age of seventy is reported from London, is known as a writer of popular and scholarly treatises on Japan, among them grammars of the spoken and written language, "Shinto: The Way of the Gods," and a "History of Japanese Literature."

The death is announced of Canon Thomas Teignmouth-Shore, aged seventy, whose two books, "Some Difficulties of Belief" and "St. George for England, and other Addresses to Children," have passed through many editions; the latter has been translated into French, German, and Italian.

Mrs. Kate Gannett Wells, who died last week at her home in Boston, was born in England in 1838, but came to this country early in life. For more than twenty years she was a member of the Massachusetts State Board of Education. She was the author of "In the Clearings," "Miss Curtis," "Two Modern Women," "About People" (essays), and "Little Dick's Son."

Mrs. Arthur Stannard, the novelist, known by her pseudonym of John Strange Winter, died in London on the 14th inst. She was born in York, England, in 1856. She was the first president of the Writers' Club, in 1892, and later presided over the Society of Women Journalists. Among her numerous publications we note "Bootle's Baby," "Army Society," "Cavalry Life," "In Quarters," "Houp-la," "A Blameless Woman," "Heart and Sword," "A Blaze of Glory," and "The Little Vanities of Mrs. Whittaker."

The Rev. Moses S. Schreiber, a Hebrew scholar, died in New York on Saturday of last week. He was born in Russia in 1832, and, after living in England, came to this country in 1870. The last few years of his life he devoted to writing on religious topics.

Dr. Johannes Vahlen, the noted classical scholar, is dead in Berlin, in his eighty-second year. We print in this issue of the *Nation* a letter of eulogy which reaches us at the same time as the news of Professor Vahlen's death.

Science

Semple's Influences of Geographic Environment: On the Basis of Ratzel's System of Anthropo-Geography. By Ellen Churchill Semple. New York: Henry Holt & Co. $4 net.

This is a remarkable book, one of the few products of American contemporary science which may safely challenge the best that has been put forth in this field by any foreign scientist whatsoever. Let us add, without any condescension, that it places Miss Semple among the handful of women the world over who are the peers of the foremost men of science. Miss Semple herself gives all credit to Friedrich Ratzel, her master at Leipzig, of whose "Anthropo-Geographie" she intended at first to make simply an English paraphrase. But she has done much more. Ratzel's work, although a landmark, is, she admits, "difficult reading even for Germans." Instead of translating, therefore, she wrote a book of her own, for which, in addition to the material assembled by Ratzel, she has collected independently a vast mass of evidence. Her work is a model of logical arrangement and clear statement, and from first to last she displays unfailing control over her subject. She has so coördinated her stores of knowledge that facts take on new significance. She draws from four great sources—geography, anthropology, history, and economics—and it is a pleasure to see her lay bare the causal relations between one and another of these.

The outcome is a work which, if we are not mistaken, will have a deep and permeating influence. It is such a work as Buckle dreamed of, only he limited his vision to the geographic influence on the history of a few so-called civilized races; but Buckle lacked the great body of evidence, and possibly also the dispassionate temperament, that Miss Semple commands. She shows, too conclusively to be gainsaid, that geography —in which are included all the natural factors of environment—determines human conditions. The materialist and the fatalist will hold that their contentions are established by her manifold demonstration of the rigid interrelation between man and his habitat; but the idealist will recognize that the riddle cannot be solved in that crude fashion. We need expect no such outbursts against Miss Semple as greeted Buckle half a century ago.

After a general introductory chapter in which she discusses the operation of geographic factors in history, she proceeds to classify the various kinds of geographic influences, and then to examine the relations of society and the state to the land. A fourth chapter, on the movements and migrations of peoples, concludes what is the more general part of her work. Thenceforth she treats in detail, with a wealth of aptly chosen and convincing illustrations, the influence of each special geographic factor—rivers, plains, mountains, oceans, and climate—upon the people subjected to it. One element—time—she bears constantly in mind, differing therein from less penetrating students, who imagine that when they have formulated the tangible factors—earth, air, and water—they have done enough. Miss Semple understands that the same valley or island may exert very different influences upon its inhabitants at different stages in their development.

A brief abstract of any chapter will illustrate Miss Semple's method. Take, for instance, her account of island peoples. She proceeds in the most rational way, from generals to particulars, stating first the relation between islands and peninsulas. She has a remarkable page on England which, through its isolation, stored up for centuries the characteristics of many European peoples, and became the home of conservatism, and then, by what seems a paradox, sent her sons to all parts of the earth, to lead "the world's march of progress." Japan has played a similar rôle for Eastern Asia, as Crete did for the prehistoric Ægean civilization. Miss Semple next examines the variations in fauna and flora, in human population, language, and customs, according as islands are large or small, isolated or in groups, near continents or remote. She cites the fortunes of Iceland, Ceylon, and Japan to show how far isolation, by protecting, may at one time promote civilization, but at another, by checking healthy intercourse, may retard it. She even does not overlook the use to which islands have been put as penal stations. She describes the effect of physical geography and climate on the products of their inhabitants. The tendency of islands under favorable conditions to become overpopulated, she discusses at length, and shows that the remedies are emigration and colonization in the case of the virile and resourceful British, while the teeming tribes of the tropical archipelagoes resort to cannibalism, infanticide, polyandry and other artificial checks.

The total impression left by this chapter, and the others, is that of completeness. Miss Semple turns from generals to particulars so quickly that the read-

Digitized by Google

er does not feel troubled by conjectures. She is alert to discover the two, three, or more causes that contribute to any given effect, whereas many investigators take the easier way and magnify a single cause, to the exclusion or neglect of the others. She is always careful to distinguish between fact and opinion, and to state frankly, as the true scientist should, the present limits of science in her field. For this reason, she refrains from summing up her immense investigations in the form of a general law, but it is certain that whoever may later formulate such a law will be incalculably indebted to her.

But the final distinction of Miss Semple's work is its style. She not only thinks clearly, but writes clearly. Whatever help symmetrical exposition can give, she gives. And though it might be hard to mention a scientific book which contains more facts on a page than hers, she puts her facts so agreeably, with so much variety, that one does not experience the weariness which comes from the mere accumulation of facts. One feels, on the contrary, that she is perpetually vitalized by ideas, to which her facts serve as markers. Possessing imagination of a high order, she visualizes principles as well as things and processes, with the result that her style is often enriched by memorable phrases. So noble a book cannot fail to sink deep in many minds.

"Dry-farming" and its application in Northern Africa is the subject of the leading article, by A. Bernard in the *Annales de Géographie* for November. A detailed account is given of what has been accomplished by it in this country where it originated. The interest in it aroused in France is shown by the fact that the Algerian Government sent a delegate to the fifth American Congress of Dry-Farming at Spokane, and that the recent work upon it of President Widtsoe of Utah Agricultural College has been translated into French. Among the other subjects treated are topology and topography apropos of a work by Gen. Berthaut, the region of the Hardanger Fjord by C. Vallaux, and the railways and foreign commerce of China, a condensed summary of facts.

Suggestive hints on the selection of food, with special reference to the relative importance of heat and energy producing values, are offered in T. C. O'Donnell's "The Family Food" (Penn). There are tables giving the chief elements of our food stuffs, the daily amount of each required, menus arranged to preserve a proper balance, and other data.

In his "Medical Science of To-day" (Lippincott), Dr. Willmott Evans of London endeavors to explain in simple language the more important advances in practical medicine and surgery in the last sixty years, or, at least, what will seem most important to the general reader quite unfamiliar with these matters and little heedful of the more purely scientific question involved. This endeavor is thoroughly successful, and the result is a very entertaining and attractive book of about three hundred pages. Many topics are touched on, some of them barely skimmed over, but Dr. Evans knows how to skim for cream, and has great facility in getting at the essentials and presenting them briefly and clearly. The pictures—there are thirty-one of them—are helpful, and sometimes very striking, as, for example, the X-ray photograph of a toy bicycle stuck half-way down a childish gullet; but three full-page plates of crystals of hæmoglobin is almost too much of a good thing. Our only regret in reading the book is that the opportunity is not used to teach more distinctly the lesson of all lessons which the public needs to learn concerning medicine, the lesson, namely, that the scientific side of medicine is at least not less important than its practical and obvious successes, and that prevention of disease and hygienic measures, in which the public must cooperate, form, perhaps, the most important part of the medical progress of the future.

Drama

William Winter's "Shakespeare on the Stage" is announced for immediate publication by Moffat, Yard & Co.; also by the same house, "Neptune's Isle and Other Plays for Children," by John Jay Chapman.

In the spring Doubleday, Page & Co. will bring out Ben Greet's arrangement of Shakespeare under the title "Shakespeare a Child Can Read and Act," and "Fairy Tales a Child Can Read and Act," by Lillian E. Nixon; both will be profusely illustrated.

M. B. Leavitt's "Fifty Years in Theatrical Management" will be issued shortly by Philip Mindil.

Gorki's play "The Lower Depths," sometimes known as "The Night Asylum," was produced recently before a London audience in a translation by Laurence Irving. The part of the old tramp is said to have been rendered effectively by Holman Clark.

A performance of "Alcestis," in a new version by Francis W. Hubback, was recently given at the University of London under the direction of William Poel.

"The management of the Scottish Repertory Theatre would have been abundantly justified in producing Henley and Stevenson's 'Macaire,' says a writer in the *Westminster Gazette*, "if for no better reason than that in their company they have an actor in whom the bizarre, flamboyant rogue finds almost his ideal exponent—Mr. Kenelm Foss threads his way through the final scenes of Macaire's tortuous journey with an abandon and a fervor which would have delighted 'R. L. S.'"

"The Price of Coal" is the name of a one-act play by Harold Brighouse, which has just been produced in the London Playhouse. The peculiar traits of the characters (Scotch) are brought out by the suspense created by a serious accident in a mine. The scene is laid at the pitmouth.

The Morality Play Society of London has just made its first production. Mrs. Percy Dearmer's "The Soul of the World." Time, Eternity, and the Virgin Mary are among the characters.

When, some fifteen years ago, Arne Garborg called the story which made him a conspicuous figure in the literature of the century's end "Müde Seelen"—Weary Souls—he coined a term likely to outlive his own memory. For with such souls is still concerned the greater part of European drama and fiction, and Arthur Schnitzler has become their master analyst. Being himself the son of a generation blighted by cynicism and a physician interested only in the abnormal, his latest play, "Das weite Land" (Berlin: S. Fischer), is an excursion into what seems to him a wide realm, but fortunately for the human race is merely a segment of real life. After all, only a small fraction of humanity sees in the mating instinct the main issue of existence, and spends its allotted span of life in drifting from one "affinity" to another. That the author calls his drama a tragi-comedy suggests his ironical point of view. The central figure of the play is Friedrich Hofreiter, a master-egotist, who, in the language of a young woman who is his counterpart in modern cynicism, "gets what he needs out of every individual he meets and ignores the rest." At the rise of the curtain one of the friends he had thus exploited had just been buried, and callers at the Hofreiter villa discuss the possible causes of his suicide. Alone with Hofreiter, his wife Genia hands him a parting letter from the dead friend, which proves that he had loved her and that she had refused to listen to his plea. Instead of being moved by her loyalty—which would be hopelessly old-fashioned—Hofreiter shrinks from a virtue which has cost a life, and, going off on an excursion to the Dolomites, rushes into a desperate and dishonorable love affair. During his absence the neglected wife passes through a dangerous emotional crisis and accepts the love-offering of young Otto Meinhold. Hofreiter returns in time to discover her transgression and kills the youth in a duel. Around the chief actors in this quadrangular intrigue, drawn with admirable firmness, are grouped a variety of characters whose interplay is as fascinating as it is enlightening. Among the most suggestive scenes are those between Genia and the mother of her lover. This woman had not borne so patiently the infidelities of her husband, but at the first trespass had divorced him, gone on the stage, and become a great actress. Genia cherishes an ideal of filial love and stakes her hope upon her son, a boy of thirteen at school in England; Frau Meinhold is sophisticated and squarely faces the fact that sons are more or less removed from their mothers on coming into manhood. The scenes between Hofreiter and the divorced husband of Frau Meinhold and Natter, the Jewish banker, with whose wife he has just severed relations of long standing, also prove the author's amazing insight into the tainted souls of his world. Among them the figure of Hofreiter, repulsive though it be, stands out with a compelling force of personality, almost typifying the spirit of his class and his period. Unpleasant as the drama is in subject-matter, it is an exceptionally fine example of the author's manner.

Percival Pollard, the author and playwright, who died in Baltimore on Sunday in his forty-second year, was born in Greifswald, Pomerania, of English-German parentage. He collaborated with Leo Ditrichstein in "The Ambitious Mrs. Alcott," which had a successful run at the Astor

Digitized by Google

Theatre in 1907. He also wrote several volumes of fiction, and "Recollections of Oscar Wilde."

Music

One Hundred Folksongs of All Nations. Edited by Granville Bantock. Boston: Oliver Ditson Co. $1.50.

Ceremonial Songs of the Creek and Yuchi Indians. By Frank G. Speck. Philadelphia: University Museum.

Album of Songs. By Charles Wakefield Cadman. Boston: Oliver Ditson Co. $1.25.

Many excellent volumes of songs and pianoforte pieces have been printed by the Ditsons in their Musicians' Library, but none of them is better than the collection of one hundred folksongs made by Granville Bantock. The editor is one of the leading English composers of the day, and he has made a specialty of folksong studies. His field of research not only covers all Europe, but includes other continents. America is represented by a Pawnee war-song, a Dakota Indian serenade, and by "Old Folks at Home," "Tenting on the Old Campground," and "Dixie." Our distant neighbor, Japan, makes a pretty showing with a cherry-bloom song and a New-Year tune, in which the editor has arranged the accompaniment to suggest the national instrument, the Koto. Most captivating to those who love the exotic in music is the Chinese "Jasmin-Flower," which the editor has ingeniously arranged as a two-part canon—a canon which would appeal, one fancies, to the Chinese themselves, since, though a European device, it actually enhances the Orientalism of the tune. India, Persia, Arabia, and Egypt are laid under contribution, and so are Tripoli, Tunis, Algiers, and Morocco. Nor does this end the Oriental contributions which constitute a unique charm of this collection. Syria, Greece, Turkey, Bulgaria, Servia, Bosnia, contribute some gems, nor are the six Russian tunes included any less Oriental. Incidentally, one notes how many of their beautiful folksongs have been embodied by Russian composers in their orchestral works.

Rubinstein once wrote that a folksong which moves to tears those to whom it belongs may leave natives of other countries cold. This is true, but we are becoming more and more cosmopolitan in our taste, and Mr. Bantock's choice samples of musical exoticism therefore come at the right time, and will be sure of a cordial welcome. Besides collecting the songs, he has provided brief but interesting notes on all of them. In one of these notes, written for a Norwegian melody, he remarks that "Grieg has undoubtedly made a free use of his native melodies, and a comparison between the present song and his well-known Solveig's Song will afford interest to many." This is misleading. The resemblance is there, but, as Grieg himself has attested, this is the only one of his songs in which he borrowed a fragment of a folktune. His arrangements of such tunes are mostly for the piano, and are clearly marked as such. Norwegian music is still somewhat exotic, but Sweden and Denmark come nearer the normal European manner. Mr. Bantock has shown admirable judgment in his choice of German and Austrian folktunes (how exquisite are the Tyrolean!), as well as of characteristic specimens of Italian, Spanish, French, Hungarian, Irish, Scotch, Welsh, and English songs. Nor is it merely for his judgment that he deserves special praise. He has succeeded in making the piano parts interesting without marring the simplicity of the melodies—a very difficult feat. Of great value also is the bibliography, which covers no fewer than seventeen wide columns. A further reason for welcoming this volume is that it will help along the "back to melody" movement in music. Mr. Bantock's predilection for Oriental tunes (which he has manifested also in some of his compositions) points at one way in which modern melody can be varied.

To folktune in its crudest form is devoted Mr. Speck's monograph, the latest contribution to the study of the red man's music. The Creek songs were sung for him by a prominent leader and shaman and were all recorded on the phonograph. No attempt is made in this volume to discuss the internal qualities or comparative characteristics of the music itself, the purpose being merely to assemble the material for some one else to study; which can be done at the University of Pennsylvania Museum, Mr. Speck's treatise being No. 2 of Volume I of the museum's anthropological publications. But while the music is merely presented to the eyes (approximately, in our own notation), there are interesting pages devoted to information regarding the musical performances and the dances of the Creek and Yuchi Indians. A paragraph is devoted to the strange use of nonsense syllables. Musical illustrations are given of the fish dance, the alligator dance, the rabbit dance, the leaf, buffalo, duck, skunk, horse, buzzard dances, besides the steal-each-other dance, the drunken or crazy dance, and so on. Special interest attaches to the medicine songs and formulas. When a Creek Indian is sick he consults the shaman, who decides what animal is to be held responsible as the cause. He then collects his medicines, steeps them in a pot of water, and, in the secrecy of his private quarters, sings a magic song, the virtue of which is thought to be transferred into the medicine. Thus result the hog the cause, beaver the cause, snake the cause songs, with others in which deer, fish, turtles, raccoons, etc., are held responsible. Mr. Speck's pages include twenty of these "cause" songs.

To return to the white man, Mr. Cadman's Album includes eleven *Lieder*, which, while not folksongs, approximate them in so far as melody is their most important ingredient. This young man is indeed the most melodious (which means the most promising) of American composers who have come forward since the death of Edward MacDowell. One of the most encouraging things about him is that he has taken MacDowell as a model, as is shown particularly in "Could Roses Speak" and "My Lovely Rose." Though MacDowell was the most individual, he was also the most American of our composers since Stephen Foster, and in thus following in the footsteps of these two men Mr. Cadman is helping to build up an American school of composition. What he needs to be warned against is writing too many songs, and publishing those in which the melody is too obvious. MacDowell never did that. The temptation to do it is great in one who has written at least one song, "The Land of the Skyblue Water," which has already become so popular that audiences greet it with applause as soon as the opening bars are played.

The Schirmers have already printed the vocal score of Horatio Parker's prize opera; and two other novelties of our season, Wolf-Ferrari's "Suzanne's Secret" and "Inquisitive Women," are in press. The same firm has in preparation a complete edition of Bach's organ works, edited by Charles-Marie Widor, and Dr. Albert Schweitzer.

Perhaps the most extraordinary thing concerning the career of the Austrian composer, Anton Bruckner, is the fact that among his pupils were no fewer than six young men who subsequently became famous orchestral conductors: Nikisch, Mottl, Mahler, Schalk, Muck, and Stransky. Notwithstanding this great advantage, and the fact that all these leaders admired Bruckner as a man and a composer, his symphonies have been surprisingly slow in making their way in Europe, and still more so in America, although all of the conductors named have been active here too. In New York city there had been only seven Bruckner performances (although he wrote nine symphonies) before Joseph Stransky, at the last Philharmonic concert, conducted the fifth, which had never been heard here before. Possibly repeated hearing might reveal strokes of genius in it; but this performance, which was admirable in every way, gave the impression of a disjointed, uninspired work, which ends, however, with an imposing climax, in which sixteen extra brass instruments, placed on a platform above the rest of the orchestra, make the desired effect.

The climax of all the Liszt Centenary concerts will be that for which the Philharmonic Society has been preparing since

Digitized by Google

October, and which will be given this evening, with the usual repetition on Friday afternoon. Arthur Friedheim will play the A major concerto, and the orchestral numbers will be the splendid symphonic poem "Ideal;" and the "Dante," which will be given with the aid of the MacDowell Chorus. This work, which on account of its difficulty is seldom performed, is regarded as the most inspired of Liszt's compositions. Richard Wagner, after hearing it, exclaimed: "There is much that is beautiful in music, but this music is divine." To his "Dante" and his "Faust," wrote Weingartner, "Liszt gave all the best his nature contained. They mark the zenith of his creative power, and, excepting those of Berlioz, they are the most perfect examples of truly artistic programme music in existence."

Contrary to all expectation, Puccini's "Girl of the Golden West" is proving a success in the cities of Italy. Rome, Lucca, Brescia, and Treviso heard it, some time ago. Then it won a big success in Turin, followed by a bigger one in Naples.

"Rigoletto," with Renaud in the title rôle, Miss Lyne as Gilda, and Harrold as the Duke, has made such a sensation in London that Hammerstein is giving it twice a week.

Bayreuth is following the example of the Metropolitan Opera House in raising its prices. Seats which ever since 1876 have been $5 will hereafter be $6.25. This, indeed, is going further than the Metropolitan, for it applies in Bayreuth to all seats in the house, whereas in our opera house it is only in the parquet that the price has been raised.

Weingartner is composing a new opera, "Cain and Abel," the text written by himself.

Alberto Randegger, whose death is reported from London was born at Trieste in 1832; he was a Knight of the Order of the Crown of Italy. In 1880 he was chosen conductor at Her Majesty's Theatre, London, and for many years was conductor of the Norwich festivals and of Covent Garden. His compositions include music for the 150th Psalm, "Fridolin" (a drama cantata), and a "Singing Primer."

Art

The second edition of Frank P. Stearn's "Midsummer of Italian Art," a mediocre book hardly worthy of revival, bears the imprint of Richard C. Badger, Boston.

"Florence and Her Treasures" (Macmillan), by Herbert Vaughan, is an excellent pocket guide especially adapted to the needs of a leisurely tourist. Besides the usual information there is added a sort of historic "Who's Who," and there is rather more architectural matter than is usual in such books. A couple of pages given to walks and drives about Florence would have been useful. To omit the Church of Sant Ambrogio seems a pity. The delectable little Church of San Giovanni degli Cavalieri is ignored by this as by most guides. Michelangelo's Madonna in the Uffizi is erroneously described as unfinished. On page 164 Verrocchio is credited with a portrait where Lorenzo di Credi is clearly intended. The bulk of the decoration of the Spanish chapel may safely be ascribed to Andrea da Firenze. An original interpretation of Botticelli's Primavera will hardly supplant the views of Dr. Warburg and Mr. Horne. Despite such minor blemishes, the book may be recommended for its abundance of well-ordered information.

A useful series of "Little Books About Old Furniture" has begun to be issued by Frederick A. Stokes Company. The authors are English, J. P. Blake and A. E. Reveirs-Hopkins. The first two volumes are entitled, respectively, "Tudor to Stuart" and "The Period of Queen Anne." Their aim is "to offer suggestions and a certain amount of information to that large and increasing body of persons to whom old pieces of furniture are more interesting than new, and to show that no extraordinary income is essential to making a collection." For American readers the books have the defect of their insularity. They will, at all events, prove valuable to the amateur collector about to spend a summer in rural England, where, for five or six pounds, it is still possible now and then to pick up an interesting article of furniture made before 1750. The half-tone illustrations are drawn from British public and private collections. The Victoria and Albert Museum, in especial, has supplied many examples. The authors' indebtedness to more ambitious and expensive furniture books, by Macquoid, Rowe, Foley, and others, is obvious and freely acknowledged. They rightly, for the purposes of their following, emphasize the evolution of each article of domestic furniture from Saxon times onward, and relate the design of each period to the prevailing standards of comfort and taste, enforcing their generalizations with well-selected quotations from the great diarists and other British classics. Unlike most recent manuals for collectors these works contain no special chapters on "faked" furniture.

G. Griffin Lewis's "Practical Book of Oriental Rugs" (Lippincott) is a very complete compilation for the collector and practical buyer, the latter being most regarded. There are tables of weaves and of the elements of design, prices per foot, advice as to cleaning and preservation, etc. Color-plates and halftone cuts are plentfully supplied. All in all, it is a safe and sensible guide. The table of weaves contains fifty-eight entries. Other tables offer more than sixty, but in the uncertainty of the trade nomenclature it would be hazardous to assert that Mr. Griffin's table is defective. We miss from it and from all others we have examined an interesting type of Caucasian antique which has extraordinarily fine wool and knotting and most characteristic autumnal colors. Dealers often call these rare mats Georgians.

One reads in Fred J. Melville's "Chats on Postage Stamps" (Stokes) that there are collections worth nearly a million dollars each; one is that of King George, and in addition to those of private individuals, there are various large national and city collections. Mr. Melville had previously written some twenty volumes on the subject, but in the present case he has either avoided technicalities or labelled them plainly, giving up most of his space to readable matter relating to the early history of stamps, to the great collections that have been made, to stories of advances in prices that seem almost fabulous, and to some noted instances of forgeries of valuable issues. There are seventy-four photographic plates showing rare stamps, and some of the roughly made devices that preceded the use of the regular postal labels.

"The Pennsylvania Academy of the Fine Arts and Other Collections of Philadelphia" (L. C. Page; illustrated), by Helen W. Henderson, is oddly distinct with local flavor. The author does not hesitate to chide painters who have made unamiable likenesses of prominent Philadelphians. The glory of the Pennsylvania Academy is its unrivalled series of Stuarts and Sullys. In this field of early American portraiture our author is an excellent cicerone. Beyond this, her taste and knowledge are far less certain. Her wholesale scorn of the old masters of the Wilstach gallery is by no means warranted by the facts. It is the only place in America where any number of important Italian and French examples of the seventeenth century can be seen, and if this art is not the most inspiring, at least the gallery nicely supplements better known collections. Like its companion volumes on the Boston Museum and the Metropolitan, this book meets a real need. But the publisher who would issue albums of large plates from American museums, with a minimum of text, would do a far more substantial service to both students and amateurs.

"Frank Brangwyn and his Work" (Dana Estes), by Walter Shaw-Sparrow, is a large octavo with twenty good color plates and a number of collotypes. It gives an interesting record of a career that, beginning on a sailing ship, soon reached international renown in painting. Brangwyn has applied in pure color Manet's doctrine of the *tache*. The result is an impression of singular energy and immediacy. He is versatile, a fine decorator and etcher, the celebrant at once of romantic and Oriental themes, and of modern English labor. About him there is something fresh and impulsive. Few who saw The Buccaneers blazing amid the mediocrities of a Salon of about twenty years ago will ever forget the impression. Yet many of those early admirers will feel that Mr. Brangwyn has failed to temper the defects of his ardor. Much of the work has a wriggling aggressiveness that catches at first, but does not improve on acquaintance. Still Brangwyn's career has been both distinctive and distinguished, and arouses a legitimate curiosity that Mr. Sparrow's book will go far to satisfy.

Finance

PREDICTION AND INFERENCE.

Two incidents of the past week or two have stood forth from the other financial happenings of the day, not only as matters of immediate interest, but as matters with a definite and important bearing on the longer future. One of these incidents was the sudden outburst of enthusiastic prediction, in and out of the steel trade, over the prospects of that industry. The other was the Gov-

Digitized by Google

ernment's very large estimate on the cotton yield. Very great interest has been bestowed by financial markets on the first of these two incidents and very little on the second. That, however, was merely because the one was not expected and the other was. It may conceivably turn out that the industrial situation foreshadowed by the cotton estimate may prove in the end the more important of the two.

The prophecy of a "steel trade boom in 1912," ascribed to Henry C. Frick, Mr. Carnegie's old partner and an important director in the Steel Trust, had to Wall Street the peculiar interest which would naturally attach to an exceedingly "bullish" judgment on the outlook, by a prophet not less intimately associated with the stock market than with the steel trade. Undoubtedly, the first inquiry of many Stock Exchange listeners was not so much, what does this mean regarding the country's industry, as what does it show to be the attitude of a powerful financial group towards the stock market? That is as it may be; but the position of the steel trade is the matter of real concern, and Mr. Frick's opinion on that is interesting.

Wall Street's version, that "1912 will be the biggest boom year in the steel trade's history," took a good many things for granted. There are some obstacles in the way of accepting this version, even with the qualification that the avenue of such expansion would be the foreign trade. It has been so easy for prophets to lose their heads these past dozen years. But one thing is certain beyond dispute. Whether a "trade boom" in a Presidential year is usual or not, and whether Europe and the neutral markets are or are not in shape to take American steel on the increasing scale of 1897 and 1899, the American trade itself is starting rightly for a movement of expansion, and is in the right position for the maximum of achievement.

Whatever is to be said of the argument that the demoralization of steel prices, in 1911, resulted from loss of control of the market by the Steel Trust (or from the Government's attitude towards the Trusts), these facts are now wholly incontestable—that the policy of refusing to lower prices in hard times stood squarely across the path of the kind of trade revival now predicted, and that the breakdown of that policy was certain. At the present moment, the industrial atmosphere is clearing. So much nonsense has been uttered about this question of after-panic markets, and such complete ignorance of economic history and economic law has been displayed in the whole discussion of the Trusts, that people are only now beginning to understand that the markets have been following, step by step, the course of events which has followed every great financial crisis, and have been finding their own way out, exactly as they found their way out of 1893 and 1873 and 1857. Practical captains of industry like Mr. Frick and Mr. King are perfectly well aware of this; perhaps the public at large will be more ready to recognize the truth, when the after-depression of 1907 is really over.

It is high time, also, that some plain common sense should be talked about the cotton crop. The attitude of a good part of our people in that matter, even up to the present week, has been one of lamentation that Providence has been so good to us. Having shrunk with dismay in June from the possibility of another ten or twelve-million-bale yield and another 16-cent market, they have been shaking their head forlornly, in December, over the certainty of a fifteen-million-bale harvest and a 9 or 10-cent price. With all that is said—and much of it reasonably—about the hardships of a narrowing margin of profit to the planter, it must be frankly added that this attitude regarding the meaning of the season's cotton crop to American industry, American commerce, and American prosperity, is ridiculous.

We have had two years in which not enough cotton was raised to clothe the world; in which the exorbitant price pressed cruelly on the poor; in which mills at Fall River and Manchester ran on half-time, with laborers by the thousands out of work, and in which, more than all, we were told that the fertility of the American cotton belt was exhausted, and that worse things were in store. There is an end of that, at any rate. The consumer has a fair chance again, and America again stands forth as the beneficent arbiter of the world's industrial fortunes. Exactly what and how much the actual outcome of the season will mean to American prosperity in the nearer future, it is still a little early to say. But when the long-postponed replenishing of exhausted supplies gets under way in the cotton goods trade, as well as in the steel trade—the obstacle of high prices having been removed in both—and when all the wheels are turning again in Northern and Southern mills, all of us will be studying the larger bearing of the movement.

"Perhaps it was because he began life as an instructor of youth that Dr. Andrew D. White possesses, in so remarkable a degree in a man of such erudition, the power to write interestingly for unscholarly readers. It is not merely that he is master of a singularly lucid style, not merely that he is so thoroughly familiar with the topics, that he is wholly free from all peril of pedantry, but also that he has a literary artist's sense of dramatic perspective, sees events and men in their true dramatic relations, neither takes for granted the knowledge in his reader which the reader does not possess nor obscures the important facts beneath a multiplicity of unimportant detail."—*The Outlook.*

"The author has done his work in a manner which divides praise between his scholarly research and his lucid popular presentations."—*Louisville Courier-Journal.*

A CHOICE HOLIDAY GIFT FOR THINKING MEN AND WOMEN

SEVEN GREAT STATESMEN

In the Warfare of Humanity with Unreason

By ANDREW D. WHITE

Late President and Professor of History at Cornell University.

A scholarly volume of essays, historical, biographical, critical, constructive, studies of seven great men who gave their lives to the war of humanity with unreason, in Italy, France, and Germany: **Sarpi, Grotius, Thomasius, Turgot, Stein, Cavour, Bismarck.** It is a book of solid and enduring worth; abounding in vitality and interest.

Royal octavo, 552 pages

Price $2.50 net; postage, 20 cents

For sale everywhere. Published by

THE CENTURY CO. UNION SQUARE NEW YORK

"The story of each is embedded in a brilliant sketch of the history of his times, so that the book as a whole is virtually the story of the European struggle for civil and religious liberty from Sarpi's defeat of the papal interdict of Venice in the beginning of the seventeenth century to Bismarck's triumph for united Germany at the end of the nineteenth. . . .

"The author's attitude throughout is one of hostility toward tyranny and unreason, whether political or ecclesiastical, Catholic or Protestant. His guiding star is 'right reason.' . . .

"The volume is written with the clearness, historical grasp, and infectious enthusiasm for modern ideals that have made Andrew D. White's books and teaching so potent a force among thinkers for more than a generation."—*Chicago Record-Herald.*

THIRD EDITION NOW READY

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY, in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme"

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

First Edition, October 1st; Second Edition, November 21st; Third Edition, March 1st

Fully illustrated with portraits and other illustrations. With copious notes and bibliography. $5.00 *net. Postage* 26 *cents.*

The Nation

NEW YORK, THURSDAY, DECEMBER 28, 1911.

The Week

Senator La Follette's speaking tour in Ohio is preceded by a flat repudiation, on the part of his friends in that State, of the Chairman of the Republican State Committee, Mr. Brown. This seems queer, for Mr. Brown had announced himself as a progressive of the progressives. He ardently desires a Presidential primary, which is good La Follette doctrine. The difficulty arises, apparently, from the fact that Chairman Brown declares himself for Roosevelt, and gives it as his opinion that the Colonel would sweep the primaries in Ohio. It is for this that he is disowned and denounced by the La Follette partisans, who point out that Brown is playing into the hands of the reactionaries by dividing the opposition to Taft. If the Ohio Progressives are lured into splitting up their votes for delegates between the Wisconsin Senator and the New York Colonel, the result might easily be to give a plurality to those favoring Taft. Hence Chairman Brown's open reading out of the progressive fold.

On the subject of the efficiency of labor, and its relation to high wages, the Tariff Board's report on Schedule K presents some interesting data and conclusions. The highly significant statement is made that the careful determinations of productive efficiency made by the Board "show wide differences in efficiency and cost, but indicate in general that the lowest labor costs per pound were in mills paying the highest wages." But it should be clearly understood that this statement refers to comparisons within our own country, the mills there under consideration being all American. While there can be no doubt that a similar relation holds over a wide field of comparison between American and foreign production, and that the efficiency of American labor and machinery is a dominant cause of the high rate of American wages, yet it should be mentioned that in the woollen manufacture, for reasons set forth in detail, the Board does not find this to be the case. It appears that 87 per cent. of the machinery used is imported; and of the labor a considerable portion consists of "unskilled immigrants with no previous experience in manufacture," this population being often of a very fluctuating kind, so that the manufacturer is "obliged continually to break in a new set of inexperienced operatives." If, however, all this is so after fifty years of high protection for this infant industry, it does not look as though the American people ought to be compelled any longer to forego the privilege of buying woollen wearing apparel and blankets at reasonable prices.

Whenever the Senate makes a Wegg-like drop into art, there is apt to be trouble brewing for culture. Last week Senator Root introduced an innocent-looking bill authorizing the American Academy at Rome to enlarge its scope and to increase its holdings of property up to $3,000,000. He made a brief explanation of its purposes, and requested immediate consideration, but the eagle eye of Senator Bailey perceived the lurking danger to American ideals. The Texas Senator had, first of all, grave Constitutional doubts about any action taken by this Government "looking to the promotion of art or science outside of the United States." Even granting that these scruples could be overcome, Senator Bailey took the broad position that "until every hill in America is crowned with a public school," he could not conscientiously endorse the outlay of millions to "educate our countrymen in a foreign land."

Senator Bailey's simple eloquence was rudely broken off by another Senator from the South, Mr. Reed of Missouri, who desired to be and promptly was "shown." We quote the frigid account from the *Congressional Record:*

> Mr. Reed—Mr. President, I desire to get a little information from the Senator from New York. As I understand, this bill only authorizes a corporation to increase its holdings, and does not take any money from the Public Treasury?
>
> Mr. Root—The Senator is correct. The bill merely authorizes the corporation to hold more property given to it by others.
>
> Mr. Reed—And am I correct in further understanding that the institution is not run for profit, but purely for the promotion of education in the lines of art?
>
> Mr. Root—Precisely.
>
> Mr. Reed—That is all I desire to know.
>
> The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

The purpose of Senator Kenyon's bill forbidding interstate common carriers to transport liquor the shipment of which would be in violation of the laws of the State, Territory, or district into which it was shipped, is one that should command the approval of right-minded persons, whatever their views on the question of prohibition. Nobody denies the Constitutional right of a State to enact prohibitory laws on the subject of liquor; and it ought to be the desire of honest men, if they admit this, to let the States have a fair chance to carry out such policy as they may deliberately adopt. If, as many opponents of prohibition are convinced, the rigorous execution of the law, without such mitigation of it as comes from the facilities which interstate commerce affords for its nullification, would demonstrate the intolerableness of the State's policy, this would be sure to lead to repeal; if, on the other hand, the people found the result satisfactory, they are entitled to have their way.

In the annual report of the Interstate Commerce Commission, the action of the new Commerce Court in enjoining the Commission's so-called "inter-mountain rate order" is sharply criticised. The Commission, it will be recalled, had given a hearing to complaints against the practice whereby transcontinental railways would charge, for shipments from Eastern points to inland markets along the Pacific Coast, the full rate to the Western ocean plus the return rate from the Pacific to the interior destination. It had decided last July that the Commission's supervisory powers under the "long and short haul clause" ought to be applied, and had therefore ordered revocation of the discriminatory rates. The order stipulated that no higher charge should be exacted for shipment to any intermediate point than for shipment to the coast, and made some more or less arbitrary rulings as to maximum differences. The railways argued that the rates to intermediate points were remunerative but that rates to the coast were not; the latter having been forced

Digitized by Google

down by water competition. On these grounds, and on a further Constitutional argument, the Commerce Court on November 9 enjoined temporarily the Commission's order, which was to go in force November 15, and on November 11 it made the injunction permanent.

Appeal was forthwith taken to the United States Supreme Court, in whose hands the matter now rests. The Interstate Commerce Commission's annual report speaks resentfully of the Commerce Court's action. It repeats the arguments for its own decision; of which the main point was that since the Commission may by law fix maximum but not minimum rates, there was no other way of guarding shippers from gross discrimination. We have held all along that there is great force in this contention, but we cannot follow the Commission's report in its further declaration, that since "the fixing of reasonable rates is a legislative function," delegated by Congress to the Commission, it is "not subject to review by the courts." Counsel for the railways, in their appeal to the Commerce Court, had not merely asserted that the Railway Law of 1910 was itself unconstitutional, but had alleged that the order, in its specific provisions, was confiscatory and equivalent to taking property without due process of law. It is quite possible that neither contention will hold when reviewed by the Supreme Court; but the Interstate Commerce Commission's argument against the jurisdiction of the court in such matters seems to us ill-founded.

In a brief circular letter, the American Association for Labor Legislation puts with unanswerable force the case of the pending bill to prohibit the use of poisonous phosphorus in the manufacture of matches. Two circumstances make the inaction of Congress in this matter nothing less than disgraceful. The first is that the fearful, and absolutely preventable, disease of "phossy jaw" is, as the Association says, "now an American disease," other civilized countries having prohibited the use of white phosphorous "while we have been talking." The second is that—as was widely noted at the time—the Diamond Match Company, commonly spoken of as the Match Trust, generously and promptly acceded, long ago, to President Taft's request that it should cancel its patent, so that other manufacturers might have the opportunity to use the harmless form of phosphorus of which it had exclusive control.

Gov. Hooper of Tennessee appears to be going about the business of improving prison conditions in a spirit of intelligence and firmness, as well as of humanity. So far as we have observed, he gives no countenance whatever to sentimental notions undermining responsibility on the part of the convicts, or confusing the mind of the public in regard to the foundations of the system of criminal justice. His endeavor to introduce methods which would offer an incentive to good conduct and genuine endeavor on the part of convicts is in sharp contrast with the preposterous distribution of pardons that marked the career of his predecessor in the Governorship. Some form of the indeterminate sentence and of the parole system, and the devotion of part of the value of the prisoners' work to the support of their families, are among the improvements the Governor seeks to obtain by new laws; but he finds that there is plenty of room for improvement in practice, under the law as it stands.

An adaptation of the Wisconsin Legislative Bureau has been planned for Chicago. At its head is to be an expert statistician, whose duty will be to establish a library of books relating to municipal affairs, to arrange for supplying the Mayor, the Aldermen, the department heads, and even inquiring non-residents, with information on city problems, and to promote the prestige of the city in all proper ways. This last purpose savors more of local patriotism than of efficiency, but need not interfere with the primary objects of the project. The plan has apparently aroused no opposition, but its adoption has been seriously delayed by the attempt of the spoils-loving section of the City Council to make the new organization a "department," instead of a "bureau," department heads being appointed by the Mayor, while bureau heads are under the civil service law. Moreover, department heads, being "officers," must live in Chicago, and consequently no expert could be brought in from outside to give the innovation the benefit of his experience. It can hardly be more than a question of time before the Bureau of Publicity and Information is added to Chicago's system of government. But no one will hope for much effect from its activities upon the relics of the boodle Councilmen of a decade or so ago.

Just what the heavy figures of outgoing steerage passengers, and the light figures of incoming ones, for the year now closing, signify, may be difficult to judge; but the publication of the figures may well serve to draw attention to the fact that the tide of immigration, with which we are sometimes represented as being submerged in these latter years, has been by no means as formidable for a number of years back as most people imagine. During the year 1911, the net immigration—excess of arrivals over departures—will be less than 300,000; and the average for the four preceding years, 1907-10, was about 525,000. This is very different from the million that is usually spoken of; and, while the showing for these years is undoubtedly in large measure to be ascribed to the check which American enterprise received through the panic of 1907, it should, on the other hand, be remembered that at the height of the boom before that panic—namely, in the calendar year 1906—the net immigration did not exceed a million, the exact figure given by the returns being 996,084. Half a million—the average for the past five years—it should be remembered, too, is only half of one per cent. of the present population of the country.

CHICAGO, December 20.—The ten packers charged with violating the Sherman law sprung a surprise on the prosecution this afternoon. Motion to strike out counts 2 and 3 of the indictment, charging the packers with criminal violation of the law, and to set aside certain other allegations, as not coming within the three years covered by the indictment, forced a sudden postponement of the trial.

These particular motions were promptly disposed of last week, but the mere offering of them, after the unconscionable delay that had already taken place, is a pointed illustration of an intolerable evil. This everlasting lawyers' game of springing surprises, and discovering pitfalls, and making mountains out of molehills, causes the business of enforcing ordinary common-sense law to be carried on under such handicaps as almost to paralyze the nation in any endeavor to institute far-reaching reforms. "I have talked of the necessity of im-

Digitized by Google

proving the criminal procedure before every bar association that gave me a chance," said President Taft the other night, in his speech at the Young Men's Republican Club; and, to his honor be it said, he has more than once used words as strong as the English language affords to express his conviction of the enormity of existing conditions and practices.

By the highly dramatic manner in which he acknowledges defeat, Gen. Reyes has more than undone the harm he brought upon his country. For the surrender of Reyes means not only the collapse of the movement with which he was personally identified, but the collapse of the various sectional insurrections that have been sputtering on in the hope of a decisive turn of fortune against Madero. Reyes was the only man upon whom an insurrection could centre that did not on the face of it bear the most sinister motives; now that he is gone, there is no one for Madero to deal with but petty local chieftains obviously out for plunder. It is to be regretted that the assurance of peace in Mexico should come only after the total discrediting of one who for many years was regarded as the rising hope of the republic. Certainly, the conduct of Reyes has latterly been quite away from the rôle of a popular saviour. Towards Diaz, when the latter was still in power, Reyes showed only timidity. When the revolution broke out, he refused to take sides, and gave himself to the enjoyment of a leisurely vacation in Europe, while the fate of the country was under decision. When Madero had won, Reyes came back to make trouble. The half-hearted way he went at the business suggests the possibility that in this matter he has been the tool of secret enemies of Madero, and not a very willing tool at that.

If the Irish get Home Rule, what will they do with it? This old and taunting question is answered by Mr. Redmond in the first number of "Home Rule Notes," to be issued periodically by the Home Rule Council. One of the first things to which an Irish Parliament would give attention, declares Mr. Redmond, is the reform of the Poor Law. In it certain changes were strongly urged in a report by a commission appointed by the Viceroy, six years ago, but the Parliament at Westminster was too busy to take the matter up, and it was dropped. This by itself was an argument for putting the Irish in charge of Irish affairs. Then there is the whole question of Irish railways and waterways and drainage which is pressing for consideration, while agricultural problems of capital importance are waiting for Irish legislators and administrators to solve. It is an ambitious programme of economic and social reform which Mr. Redmond sketches—certainly extensive and difficult enough to keep an Irish Parliament busy for a long time to come. There will doubtless be squabbles in the new governing body—Ireland would not be Ireland if there were not—but there seems to be, with the prospect of Home Rule, a settling down of the people to its serious tasks.

The debates in the French Chamber confirm the impression resulting from official declarations in the Reichstag and the House of Commons, to the effect that Germany's attitude in her negotiations with the French Government was by no means so provocative as it was generally supposed to be at the height of the crisis. There was some hard bargaining over the Congo, but that is legitimate enough; actually it seems to be established that Germany's demands in the beginning were not much above what she finally obtained. This only brings out once more the unfortunate manner of German diplomacy. The dispatch of a warship to Agadir was apparently done for the purpose of protecting German interests in south Morocco. But the world at large, and the German people as much as any one else, regarded the act as a challenge. The imperialistic spirit in Germany was immediately inflamed, and the Government found itself forced into an attitude of menace it had never planned. So, too, in Great Britain, public opinion forced Sir Edward Grey's hand and led to the famous speech of Lloyd George, for which, as it now appears, the direct occasion did not absolutely exist. And thus is once more exemplified the danger of playing with fire and how the diplomats' "game" may assume very bitter reality.

The submission of Persia to Russia's demand for the dismissal of W. Morgan Shuster from his post as Treasurer-General closes an episode, but not an epoch. For the time being, Persia is beaten to her knees; but the young American's bold stand against the two "protecting" Powers who have now protected Persian independence out of existence has served its purpose in a three-fold way. It has forced both the Russian and British Governments out of the jungle of diplomacy into an open avowal of their unhallowed motives. It has roused the better conscience of the nations, not excluding Britain herself, where a powerful minority has raised its voice in protest against the co-partnership of robbery with Russia. Finally, it has brought forth the latent resources of the Persian people, whose attitude, as voiced in the Parliament at Teheran, has been altogether admirable, even to the point of venturing the trial of battle with Russia's armed millions. For the time being the people of Persia must yield to *force majeure;* but the stirring of the subject races the world over is warrant for the belief that Mr. Shuster's fight for the preservation of the rights of an ancient people will have its results in the future.

Another Russian statesman utters the refrain, "We cannot change our internal legislation to please the United States." But Russia has not been asked to change her laws of domicile or any other regulation affecting the status of various races within the Empire. The claim has not been put forward that Jewish-American citizens shall be allowed to enter Russia for the purpose of taking up residence there. The claim has simply been made that any legitimate purpose which sends a man travelling abroad under the protection of an American passport shall receive recognition at the hands of the Russian Government. At the present moment Russia admits foreign Jews who come in the capacity of commercial travellers, and it is not on record that Jewish anarchists, revolutionists, and other enemies of society have taken advantage of this loophole to force their way into Russia; or, if they have, why does the privilege remain? If a Russian-born Jew has emigrated to this country and prospered, and is moved by sentiment to revisit the country of his birth, to revive old scenes and old friendships, how does the question of his admission into Russia become a domestic problem and a menace?

TAFT'S KIND OF "PROGRESSIVENESS."

The message which President Taft sent to Congress on Thursday of last week covers many routine governmental matters, but contains a few striking proposals of new legislation. Mr. Taft comes out strongly, for instance, in favor of the establishment of a parcels post, and urges Congress to make immediately at least a beginning of the system. The President also recommends the enacting of a bill defining anew and more humanely the liability of employers for accidents to their workmen, together with the passage of pending measures to do away with some of the mischiefs of delayed justice in the courts. His most advanced and significant position, however, is taken in connection with the civil service. Mr. Taft goes further than any of his predecessors in urging that all local Federal offices throughout the country—collectors of internal revenue and of customs, commissioners, and marshals, together with postmasters of all four classes—should be by law placed in the classified service, and that the whole mass of patronage involved should be destroyed.

This proposal is so quietly made by President Taft that its radical and far-reaching nature may easily be overlooked. In reality, it lays the axe to the root of a hoary abuse. Mr. Taft frankly points out the exact nature of the existing method under which the President is supposed to appoint these Federal officials. They are, in fact, dictated to him by Senators and Representatives. The motives for their appointment are political; they are simply rewarded for past party services; and their main allegiance is not to the public service but to their patrons. All this is set forth by the President explicitly, who also speaks with emphasis of the immense and needless "burden" placed upon the Executive by this distribution of patronage. His time, with the time of Congressmen, is eaten into by the incessant demand for appointments to office, with all the wearisome canvassing of "credentials" and weighing of "influence." What the President calls for is the casting out of the whole system, bag and baggage, so that there may be, on the one hand, an assured career in the public service for those who enter it by examination and are promoted for merit, and on the other more freedom and opportunity for the high officers of the Government to spend their strength on really important tasks. If the recommendations which President Taft now makes were to be carried out, we should have an extension of civil-service reform going beyond the fondest dreams of the earliest advocates of that cause in this country.

To the need of a fresh advance in improving conditions in the Federal service attention was sharply called at the recent meeting of the National Civil Service Reform League in Philadelphia. In the address by President Eliot statistics were given to show how large a number of Federal offices are still in the unprotected class. The rosters of employees swell year by year, and constant vigilance is necessary to prevent the spoilsmen from getting the upper hand. Then there is the evil of having officeholders engaged in politics. Representative Norris of Nebraska has just dwelt upon this in a public speech. He showed that in one Southern State, out of a Republican State Committee of forty-six members, forty-four were Federal officials. On this point President Taft makes a remark in his message, to the effect that rules to prevent it are treated as "hardly worthy of respect" so long as the officeholders know that their tenure depends upon continued political service in behalf of the Congressmen or others who originally appointed them. This cannot be called a vigorous utterance. The President could undoubtedly issue orders to Federal officials to abstain from partisan activities under penalty of removal, and could enforce them. Such was the course followed by Hayes and Cleveland, and Roosevelt made a show of following it. Mr. Taft has not, but it is clear that he is ready to go on to a more thorough remedy for the evil. He would have the entire service reformed in such a way as to take away from appointees the motive to do work for their political chiefs. We repeat that the President's plan is the most sweeping ever urged by an American Executive. There has been in Congress much grumbling about Mr. Taft's use of patronage. But now he throws down the square challenge: Join me in doing away entirely with the great bulk of the patronage.

For the response the country will watch with much interest. Meanwhile, we may see in the President's proposals the sort of progress which appeals to him. He sets his heart on legislation. To get definite bills enacted is with him the main thing. Ways and means and machinery he cares less about. And it must be confessed that he drives at his practical results with a great deal of directness and force. If he were to succeed in getting his legislative programme carried out, it would do a good deal to break the charge that he is not "progressive." All the reforms which the progressives advocate—direct primaries, the initiative and referendum, even the recall—are designed to improve our political machinery so that we may have better laws and better administration. But the means must not be exalted above the ends. For some of those ends—particularly the rescue of the public service from the politicians—President Taft has now shown that he will go as far and work as hard as the next man. That is his idea of "progress," and nothing can be said against it—if only the progress be actually achieved.

EDUCATION FOR THE MASSES.

The daily press gives frequent evidence of the fact that there are still many who cast wistful glances at the good old days when the acquisition of the three R's was the supreme object to which the schools for the children of the masses were supposed to be devoted. That those necessary rudiments of education are less successfully imparted to the average child nowadays than they were in the olden time we do not believe there is any good reason to think; on the contrary, there is a great deal of evidence that the opposite is the case. However this may be, every one who stops to think must recognize that any limitation of the present activities of the schools to this narrow scope, or to anything like it, is out of the question. Against such proposals, two powerful factors operate irresistibly; in the first place, the manifest needs of the present era, and secondly the obvious fact that education in the common schools extends, in the case of a preponderant portion of the population, over a far greater number of years than was the case half a century ago.

And it is not only in the ordinary school curriculum itself that a broadened conception of the function of the

Digitized by Google

public school, and of the relation of the State or municipality to the diffusion of knowledge and education throughout the community, is manifested. In New York city there has been maintained now for twenty-two years, as part of the public school system, an institution which has quietly done an inestimable amount of good in this direction by opening to adults an opportunity for instruction, and for improving entertainment, in almost every field of human interest. We refer to the public lectures given under the auspices of the Department of Education, in every section of the city, and chiefly in the public-school buildings. A glance at the report of the supervisor, Dr. Henry M. Leipziger, cannot fail to impress any thoughtful person with a sense of the enormous benefit which, at relatively very small expense, is thus obtained for the masses of the people. During the year 1910-11, 5,411 audiences were addressed by 716 lecturers, the average size of the audience being 176. Not the least of the merits of the system is the participation of local committees in determining the choice of the subjects to be treated at the several lecture centres; and one of the incidental benefits attained is the quickening of the interest of parents in the schools, through being brought into contact with them by attendance on the lectures. It ought to be highly gratifying to New Yorkers to know that the initiative of their city has found imitation throughout the country. The movement reached the Pacific Coast last winter, when public lectures based exactly on the New York system were successfully instituted in San Francisco.

But one does not need to go beyond the effect on the auditors themselves to feel that this extension of public education is amply justified. When thousands of hardworking men and women gather, after the day's toil, to listen not only to lectures on travel, or "current topics," or so intensely practical a subject as first aid to the injured, but to long courses of consecutive lectures on the development of fiction and on the nature of poetry, there needs no argument to show that the seed is falling on good soil. Of the two last-mentioned series, Dr. Leipziger says that they have proved among the most successful of all, and that he has received from unknown auditors letters giving ample proof that many lives have been enriched through listening to these courses. But the range of subjects is comprehensive; competent lecturers deal with leading questions in economics and government, with the great themes of physical science, pure and applied, with history and geography, with music and painting and architecture. It is precisely by the spreading of such opportunities for cultivating interests other than those of the daily grind for subsistence, that it must be made possible for the toiling masses to escape from the sordidness under which the pressure of life constantly tends to submerge them.

When this project was first instituted, it doubtless seemed to many a strange innovation, and one to be looked upon with a certain misgiving. But in reality it is entirely consonant with the general trend of the development of public education. It is to be noted that at the other end of the scale of population—in the hamlets and country districts—a movement has been gaining a foothold which shows that "the little red schoolhouse" is no longer regarded, in the more progressive rural communities, as fulfilling the needs of the people; by a combination of economic forethought and educational aspiration, the idea has been worked out, and acted upon, that free transportation of the children to larger centres will give more and better education for a given expenditure of money than could be got in the old way. And throughout the country, in big cities and in small towns, the free library has come to be regarded as an indispensable part of the intellectual facilities of the people. Our complex civilization has many drawbacks as well as immeasurable advantages; and we shall not do our duty by the masses of the people if we do not see to it that, so far as possible, they are placed in a position to profit by the general diffusion of opportunities for self-development. Modern conditions make these far more necessary than they were in simpler days, and at the same time the providing of them is made easily practicable by modern concentration and modern resources.

OUR FUTURE EXPERTS.

There has evidently come a reaction in this country against the mere expert—that idol of yesterday. In the future he must be something of an all-round man. Already there is discontent with the football player who can only kick, with the statesman who has no hobbies, with the scholar who knows only his Gothic, and with the preacher who can merely preach. Not only must a pastor expound Holy Writ, he must tell his flock what to think of every flying straw, and sometimes how to vote. No one person has wrought this change of feeling. For instance, the rage for specialization was never so great as when a certain other type of man was talking French to Pastor Wagner, writing reviews of Celtic sagas, establishing endurance tests for army officers, helping out reporters, and holding high office. It is to be noted, however, that foreigners like to reckon a finger in every pie as typically American.

At the present moment at least the danger which seemed to have fastened its roots in us appears to have been only a mushroom. For there has always been a great difference between foreign and American specialization. A family of watchmakers unto the fourth and fifth generation or a restaurant keeper who all his life has raised his own ducks, does not strike our people as particularly admirable. The American expert, to win applause, had to appeal to a larger imagination, had to be potentially a man of the hour. An electrical engineer because he might bring rescue to a sinking ship, an out-and-out business man because he might some day dine with an emperor or receive the freedom of a city, an agriculturist who could perform the miracle of a blossoming desert, or a prospector who might live on apples of gold in pictures of silver—these were our heroes. It is hard to recall a single programme of preparation which did not hold out the chance of a broad notoriety. To say that this was inherent in the mere hugeness of our industries, is only to show the real difference between American and European specialties and motives. It comes out more clearly still when we reflect upon our manner of rewarding experts. A criminal lawyer who succeeded in a spectacular trial at once received offers to try cases of all sorts; a man who had cornered the wheat market was asked for his opinions on the future welfare of the country; the experimenter with guinea-pigs was expected to hold the secret of the census for the year 2000. Narrow grubbing there has been, but only that one

Digitized by Google

might later be set upon the pinnacle of the temple and be told to adjudge our possessions.

American versatility was all along too much a part of our traditions to be seriously threatened by specialization. The picture of the well-to-do householder being able at a pinch to mend a dripping faucet or build his wife a cupboard, as well as the foreign assertion that the American millionaire could carry parcels as naturally as a messenger boy, has always tickled our fancy. Whither, then, are we tending to-day? The signs of the times require as delicate scrutiny as a patient's thermometer, and are not so trustworthy. Yet it begins to look as though our big prizes would be bought more dearly in the future. In many spheres of activity we have indeed reached a point where some breadth and depth of nature are necessary parts of the competition. In business it is markedly so. The thought that one could easily turn to a new enterprise if the first one failed is replaced by the belief that efficiency will bring to the front many abandoned enterprises; and efficiency is taken to mean not only smoothness in mechanical processes and systems, but a wide range of human faculties playing upon a product of whatever sort. For the man who would be successful there are whole sermons in rolling-pins and axle grease. Or take the professors. It used to be that a dull stripling might be the recognized authority—for lack of any rivalry—on the phonology of low Latin. But to-day, for aught we know, there are congresses of low Latinists, and it is seen that if low Latin is to be raised to its proper level, it must be learned from eloquent lips. And in many other ways emphasis is settling upon the personality of the teacher and his method of imparting, rather than upon the mere substance of his knowledge. This latest tendency, in so far as it serves to keep cheapness from expertness and to require that the latter be the product of sound reflection quite as well as of digging, is, of course, wholly admirable. It was always a bit trying to worship any "greatest living authority" whose ideas on most matters were negligible.

And yet the present test of broadmindedness carries with it the usual dangers inherent in reactions. There is a time to laugh and a time to dance and there is a time to weep; and it may be that everybody should have done them all. But there is no command that they shall all be done at once, or that one shall be expert in each of them. Likewise there is a great difference between vital learning and versatility. By all means, for example, let us have professors whose broad preparation and rich life give an inspiring reach and background to their specialties. But just as emphatically let us not expect them to be dandies and social favorites. Nor is it necessary that a preacher, to be accounted human and broad, shall dispute the decisions of the Supreme Court. If sticking to what one thoroughly understands is, according to the newer attitude, dull pedantry, we trust that our leaders will have the courage to be dullards. We believe, however, that we are moving in the right direction and that our experts of the future will attain to something of that mellowness which in the older countries of Europe has long rendered men in the public eye interesting to all.

THE FALLIBLE INTERVIEWER.

Maurice Maeterlinck, according to the latest dispatches, has given up his contemplated visit to this country. Fear of the American reporter is still strong upon him. It seems odd that a man who has gazed steadfastly into the depths of Destiny, of Death, and of other unfathomable mysteries, should be afraid to meet the eye of so unpretending a person as the American newspaper man. But if M. Maeterlinck's state of mind is such that it is a question of entering this country uninterviewed or not entering it at all, he has acted wisely in deciding not to come. The idea that he could evade our interviewers by coming in disguise, or by way of San Francisco, Montreal, or Juarez, is preposterous. The distinguished author might dress up as a Dalmatian peasant and come by way of Ellis Island; he would only find that his bunk-mate all the way from Trieste was one of Mr. Hearst's young men. At the present moment M. Maeterlinck is probably under constant surveillance; and his fate may ultimately be like the unhappy victims of the third degree. Surrounded day and night by the disguised emissaries of the Associated Press, the Belgian poet will end by engaging the royal suite on the Lusitania and summoning the reporters to meet him at Quarantine. There he will cry, "I am here. Take me. Interview me. I can bear this no longer!"

But there is an alternative. Provided he can hold out for six months, M. Maeterlinck can attain his ambition and land among us unnoticed. In six months his challenge to the reporters will be forgotten. In six months the opera season will be over, the theatres will be closed, the "Blue Bird" will be stale news, and the minds of men will be taken up with the puzzling condition of "Matty's" pitching arm. Let the distinguished Belgian then board a vessel for New York, without disguise and without ostentation, and enter his name upon the ship's list as plain "M. Maeterlinck." He will pass the interviewers without arousing suspicion; or, if to some one among the reporters the name Maeterlinck may bear a familiar echo, a few discreet and kindly words will satisfy the man. If the distinguished Belgian has any doubts on the subject, let him think of Dr. Wilhelm Bode. Two years ago, Dr. Bode and his $50,000 wax bust by Leonardo da Vinci held the front pages of the newspapers for weeks. Had he landed in New York in 1909, he would have been interviewed to a shadow. But Dr. Bode came to the United States in 1911, and the first intimation of this visit to most of us was a cable from Berlin giving Dr. Bode's impressions of America. What happened to Dr. Bode is happening all the time to distinguished foreigners in this country. Men devoid of immediate news value are thereby rendered invisible to the all-seeing eye of the press.

In planning a mid-summer trip such as we have described, M. Maeterlinck might take the additional precaution of engaging passage on the same boat with a theatrical manager returning from Europe with a long list of new attractions for the approaching season; or with a party of young women from the Middle West who have been victors in a newspaper educational contest in which the first twelve prizes were a choice between a trip to Europe and a grand piano; or with a prosperous business man from the same Middle West who has been enjoying the hospitality of Europe's effete but exceedingly likable aristocrats and royalties. Against such competitors it would need a very obtrusive man of fame, indeed, to win much attention in the public prints. First place, of course, would go to the

Digitized by Google

young women from the Middle West, with a group photograph, individual impressions of the Vatican, the Louvre, the Tower of London, and the Rhine, and a general chorus of satisfaction at getting back to what is, after all, the finest country on earth. For second place there would probably be a close race between the theatrical manager with two hundred theatres, thirty stars, and unnumbered plays at his fingerends, and the business man from the West, with his highly interesting views on the present state of European politics and civilization.

We confess to a particular fondness for this sturdy self-made gentleman from the West whom a single trip across the Atlantic renders an authority on the profoundest questions of contemporary interest. We read:

Mr. W. B. Sands of Milwaukee, who arrived yesterday on the Ruritania, after a two months' stay abroad, in the course of which he was introduced to the Grand Duke Michael at a luncheon at Monte Carlo, declares that never was the condition of the Russian Empire as satisfactory as it is at present. The Russian peasants all love the Czar and the Czar is constantly working for the welfare of the peasants. Mr. Sands declared that there is no basis for the rumors of a secret treaty of alliance between Russia and Japan.

We read:

It is the firm opinion of Henderson W. Sloggs of Omaha, who arrived yesterday on the Cetacean, that Italy's measures in Tripoli are regarded with extreme dissatisfaction at Berlin and Vienna. At the same time, Mr. Sloggs insists that Italy was justified in acting as she did. Tripoli is a land of infinite promise and in the course of time can produce enough wheat to feed half the world. Mr. Sloggs's sojourn abroad was confined to Paris, London, and the Lakes of Killarney.

We read:

W. Dexter Jones, one of the lumber-kings of northern Michigan, when seen on board the Wilhelm, at Quarantine, said that during a two-days' stay in Berlin he became convinced that Ibsen had lost his hold on the German people. While at Berlin Mr. Jones took in three musical shows and the circus.

With so much news in the air, M. Maeterlinck would stand a very good chance of escaping notice.

PELATIAH WEBSTER AND THE CONSTITUTION.

In an article in the *North American Review* for August, 1907; in a memorial presented to Congress in May, 1908, and printed by its order; in his recent book, "The Origin and Growth of the American Constitution," and in several newspaper communications, Mr. Hannis Taylor has announced the discovery that Pelatiah Webster, a pamphleteer of the Revolutionary period, was the true designer or architect of the Constitution of the United States, having previously proposed the convention which constructed it. The claim must be treated seriously because of the importance of the subject and because Congress has given it currency by publishing it.

In the *North American Review* article Mr. Taylor says:

He [Webster] it was who first proposed in a public way the calling of the convention in which the present Constitution was made.

Again:

It is beyond question that Pelatiah Webster, in his financial essay of 1781, made the first public call for a convention to create an adequate system of Federal government.

In the memorial he adds:

Having thus taken the first step, he set himself to work to formulate in advance such an adequate system as the convention should adopt, whenever it might meet.

The "adequate system" was formulated in a pamphlet issued in 1783, which derives much of its force, according to Mr. Taylor, from the pamphlet of 1781 which paved the way for it.

I.

Mr. Taylor's authority for stating that Webster proposed a Continental convention in 1781 is the following paragraph by James Madison in his sketch of the origin of the Convention, first printed in 1840 as an introduction to the "Madison Papers," edited by Henry D. Gilpin:

In a pamphlet published in May, 81, at the seat of Congs. Pelatiah Webster, an able tho not conspicuous Citizen, after discussing the fiscal system of the U. States, and suggesting among other remedial provisions including [a] national Bank, remarks that "the Authority of Congs. at present is very inadequate to the performance of their duties; and this indicates the necessity of their calling a *Continental Convention* for the express purpose of ascertaining, defining, enlarging, and limiting, the duties & powers of their Constitution."

Madison further states, in the same sketch, that on April 1, 1783, in Congress, Alexander Hamilton said he wished to see a general convention called and would make a motion for that purpose in view of the recommendation of the New York Legislature; and Madison cites as his authority the "Life of Schuyler in Longacre" (Madison's Writings, Hunt, Ed. II, 401, 402). The citation is incorrect, however, the action of the New York Legislature being given in the sketch of *Hamilton* in Longacre ("National Portrait Gallery," Vol. II).

So is his statement of the authorship of the pamphlet of 1781 incorrect, for it was written by William Barton, and not by Pelatiah Webster. The title is, "Observations on the Nature and Use of Paper Credit," and it was "printed and sold by Thomas Aitken, at Pope's Head, three doors above the Coffee House." All libraries which have it attribute it to Barton, and it appears under his name in Hildebrun's "Issues of the Philadelphia Press, 1685-1784." Our interest, however, is not in knowing who wrote it, but who did not write it, and the proof that Pelatiah Webster was not the author is overwhelming. It is written in a flowing, scholarly style, and every principle advanced is supported by quotations from contemporaneous economic authorities, whereas Webster never quotes, and his simple, homely diction shows in every line the practical and shrewd mind of a man who studies his subject untrammelled by books. Webster reprinted most of his papers in 1791 and did not include this one among them. His essays are on kindred subjects, they follow one another in orderly array, and they refer to one another. That he should have written this essay and not spoken of it in some other essay is highly improbable. Moreover, he did not agree with the main proposition advanced in the pamphlet. It urged the establishment of a national bank, the funds to be raised by a lottery, to be immediately governed by fifty men chosen by Congress and to be controlled by a committee composed of one member named by each State. One searches in vain for an allusion to such a scheme in Webster's essays. In only one does he discuss banks—that of February 10, 1786, on "Credit; in which the Doctrine of Banks is Considered." Here he says a State or national bank "would tend immediately and directly to tyranny in the Government, because it would give the minister or ruler the command of a vast sum of money," and suggests that a State and private bank might be combined. His ideas do not remotely resemble those set forth in the pamphlet of 1781. It can be asserted with positiveness that no unbiassed mind can read Webster's pamphlets and this pamphlet without being certain that Webster did not write it. Madison's sketch in which the error of attributing the pamphlet to Webster occurred was written by him in extreme old age, and was not one of the papers which he prepared for posthumous publication. It is an exceedingly rough draft, was never revised, and was endorsed by him, "a sketch never finished nor applied" (Writings, II, 391). He remembered only in a general way the subjects on which Webster had written, more than fifty years had passed, and, finding the pamphlet on "Paper Credit" in his collection, he erroneously attributed it to Webster.

It is not so easy to understand how Mr. Taylor followed this error and used it as part of the foundation on which

Digitized by Google

he builds his panegyric of Webster. In his article in the *North American Review* and in his memorial he quotes, from George Bancroft's "History of the Constitution," the remarks on Webster's pamphlet of 1783 which occur on page 86 of Volume I; but he ignores Bancroft's remarks on the pamphlet of 1781 made on page 23 of the same volume, where Bancroft says:

> In a pamphlet dated the twenty-fourth [of May, 1781] and dedicated to the congress of the United States of America and to the Assembly of Pennsylvania William Barton insisted [and so forth, as in Madison's quotation].

In a footnote on the same page Bancroft adds:

> Not by Pelatiah Webster, as stated by Madison. . . . First: at a later period, Webster collected his pamphlets in a volume, and this one is not among them, a disclaimer which, under the circumstances, is conclusive. Secondly: the style of this pamphlet of 1781 is totally unlike the style of those collected by Pelatiah Webster. My friend F. D. Stone of Philadelphia was good enough to communicate to me the bill for printing the pamphlet; it was made out against William Barton and paid by him. Further: Barton from time to time wrote pamphlets, of which on a careful comparison, the style, language, and forms of expression are found to correspond to this pamphlet published in 1781. Without doubt it was written by William Barton.

Mr. Taylor does not completely ignore this statement in his book, however. Here he welds the pamphlets of 1781 and 1783 together more strongly than ever, so that when one falls, the other must have a precarious standing, and in a note (p. 27), dismisses Bancroft thus:

> No attention should be paid to Bancroft's vain attempt to discredit Madison's statement. "History of the Constitution," I, 24, Note 3. Apart from Madison's great accuracy and Bancroft's well-known inaccuracy stands the fact that the call of 1781 was a natural part of Pelatiah Webster's initiative as now understood. Madison was on the ground and knew the facts; Bancroft's inference is based on flimsy hearsay nearly a century after the event. Bancroft never grasped the importance of Webster's work.

The logic of this remark is that the pamphlet of 1781 must have been written by Webster, in order to sustain the theory of long premeditation for the pamphlet of 1783. Mr. Taylor will find it hard, however, to make any one agree with him in thinking that a circumstantial averment like Bancroft's can properly be dismissed as an inference based on hearsay.

II.

After the primacy claimed for him in calling for a Convention, it is in order to examine the weakened claim that Webster designed the plan which the Convention adopted, but space limitations make it necessary to deal with only two or three points; they are, however, the strongest that can be brought forward for the claim. The pamphlet, in which the plan was given to the world is entitled "A Dissertation on the Political Union and Constitution of the Thirteen United States of North America." It was first published in 1783 and reprinted in Webster's collected pamphlets in 1791. It contains only two features which also appear in the Constitution—the power of Federal taxation and the bicameral Legislature—and there were no two principles of government better understood in the States at the time Webster wrote than these. The one had been discussed in and out of Congress for years; the other was an accepted policy in the States from the time of the Declaration of Independence. Lack of Federal power to tax without State intermediation was universally recognized as the great cause of the inefficiency of the Confederation. As Madison said:

> But the radical infirmity of the "Arts. of Confederation" was the dependence of Congs. on the voluntary and simultaneous compliance with its Requisitions, by so many independent Communities, each consulting more or less its particular interests & convenience and distrusting the compliance of the others. (Writings II, 395.)

On February 3, 1781, Congress asked the States to vest power in it, to levy a duty of five per cent. on imports. On the same day the resolution was printed as a broadside and passed on to the street.

The taxing power was much debated in the convention of 1787, and, finally, emerged with restrictions. There were half a dozen members of the convention who had been members of the Congress of 1781, and nearly all the members had been in other Congresses, where the subject of Federal taxation had been discussed before and after Webster wrote.

A bicameral Legislature was proposed in the Virginia plan, presented to the Convention as soon as it had a quorum, and two days later agreed to without dissent, except from Pennsylvania, which was the only State that did not have a Legislature of two chambers. Edmund Randolph explained to the Convention on May 31 that the object was to guard against "the turbulence and follies of democracy." On June 7, John Dickinson said he wished the Senate to bear as strong a likeness as possible to the British House of Lords. We need look no further for the Convention's reasons in agreeing at once to a Legislature of two chambers.

IV.

Webster deliberately omitted from his plan recommendation of a Federal judiciary, and so far as we can judge from his writings had no conception of such a one as the Constitution provided for. Here it is my duty to call attention to a carelessness of quotation and statement on Mr. Taylor's part of so grave a character that it has given an entirely incorrect idea of Webster's meaning. In his *North American Review* article, he gives what purports to be a connected quotation of a passage from Webster's pamphlet, but a sentence has been interjected in it from a different part of the pamphlet, a vital word has been changed in the most important sentence and from this sentence a qualifying clause has been omitted. The *Review* article does not, of course, print Webster's pamphlet, which the reader would have to consult to detect these errors and the pamphlet was not then readily accessible. Following is the passage as quoted in the *Review*, italics indicating the misleading portions:

> These ministers [of state] will of course have the best information, and most perfect knowledge, of the state of the Nation as far as it relates to their several departments, and will of course be able to give the best information to Congress, in what manner any bill proposed will affect the public interest in their several departments, which will nearly comprehend the whole. The Financier manages the whole subject of revenues and expenditures—the Secretary of State takes knowledge of the general policy and internal government—the Minister of War presides in the whole business of war and defence—and the Minister of Foreign Affairs regards the whole state of the nation, as it stands related to, or connected with, all foreign powers. *To these I should add judges of law and chancery. I would further propose that the aforesaid great ministers of state shall compose a Council of State, to whose number Congress may add three others, viz., one from New England, one from the Middle States and one from the Southern States, one of which is to be appointed President by Congress.* (Vol. 185, p. 820.)

There is nothing here to indicate what is the fact, that after the sentence describing the duties of the Ministers, a whole paragraph about the Secretary of State has been omitted; but that is not important. The sentence about judges of law and chancery has been changed by substituting the word *should* for *would* and by leaving off half of the original sentence, and the sentence which follows had nothing to do with this part of the argument, but has been inserted from a different part of the pamphlet.

What Webster really said, after speaking of the Ministers, was (italics marking the variation from the passage given by Mr. Taylor):

> To these [*i. e.*, the Ministers of State] I *would* add Judges of law and chancery; *but I fear they will not be very soon appointed—the one supposes the existence of law, and the other of equity—and when we shall be altogether convinced of the absolute necessity of the real and effectual existence of both these we shall probably appoint proper heads to preside in those departments—I would therefore propose,*
>
> 3. *That when any bill shall pass the second reading in the house in which it*

Digitized by Google

originates, and before it shall be finally enacted, copies of it shall be sent to each of the said ministers of state, in being at the time, who shall give said house in writing the fullest information in their power, &c. (Edition of 1791, p. 214.)

Seven pages further on in the pamphlet, as the sixth of his main propositions, occurs the sentence about the Ministers of State, "I would further propose that the aforesaid great Ministers," etc. The plain truth is that Mr. Taylor has made Webster propose a Federal judiciary when he did not do so.

V.

In his memorial which precedes the reprint of the pamphlet, and in his book, Mr. Taylor treats this part of Webster's plan somewhat differently, but hardly less recklessly. There he connects Webster's statement that "the supreme authority" should be vested with power to decide controversies between States with the "judges of law and chancery," and finds the entire judicial system distinctly outlined (p. 18 of the memorial); but Webster's "supreme authority" was nothing but Congress, and he meant to continue in it the authority which it already had with reference to controversies between States. He gave it similar authority when he provided that any one who should disobey the "supreme authority" should be "summoned and compelled to appear before Congress."

VI.

Not only did Webster have no discernible part in framing the Constitution, but he did not understand it after it was framed. His own plan had kept all power in Congress, as it was under the old government, and he did not grasp the fact that coördinate and coequal branches had been erected beside Congress. He seems to have thought that the President was a third house. In his essay, published October 12, 1787, in reply to the address against the Constitution issued by sixteen members of the Assembly of Pennsylvania, he says:

2. Their next objection is against a *legislature consisting of three branches.* This is so far from an objection that I consider it an advantage. The most weighty and important affairs of the Union must be transacted in Congress; the most essential counsels must be there decided, *which must all go thro' three several discussions in three different chambers.* . . . At any rate I think it very plain that our chance of a right decision in a *Congress of three branches* is much greater than in one of a single chamber. (Edition of 1791, pp. 404, 405.)

An impartial reading of his essay "The Weakness of Brutus Exposed," published November 4, 1787, and on the "Seat of Federal Government," published September 21, 1789, shows that he had not yet shaken off the habit of thinking of the Federal Government as simply and solely Congress.

I disclaim any wish to detract from the merit of Pelatiah Webster, who was a sound thinker and a patriotic man. Undoubtedly, by his essays on financial subjects, he influenced his time in favor of a stronger central government. Probably his essay on the Federal Union had a general influence in the same direction, although few of the propositions he advanced found a place in the Constitution and none because he had made them, and his plan, as a whole, was completely ignored. GAILLARD HUNT.

Washington, D. C.

NEWS FOR BIBLIOPHILES.

In the final volume of the Memorial edition of Meredith, just published, is included a list of the errata observed by Mr. Esdaile and me in the three volumes of poems (Vols. XXIV to XXVI of this edition). This list, having been prepared in England, and being identical in the volume printed there by Constable and in the United States by Scribner, naturally does not include notice of the errata peculiar to the American volumes. For the patriot must acknowledge with chagrin that many printer's errors have crept in this side the Atlantic of which the British text is innocent. Leaving out of account matters of punctuation, and apart from obvious typographical accidents (such as may be found on pages 108, 146, and 191 of the third volume of poems), there appear in the American volumes at least a score of perversions in the forms of words, some of which might be serious stumbling blocks to the reader. The following are those which I have observed: In Vol I, line 7 of page 129, *Scarccably* for *Scarcely;* 15 of 171, *enemy's* for *enemies';* 11 of 186, *women* for *woman;* in Vol. II, line 1 of page 6, *hunting* for *haunting;* 15 of 115, *Reason's* for *Reason;* 4 of 154, *noonrise* for *moonrise;* 10 of 195, *then* for *than;* 4 of 197, *stuck* for *struck;* 12 of 270, *damned* for *dammed;* in Vol. III, line 13 of page 90, *Like* for *Liker;* 12 of 106, *illumine* for *illume;* 22 of 106, *has* for *had;* 20 of 120, *an* for *on;* 20 of 123, *mid* for *amid;* 17 of 146, *the* for *her;* 7 of 154, *of* for *the;* 23 of 181, *words* for *word;* 32 of 196, *labyrinth's* for *labyrinths;* 25 of 203, *earthly* for *earthy;* 12 of 205, *needs* for *deeds.*

In reference to the Memorial text of the poems as it appears in the volumes of Constable, as well as Scribner, the reader should heed this further warning of a set of errors more important perhaps than the verbal errors resulting from misprint. These mistakes concern the division of the irregular strophes, or groups of lines, in such poems as the "Empty Purse." In a large number of cases there is in the Memorial text no indication of this strophic division; no break is made in the continuity of the text on the page. To specify: there is no break indicated after any of the following lines, of which I give in each case the last word, each of which was intended by Meredith for the last of a group: In Vol. I, line 23 of page 4, *churchyard;* 1 of 8, *no;* 23 of 8, *infantwise;* 12 of 151, *fountain;* 19 of 256, *floor;* in Vol. II, line 8 of page 200, *Helios;* 21 of 252, *herb;* in Vol. III, line 16 of page 15, *wave;* 12 of 16, *sing;* 20 of 28, *brayed;* 19 of 37, *sped;* 31 of 38, *touched;* 21 of 39, *elect;* 2 of 43, *Fiend;* 15 of 46, *knell;* 19 of 50, *stream;* 9 of 53, *voice;* 30 of 53, *calf;* 21 of 54, *accursed;* 20 of 125, *foredoom;* 15 of 129, *instrument;* 7 of 130, *lie;* 21 of 135, *scourged;* 27 of 138, *sky;* 11 of 152, *dirt;* 9 of 160, *flanks;* 13 of 166, *assigned;* 12 of 180, *victory;* 15 of 190, *break;* 16 of 200, *sang;* 24 of 202, *swayed;* 6 of 206, *range;* 22 of 206, *youth;* 28 of 206, *goals;* 18 of 239, *believe;* 21 of 250, *day.*

The occasion for most of these errors is simple enough. In the majority of cases the line cited comes at the bottom of a page in the Constable Library edition (Vols. I-III of the poems in 1898, Vol. IV in 1910), upon which the text of the Memorial edition is based. And as there is nothing to indicate that the first line of the succeeding page does not belong to the same group, no break is indicated in the text of the Memorial edition. In a few cases of lines which do not come at the end of the page in the Library edition, no break is indicated in that text, because in the texts upon which it was based, the lines did come at the end of the page without indication of break. In two cases the Library edition is unfaithful to the earlier text for no apparent reason. A case by itself is the "Centenary of Garibaldi" (III, 243), in which there is no division indicated between the first and second quatrains. And, conversely, breaks in the text have been erroneously introduced after line 25 of III, 42 (first introduced in the Library edition), and after line 16 of III, 48.

Meantime the Memorial edition has followed the blind practice which chiefly gave rise to this confusion,—that of making no indication of the strophic division when the last line of a group falls at the end of a page. The reader has no indication of the strophic division at the bottom of pages 83, 105, 258, 259 of Vol. I; pages 68 and 205 of Vol. II; and pages 25, 28, 34, 35, 37, 39, 45, 47, 48, 50, 70, 96, 127, 128, 153, 156, 160, 161, 162, 179, 190, and 202 of Vol. III.

We should note, before leaving this subject, that we have now the key to the curious grouping of the stanzas of "Love in the Valley" as it appears in the popular two-volume pocket edition (Constable and Scribner). Here, save for the first and last, the stanzas are printed in groups of twos separated by lines of periods. This grouping, which has no relation to the sense, has been the source of great bewilderment to at least one reader; and it is a relief to find it merely the result of misunderstanding. In "Poems and Lyrics of the Joy of Earth," 1883, Macmillan follows each stanza of this poem with three asterisks, as the stanzas of the poem in its earlier form were separated by short horizontal lines in the 1851 "Poems." In the Constable Library edition, however, only those stanzas are followed with asterisks that do not fall at the bottom of the page. But as every other stanza, beginning with the second, does fall at the bottom, it evidently remained in doubt thenceforward whether it were separate from, or to be connected with, the stanza that follows; and in the pocket edition the wrong interpretation was made. Hence endless confusion, no doubt, to numerous readers of what is probably Meredith's best-loved poem.

The general reader will be contented to feel that he has, in the Memorial edition, a handsomely printed and comprehensive col-

Digitized by Google

lection of the poems (as well as the prose writings) of the great novelist. The more scholarly reader will note that he has yet to look for an edited and authoritative text at least of the poems.

THE ETHICS OF BUSINESS.

TO THE EDITOR OF THE NATION:

SIR: The continued prosecutions of the Trusts have drawn the attention of the community to the peculiarities of the problem without suggesting any explanation of its existence, beyond an hysterical insistence upon the personal depravity of the promoters of Trusts. We have, indeed, been told that the Trusts are manifestations of economic forces beyond the control of legislation, and we have been assured that remedies are, therefore, useless; since the true remedy must evolve from the action and interaction of the same forces which gave birth to the problem itself. But the problem is by no means entirely economic. The facts really difficult to explain are oftener psychological, and relate to the attitude of business men to one another and to the community. To the unprejudiced observer it is puzzling to see a sane, clear-headed man, who is in private life an admirable father, a sincere Christian, and a "pillar of the church," break completely in business the bounds of fair dealing, and rob and ruin his fellow men, not against the law, but through its forms. He would believe himself a thief if he took a silver spoon from his neighbor's dinner table; but he will steal his neighbor's whole fortune in Wall Street through some stock deal, and, *mirabile dictu*, be proud of it. This consciousness of rectitude, this attitude of injured innocence, which the business man assumes when his dealings are questioned, is the hardest thing of all to explain.

Yet in searching for our remedies for "big business" we have been too prone to credit the Rockefellers and Morgans with intentional wrong-doing, and too forgetful of the fact that their defence rests upon the traditional notions of the race about trade. Our remedies have been futile because ill-directed. In fact, the business ethics which supports the Wall Street gamblers and stock-waterers, finds its origin in the primitive conception of trade. The commonest defence is this: what you say is all right in every-day life, but in business it's different. We are dealing, in other words, with the existence of a double standard, one at home and one at the office. Moreover, that double standard is one of the oldest things the legal world knows about, for the earliest notion of a merchant is that he is not like other men, and that his actions are therefore governed by a special law. The Law Merchant was for centuries in England and other countries a special law governing exclusively the relations of merchants with one another, and had courts, judges, and procedure of its own. They were not amenable to the ordinary law of the land. If one merchant robbed another, the common law was not concerned. So the centuries during which all merchants and business men were governed by their own courts completely absolved, so far as business went, from the regular judicial hierarchy, laid, little by little, but firmly, that fundamental modern notion that somehow business need not accord with ordinary morality and legality.

The notion of the modern "muck-raker" is equally old. So far as concerns the relation of the merchant to his customer, all primitive law is based on the conception that merchants are thieves and steal from the rest of the community when they can. In fact, the early law looks on trade as only a species of stealing, and all its first regulations are aimed at preventing the merchant from getting an undue advantage of the purchaser, always providing that the latter is not himself a merchant; for the early law is concerned only with thefts and broken contracts between merchants and other people. When, therefore, a new form arises in the business world like the Trust, whose operations seem strange and unaccustomed, two notions at once are fathered by the primitive ideas about trade: first, the idea in the makers of the Trust, that their proceedings are perfectly legitimate; secondly, the idea of the consumers, that the Trust was formed to rob them. The battle waged between the two is, however, peculiar. The Trusts plead their "privilege," their exemption from the operation of ordinary law. The people plead the ordinary law, and declare that the burden of proof lies on the Trusts, for, according to all precedent, they are assumed to be thieves, and must prove their innocence. Here again the real defence of each lies too deeply imbedded in the past to be dislodged by statutes or prosecutions. The courts may apply the ordinary law, the people may apply the "ordinary" code of ethics, and certain men may be punished or deterred from action; but the real difficulty, the double standard, the idea that business has an ethics of its own, will not be eradicated so easily. We are concerned to-day, not with the remedying of forms and phrases, but with the gigantic problem of sloughing off the *thinking* of primitive men, with the immensely difficult task of making the thoughts as well as the clothes of the community modern.

POETS IN MEXICO.

TO THE EDITOR OF THE NATION:

SIR: It might appear from the amount of poetry, rhymed and unrhymed, that adorns the pages of most of the public prints to the south of us, that conditions in the Spanish Republics were particularly favorable to the production of that commodity. But even there the course of poesy does not always run smooth, as is shown by a very remarkable recent happening in Mexico. The Spanish "Society of Covadonga" had announced a prize of five hundred pesos for the best poem in honor of the Mother Country across the ocean. The announcement brought twenty-one eloquent responses; but alas, when the twenty-one hopeful ode-builders and their friends assembled in the Teatro Principal of Mexico City on the evening of October 31, they were thunderstruck to learn that all the poems submitted were "so deplorable, so far beneath the grandeur of the subject, so insignificant, that the jury found themselves reduced to the sad necessity of refusing to award the prize."

Among the twenty-one slighted bards was one whose proud Castilian soul refused to bow to the decision of even so august a body as the Junta Española of Covadonga. He presented his case, a few days ago, in the columns of the leading Mexico City daily, *El Imparcial*, with all the eloquent fervor that so glorious—and lucrative—a cause demands:

> The lofty amplitude of the standard set by your important daily, and the unforgetable gallantry with which your columns have honored my name, impel me to ask your noble hospitality for this letter and for the poem which accompanies it.
>
> I should be unfaithful to the tradition of civic courage which I have established in the past, if on this occasion—as never happened on any occasion during my long literary life on the Old Continent—I were to fail to step into the breach and furnish a needed personal example. . . .

Why, continues this literary Arnold Winkelried, should the jury, not satisfied with refusing a pecuniary reward to filial virtue, add insult to injury by impugning the intellect of Spain's eulogists? Why, if no one poem was preëminently meritorious, should they not have divided the sum equally among twenty-one not too prosperous versifiers? What right has such a jury, anyway, to set an arbitrary standard of excellence when their business is neither more nor less than to ladle out five hundred pesos? How would it be possible, moreover, for twenty-one bards to sing of so inspiring a subject and not one wander, even by accident, into a melodious and stirring strain? And in conclusion:

> I feel impelled, by way of protest against the offensive tone taken by this jury, to do something positive. The only way to prove whether the jury was justified in insulting these unrewarded poets—not content with refusing to reward them—is to publish the compositions which were presented. So, to set the matter in motion, I publish mine. . . .
>
> Thanking you, Señor Editor, for your kindness, it is a particular pleasure to me to reiterate that I am your most earnest friend and reliable humble servant, who hereby kisses your hands.
>
> FERNANDO DE ANTON DEL OLMET,
> Marquis of Dosfuentes.

Then follows the poem, an enthusiastic effort, indeed.

If the jury had been rewarding superlatives, they should have been compelled to give some recognition to the Marquis's eulogy—which really has some fine lines, for the reader who is able to Latinize himself sufficiently. Friends of the Muse will watch the columns of *El Imparcial* to see if the other poets follow this spirited example.

ROY TEMPLE HOUSE.

Norman, Okla., December 7.

FOREIGN AMERICANS.

TO THE EDITOR OF THE NATION:

SIR: As one reads the account of the riotous demonstration which broke up the peace meeting at Carnegie Hall on December 12, perhaps the first aspect of the affair which impresses one is the grim humor of the situation, as illustrating the unforeseen difficulties which the friends of peace are likely to encounter among their own fellow-citizens, before their plans for

Digitized by Google

international amity can be accomplished. On further consideration, however, the amusing features fade out of sight, in comparison with a real and formidable danger which the incident suggests. This has nothing to do directly with the fate of the peace treaties. The efforts to obtain their ratification will proceed to their ultimate success or failure, irrespective of what Mr. Koelble and his German-American Citizens League think about it. But what of the future influence upon the solidity of our nation, resulting from groups of citizens who, upon such a public occasion, act not as Americans, but as qualified Americans? This is not the first time that bodies of citizens have acted upon motives inspired by alien affiliations, nor will it be the last. Almost exactly four years ago, when New York was endeavoring to establish a more quiet Sunday, there were emphatic protests from large gatherings of German-Americans, who felt that their rights were infringed upon. From time to time other groups of what somebody has called hyphenated Americans have come to the front with opinions or claims dictated by racial considerations rather than by the needs and welfare of the nation. The character of the reception accorded to the visiting Irish players within the last few weeks has been influenced, in some important instances, by Irish-American societies. If, for any conceivable reason, the United States should be drawn into the Italian-Turkish controversy, she would find that a large number of her citizens would take an attitude determined by Mediterranean racial ties rather than by American citizenship. The Russian passport controversy presents a somewhat different aspect, inasmuch as the discrimination in this case is made by a foreign nation rather than by any body of our citizens. Yet it illustrates forcibly the problems which may be thrust upon this Government through the existence of heterogeneous groups of population in its body politic, and it is easy to imagine a situation where the diversity of interests might be emphasized by Hebrews within our own borders rather than by a foreign country.

Thus far in our history this danger has never assumed serious proportions, partly because our qualified Americans have mainly been of two or three principal races—the Germans, the Irish, and the Scandinavians—all of whom have inherited, for generations back, sentiments, principles, and habits of mind similar in the main, and which, in the persons of the early settlers of this country, made America. But when the time comes, visible in the not far distant future, when, in addition to these, we shall have large and influential groups and organizations of Italian-Americans, Croatian-Americans, Russian-Americans, and a host of others, each with its own set of racial and national prejudices and interests, the solidarity of the nation will be in a precarious position. If these adopted elements of our population wish to win and keep the sympathy of the American people as a whole, they will wisely refrain from exhibiting, publicly at least, views and opinions based on any other allegiance than that of an American citizen.

HENRY P. FAIRCHILD.

New Haven, Conn., December 18.

"A CHINESE APPEAL TO CHRISTENDOM."

TO THE EDITOR OF THE NATION:

SIR: In a review in the *Nation* you refer to the volume "A Chinese Appeal to Christendom concerning Christian Missions," as demanding "very slight consideration" on the ground that it is a "forgery and a self-confessed deceit." Your reviewer writes further that "criticisms must be presented by an honest man to command respectful notice."

We suggest that the contentions submitted in a volume like this (or for that matter in any volume), might more justly (and more usefully as far as the readers of the review are concerned) be described or criticised on the basis of their intrinsic value rather than to be dismissed because the author has not put his own name on the title page.

A dismissal of a volume as "fraudulent" and as not entitled to consideration, on the ground that the author had hidden his personality behind some pseudonym, or that he had on the title page assumed a nationality to which he had no claim, would include in a similar condemnation a long series of books from "Les Lettres persanes" of Montesquieu, and "The Hindu Studies of Sir Alfred Lyall" to the "Letters from John Chinaman," by so recent and so widely accepted an author as Lowes Dickinson.

At the time we brought into publication the American edition of the "Chinese Appeal," it was our own understanding that the name of Lin Shao-Yang on the title page stood for that of a Chinese writer. The author took pains to inform us later that Lin Shao-Yang was a *nom de plume*. He explained, however, that he had been for many years a resident of China, and had come into close sympathetic relations with Chinese circles, both of low and of high degree. He asserted further that, while the pen was that of an English writer, the thoughts, feelings, and protests presented in the book were those of Chinese friends, associates, and acquaintances, who had asked him to be their spokesman to the outer world. A volume, written in this fashion, is not to be classed with the "foreign correspondence" of a "Jefferson Brick," conducted in the home office of a New York journal. In any case, if the book be an honest statement, and an accurate description of opinions and conditions of which the author has personal knowledge, it is, we suggest, not in order to dismiss it as "of no importance"; while the classification of the book as a "fraud" and "a deceit" because the author, in assuming a foreign name, has followed a long series of famous precedents, constitutes, we maintain, a literary injustice.

G. P. PUTNAM'S SONS.

New York, December 18.

[There is a distinction in kind between such a book as that in which Mr. Dickinson under a thin literary disguise compares Eastern with Western civilization, and the attempt of a writer to undermine a particular set of men and a particular movement in China by pretending to speak as a Chinese.—THE REVIEWER.]

CRIME AND SENTIMENTALISM.

TO THE EDITOR OF THE NATION:

SIR: The editorial remarks on the relation of sentimentalism to crime, in recent issues of the *Nation*, have caused me to notice instances of this sort of thing in the daily press. The following, from the *Wisconsin State Journal* of Madison, is typical of half-a-dozen such instances:

> A fellow named Samenfink was arraigned before Judge August Backus at Milwaukee for killing a companion in a saloon fight. Judge Backus said, "You are sentenced to support the widow of the man you killed," and has taken steps to see that Samenfink does this.
>
> Lawyers will laugh heartily over this, for the statutes describe crimes and prescribe the penalties therefor, and the penalties all say that the guilty man shall be locked up where he can be of little good to himself or any one else. The killer's great offence is that he has done some more or less indirect injury to society, and that there is possibility of reparation to widow or orphan doesn't enter into the matter at all.
>
> Evidently, Judge Backus is no great shucks as a lawyer, but just a man of hard sense, with a fine idea of substantial justice. Occasionally we find one of that sort on the bench.

NORMAN FOERSTER.

Madison, Wis., December 18.

Literature

PALESTINE TO-DAY.

Palestine and Its Transformation. By Ellsworth Huntington. Boston: Houghton Mifflin Co. Illustrations and maps. $2 net.

Among books on Palestine and Syria this, by dint of its suggestive and persuasive originality, should take a leading and permanent place. In it a professed geographer for the first time approaches a definitely connected series of historical and cultural Biblical problems. We have had the theologian interested in geography, the Orientalist interested in theology, and even the geologist with memories of the Bible. But now the comparatively new science of geography—new, at least, in this country as a university discipline—vindicates its claim to a separate and real existence. For this book is specifically different from all its predecessors on Palestine. And the earth, to Professor Huntington, is no dead thing on which men walk and with which they do as they will, but it has its breathings and pulsations, as though it were in truth an animal by itself as the old geographers dreamed.

But though everywhere this freshness of touch appears, it is in the latter half of the book that Professor Huntington's principal contribution is made. When applied baldly to topography the formulæ of the geographer and geologist do not seem to the layman, at least in themselves, to lead us far. It does not sound convincing as an explanation of the history of Judea to hear that it is a peneplain broken up into a dissected plateau, and it is really Mr. Hunting-

Digitized by Google

ton's own luminous descriptions and analyses which carry off his technicalities. He makes us see the uniquely isolated plateau of Judea, the heart of the country; the accessible Samaria; the difference between Philistia and Phœnicia; the tremendous trench of the Jordan and the Dead Sea, and the wilderness of Judea sloping to the great dry land of the south.

Then he passes from this examination and description of the land, geographic district by district, to a consideration of the climate and its mutations, and applies the hypothesis of pulsatory changes of climate, already stated in his "Pulse of Asia." Here he is on ground peculiarly his own, and is facing the great problems not only of this land but of many others. It is an unescapable fact that Palestine once supported an indefinitely larger population than it does at present; that its surrounding deserts were traversed again and again by great armies along routes now, for lack of water, virtually impassable, and, save for handfuls of hungry Bedawin, uninhabitable; that in the desert beyond Jordan there were great cities with sufficient abundance of water to supply baths and naumachias; that trade routes were in regular use which can now be attempted only by a few travellers at the risk of their lives and of half of their beasts, or not at all. For all this the history of the rise and fall of Palmyra is most significant. By the gradual drying and closing of routes across the desert to the south, it grew for a time to be a town of wealth and importance. But, later, the route which it commanded became in its turn impassable; the caravans went still further north, and Palmyra sank in drought and hunger.

But the change was not uniform; it seems often to have been spasmodic. Why does the population of the desert overflow, with more or less permanent results? And when the desert thus moves, it is certain that nothing can turn it. It is evidently driven by hard economic necessity which knows no restraint and fears no barrier. Of two such great migrations we definitely know, and beyond question there were others. Tribes, among whom were the Hebrews, came out of the desert and threw themselves on the more fertile surrounding lands. Much later, the Arab tribes under the banner of Islam did the same. Forced by what law did they move?

To answer these questions, Mr. Huntington rehearses the various theories of climate. Some have held that climate, except for small, regular variations, is uniform, finding their explanation of the difference between the present situation and the past in bad government—an explanation which does not explain. Government in the East cannot fill the wells of the desert and make naumachias possible in the barren plateau beyond Jordan any more than a Republican administration here can insure good crops. Others find the secret in deforestation; but it is at least as certain that forests grow where there is water as that rain falls and water is preserved where there are forests. Further, Palestine, with its population, can never have been so densely wooded as really to attract rain. Thus this hypothesis does not sufficiently explain the general situation and completely fails when applied to such an individual case as Palmyra. A third view accepts a change in climate, but makes it a comparatively steady process of drying, extending from the glacial period into historic times. In this there is undoubtedly much truth, but it does not meet all the facts; especially it does not meet the evidence that there have been recurrent dry periods in the past. In consequence, there is much to be said for Mr. Huntington's own hypothesis of gradual drying, combined with considerable temporary fluctuations. That is, on his curve of climatic change, he would insert several large "humps" and an infinity of smaller ones, yet all tending gradually towards dryness.

The "humps" he then endeavors to bring into agreement with the known movements of history. When there was rain enough and crops prospered, there was peace in the lands; but when rain and crops failed, the pinch came, the peoples were restless, and if the drought were long continued, there were great migrations. That such causes were contributory to the greater popular wanderings no one can doubt. Questionings can rise only when we try to establish elaborate synchronisms between hypothetically plotted curves of climate and the accepted eras of history. In this book, three great eras are found, both of climate and of history. The first, the primitive historic, ends about 1200 B. C., with a sudden dip to dryness and the chaos of the Aramean migrations. The second spans the life of Israel in Palestine, of the Greeks in their islands and peninsula, of Italy in the west and Assyria and Persia in the east, and ends about 600 A. D. in another dry period and in the movements of the Muslim armies on Asia and Africa and of the barbarian hordes on Europe. The third runs to our own time and may, in its turn, end in drought and movements of the peoples.

How Mr. Huntington works out his synchronisms cannot be treated in detail here. In that connection, he has an elaborate and exceedingly interesting examination of the strands of the Dead Sea with Caspian parallels and a geological suggestion as to the site of Sodom. Another chapter of extreme interest is that contributed, as to its facts and opinions, by Prof. H. C. Butler of Princeton. That the physical conditions of Syria as a whole have altered greatly since the early part of the Christian era he is convinced, and he here gives the archæological evidence for it, the most striking part of which, perhaps, is a chronological curve of inscriptions, according to their number, showing the variations in architectural activity and presumably in prosperity.

Of course, much in all this is conjectural, and some few points are open to immediate correction. Thus, when Douglas Carruthers of the British Museum (quoted on p. 331) was told by the Shararat Arabs that their tribe, driven by a seven years' drought, had migrated in the days of Mohammed through Egypt to Tunis, the statement must be regarded as a legendary reflection of the historical raid by Bedawi tribes on Egypt and north Africa in the eleventh century A. D., reflected otherwise in the Beni Hilal romance. On the historical basis for this raid, reference should be made to Hartmann's article in the *Zeitschrift für afrikanische und oceanische Sprachen*, IV, pp. 311 ff. But, all in all, Mr. Huntington's book marks a new and definite departure in the investigation of the history of the civilization of Syria.

CURRENT FICTION.

A Likely Story. By William De Morgan. New York: Henry Holt & Co.

By far the most amusing part of this book is the "Apology in Confidence" which brings up its rear. "An Affair of Dishonor" was not received with enthusiasm by either Mr. De Morgan's critics or his audience. Not only were reviewers unanimous in the opinion that the book showed a sad lapse from the writer's standards, but lay admirers besieged him with letters of regret and condolence. Mr. De Morgan here delivers a whimsical apology for having given the public what it did not expect of him. "He cannot free himself from a haunting sense that he was guilty of a gross neglect in not giving them fuller warning that the said fifth volume was not Early Victorian, either in style or substance." He is aware of the great principle that an artist is rightly expected to produce, at regular intervals, "a picture or a volume on all fours with the work from his hand which has first attracted public attention." In order to justify that expectation, he himself should have offered in his fifth novel not only something Early Victorian, but something Suburban. This he failed to do, and for his failure he confesses that he has been properly punished.

This is excellent fooling, but, of course, it does not go to the root of the general discontent with "An Affair of Dishonor." This fact is made clear enough by the very extracts from reviews and letters which Mr. De Morgan

Digitized by Google

here marshals. The upshot of their complaint is not primarily that a beloved writer has done something new, but that he has done something worthless, or nearly so. "An Affair of Dishonor" is a dull and commonplace story. And as the novelist had done nothing dull or commonplace so long as he dealt with "Victorian" people and events, it was only human and natural that we should lament his departure from that living scene. The truth is, this "apology" shows our friend himself in an engagingly human and natural mood. He is put out by the fizzle of "An Affair," and shows his pique. His mistake is in attempting to defend that lifeless yarn: it is clear that he does not himself feel the essential difference in sincerity and spontaneity between that figment of historical romance and his true stories. As for "A Likely Story" he prides himself on its being so constructed as to suit all parties, Victorian in its main substance, with a "very pretty suburb" involved, and only a hundred thousand words or so in length, instead of the quarter of a million which has been deprecated by critics of the earlier books. It is, in fact, a recognizable and fairly creditable De Morgan. With the somewhat humdrum group of Londoners and suburban folk who conduct the main action, is involved an episode of the Italian cinquecento, conveyed to our moderns by the lips of a talking picture and of a supplementary manuscript. Some such ghostly connection of past and present played a part, it will be recalled, in "Alice-for-Short." Here the rôle of the picture spook is of greater importance, since she is cast as practical adviser and benefactor to the present. Where the book falls short of its "Victorian" forerunners is in the lack of lovable characters. But if there was one thing that readers of "Joseph Vance" and "Somehow Good" could not reasonably expect of Mr. De Morgan, it was that he should go on indefinitely creating Lossies and Christophers and Sallies for our affections to twine about.

Jane Dawson. By Will N. Harben. New York: Harper & Bros.

Of the two leading interests in this story, one is the later life of a betrayed woman; the other the theological warfare between a strict and narrow sect and what the author calls sometimes agnosticism, sometimes Unitarianism. Whether this use of language is part of the Georgia local coloring is a question which may be left to the American Unitarian Association, without benefit of book-reviewer. There are several good sermons in the book which may serve as evidence. The woman fears that her unbelief, the natural fruit of her early bitter wrongs, may work injury to her son in the sight of the congregation and of the girl he loves. The son, as free a thinker as herself, has for rival a man at the opposite pole of belief from his own, and thus war is waged between the doxies and between the more instinctive forces of love and hate and spite. Of revenge, there is an exemplary, if unusual, absence. There are effective climaxes and surprising anti-climaxes. Quite dramatically striking is Jane Dawson's resolve to appear in the long-unvisited church, in order to renounce disbelief for her son's sake. But the passionately fond relation between mother and son which makes this resolve ring true takes away all substance from the scene where George first knowingly faces the father—however repentant—who had ruined his mother's life, and, far from condemning, seeks to comfort him. It remains to say that parish tyrannies, free thinking, tortured hearts, sermons, and love scenes are combined readably, if not with the strictest feeling for art. Welcome will be the day when at least the educated in stories shall cease to say "like I did."

The Moon Lady. By Helen Huntington. New York: Charles Scribner's Sons.

The Moon Lady is an American, a widow, a famous novelist, and a dipsomaniac. Unfortunate in her parents, she has been exceptionally fortunate in her breeding, and the strange charm and force of her young womanhood make her the wife of an honest and well-to-do New Yorker of good social standing. It is he who calls her "the moon lady," and he worships her always as a superior being. Nevertheless, though he is not her match in brilliancy, he has the physical and moral stability she lacks, and before his death sees very clearly the perils of her temperament. Their only son inherits the father's stamina. When the story proper opens, Humphrey Wylde is a promising young architect, on the verge of successful love. He is devoted to his mother (who bears the Herrickean name of Dioneme) without very well understanding her. She, for her part, thinks of him as a nice, solid, rather stupid boy: her maternal nature is not fully developed. Her success as the writer of a somewhat fanciful and effusive type of fiction is assured, and she makes enough money to maintain a very comfortable establishment in New York. The fact that she is the chief "provider" already gives Humphrey uneasiness, and he is most anxious to make head with his profession on that account. But Mrs. Wylde's fondness for stimulants passes from the deplorable to the impossible. She is always on the verge of excess; and it presently devolves upon the son to give up his profession and his hopes of marriage in order to become the attendant and protector of his mother. The situation would be more dignified if so much stress were not laid upon the hushing-up motive for Humphrey's sacrifice. But he makes it in good faith, and, as it seems, in vain. The world, led by the insinuations of a villanous rival, is ingenuous enough to set him down as a mere idler, preferring to live on his mother's bounty, and keeping her from society so that she might not be distracted from her output. The girl of his choice is able to believe this. But, of course, it is all straightened out in the end. Dioneme, almost *in extremis*, discovers what her son's sacrifice has been, and declares her own fault in a final burst of womanliness and magnanimity. The tale, not without its melodramatic elements of plot, is told with delicacy and even distinction of style.

A SPANISH ANARCHIST.

The Life, Trial, and Death of Francisco Ferrer. By William Archer. New York: Moffat, Yard & Co. $3 net.

Two years have elapsed since the judicial assassination of Francisco Ferrer. During that time, little has appeared in print which would aid the intelligent reader in forming an unbiassed judgment with reference to Ferrer, the man, the educational movement he promulgated, and the sinister events which culminated in the tragedy of Montjuich. Legends have grown up around Ferrer's name. The campaign of calumny instituted by his clerical opponents has been met with exaggerated eulogiums on the part of friends until the truth seemed hopelessly obscured. Happily, an impartial biographer has been found in Mr. Archer, whose religious and political opinions predispose him to neither side of the controversy, and whose one purpose is to arrive at the truth. In this attempt he has been successful, as readers of *McClure's Magazine* already know.

First of all, the author dispels the legend which represents Ferrer as a monster in private life. The true story of his unfortunate marriage indicates that he was more sinned against than sinning. The man who refrained from pressing charges against the woman who had attempted his life deserves credit for an unusual degree of chivalry. That he was a devoted father appears from the evidence of his daughters. On the other hand, he was far from a model of puritanic virtue. In early life he was deeply compromised in anarchistic plots, and doubtless approved of the methods of terrorism. But with years came disillusion. He eventually pinned his faith to the cause of education and literary propaganda. At the very moment when the Barcelona riots were in progress, the alleged instigator and chief of the revolution was quietly engaged in translating, out of the English, moral books for the young of a distinctly "goody-goody" sort, careful only to expurgate all denominational allusions.

A bequest from a French lady, Mlle.

Digitized by Google

Meunier, enabled Ferrer to realize a long cherished educational project. The result was the famous Escuela Moderna of Barcelona. There children of tender years were taught to hate capitalism, government, religion. The effect of such a nursery of anarchy in Spain's most turbulent province caused concern to those in authority. Few will blame the Spanish Government for closing its doors; yet perhaps some such harsh protest was necessary. The parochial schools were notoriously bad, and the secular educational system little better. If at the present day the municipality of Barcelona is studying the public school systems of America and Europe in an earnest endeavor to improve its own, no small part of this newly awakened interest is directly traceable to Francisco Ferrer.

The crime of the Calle Mayor was the beginning of Ferrer's end. Although a civil tribunal acquitted him of complicity in the attempt upon the lives of Spain's Sovereigns, nevertheless his connection with the anarchist Morral was compromising. The nation at large believed him guilty. So it was that in 1909, when the Barcelona riots had been quelled and officialdom demanded a victim, the authorities sought to inculpate the most prominent of Spain's anarchists. Even those who have carefully followed the press reports will be unprepared for some of the facts which Mr. Archer's book discloses. For the first time a full, detailed account of the trial, based on official records, is printed in English. The author goes over every scrap of evidence, and riddles the prosecution's case with merciless logic.

The iniquitous "law of jurisdictions" decrees that all offences against the army shall be tried before military tribunals, and this in time of peace. The author emphasizes the fact that Ferrer's trial was no ordinary drumhead court-martial. Peace had been restored, the Constitution reëstablished, yet Ferrer had to face a board of officers who were at one and the same time prosecutors and judges. Worse still, his defender, too, had to be an army officer, chosen by the defendant out of a list of names unknown to him. The captain chosen was loyal, but utterly unskilled in the niceties of the law. Nearly all the evidence brought against Ferrer was of the hearsay variety. In one case, a witness testified to having read in a newspaper that the prisoner had been seen distributing dynamite cartridges; but the original article was not produced in court, nor any attempt made to learn the source of the writer's information. Of the seventy witnesses, Ferrer was permitted to cross-examine only four. One of the most important of these was spirited out of the country before the case was ended. Ferrer's friends were banished to the interior, and not allowed to testify in his favor; yet the prosecutor had the effrontery to state that not a single individual had been found willing to testify for the accused. In his final plea, the prosecutor made numerous assertions wholly unsupported by evidence without hindrance on the part of the court. The prosecution occupied so much time at the final session that very little was left for the defence. The whole trial was disgracefully hurried.

But admitting that the trial was a travesty, was not Ferrer after all guilty? It may be said with all assurance that he was innocent of the charge on which he was convicted, that of being "author and chief" of the July revolution of 1909. There is no evidence to show that he was the master mind of that revolt, and much to indicate that he was not. A more spontaneous outbreak never occurred. A civil court, even in Spain, would certainly have acquitted him on that charge. It does, however, appear that Ferrer was guilty of a specific overt act of sedition in urging the inhabitants of the little hamlet of Premiá to proclaim a republic, but no more guilty than the alcalde and several others who turned state's evidence to escape the consequences of their own treason. Mr. Archer, accordingly, believes that Ferrer did not deserve to escape unpunished. As one of several leaders in a mob of republicans, he probably deserved some slight penalty.

Ferrer is to most an unsympathetic personage. The crudity of his intellectual programme reveals the self-assurance of ignorance. He fought dogmatism with a dogmatism no less uncompromising. His courage, sincerity, and unselfish zeal for the cause in which he believed force a certain respect, even while one deplores his teachings as incendiary. But Ferrer, living, was no hero. The civilized world lifted its protest in his behalf because a grievous wrong was done him, not because it championed his opinions. His enemies by taking his life have conferred upon him a quasi-immortality.

Frederick James Furnivall: A Volume of Personal Record. New York: Henry Frowde. $1.40 net.

The present volume will revive a host of delightful memories in the minds of Dr. Furnivall's numerous friends on this side of the water. We see him again feeding the pigeons in the British Museum yard, or conversing with a group of scholars in his favorite corner at the A B C tea-rooms in New Oxford Street, or taking his afternoon nap on the island up the river, which was the regular objective point of his Sunday excursions—his ruddy face and flowing white hair irresistibly suggesting a recumbent Father Thames. No formal biography, perhaps, would be so likely to preserve the image of this "eternal boy," in all its freshness and charm, as the sheaf of "memories" (so the editors designate them) that make up this volume. An excellent biographical sketch from the pen of his loyal disciple and collaborator, John Munro, introduces the work, and there follow forty-nine tributes of varying length from as many different people who, in one way or another, were associated with Dr. Furnivall. That the list should include contributions from an A B C waitress and from members of his sculling club, as well as from some of the most eminent scholars in Europe and America, is just as he would have had it. And, really, making allowance for differences in literary accomplishment, what was most distinctive of Furnivall—his universal humanity—shines out as clearly in the one class of "memories" as in the other. In this quality, indeed, he was probably closer to Shakespeare and Chaucer than any man of recent generations.

As is generally known, Dr. Furnivall had no training for his life work, except what might be gained from the ordinary classical education. For upwards of ten years after leaving Cambridge in 1846, his principal activity was in the Christian Socialist movement, under the leadership of Kingsley and Maurice, especially in connection with the Working Men's College, which appealed strongly to his democratic instincts. It is worthy of note that the chief initial impulse to the immense achievement of Furnivall's life was given by Tennyson's "Idylls of the King." It was this book especially that fixed his attention upon the past and made him determine in the words of his biographer that our "forefathers' voices should be made audible and significant to modern men." Then came the Philological Society's project of the New English Dictionary which gradually took shape in the early sixties. But it soon became manifest that no adequate work of this kind was possible, so long as the great majority of mediæval English books still remained in manuscript. And so with a courage that reminds one of Daniel O'Connell and the Catholic Association, Furnivall founded in 1864 the Early English Text Society for the purpose of getting the materials into print. The support which it derived from its connection with the project of the Philological Society was probably necessary for the existence of the new organization, but lexicographical interests were not the exclusive or even the dominant influence with its founder. As he himself said, "my chief aim has been throughout to illustrate the social condition of the English people in the past." Moreover, the prominent place which is given to Arthurian texts among its earliest issues betrays the source of Furnivall's original interest in the enterprise. Pecuniary difficulties were not the only ones that beset the society. Furnivall's own knowledge of Early Eng-

Digitized by Google

lish was limited, and even in his latest days, he described himself—too modestly, as all the world knows—as "a worker, not a scholar." By strict adherence, however, to the letter of the manuscript and by careful collation of proofs he established the high standard of accuracy which with few exceptions distinguishes the society's publications. No scholar who has had occasion to reëdit a text after him has failed to admire the scientific exactness of his work. But such standards were far from being general in the sixties, and the present writer has heard him describe how Thomas Wright, the well-known antiquarian, turned over the proof-reading of a text to some chance person. When Furnivall discovered it and took him to task for this laxity, Wright replied that he had tested a few pages and found the collation pretty well done, so he saw no need of bothering further about the matter. It was only in his occasional happy-go-lucky methods of choosing editors that Furnivall sometimes laid himself open to criticism, as for example in a certain amusing instance, related in this volume, when a stranger wrote to him inquiring concerning an early version of Boethius still unpublished. In Furnivall's reply, he confessed his ignorance of the subject, but invited his unknown correspondent to edit the text. His instinct, however, served him aright, for this same correspondent is now an English historian of high rank.

The circumstances under which Furnivall founded the Chaucer Society—next to the founding of the Early English Text Society his greatest service to literature—are so well known that we do not expect any new light on the subject from the present volume. Similarly with the Browning Society. On the other hand, one of the most interesting contributions to these pages, is Sir J. A. H. Murray's authoritative account of the leading part which Furnivall played in connection with the great Oxford Dictionary. He infused vitality into every thing that he undertook with the single exception, perhaps, of the Shelley Society, which, as he used to say laughingly, he started because his father was the physician who attended Mary Shelley in her first confinement.

It is invidious, perhaps, to single out for commendation any particular tributes where all are so heartfelt, but those of Alois Brandl and A. W. Pollard call up with especial vividness different aspects of their subject's character. Furnivall, however, was the very embodiment of life, and so even in closing this memorial volume, it is difficult to realize that the happy spirit who imparted energy to so many men of his generation, the indefatigable worker whose influence was, perhaps, the most comprehensive in the whole history of English scholarship, has paid at last the inevitable debt to nature.

The Individualization of Punishment. By Raymond Saleilles. With an Introduction by Gabriel Tarde. Translated from the second French edition by Rachel Szold Jastrow. With an Introduction by Roscoe Pound. Boston: Little, Brown & Co. $4.50 net.

This volume stands fourth in the American Criminal Science Series. Whatever may be said of some of the other numbers, the American Institute has done well in undertaking the translation of this thoughtful and scholarly work, the writer of which, professor of comparative law in the University of Paris, holds a position of authority in the subject that formed the chief topic of discussion at the International Prison Congress held in Washington last year. We regret, however, that we cannot speak highly of the translation. The translation reads well, and shows skill in turning the French into the English idiom, but it constantly tones down the author's meaning and not seldom misses his point. As an extreme illustration, on page 161 we record five positive errors, all of them material, in two of which the author's meaning is neatly reversed. It is true, however, that, while the argument of M. Saleilles is clear in its larger outlines, his style is often meditative and difficult to follow; and the translator has done well in dividing his long chapters into sections, or shorter chapters, with appropriate titles. Professor Pound contributes materially to the value of the work by showing its bearing upon our American institutions.

M. Saleilles arrives at his problem through an historical survey of penal theory which we must regretfully pass by. Sufficient to say that to-day the theory of punishment faces (roughly speaking) the classical school, represented in the French codes of 1791 and 1810, and the Italian school of Lombroso and his successors. The classical school presupposes moral freedom and responsibility, and the same degree of responsibility for all normal persons. Hence, there is no individualization of punishment. The penalty is determined objectively, by the nature of the crime, and not by the nature of the criminal. The Italian school is deterministic. While it has more or less receded from the position of Lombroso, that the criminal is either congenitally incorrigible or a criminal by accident, crime is still viewed as a disease. Hence, the preventive or corrective measures (no longer penal) should be adjusted to the individual.

M. Saleilles's position is one of compromise—yet of open compromise. He is a believer in responsibility, though he rejects the fiction of equal responsibility in all who are not manifestly insane. Apart from responsibility, however, punishment would be not only meaningless, and even barbarous, but without support in social sentiment. Yet, when responsibility is once admitted, it has nothing more to say. Since (as he holds) the degree of responsibility is indeterminable, the individualization of punishment must rest upon other considerations, which are mainly reformatory, but partly also deterrent and measured by the objective gravity of the offence. The author's analysis of these considerations is most instructive. What he finally stands for is a discretionary administration of penalties, directed by the judge and supplemented by the prison authorities, which shall nevertheless be uniform and consistent; that is to say, though penalties are not to be prescribed by law, they shall nevertheless rest upon a scientific basis of fact. And the main fact in each case will be the "subjective criminality"—the character, moral status, and point of view—of the individual. But this seems to mean (as Tarde also hints in his Introduction) that responsibility is, after all, the chief factor in the decision.

M. Saleilles rejects the criterion of responsibility because, in his opinion the legal definition, which makes it a matter of premeditation and will, is wholly false; for him responsibility is constituted by an "inherent power of resistance" in the character of the man. That is to say, the motives or reasons expressed in the act are not only indeterminable by other persons, and incommunicable, but are quite opaque and unintelligible to the thinking and willing agent. For him, then, as for others, his "character" is something foreign and impersonal. "It is strange," says Tarde in his Introduction, "that when the criminologists of our day, whether naturalists or sociologists, look for the causes of crime, they find only impersonal *factors*, like climate, social environment, season, race, cranial, and other anomalies." This repeats the statement regarding criminal science (in our review of the earlier numbers of the series) which aroused Professor Wigmore's astonishment. Our purpose now is to suggest that it applies—remotely, but all the more significantly—even to so subjective a writer as M Saleilles.

After all, what is wrong with premeditation? It is shown, M. Saleilles replies, that a crime may be well planned, but none the less the outcome of a fixed and unalterable idea, or obsession; that is to say, the possibility of refraining from it has never been considered. But can we then say that it was in any high degree premeditated? Genuine premeditation must, it should seem, involve a weighing of alternatives. The problem is, in fact, the same as that of motive, or intention, in ethics. It is only recently that moralists have begun to perceive that the intent expressed, *e. g.*, in driving a motor car at

Digitized by Google

high speed in a crowded street is very different from that expressed in the same act on a country road. But when the question of premeditation is extended to cover the considerations against the act, we have, in the scope of consequences considered by the agent, a fair measure of his responsibility. It is hardly too much to say that every deficiency of responsibility, whatever else it may be, is a limitation of horizon. This may be illustrated by the "aboulia" of the neurasthenics, mentioned by M. Saleilles, and the view is borne out by his own analysis of insanity (85).

We venture to suggest, therefore, that M. Saleilles has been too hasty in abandoning the legal criterion of responsibility for a supposedly scientific "power of resistance." And this suggestion may apply to the criminal-science movement generally. The jurists have doubtless something to learn from the sociologists—perhaps they have a special need to cultivate open-mindedness generally—but it is not yet time to discard their whole heritage of ideas. Had M. Saleilles undertaken to develop the legal conception of premeditation, he might have found it a useful instrument for individualization; for the scope of consequences actually considered by a criminal, and thus the extent to which he can probably be reached by punishment, may often be determined from his speech and behavior. Furthermore, in the nature of the consequences accepted or rejected, he might have discovered a useful and intelligible criterion for "character."

Touring in 1600: A Study in the Development of Travel as a Means of Education. By E. S. Bates. Boston: Houghton Mifflin Co. $3 net.

It would have required a dull mind to remove entirely the racy flavor which clings to the material set forth in this volume. Yet we suspect that few scholars could have done it greater justice than Mr. Bates. He has manifestly studied long and furiously, and has an extraordinary range of references to out-of-the-way, often unpublished, documents; yet the text is never cluttered, maintaining to the end a spirited narrative. Few who have not looked into the subject can quite imagine the difficulties of travel in the sixteenth century. The fact that seeing foreign lands was accounted an essential part of a young man's education and the remarkable acquaintance of Elizabethan writers with general European tendencies have blinded later generations to the obstacles. The following admonishments gathered by Mr. Bates from the guidebooks of those days reflect the conditions:

> A traveller has need of a falcon's eye, an ass's ears, a monkey's face, a merchant's words, a camel's back, a hog's mouth, a deer's feet. And the traveller to Rome—the back of an ass, the belly of a hog, and a conscience as broad as the king's highway.
>
> Line your doublet with taffetie; taffetie is lice-proof.
>
> Never journey without something to eat in your pocket, if only to throw to dogs when attacked by them.
>
> When going by coach, avoid women, especially old women; they always want the best places.
>
> At sea, remove your spurs; sailors make a point of stealing them from those who are being seasick. Keep your distance from them in every case; they are covered with vermin.
>
> In an inn bedroom which contains big pictures, look behind the latter to see they do not conceal a secret door or a window.
>
> Women should not travel at all and married men not much.

Some of these may be set down as the exaggeration of smartness; others are evidently true. The now simple passage from Calais to Dover, for instance, sometimes required weeks. "In 1610 two ambassadors waited at Calais fourteen days before they could make a start; . . . one gentleman, after a most unhappy night, found himself at Nieuport next morning and had to wait three days before another try could be made."

Mr. Bates gives a brief description of a few of the travellers upon whose diaries or notes he has drawn. One was Fynes Moryson, who, starting in 1591 at the age of twenty-five, toured through Germany, the Low Countries, Denmark, Poland, Austria, Switzerland, and Italy. Upon his return after four years, he at once joined his brother who was setting out for Jerusalem and who died in Fynes's arms at Aleppo "while the Turks stood round, jeering and thieving." We like the simple epitaph which Fynes there composed and which a later traveller discovered and published:

> To thee, dear Henry Morison,
> Thy brother Phines, here left alone,
> Hath left this fading memorie.
> For monuments and all must die.

Another of the travellers was Pietro della Valle, of Naples and Rome, who was set wandering when, after a twelve years' courtship, his lady was given to some one else. Sped by masses and provided with staff and scrip, he vowed he would visit the Holy Sepulchre. In Babylon he married a girl of eighteen who shortly afterwards died; and through the remaining four years of his travels he carried her body with him, like Tamburlaine the great. Again, there was Thomas Dallam, who must needs bear a huge organ of his own make as a gift from Queen Elizabeth to the Grand Turk. It "played chimes, and song-tunes by itself, had two dummy-men on it who fanfared on silver trumpets, and, above, an imitation holly bush filled with mechanical birds which sang and shook their wings."

The author corrects the impression that Latin was generally understood by intelligent people. Oddly, he finds that it was less used for conversation south of the Alps than north of them, and that the pronunciation of Latin varied very much. One writer (Andrew Boorde), giving a list of the commonest phrases heard abroad, renders "How do you fare?"—"Quo modo stat cum vostro corps?" Other hybrids there were in plenty, such as: "Si tu es plus sapientis quam nos sumus, tu es plus beholden to God Almighty quam nos sumus." Italian and later French came near to being the international tongue in those days. It is certainly true that neither of those countries was likely to be left from a traveller's itinerary, even though entering the papal centre was dangerous for Protestants.

There are instructive chapters on inns and social life. At Berne, it seems, it was illegal to sit at table more than five hours; at Bâle "10 A. M. to 6 P. M. was the maximum"; and in Saxony an innkeeper "was forbidden to serve more than four dishes at a meal," but the dishes were commonly likened to Sicilian tyrants, each "a more fearful monster" than its predecessor. Spending the night at an inn was avoided as far as possible by gentlemen, who generally carried letters to men of their own class and were entertained by them. At night windows were not open, and in many places on the continent men, women, and children lay together in one room, with the heat so great, as one Englishman complained, that it seemed as though a snake were twining about his legs. When beds were provided, a gentleman might find himself compelled to share his with a drunken carter, a disgrace which he generally mollified by being drunk himself. If we may believe the reports of travellers, conviviality was carried further in Russia than elsewhere. So it is stated that when a Russian lady entertained, "it was etiquette to send round afterwards to know if they all got home safely." And there are cases recorded where men stalked the streets naked, having sold their last rag to the bar-keeper. Smoking, however, was prohibited in 1634, "under penalty of slitting the nostrils," on the ground that it started fires and polluted "the Muscovite's breath when he addressed the saints."

We select one further illustration of travellers' experiences because it corresponds with one important phase of Elizabethan and Renaissance character—the frequent chance to see torture and public executions. Bacon, we recall, advises the visitor abroad not to neglect these opportunities. Distressing evidence of cruelty the traveller could hardly escape—men broken on the wheel, gangs of victims chained and flogged, and jokes played upon idiots. The tolerance of brutality, even fondness for

Digitized by Google

it. is one of the puzzles of that great age.

Notes

The Index of the *Nation*, July 1 to December 31, will be printed with the issue of January 4.

Volume XXVII, "Various Readings and Bibliography," completes the Memorial edition of George Meredith, issued in this country, for subscribers to the whole set only, by Charles Scribner's Sons. This concluding volume is noticed in the Bibliophile column of the *Nation* this week.

The list of private collectors of books and literaria in the United States, which was printed in "The Annual Library Index, 1910," issued by the office of the *Publishers' Weekly*, is undergoing a thorough revision for insertion in the Annual covering 1911; the latter will appear early in March. The revision will include additional names, making the total number about 1,500, arranged geographically by States as before. The compilers would be glad to hear, before January 15, from any whose libraries ought to be in the list.

The George H. Doran Co. will publish in January a novel whose heroine is Queen Elizabeth; the author is H. C. Bailey.

Books announced by Doubleday, Page & Co. include: "Danny's Own Story," by Don Marquis; "The Recording Angel," by Mrs. Corra Harris; "Counsel for the Defence," by Leroy Scott; "In Search of Arcady," by Nina Wilcox Putnam; "The Radium Terrors," by Albert Dorrington; "The Guests of Hercules," by A. M. and C. N. Williamson, and "The White Waterfall," by Charles Francis Dwyer.

"The Book-Lovers' Anthology," edited, with notes, by R. M. Leonard, will be added immediately to Frowde's series of Oxford Editions of Standard Authors. It consists of passages in poetry and prose relating to books in all their aspects.

Major H. B. Smith, chief of detectives and assistant provost marshal-general under Gen. Lew Wallace, has put together, under the title "Between the Lines: Secret Service Stories Told Fifty Years After" (Booz Brothers), his personal records of service during the Civil War. To the reader who expects a thrilling account of detective experiences the title will seem misleading; for the book is made up almost entirely of official correspondence, reports, dispatches, and affidavits, with only a few attempts at narration. As a contribution to the history of the war, however, the material was worth printing.

"The Norsemen in America," by Dr. Fridtjof Nansen, the title of the leading article in the *Geographical Journal* for December, is an attempt to dispel some of the clouds of mystery that overhang the voyages of his great compatriot navigators. After a careful investigation of the Norse-Icelandic literature of the twelfth, thirteenth, and fourteenth centuries, "chiefly put into writing in that strange island, Iceland," he comes to these conclusions: "That the Norsemen have discovered America, and have had intercourse with the land and its natives probably during some long period; but the narratives of the discovery and of voyages to Wineland are legendary. The Icelanders and the Greenlanders may have transferred the ideas, especially of the Fortunate Isles, from the legends to the discovered land; and the saga of Wineland the Good has then been gradually formed in the course of time, by putting together feature after feature from old tales and legends, with some real knowledge of lands in the West." In the animated discussion following the reading of the paper before the Royal Geographical Society, Sir Clements Markham agreed with Dr. Nansen, but Lord Curzon was strongly inclined to hold to the belief that Wineland was really one of the discoveries of the Norsemen.

If there are any readers who enjoy the current jargon of newspaper book reviews, they should take delight in Frederic Taber Cooper's "Some American Story Tellers" (Holt). Mr. Cooper uses with exceptional lavishness a small number of adjectives; "big," "vital," "vivid," "epic," "unsparing," "relentless," "subtle," "pervading," "far-reaching," are, to use some more of his favorites, "recurrent," "insistent," "inevitable" in his book. With the aid of these words and a few others he attempts to characterize fourteen writers of fiction, varying in point of view from Kate Douglas Wiggin to Ambrose Bierce, and in literary quality from Robert W. Chambers to Mrs. Wharton. As to literary standards his catchwords are "economy of means" (negatively illustrated in his style) and "the best rules of modern construction," by which he seems to mean something approximating the short-story methods of Maupassant. He has also a theory of the "epic novel" which is set forth at length in four or five different essays. Of the authors treated, the late Frank Norris is his favorite. "Such in brief are the materials and the methods of Norris's art as a novelist: big words, big phrases, big ideas, an untrammelled freedom of self-expression." How well this description fits Mr. Micawber! Perhaps the best essay is the one on "O. Henry"; it is short, and it retells some good stories.

C. O. Minchin, of the "Minchin rod," the "Minchin gaff," etc., has gathered into a good-sized volume (Macmillan), with ample revision, rearrangement, and additions, the substance of a series of articles on "Sea Fishing," contributed originally to the *Yachting and Boating Monthly*. The author's introductory quotation from Ovid,

> Casus ubique valet; semper tibi pendeat hamus
> Quo minime credas gurgite, piscis erit,

gives warning at the start that the reader has to do with a man of more than one interest. The book covers a wide range of sporting fish, wider than many would admit to the honor of that classification, with practical suggestions on bait, tackle, handling, etc., and is illustrated by drawings made for the purpose by the author's daughter.

More stirring to the sportsman's blood, however, is the "Book of the Tarpon" (Outing Publishing Company), by the veteran tarpon devotee, A. W. Dimock. Mr. Dimock had his first round with a tarpon on rod and reel thirty years ago, prior to any recognition of it as a possible game fish. He has been after tarpon ever since, and will not stop, he says, until it can no longer be said of him: "His eye was not dimmed, nor his natural force abated." Much of the fishing recounted in this volume was done with the camera at hand in an auxiliary boat, and, as tarpon leaping can very easily be stimulated by an expert with the rod, the result is a series of photographs of extraordinary interest. Of course, the language of the camera needs careful interpretation, with occasional checking, just as the language of the enthusiast who holds the rod, but for the fireside angler who must catch his tarpon from the printed page, Mr. Dimock's racy word pictures and photographs will bring the waters of Florida as close as is humanly possible.

In these days of easy paradox and complicated irony, the old *difficile est satiram non scribere* has acquired a new meaning. Almost any British essayist drops naturally into the rôle of social regenerator, and finds himself a satirist ere he is aware of it. Occasionally, as in the case of William Stebbing's "Truths or Truisms" (Frowde), the newcomer, alas! is no longer young, and the shafts of age are notoriously apt to fall wide of the mark. Mr. Stebbing was a Saturday Reviewer thirty or forty years ago, and thus he learned in a good school to aim at human folly and frailty. "The Marriage Lottery," "Insincerities," "Temper," "Eccentrics," "How to Quarrel" are some of his targets, but he comes nearer hitting the bull's eye where the object is far off and indistinct. Some of these brief essays may be worth quoting, but few sentences are quotable, and perhaps not one sticks. Whether undisguised moral precepts, or intended for simple humor, satirical cynicism, or pure irony, Mr. Stebbing's musings, though the outcome of culture and reflection, do not seem sufficiently spontaneous and graceful. The shades of Lamb and La Rochefoucauld may still rest in peace, and the laurels of Anatole France are as green as before.

The friends of the late Raymond Patterson who have been responsible for publishing his occasional articles on the negro question under the title of "The Negro and his Needs" (Fleming H. Revell Co.), with a preface by President Taft, have not done him a great service. Mr. Taft is quick to disclaim any concurrence with the conclusions which Mr. Patterson drew, and well might anybody, for among the suggestions made by Mr. Patterson are the following: "Lynch no negro for anything except crimes against women, and then be sure you have the right negro"; "Chain up all anarchistic negro editors north of that [Mason and Dixon] line and put in asylums Southern statesmen who oppose the education of the negro." Surely a book which offers this as sound advice towards settling the most difficult problem facing the American Government need hardly be taken seriously. Nor is any other treatment called for by the body of the matter itself. Mr. Patterson made large drafts upon the knowledge and wisdom of Dr. Du Bois, Booker Washington, W. H. H. Hart, and other prominent colored leaders and quoted many white students as well. But every chapter proves that he had only a superficial knowledge of the momentous problem about which he essayed to write.

Three new volumes have been added recently to the reports of the Historical Manuscripts Commission of Great Britain. The first constitutes the fifth report on the manuscripts of the Earl of Denbigh, the

Digitized by Google

second the long-delayed report on the manuscripts of Lord Middleton, and the third a brief report on certain sections of the Pepys manuscripts at Magdalene College, Cambridge. The Denbigh manuscripts, preserved at Newnham Paddox, Warwickshire, had already been the subject of four short notices in earlier reports, but the present calendar reviews again the entire collection and presents a more thorough and complete analysis of the papers. In time the documents range from 1537 to 1787, and the largest part of them contain the correspondence of Lord Feilding, who afterward became the first earl, during his embassies to Venice and Turin, 1634-1639, and the letters of Isabella de Yonge, wife of the fifth earl, 1735-1753. The Feilding papers throw no little light upon the foreign diplomacy of the reign of Charles I, while the letters of the countess have much to do with the character and career of Bolingbroke, after his departure for France in 1735. Two letters, dated 1691, concern an episode hitherto unknown in the career of Sir Edmund Andros, when the latter sought to obtain through the aid of Princess Anne a post as special emissary to France for purposes of espionage. The plan involved too much risk, and was rejected and Andros was consoled with an appointment elsewhere. The majority of the Pepys papers belonged originally to John Evelyn, who loaned them to Pepys in 1681. Evelyn never asked for them in return, and they were bequeathed with other Pepys manuscripts to Magdalene College, where they now are. Many of the papers relate to the reign of Elizabeth; others, the Stuart and Jersey papers, to the period of the civil war. The Elizabethan letters concern Leicester, Amy Robsart, Mary Queen of Scots, and the diplomatic relations of England, France, and Holland, and among them are a few references to the second Florida expedition of 1565. The later papers are exceedingly valuable for the history of the civil war, and incidentally give us several letters from Sir John Berkeley and the heads of a letter from Charles I to the secretary of Virginia. Among the few papers of later date in this report are a remarkable paper on New England, probably of date 1663-1664, and a letter from Edward Byllynge, of 1673-1674.

Very noteworthy is the report by W. H. Stevenson, the learned editor of Asser, upon the manuscripts of Lord Middleton. The collection is one offering many difficulties, consisting as it does of an enormous number of mediæval and later deeds, charters, court rolls, manorial accounts, and the like relating to thirty counties in England. The list of manorial records alone, here entered, occupies thirty-nine pages, and does not include similar documents of the seventeenth and eighteenth centuries. In addition to the legal and official documents there are a great many letters, among which is one affording a glimpse of Mary Queen of Scots during her imprisonment at Sheffield House, and giving a lively account of the domestic jars between the Earl of Shrewsbury, her jailor, and his wife, the famous "Bess of Hardwick," who built Hardwick Hall. There are also groups of papers relating to settlement in the West Indies, and to the Newfoundland venture of 1611-1631. Oddly enough, among these letters is one from Panhekoe, sachem of the Mohegan Indians in Connecticut, to Nicholas Hallam of that colony, touching an early phase of the long drawn out quarrel between that tribe and the colony of Connecticut. Among the rare documents noted in this report is part of an eighth-century uncial copy of the Latin vulgate, which Mr. Stevenson thinks may represent one of the three oldest manuscript books known to have been written in England. There are also fragments of a Worcestershire Chartulary of 1000 A. D., the oldest chartulary of which we have any trace. As fragments of both these precious manuscripts are in the British Museum, it is clear that many unique and rare documents were sold as waste paper at the dissolution of the monasteries. Almost equally interesting are the household accounts of the sixteenth century, which show the minute care with which household expenses were recorded, and, consequently, throw numerous side-lights upon the domestic life of the time. These records also yield a rich crop of obsolete terms, some of which are not recorded in the New English Dictionary. A list of these words is given in the index under "Glossary," occupying four columns. This volume, upon which Mr. Stevenson has been engaged for many years, has a wide interest for the modern, as well as the mediæval student, and bears to an unusual degree the marks of rare learning and patience in the realm of historical scholarship.

To the monographs on minor English authors of the late eighteenth and early nineteenth centuries which have been appearing of recent years in the Wiener Beiträge zur Englischen Philologie (Vienna: W. Braumüller), there is now added one on Joanna Baillie, or rather her "Plays on the Passions," by Dr. A. Badstuber (No. 34 of the series). After a few pages of biography the writer analyzes and discusses Miss Baillie's theories concerning the drama which she set forth in the "Introductory Discourse" to the first volume of her plays (1798), and which she endeavored to exemplify by the plays themselves. He next gives full outlines of the plots of these plays and comments on their relations to the theories of the authoress. Finally we have a general critical estimate of the "Plays on the Passions" and their place in English literature. Dr. Badstuber's dissertation cannot be said to have added anything notable to our knowledge of Joanna Baillie, but it is readable, and he has only to a slight extent fallen into the error which is common to works of this kind—that is, of overestimating the importance of his subject. Moreover, the full analyses of the plays which he gives will be useful for reference. On the other hand, his suggestion that in her methods of characterization Miss Baillie was influenced by earlier books of "characters" (compare, for instance, Theophrastus and La Bruyère) will hardly find acceptance. The similarity was an inevitable consequence of her dramatic theory, in accordance with which all the interest of a play was concentrated on one character conceived as the type of some single passion. No question concerning Joanna Baillie, however, has much importance, for her influence on the English drama was virtually *nil* and her works can scarcely be reckoned among the books that are merely half forgotten. Indeed, an eloquent passage in Scott's "Marmion" has done more to preserve her memory than all that she herself wrote.

"European Years, the Letters of an Idle Man" (Houghton Mifflin) reveals an exiled Bostonian of the old stock seeking climate in many lands, and meanwhile reading and moralizing at large. The idle man has an uncommonly well-stored mind and with frankly displayed prejudices a sufficient flexibility before the hazards of travel. He can be vivid when he chooses, and his comments on public affairs are often shrewd and pungent. Whoever has followed the course of things European for the last thirty years or so will find this book an agreeable remembrancer. That the letters have a fine crustiness is not to be denied, but we quite fail to find in them the exceptional epistolary merits promised by the editor, Prof. George E. Woodberry. They seem to us, even when most witty, a little overweighted with the complacency of a professional culture. Witness an extract: "I wonder somebody does not start the philosophy of Epicurus in Boston: it would ameliorate the asperity of its theological attrition."

Earnest readers will welcome A. Cabaton's "Java, Sumatra, and the Other Islands of the Dutch East Indies" (Scribner), with preface by Bernard Miall, as one which has succeeded in blending authoritative statement of fact with an attractive style. The Dutch East Indies possess an interest for the student of history and comparative politics which is out of proportion to their political status. In the first place, they constitute the oldest and most valuable colony of Holland, comprise an area approximately fifty-eight times the area of Holland, and contain a population nearly seven times as large as Holland's. And, in the second place, ever since the time of Pope Alexander's famous decree concerning the demarcation line, the islands of the East Indies have been sought after by the commercial nations of the earth. There is an added interest in this fact for the student of politics, inasmuch as the Dutch, English, Americans, and others are attempting to solve in different ways similar problems in their respective island possessions. The archipelago forms, as it were, a political laboratory wherein certain of the Powers are now working out the problems of colonial administration with varying degrees of success. The author devotes one of the early chapters to a description of the physical geography of the region, evidently believing, and rightly so, that one of the fundamental factors influencing human life conditions is the physical environment. Then follow chapters dealing with such topics as the natives of Java, the Oriental foreign element, Europeans in Java, the administration of Java, agriculture and industry, Sumatra and Borneo, Celebes and its dependencies. Not the least interesting part of the volume is the short final chapter, which might better be called a concluding note. The author here refers to the probable political future of the Dutch Indies. Although he admits that they, like all Asiatic colonies, are tending toward autonomy, he quickly adds that for the present, at least, they are incapable of realizing that goal unaided. "To pretend that a European domination," says the author, "even with its regrettable blunders and failures of

Digitized by Google

justice, is not for the good of such peoples (the Malays), is to deny the past and to deny the petitions of the victims in favor of the complaint of the privileged despoiled of their privileges." In short, his logical conclusion, whether assented to by the reader or not, is that no other nation, European or Asiatic, could do more than Holland has done for the Indies, and that they can attain independence only in the remote future, under the protection of the Dutch flag.

In "British and German East Africa" (Longmans), Dr. H. Brode, for many years German consul at Zanzibar, has for his main object to show the economic and commercial relations of the two Colonial possessions. But incidentally he gives much information in regard to the civilizing work going on in them, and the development of their rich natural resources. He attributes the greater advance made by his countrymen (their total trade in 1909 amounted to nearly twelve million dollars, twice as large as that of the English) to the fact that the colonial interest in Germany is concentrated on East Africa as the "jewel" colony, "whilst in the huge British Colonial Empire the East African Protectorates were looked upon as stepchildren." However, he frankly acknowledges that much of this greater growth is due to England's aid, especially through the building of the Uganda Railway and the establishment of a steamship line on Lake Victoria. As regards the future, he holds it to be certain that the economic relations will become closer; "and so, in peaceful competition, Germany and England will work together for the expansion of civilization in East Africa." Among the nine illustrations is one of an interesting slave caravan of former days.

In "The Egyptian Elements in the Legend of the Body and Soul" (Bryn Mawr College Monographs, Vol. VIII) Miss Louise Dudley publishes the results of a long and minute study in this country and abroad. As one of the most dramatic literary products of the Middle Ages, the story of this debate between a man's soul and body over the responsibility of each for his pitiful plight just at the point of death, has engaged more than the usual attention of scholars. But Miss Dudley has outdone them all by carrying its origin back to the superstitions of ancient Egypt. There she found in Coptic documents representing Christianized survivals of the older time the main elements contained in the versions of the Middle Ages. The following references in two Latin homilies on the subject gave her the clue: "Quoddam exemplum horribile, quod quidam homo sanctus in excessu mentis positus vidit, et audivit de quadam anima de Ægypto exeunte, et contra corpus suum contendente"; and "Audiamus quid Macaris qui curam gerebat animarum in Alexandria, quibusdam verba faciens, se a quodam fratre monacho in excessu mentis posito audisse peribetur." Considering the well-known vagueness and downright lies of mediæval writers with reference to their sources, Miss Dudley may be commended for her courage in taking these statements at their face value. Her arguments are altogether too complicated to be summarized here, but her general conclusion is this: In ancient Egypt the dramatic separation of the soul and body at death was a favorite theme, which was later greatly enlarged upon by the Christians of that country. At first there was no question of a good soul and a bad body, or vice versa, or of reproaches brought at that time; the mere act of separating was the real foundation of the story. No extant Coptic documents can be called direct sources of the Western versions, but, taken together, they prove conclusively that Egypt started the legend on its popular round.

Arnold Tanzer, who died recently at his home in New York, was born in Prague in 1841. Devoted to mercantile pursuits all his life, he found leisure for the cultivation of scholarly tastes and the acquirement of extensive knowledge, to which the columns of the *Nation* bore frequent testimony. His articles on contemporary politics, more particularly his reviews of books dealing with German and French history and biography, were always welcomed by the editor, the late Mr. Garrison, his friend, and, for many years, his neighbor in Orange. Mr. Tanzer was one of the few American possessors of Ersch and Gruber's "Allgemeine Enzyklopädie der Wissenschaften und Künste," that colossal encyclopædic collection, of which nearly 200 volumes have appeared up to date. The critical notices of some of the successive volumes of this unique work were not the least notable of his contributions to the *Nation*.

The Right Rev. Rowland Ellis, whose death is reported at the age of seventy, was the author of several works, among them "Some Aspects of Woman's Life," "The Church in the Wilderness," "The Christian Faith," "Sin and Its Remedy," and "Christ and the Gospels."

The death is announced of the Rev. Peter Anton of Kilsyth, Scotland, whose writings include "Masters in History," "England's Essayists," "The Flywheel," "Staying Power," and "History of Kilsyth."

Edmond Saglio, who died recently in Paris at the age of eighty-three, wrote in collaboration with C. Daremberg, a notable "Dictionnaire des Antiquités grecques et romaines"; for several years he was a conservator at the Louvre and later was director of the Cluny Museum.

From Berlin comes the report of the death of Friedrich Dernburg, the writer, at the age of seventy-eight. He wrote "Spanische Bilder," "Russische Leute," and other works, and edited the *feuilleton* of the *Berliner Tageblatt*.

Science

Books on gardening are constantly published, but they are for the most part concerned with the problem how to make seeds grow up into beautiful flowers or succulent vegetables. There is another aspect of gardening—the laying out of the home grounds so that they may all be harmoniously disposed in relation to the house—which has been comparatively ignored, with the result that every village and suburban street presents a number of misconceptions in gardening which might have been easily avoided. Grace Tabor, the well-known landscape architect, gives much helpful information on this subject in "The Landscape Gardening Book" (John C. Winston Company). She believes that Americans should have American gardens instead of attempting to build Elizabethan or Italian gardens, for which the castles and moats and other necessary surroundings are wanting. Having thus stated her point of view, she gives hints as to how to utilize natural features in garden making; how to screen, reveal, and emphasize objects and views; how to treat boundary lines, etc. She does not look on roads as necessary evils, but shows how they can be made the most of. The uses of trees are fully discussed, and the names given of the kinds best suited for various soils, rich or poor. There are chapters on vegetable gardens, on winter in the garden, on buildings, and so on, all of them copiously illustrated.

Another book on the same subject is "Garden Planning," by W. S. Rogers (Doubleday, Page & Co.). Mr. Rogers is an Englishman writing from an English point of view, but the only serious alterations deemed necessary for an American reprint of the book were in the lists of trees and plants adapted to this or that situation. He strongly urges the importance of eliminating symmetry from the general garden picture, as precluding a picturesque effect. He cautions against building on made ground; shows what is best to be done on the north and the south sides of a house, and has much to say regarding the comparative value of grass walks and other kinds of paths. Bridges, hedges, and summer houses are not overlooked. The appendix contains lists of flowers for special purposes, and many other things. While the subject of this book is identical with Miss Tabor's, there is much additional matter. Home-makers may profitably consult them both, thus avoiding mistakes and saving money by planning in advance.

The third of the Rural Manuals is Prof. L. H. Bailey's "Farm and Garden Rule-Book" (Macmillan). Like his "Manual of Gardening," the first of the series, it is the expansion of an earlier volume, in this case "The Horticulturist's Rule-Book," the continued demand for which, coupled with the growth of modern knowledge, made revision and completion necessary. The result, intended for the student farmer, is a handy reference manual of very wide scope. It is safe to say that within similar space there is nowhere contained so much reliable information for the farmer and gardener. This is in the form of rules, tables, formulæ, records, and so forth, and covers all the important departments of farm activity. The facts are gathered from many different sources, and preserve much valuable material which would otherwise be buried in experiment station reports. The book is thoroughly indexed, well printed, and attractively bound.

Susan M. Hallowell, emeritus professor of botany in Wellesley College, died in Wellesley on Friday evening, December 15. Miss Hallowell was born in Bangor, Me., in 1835. She became a teacher of various subjects in the public high school, but a strong bent towards science led her to give herself all the opportunities in the subject which the time afforded. She studied with Agassiz at Panikese Island. Before the opening of Wellesley College, Miss Hallowell was appointed professor of natural science, but she insisted that her work should be confined to one branch—that of botany.

Dr. Joseph Edward Janvrin, one of the founders of the International Congress of

Digitized by Google

Gynæcology and Obstetrics, is dead at the age of seventy-two. He was born in Exeter, N. H., in 1839, was educated at Phillips Exeter Academy, and received his medical training at the College of Physicians and Surgeons. He acted as assistant surgeon of the Fifteenth New Hampshire Volunteers in the Civil War, and came to New York in 1872 to be an assistant surgeon in the Woman's Hospital of the State of New York, a position he held until 1882. A year later he became the gynæcologist of the New York Skin and Cancer Hospital, and continued in that capacity until his death. He was president of the American Gynæcology Society, 1902-1903; president of the New York Obstetric Society, 1890-1891, and president of the New York County Medical Association in 1896 and 1897.

Prof. Odilon-Marc Lannelongue, the celebrated surgeon, died in Paris on Friday of last week. He was born in 1840, at Castera-Verduzan, in the Department of the Gers, and had devoted himself principally to surgery; he was made a professor in the Faculty of Medicine in 1884. As a practical and theoretical sugeon he acquired great fame, and some of his books on surgery are accepted as standard works. He was a member of the Academy of Sciences, and also of the Academy of Medicine, a Senator from the Department of the Gers, and was a Commander of the Legion of Honor.

Drama

A FAILURE AND ITS LESSON.

The temporary, if not final, abandonment of their enterprise by the Founders of the New Theatre is a discouraging incident for those who believed that its inception meant the dawn of a brighter day for the theatre; but it may be productive of good in the long run, if the lesson which it inculcates be duly taken to heart. That lesson, to be sure, is an old one, but the Founders disregarded it, and it is just as well, perhaps, that they and others of like mind should be compelled to study it over again from the beginning. The lesson briefly is that the first essential of a first-class theatre is a first-class performance, and that the one indispensable requisite to a first-class performance is a first-rate company.

There is an intimation in the official statement of the Founders that they may, at some indefinite time in the future, be inclined to try again, when conditions shall offer a clear field and satisfactory arrangements for management have been made. The clear field has always lain open before them, and lies there still. It is in the "satisfactory managerial arrangements" that the crux of the problem is to be found. When the New Theatre scheme was first mooted, certain prevailing conditions upon the stage had long been notorious. One of them was that the whole English-speaking theatre—not the American only—could not supply, from both sexes, half a dozen performers of the first class; another was that a steady deterioration in the quality of acting had been going on for a generation, as was proved by the marked superiority of the few surviving veterans over their younger successors, and the third was that, under the new system of syndicate management, nothing resembling a school of acting any longer existed. In other words, there were no really good actors to be had, and no apparent means of producing them. This was the situation. Nevertheless, the enthusiastic promoters of the New Theatre, putting too implicit faith in the irresistible magic of the checkbook and despising all obstacles, set to work to build a palatial temple, too large for drama, in which the spoken word was often inaudible, and when the edifice had progressed to a point where modification was virtually impossible, proceeded to collect an expensive but scratch company of widely different training, experience, and speech, for the expressed purpose of presenting the best drama of all kinds, and of establishing an institution akin to the Théâtre Français.

The wonder is not that they failed, but that they did not perceive the reason of their failure until something like half a million dollars had been lost in the experiment. They are to be congratulated very heartily upon the resolution to consider further before they adventure more. And, as has been hinted, they have furnished an object lesson of immense value. They have proved that money cannot do the work of brains, and that a theatre without actors is a futility. Others have shown that money is not even a prime essential to the establishment of such an institution as the Founders dreamed of. But the beginning has to be made from the bottom, with becoming humility, and not from the top. Phelps—one of the most sterling actors and managers that ever lived—showed how to make a stock company when he converted the disreputable and ruined Sadler's Wells Theatre, in one of the shabbiest districts of London, into the great centre of the poetic drama in England. F. R. Benson not only maintains the best Shakespearean company in Great Britain, but a school to which the metropolitan managers are indebted for nearly all their best players. The Chicago Drama Players have demonstrated that it is still possible to assemble an excellent company for all purposes of good modern drama from the capable players banished to the provinces by the manufacturers of modern stars. Not only this, but they proved once more how impossible it is for even capable actors to interpret artificial comedy acceptably without previous instruction. The Irish Players, with not much besides their coöperative zeal to help them, are exhibiting in a remarkable way the capabilities of a stock company and the undeniable feasibility of a true and inexpensive National Theatre.

It is not likely that the appearance of Mr. Ames as a possible rival had anything to do with the withdrawal of the New Theatre project. His opposition is neither direct nor formidable. It is only reasonable and agreeable to suppose that the Founders have realized finally the nature and depth of their error in not thinking about their company until they had built the house to put it in. The task of organizing a real stock company now is more arduous than it would have been three or four years ago, for some persons who might have been valuable assistants are dead. But money can command time and men. It might not be impossible, even now, to find a competent director—cocksure juvenile enthusiasts, of course, are plentiful—who would undertake to form in the course of four or five years a sufficiently sound, if not brilliant, stock company—from which all stars should be rigorously excluded—capable of speaking blank verse, of acting in romance or tragedy, and reproducing artificial comedy with its appropriate sparkle and elegance. Such a company would not cost half a million—for it could easily be made self-supporting while it was acquiring its education—but it would fulfil the original New Theatre programme, and, perhaps, though somewhat late in the day, justify the original expenditure upon its ineffective predecessor.

The presentation of Edward Knoblauch's "Kismet" in the Knickerbocker Theatre on Monday evening was in many respects a disappointment. So far as the beauty, taste, and costliness of the stage decorations were concerned, managerial promises were fairly fulfilled. Exterior scenes were fine in atmosphere, proportion, and color, and the architecture was constructed after good models. The interiors were spacious and brilliant. Only the bazaar scene, which required special tact and knowledge, was a comparative failure. This had brilliancy and bustle—too much bustle—but not life. For the eye there was ample entertainment, for the understanding not much. The story of "Kismet," interpreted in contemporaneous fashion, is only crude melodrama, but played in the Eastern spirit, with some realization of the conditions in Bagdad a thousand years ago, it becomes an Oriental romance of the most dramatic kind in which the power of coincidence—so dear to the fatalistic mind—is deftly used to bring about a series of startling events, including many reversals of fortune, in the course of a single day. The action is varied and incessant. Only illusion is necessary to hold the spectator in the grip of that suspense that makes light of all improbabilities. The part of Hajj, the beggar, who in his "day of days" achieves sudden prosperity, commits several murders, narrowly escapes mutilation, is reduced again to penury, and sees his daughter married to the Caliph whom he has tried to assassinate and who therefore dooms him to ban-

Digitized by Google

ishment, is Oriental to the core, and in its infinite variety of emotions might well excite the envy of the ablest actor. It may readily be believed that Oscar Asche created an immense impression in it in London. Here, although played by so good a romantic actor as Otis Skinner, it awakened no more than a languid interest. The performer seemed to feel the repressive influences of a cast unable to adapt itself to unfamiliar conditions. There were but few moments when the play really bore an Oriental, antique, or romantic flavor, in spite of the dreamy splendors of its setting. It was criticised openly as extravagant and dull. The actors, having no sense of illusion, could not, of course, impart it. If the representation should fail, the poor author must bear the blame, though his part of the work is very well done.

Among the novelties marked for production by Herbert Trench during his tenancy of the London Haymarket was an adaptation by Rudolf Besier of H. G. Wells's novel, "Kipps." For one reason or another the piece was never done, and with Frederick Harrison's advent at the Haymarket the rights in it were allowed to lapse. "Kipps" was promptly procured by Carl Leyel, Oscar Asche's general manager at the Garrick. In due course Mr. Leyel hopes to present it at a West End theatre.

Professor Reinhardt has arrived in London to superintend preparations for his production of "Œdipus Rex," which Martin Harvey presents at Covent Garden on January 15. The heavy structural alterations will at once be begun; the raising of the stalls floor, necessitated by the carrying of the steps to the King's palace into the front portion of the auditorium, is one of the important changes to be effected in the interior of the house. As it is Professor Reinhardt's intention to light the play entirely from the front, a special installation of an electric plant is to be made at the back of the gallery from which point the various remarkable effects will be obtained.

Gordon Craig has gone to Moscow to be present at the final rehearsals of "Hamlet," which is to be given in accordance with his theories. Speaking of the Prince, he said:

> I take an entirely commonsense view of the man and his motives. He simply succeeded in performing in two months a task that has been tried in every court in Europe for centuries. He set out to cleanse social and official life of its moral grime and its degeneracy. He set about his task with direct purpose, and with the full enthusiasm of a young, virile, and cruelly wronged man. His ideas were logical, and he reasoned and thought out every movement and act during that brief time of storm and stress that ended in tragedy. That is my idea of Hamlet.

If that really is Mr. Craig's notion of Hamlet, there does not seem to be much reason why he should be encouraged to promulgate it. What fatality is it that condemns so many enthusiastic stage reformers to be freakish?

The Paris correspondent of a London paper furnishes the following synopsis of "La Flambée," by M. Kistemaeker, which has just been produced at the Porte St. Martin in Paris: A French lieutenant-colonel, who has run himself deep into debt in order to provide a life of luxury for his high-spirited wife, falls into the hands of an international spy, who has bought up his bills and has him at his mercy. The officer and the spy are staying at the same country house, and when at a midnight interview the spy proposes to free the officer from all his financial embarrassments if he will betray the plans of the neighboring fort, the indignant soldier strangles him. The officer's wife, who had been estranged from her husband by his domineering spirit, is stirred to passionate devotion by his deed, and resumes the old conjugal relations in order to provide him with an alibi. At the same time she rejects the advances of a brilliant and fascinating ex-minister whom she had long encouraged. The ex-minister is impressed by the patriotism of the confession which the officer makes to him, and so manages the official inquiry as to bring out the real character of the murdered spy, whose death he characterizes as an "execution." There is a reconciliation of a kind dear to the French stage morals, and the curtain falls on a scene in which patriotic enthusiasm is mingled with conjugal and other affection.

Rose Eytinge, whose death occurred last week, was, in her day, a very beautiful woman and a most capable actress. She had at her command pathos, passion, hauteur, and, in a measure, humor. Her style was bold, picturesque, and refined, and her presence exercised a great power of fascination. In her early prime, when she was leading lady at Wallack's, her performance of Nancy Sykes to the Bill of G. L. Davenport, was generally regarded as a masterpiece of cruel, pitiful naturalism, and she excelled also in romantic characters. It was in the Union Square Theatre Company, especially in such plays as "Led Astray" and "Rose Michel," that she was seen at her best and reached the height of her reputation. She was born in Philadelphia in 1835, and was educated there and in Brooklyn. She became a member of Edwin Booth's company, and in 1880 went to London and appeared with Barry Sullivan, Stuart Robson, and other leading actors. For several years following she taught stage work. She reappeared as an actress in "The Helmet of Navarre," "Frocks and Frills," and, more recently, in support of Mrs. Fiske in "Mary of Magdala" and "The Bishop's Carriage."

Music

LISZT'S DANTE SYMPHONY.

The climax of the Liszt Centenary festivities was the last Philharmonic concert. Josef Stransky conducted the symphonic poem, "Die Ideale," and the "Dante" symphony, while Arthur Friedheim, a genuine pupil of Liszt, played the A major concerto in a manner which his master himself could hardly have surpassed. The "Ideale" is, from a formal point of view, one of the most finished of Liszt's symphonic poems, but in the matter of inspiration or abundance of ideas it is inferior to his "Tasso," "Les Préludes," "Orphée," "Mazeppa" "Festklänge," "Hungaria," and "The Battle of the Huns." The "Dante" symphony, on the other hand, is generally regarded as marking, with the "Faust" symphony and "Tasso," the climax of his creative activity. The first sketches for it were made as early as 1847; it was finished in 1855, and first performed in 1857 at Dresden.

Its first American production was in 1870, in New York, where there was an early Liszt cult fostered by Bergmann, the conductor of the Philharmonic Society. This society made Liszt an honorary member in 1873, a distinction which gave him much pleasure. In his reply he said: "This diploma is rendered especially valuable to me by the words expressive of the motive which prompted it, namely: 'By his many compositions has extended the boundaries of his art,' etc., and their consonance with the acts of the Philharmonic Society in performing many of my works." Subsequently, Theodore Thomas became an ardent missionary for his works, and to him Liszt also wrote to express his gratitude "for the unusual care which you have given to the performance of my works. They need—even more than other, better compositions, the sympathetic and intelligent care of the conductor, on account of the many changes of tempo and tone color."

In Josef Stransky, the Philharmonic now has an ideal Liszt conductor—one who knows the significance of these many changes in tempo and color. His accession, just at the time when Joseph Pulitzer left the Philharmonic $500,000 on the condition that a prominent place should be given in the programmes to the works of his three favorite composers—Beethoven, Wagner, and Liszt—makes it certain that none of Liszt's masterworks will again be neglected as long as was the "Dante" symphony, which had not been heard here for twenty-eight years. Its performance showed that time has had no effect on this piece, as might be inferred from the fact that Dvorák, Dukas, and Thuille have found inspiration in its score, while Wagner borrowed themes for his "Parsifal" from the Magnificat which forms its third part. In this part a chorus of women's voices is introduced with beautiful effect. But the most original and imposing part is the first, in which Liszt depicts the infernal regions with a realistic force that even Berlioz never equalled. In all music, there is nothing more awe-inspiring than the tones in which the brasses hurl out the "All hope abandon, ye who enter here," or than the *allegro frenetico*, in which the agonized shrieking souls are beaten about in the darkness by the musical whirlwind.

"The Inquisitive Women," Wolf-Ferrari's opera, is to have its first American performance at the Metropolitan Opera House next Wednesday. It is based on a comedy by Goldoni. The reason the women are inquisitive is that the men spend their time at a clubhouse on the door of which is a sign reading, "Women are excluded."

Digitized by Google

The women are sure that horrible orgies are carried on and they try in diverse ways to get keys or force their way in. The opera will be conducted by Toscanini, and the cast includes Geraldine Farrar, Bella Alten, Rita Fornia, Mme. Maubourg, Jadlowker, Scotti, and De Segurola. Wolf-Ferrari is a young composer of thirty-five, whose operas have won success in Germany as well as in Italy. He is director of the Marcello Conservatory in Venice.

A notable feature of Joseph Stransky's programme for the New York Philharmonic concerts this Thursday evening and Friday afternoon will be the first performance in America of Weingartner's latest Symphony, the No. 3, in E major, op. 49. His first Symphony has been heard in this country in Boston only. The second was produced by the Philharmonic Society on December 5-6, 1902. In 1904, when Weingartner was in New York, as one of the "guest conductors" of the Society, he directed performances of two of his symphonic poems. The Symphony now to be performed, the Third, was played for the first time late last year in Vienna. It has since been performed by a number of European symphony orchestras. The work is Viennese in spirit, use being made of a waltz theme in the finale, with motives from "Die Fledermaus."

The full orchestral scores of Liszt's twelve symphonic poems have been published by Ernst Eulenburg, Leipzig, in the miniature editions which are coming so much into favor because they are so handy and cost so little—only thirty marks for the twelve, any one of which used to cost about that sum. Among other full scores at nine to eleven marks each, are Bach's St. Matthew's Passion, Brahms's four symphonies and his German Requiem, Schumann's four symphonies, Mendelssohn's two, Handel's "Messiah," Berlioz's best works, Beethoven's nine symphonies (30 marks for three volumes), and two volumes, including violin concertos by Bach, Beethoven, Mendelssohn, Mozart, Spohr, Brahms, Bruch, and Tchaikovsky. The chamber music scores of the great masters, from Bach to Dvorák, can also now be obtained in this miniature edition.

Art

THE WINTER ACADEMY.

Despite the new rule of accepting no more than two works by any painter, the National Academy hangs this winter less than two-thirds of the works accepted. The residue of sixty-eight pieces of sculpture and three hundred and thirty-four paintings forms a show by no means uninteresting in itself, but imperfectly representative. Such will be the case with all Academy exhibitions until proper galleries are provided.

Dallin's An Appeal to the Great Spirit, a praying Indian on horseback, in bronze, occupies the approach to the Fine Arts Building. The lithe handsomeness of the sculpture is much diminished by the oddness of such an apparition apparently leaving the portal. Is he thanking the Great Spirit that the visit is over? Or does he merely emphasize the fact that there is no room inside for monumental art? Either explanation will perhaps explain his rather startling presence in Fifty-seventh Street. Inside, sculpture holds its usual secondary place, though there still is too much for the decorative effect of the galleries. Among the more attractive contributions are those of French, Janet Scudder, Robert Aitken, Bessie Potter Vonnoh, Fraser, Edith Woodman Burroughs, and Abastenia St. Leger Eberle. With these may be mentioned the exhibit of finely carved medals by Victor D. Brenner.

As for the pictures, they are uncommonly well hung. In fact, the material is more varied than usual, both in size and theme. The normal supply of merely respectable portraiture has mercifully shrunk; small landscapes do not so tediously prevail; figure subjects are more than commonly in evidence, and the presence of a few large canvases gives tone and focus to each gallery. One comes away with the novel sensation less of a duty done than of a pleasure experienced. And this is due not so much to the presence of a few memorable works as to the sense of a general cheery competence which neither calls for cavil nor yet exacts any very intense appreciation. With some visitors the homelikeness of re-seeing several good pictures already viewed at Pittsburgh or Philadelphia counts for something. Others may resent such a reminder of the secondary position of New York as exhibitor of current art.

There can be little new to say of the approved excellence of such painters as Ochtman, Snell, Rehn, Woodbury, Frieseke, Cecelia Beaux (unfavorably represented this year), Volk, Chase, Sergeant Kendall, Groll, Van Laer, Eaton. Again, Sargent's splendid portrait of the "Hoosier Poet" cannot be seen too often, but suggests no new comment. Unquestionably the most striking contributions are the Russian Fechin's Carrying Off a Peasant Bride, Blashfield's big allegorical canvas called Life, and Kenyon Cox's A Vision of Moonrise.

Fechin has plenty of the disorderly power befitting his race. His peasant rout is painted with gusto, but there is no unity beyond that of subject matter. Amid discreet surroundings such robustness gains factitious value, as Col. Roosevelt might seem more than usually colossal at a session of a peace society. In the spectral solemnity of the allegory Life it is hard to recognize the suavity of Blashfield. Nor is the allegory itself quite clear, though apparently a mother's death in child-birth is the basis of the symbolism. The nude figure of a man is doubled upon itself in the portico of a vast temple. Two ominous female figures stand before a bronze door where a black-robed, mourning woman enters slowly. A shaft of light from her widens towards the cowering man. In it is a nude infant appealing to the disregardful sitter at the threshold. Behind the group, the base of a massive Doric column looms phosphorescently. It is an impressive piece, recalling on the one hand Watts, on the other Franz Stuck in his better vein. It would require more acquaintance than is possible in a first visit justly to appreciate this remarkable picture. Kenyon Cox's A Vision of Moonrise seems a masterpiece *manqué*. The draughtsmanship is superb. One would love to cut out the figure of the nude shepherd dazzled by the beauty of the winged moon-maiden who hovers before him. The color is sonorous and fine, the landscape beautifully disposed in succinct decorative formulas. Mr. Cox achieves quite new and notable qualities in this canvas. It will become more lovely in color with age. And yet something ails the whole thing. Perhaps the fuller realization of the moon-maiden is out of keeping with the more generalized form of the shepherd. Or there may be the more radical defect that the composition is not a vision at all, but a thing learnedly compiled with no comprehensive visualization at any stage. One is inclined to that view after seeing Cox's masterly portrait of Grant La Farge a few steps away. A definite subject matter seems to make all the difference.

Among the portraits, none, with the exception of Sargent's James Whitcomb Riley, seems its peer. But Speicher's prize portrait of a lady in a fur toque is lovely in tone and admirable in characterization, Alden Weir's second best remains better than most painters best, Blumenschein shows a very able portrait group which, however, sags out of the frame. George Bellows and Ben Ali Haggin contribute portraits of immense exhibitionistic effect, but lacking the self-contained quality of really fine portraiture. It would be an interesting exercise in criticism to discriminate between these two very striking female portraits and their nearest parallels, Manet and early Sargent. The difference possibly is that these old masters did not carry a chip on their shoulders, and yet a chip is a seemly ornament for ambitious youth.

Couse's crouching figure of an Indian Potter well deserved its prize and is the most attractive of the smaller figure compositions. It shows that preciseness and even explicitness of rendering is compatible with atmospheric envelope—a lesson which though obvious enough to those who know old painting needs to be reiterated to-day. Paxton's big Academy, vaguely reminiscent of Ingres's La Source, is as beautifully seen as painted. Among *genre* subjects, Glackens's Children Bathing is remarkable for sense of place. The flimsy ugliness of seaside architecture is most humorously conveyed. There is a de-

Digitized by Google

lightful idyllic freshness about a similar subject by Jonas Lie. The social dip is sublimated into a kind of nature worship. Jerome Myers, perhaps the finest eye and sympathy among the painters of child life in New York, seems, as in the last year or so, to be hesitating between decorative and illustrative aims. Walcott, in a vision of romping children, chooses frankly for illustration. A gracefully decorative sort of ideal portraiture is well represented by the contribution of the President of the Academy, and Johansen reveals a very similar bent and accomplishment in the group A Windy Day on the Beach.

Landscape, were it not for the feature of many studies from the Grand Canyon, would seem rather in abeyance. Of these Arizona pictures none is more distinguished than Ben Foster's beautifully composed and reticent canvas Laguna Canyon. It represents merely a rise of sunsteeped sand and sage bush, but it conveys the peculiar dignity of the desert and the austerely beautiful quality of wind-sculptured desert forms. Gardner Symons's Snowclad Fields in Morning Light is a quite astonishing bit of insistent realism. You could walk in it, if that be any advantage, but it is lacking in design, a quality in which this able young painter usually is strong. Two little landscapes by George M. Bruestle hang over a door. In that place and altitude many good things have hung before. A shrewd visitor will look there first on entering the gallery. Bruestle affects a sonorous contrast between a russet earth and a blue-green sky. His pictures have, besides this depth of color, extraordinary mass and scale. There may be some danger of the scheme sinking to a trick, but at the moment none of the younger landscape painters gives more substantial promise. Harold Camp, whose Morning Star this year is of ambiguous effect, is another youngster who will bear watching. He achieves fine color and a real decorative simplicity. A similar tendency is shown in the landscapes of W. D. Paddock in which elimination is carried almost too far. They have charming passages of color.

So one might go on quite endlessly. Paul Dougherty's A Freshening Gale is perhaps the best of the marines. Hays's study of jockeys is as vivid as a Degas. Jonas Lie's Brooklyn Bridge in Winter is fine in pattern and big in feeling. Louis Cohen's view of Toledo from the river has an old-fashioned well-bred charm quite rare in painting to-day. It would be rash to assert the presence of a single deathless masterpiece in the Academy this winter, though it is hard to imagine a time when Sargent's Riley will cease to be interesting, but there are many pictures one is glad to have seen. Everything about the show testifies to a wholesome experimentalism by no means confined to the younger men.

The Carnegie Prize was awarded to Edwin H. Blashfield, the Thomas R. Proctor Prize for the best portrait, to Eugene E. Speicher, The Isidor Medal for the best figure composition, to E. Irving Couse, the Helen Foster Barnett Prize for sculpture, to Mahonri Young.

F. J. M., JR.

The gold medal for painting at the London Royal Academy was won by Miss Margaret L. Williams; a woman also won this medal two years ago.

William Griggs, who is well known for his studies to perfect the art of facsimile reproduction, is dead in London, at the age of seventy-nine. His "Specimens of Illuminated MSS. at the British Museum" is a masterly work.

Finance

AT THE END OF THE YEAR.

Not often does the financial community as a whole approach the end of an old year and the beginning of a new one in a more sane and intelligent frame of mind. It is true, we have lately been aroused with somewhat extravagant talk of "the biggest boom in the steel trade's history for 1912"—talk that bore a faint suggestion of 1909. But the test of such venturesome predictions is not in their utterance, but in their reception, and the reception of Wall Street's version of Mr. Frick's prediction has been marked by eminent common sense. The Stock Exchange, though it cheered up, did not get excited. Pittsburgh shook its head, predicted a gradual revival, and professed its willingness to take things as they should come. The organs of the steel trade had some smiling allusions to Wall Street's habit of coloring prediction, and advised the steel-making interests to go slow. And finally, the steel-making chiefs themselves, after conferring upon the situation, decided to do no arbitrary marking-up of prices, but to let the movement develop in its natural course.

Now all this is so normal, from the standpoint of an intelligent merchant or investor, that it might seem the merest commonplace. It is the policy pursued by those humdrum capitalists, concerning whom everybody wonders how they made their fortunes, since they never plunged on the Stock Exchange, or promoted Trusts, or offered more or less fraudulent enterprises to investors. But it is chiefly the contrast between this mood of the community and the mood of 1901 or 1906 or 1909 which arrests attention. Whatever the explanation, it is certain that some sort of sea-change has come upon the financial mind.

There is one possible and not uninteresting explanation. A very shrewd observer of the history, both of Wall Street and of American industry, once remarked that the real forward movement after a period of hard times never comes until all the parties chiefly interested have agreed that it will never come at all. This diagnosis, which was based upon study of several famous episodes of financial reaction and recovery, would have ruled out from the realities such episodes as the "Sunshine movement" of 1908, when everybody declared that nothing had happened in the previous October, or the boom of 1909, when every one said that of course good times were back again, because the group of financiers who make good times had said so. The prescribed conditions would not have been met, in the present after-panic period, until the autumn of 1911, when the merchants, the manufacturers, the Stock Exchange, the outside public, and high finance itself, had publicly agreed that prosperity had departed, never to return.

Nor is it by any means illogical that such a state of mind should mean that the hour had struck for the beginning of real recovery. A great financial crisis always means that credit and prices, in financial and industrial markets, had been inflated beyond the point where available capital could bear the strain. If one were to imagine Finance and Industry meeting the problem in a sober and scientific way, one would expect a period of prolonged and persistent liquidation; of prices lowered so as to suit the community's impaired resources, and kept down until supply and demand were brought in touch with one another; of extravagant living and abuse of credit abandoned through force of circumstances, until people who had been deliberately living beyond their means were put in their proper place in the social organism.

There were not wanting prophets to say, in November, 1907, that all this would have to happen before we should be again on the road to genuine prosperity. Some of them went so far as to predict that an era was ended with that panic. They declared that billion-dollar Trust promotions, community-of-interest directorates, use of the trust funds of great corporations to fight on the Stock Exchange for possession of $155,000,000 railways, the buying up of groups of banks at reckless prices, with money borrowed on shares of other banks, and the buying up of groups of railways with money borrowed on bonds of other railways, would presently be deemed as much the incidents of a closed chapter in history as were the "gold corner," the purchase of judges by railway adventurers, and the flight of the Erie directors with the company's books and cash to Jersey City, in the later 'sixties. These prophets usually concluded their forecast by suggesting that economy would have to replace extrava-

Digitized by Google

gance among the people as a whole, and that those who would not recognize the new order of things would be relegated to the ranks of seedy promoters, book agents, Wall Street bores, and borrowers from their wives' relations.

Such was the highly unpalatable prediction, and never did prediction seem more grotesque than this did in 1908 and 1909. Yet the community is now beginning dimly to perceive that it was a true prediction. It sees that the conditions thus laid down have, one by one, been realized. They did not come into force at once; they never do; and the process of loosening the desperate grasp of the irreconcilables from the old planks that remained afloat in the troubled sea was painful. But now that so much of the clearing away of wreckage has been done, the end of the process seems to be in sight. That this should happen on the heels of the declaration (six or eight weeks ago) that boom times would never be seen in America again, and that its first result should be that men in charge of great affairs are insisting on moving slowly, prudently, and discreetly, is only repeating the pleasanter part of the history of finance.

A Book of Vital Importance Just Published

C. B. Davenport's HEREDITY IN RELATION TO EUGENICS

By the Director, Department of Experimental Evolution, Carnegie Institution of Washington. With diagrams, 298 pp. 8vo. $2.00 net.

Eugenics treats of inborn, inheritable capacities and tendencies. Modern heredity explains how these tendencies get into the children and assists young persons to select consorts so as to have a sound offspring. The book tells what is known of the inheritance of various diseases and other characteristics; it discusses the origin of feeblemindedness, its vast social consequences, and its elimination; it consders American families, the part they have played in history and the proof they furnish of the all-importance of "blood."

Henry Holt & Co. 34 West 33d St.

THE BOOK OF BURIED TREASURE

By RALPH D. PAINE

This absorbing book, the outgrowth of travel and research, tells the facts regarding great treasure hoards known to have been lost or buried, their whereabouts, and the pirates or others who lost or hid them. It tells also of the results of present-day treasure-seeking. Entertaining as fiction—and true. (*Crown 8vo. Copious illustrations.* $2.50 *net; postpaid,* $2.72.)

GOOD CHEER

The Romance of Food and Feasting

By F. W. HACKWOOD

Author of "Inns, Ales and Drinking Customs," etc.

A diverting holiday book presenting its subject from the historic and picturesque sides. Roman banquets, royal feasting, baronial profusion, cooks and epicures, the aesthetics of dining, diet, etc., etc., are among the subjects treated. (*Demy 8vo. Color frontispiece and 24 illustrations.* $2.50 *net; postpaid.* $2.72.)
