Macmillan's long list of recent or forthcoming books includes in fiction: "The Man in the Shadow, and Other Stories," by Richard Washburn Child; "The Inside of the Cup," by Winston Churchill; Dostoievski's novels, "Crime and Punishment," "The Possessed," "The Idiot," "The House of the Dead," and "The Brothers Karamazov," translated by Lucy M. J. Garnett; "Puppets," by George Forbes; "Mothers to Men," by Zona Gale; "The Healer," by Robert Herrick; "South Sea Tales," by Jack London; "The Believing Years," by Edmund Lester Pearson; "The Jugglers," by Molly Elliott Seawell; "Mother," by Kathleen Norris, and "The Love that Lives," by Mabel Osgood Wright.—Juveniles: "The Children's Book of Christmas," edited by J. C. Dier; "Honey Sweet," by Edna Turpin; "Peggy Stewart," by Gabrielle E. Jackson; "Peeps at Many Lands and Cities" and "Fairies Afield," by Mrs. Molesworth.—Travel: "From Constantinople to the Home of Omar Khayyam," by A. V. W. Jackson; "Panama," by Albert Edwards; "Universities of the World," by Charles F. Thwing: "The Soul of the Far East," by Percival Lowell; "Highways and Byways of the Great Lakes," by Clifton Johnson: "Home Life in Russia," by Dr. Angelo S. Rappoport, and "France and the French," by Charles Dawbarn.—Verse: "Poems," by Madison Cawein, and "The Overture and Other Poems," by Jefferson Butler Fletcher.—Biography: "The Life of Ruskin," by Edward Tyas Cook; "The Life of Benjamin Disraeli," by W. F. Monypenny, Vol. II: "The Record of an Adventurous Life," by Henry M. Hyndman; "The Life of Edward, Earl of Clarendon," by Sir Henry Craik, 2 vols.; "Statesmen of the Old South," by William E. Dodd; "The Philanthropic Work of Josephine Shaw Lowell," by William Rhinelander Stewart, and "Autobiographic Memoirs," by Frederic Harrison.—History: "Studies: Military and Diplomatic," by Charles Francis Adams; "Democratic England," by Percy Alden, M.P.; "A History of the United States," by Edward Channing, Vol. III; "The New History," by James Harvey Robinson; "The Presidential Campaign of 1860," by Emerson David Fite; "The Cambridge Modern History," two supplementary volumes; "The Cambridge Mediæval History," planned by J. B. Bury, Vol. I; "A History of German Civilization: A General Survey," by Ernst Richard; "The Quakers in the American Colonies," by Rufus M. Jones and others; "The First American Civil War," by Dr. H. Belcher; "Social Forces in American History," by A. M. Simons; "Hellenistic Athens: An Historical Study," by William S. Ferguson, and "Social Life in France in the XVII Century," by Cecile Hugon.—Politics and economics: "Principles of Economics," by F. W. Taussig; "Wages in the United States," by Scott Nearing; "Economic Beginnings of the Far West," by Katharine Coman; "The Law of the Employment of Labor," by L. D. Clark; "The Rise of Chinese Nationalism," by Paul S. Reinsch; "The Tariff in Our Times," by Ida M. Tarbell; "Making Both Ends Meet," by Mrs. S. A. Clark and Edith Wyatt; "Problems in Railway Regulation," by Henry S. Haines; "District Nursing," by Mabel Jacques; "The Lowell Social Survey," by George F. Kenngott.—Religion and philosophy: "Christianizing the Social Order," by Walter Rauschenbusch; "Success Through Self-Help," by Newell Dwight Hillis; "Moral and Religious Challenge of Our Times," by Henry Churchill King; "Everyman's Religion," by George Hodges; "Socialism and the Ethics of Jesus," by Henry C. Vedder; "William James and Other Essays on the Philosophy of Life," by Josiah Royce; "The Five Great Philosophies of Life," by William DeW. Hyde; "Life, Love, and Light"; "The Basis of a Scheme of Life," by Rudolf Eucken; "The Bible for Home and School," edited by Shailer Mathews, and "Job," by George A. Barton. Macmillan's list of announcements will be completed in the *Nation* of next week.

In a neat volume bound in red limp leather Crowells have issued the "Complete Poetical Works of Dante Gabriel Rossetti,"

Digitized by Google

with W. M. Rossetti's Preface of 1886 and Notes.

The *American Journal of International Law* for July, which has just appeared, opens with the Presidential address of Senator Root, delivered at the annual meeting of the American Society of International Law held in Washington last spring. In it, as in his previous Presidential addresses, Mr. Root undertakes to discuss a practical, utilitarian question, in this case codification as applied to international law. The function of the codifier of municipal law is to produce a systematic and authoritative statement of the law already prescribed by a sovereign, whether that sovereign be the people or some other body. To codify international law one deals with different material, and with a different process. The substantial work of international codification is not merely to state rules, but to obtain agreement as to what the rules are by the nations whose confirmation of them is indispensable to establishing them. In short, to codify international law is primarily to set in motion and promote the law-making process itself. Publicists have long occupied themselves with formulating international systems: Mr. Field, in 1872; Professor Bluntschli, Heidelberg, in 1868; Sig. Fiore of the University of Naples, in 1888; M. Duplessix, in 1906; while the Institute of International Law, established at Ghent in 1873, has devoted itself to the scientific study and discussion of the law. Associations for such study have so grown in numbers that when in 1910 the central office of international institutions at Brussels invited representatives of similar associations to meet in a congress, one hundred and thirty-four accepted, and it has appeared that there are about three hundred associations in existence. The paper by the late Gen. H. W. Halleck, U. S. A., on "Military Espionage" discusses the case of Major André, whose execution Gen. Halleck thought was legally justified. The paper corrects certain misstatements, among others as to the composition of the trial court, which consisted of fourteen general officers of distinction. Gen. Halleck's opinion—that a spy who has succeeded in carrying information to his own army is not liable to punishment for that offence if subsequently captured by the enemy—is also shown to be confirmed by the Hague Conference, in Art. 31 of its "Regulations Respecting the Laws and Customs of War on Land." There are two papers on the right to fortify the Panama Canal; the first, by Prof. Eugene Wambaugh, maintaining the right; the second, an elaborate study by Crammond Kennedy, denying it. Professor Wambaugh's shorter paper quotes Lord Lansdowne as saying that "there is no stipulation prohibiting the erection of fortifications."

Ching-Chun Wang, in an article on "The Hankow-Szechuan Railway Loan," gives a very intelligible narrative of complicated negotiations. The railway line is to extend from Hankow, on the Yang Tse, a great railway centre, westward to Shengtu, the capital of the very rich Szechuan province. In 1903 Sir Ernest Satow, British minister to Peking, after long negotiation and a naval demonstration, concluded an agreement with Prince Ching, president of the Board of Foreign Affairs, which provided that if China desired to construct a Hankow-Szechuan line, she might obtain all necessary foreign capital from Great Britain and the United States. This offer was in harmony with the British policy of connecting India with China, via Burma, Yunnan, and the head waters of the Yangtse River. Thomas Willing Balch contributes an article of historical significance on Albericus Gentilis, the Italian scholar and exile, who, coming to England in or about August, 1580, was one of the founders of international law. He became a doctor of the civil law and soon after his arrival was called on for advice in the case of Mendoza, the Spanish ambassador, who had been detected in plots against Queen Elizabeth. His advice was to conduct Mendoza to the frontier, and send him back to Spain, and this is a practice approved in more recent times. Mr. Balch credits Gentilis with having clearly laid down rules of conduct between nations in beginning war, waging it, and bringing it to a close; with having held advanced ideas on the rights of neutrals; with striking a blow for more humane practices in the treatment of prisoners, and of the defenceless in the enemy's country.

Those who would expect some interesting philosophy from a man of President David Starr Jordan's experience in science and in public life will be disappointed in the little book, "The Stability of Truth" (Holt), which is a mass of irrelevancies. In the first place the character of the six lectures is irrelevant to the purpose of the McNair Foundation; science is represented, but theology is quietly ignored. Then the title of the book is irrelevant to the eager and avowed pragmatism of its message; for if truth is being ever developed in action, it is not conspicuously stable. Yet this irrelevancy, or inconsistency, is faithful to the internal confusion of the doctrine, in which pragmatism is crudely compounded with a naturalistic absolutism. Truth is that which works; yes, but nothing will work unless it corresponds to natural fact. Each of us may choose his truth—from the eternal truth of the universe. Throughout the six lectures the argument never progresses, but remains always pivoted. The most interesting feature is a choice collection of frauds and delusions presented under the head of Realty and Illusion. The book is the first number of a Philosophy of Nature series.

"Among Indian Rajahs and Ryots" (Lippincott), by Sir Andrew H. L. Fraser, ex-Lieutenant-Governor of Bengal, differs from the many other profusely illustrated books put forth annually concerning India in being the work of a man who has lived a number of years in the country he describes. Sir Andrew gives pleasant touches here and there revealing life as it was, in sharp contrast to life as it now is in diplomatic circles. His remarks on the ease with which testimony is bought in the law courts, the chapters on the police, education, and Christian missions, are all well worth reading. The author is not in sympathy with the present view of education which tends to neglect the higher in favor of the "lower orders," and says: "In our enthusiasm for the salvation of blind beggars, let us not overlook the possibility of enlisting a St. Paul." Politically, the chapter on Indian unrest will also attract attention. Sir Andrew regards this unrest as not altogether evil. He is, in fact, somewhat sanguine, but his is an argued and reasonable hopefulness, which is good reading after the vague diatribes against the government. The chapter on the partition of Bengal should be especially instructive to the natives themselves. Under the caption Humours of Administration many good stories are told. There are also tales of hunting to please Nimrods, and some details of massacres, showing what sort of wild beasts in human form India still contains.

"Adventure, Sport, and Travel on the Tibetan Steppes" (Scribner), by W. N. Fergusson, is, in the main, a record of two journeys taken through China by the late Lieut. Brooke, who in the first instance left Shanghai on August 1, 1906, and, after partly crossing Tibet, returned in October, 1907. On the second journey he left Shanghai in December, 1907, and travelled for a year in western Szechuan and eastern Tibet. On December 28, 1908, he was cruelly murdered in the Independent Lolo Land. Mr. Fergusson has elaborated the diary of this unfortunate Englishman, and has added the experiences which he himself had in this interesting region, while distributing tracts for the Foreign Bible Society. It is a pity that Lieut. Brooke did not survive to record his own wanderings, as even in his rough diary he reveals a delightful power of description and a grasp of salient points of interest. On the first day's ride of his journey into Tibet he was attacked by a Tibetan, who with sword and stones tried to kill him; on the second day his Yaks broke his instruments and half-murdered his servant; and, after weeks of the hardest travel, he was finally turned back and not allowed to proceed to Lhasa. Mr. Fergusson's style is not so pleasant, being more matter-of-fact, and burdened with many repetitions; yet he gives many interesting facts concerning the semi-independent tribes of western Szechuan, and the few allusions to the flora and fauna are all of value. For one who has travelled in these isolated regions, it is an easy matter to fill in the gaps of descriptions—the hundred and one common things which make up the picture—but it will be impossible for the untravelled to form anything like a correct impression. He will see but vaguely the dark, rocky valleys and their torrents; the brilliant, snowy heights, with their strips of blue sky; the soaring lammergeiers, and the grace and poise of the living serow or goral. Two maps of Szechuan show the line of travel.

The "Bellum Civile" of Petronius, edited by Florence T. Baldwin (Columbia University Press), takes the place of the customary dissertation for the degree of doctor of philosophy in Columbia University. This poem of less than 300 lines has been the subject of a vast amount of discussion. It swarms with difficulties, both of text and meaning. What was Petronius's object in writing it? Is it a parody or serious work? What is its relation to Lucan's "Pharsalia"? Has it any allusions to Seneca? These and many other problems have continually vexed the critics. Miss Baldwin's work shows the most conscientious care in sifting all authorities and in weighing all the suggestions of the preceding critics. While contributing little herself to the elucidation of the various questions, she has made a very useful edition, and supplied a need that has

Digitized by Google

been increasingly felt since Burmann's time.

Francis Andrew March, who died on Saturday in his eighty-sixth year, was emeritus professor of the English language and comparative philology at Lafayette College. At the age of twenty he graduated from Amherst. Princeton gave him the degree of LL.D. in 1870, and Amherst a year later. From Columbia he received an L.H.D., and in 1896 Oxford and Cambridge, England, made him, respectively, a D.C.L. and a Litt.D. He was president of the American Philological Association for two terms, an honorary member of the London Philological Society, and vice-president of the New Shakespeare Society of London. Among his works are "Method of Philological Study of the English Language" and "Comparative Grammar of the Anglo-Saxon Language." He also edited several Latin and Greek texts.

The Rev. George Thomson Knight, D.D., professor of Christian theology at the Crane Theological School, and formerly connected with the Tufts Divinity School, died on Sunday, in his sixtieth year. He wrote many treatises on theological subjects, and two books, "The Goodness of God" and "The Praise of Hyprocrisy."

James Russell Soley, a lawyer who was noted as the author of books on naval affairs, ex-assistant secretary of the navy, for a time professor of history and law at the United States Naval Academy, and since 1885 lecturer on international law in the Naval War College at Newport, died on Monday. He was sixty years old, and a graduate of Harvard. Professor Soley was counsel for Venezuela, at the arbitration at Paris of the Venezuela-British Guiana boundary dispute in 1899. Among his books are "History of the Naval Academy," "Foreign Systems of Naval Education," "The Blockade and the Cruisers," "Rescue of Greely" (with Winfield S. Schley), "Boys of 1812," "Sailor Boys of '61," and "Life of Admiral Porter." He edited the autobiography of Commodore Morris, 1886, and contributed to "Battles and Leaders of the Civil War" and to Justin Winsor's "Narrative and Critical History of America."

The death is reported from Kelso, N. B., of Miss Anna M. Stoddart, who was the author of several volumes of interesting memoirs: of Professor Blackie, Mrs. Pease Nichol, Sir Philip Sidney, Saint Francis of Assisi, and others. She also wrote a monograph on Jacopone da Todi, and was engaged at the time of her death on a life of Paracelsus.

Mrs. Katherine Cecil Thurston died suddenly last week in Cork, the city of her birth. Mrs. Thurston was known on this side of the ocean as the author of several best-sellers, among which "The Masquerader" and "The Gambler" are perhaps best known. "The Circle," "The Fly on the Wheel," and "Max" were others.

Dr. Otto Kirn, professor of dogmatics, is dead at Leipzig, aged fifty-four. He was the author of "Schleiermacher und die Romantik," "Grundriss der Theologischen Ethik," "Sittliche Lebensanschauung der Gegenwart," and other works.

Not until he was twenty-eight years old did Prof. J. E. Lieblein, the Egyptologist, whose death at the age of eighty-four is announced from Christiania, contrive to become a student of the university. Before that he was a workman in a sawmill and later a clerk. The University of Christiania made him a professor in 1876. He is remembered for his two books, "Deux Papyrus hiératiques du Musée de Turin" and "Gammel-ägyptisk Religion."

Science

Science books in the autumn list of the University of Chicago Press include: "American Permian Vertebrates," by S. W. Williston, and "Agricultural Education," by Benjamin Marshall Davis.

There are two science books in Stokes's autumn list: "The World's Minerals," by L. J. Spencer, and "Overheard at the Zoo," by Gladys Davidson.

"With Pack and Rifle Through Trackless Labrador," by H. Hesketh Prichard, is promised shortly by Sturgis & Walton.

"The Steam Engine and Turbine," a work by Prof. Robert C. H. Heck, which Van Nostrand will shortly issue, is announced as a textbook of engineering students.

Yves Delage, the French experimenter, has written a new book on "Theories of Evolution." The publisher in its English form will be B. W. Huebsch.

Under the title "Zur Geschichte der Wissenschaften und der Gelehrten" (Leipzig: Akademische Verlagsgesellschaft), Wilhelm Ostwald has issued a German translation of Alphonse de Candolle's "Histoire des sciences et des savants," as the second volume of his series of studies of "Grosse Männer"; his own work with this latter title in its new edition is numbered as the first of the series. The series was an afterthought, caused by the great interest which Ostwald's own book aroused. The trifling change in the title given to M. de Candolle's work in the German translation makes it express more clearly the real character and purpose of the book; it is not a formal history of science, but contributions to that history. Alphonse de Candolle was a botanist with decided predilection for statistical methods, and his book is a statistical study of the causes that help to produce the scientific investigator, more precisely expressed in the author's own words as being a man who "is anxiously inquiring about real facts which are unknown or little known," and who "loves truth for its own sake, without bothering about other people's opinions, personal advantage, or the possible results." It is a biological study of the particular sub-species of *homo sapiens* known as the "great man," greatness being conceived as spiritual and being measured by the esteem in which men are held by the groups of men who might be supposed to be competent above others to judge —namely, the members of the great scientific academies. An investigation is made into the lives of the foreign members of the Académie des Sciences in Paris, of the Royal Society in London, and of the Akademie der Wissenschaften in Berlin. M. de Candolle gives (pp. 326-328 of the German translation) a list of twenty conditions which tend to foster the proper soil for the production of great men; among the most important being the existence of a wealthy leisure class, an old civilization, well organized learned institutions, a public interested more in truth and reality than in poetry and fancy, a religion which does not make use of the principle of authority.

Dr. George Alexander De Santos Saxe died at his home in New York city on Sunday. He was born in St. Petersburg in 1876, the son of a chemist. He came to New York in 1890, and four years later graduated from Columbia. He was made gynecologist of Bellevue and the Post-graduate hospitals. Several textbooks bear his name.

Dr. Thomas Dwight, who died in Boston on Friday of last week, aged sixty-seven, was successor to Oliver Wendell Holmes in the Parkman professorship of anatomy at Harvard. He was a member of the Association of American Anatomists and of the American Society of Naturalists. He was the author of "Anatomy of the Head," "Frozen Sections of a Child," and "Variations of the Bones of the Hand and Foot."

Masuchika Shimose, a distinguished Japanese chemist, died on Wednesday of last week at Tokio. He was born in 1859, and was educated at the Imperial College of Engineering. His first official associations were with the Imperial Printing Department, where he improved methods of manufacturing printing ink and pigments. Mr. Shimose was transferred to the Naval Arsenal in 1887. As superintendent of the ammunition department he prosecuted researches in high explosives. His compound was adopted in June, 1893, by the Japanese navy, which gave it the name "Shimose powder." The Government showed its appreciation of his service by granting him a decoration and money. In 1899, the Shimose powder factory was established at Takinogawa, with the inventor as its superintendent. Mr. Shimose was the holder of the Kogakukai (engineering society) medal, and was a member of the Order of the Rising Sun.

Drama

THE DRAMAS OF MAETERLINCK.

The welcome accorded by America to the "Blue Bird" just when its power over the French public had been attested at the Théâtre Réjane, and its promise of renewed welcome this year, recall our minds to the whimsicality of that destiny which has twice at least granted brilliant popular success to the most reserved and least obsequious of dramatists. His success with "Monna Vanna," a real dramatic achievement, was humiliating to prophets, and his reconquest of the public with a mixture of poetry and spectacle like the "Blue Bird" bears curious witness to his versatile aptitudes or the persistence of his good fortune. The time seems auspicious for a survey of the dramatic output of this extraordinary mind.

I.

Between the years 1889 and 1894 a young Belgian writer, previously known to the public only through a thin volume of original and remarkable verse

Digitized by Google

called "Serres chaudes," published eight little works bearing the name and the form of dramas. Four of these, "L'Intruse," "Les Aveugles," "Les Sept Princesses," and "Intérieur," were one-act plays, dealing with groups of persons, and all, by a suggestive coincidence, night pieces. The other four, "La Princesse Maleine," "Pelléas et Mélisande," "Alladine et Palomides," and "La Mort de Tintagiles," mustered, with some difficulty, five acts apiece, were indistinctly amatory or domestic, groped falteringly after a plot, and in common with the other group were checkered with those vague intimations for which the enunciation of the word "symbolism" is held to sum up the measure of critical responsibility. To call these pieces drama would be an act of intrepidity or of irony: not merely the action but even the psychology is stationary, the emotional and intellectual content is jejune, and the character displayed would not overtax the histrionic capacities of those marionettes for which four of the later plays were nominally destined.

None the less these so-called plays are remarkable productions. The materials are handled with a singular and striking union of solidarity and isolation: all things are enveloped by a single mood, yet against this monotonous and melancholy background each object stands out in an impressive solitude, the sources of which are distinct and succinct utterance and unexampled hardihood in repetition. The imagination unites a youthful opulence with a poignancy more usual in maturity; the diction mixes the gravity of ritual with the lisp of infancy. Certain images recur with the frequency of figures in a pattern—large architectural landmarks, towers, lighthouses, windmills, caverns and crypts, corridors and sealed doors, dividing love and fear upon the one side from crime and mystery upon the other; trees, commonly cypresses and weeping willows; birds, often nightingales and swans; water, in the curiously different forms of seas, fountains, and tears; parts of the human body, the hands and eyes, of course, and (notably and redundantly) the hair. Many of these are in a way the traditional properties of fantasy and mysticism, but nothing that touches Maeterlinck can remain conventional.

In one of his essays, "La Justice," section 5, the author has himself pointed out the dominant note in these early dramas as that of old-world fatalism qualified with the retributive phase of Christianity. The power of fate is most naturally and effectively brought out by the strength of the resistance which it masters, and Œdipus and Macbeth have accordingly received from their creators an ample portion of resolve and energy. Maeterlinck has adopted an opposite course; the universal and normal helplessness of human nature before the rigors and mystery of fate he has typified in special states of peculiar or abnormal infirmity. This explains many features in his work: the partiality for night, the omnipresent interest in sleep, the emphasis on sickness and on feebleness of mind, the prominence of blindness, the extraordinary part assigned to old age, the frequent, though less frequent, introduction of children. Most significant of all are those exhalations that bear the names of women—Maleine, Alladine, Mélisande, foreigners and outcasts, faint, dumb, cowed, ineffectual, the symbols of their helpless race on this mysterious planet.

The artistic value of an underlying idea of this kind is open to question. To us it seems as if the term fatalism or fate were little more than a juggle by which poetry seeks to reinvest the external order with the prestige of the will, intellect, and consciousness to which, in the opinion of Maeterlinck at least, it has no longer an authentic claim. A fate that is disjoined from award and intention—even, it should seem, from the uniformities of science—is, in fact, merely accident in a periwig. It is difficult to convert nothing into something by the naïve expedient of writing it with a capital N.

II.

During the period from 1896 to 1903 three dramas, "Aglavaine et Sélysette," "Monna Vanna," and "Joyzelle," gave signs of a new phase in the evolution of the powers of Maeterlinck. The old style, all incisions and punctures, made way for stately, cadenced, and flowing periods. The tension, the restiveness, of the early manner was replaced by a meditative serenity; a richer psychology, a distinct, though ethereal, intellectuality, was substituted for the dead level, not to say the fixed point, of poignant but stationary emotion. The imagery declined in power, and already showed symptoms of that Oriental exuberance which was to culminate in the deluge of flowers in "Sœur Béatrice" and the cataracts of jewels in "Ariane et Barbe-Bleue." The symbolism receded, and the issues became, in an eccentric fashion, moral. The fatalism which had levelled kindness and malice, goodness and evil, in the impartial ignominy of a common abasement before its decrees made room for the exercise of judgment and conscience; and the women, in particular, who had been, in Vaughan's language, mere "glimmerings and decays," became courageous, resolute, and masterful. Of the three plays in this group, however, two scarcely rose above their predecessors in sheer dramatic force; the third was the incomparable "Monna Vanna."

III.

Almost every dramatic aptitude except that of characterization had been shown or at least indicated by Maeterlinck in brief passages in his earlier works. It would be easy to collect instances of tragic events, of acute tension, of impassioned outbreaks, of significant declarations, of penetrating suggestions, of remarkable settings, of homely reality, of pointed dialogue. But these manifestations had been too episodic or too careless to lessen the surprise following the appearance of a powerful stage-drama from the pen of a dreamer and a mystic. In spite of obvious and serious defects in the form of finespun reasoning, redundant speech, and retarded action, the defect of "Monna Vanna" on the score of pure drama is superabundance rather than deficiency. Three successive acts develop three perfectly distinct though firmly articulated situations, of equal and superlative intensity, originality, and force; and two at least of these situations involve profound moral questions. The affluence of power overflowed the very episodes, and the quite incidental collision of Prinzivalle and Trivulzio is handled with an incisiveness unapproached by the earlier works. The mere advance in characterization was almost enough to cast doubts on the drama's authenticity.

Maeterlinck's mastership in this field seems to have been, like the kingship of Villon, the prerogative of a day. The evolution of his mind was already taking him in a direction which was to preclude either a return to the early fatalism, or a carrying onward of the phase which "Monna Vanna" half fulfilled and half interrupted, or the origination of fresh methods. His mind was to experience two distinct changes: the removal to the sphere of thought of that august and mysterious something which, in the vague guise of fatality, had first drawn him to the objective world, and the later transfer of the same impression from the outer court of the mind, where the passions jostle with the conscience and the reason, to the dusky inward tabernacle of divinations, intuitions, and reverberations. It is obvious that drama could not accompany him in the first of these migrations without difficulty, nor in the second without disaster.

The later work of Maeterlinck has an effect of excursion or byplay. In "Ariane et Barbe-Bleue" an old fairy tale is deftly and lightly applied to the illustration of a modern problem; in "Sœur Béatrice," a miracle-play of the Virgin, an overcharge of pathos breaks down the slender frame of the supporting incident with injury to both; in "Marie Madeleine," a brief and rather casual effort offers us the New Testament with an edging of Sardou. Hardly more valuable as a symptom, though somewhat more solid as a product, is the child

Digitized by Google

fairy-tale of "L'Oiseau bleu." In this whimsical five-act piece Maeterlinck has shown that the same art which commonly volatilizes the earthy may serve on occasion to solidify the impalpable. The most distinctly fantastic in form of all his productions except "Joyzelle," it is in spirit and tone the most matter-of-fact; much of it is rather elementary and obvious, and there is a bluff fellowship and jovial tartness in the handling that would almost justify a parent in hanging it on a child's Christmas-tree between a trumpet and a cornucopia.

IV.

The renascence of symbolism in our own time and its countenance by Ibsen give a peculiar interest to the forms it assumes in a man of Maeterlinck's originality. Ibsen's own success in this material never justified his frequent resort to its aid; he was unable either to blend it with his realism or to keep it entirely distinct; it clung loosely like a pendant or affix. Has the success of the younger dramatist been great enough to constitute a recommendation of the method?

The first point of interest is the smallness of the bulk of the really significant symbolism in Maeterlinck. It is in only a few of the dramas, regarded as wholes, that the meanings found by the reader are clear enough to make him sure of their validity for others. "Les Aveugles" embodies a clear, powerful, and awful symbol; in "L'Intruse," the meaning is evident, but has no ethical quality; in "Ariane" a pointed lesson falls on us with the percussion of a *bon mot*. Excluding what is equivocal or incidental, we find little else to detain us before the date of "L'Oiseau bleu." In this play, the losses of color in the several birds suggest clearly enough the illusoriness of the happiness to be found in memories, in dreams, in the world's future, in the kingdom of death, and even the uncertainty of the better founded hopes that place it in the affections and sacrifices of common life. The allegory which makes the life of departed spirits ebb and flow with the rise and fall of remembrance in the hearts of the living is of touching and unequalled beauty. But even here the returns in symbolism seem hardly commensurate with the outlay in picture, and the invention is at times more suggestive of the workshop than the studio.

We doubt if Maeterlinck can properly be called a symbolist, if that term is held to connote a fondness for the precise and definitive attachment of moral ideas to external objects, for making, in other words—after the fashion congenial to Swedenborg and Schelling and not distasteful to Ruskin—a lexicon of the spiritual world in terms of the material. What he craves is not so much suggestions as suggestiveness, and he is a little shy of interpretations which cheapen the mystery they resolve. He loves the secrets of life as a Gothic warrior might value the runes inscribed upon his sword-hilt; they enrich the weapon all the more that their meaning is inscrutable.

There remains the general mystic atmosphere, which impresses us as most distinct and effective in the author's closest approximations to life. Between the mystical and the romantic there is an undoubted affinity, but what each needs is not so much an ally as a corrective. The object of both is to strip reality of its sheath of commonplace, and the end is gained in each case at a considerable and regrettable expense of verisimilitude. Either force, by itself, can effect this removal, and the double estrangement from reality which is produced by the union of the two merely impairs truth without profit to distinction. Accordingly, we fully agree with M. Lemaître and M. Chaumeix in the high estimate which they put upon the one-act piece called "Intérieur," in which the simplest actions of a normal evening in an every-day household are raised to mystery and dignity by the observer's situation in the darkness of the enclosing garden and his knowledge of the approach of fatal tidings.

V.

The six volumes of essays published by Maeterlinck lie outside of the immediate province of this article, but a glance at their moral content is essential to the formation of clear ideas on the ethical import of his writings. The ethics set forth in these works comprise the loftiest and most refined standards, the most fervent and inclusive charities, and a disinterestedness in the relinquishment of all premiums, both religious and utilitarian, which borders on the heroic. We are in contact with a mind which claims to have found joy and peace in the absence, the renunciation, of all the traditional and accepted guarantees. The unequivocal, almost unregretful, concession of the sternest demands of materialism and evolution has failed to disturb the author in that beatific tranquillity which religion once reserved for the favored hours of her happiest disciples. Claims of this sort advanced by a strong mind with unhesitating assurance should not be hastily or irreverently dismissed by an age whose heart is torn between its religious needs and its intellectual obligations. At the same time the very depth of the interest which we have in the truth of this philosophy impels us to be careful, even rigorous, in our examination of its credentials.

We find in the ethics of these essays a beauty which is almost unearthly, the loveliness which, in a human constitution, would suggest fragility. A sense of "a fugitive and cloistered virtue, unexercised and unbreathed," is latent for us in the delicate luxury of permitting our minds to be sprayed, so to speak, by the emanations from these balmy sentences. Two things, in particular, arouse distrust: the superlatively high pitch both of the requirements and of the promises, and the marked rarity of specifications and applications. The relaxations of demand which practice extorts from the most resolute are never seen, and the ideals are unblemished by any signs of contact with the dust and smoke of the external world. Not one of those wails which the gap between hope and deed, between vision and attainment, has wrung from the tortured souls of saints and prophets from Paul to Emerson disturbs by so much as a ripple the assured quietude of Maeterlinck. We begin to be half ashamed of our evangelists and martyrs with their absurd fuss about this facile problem of redeeming their own souls and the human race from the yoke of moral evil. In this remodelled universe victories are a matter of course, and exaltations and felicities are dispensed with the same liberality as countships and dukedoms by a prince in exile.

These observations are naturally inconclusive, but they give interest and piquancy to the application of a second test, the test of the form which these ideals assume in the concrete representations in the dramas. In "Monna Vanna" the morality is eccentric to the verge of paradox. In this not extensive play we have the pattern of chastity assenting to a midnight assignation, the pattern of fidelity abandoning her husband, and the pattern of sincerity resorting to the most involved and elaborate duplicity. We are not prepared to condemn her actions as immoral; but we are entitled perhaps to some misgivings as to the wholesomeness and elevation of a mind which overhauls the recesses of possibility to discover and illustrate the few anomalous occasions in which perfidy may be noble and adultery magnanimous. Again, the culmination of "Monna Vanna" is signalized by three several transactions: the rescue of Prinzivalle, the abandonment of Guido, and the acceptance of Prinzivalle as a lover: and, however the author's subtlety or the reader's dulness may succeed in confounding or identifying the three, it is clear that they rest upon separate foundations, and that the foundations of the third are decidedly the least secure. Further, the really noble and inspiring outcome for the situation of the first act was either not discerned by Maeterlinck or was sacrificed to dramatic effects of a grosser but more powerful nature. That conclusion would have involved the consummation of the infamy, and forthwith—in keeping with the fine analogy of Godiva suggested by Mr. Courtney—the return of Vanna, in proud humility, to a life of invincible chastity with her husband. But the

Digitized by Google

blood of the Renaissance beats only too clearly and passionately in the veins of this Lucretia à la Maeterlinck, and the words with which she closes the play seem to vibrate with a luxurious foretaste of the very relations which it has been her glory in the first act to accept as martyrdom.

In "Aglavaine et Sélysette" there are two persons, man and woman, of highly refined and amiable temper, for whom life is, in Cowper's words, "Elysian reverie." All things become volatilized, as it were, in this rare and intangible medium; we get a vapor of right and a vapor of wrong which, like other gases, exhibit the property of interfusion to a degree which makes them virtually indistinguishable. These persons utter lovely sentiments in exquisite language; this seems indeed to mark the limit of their occupations and their capacities: and meanwhile they are driving a poor young creature—for whom they each feel a tenderness that is fairly celestial both in its fervor and in its condescension—into a state of mind which results in her casting herself down from a tower. It would be too much to say that Maeterlinck is in sympathy with these beatific personalities, but their perfect sympathy with him is only too fatally obvious. As with Simon Peter in the hall of Caiaphas, their speech betrayeth them; it is plain that they have read and reread "La Sagesse et la destinée" and "Le Trésor des humbles."

In Sélysette herself we have another instance of the moral contradictions so congenial to Maeterlinck: a young girl who is the embodiment of innocence and simplicity lies in the hour of death for a magnanimous purpose, and arranges the supports of her falsehood with a cunning hypocrisy which would have dazzled or appalled a Jesuit. In "Joyzelle" a woman buys her lover's life by the sacrifice of her chastity, and then proposes to protect her chastity by assassination (which is forgivable) and by treachery to the compact which has saved her lover. It is a striking fact that, in a dramatic output of five or six volumes, an author who pitches his philosophy in the key of Marcus Aurelius, Coleridge, or Emerson should have availed himself three times of the unsavory expedient which is immortalized in "Measure for Measure" and popularized in "La Tosca." To the cases of "Monna Vanna" and "Joyzelle" he has not scrupled to add that of "Marie Madeleine." To those of us who have not buried our good taste in the sepulchre of our orthodoxy, it may seem that the honor of making the safety of Christ the subject of one of these revolting bargains might well enough have been left in the undivided possession of the German playwright from whom Maeterlinck borrowed or (more accurately) wrested it.

The foregoing discussion by no means indicates that Maeterlinck is a sensualist or a hypocrite, or that he lacks many amiable and noble qualities. But, in spite of one or two instances of real sacrifice like that of Sélysette, it is impossible to affirm that the life exhibited in these plays affords any powerful or consistent support to the ideals of the nobler morality; it must even be conceded that it shows a rather evident leaning toward the paradoxical, the eccentric, the sexual, and the disingenuous. The plays as a whole unsettle, rather than confirm, the reverence inspired by the beautiful philosophy unfolded in the stately eloquence of the essays. The doubts which occur to the investigator relate less to the mere correctness of the affirmations than to that application and attestation in experience which alone can impart to moral truth a profound and enduring significance. The perusal of the philosophy itself is the origin of these doubts: and they are not dissipated by a reading of the plays.

O. W. Firkins.

University of Minnesota.

"The Summons of the King," a play in blank verse by Philip Becker Goetz, will appear late in October from the McDowell Press, Buffalo.

"The Pigeon," a new play by John Galsworthy, has been accepted by Messrs. Vedrenne and Eadie for future production at the Royalty Theatre, London.

J. Comyns Carr is, by arrangement with the author, making a stage version of A. E. W. Mason's novel, "The Four Feathers."

"The Quality of Mercy" is the title of Hall Caine's latest play, which has just been tried in Manchester. There are forty characters in the cast.

A. E. Thomas's new comedy, "What the Doctor Ordered," will be presented in the Astor Theatre on the 20th inst., with Fritz Williams in the lead of the merry-makers.

"The Outsiders" is the title given by Charles Klein to his new play, which will be produced by the Authors' Producing Company in November. The theme is taken from incidents in every-day life as gleaned from the daily newspapers, and in general character resembles "The Lion and the Mouse" and "The Gamblers."

Henry Arthur Jones's new comedy, to be produced in a week or two at the London St. James's, is called "The Ogre." In spite of the fierce title, however, the piece is said to be of a light character. The ogre is simply the head of a modern family, and the troubles dealt with are those of ordinary, every-day experience. The cast, which is a long one, will be headed, of course, by Sir George Alexander. The nature of Mr. Jones's work varies widely, but is generally distinguished by excellence of some kind.

"Disraeli," with George Arliss in the principal character, will be presented here for the first time in Wallack's Theatre on the 18th inst. This piece had a successful career last season, both in this country and Canada, and will be awaited with considerable interest. Mr. Arliss is said to provide a wonderful counterfeit presentment of one of the most picturesque of modern British politicians—in the matter of externals, at all events.

Music

A Viennese publishing house is said to have in press the autobiography of Karl Goldmark.

Kurt Schindler has compiled and arranged for the Schirmers "A Century of Russian Song," embracing songs by a dozen Russians from Glinka to Rachmaninoff, and including Rubinstein and Tchaikovsky.

New York's leading orchestra, the Philharmonic, last year, for the first time in its career, undertook a long tour. This season a second tour will be made, consisting of twenty-five concerts, as far west as St. Paul, and possibly further. The New York season of the Philharmonic begins with two concerts on November 2 and 3, at which the soloist will be the Russian violinist Zimbalist, who has created a genuine sensation in the musical countries of Europe.

Paderewski, who was one of the first to recognize the great merits of Frederick Stock, the present leader of the Theodore Thomas Orchestra in Chicago, paid a striking tribute to the man who is to be conductor the coming season of the New York Philharmonic. "Stransky," he said at a recent luncheon in Paris, "is one of the coming musicians, and is certain to make as deep an impression in America as he has done in the past few years in Europe."

Philadelphia will open its opera season as early as November 3, with Mary Garden as Carmen.

Saint-Saëns, Richard Strauss, Max Schillings, Ludwig Hess, Arthur Friedheim, and Busoni are among the famous musicians who will participate in the Liszt centennial festival at Heidelberg, October 21 to 25.

It seems to be the fate of Jewish composers particularly to be overrated during their life, underrated afterwards. Meyerbeer and Mendelssohn were so undeservedly popular compared with some other greater men of their time that one can understand the indignation which made Wagner write his pamphlet, "Das Judenthum in der Musik." After the death of Mendelssohn his vogue waned rapidly, till it became necessary for sane critics to call a halt and point out that he was, after all, a genius and some of his pieces masterworks. Meyerbeer's star sank more slowly. Not so many years ago he still held the prominent place in the Paris repertory which has now been won by Wagner. In New York, also, in the days of Maurice Grau, Meyerbeer held the first place at the Metropolitan, where Wagner now has a larger number of performances than any other composer, while Meyerbeer's very name seems to have been forgotten. In Berlin an effort is being made to rehabilitate Meyerbeer, who was born in that city in 1791, and who from 1831 on for over half a century was the favorite of Parisian opera-goers. A monument is to be erected in his honor in the German metropolis, and the funds are to be obtained by revivals of his works at the leading German opera houses. The most remarkable thing about this movement is the number of prominent persons who head

Digitized by Google

it. The Kaiser is interested, and among those who have signed their names are Count Hülsen-Haeseler, Leopold Schmidt, Lilli Lehmann, Rudolf Mosse, Dr. Muck, Georg Schumann, Albert Niemann, Richard Strauss.

The death is reported from Brussels of Imbart De La Tour, a Belgian tenor. He appeared at the Metropolitan Opera House, New York, in 1901.

Art

Piranesi. By Arthur Samuel. New York: Imported by Charles Scribner's Sons, 1910. 215 pp. 25 plates. 12mo. $5 net.

Piranesi's most important work as an etcher, and that by which he is known to the connoisseur and collector to-day, is found in the best of the plates in which he contrasted the ruined magnificence of Rome with the every-day life around it. He presented always the picturesque aspect of these old structures, with a tendency to emphasize effect, to draw Rome, as Mr. Samuel puts it, "more splendid than she had been even at the zenith of her magnificence." He saw his subjects, and executed his large plates, in a large way. His extravagantly attitudinizing figures rather help to accentuate, by their own grotesque littleness, the monumental relics of the great art of a great people. Rhetorical emphasis was part of his method, and at its best his manner rises to the dignity of a style. His genius has been well described as scenic; there was an element of the histrionic in him.

One may appreciate fully the peculiar talent of this artist without necessarily subscribing to Mr. Samuel's dictum that "architectural etching has culminated with" Piranesi, or that "he summed up the results of the etcher's craft and carried them to a point beyond which they have not been improved." Incidentally, it is inexplicable why De Quincy and Coleridge should be quoted, with approbation, as calling Piranesi "the Rembrandt of Etchers," but perhaps there is a slip of the pen here, and "the Rembrandt of Architecture" (a name often applied to Piranesi) is intended. The tendency to superlatives is not calculated to make one feel that the present book, in its comments on Piranesi as an etcher, can entirely supersede the incisive and sanely appreciative criticism in the little pamphlet (1905) by the late Russell Sturgis.

It is, in fact, not so much Piranesi the etcher as Piranesi the archæologist, with the resolve "to preserve by means of engravings" the splendors of ancient Rome, who particularly holds the attention of the author. Mr. Samuel is so impressed with the fierce, untiring energy with which this Italian artist labored to arouse more widespread interest in ancient art, that he would extend the influence of his subject to the furthest limits. To Piranesi are indebted Robert Adam, Chippendale, Sir William Chambers, Ceracchi the sculptor (known to Americans particularly through his busts of Hamilton and Franklin), Cotman (who, indeed, himself said: "I decidedly *follow* Piranesi"), Dance the architect of Newgate, Sir John Soane architect of the Bank of England, Robert Mylne architect of old Blackfriars Bridge, Wedgwood, Flaxman, and finally American architects, with their strong leaning toward classic form. Even the "science of hypothesis," which Mr. Samuel himself characterizes as "not a fruitful one," is assiduously cultivated; for instance, in regard to a possible effect on Doré and Poe.

The facts, stripped of rhetoric, are about these: Piranesi, a prominent figure in the movement of the day toward appreciation of antique art, which found expression notably in the writings of Winckelmann and the activities of the Society of Dilettanti, devoted himself to the production of pictorial records of ancient architecture and decoration. The material thus made available educated public taste for the antique, and proved of great use to designers active in architecture and the decorative and applied arts. His infectious enthusiasm no doubt strongly influenced the artists with whom he personally came into contact, and his imaginative designs in the classical spirit, practicable or not, are still to-day, it is said, a source of inspiration to students of architecture.

Of the two usual and expected additions to a work of this kind, Bibliography and Index, the latter is useful, though not infallible, and though not including references to the different series of plates. A separate list of these series is given, however, which will be appreciated by those who have tried to collate a set of Piranesi's works, although it does not in any case note individual plates. (A. M. Hind has half promised a complete list of Piranesi's publications.) In the Bibliography, the "Catalogo delle migliori stampe di incisione in rame che esistono nella Regia Calcografia" (Rome, 1904), of which pages 37-52 are devoted to Piranesi, might well have found a place.

When all is said, and the fact recorded that Mr. Samuel's book is not to be used without reference to other literature on the subject, this well and discriminatingly illustrated volume, evidently the result of stimulating enthusiasm, remains an interesting addition to the growing list of monographs on individual practitioners in the reproductive graphic arts.

Among the books of the season announced by Heinemann we note "A Treatise on the Technique of Painting," by Charles Moreau Vautier; "The Biography of John Gibson," the sculptor, and two architectural albums on "The Romanesque School in France" and "Baroque Art in Italy."

From F. Gutekunst of Philadelphia we have received a photograph of the late Edwin Abbey. It is an excellent likeness, and could well be framed.

The large and fully illustrated folio, "Civic Art," by Thomas H. Mawson (Scribner importation, $20 net), is devoted to town planning, parks, boulevards, and open spaces. The examples are largely drawn from the author's designs, notable among which are the Dunfermline park projects under the Carnegie Trust, and the Southport and Lever Park improvements near Liverpool. A number of standard city and park plans from the Continent are included, but in general the book is pretty closely confined to English interests, and to Mr. Mawson's own activities. A general discussion of the limits of naturalistic and geometrical design will interest American landscape architects, to whom, indeed, the volume will serve rather for suggestion than for specific guidance. In paging over Mr. Mawson's interesting designs, your reviewer is struck by the skilful and artistic use of bodies of water. Here is a point in which American town, park, and country-place planning is strangely backward, less from lack of water than from the difficulty of mediating between the severe and picturesque methods. As in all design, success depends upon a reasonable linking of improvements with preëxisting conditions whether of man's or nature's making—a text upon which our author constantly and sensibly expatiates.

The well-known French painter of battle scenes. Auguste-Henri-Louis de Clermont, died recently in Paris at the age of sixty-seven.

Finance

THE BERLIN STOCK MARKET AND THE "WAR TALK."

At first glance, last Saturday's news of a sudden and demoralizing break on the German stock exchanges, combined with a sharp rise in money rates at Berlin and a run on various provincial savings banks, would seem to reflect a turn for the worse in the Franco-German negotiations. The curious fact about the incident, however, is that it occurred at the very moment when the "Moroccan situation" had become more reassuring than for many weeks past. Not only so, but financial Paris, which certainly had as much reason as financial Berlin to be concerned at a renewed prospect of war, remained calm while German prices were breaking. These facts suggest that there must have been some underlying cause for the financial disorder in Germany, not directly connected with the fear of war. As a matter of fact, there was such a cause; for the German market, like our own, had lately reached a position where it had to pay the penalty for a premature resumption of industrial expansion and financial speculation after the shock of 1907.

Digitized by Google

The event of that year was a world-wide phenomenon. It broke with the greatest violence on New York, but Europe was not spared, and the German markets had become a focus of serious trouble, even before the Knickerbocker Trust Company's failure precipitated panic here. The cause in Germany, as in America, was the straining of capital resources to the breaking-point in the excited financial exploitation of the day. But the Germans, like ourselves, refused to recognize the collapse of 1907 as anything but a passing incident; the movement of speculation and expansion was resumed, and in Germany it was resumed very largely on the basis of capital borrowed from France and England—a precarious basis, since those markets, too, were confronted with impaired resources.

Our own effort at premature resumption of the exploits of 1906 broke down a year and a half ago, and the resultant liquidation has not entirely ended yet. London and Paris passed through a similar experience this past summer. It was hardly to be expected that Berlin, relying as it did on the capital of those two markets, should escape a pretty severe financial reckoning; and, although the "war scare" cannot be called the fundamental influence, it certainly could not have helped matters that Germany's chief creditors at the time were the markets of the two nations with which the diplomacy of the German Government was threatening war.

But whether the break on Berlin's markets resulted immediately from fear of war or from causes apart from war, the inquiry naturally arises: How would the markets act if war were really on the cards? Sometimes markets "discount" war many weeks ahead; sometimes they hardly move until it comes. In 1898, our own stock and money markets had their violent convulsion in February, just after the "Maine" was destroyed in the harbor of Havana. When war was actually declared, on April 20, they hardly moved at all. But in 1899, when Kruger sent his ultimatum on October 10, the money market was only a week ahead of the event. The Bank of England rate began the month at 3½ per cent., on October 3 it rose to 4½, and two days afterward to 5. Even the London Stock Exchange did not grow excited until that week.

Perhaps, however, a more interesting case in point would be the European markets when the great Franco-Prussian war of 1870 began. That was a time when financial markets failed to show which way the wind was blowing, until the storm broke full upon them. Two or three weeks before France declared war, on July 15 of that year, the discount rate was only 3 per cent. at London, 2½ at Paris, and 3¾ at Berlin; and the trifling weakness on the stock exchanges was ascribed exclusively to drought in the harvest district of the Continent. When, however, France had presented its impossible demands to the Prussian King, and William had curtly ordered the French ambassador to leave, and the Paris government had declared war, the crash came.

There was panic on London's Stock Exchange, in the course of which all European government securities, including consols, went to pieces. Within a fortnight the London bank rate rose from 3½ to 6 per cent., the Berlin rate from 4 to 8½, and the rate of the Bank of France from 2½ to 6. Within a month the Bank of France had suspended specie payments. Wheat went up violently in price; bills of Continental banking houses could not be negotiated in London. Nobody knew certainly whether England herself could keep out of the fight, and most people thought that the French fleet, which was five or six times as large as Prussia's, would blockade the Channel and put a stop to trade with the German ports.

What would have happened, had the Franco-Prussian war been prolonged like those of 1899 or 1904, is a matter of conjecture. But the "débâcle" came with wholly unexpected swiftness. The German army moved instantly and with mechanical precision across the French frontier; this, while the strongest part of the French reserves, with its officers untrained and taken unawares, was marching and counter-marching nearer to Paris than to the Rhine frontier. The French fleet had no time to move, and no plan for action. Bazaine was beaten at Gravelotte barely one month after war had been declared, and was surrounded and "bottled up" in Metz, whence he could give no help to the rest of the French army. Napoleon III, after having allowed himself, his generals, and his army to be encircled at Sedan, surrendered almost exactly two months after the fighting had begun. Even before Gravelotte, the Bank of England had begun to reduce its discount rate; from 6 per cent. in the middle of August, it was down to 2½ before Sedan. Napoleon's surrender was the signal for a general rise on the stock exchanges and the cotton markets, and for a fall in wheat.

A mere review of the story of 1870, as it began and ended, shows the difficulty of drawing analogies with the present markets. There is this at least to say—that whatever else might happen, European markets would not be taken unawares by a declaration of war to-day, as they were in 1870. And then, who knows whether matters would move as swiftly and assuredly as they did forty years ago, when there were no frontier fortifications, no trained iron fleet, no aeroplanes, and no speech from an English Premier committing the British Government to stand by France?

BERGSON'S CREATIVE EVOLUTION

Translated from the French by **DR. ARTHUR MITCHELL.** 4th Edition, $2.50 net, by mail, $2.70.

Especial pains have been taken by the translator to make into English every thought and shade of expression of the author. The work has been revised by the author and the proofs have been read by no fewer than four eminent translators.

The Nation:—"Than its entrance upon the field as a well-armed and militant philosophy there have been not many more memorable occurrences in the history of ideas."

The Contemporary Review:—"Philosophy perhaps has found its Darwin or its Newton at last in M Bergson."

The London Nation:—"This man is a magician."

Chicago Evening Post:—"It is hard to estimate, but it would be impossible, perhaps, to overestimate the importance of the philosophy of Henri Bergson."

William James:—"Open Bergson and new horizons open on every page you read. It tells of reality itself. Nothing in Bergson is shopworn or at second-hand."

PAPER-BAG COOKERY

By NICOLAS SOYER

Chef of Brooks's Club, London.

Cloth, 16mo, 60 cents net; postpaid 65 cents

Cooks food better, in half the time, with half the trouble, and cuts the fuel bill in two.

This book with its recipes tells how to cook almost everything but soups in paper-bags in *any* oven—a method now practised in many countries and likely to revolutionize cookery the world over. More savory, quicker, cleaner and cheaper cooking; no washing of pots and pans, and no cooking smell. A boon alike to epicures and housewives. For information write—

By ANDRÉ MAUREL

With a Preface by Guglielmo Ferrero. 8vo. 30 *Illustrations.* $2.50 *net.*

Through the country of Tuscany and Venice, as the two main divisions of his work are entitled, M. Maurel has wandered from town to town, painting in vivid colors his impressions of their historical and artistic aspects, showing with keen insight how closely allied are these, what each owes to the other, and how indebted is the present to both.

The Nation

NEW YORK, THURSDAY, SEPTEMBER 21, 1911.

The Week

The President's discussion of the Supreme Court's Anti-Trust decisions, in his speech to the Detroit Board of Commerce, was not only marked by the clear reasoning which distinguishes all his remarks on judicial or Constitutional questions, but was particularly timely. In consequence of much ill-judged inference from the language of Chief Justice White's opinions, a point had been reached where attacks on the court's position might have been made to play an unfortunate part in formal political declarations of the day. Mr. Taft leaves no doubt as to his own view of the matter. "The court," he said emphatically at Detroit, "has exhibited a courage in facing the necessary results in enforcing the statute that, instead of prompting an attack on it, ought to make every American proud that we have such a tribunal." Referring to the accusation fathered by the impulsive critics (who, of course, include Mr. Bryan) that the application of the "rule of reason" was a surrender of the people's rights and a usurpation of judicial power, the President challenges any man to come forth and say "what particular contract or restraint of interstate trade he would condemn, which would not be condemned within this definition of the court." Taking up the common assertion that in his own Presidential message of January, 1910, he had declared the "rule of reason" impracticable, the President answers that what he then said was "in exact accord with those decisions." His message of 1910 declared that insertion of the word "reasonable" in the statute itself, so as to distinguish "good Trusts" from "bad Trusts" in their restraint of trade, would make consistent and uniform application of the law impossible.

In other words, the court has declared, not that a combination whose ulterior purposes are presumptively harmless should be allowed to suppress competition and control prices, but that the scope of such combination and control must, in applying the law's prohibitions, be considered in the light of reason. Mr. Taft points out that in no other way can the manifest purpose of the authors of the Anti-Trust Law be made effective. For the notion that the Congress of 1890 had seriously in mind to prohibit all business combinations—even ordinary partnerships—merely because they eliminated a preëxisting competition, is absurd upon its face. In his view these later anti-Trust decisions, far from emasculating the statute, have in reality made feasible, almost for the first time, the uniform enforcement of the law.

Senator Works of California is the latest of the Republican Insurgents to confess that they will be confronted by a serious "problem" after President Taft is renominated. The difficulty will be to decide, not what to think of him, but what to do themselves. They have their minds made up, Senator Works declares, that Taft is too little of a progressive to give the Republican party any hope of success under his leadership, but, then, think of the awful alternative of voting for a Democrat! The California Senator shrinks from that, as much aghast as La Follette or Cummins. They have so long made speeches about the horrors of a possible Democratic Administration, and carried elections by that warning cry, that they cannot turn about now. Consequently, they discountenance all talk of a bolt from Taft, and intimate that their choice will be to stick by the party and gradually reform it "from within"—after the successful fashion of revising the tariff by its friends. It may well be that such a course on the part of the Insurgent Republicans is inevitable, but for them to announce it in advance is necessarily to take the heart out of their followers.

The "Wiley case" is disposed of by the President, in a letter to Secretary Wilson, presenting the whole subject with admirable clearness and with perfect judicial poise. While some of the points brought out by Mr. Taft had not been apprehended in detail by the general public, the essential features of the case became so well known within a few days after it first came up that there has never been room for reasonable doubt as to the President's disposition of it. Dr. Wiley is completely exonerated; and, so far from entertaining the proposal of the personnel board, backed by Attorney-General Wickersham, that he be "permitted to resign," the President takes occasion to emphasize the value and importance of his work and to express regret that such work should be hampered by unreasonable limitations of payment for the necessary service of experts. But the President's letter makes it absolutely clear that even as regards any technical violation of the law, Dr. Wiley was wholly innocent. In the case of two members of his bureau, the President finds a degree of willingness to stretch or evade the law in connection with the employment of Dr. Rusby, which he pronounces worthy of reprimand.

Of Mr. Wickersham's share in the matter, the President merely says that his recommendation approving the findings of the personnel committee had been given "upon only part of the evidence, and hence his judgment was different, doubtless, from what it would have been if he had had the whole record before him, as I have now." This is, of course, meant to let the Attorney-General down as softly as possible; but even so, is it not pretty hard upon him? Why is a matter referred to that officer, if not to guard against this very passing of judgment *ex parte*—on "only part of the evidence"? And even upon that part of the evidence which Mr. Wickersham did have before him, the recommendation to dismiss Dr. Wiley would have been preposterous; yet the Attorney-General, instead of limiting himself to a strictly legal opinion, went out of his way to endorse that recommendation with great emphasis. That he did this with no wrong intent, we feel sure, but it is unfortunate that he should have permitted himself to be used in this manner by persons having a strong desire to get a troublesomely zealous officer out of the way.

That Socialism is a bigger question than the tariff, few persons would deny; but it is a little queer that the one Socialist member of Congress should seek to enforce this fact by a statement which is absurdly wide of the mark.

Digitized by Google

"Figures will tell the story," said Mr. Berger:

> The entire yearly income from tariff duties is about $326,000,000, which means $3.50 per capita. Let us suppose the Democrats reduce this by as much as one-fourth. They can hardly reduce it more, because the country needs the revenue. Then the change would net the consumer about 87½ cents per capita. Suppose they would make a still more radical change and reduce the tariff by one-half, thus cutting down the country's revenue from this source in proportion. That would amount to the princely sum of $1.75 per capita. So in the question over which the Republicans and Democrats have been so bitterly at war for so many years just $1.75 per capita annually is involved.

Now, however absorbing may be the great question of Socialism, one would think that Mr. Berger would feel it his duty to have some glimmering notion at least of what the leading controversy in Congress was about. Mr. Underwood and his fellow-Democrats were not aiming to cut down the customs revenues by one-half, or one-fourth, or anything at all. What they desired to cut down was the prices which, under cover of the protective tariff, are extorted from American consumers for goods produced in this country. The amount of this enhancement of price bears no assignable relation whatever to the amount of customs revenue collected. Under an absolutely prohibitory tariff, no duty at all would be collected, but the enhancement of the domestic price of the protected articles would be greatest of all.

Mayor Harrison has only himself to blame if people are somewhat skeptical about the sincerity of his investigation into gambling and vice conditions in Chicago. By itself the plan seems straightforward. The Civil Service Commission is instructed by the Mayor "to inquire into any facts which tend to show a connection between any members of the Police Department and either gambling or vicious conditions." It is said to be the intention of the Commission to call upon members of the Vice Commission for explanation of charges in their celebrated report of last winter. And Commissioners and Mayor unite in saying that the investigation is to be the most thorough official inquiry that the city police force has known in a decade. But the question that haunts the mind of the reader of this declaration of war upon protected crime and vice in Chicago is why it comes just now. Mayor Harrison has been the city's Chief Executive more than once in this same decade, and it is but the simple truth that his name has been no more closely associated with bitter opposition to the granting of street-railway franchises without adequate compensation to the city than with apparent acquiescence in "wide-open" conditions and "red-light" districts.

The Western Union Company's quarterly statement of earnings, just published, is the best in ten years—a fact that ought to bring some encouragement to Wall Street, particularly when it is considered that this period covers such prosperous years as 1901, 1905, and 1906. But the explanation is, perhaps, to be found in the Western Union's new policy of a more scientific management of its own property. We take it that this satisfactory showing is in no wise due to extensions of plant nor even to the adoption of more economical appliances, but to the company's efforts to utilize its existing plant to a greater extent. In other words, it is the new night-letter and day-letter service to which this present prosperity is probably due. The public has appreciated the lower rates, and the business has been taken on such a basis that it has not called for more employees, but simply given the present telegraphers the opportunity to fill in spare moments with "slow" matter. We sincerely hope that, if our theory is correct as to this splendid showing in the face of keener competition than ever before, the company will go still further in the direction of lower rates, and particularly that it will at last have the decency to cut loose from its indefensible alliance with pool-sellers.

No ear but that of Gov. Dix has caught that popular clamor for boxing which is held by the Governor to justify public rioting such as marked the opening event at the Madison Avenue "Athletic Club," or brutal exhibitions like that of last Friday night at the same place. Boxing is the noble art of self-defence; in the process of popularizing this art the other night, one exponent "was practically slaughtered. Both of his eyes were closed, his nose was broken, his lips were slashed, and he received so many blows on the right side of the head that it swelled to the size of a small pumpkin." It is for entertainment of this sort that Gov. Dix finds the voice of the people of New York calling loudly. But it is curious how this clamor of the crowd failed to make itself heard at Albany until a happy chain of circumstances swept into power a majority controlled by Mr. Murphy.

Once more it is necessary to say that automobile racing in enclosed spaces, with thousands crowding to the rails to see the spectacle, should cease. The tragedy at Syracuse ought to lead to the indictment and punishment of those responsible, for it is unfortunately not unique. Similar plunges into crowds with fatal results have taken place in Indianapolis, in New York, and elsewhere. For racing of this kind only a few places are suitable—beaches like that at Ormond and specially constructed tracks like the wonderful one at Brooklands, near London. Even on that track accidents happen to the racers; but they at least know the risks they assume. With spectators it is different. They have the right to believe that their safety has been assured by those responsible for the racing.

To say that Mr. Hilton, in winning the American amateur golf championship, had good fortune on his side, is no disparagement of his remarkable display all last week. Luck, or "the rub of the green," is a recognized factor in golf; and Mr. Hilton himself freely acknowledged that it favored him conspicuously at the deciding hole of his thrilling match with Mr. Herreshoff on Saturday. Further than that, he was highly fortunate in the draw for the tournament play, chance having given him three mediocre players to meet as against only two of high calibre. But no considerations of this sort really take away anything from the extraordinary game which he exhibited. To play through an entire week eleven rounds averaging about 76 is a performance of which it is safe to say no American amateur is capable. Any one of half a dozen might beat Mr. Hilton in a single match, but his sustained low scoring, day after day, is the golfing marvel. He carries off our highest honors, not only amid expressions of personal good will, but with the general conviction that the palm went to a man who merited it.

The death of Col. John J. McCook brings to mind anew the fact that the civil war was fought by boys. He himself left the class-room at sixteen to return to it three years later as a brevet colonel. At this distance of time the thing seems incredible, and yet there were many like Col. McCook, on both sides, though none were more promising young soldiers. It is related of Major-Gen. John Sedgwick that his staff called him "Old Uncle John," although he was only fifty when killed; but the title is explained by the record that the oldest of his staff officers was but twenty-five, the others being between that mature age and eighteen! Col. McCook's own father was killed at the age of sixty-three, when acting as an officer in a homeguard regiment called out by Morgan's daring raid into Ohio, and his age evened up somewhat in years the losses of this famous family, which began at Bull Run and included the murder by guerrillas as he lay ill in an ambulance of the gifted Col. Robert L. McCook.

The future implications of the tragic act at Kiev by which Russia gave notice to the world that her government is still a government of autocracy tempered by assassination, cannot at this moment be predicated with any degree of assurance. For that matter, the identity of the assassin and the nature of his motives have not been clearly established. The authorities at Kiev are under the necessity of explaining how an emissary of the revolutionists found easy entrance into a hall where, if he had so chosen, he might have turned his weapon against the Czar himself with a very good chance of success. The hypothesis has been brought forward that the assassin Bogroff was another Azeff, and that, in playing the double rôle of revolutionary conspirator and police agent, he finally found himself facing the choice between executing the revolutionary committee's orders or being put to death by his comrades. It is not a very convincing theory, since the choice was, after all, between the certain death that now awaits him and the rather problematic punishment that a disorganized and discouraged revolutionary faction might be able to visit upon him.

Measured by character and achievements, Stolypin without question towered head and shoulders above the common level of the Russian bureaucracy. He was a forceful personality in an environment where forcefulness is usually accompanied by the policeman's outlook and temper; such a type was the late Gen. Trepoff, the hero of "Red Sunday." Stolypin added to strength of will and an autocratic view of government, a knowledge of the business of statecraft such as no other minister during the reign of Nicholas II has displayed, with the exception of Sergius Witte. Called to the Premiership during the full tide of revolution in the summer of 1906, Stolypin went about the business of extinguishing the liberal movement with relentless thoroughness. There was a Russian Parliament in being and a full code of popular and personal liberties, but the methods of Stolypin were the old methods of the police state, elaborated and carried to a high pitch of perfection. He pacified Russia through the instrumentality of drum-head courts-martial and punitive expeditions, very much as Gen. Trepoff might have done. Where he went further than the old police minister was in developing a constructive policy of social and economic legislation which may have been designed primarily to make another revolutionary movement impossible, but which went a great deal beyond that. The breaking up of the communal system of land ownership and the colonization of Siberia were two projects of first-rate importance. Judged by his programme, his title to real statesmanship might have been made out. The trouble was in his methods. There he was at one with the police methods that had guided government policy throughout the reign of Alexander III and the present Emperor. Stolypin refused to recognize the new factor that had come into the national life with the creation of parliamentary institutions.

Allowing for the political factors that entered into Sunday's serious rioting in Vienna, it is still quite plain that the pressure of rising food prices which has been felt in Germany and has led to disorders in France, has become a serious question in the Austrian capital. If the Socialists have chosen to make an issue of the cost of living, it is only proof that the problem is a real one. We need not enter into the complex discussion of what underlies the present economic unrest in Europe. One temporary cause that suggests itself is the extraordinary drought and heat of the late summer, with their disastrous effect on the crops, a situation with which the Prussian Government has been compelled to deal by cutting in half the freight rates on food products. Putting this common factor aside, it is to be noted that the people of Austria suffer as much as any country under the double system which, rightly or wrongly, has been everywhere accepted as largely responsible for the rise in the cost of living—namely, a tariff on foreign food products, and the growth of Trusts. Discontent with the concentration of trade and industry has long been rife among the lower middle classes in Vienna.

The German army manœuvres seem to have ended in a veritable triumph for the military aviators. Lieut. Mackenthun, who had already distinguished himself in long-distance flights, is reported to have flown over the enemy and brought back in half an hour precious information which the cavalry could have obtained only after many hours of reconnoitring, coupled with heavy losses. But if both the opposing armies were similarly equipped with aeroplanes and dirigibles, they ought both, it should seem, to have profited in equal measure. Moreover, the ordnance sharps, who persistently refuse to believe in the possibilities of the aeroplane as a military scout, will be quick to point out that such manœuvres afford no real test, for, in war-time, thousands of men and many specially constructed balloon-cannon would have been blazing away at Lieut. Mackenthun and forcing him up so high in the air as to make observation difficult, if not impossible. Obviously, under actual service conditions, the difficulties of the air-scout will be vastly greater and success will be achieved only at a terrible risk and by the exceptional aviator. None the less, military men everywhere are paying more and more attention to this new method of scouting, even where there is absolute skepticism as to the use of the aeroplane for bomb-dropping. One has only to study some of our own civil war battles to see what terrible blunders might have been avoided had even captive balloons been more widely used.

MAINE AND THE REFERENDUM.

The closeness of the popular vote in Maine, on a question regarded as of vital importance to the welfare of the State, suggests some reflections on the general merits of the initiative-and-referendum system as a substitute for representative government. In the instance before us, this evenly balanced vote, this result which would have been reversed if only eleven electors out of 120,000 had changed their votes, had reference to the repeal of an established feature of the State's Constitution, but precisely the same thing might happen in regard to the introduction of some innovation of crucial importance. Under the system of initiative and referendum, a very small percentage of the voters may propose a measure, and, if it is then carried in a popular election by a margin ever so narrow, it becomes a law, without qualification or amendment, and without having to encounter the possibility of a veto at the hands of the Executive.

Now it is quite true that, under any system of republican government, the same closeness may arise in an election, and that the result, however momentous its consequences, must be accepted by a law-abiding people. The reversal of six hundred votes in New York State in the national election of 1884 would have made Blaine President instead of Cleveland; and in any legislative body that is almost exactly tied, it is easy to point out how few changes of votes, if properly distributed, would have sufficed to modify the complexion of the result. But there is a difference. To elect a Legislature, or a Governor, or a President, is not the same thing as to answer an abstract question with the single word yes or no. You have still human beings to deal with, men who have been more or less distinctly committed to certain lines of action, but who still retain—if they are men and not mere puppets—the right of private judgment on the whole state of facts that presents itself for their decision. The very closeness of the vote by which their party won may itself be a part of that state of facts which they may feel it not only their right, but their duty, to take into account; and this is especially true of the cases which are the most important, the cases in which some serious and critical step was included in the party's programme, the result of taking which might be attended with disastrous consequences. One has only to think of such a question as that of the free coinage of silver to see how desirable it is that there should reside somewhere, in the minds of some few men of superior intelligence and superior courage, the power to prevent the automatic consequence of a bare majority resulting from a mere count of noses.

Of course, in addition to the opportunity given for reflection and for individual judgment on the part of legislators, the representative system presents the advantage of giving opportunity for desirable modification of a proposed measure. But against all this the advocates of the initiative-and-referendum system place one argument which, to their mind, swallows up all the others, and the force of which it is, unfortunately, impossible to deny. What independent and honest Legislatures might do, they say, is very pretty to talk about, but the condition that confronts us in this country is that we cannot get that kind of Legislatures. Were it not for the degree of truth in this view, there would be no occasion to discuss the subject of the initiative and referendum as a practical issue. But whatever weight there may be in this consideration, it will not do to lose sight of the gravity of the change that is proposed by the direct-legislation men, nor of the immense loss that it threatens, along with any gain that it may bring. So long as the idea of representative government, in the full sense of the word, is still dominant in our polity, the true effect of its abandonment cannot safely be inferred from the fragmentary experiences of a few States. The heart of the issue lies in the question whether in the long run the initiative-and-referendum system will sap the vitality of representative government; whether it will result in turning over all really vital questions to the decision of a mere numerical majority at the polls—in a state of things in which a momentous change like the introduction of prohibition or the free coinage of silver may be effected in a moment, without the interposition of any chance for the assertion, by representative men, of those intellectual and moral powers which have hitherto been regarded as an essential part of the forces that shape our political destinies.

Upon a subject less far-reaching, and also less remote, the Maine election may serve to point a moral. When a proposed Constitutional amendment is under consideration, it is often thoughtlessly urged, when the objections to it are not manifestly conclusive, that the Legislature should give it the benefit of the doubt, since its favorable action would mean only the submission of the question for approval or rejection by the people. The fallacy of this view must be evident on a moment's thought; since, if it were adopted, the result would be that the Constitution could be changed with greater facility than an ordinary law. The closeness of the Maine election, however, brings into strong relief the lack of authoritative force in the mere acceptance or rejection of a fundamental measure by a popular majority. Approval of a Constitutional amendment by such a majority is designed to be a check on legislative action, not a substitute for it. In order that a change should be made in the organic law, it should satisfy, separately and independently, the requirement of being approved by the Legislature and the requirement of being approved by the people. No legislator can absolve himself from the duty of recording his own judgment upon it, on the plea that he is merely giving the people a chance to decide. It is his own duty to decide according to his judgment and conscience. The adoption of an amendment to the Constitution is understood to mean, first of all, that the Legislature has pronounced judgment in its favor, and secondly that the people have not reversed but confirmed that judgment. Any other view of the matter is manifestly absurd; and yet such views are so often put forward that the Maine election may serve a useful purpose in reminding us of their falsity.

THINGS FOR POLITICIANS TO DENY.

If a modern poet were to bring up to date the account of "the spirit who denies," he would have to reckon largely with men in public life. They are all the time being called upon to deny having said or done certain things with which they are charged. One of the latest and most amusing instances of this has just occurred in England. Mr. Lloyd George was accused of having declared that he "would never rest until he had made England bow the knee to Wales." Enemies of "the wretched lit-

Digitized by Google

tle Welsh attorney" were circulating this story with glee, and it was having a great run in the irresponsible newspapers. But the Chancellor of the Exchequer finally wrote a letter solemnly denying that he had ever said anything of the kind. So the national anthem will not have to be altered, and it will not be necessary for Englishmen to practise going on their knees to Welshmen.

Candidates for office have regularly to make arrangements for a series of public denials. In this country there is one story that periodically crops up and that demands the most earnest disclaimers and refutation. It is that some man standing for high office has been heard to say that, in his opinion, a dollar a day is enough for any workingman. The figure is always precise: not $1.25 or $1.12½ a day, but exactly $1. No regard is had for rising or falling wages or changes in the cost of living; the hard-hearted man is charged with having asserted that a dollar a day is enough. Usually it is some old employee, or a farmer-friend, who has heard him say it, though the fact was never mentioned until a political campaign came up. Thereupon other employees, or neighbors in the country, come forward to bear witness that they know the sentiment attributed to the candidate to be abhorrent to him, since they had often heard him say that no rate of pay could be too high for the beloved laboring man. It will be remembered that this charge was made against Judge Parker in 1904, and was then impressively declared to be false. But it was really a revival or survival of earlier days. For many years the dollar-a-day fiction had been numbered in the United States among the things for politicians to deny.

During a recent turbulent Presidency, denial played a truly strenuous part. A collection of the mendacious and damnable charges made and exposed during those six years without a dull moment, would rival in length the list of specimens brought back from Africa for the Smithsonian. Indeed, so fixed and active was then the habit of denial, that some things were denied before they were alleged, and in one case, at least, a furious denial, with a threat of criminal prosecution, followed a newspaper article which on its face was plainly humorous. That period will long remain a high-water mark in the art, or duty, of political denial.

A more serious aspect of the matter is seen when we pass from what may be only campaign slanders or partisan attacks, to questions of political principle, supposed to be held peculiarly sacred. A good illustration of what we mean was furnished the other day in the discussions of the assembled Governors at Spring Lake, New Jersey. Debate chanced to grow pretty sharp on the question of Executive power and the control of Legislatures, and particularly on the subject of the referendum and recall. Every disputant, however, when hard put to it, had one triumphant resort. "Then you don't trust the people?" he would ask. Now, this is a question which always strikes terror to the heart of a politician—this is a charge which he must make haste to deny. No matter on which side he may be arguing, or how he may stand on the main question, his necessary postulate is that the people are always to be trusted, and that he, for his part, has not a particle of doubt that the American voters fully realize Plato's dream of sovereign power joined to absolute wisdom. Nor is it safe for him to attempt to make any nice distinctions in this matter. We observe that on this occasion one or two of the more daring Governors ventured to assert that there might be a difference between the settled and deliberate will of the people and a popular "caprice." But this is perilous. The retort is obvious, and it was made: "Can you feel sure that it was not a foolish caprice that put you in office?"

Alongside the things which public men have to deny is the even more troublesome category of things they have to explain away. These arise, not from vague or malicious charges, but from printed letter or recorded speech. It requires great skill in a politician to show how when he said black in 1902 he really meant the same as white in 1911—or, at all events, a neutral shade of gray. This was Senator Cummins's difficulty when Senator Williams confronted him with an extract from one of his own messages, as Governor of Iowa, deriding the notion that Canadian reciprocity could injure the American farmer. The Iowa Senator had not Gladstone's mastery in this kind of thing—for the latter was said to be able to "explain away" the wife of a bishop. But even he would have shrunk from the task of explanation which will soon be pressing upon Mr. Roosevelt. We refer to that congratulatory statement of his to the American people, issued shortly after President Taft's election, and positively and sweepingly asserting that the choice was the best one that could possibly have been made.

THE STATES AND THEIR PRISONS.

That the conference of Governors devoted so much time to the consideration of prison questions is at once a significant indication of the importance now coming to be universally assigned to such questions and an illustration of the varied usefulness which these conferences may have. Unlike some of the questions that have come before the Governors, this of prison management raises no questions of party controversy, nor any issue of the division of powers between the States and the Federal Government. In the matter of crime, except in the comparatively small domain of violations of Federal law, each State has complete control of the situation within its borders. As a result, the history of prison administration in this country furnishes ample material both for the advocate and for the critic of our system of federated States. In some respects, and preëminently in the establishment of juvenile courts, individual States of our Union have set an example that has been admired and imitated in a number of the leading countries of the world; while, on the other hand, in a large proportion of our States there have prevailed, in the ordinary management of prisons and reformatories—above all, in the county institutions—conditions that are a reproach to the country, conditions which have long ceased to be tolerated by any of the advanced nations of Europe. It is a safe conjecture that neither the worst nor the best that our States have had to show in this field would have been presented by the history of our prison administration had it been under the centralized control of the nation.

That in many of the States there is going on an earnest effort to advance toward a higher standard in prison management, and to take more and more seriously into account the possibilities of regeneration, instead of degeneration, for those condemned to

Digitized by Google

terms of service as convicts, there is ample evidence on every hand. The series of leaflets published by the National Committee on Prison Labor shows how many of the messages of Governors and the platforms of parties in various States have given attention to these questions. The difficult problems of contract convict labor, of direct State management of convict labor, of the direction which such labor should take, and of the disposal of its products, all receive earnest consideration. The importance of permitting the convicts to get in large measure the benefit, for themselves or their families or both, of the proceeds of their work, is coming to be more and more widely recognized. Another thing, of perhaps equal or greater importance, is the question of giving the convicts open-air occupation so far as possible; and along this line highly encouraging experience has already been put on record in more than one State. From such an interchange of facts and opinions as was had at the Governors' conference, whatever is best in all these movements for betterment of prison conditions must inevitably receive a strong impetus throughout the Union.

But it is by no means only upon the adoption of general principles or methods that the question of prison reform or prison improvement turns. In this, as in the general questions of government, there remains a deal of truth in the maxim "whate'er is best administered." Out of a fundamentally bad system, to be sure, good results cannot be expected; but a poor system can be made comparatively beneficent by admirable administration, and the best of systems can be made futile or mischievous by inefficient or corrupt management. The Maryland State Penitentiary, for instance, has for many years afforded a conspicuous lesson of great benefits procured for the prisoners, and great savings at the same time effected for the State, without any change of system, but simply through the extraordinary qualities and exemplary devotion of the warden, who has survived two changes of party in the State. So, too, there is an enormous range between the worst and the best in the contract system, both according to the spirit in which it is instituted and according to the kind of men in charge of it. Among the specific reforms brought to the attention of the Governors last week is the simple requirement of complete publicity in regard to prison-labor contracts —a requirement which is manifestly just in itself, and of which the exposure of outrageous abuses has abundantly emphasized the necessity.

In relation to the largest and deepest problems of the treatment of crime, the question of quality in the prison officials becomes absolutely essential. At the recent International Peace Congress, papers dealing with such fundamental questions as the indeterminate sentence, probation, etc., recognized the obtaining of a high class of officials as the indispensable prerequisite of success in these endeavors to put the treatment of crime upon a more hopeful footing. It is a satisfaction to be able to think that along this line great progress has been made in most of our States in recent years. This has been largely due to the infiltration of the ideas underlying the merit system throughout the whole country, even where its principles have not been embodied in any provision of law. The hideous monstrosity of making the guardianship of wretches condemned to prison a source of reward for party workers and "heelers" is gradually but steadily becoming apparent to the minds of decent Americans everywhere. But the old bad system still lingers, and still calls for vigorous effort to stamp it out.

EDUCATION IN ENGLAND AND HERE.

Education in Great Britain has just been undergoing a careful scrutiny. The Educational Section of the British Association has been listening to papers and addresses on a wide range of topics, which have then become the subject of general discussion. Some of these topics are the same as those we are accustomed to; others are strikingly unfamiliar. An example of the latter class is the problem of Church and School, which has many phases. Thus, the professional training of teachers in Scotland, where it has made more progress than in England, has only recently been taken out of the exclusive control of denominational training colleges and assumed by the state. Another aspect of the same question was presented by Bishop Welldon, in an address that covered the field from elementary to university education. He dared to look forward to the time when Oxford and Cambridge would recognize Nonconformists as eligible not only for degrees, but for lectureships and professorships in the theological faculty. A result of the present situation, he pointed out, is that, since these institutions are the close preserves of the Church of England, the modern universities tend to become the preserves of non-conformity. In this way narrowness begets narrowness, to the disadvantage of all concerned.

When we turn to examinations and the relations of secondary schools and colleges, we seem to emerge from mediæval to modern times. We have never lived under the shadow of an official religious establishment, but we have heard much about the blessing and the curse of formal tests of proficiency, and very much about the futility of the preparatory school and the dictation of the universities. The suggestion that the subject of examinations deserved investigation by that court of last resort, a Royal Commission, indicates the gravity with which it was regarded. The report of such a body would be eagerly seized upon by American educators, especially if it realized in some degree the hope of one speaker that scientific method might be successfully applied to the examination of examinations. Even in these problems, however, which are common to Great Britain and the United States, there is as much difference as likeness. On both sides of the water there is complaint of the want of coordination between secondary school and college. But with us it takes the form of an outcry against the tyranny of the college. In England, there is protest against the "unnatural ascendency" enjoyed by secondary education. The trouble there is apparently a serious overlapping of work. Here, to judge by what the colleges say, a warm welcome awaits a nearer approach to overlapping, which, judged by the sighs and groans of the secondary schools, is utterly beyond the range of possibility. A point that comes closer to our conditions is that of too little overlapping of methods, between the much lecturing and little teaching of the university and the "spoon-feeding" of the schools.

It is in reference to the great end of education that the two nations find themselves most nearly at one, both in purpose and in uncertainty as to the best or even the second-best way to its

Digitized by Google

attainment. Bishop Welldon's four fundamental principles of education are implicit in the one he puts first: Every child shall enjoy the opportunity of developing in full measure the intellectual and moral faculties with which he or she is endowed. This is more abstract than Milton's stately expression of the supreme object of education as the providing of citizens able to "perform justly, skilfully, and magnanimously all the offices, both public and private, of peace and war"; but in other respects it is not different. There is nothing surprising in the fact that in form, at least, we have gone further than the mother country in realizing this ideal. It would be an absurdity for a speaker here to allude to a remnant of social exclusiveness still apparently lingering in "that most truly democratical" of institutions, the public school. Even more unintelligible would be a reference to the monopolizing of scholarships by the rich, to the loss of the very persons for whom they were founded. It would also be a ludicrous understatement which affirmed that "even now boys educated in elementary schools have attained the highest honors in the ancient as well as in the modern universities." In all this we are face to face with the tremendous social cleavage between the two countries, despite our numerous and well-attended private schools. In both, nevertheless, democracy more and more looks upon universal education as its only real safeguard.

The chief danger in this view was not overlooked by the bishop, whose fifteen years as headmaster at Dulwich and Harrow evidently did not blind him to the defects of the system of which he is still a part. It can hardly be truer of England than of this country that the public schools—regardless of the difference in the meaning of the phrase there and here—tend to become "the homes of the average," to applaud mediocrity. It is easy to see how this comes about. In the very process of leading democracy to higher levels, education makes efforts to adjust itself to the ideals of the institution for which it ostensibly sets the ideals. In the United States this is shown of late by the emphasis put upon vocational training. Democracy is willing to be educated, but it is inclined to prescribe its own courses. To this in itself there is comparatively little to object. The peril lies in the implication of intellectual equality that it fosters. Equality before the law is a sound and permanent democratic principle. Equality of personal capabilities is an absurd fallacy. Public schools will fail in one of their highest duties if they sacrifice the development of ability, and, consequently, of leadership, to a fetich of uniformity. A minimum of education for all must not be allowed to interfere with a maximum of education for some, for as many, indeed, as can be found or made fit for it.

NIETZSCHE.—I.

If the number of books written about a subject is any proof of interest in it, Nietzsche must have become one of the most popular of authors among Englishmen and Americans. Besides the authorized version of his Works appearing under the editorial care of Dr. Levy, every season for the past three or four years has brought at least one new interpretation of his theories or a biography of the man, among the most important of which are the expositions by Henry L. Mencken and J. M. Kennedy, and J. M. Hone's translation of the Life by Daniel Halévy.* Now a considerable part of Nietzsche's writing is just the sort of spasmodic commonplace that enraptures the half-cultured and provokes a disciplined mind to reject his books with disgust. But withal he cannot be quite so easily disposed of. He may be like Poe, "three-fifths of him genius and two-fifths mere fudge," but the inspired part of him is the provocative and, it might be said, final expression of one side of the contest between the principle of egotism and sympathy that for two centuries and more has been waging for the polity and morals of the world. We cannot rightly understand Nietzsche unless we find his place in this long debate, and to do this we must take a rapid glance backward.

I.

The problem to which Nietzsche gives so absolute an answer was definitely posed in the eighteenth century, but its source is best displayed by comparing it with the issue—different in substance, though somewhat similar in terms—of the preceding age. To the dominant moralists of the seventeenth century the basis of human nature was a pure egotism. La Rochefoucauld gave the most finished expression to this belief in his doctrine of *amour-propre*, showing itself in a vanity that takes pleasure in the praise of ourselves and a jealousy that takes umbrage at the praise of others. In England the principle of egotism had already been developed by Hobbes into a complete philosophy of the state. "In the first place," said Hobbes, "I put forth for a general inclination of all mankind, a perpetual and restless desire of power after power, that ceaseth only in death." The natural condition of mankind, therefore, is that every man's hand should be against every other man, and society is the result of a compact by which individuals, since each is unable to defend himself alone against the passions of all others, are driven to mutual concessions. The contrary principle of natural sympathy did not, so far as I know, come to clear definition in that age. Something like it is implied in the theories of the sects called Levellers, underlying, for example, the protest of the fanatic company of Diggers who, when arrested for starting a communistic settlement in Surrey, declared that "the time of deliverance was at hand; and God would bring His People out of slavery, and restore them to their freedom in enjoying the fruits and benefits of the Earth. . . That their intent is to restore the Creation to its former condition. . . . That the times will suddenly be, when all men shall willingly come and give up their lands and estates, and submit to this Community of Goods."

In this opposition of Hobbes's notion of the natural condition of man as one of warfare, with the humble effort of the Diggers to restore mankind to a primitive state of equality and fraternity, one may see foreshadowed the ethical theories of self-interest and sympathy which were developed in the next century. But there was an element in the theorizing of the seventeenth century which quite separates these men from their successors. Above the idea of nature hovered, more or less distinctly, the idea of a supernatural power. Even Hobbes, though he was repudiated by his own party as an atheist, completes his conception of the civil commonwealth dependent on the law of nature with a Christian commonwealth based on supernatural revelation and the will of God. So, on the other hand, the political schemes of fraternity were almost universally subordinate to notions of theocratic government. Of purely natural sympathy, as it was later to be developed into the sole source of virtue, the epoch had scarcely an inkling. This distinction is of the utmost importance in the history of ethics, and may be ren-

dered more precise by consideration of a few lines from that erudite scholar, but crabbed poet, Dr. Henry More. In his "Cupid's Conflict" the great Platonist becomes almost lyrical when this theme is touched:

When I myself from mine own self do quit,
And all things else, then an all-spreading Love
To the vast universe my Soul doth fit;
Makes me half equal to All-seeing Jove.
My mighty Wings high-stretch'd then clapping light,
I brush the Stars, and make them shine more bright.

Then all the Works of God with close Embrace
I dearly hug in my enlarged Arms:
All the hid Pathes of heavenly Love I trace,
And boldly listen to his secret Charms.

The same idea occurs more than once in the mystical doctor's prose, which was, if truth be told, a good deal more poetical than his verse.

II.

It is clear that this sense of compassion is a motive utterly different in kind from the sympathy which meant so much to the next age; to pass from one to the other a great principle had to be eliminated from the philosophy of human conduct, and this principle was manifestly the sense of the divine, of the infinite which stood apart from mortal passions and of which some simulacrum resided in the human breast. The man who effected this great revolution, partly by virtue of his own genius and partly as spokesman of his time, was John Locke, whose "Essay Concerning Human Understanding," published in 1690 as the result of eighteen years of reflection, became the bible, so to speak, of the next century. Locke did not expressly deny the existence of a supernatural world; on the contrary, he began his discussion by a kind of apology, declaring that "God having endued man with those faculties of knowing which he hath, was no more obliged by his Goodness to plant those innate notions in his mind, than that, having given him reason, hands, and materials, He should build him bridges or houses." Having thus apologetically cleared the field, Locke proceeded to prove that all our ideas spring from sensations, and reduced the human mind and soul to pure conformity with the phenomenal processes of nature. To explain our sense of morality, he had recourse to a law of God imposed upon man by decree and without any corresponding law in nature.

One of the first and strangest fruits of this new naturalism was Mandeville's "Fable of the Bees," which undertakes to show by the apologue of a hive of bees that the welfare of a state is the result of the counterbalancing of the passions of its individual citizens, that, in a word, private vices are public virtues:

Thus every Part was full of Vice,
Yet the whole Mass a Paradise.

The poem in itself was not much more than a clever *jeu d'esprit*, but the "Remarks" and the "Inquiry Into the Origin of Moral Virtue," which he published in defence of his thesis, are among the acutest psychological tracts of the age. "I believe man," he says, "(besides skin, flesh, bones, etc., that are obvious to the eye) to be a compound of various passions, that all of them, as they are provoked and come uppermost, govern him by turns, whether he will or no." The passions which produce the effect of virtue are those that spring from pride and the sense of power and the desire of luxury. "Pity," he adds, "though it is the most gentle and the least mischievous of all our passions, is yet as much a frailty of our nature as anger, pride, or fear. The weakest minds have generally the greatest share of it, for which reason none are more compassionate than women and children." Such a theory of the passions is a one-sided deduction from the naturalistic philosophy as it left the hands of Locke; the ethical conclusions, it will be observed, have a curious similarity with the system which Nietzsche was to develop so enthusiastically. The theory of Mandeville was too violently in opposition to the common sense of mankind to produce much direct influence, but it remained as a great scandal of letters. It brought the author an indictment before the grand jury of Middlesex for impiety; and as late as 1765 Diderot, in his criticism of a large and inartistic painting, could be understood when he exclaimed: "What shall we do with such a thing? You who defend the 'Fable of the Bees' will no doubt say to me that it brings money to the sellers of paints and canvas. To the devil with sophists! With them good and evil no longer exist!"

The real exegete of Locke's Scripture, he who made naturalism current by finding within it, without recourse to any extrinsic law, a sufficient principle of moral conduct, was David Hume. Hume's "Treatise of Human Nature," published in 1739, fell dead from the press, and was in part repudiated when he put forth his shorter "Inquiry Into the Principles of Morals," in 1751. Yet there is in reality no fundamental difference between his earlier and later theories, and the doctrines which passed to Rousseau and Kant were fully and definitely pronounced in the "Treatise" written before the author had completed his twenty-ninth year. He begins by resolving the world into an absolute flux, wherein the only reality for us is a succession of sensations, beyond which all is a fiction of the imagination. I enter a room and perceive a certain chair; if after an interval of time I return to the room and perceive the same chair, the feeling that this object of perception and the former are identical is merely created by my "propensity to feign." Our notion of cause and effect is likewise a fiction, due to the fact that we have perceived a certain sequence of phenomena a number of times, and have come to associate them together; we have no real assurance that a similar sequence will happen another time. And human nature is equally a flux, without any principle of unity or identity. An idea is nothing more than a reproduced and fainter sensation, and all knowledge is nothing more than probability. There is no persistent self, but only a "succession of related ideas and impressions, of which we have an intimate memory and consciousness." In this flood of sensations pleasure and pain alone can be the motives of action, and to pleasure and pain alone our notion of virtue and vice must be ultimately reduced.

In his analysis of the moral sense Hume begins with the conception of property. Self-interest is fundamentally opposed to admitting the claims of others to possession, but the only way I can be assured of retaining what I possess is by allowing my neighbor to retain what he possesses. Justice, then, is a mutual concession of self-interests for the advantage of each. A just act is an act that is useful at once to society and the individual by strengthening the security of property. But a just act is not in itself virtuous; the sense of virtue is the agreeable emotion, or passion, as Hume calls it, that comes to us when we perceive a man perform an act of justice which, by the power of throwing ourselves sympathetically into the position of others, we feel to be indirectly useful to ourselves. The pleasurable emotion of self-interest is the motive of just action, the pleasurable emotion of sympathy with an act of justice in which we are not immediately concerned is the sense of virtue. Besides this passion of justice which is necessary for the very existence of society, Hume recognized certain minor passions, such as benevolence, which are not instigated by mutual self-interest, but spring directly from the inherent tendency of man to sympathize with his fellows. Manifestly there are serious difficulties in this reduction of virtue and vice to agreeable and disagreeable passions. It leaves no motive for virtue when the individual has become conscious of the basis of justice in the mutual concessions of self-interest, and asks why he should not foster this concession by the appearance of surrendering his native rights while secretly grasping all in his power; it furnishes no clear difference between the passions which actuate the hero and the *gourmet*, between a Nathan Hale uttering his regret that he had only one life to give

Digitized by Google

for his country and a Talleyrand saying placidly, "Fate cannot harm me; I have dined." The lacunæ point to some vital error in Hume's philosophy, but his theory of self-interest and sympathy was none the less the beginning of a revolutionary change in thought and morals.

Hume's "Treatise" dates from 1739 and 1740; in 1759 his friend Adam Smith published "The Theory of Moral Sentiments," in which the doctrine of sympathy was carried a step forward. Utility is still the measure of virtue and vice, but a man now not only has the sense of virtue from sympathy with an act of justice, but is himself led to act justly through a sense of sympathy with the feelings that his conduct will arouse in others. Furthermore, through the habit of reflection we come to harbor a kind of impersonal sympathy with, or antipathy to, our own acts similar to that which we feel for the acts of others. "It is not," says Smith, "the love of our neighbor, it is not the love of mankind, which upon many occasions prompts us to the practice of those divine virtues. It is a stronger love, a more powerful affection, which generally takes place upon such occasions; the love of what is honorable and noble, of the grandeur, and dignity, and superiority of our own characters." Thus in the system of Adam Smith sympathy becomes the actuating cause of virtue and is even able to transform self-love into a motive wearing the mask of absolute virtue.

III.

Not the least significant feature of the advance from Hume's philosophy is the introduction of the word *sentiment* into the title of Adam Smith's treatise, for during the remaining years of the century the chief development of the doctrine of sympathy in England is found in the novelists of the sentimental school. "*Sentimental!* what is that?" is the record in Wesley's Journal after reading Sterne's "Sentimental Journey." "It is not English: he might as well say *Continental.* It is not sense. It conveys no determinate idea; yet one fool makes many. And this nonsensical word (who would believe it?) is become a fashionable one!" The hypercritical evangelist might have been told that if the word conveyed no determinate idea, it at least represented a very definite force and had a very clear origin. It was nothing else but the logical outcome of Hume's and Adam Smith's theory of sympathy entirely dissevered from any supernatural principle as the source of virtue. From 1760 to 1768 Sterne was issuing the successive volumes of "Tristram Shandy" and the "Sentimental Journey," in which this virtue of sentimental sympathy, reduced to pure sensibility, if not to morbidly sensitive nerves, and utterly freed from reason or character or the law of cause and effect, appears full-blown. If there is any practical moral in these books it is to be found in the episode of my Uncle Toby tenderly letting the buzzing fly out of the window, or in the tears of the pilgrim over the carcass of a dead ass. If Sterne's sentiment was apt to grow a trifle maudlin, that of his contemporary, Henry Brooke, was a constant downflow of soul. "This is a book of tears," says the modern editor of Brooke's "Fool of Quality"; "but they are tears that purge and purify with pity and compassion." I am inclined to think the purging for many readers to-day would come more from ridicule than from pity; but the book is notable as an attempt to depict a life made completely virtuous by the new sentiment of sympathy for all mankind. Hearken for a minute to one of the sermons of the pious Mentor of the story to his youthful charge:

> I once told you, my darling [he says], that all the evil which is in you belongs to yourself, and that all the good which is in you belongs to your God. . . .
>
> Remember, therefore, this distinction in yourself and all others; remember that, when you feel or see any instance of selfishness, you feel and see the coveting, grudging, and grappling of the creature; but that, where you feel or see any instance of benevolence, you feel and see the informing influence of your God. All possible vice and malignity subsists in the one; all possible virtue, all possible beauty, all possible blessedness, subsists in the other.

Now two things are remarkable in this passage, and would stand out even more plainly if I had space to quote at greater length. First, we have got completely away from the utilitarian theory of social virtue as a mutual concession of self-interests, which was propounded by Hobbes and essentially retained by Locke and Hume and Adam Smith, though gradually overlaid by the modifying power of sympathy. In Brooke's philosophy self-interest and sympathy are finally and absolutely sundered: the one is all vice, the other is all virtue. And, secondly, we may see here how far this newer notion of sympathy is removed from the compassion of Hobbes's Platonizing contemporary; the contrast is even more vivid from the fact that Brooke gives a thoroughly Christian turn to the expression of the "eternal law of benevolence," as he calls it. In Henry More the "kindly compassion" for the world is entirely subsidiary to the rapture of a spirit caught up in celestial contemplation, whereas in "The Fool of Quality" love is indeed planted in us by a divine hand as a force contrary to what Brooke calls "the very horrible and destestable nature of Self," but its total meaning and effect are in a sentimental dissolution of man's self in the idea of humanity. We have reached, that is to say, the genuine springs of humanitarianism.

Meanwhile the doctrine of sympathy had passed in France into the pen, if not into the heart, of one whose genius was to give it a new color and a power sufficient to crush and remould societies. It is not necessary to go at large into well-known theories of Rousseau. In his "Discourse on Inequality" (1755) and his "Social Contract" (1762) he, like his English predecessors, starts with the motives of self-interest and sympathy, but soon gives them a different direction. He saw, as did Hobbes and Hume, that property depends on the mutual concessions of self-interest, but he saw further that on this basis alone society and traditional morality were in a condition of unstable equilibrium, were in fact founded on injustice and not on justice at all. He perceived no relief from this hazardous condition except through counteracting self-interest with the equally innate and human force of sympathy, which was somehow to be called into action as the *volonté générale*, or mystical will of the people, embracing and absorbing the wills and desires of individuals into one harmonious purpose.

One step more and we shall have ended this preliminary history of the growth of sympathy as the controlling principle of morals. From Rousseau it passed into Germany and became one of the mainsprings of the romantic movement. You will find its marks everywhere in that literature; in the peculiarly sentimental attitude toward nature, in the impossible yearning of the *schöne Seelen* for brotherhood, in the whole *Gefühlsphilosophie* or philosophy of feeling. It lurks in Kant's fundamental rule of morality: "Act on a maxim which thou canst will to be law universal"; it lives and finds its highest expression in Schleiermacher's attempt to reunite the individual with the infinite by dissolving the mind in sympathetic contemplation of the flowing universe of things. And in this heated, unwholesome atmosphere of German romanticism sprang up and blossomed our modern ethics of humanitarianism. The theories of socialism are diverse and often superficially contradictory; they profess to stand on a foundation of economic law and the necessity of evolution, but in reality they spring from Rousseau's ideal of sympathy working itself out as a force sufficient in itself to combine the endless oppositions of self-interest in the *volonté générale*, and from the romantic conception of the infinite as an emotion obtained from surrender of self to the universal flux. From the former come the political schemes of humanitarianism; from the latter its religious sanction and fanatical intolerance.

IV.

This survey of the growth of self-interest and sympathy may seem a long

introduction to the study of Nietzsche, but I do not see how otherwise we can understand the problem with which he struggled, or the meaning of his proposed solution. Into the life of Nietzsche—his strenuous education; his early professorial work at Zürich; his revolt from philology to philosophy; his rapturous friendship and bitter quarrel with Wagner; his years of self-imposed ostracism in Italy and Switzerland; his growing inability to associate with men, marked by his exclamation, "I have forty-three years behind me and am as alone as if I were a child"; his ill-health and increasing delusions, culminating in the incoherent letter to Brandes in which he identified himself with Jesus Christ; his pitiable breakdown and decay under the care of his sister; his death at Weimar in 1900, at the age of fifty-five—into all this I need not enter. The events of his life are told sympathetically, yet honestly, by M. Halévy; they are related in greater detail, and with an unfailing sense of hero-worship that is not without its charm, in the biography by his sister, Frau Förster-Nietzsche. One may begin the perusal of his life with a feeling of repulsion for the man—at least that, I confess, was my own experience—but one can scarcely lay it down without pity for his tragic failures, and without something like admiration for his reckless courage. And all through the reading one is impressed by the truth, which is as important for judging the man as it is for understanding his philosophy, and which one of his ardent worshippers, Meta von Salis-Marschlins, has brought out with special emphasis. "He, and this is the salient point," she says, "condemned a whole class of feelings in their excess, not because he did not have them, but, on the contrary, because he had them and knew their danger." His revolt from the principle of sympathy to the other pole of naturalism will form the subject of the concluding part of this essay. P. E. M.

Correspondence

SWIFT AND MARK TWAIN.

To the Editor of The Nation:

Sir: Your article on "The Common Stock of Wit" has, because of vacation limitations, just come to my notice. I wish your purpose had permitted you to include within the range of your wise criticism the characterization which Mr. Howells gives us of Swift's humor. Mr. Howells writes:

> The one great English humorist who never had credit for the high moral quality of his humor was Swift, who really seldom hurt but to heal, and who got himself permanently imagined a cynical savage by a humorist who ought to have been kinder to him and truer. He came nearest being the purely and entirely humorous humorist we are requiring from the future as successor to Mark Twain, and he was the most eminent predecessor of Mark Twain in the conscienced humor we must always associate with that great pseudonym. Steele was not really gentler, though Thackeray tries to make him out so, and Pope was by comparison a venomous little viper, loving to bite the little heels of ladies. Out of most things that Swift wrote, the caustic irony has passed, and "Gulliver's Travels" remains the harmless delight of boyhood without a suggestion of the political satire it began by being.

As a characterization of Swift, this seems to have the qualities of the celebrated definition of the lobster. No credit for moral quality? Thackeray himself writes his essay, except the Stella-Vanessa portions, in a spirit justly enough indicated in this passage:

> His bitterness, his scorn, his rage, his subsequent misanthropy are ascribed by some panegyrists to a deliberate conviction of mankind's unworthiness, and a desire to amend them by castigating.

Dead in earnest to right the wrongs of the world, all agree Swift was. "Purely and entirely humorous humorist"? Did an entirely humorous humorist write the "Modest Proposal," or "Laputa," or the "Houyhnhnms"? "Conscienced," suppose we grant: does this constitute a parallel with Mark Twain, the author of "Roughing It," of "A Tramp Abroad," of "Huck Finn"? "Steele was not really gentler"? Really, one's standards are turned topsy-turvy. One thinks of Steele as the type "gentleness." Where is there in Swift anything to compare in this quality with dozens of Steele's essays? "From most things the caustic irony has passed"? Has the caustic irony passed from anything Swift wrote about the church or about conditions in Ireland? Do the third and fourth parts of Gulliver's Travels remain "the harmless delight of boyhood without a suggestion of the political satire they began by being"? Were the first and second Voyages ever anything but delightful?

As a parallel to Mark Twain the choice of Swift seems as unfortunate as could be made. Because a critic is altruistic, must all great writers of the past be altruistic? William H. Powers.

Brookings, S. D., August 31.

HIRAM CORSON.

To the Editor of The Nation:

Sir: Some time has passed since the death of Prof. Hiram Corson, yet I have not ceased to wonder how a man of his attainments and scholarship could receive from a paper of the standing of the *Nation* merely the briefest mention.

Many Cornell students can recall him as he took a walk on wintry mornings, the epitome of loneliness—a pagan loneliness—one might say, without hope and without despair.

Those who had the good fortune to be at his home for the delightful readings he gave throughout the year on Sunday evenings, recall them with deepest gratitude. To hear him read a poem of Browning's or Shakespeare's was to know that poem, as much as one can know before life has brought a deeper appreciation of its meaning. Often the reading was followed by music, or we would wander freely about his interesting home, and examine rare prints and first editions; or, better still, he would give personal reminiscences, of which he had a rich store, about Browning, Swinburne, Rossetti, and others.

These evenings brought more literary appreciation, to one at least, than did all the cut-and-dried lectures of the curriculum. And this is what he gave his classes, no rule of thumb or academic formulas to judge things by—he had the utmost scorn for them—but the very life of the piece; not a study about Shakespeare and his time, but Shakespeare who is life and the world.

Surely we have too few men of this kind, not to give them due honor. G.

Brooklyn, September 14.

"CURIOUS TO KNOW."

To the Editor of The Nation:

Sir: Just back among my books after a summer vacation, I have examined Mr. Theron Wilber Haight's letter (*Nation*, August 10), upon the phrase "curious to know." Mr. Haight has carelessly misread the Oxford Dictionary and thereby done it an injustice. He writes:

> I was horrified to find that the only appearance of it [the phrase in question] in that monumental work [the Oxford] is credited to E. E. Hale's "In His Name," with the date 1873, thus implying a recent American origin for the atrocity.

Now the Oxford, p. 1266, col. *a*, No. 5, under the definition: *Desirous of seeing or knowing*, ends this paragraph with a quotation from E. E. Hale's "In His Name": "Crowded with curious idlers"—an ordinary and perfectly unobjectionable use of the word "curious." The quotation immediately preceding, however, is quite different, namely, "1833, Ht. Martineau, *Brooke Farm*, x. 116: Two or three neighbours . . . were curious to know what he had seen abroad."

Evidently Dr. Murray and his co-workers should not rest under the imputation of trying to father the bastard "curious to know" upon America.

Mr. Haight's citations from Boswell are, of course, interesting and valuable.

THE WORKING VOCABULARY.

To the Editor of The Nation:

Sir: In your issue of July 6 you printed a letter from Prof. R. W. Brown, in which he submitted data to show the real size of the working vocabulary as contrasted with traditional estimates. He reported that six representative freshmen in Wabash College last year attempted to record their own vocabularies, and that after he had sifted the words in each list to avoid all possible repetitions, the totals ranged from 2,970 to 4,560 words. I have in my possession some facts touching this same matter. My material was obtained from an impromptu test, which I conducted at De Pauw University, with ten representative students, six freshmen and four upperclassmen. One evening last spring, without any intimation of what I desired to have them do, I called these students into my office and asked them to write down all the words they could think of in two hours. Of course, they worked independently of each other and of all sources of suggestion save only the laws of association. Since then I have carefully sifted and counted the words in each list, with the following result:

Digitized by Google

Freshmen—Men, 1,114, 1,596, 1,789; women, 847, 948, 1,230.

Upperclassmen—Men, 1,239, 1,464; women, 1,489, 1,573.

It is only fair to state that when time was called at the end of the two hours every student was still writing words rapidly, and insisted that he had by no means exhausted his supply. Since many of the commonest words of everyday communication were omitted in every list, it should seem that their protests were well grounded. Moreover, several of the students were handicapped by the fact that they write a very slow hand, so that their vocabularies would have been tested more accurately if they could have enumerated their words orally.

These results suggest many interesting questions which cannot be answered without more extensive study. For instance, is there any noticeable difference in the size of the vocabularies of the two sexes? What is the normal percentage of increase in vocabulary among students while in college? How does the size of the college student's vocabulary compare with that of the young laboring man or woman? How much of the ineffectiveness of the college student's writing is due to poverty of words? Let some university student in search of a subject for investigation enlighten us.

NATHANIEL WARING BARNES.

Greencastle, Ind., August 28.

THE HAIR IN BROWNING'S POETRY.

TO THE EDITOR OF THE NATION:

SIR: A specialist in psychology suggested to me, not long since, that in description of female beauty Browning relies to a very uncommon extent upon references to the hair. This, indeed, proves to be the case. A curiously interesting and not unimportant list of passages may be adduced. In the "Statue and the Bust," for example, the most strikingly beautiful phrase in a haunting quotation is the one italicized:

> The lip's red charm,
> The *heaven of hair*, the pride of the brow,
> And the blood that blues the inside arm.

More familiar, and perhaps quite as felicitous, is the close of "A Toccata of Galuppi's":

> Dear dead women, with such hair, too—what's become of all the gold
> Used to hang and brush their bosoms? I feel chilly and grown old.

Even in that much abused poem, "Sordello," there are similar references, of surpassing phraseology:

> How the tresses curled
> Into a sumptuous swell of gold and wound
> About her like a glory! even the ground
> Was bright as with split sunbeams. (Book i.)

> The very maid
> Of the North Chamber, her red lips as rich,
> The same pure fleecy hair; one weft of which,
> Golden and great, quite touched his cheek as o'er
> She leant. (Book ii.)

> Elys' hair
> And head that's sharp and perfect like a pear,
> So smooth and close are laid the few fine locks
> Stained like pale honey oozed from topmost rocks
> Sun-blanched the livelong summer. (Book v.)

The tribute to his wife, in "By the Fireside," is particularly noteworthy:

> Worth how well, those dark grey eyes,
> That hair so dark and dear, how worth
> That a man should strive and agonise,
> And taste a veriest hell on earth
> For the hope of such a prize!

Evidence of the same strange fondness for such description is to be found in the very crisis of that intense scene between Sebald and Ottima, in "Pippa Passes":

> I felt you
> Taper into a point the ruffled ends
> Of my loose locks 'twixt both your humid lips.
> My hair is fallen now: knot it again!
> . . . . . .
> Bind it thrice about my brow;
> Crown me your queen, your spirit's arbitress,
> Magnificent in sin.

Again, the somewhat morbid poem, "Gold Hair: A Story of Pornic," betrays an almost unmistakable fascination of subject, for the reason that elsewhere Browning is never morbid—unless in "A Blot in the 'Scutcheon." But in "Gold Hair" what may be called the capillary attraction proved too strong to resist. (Cp. Pope's "Beauty draws us by a single hair.") And so the story of the beautiful young girl, who, an unnatural miser, obtained her last request, that her wonderfully abundant hair, in which she had hidden many gold pieces, should be left undisturbed after her death, was duly chronicled—with much more than the reticence of a chronicle. And, finally, by way of contrast with praise of beautiful hair, one may cite the disparaging reference of James Lee's poor wife to her own locks, in a line to which a famous phrase of Kipling's "Vampire" probably owes something:

> Fade you might to a thing like me,
> And your hair grow these coarse hanks of hair.

All this does not show, of course—and is not intended to show—that glorification of the beauty of woman by varied descriptions of hair was with Browning an obsession. Nevertheless, it seems to have been a favorite subject, to a degree not discernible in other English poets, except those of a distinctly decadent type.

Literature

CHINA AND THE WORLD.

The International Relations of the Chinese Empire. By Hosea Ballou Morse. The Period of Conflict, 1834-1860. With illustrations, maps, and diagrams. New York: Longmans, Green & Co. $6 net.

Mr. Morse is an American who has passed half of his life in China. He is familiar with its language and institutions. He has had much to do with its governing class. He adds to his experience and training sympathy with their point of view. His account of the impact of modern Western culture upon the Far East should be as complete and impartial a history as can be written by a member of one of the two races thus placed in antagonism. The result of his labors, so far as it lies before us, does not disappoint expectation. This volume carries the story of China's foreign intercourse from the beginning of modern sea-traffic to the close of the second Arrow War, and is to be followed by another detailing the events of the past fifty years; the two will constitute a history of the opening of China that will long remain an authority.

For this reason the work ought to be judged in accordance with the high standards of historical research. Its value and importance are such that its very few defects may be pointed out without fear of doing injustice. It is remarkable, in view of his opportunities when living in China, that Mr. Morse's sole Chinese sources are those printed in the *Chinese Repository* and the *North China Herald*. While it is too early yet to expect from any one a full acquaintance with Chinese accounts of the *Yi*, or Western Outlanders, there are public documents as well as published journals and reminiscences which a collector in China could accumulate for a study of their history. Imperfect and even inconsequential as they are, there exist, moreover, a few periodicals edited by the Young China of to-day which are characterized by national feeling and demand the historian's attention, as similar literature does in other countries. Indications of the abundance and importance of Chinese material are so numerous in the translations found in Professor Parker's books and Mr. Backhouse's "China Under the Empress Dowager"—to mention only two instances—that its neglect in such a work as this seems hardly justified by the author's easy assurance "that access to the original [Chinese] records would give us but little further light on the subject." As to European sources, the opportunity afforded by his residence in England for consulting the British Foreign Office records has made his study of the part of the protagonist in the long drama quite comprehensive, and afforded a valuable collection of hitherto unpublished documents reproduced on seventy pages of appendices. One would like, however, to know why these researches were not supplemented by similar reference to the store of papers in the India House, or why he disregarded the *livres jaunes* on French diplomacy, and the United States diplomatic correspondence covering American post-treaty relations with China. So far as the footnotes reveal his authorities, the author in recounting these negotiations has relied upon Cordier's compendium in the one case and on Gen. Foster's "American Diplomacy in the Orient" in the other.

But if Mr. Morse cannot be said to have satisfied the critical student in his use of sources, it may be readily conceded that the predominance of British interests during the Opium and Arrow Wars reduces the affairs of other nations in China to comparative insignificance. The crux of every history of this period is its verdict as to the real origin of the hostilities arising after the seizure of the opium by a Chinese high commissioner. Was it a necessary conflict,

Digitized by Google

or could it have been avoided? To the English in Canton, suffering for years under the "injurious proceedings" of the Chinese, war seemed a natural and legitimate remedy for an intolerable situation. But the British Government, in their ignorance of Chinese polity, were responsible for rendering the situation intolerable by withdrawing the East India Company's trade monopoly and virtually substituting anarchy for the old autocratic control. When they commissioned a chief superintendent to demand consular rights from a Government which recognized no other nation as independent of its suzerainty, they gave him neither the proper credentials nor the support of a force sufficient to procure recognition. How little Asiatic statecraft was understood by Europeans eighty years ago is evident from the Duke of Wellington's instructions declaring that "it is not by force and violence that his Majesty intends to establish a commercial intercourse between his subjects and China, but by the other conciliatory measures so strongly inculcated in all the instructions you have received." Mr. Morse most pertinently observes upon this: "The British Government alone, while necessarily and rightly directing that a conciliatory policy be adopted, could not see that the only probable result was that which attended Lord Amherst's embassy in 1816, and made no provision, and allowed their representative to make no provision, for the possibility of a different result."

If there were pride and obstinacy on the one side, then there was stupidity on the other. It is a disagreeable word, and Mr. Morse does not use it, but it describes the cause which deferred formulating a policy and let matters drift. "Repeated requests were sent for instructions and for increased authority; but during more than five years, beyond specific injunctions not to exceed their authority and not to interfere unduly with the operations of the merchants, the superintendents received no instructions which gave any indications of the general, or even of the specific, views of their Government." Few things, perhaps, are more futile than to talk of the "might-have-beens" of history, but it might be asked here, if the English had addressed themselves to the problem with the sort of policy and the sort of man the Americans employed in Japan in 1853, would the opening of China have dragged on for eighty years? Mr. Morse rightly concludes that the British did not begin hostilities because of their loss of some twenty thousand chests of opium, but he conceives it to be none the less true that the Chinese fought only because the drug came to them against their will. The vexed question has never before been handled with keener perception and more impartial analysis. So much literature of a highly controversial character has resulted from this famous war that it is gratifying to follow the author's consideration of the moral question involved. Whether opium-smoking is to be called a sin or a vice,

> it may be permitted to the historian to point out that the moral sense of the Western world has advanced far since a hundred years past; even then there were men, ahead of their time, whose opinions in these matters were such as we hold to-day, but in general, morality and what we term civilization made fewer demands upon mankind then than now. Buying, transporting, and selling slaves gave profit to many English and American shipowners through the eighteenth century, and it was not until 1807, after the issue of the Emperor's opium-prohibition edict, less than a generation before the date we have now reached, that the slave trade was prohibited to the people of the two countries. . . . By a common instinct the English and American people have refused to give state regulation to prostitution, and have adopted, instead, the policy which the Chinese adopted for opium-smoking, viz., total prohibition: and yet he would be a bold man who asserted that there was less of that form of immorality in London and New York than in other large cities where other views are held. All these considerations must be borne in mind when we attempt to judge the motives and actions of those Chinese who wished to prohibit their national vice; of those Chinese who preferred to regulate it; of those foreign Governments which considered security of person and property before the social legislation of the Chinese.

A single exception to the admirable impartiality which characterizes his narrative may be noted in the author's treatment of the American envoy, W. B. Reed. Like all the other plenipotentiaries of that period, Reed reached China in utter ignorance of the Chinese, and had presently (in his own words) "to dismiss the dream of dealing with China as a power to which any ordinary rules apply." The task before him was not one to be accomplished in accordance with diplomatic methods customary in the West. He is rather severely handled by Mr. Morse for beginning treaty negotiations with the Viceroy Tan at Taku, in 1858, while the Allies were on the point of striking their blow. Of course, discussion at that crisis was bound to be abortive, but it was worth undertaking in order to explain to the Chinese the folly and danger of resistance, and it was morally justified by the American policy. The author also joins Dr. Martin in blaming Reed for withdrawing the anti-opium clause from the American treaty and proposing to Lord Elgin to legalize the traffic. It is not necessary to call him a great man, nor did the unhappy end of his career reveal him to be an entirely honest one, but to include him "among those who have betrayed great causes" is a serious indictment to be made by an historian who has not, apparently, consulted the minister's correspondence with his own Government.

A few matters of pregnant importance in this war, such as Ward's debate in Peking on the audience question, the Russian land-grab of Primorsk, and the surreptitious clause in the French treaty, do not receive treatment at all adequate to their significance; but it is reasonable to suppose that the author reserves them for fuller consideration in a second volume—a work which every student of modern China will await with eagerness.

CURRENT FICTION.

Monna Lisa, or The Quest of the Woman Soul. Transcribed by Guglielmo Scala. New York: Thomas Y. Crowell & Co.

The author professes, in his preface, that this narrative is translated from a manuscript found in a rubbish-heap in an old Florentine palace, and that internal evidence showed it to be the work of Leonardo da Vinci. Hence the transcription and presentation here of an important document. The publisher, rather quaintly fearful lest some ingenuous reader should take the author at his word, explains in an insert that the book is pure fiction, and that "Guglielmo Scala" is the pen name used for the nonce by an American writer "who has devoted long study to Italian art and literature, and who takes this method of sharing with the public the web of imagination woven for his own pleasure about Da Vinci and the subject of his famous portrait." Any possible illusion as to the nature of the work being thus satisfactorily removed, we are enabled to approach it in safety. To such lengths does the modern conscience bring us: fancy the publishers of "Robinson Crusoe" gravely assuring the world that Defoe isn't really telling the truth!

In fact, we should say the present narrative would have deceived only those who wish to be deceived and who ought to be permitted their dollar's worth. Not that the style is clumsy, or, in the main, unplausible, but that the whole affair is too neatly consecutive for credibility. Even the bad places in the manuscript, which defied the efforts of the decipherers, are conveniently placed so that no real gap occurs in the story of the Leonardo-Lisa relation. Lisa is represented as wife of a Florentine named Francesco Giocondo. She has long admired the great Leonardo at a distance, and it is at her solicitation that he undertakes her portrait. The reason for his consent, however, lies in his fancy that her smile and her strange beauty contain that mystery of "the woman soul" which he has never solved. For some years, he works at the portrait, and in the meantime, the bond between his own soul and that of the woman grows always stronger. The extracts from Leon-

Digitized by Google

ardo's story and from the letters which are supposed to have been exchanged between the lovers are managed with skill, though with here and there a lapse into modernism of thought or phrase. The upshot is that at the moment when the ideal love of the pair is threatened by passion, Lisa dies, and Leonardo at last catches the secret of her expression and immortalizes it upon his canvas. Alas, for that painted immortality!—the world now grieves over its possible loss after these few centuries. The author and his publishers are to be congratulated at least upon the chance timeliness of the work.

An Ardent American. By Mrs. Russell Codman. New York: The Century Company.

Two initial advantages—a distinct novelty in the way of heroines, and an unhackneyed point of view for the observation of American manners—lend promise to the opening pages. Yvonne Carrington, the young exotic patriot, whose mother after long residence abroad has "remarried herself to a German diplomat," unites a charming partiality for America, Americans, and American ways, with all the naïve seriousness of a properly "elevated" comtesse. Her diary, "written in English, with the help of a dictionary," divertingly records her enthusiastic efforts to follow idioms and customs in the land of her loyalty. When Yvonne returns to the household of the German diplomat, the end is not yet. A plot we must have, though it be of antiquated design. So the titled lover pursues, unkind mamma coerces, and Yvonne becomes the high-born fugitive of ancient fame. To share the precarious fortunes of a company of travelling players, to undergo privations in a garret, to fall, oh, desperately ill, and be rescued delirious by an estimable gentleman with a fine American talent for timing his arrival—all these are decreed for the fragile lady by a relentless author. Small wonder that the savour of the chronicle deteriorates and the reader's interest flags before the happy issue and the last page are reached.

Esther Damon. By Mrs. Fremont Older. New York: Charles Scribner's Sons.

The harsh fate of the reformed drunkard and the penitent Magdalene in an "up-State" village fifty years ago, and the rigors which the Methodism of that dark age imposed upon its disciples, might well excite the pity of the modern reader; it would if one could give implicit credence to this tale. There is a certain crude vigor in the telling, but most of the villagers are too starkly uncompromising in their attitudes to seem quite human. The three figures that live and move are those of Esther Damon, her mother, and Robert Orme. Orme, whom financial ruin and a subsequent sojourn in New York have unaccountably regenerated, does in the course of long years reinstate himself in popular esteem as the organizer of a prosperous industrial "republic," where advanced social ideas and primitive handicrafts thrive together. To Esther Damon who has loved too well and finds the expiation beyond her endurance, he becomes an angel of tolerance and protecting strength. He is a completely modern type, emancipated from prejudice by a gospel whose message is social and economic. Esther, on the contrary, finds a more orthodox salvation in returning to the exacting faith of her mother, a pathetically saintly creature given over to the impulse of religious asceticism and able to translate all suffering into spiritual beauty. Some of the morbid phenomena of religious excitement are dramatic factors in Esther's progress, although there is nowhere evidence of much psychological insight. Recognizing certain poignant possibilities in lives where intense religious conviction takes the place of intelligent thought, the author has been content to dwell upon these exclusively without reckoning with such artistic considerations as just historical values and the mellowing effect of distance.

The Dilemma of Engeltie. By Emma Rayner. Boston: L. C. Page & Co.

Engeltie was a Dutch maiden of Colonial times on the banks of the Hudson. Her marriage to the man of her heart was at hand when her father quarrelled with him and bade him begone. At the same time the angry parent insisted that the wedding should take place, as appointed, with one trifling change in the cast, namely, that of the bridegroom. Hence he allowed his daughter to choose from among her neighborhood suitors, with the alternative of giving her to an old curmudgeon of his own selection. Promptly the six mothers of the six aspirants to Engeltie's hand inaugurated a series of festivities to give each suitor an especial opportunity. A detailed description of six sorts of junketings in the Dutch fashion may be set down as an intended contribution to colonial history. Six ways for a pretty maiden to hold at arm's length six undesired proponents might be called history of a more universal application. The true lover keeping watch and ward in the disguise of a negro slave is hard to believe in, but since there is provided superabundance of plotting, ambuscading, all but kidnapping, and since all ends happily for the loving pair, why kick against such insignificant pricks as absurdities and improbabilities?

THE CHIEF OF SCOTLAND YARD.

The Lighter Side of My Official Life. By Sir Robert Anderson, K.C.B., LL.D. New York: George H. Doran Co. $3.50 net.

This is a model of the way in which such reminiscences should be written. The author pretends to no mock modesty; he lets you see his personality plainly enough; and he criticises men and events freely. But there is no suggestion of "writing up" an event, or of exploiting pet hobbies. The touch-and-go quality of good talk runs through the book.

From 1868 till his resignation in 1901 Sir Robert was connected with the Police Department of the British Home Office, and for much of that time, he controlled the "C. I. D."—or Criminal Investigation Department—to which are referred all the important criminal cases. A Scotch-Irishman by birth, educated at Trinity College, Dublin, and a devout Protestant, he was blest with a sense of humor and a love of justice, which saved him alike from fanaticism and from undue severity.

Many of the anecdotes he relates of strange crimes throw fiction into the shade. He very frankly shows how often luck helps in solving a mystery: but we get the impression that luck would be bad and not good without the careful organization of his force. His most significant chapter refers to Irish political crime, beginning with the Fenian conspiracy of 1867 and coming down to recent times. The story is not edifying, nor do most of the men who planned or perpetrated the assassinations and outrages deserve any sympathy. Dynamiters ought, as he says, to get short shrift everywhere. News to many of Sir Robert's readers will be his account of the Irish project to blow up Queen Victoria and her court in Westminster Abbey at her Golden Jubilee in 1887. His chapter on Le Caron, the informer, is highly instructive; and he has many casual revelations to make on the Phœnix Park murders and their sequel.

In general, he takes no stock in Home Rule, having too intimate an acquaintance with the Catholic Irish politicians and agitators to believe that they possess either the character or the ability for self-government. He quotes approvingly the epigrammatic definition of the Irish Question, by another Irishman, Lord Morris: "The attempt of an honest, stupid people to govern a quick-witted, dishonest people." Being on the inside of the Kilmainham Treaty, he calls the Irish section of Morley's "Life of Gladstone" "that charming historical romance."

When he talks shop, he is equally interesting: for it is no trifle to hear the head of Scotland Yard, where the largest police organization of the world is

Digitized by Google

centred, give his views on how to deal with criminals. He has contempt for the sentiment which a morbid public pours out on convicts; and he regrets that the observance of the Anglo-Saxon theory of justice enables many a known malefactor to escape. Sir Robert shows how the demand for technically satisfactory evidence often ties the hands of the prosecution. Thus "Jack the Ripper" was discovered to be a degenerate Polish Jew, with maniacal outbreaks, but the police could not procure testimony against him that would have satisfied the court. In this case the refusal of Polish Jews to bear witness before Gentiles against one of their number illustrates the difficulty which the racial problem has created for the London police. That difficulty, with which we Americans have had to cope for a long time, has grown rapidly in England during the decade since Sir Robert retired. In England, the tradition has been for centuries that the policeman is the friend and protector of the citizen: on the Continent and in Ireland the opposite view has prevailed; latterly, the crowding in of a cosmopolitan population has undermined the tradition there, as it did here much earlier.

As to relative efficiency, if the figures cited by Sir Robert are accurate, his force has no competitors on this side of the Atlantic. Out of only 92 murders in London during the six years, 1903-1908, in just six, or one a year, was the murderer undiscovered. No wonder Sir Robert was amazed when some American gentlemen assured him that Chicago had had 2,000 homicides the previous year; for though they probbly said "violent deaths" and not "homicides," the moral was clear. And yet he constantly inveighs against the red tape, antiquated methods, and divided jurisdiction which hampered his work.

Among many side-lights which he throws on historical events, we have space to mention only two. The "carbuncle" which was officially given out as the cause of Count D'Orsay's death in 1852, was really a pistol bullet aimed at Louis Napoleon. A lunatic named Townsend lay in wait for Gladstone in 1893, and would have killed him had he not been suddenly diverted by the unsuspecting Premier's smiling at him as he passed into No. 10 Downing Street; "a providential circumstance that," Sir Robert adds, "for Mr. Gladstone was not addicted to smiling."

In our effort to show some of the important contents of this book, we have hardly done justice to its abundant humor. But why do the publishers follow the suspicious practice, that has grown too common of late, of not giving the date of publication on the title-page?

A Companion to Latin Studies. Edited by John Edwin Sandys. With maps and 141 illustrations. Cambridge University Press. New York: G. P. Putnam's Sons. $6 net.

In 1905 the Cambridge University Press issued under the editorship of Mr. Whibley "A Companion to Greek Studies," which had so wide a sale that it proceeded within the next year to a second edition. That excellent book is now followed at an interval of five years by another, equally excellent, on the Latin side. It aims "to supply in a single volume such information (apart from that contained in Histories and Grammars) as would be most useful to the student of Latin literature." The book is in general plan like its Greek predecessor, a sort of select encyclopædia. Twenty-five contributors have furnished the articles, which appear to leave no necessary topic within the limited field untouched. The writers are for the most part men already celebrated for their special knowledge of the subjects here assigned them. No one could question Dr. Sandys's preëminent fitness to edit the whole, and to contribute more than one of the articles; and scholars much more advanced than those for whom this book is primarily designed will listen with interest and respect to Dr. Ashby speaking on Roman Topography; Prof. Otto Keller, on Fauna; Prof. J. S. Reid, on Chronology, Laws, and the Roman Constitution; B. W. Henderson, on the Municipal, Colonial, and Provincial System; Mr. Wace, on Sculpture; Sir Edward Maunde Thompson, on Palæography; Professor Postgate, on Textual Criticism; Mr. Verrall, on Metres.

The articles are every one distinctly readable, and most of them sufficiently up to date. Certain may be said to be even in advance of date. Prof. William Ridgeway is a scholar of high academic position, and one whose views will continue to attract attention from their intrinsic character. But his beliefs concerning the ethnological relations of the races of Italy have not yet won wide support, and that because his logic and facts seem too often faulty. The evidence that would make the Latins Ligurians is surely insufficient, to say the least. (We observe that the editor has allowed Dr. Giles's temperately agnostic statement to stand on p. 808 as against Professor Ridgeway's on p. 29). To cite but one other typical example, the two forms of disposal of the dead revealed in the necropolis of the Sacra Via at Rome do not by any means prove "the existence of two races with different views respecting the soul." And the penetrating in that graveyard of a tomb of cremation by one of inhumation works in the wrong chronological direction for some of Professor Ridgeway's theories. Also in his article on Coinage he utterly disregards in text and bibliography the greatest of recent works on early Roman coinage. The elementary student who takes the "Companion" as his guide on these matters will probably be much misled.

Elsewhere also modern investigation has been disregarded to the detriment of the book. Rüstom-Köchly's was a great work for its day, above half a century ago, but during the last few years there has been much study and reconstruction of ancient military engines. This is apparently all unknown to the writer of the article on the Roman Army, who even reproduces the certainly antiquated cut of a catapult from the venerable book aforesaid. The reader who desires knowledge on this head must turn to the excellent article on *Geschütze*, by R. Schneider, in the latest half-volume of Pauly-Wissowa's "Realencyclopädie."

An amusing misstatement in topography slipped by the editor on p. 61, where Hofrath Keller is represented as asserting that eels "were caught in the river Athasis at Verona, on their way from the Lago di Garda to the Mincius." The error is doubtless due in some way to the translation from the German, which was, however, as the editor tells us in the preface, revised "by two eminent zoölogists"! They ought to have been also geographers. Director Ashby's caution that Kiepert-Hülsen's *Formæ* contains a bibliography up to 1895 only may now be supplemented by a note that a new and enlarged edition is promised the present year. The "Companion" is a large book, but we could wish that more space could have been granted to certain important articles, such as Warde Fowler's on Religion and Mythology (24 pp.), Provost James's on Books and Writing (15 pp.), and Mr. Hicks's on Philosophy (18 pp.) And the new edition should be more securely bound. The book deserves a place not merely in every school, college, and public library, but in the private collections of all people of culture.

The First Decade of the Australian Commonwealth: A Chronicle of Contemporary Politics, 1901-1910. By Henry Gyles Turner. Melbourne: Mason, Firth & McCutcheon.

Emerson, in the essay on Politics, adopting a remark of Fisher Ames, says: "A monarchy is a merchantman, which sails well, but will sometimes strike a rock and go to the bottom; whilst a republic is a raft, which would never sink, but then your feet are always in the water." Both sides of this truth have good illustration at the present moment. Mexico for a generation or more has been ruled with an outward semblance of order by one man. The ship has sailed well, but now strikes a rock, the old age of the autocrat Diaz, and at

Digitized by Google

any moment many are expecting to see her engulfed in anarchy. Coeval with this is the close of the first decade of federated Australia, a detailed account of whose experiences we possess in this book of Mr. Turner's. Verily, it is the tossing of a raft on a turbulent sea. The feet of the Australians have been very much in the water, and there seems little chance that they will ever be dry.

It is impossible for one not close at hand and in daily touch with the events described to judge accurately Mr. Turner's account. It appears to be carefully and impartially done by a man much interested and with good opportunities for gaining information. He is clear, circumstantial, and, we take it, trustworthy. Foolish and discreditable things are not glossed over, nor is there sign of unfair bias toward or against any one of the contending parties. Ten years ago it was a hard matter to induce Australians to federate. Conflicting interests and opinions in the various provinces caused much wrangling; nor has the wrangling at all abated since the birth of the Commonwealth. As to the tariff, there are free-traders who would go to an extreme, and also protectionists who desire a Chinese wall; and between the extremes, every possible phase has its representatives. As to immigration, some would shut the country up virtually, leaving its peopling to the slow increase of those already established on its soil; while still others demand a large influx of Italians for the mines, and of Polynesians and Chinese for the fields. Here, too, every possible intermediate view has its defenders. Again, as to the relations between capital and labor, while some advocate conservative ideas, there are at the same time extreme Socialists who demand that the state shall control all money and industry; and here again between the extremes stand moderates of every type. Other questions concern the location of the federal capital, internal improvements, defence, the exact relations between the Commonwealth and the mother-country, etc. These have all been the subjects of extended, strenuous, often acrimonious debate, in which, while ability and high-minded wisdom are often apparent, ignorance, folly, and selfishness are not less in evidence. In the turmoil emerge figures which command our respect. Sir Samuel Griffiths, Sir Alfred Deakin, Sir G. H. Reid, the Labor members Watson and Fisher, and the Western Australian Forrest, men of statesmanlike qualities and strong, persistent character, but there are also demagogues and incapables. Altogether, according to Mr. Turner's portrayal, the Australian raft has been tossing for ten years on a very tempestuous sea, nor does he hold out any hope of betterment. At the moment the Labor party and the Socialists are very much to the fore.

We are not throwing stones at Australia. We are in no position to do that. Australia has had but one decade, the United States twelve, and can we maintain that the story of any one of these decades of ours, fully and faithfully told, would read any better than this story by Mr. Turner? In the long career of England there have been many decades during which the democracy has played a part, and can one be cited less free from such agitations and anxieties than those which have perplexed our brethren in the South Seas? No, strife and confusion are inevitable in the politics of any state possessing Anglo-Saxon freedom, and would we have it otherwise? We might surrender ourselves to a Diaz, with a probable result of smooth sailing for a time, but of an inevitable crash at the last on the rock always lying in wait. Turmoil is the essential condition of our freedom. We can comfort ourselves that it is, after all, grandly disciplinary and educative. Because of it the Anglo-Saxon has been schooled into the leadership among men which he enjoys. We need have no fear for the Australians. They are on their raft, the sections that make it up straining at the fastenings, the crowd discordant and tossing wearily. Their feet are very wet, but they will endure and prosper. They are only repeating what always has been the political experience of English-speaking men.

Selections from Ancient Irish Poetry. Translated by Kuno Meyer. New York: E. P. Dutton & Co. $1.25 net.

Professor Meyer's little volume of barely more than a hundred pages has an interest and value quite beyond its modest pretentions. For it gives, what English readers have had only limited means of obtaining, a veritable indication of the nature and substance of the earliest Irish poetry. Celtic literature has been largely known and judged, either by Matthew Arnold's familiar essay, which, however sympathetic and brilliant, presents an inadequate and in some respects misleading account of it; or by the Anglo-Celtic production of Macpherson, in the eighteenth century, and of such recent writers as Fiona Macleod. These authors, again, while inexplicable except as products of the Celtic world which they have sought, or pretended, as the case might be, to interpret, have been by no means its most genuine representatives. In the interest, therefore, of historic truth, every book is to be welcomed which affords a direct knowledge of Celtic writings in any age, and particularly in the early periods when the expression of the Welsh and the Irish genius was most independent and characteristic. Though many scholarly translations of old Irish texts have been made in English, yet somehow they are little known even to serious students of literature. But Lady Gregory's "Cuchulainn of Murthemne" and "Gods and Fighting Men" gave to a wide reading public a true conception of the early Irish saga-cycles; and now Dr. Meyer has made a good beginning toward a kind of golden treasury of the ancient songs and lyrics. Only his volume is rather more inclusive than such a description suggests, and contains, besides pieces of strictly lyrical character, some didactic and proverbial material.

The collection is very fairly representative of the kinds of poetry written in Ireland down to the early part of the Middle Irish period, and few of the selections are of date later than the tenth century. Many of the best of the old Irish lyrics are preserved in the sagas, which were commonly composed, as is well known, in the *cantefable* form. Of these, Dr. Meyer has selected some good examples, notably two of the songs of Deirdre, from the tale of the sons of Usnech. Of the bardic songs in praise of a chieftain, perhaps the most extensively cultivated of all forms of secular verse in Welsh and Irish, three laments are included, and the striking "Song of Carroll's Sword." There are several strictly religious pieces, among them the fine old liturgical poem known as the "Hymn of St. Patrick," and the lines on Angus, the Culdee, which Arnold, in his essay, compared to a Greek epitaph. A number of the shorter pieces, meditative quatrains, and the like, are similarly noteworthy for happiness of thought or fancy and for fitness of style. The songs of nature are particularly charming, and some of them reveal a sentiment for which one can think of no better term than "natural piety," though the words must, of course, be freed from any specially Wordsworthian suggestion. The feeling is occasionally associated, as in the song of the "King and Hermit," with the other piety of religion. The sentiment of romantic love, finally, which like the delight in nature, was characteristic of the Irish, finds expression in the songs of Deirdre already referred to, in the lamentations of Cride and of Liadain, and—with a difference—in the song of the "Old Woman of Beare," whose regrets over her vanished youth recall those of *la belle Heaulmière* in Villon.

All these phases of Irish poetry are admirably illustrated in Dr. Meyer's collection. It is not necessary to add, in view of the translator's eminence as a Celticist, that the renderings are absolutely trustworthy. The metrical form of the Irish verse, highly finished with many complications of rhyme and alliteration, Dr. Meyer has not tried to reproduce; and an attempt to do so, on any large scale, in English would prob-

Digitized by Google

ably have resulted in an unnaturalness quite unjust to the original. Single bits of skilful imitation of the Irish measures may be found in Dr. Sigerson's "Bards of the Gael and the Gall." Dr. Meyer chose, wisely for his purpose, to give close unrhythmical translations, and he has done them so well that the reader would never suspect him to be a German born and a professor-elect in the University of Berlin. His long expatriation has been in more ways than one of advantage to the cause of Celtic learning.

Notes

Everyman's Library will be increased shortly by fifty volumes, including: The final volumes of Aristophanes and Horace; two volumes of Bagehot's "Literary Studies"; Isaac Taylor's "Words and Places"; Scott's "Plays and Poems," edited by Andrew Lang; "A Literary and Historical Atlas of America"; Mommsen's "History of Rome," in four volumes, and a Life of Shakespeare, by Oliphant Smeaton.

Prof. Lane Cooper is issuing through Smith & Elder a concordance to the poems of Wordsworth.

Mr. Roosevelt contributes a preface to "Animal Life in South Africa," a book by Major Stevenson-Hamilton, warden of the Transvaal Game Reserves, which Heinemann announces.

Prof. A. E. Housman's second book of his critical edition of Manilius is announced by Grant Richards.

The new and revised edition of the Century Dictionary, Cyclopedia, and Atlas, which the Century Company will issue in the autumn, will appear in twelve volumes, instead of ten, as before. The paper used for the work is the result of much experimenting. There has been produced for this edition a thin, opaque paper, which is said to print cuts well, and which is strong and durable.

"The Life and Letters of John Rickman," by Orlo Williams, should prove to be an interesting volume in Constable's list.

Dent has arranged to publish Professor Legouis's "Chaucer" in an English translation.

George Allen & Sons have among their announcements: "The Life of Ruskin," 2 vols., by E. T. Cook; "Bismarck's Pen," by Dr. Abeken, translated by Mrs. Barrett-Lennard, and "The Memoirs of the Russells of Birmingham in the French Revolution and in America, 1794-1814," edited by the late S. H. Jeyes.

The Rev. T. H. Darlow has edited for Hodder & Stoughton "The Letters of George Borrow to the Bible Society."

The same house will publish a new translation by Prof. D. S. Margoliouth of Aristotle's "Poetics"; "The Complete Works of Emily Brontë: Vol. II, Prose," edited by Clement Shorter, and "The Feast of St. Friend," a Christmas book by Arnold Bennett.

Eugene P. Lyle, jr., is publishing through Doubleday, Page & Co. his novel, "The Transformation of Krag."

E. Phillips Oppenheim's novel "Havoc" will be issued October 7 by Little, Brown & Co.

By the same house is promised "The Fair Ladies of Hampton Court," in which Clare Jerrold tells the stories of the notable ladies whose portraits were painted by Godfrey and Kneller.

Houghton Mifflin Co. will publish the following books on Friday, September 22: "Her Roman Lover," a novel by Eugenia Brooks Frothingham; "The Enchanted Mountain," a story for children by Eliza Orne White; "Tommy Sweet-tooth and Little Girl Blue," a book for little folks by Josephine Scribner Gates; "The Story of the Roman People," written for children by Eva March Tappan; "Short-Ballot Principles," by Richard S. Childs; a large-paper edition of "Touring in 1600," limited to 300 numbered copies, by E. S. Bates; new limp leather editions of "The Piper," by Josephine Preston Peabody, and "Her Letter," by Bret Harte, illustrated by Arthur I. Keller: "Essentials of Exposition and Argument," by William T. Foster; "The Tudor Drama," by C. F. Tucker Brooke, and "Selections from the Riverside Literature Series for Sixth Grade Reading."

Among the books announced for publication this autumn by Frederick A. Stokes Co. are found: "Boys' Book of Warships," by J. R. Howden; "Chats on Postage Stamps," by F. J. Melville; "Liber Studiorum," by J. M. W. Turner; "Brownikins," by Ruth Arkwright; "King Arthur's Knights," by Henry Gilbert; "The Italian Fairy Book," by A. Macdonell; "The Story of France," by Mary Macgregor; "Plutarch's Lives," edited by W. H. Weston; "The Fortunate Isles," by Mary Stuart Boyd, and "Nova Scotia," by Beckles Willson.

The Columbia University Press will publish: "The Rise of the Novel of Manners," by Charlotte E. Morgan; "The Political Prophecy in England," by Rupert Taylor; "The Soliloquies of Shakespeare," by Morris Le Roy Arnold; "New Poems of King James I of England," by Allan F. Westcott; "The Middle English Penitential Lyric," by Frank A. Patterson; "Mathew Carey, Editor, Author, and Publisher," by Earl L. Bradsher; "The Exemplum in the Early Religious and Didactic Literature of England," by Joseph A. Mosher; "The Symbolism of Voltaire's Novels," by William R. Price; "Greek Romances in Elizabethan Prose Fiction," by Samuel Lee Wolff; "Social Evolution and Political Theory," by Prof. Leonard T. Hobhouse of the University of London; "Mediæval Story," lectures delivered last winter by Prof. W. W. Lawrence at Cooper Union.

"Literature Learned and Loved by Rule of Thumb" might stand equally well as its real title for Arnold Bennett's "Literary Taste" (Doran). Mr. Bennett is here, as in his other treatises, avowedly the schoolmaster of the masses, and he adopts the well-known tone of Ruskin, telling night classes how and what they must think. But in the term masses Mr. Bennett would include the illiterate of whatever social standing. The book may indeed be taken to heart by all whose literary taste is unformed. Delivered at a time when the amount of literature to be read and the complication of types are such as to bewilder and terrify those even who are eager to make a beginning, its message is simple and direct and moving. Present-day difficulties are dissolved by the author by returning at one leap to the view of Aristotle and his followers that literature is all one, and poetry at heart not different from prose. He tries to convince the reader that literature, regardless of its special forms, is but the expression of clear thinking and clear feeling, and that literary appreciation will truly begin with an intelligent acceptance of that fact. Those to whom poetry is a "name of fear," he implores to forget that it is poetry. Mainly by homely example and analogy, and without brilliancy of phrase, Mr. Bennett contrives to disentangle the reader from cant talk about literature and to confront him with its real spirit.

With the mass of correspondence now in print, it is no easy task to pick out a representative set of examples for the use of college classes and the like. On the whole, however, the editors of "Specimens of Letter-Writing" (Holt), Misses Lockwood and Kelly, have done well by their material. As they themselves acknowledge, they have omitted, for one reason or another, some letters that one would expect to find in a collection of this sort. But in spite of the difficulties of copyright and of space and plan with which they have had to contend, the letters are not only variously interesting in themselves, but also fairly illustrative of the changes and developments of English epistolary style. The volume is introduced by a pleasantly anecdotal sketch of the subject as a whole and is closed by a series of brief biographical notes.

During the summer two parts, 16 and 17, of Prof. Morris Jastrow's "Die Religion Babyloniens und Assyriens," his own translation and enlargement of his "Religion of Babylonia and Assyria," have appeared. The publisher (Alfred Töpelmann, Giessen) announces the completion of the work, three parts more, within the year. These two parts complete a very important chapter on astrological and meteorological divination, which is largely new.

"In Dwarf Land and Cannibal Country" (Scribner), by A. B. Lloyd, originally published in 1899, is reproduced as one of the Modern Travel Series. It is divided into three sections, the first containing an account of Mr. Lloyd's journey from the coast to Uganda which, seventeen years ago, took five months, though it can now be made in fewer days; the second narrating his experiences as a missionary and explorer in that and neighboring regions; the third tells the tale of the adventurous trip without an escort through the great forest to the Congo, and thence by steamboat and railway to the Atlantic. The last is by far the most interesting and valuable part, as he came into friendly relations with the pygmy and cannibal inhabitants of the forest. Of the cannibals he says: "They are a splendid race of people; I was very much taken with them. I have seldom seen such physical development and such symmetry of figure; they are upright as a dart, with heads erect, and bright, intelligent faces." They apparently eat human flesh from the conviction that it is the source of the greatest strength. He tells of numerous and startling adventures with big game while travelling and hunting, elephants and lions playing the principal parts. Once when he was coasting down a hill on his bicycle and rounded a corner, "there lay in the

Digitized by Google

centre of the path a huge lion, with his head down upon his paws, facing the direction from which I was coming." It was impossible for him to stop the machine, on account of the speed, so ringing his bell and shouting at the top of his voice he succeeded in frightening the creature away. There are three maps and fifty-four reproductions of photographs.

Prof. Paul S. Reinsch's "Readings on American State Government" (Ginn) is a companion volume to his "Readings in American Federal Government," published two years ago. As compiler and editor he has performed well a difficult task, and has produced a valuable volume. Professor Reinsch has selected wisely among Governors' messages, political articles in newspapers and reviews, and monographs; and his book of almost 500 pages will supply a work of reference that should prove almost priceless, not only for the teacher and student, for whom it is primarily intended, but for the writer and editor as well. A perusal of the selections cannot fail to clarify the rather hazy ideas of the ordinary reader as to the workings of State governments. If the tone of the book is "progressive," in the current political sense, it can only be said that it mirrors with a considerable degree of accuracy the movement for a wider participation by the people in the affairs of government that has marked the past five years, in almost every State. The subjects are grouped as follows: Governors, Legislatures, Judiciary, Criminal Law, State Administration, Education, Prohibition, Elections and Nominations, Constitutional Conventions. A bibliographical note and index follow.

"England under the Hanoverians" (Putnam), by C. Grant Robertson, is the sixth volume in Professor Oman's seven-volume History of England. Mr. Robertson has cleverly crowded into his allotted five hundred pages an extraordinary amount of information about England from 1714 to 1815. He has done equal justice to the Imperial, the constitutional, and the industrial phases of development which made such mighty strides during the century which closed at Waterloo. Many a reader will wish, however, that the names and facts had been fewer and the thread of thought stronger and more interesting. His condemnation of Bute is too unqualified in view of the recent investigations of Winstanley and Von Ruville. On the other hand, his handling of the causes of the American revolt is admirable. His analysis of the Industrial Revolution, and his insistence on its importance in the war with Napoleon and in the growth of empire, are among the many good points of a really excellent and very serviceable volume.

Prof. M. B. Hammond's series of papers on the "Railway Rate Theories of the Interstate Commerce Commission," first printed in the *Quarterly Journal of Economics*, has been reissued in book form (Harvard University Publication Office). The subject bears on current problems of the first consequence. The Interstate Commerce act of 1886 prescribed that rates should be "reasonable"; but neither in that act nor in the later amendments was there the remotest hint of what Congress conceived to be the test of reasonableness. That crucial matter was left to the commission and the courts. Professor Hammond's analysis of the decision of the commission is by far the best that has yet been made; well-ordered and easily followed, in sympathy with the commission in its intricate task, yet frank in pointing out the inconsistencies that appear in its decisions. The cases are analyzed under various heads, indicating rate theories that seem to be followed: Value of Commodity, Cost of Service, Distance, Advantages of Location, Competition, Return on Investment. The upshot of it all is, according to Professor Hammond, that the commission, notwithstanding the express rejection in some of its early decisions of the cost-of-service principle, and notwithstanding some later inconsistencies, has moved more and more toward that principle.

So much is not to be denied. The drift is toward a cost-of-service principle. But it should be remarked—and this Professor Hammond does not point out—that the decisions looking that way are concerned chiefly with distance rates, not with the equally perplexing and important problem of the classification of freight. The question, after all, is comparatively simple when it comes to rates on any one commodity, or homogeneous group of commodities; here it is obviously in accord with general principles of sound economic policy that rates should ordinarily vary with distance, that is, should be based on cost of transportation. But classification is a different matter. It involves the question whether, on articles of different kinds and having different uses, rates should be different, even though the articles be carried for precisely the same distance, and though the difference in cost of loading, unloading, risk, and the like, be negligible. Classification has been so commonly assumed as a matter of course, and its general reasonableness has been so little attacked by shippers, that the decisions give little occasion for its discussion; yet the general significance of the cases before the commission would have been made clearer if their restriction (in the main) to distance rates had been brought out. Subject to this criticism, Professor Hammond's volume can be heartily commended. Its serviceableness is much increased by a full index of cases cited.

Joel Benton died on Friday of last week in Poughkeepsie, at the age of seventy-nine. His first work as an author, "Emerson as a Poet," was published in 1882. "The Truth About Protection" appeared in 1892, "Greeley on Lincoln" the following year, "In the Poe Circle" in 1899, a later edition of "Emerson as a Poet" the same year.

Brig.-Gen. Michael Ryan Morgan, U. S. A., retired, who died in St. Paul on Saturday at the age of seventy-eight, was the author of "Types and Traditions of the Old Army," and "From City Point to Appomattox with General Grant."

Edmund Robertson, first Baron Lochee of Gowrie, died the middle of last week, in his sixty-sixth year. From 1885 to 1908 he was a Liberal in Parliament, representing Dundee. He was secretary of the Admiralty from 1905 to 1908. He wrote numerous articles on legal and constitutional subjects for the Encyclopædia Britannica; one of his works bears the title, "American Home Rule."

Peter Friedrich Siebold, who through his translations introduced Ibsen into Germany, is dead in Berlin, at the age of eighty-three.

The death is reported from Aibling, Upper Bavaria, of the American writer, Elizabeth Edson Evans. She was born in Newport, N. H., in 1832, and had lived in Europe since 1870. Among her works are "The Abuse of Maternity," "A History of Religions," "The Story of Kaspar Hauser," "The Story of Louis XVII of France," "Ferdinand Lassalle and Helene von Dönniges: A Modern Tragedy," "The Christ Myth," and the following novels: "Laura, an American Girl," "Transplanted Manners," "Confession."

Science

Crystallography and Practical Crystal Measurement. By A. E. H. Tutton. New York: The Macmillan Co. $8.50.

Few branches of science have appealed more strongly than crystallography to the lover of nature. From remote times the symmetrical shapes, the flashing faces, and the lovely colors of minerals have attracted the eye of the observer, whether a trained scientist or not. In the last century the underlying and fundamental geometrical relationships of the subject were properly appreciated; precise instruments were devised and the record of faces began to assume accuracy and completeness. With this comprehensive development the subject gained an increasing number of devoted students. Many a man now in middle life in looking back to his student days recalls as among his happiest hours those spent upon the study of crystals with Dana and Penfield in America, or with Groth and other masters in Germany.

On reading Tutton's Crystallography one feels forcibly the evolution through which the science has passed within thirty years, Naumann's system of notation for the faces, once almost universal, has now given place, even for elementary instruction, to Miller's indices, which were formerly regarded as too difficult except for the specialist. Whereas a few years ago six systems of forms were established, with subdivisions of hemihedral or holohedral character, now thirty-two types of greater and greater symmetry are from the outset placed before the student. The types with which the teacher formerly began are now held in reserve for his closing lectures. Whereas with one-circle goniometers and with repeated adjustments the student or investigator of yesterday laboriously measured his angles; today, with the ingenious two and three-circle instruments, almost all the angles on crystals of small size are read off with one adjustment. In the optics of crystals advances equally great have been made, since petrography has called them into hourly use in the study of rocks.

Digitized by Google

After a brief introduction on the nature of crystals and the constancy of their angles, the author proceeds at once to their artificial preparation and to their measurement with the goniometer. A crystal of potassium sulphate, belonging in the holohedral class of the old orthorhombic system, having been successfully produced, is then measured with the instruments, its indices are calculated, and its zonal relations explained. No greater demands are made upon the student than a working knowledge of trigonometry. When once the significance of indices and axes has been grasped, the thirty-two classes of crystals can be and are systematically described.

This method of attack virtually reverses the one usually followed. Students are generally drilled on the wooden models of all the classes of forms before they ever see a reflecting goniometer, much less use one. Dr. Tutton, however, begins with a specific case, and leads logically and clearly to the general treatment. In elaborating the systems and classes the author carries along the measurement and study of a crystal under each, and surely in this respect has adopted the right way to ground a student thoroughly in the subject; but the method obviously demands abundance of time and an advanced grade of instruction. The drawing of crystals, the discussion of twinning, of cleavage, and of gliding planes; goniometry at high temperatures, the use of the two and three-circle instruments, limits of accuracy, and determinations of density complete the manipulative directions under Part I, Morphology, and pave the way for the final discussion of the latest doctrines of crystal structure as bearing on the constitution of matter. The remarkable generalizaions of Professor von Federow of St. Petersburg regarding the inter-relationships of the crystal systems, and the theory of molecular and atomic structure formulated by Pope and Barlow, are of extreme interest, not only to mineralogists, but to chemists and physicists.

The morphological branch of the subject having been completed, the physical portion is treated in Part II. Almost all the space is devoted to the optics of crystals. The latest views of the nature of life are well summarized, and then their applications to crystals are discussed with full directions as to methods of investigation and manipulation. In the exposition of this baffling portion of the subject the author is exceptionally clear. For the student, indices of refraction, optic axes, axes of elasticity, interference figures, extinction angles, and the like will lose some of their terrors. A very full chapter is devoted to microscopic observations and measurements. It is the more welcome because the most important use of the optical properties of crystals is in the microscopic study of rocks. Chapters on the thermal expansion of crystals, their elasticity and hardness, and a brief description of the curious liquid crystals conclude the book.

"Scientific Features of Modern Medicine," by Prof. Frederic S. Lee, is announced by the Columbia University Press.

The Macmillans have a large number of science books in their autumn list: "A Manual of Farm Animals," by M. W. Harper; "The Principles of Fruit-Growing," by L. H. Bailey; "Dairy Cattle and Milk Production," by C. H. Eckles; "Law for the American Farmer," by J. B. Green; "The Mind of Primitive Man," by F. Boas; "Biological Aspects of Human Problems," by C. A. Herter; "Who's Who in Science"; "A System of Treatment," by many writers; "A System of Medicine and Gynæcology," by many writers; as textbooks: "Plane and Spherical Trigonometry," by T. G. Hun and C. R. MacInnes; "Social Pathology," by S. G. Smith; "Anthropology," by H. Schurtz; "Physiological Psychology," Vol. II, by W. Wundt; "Text-Book of Physics," by L. B. Spinney; "Text-Book of the Principles of Physics," revised, by A. Daniell; "Elements of Electrical Transmission," by O. J. Ferguson; "Storage Batteries," by H. W. Morse; "Alternating Currents and Alternating Current Machinery," by D. C. Jackson; "Revolving Vectors," by G. W. Patterson; "Modern Science Reader with Reference to Chemistry," by R. M. Bird; "Principles of Human Nutrition," by W. H. Jordan; "Methods of Organic Analysis," revised, by H. C. Sherman; "The Theory and Practice of Technical Writing," by S. C. Earle; "Experiments in Educational Psychology," by D. Starch; "The Teaching of Physics," by C. R. Mann; "Introduction to Social Science, with Experiments," by P. E. Rowell; "An Applied Arithmetic for Secondary School," by E. L. Thurston; "Applied Biology," an elementary textbook, by M. A. Bigelow; "Chemistry: An Elementary Text-book," by W. C. Morgan and J. H. Lyman; "Beginnings in Agriculture," by A. R. Mann and L. H. Bailey; "Pupils' Arithmetic—Book Five," by J. C. Byrnes and others, and "World Geography," by R. S. Tarr and F. M. McMurry.

The Rev. Frederick J. Jervis-Smith, who died recently, is remembered chiefly for his scientific inventions in practical mechanics and physics. He wrote numerous treatises on his subject.

Edward Whymper, the noted traveller and mountain climber, died at Chamonix, France, on Saturday, aged seventy-one. Between the years 1861 and 1865, in a series of expeditions remarkable for boldness and success, Whymper ascended one mountain peak after another until then reputed to be inaccessible. These expeditions culminated in the ascent of the Matterhorn (14,780 feet) on July 14, 1865, on which occasion his companions, Lord Francis Douglas, the Rev. Charles Hudson, and Mr. Hadow, as well as one of the guides, lost their lives. In 1867 Whymper travelled in Northwest Greenland with the intention of exploring its fossiliferous deposits and, if possible, of penetrating into its interior. In the years 1879 and 1880 he travelled in Ecuador, exploring, ascending, and measuring the Great Andes on and near the equator. On that journey he made the first ascent of Chimborazo (20,517 feet), Sincholague, Antisane, and other peaks. He published the results of his explorations and was awarded the patron's medal by the Royal Geographical Society.

Drama

A second volume of "Ibsen's Plays," including "Warriors at Helgoland," "Ghosts," and "An Enemy of the People," will be added to Everyman's Library; the plays are translated by R. Farquharson Sharp.

"The Tudor Shakespeare," under the general editorship of Profs. W. A. Neilson and A. H. Thorndike, in forty volumes, illustrated, is an important announcement made by Macmillan. The first volume in the series has already been issued, prepared by the general editors. Among those to appear are: "Macbeth," by Arthur C. L. Brown; "Henry IV, Part I," by F. W. Chandler; "Henry V," by Lewis F. Mott; "The Merchant of Venice," by Harry M. Ayres; "Troilus and Cressida," by J. S. P. Tatlock; "Two Gentlemen of Verona," by Martin W. Sampson; "As You Like It," by Martha H. Shackford; "Coriolanus," by Stuart P. Sherman; "Henry VI, Part I," by Louise Pound; "Richard II," by Hardin Craig; "Antony and Cleopatra," by George Wyllys Benedict.

The same house announces "Representative English Comedies. Vol. II. The Later Contemporaries of Shakespeare," by Charles Mills Gayley.

Montrose J. Moses has prepared for autumn publication "The American Dramatists." Little, Brown & Co. will bring it out.

A new Yiddish theatre, erected at the cost of three-quarters of a million dollars in the heart of the East Side, emphasizes the factor of permanence in an element of New York's population which we often think of as in a state of constant flux. It is quite true that the process of assimilation works rapidly among the Jewish immigrants. But the influx from abroad is always more than enough to counterbalance the outflow from the East Side. Thus, in spite of the building up of large Jewish colonies in Harlem, the Bronx, and the Brownsville and Williamsburgh sections of Brooklyn, the old East Side has remained the intellectual centre for the Jewish population in Greater New York. All their theatres are there and all their newspaper offices. And both the Yiddish theatre and the Yiddish press are more prosperous to-day than they ever have been. There must be at least four Jewish dailies claiming a circulation of 50,000, and one newspaper asserts that it has twice as many readers. The theatre to-day has no such single dominating figure as when Jacob Gordin was writing a few years ago. But an entire school of younger playwrights has sprung up who find in the life of the people for whom they write ample and profitable material.

In John Galsworthy's "The Little Dream" (Scribner) there is not much to suggest the author of "The Silver Box," "Joy," "Strife," and "Justice." Described as an allegory in six scenes, it is a purely fanciful work, dealing with the prophetic vision of an Alpine maiden, whose placid love for a rugged mountaineer is disturbed by the

Digitized by Google

intrusion of a city wooer. In her dream the neighboring peaks, the Cow Horn, the Wine Horn, and the Great Horn, and various symbolical voices and figures, contrast the dangerous allurements of the town with the peacefulness and quiet of the remote hills, and reveal to her glimpses of her future, how she shall drink of the cup of pleasure to the point of weariness and satiation, and then return to her rustic adorer only to fail of content and to pine for new experiences. This, at least, appears to be the meaning of the allegory, which is somewhat obscure and therefore not very valuable. When the heroine, Seelchen, awakens from her dream the curtain falls and the dramatic parable is ended. For theatrical purposes—except in the form of a musical spectacle which no manager is likely to undertake—the piece is wholly unsuitable. Moreover, the idea upon which it is founded is trite and is not treated with any notable power or originality. The dialogue, what there is of it, exhibits literary skill and imagination, but the work as a whole will not add greatly to Mr. Galsworthy's reputation. It may, indeed, be intended to convey a deeper significance than it bears upon the surface, but a symbolism that is not clear can never be effective or useful.

In the case of "Passers-by," by C. Haddon Chambers, which may now be seen at the Criterion Theatre, the play and not the performance is emphatically the thing. This piece is exasperating in some respects, for it disregards occasionally the probabilities of nature and of common sense, and possesses little of the logical sequence of true drama, but fascinates by its freshness, its originality, its variety of characterization, its shrewd observation, its inspiring sentiment, its quaint humor, and its simple, sincere pathos. A rich young bachelor, Peter Waverton, surprising his valet hobnobbing in his chamber with an ancient cabman, whimsically resolves to engage in amateur philanthropy himself, and, the night being stormy, opens his hospitable doors first to a vagrant and then to an exhausted young woman, in whom he recognizes the pretty governess, Margaret Summers, whom he had loved and lost, as a boy, seven years before. He had worshipped her with the ardor of a first passion—which she fully reciprocated—and had vowed, and intended, eternal fidelity; but the pair were separated by the successful interference of his guardian step-sister and met no more. Now he learns for the first time that he is a father, and that Margaret, ever true to his memory, has reared his son in comparative comfort by her own unaided labor. His position is cruel and difficult since, in the interval, he has become engaged to Beatrice Dainton, a dashing beauty, who is as devoted to him as he to her. Thus he is bound by the closest of ties to two good women, for of Margaret's innate virtue, despite her early lapse, Mr. Chambers takes care that there shall be no doubt, and his portrayal of her is exceedingly delicate and true. Being an honorable man, Peter promptly decides to make a clean breast of it to Beatrice—without any thought at first, however, of resigning her—while he pledges himself, notwithstanding Margaret's protestations, to provide for her and the boy. The poignancy of the situation is illustrated and enforced by innumerable lifelike details which cannot be described here. In the end, by a somewhat transparent device, Margaret and her old love are surprised, while in consultation, by Beatrice and the old step-sister, and, in a singularly effective scene, the whole truth is revealed. At the same time the crisis is strengthened by the news that the boy has been carried off by the tramp whom Peter had befriended. It is then that Beatrice, throwing all conventions aside, exhibits the nobility of her nature by frankly ranging herself on Margaret's side and ministering to her in her sorrow. Moreover, she quickly discovers that Margaret loves Peter as deeply as ever, and thereupon she determines to sacrifice herself and set her betrothed free to atone for the old injustice. This she does, in another admirable scene, and the curtain falls upon the restoration to Margaret of her boy and her old lover.

Evidently there are many weak points in this story, such as the reappearance of Margaret, the arbitrary use made of the tramp, the benevolent action of Beatrice, and the ease with which Peter abandons the new love for the old. All these things savor more of romance than of actuality, but the incidents are related so naturally, and are accompanied with such adroit humorous or philosophical comment that they always seem plausible. This effect is heightened by the unconventionality of the characters—the valet, the cabman, the tramp, etc.—and the quality of their talk. Altogether the play, if by no means a great one, is very clever and interesting, and will add to the reputation of the author of "Captain Swift," "The Idler," and "The Tyranny of Tears." It is well but not brilliantly acted at the Criterion. The lighter comedy side is represented neatly, intelligently, and artistically, but there are deeper emotional notes which the principal performers are quite unable to sound.

The long-talked-of "Disraeli" of Louis N. Parker, which was presented in Wallack's Theatre on Monday evening, is a clever but tricky piece of theatrical entertainment, which is certain to please the multitude and many intelligent playgoers, but is not of high dramatic importance. George Arliss, who enacts the title part, bears, when "made up," an extraordinary external resemblance to the famous British minister. He offers, indeed, a veritable double of him. But the resemblance is only, or chiefly, in externals. The illusion ceases to be potential when the actor is engaged in speech or action. He can suggest intelligence, cunning, and a certain quality of dry, sardonic humor, and is more or less successful, as he has often been before, in the signification of emotional storm beneath a surface of assumed calm, but he is unable to express the innate sense of power and authority which should give weight and force to a character of this kind. The mask and figure of the dead politician he counterfeits with startling accuracy, but he cannot reproduce the mysteries of the unfathomable eye, the subtle curves of the eloquent lips, or the tones of the vibrant voice. It is impossible to see in him the indomitable man who, after being denounced by O'Connell as the lineal descendant of the impenitent thief, rose to be the practical ruler of England; the "Old Jew," whom Bismarck said was the only man worth talking to at the Berlin conference. It is but fair to add that Mr. Parker's hero is but a libelous parody of the original, a theatrical puppet, moved, not by compelling character or circumstance, but by the urgency of dramatic necessities. He is the central figure in several capital theatrical situations, and is described as a prodigy of foresight, patriotism, and statesmanship, but acts in defiance of law and Constitution, and reveals, at times, the most astonishing simplicity. Neither the play nor the leading character will bear the test of analysis, but both are effective in their way, and the play itself, despite its many reminiscences of "Dora," "Richelieu," and other pieces, is decidedly interesting, and is, for a star piece, uncommonly well acted, especially by Ian Maclaren, Elsie Leslie, and Margaret Dale.

"Married by Degrees," which was produced in the Court Theatre, London, Saturday evening, is by A. P. Sinnett, once prominent in the Theosophical Society, and tells the story of a woman with a dual personality.

Cyril Maude will be seen before long, at the Playhouse in London, as Rip Van Winkle, in the new dramatic version of the legend made for him by Austin Strong.

Arnold Bennett's new play, "The Honeymoon," will be played in a few weeks at the London Royalty, with Marie Tempest in the chief female character. Dion Boucicault will superintend the production.

Messrs. Vedrenne and Eadie are rapidly increasing their stock of plays for eventual presentation at the London Royalty. The list includes the new play by John Galsworthy, entitled "The Pigeon"; "The Son and Heir," an original piece by Miss Gladys Unger; another named "The Supplanters," by H. M. Harwood; a fourth, called "The Old Man Out," by Harold Brighouse; two plays by Miss Cicely Hamilton, and another by the late St. John Hankin.

When Ibsen's "Pretenders" is played at the London Haymarket, Laurence Irving will assume the part of the Bishop of Osio.

Music

Pianos and Their Makers. By Alfred Dolge. Covina, Cal.: Covina Publishing Co.

Modern Organ Building. By Walter and Thomas Lewis. London: William Reeves.

Foreigners still speak with a certain condescension of American music and musicians, but in one thing they have to admit our supremacy—in the making of pianos, both as to quantity and quality. Last year the United States produced about 350,000 pianos; Germany, 170,000; England, 75,000; France, 25,000; Austria and Switzerland, 12,000; Russia, 10,000; Netherlands and Scandinavia, 4,000; Spain, 2,500; and Italy only 1,500; which recalls Hans von Bülow's remark that "Italy was the cradle of music—and remained the cradle." Like most things in modern music, the piano, as distinguished from its precursors, had its origin in Italy, but only that. The Germans first gave

Digitized by Google

it strength and fulness of tone, the English improved the action, the French took off the rough edges of English construction and invented a mechanism which permitted of a more delicate execution, and finally America, with the full iron frame, enlarged scales, and heavy hammers of her instruments, produced the power necessary to fill large concert halls and at the same time a tone richer in sensuous beauty and more expressive than that of any European piano. Germany, after yielding first place to England in the nineteenth century, adopted the American innovations, and after 1860 again out-rivalled England and France.

The world's total output of pianos yearly is estimated by Alfred Dolge at 650,000. The 350,000 made in the United States last year were valued at about $100,000,000. A business of such dimensions is worth having its history written. This has been done more than once; Mr. Dolge gives a list of previous attempts in various languages; but most of them were written twenty or more years ago, and the time has arrived for a work like his, which gives not only a sketch of the development of the piano from the monochord of Pythagoras to the modern grand and the "player piano," but short biographies of the men who made piano history, and chapters on the commercial piano, stencils, department stores, consolidations, methods of marketing, the agency system, Trust movements, the influence of piano virtuosos upon the industry, testimonials and their value, national associations of manufacturers and dealers in Europe and America, and the trade press and its value to the industry. There is an appendix containing a list of firms manufacturing pianos and supplies at the present time. There are three hundred illustrations, partly for elucidation, partly for ornament; among these being pictures of "art pianos," with cases decorated by great artists, and valued as high as $40,000 each.

To write on these topics Mr. Dolge is eminently qualified, as he has long been prominent among those who helped to win first place for the American piano. For four decades he has given special attention to improvements of soundboards and piano-hammers; and has devised a compressed-air machine for covering hammers, by which the operator is enabled to give them any desired degree of firmness. For the supply of soundboards the Adirondack and White Mountains have from the beginning been the chief source. These forests are fast passing away, but Mr. Dolge has found splendid material in the mountains of Oregon and Washington. While fully alive to the importance of procuring the best timber for soundboards, he nevertheless believes that it is "not nearly as much of a factor in tone production as the string, the proper length, position, and thickness of which, together with the most advantageous striking point for the hammer, are the all-important factors to be considered in piano construction."

In the development of this instrument, rivalry has been a great aid, and more stimulating still have been the never-ceasing demands of great players and composers for a better action, greater and purer tone, and power of expression. It is questionable if Silbermann would have striven to improve his pianos had he not been hurt by Bach's criticisms of them. Liszt needed two grand pianos for a recital; his forceful touch and rapid execution put most of the instruments of his time out of tune, "hence we can understand later on, when the iron-frame construction and the modern action came into universal use, why Liszt did not spare his approving testimonials for the creations of Steinway, Bösendorfer, Ibach, and others."

Although America is in the lead in piano making Mr. Dolge thinks that the industry here is still in its infancy. We have now establishments which turn out 30,000 pianos a year, but the time is not far off, he thinks, when we shall see organizations whose output will exceed 100,000 a year. He declares that the "Kindergarten methods" of distributing pianos—"methods which often make the cost of selling larger than the cost of production—must come to an end for the good of everybody connected with the industry." He recommends the establishment of training schools for piano-makers by means of donations from the leading manufacturers; and he believes in aggressive advertising campaigns, pointing out how the men who adopted them made fortunes. He is doubtless right in declaring that the "player-piano" is destined to be the controlling factor in the piano industry of the future, and he calls for teachers to give instruction as to how to get genuinely musical results from these mechanical players; but one is loath to believe that they are destined eventually to displace the piano as the musical instrument of the home, unless, indeed, the dream be realized of a "player" from which the mechanical element shall be eliminated entirely and which shall be as superior to the present-day piano as that is to the old clavichord. The pictures and explanations of the gradual evolution of the semi-automatic players make one of the most interesting features of this book.

While every intelligent pianist, amateur or professional, must be interested in the construction of his instrument, an organist is obliged to know all about his organ because, like a person who runs a motor car, he may be called upon at any moment to make some repairs in the complicated mechanism. The volume on "Modern Organ Building," by Walter and Thomas Lewis, is a practical explanation and description of the whole art of organ construction, with especial regard to pneumatic action and electric appliances. There are chapters on blowing, tuning, cleaning, voicing, and copious illustrations elucidate the technical sections. Some of the pages, like those which tell of the material of which organ pipes are made, are of general interest. The authors—who are builders themselves—controvert the current notion that organ pipes, like wine, improve with age; but while in truth they gradually deteriorate they have a life of one hundred and fifty to two hundred years, if they are kept clean and carefully tuned. The assertion that there is hardly a word left to be said on the historical side of organ building is misleading. No satisfactory history of the organ has yet been written in any language.

"Favorite Operas," by the late Sir W. S. Gilbert, four volumes, crown quarto, each with eight colored plates by W. Russell Flint, is to be brought out by Macmillan.

The success of the Russian Balalaika Band has caused the formation of the New York Plectrum Orchestra, which, under the direction or Valentine Abt, will give four concerts in Carnegie Hall during the coming season. The orchestra consists of thirty players of instruments of the mandolin family, ranging from the premo mandolin to the bass mandolin.

One of the innovations in Hammerstein's London Opera House consists in the fact that in each of the fifty-three boxes telephones have been placed, so that friends in different parts of the house will be enabled, without leaving their seats, to discuss the performance or anything else they please. Six thousand electric lamps will add to the brilliancy of the auditorium, making it easier to see the 15,000 costumes for the thirty-two operas to be sung on which some 300 dressmakers are being employed. The sum which Hammerstein is expending on this opera house is said to be $1,250,000.

The Royal Academy of Music in London, which has just removed to an imposing new building in Marylebone-road, has organized a special course of training for teachers.

There is a plan for the formation of a California State orchestra on a coöperative basis. The cost of this is estimated at $125,000 a year, which would have to be borne by nineteen cities, in proportion to their size, San Francisco, Oakland, and Berkeley getting ninety-nine concerts, at a cost of $66,000; Los Angeles and Pasadena fifty-six concerts, at a cost of $40,000, and so on.

Maggie Teyte, the young English singer and pupil of Jean de Reszke, who has created such a sensation abroad, will make her American début with the Dippel Opera Company at Philadelphia in Mozart's "Figaro." Her second appearance will be on November 6 in the first American performance of Massenet's fairy opera, "Cendrillon," in which Mary Garden will be the Prince.

Art

In an edition limited to 575 copies Goupil & Co. will issue a book on "Eugène Lami," with text by P. André Lemoisne.

The School of American Archæology, organized in 1907, under the act of incorporation of the Archæological Institute of America, held during the month of August a summer session in the Palace of the Governors, at Santa Fé, the headquarters of the school, and at the excavation camp, in El Rito de los Frijoles, where the school has conducted excavations for the past three summers. The work consisted of examination and study of the communal house, cliff dwellings, and the ceremonial cave of this deserted Pueblo, excavated in former seasons, and of lecture courses intended to give to regular students and auditors a view of the general field of archæology. The excavations of the present season in the Rito were confined largely to clearing the old elliptical communal dwelling in the valley, the excavation of which was more than half completed last summer. Alice C. Fletcher of Washington, D. C., was re-elected chairman; the office of vice-chairman was created, and William H. Holmes was elected. Plans were formed for the conduct of the excavations in New Mexico and Central America during the coming year, and for the holding of a second summer session in August, 1912.

The complete rearrangement of the Uffizi Gallery has necessitated a revision of Grant Allen's "Florence" (Holt). The recasting has been well done by J. W. and A. M. Cruickshank. Except that some slight confusion has come into the text through ascribing the Rucellai Madonna to Duccio without making other requisite changes, there is little to criticise. On the whole matter of these famous and justly popular historical guides it may be said that purely artistic considerations are too much subordinated. Such mediocrities as Taddeo Gaddi and Filippino Lippi at his worst (in the Strozzi Chapel) receive the double asterisk beside Giotto and Orcagna. Evidently a well-trained traveller needs little direction in the matter of taste; the average tourist, however, is in danger of assuming a parity of historic and æsthetic interest where none exists. Taddeo Gaddi's Life of the Virgin, for example, is highly important to the tourist wishing to learn the stereotyped forms of a noted legend; as art these frescoes are but third rate. It seems to us that an ideal guide would discern both values. But ideal guides do not exist, and we know few handbooks on the whole so stimulating as those of the late Grant Allen.

All readers of Mme. Cladel's book on Auguste Rodin know that the great intelligence of the sculptor plays not merely upon the practice, but as intently upon the theory, of the arts. Paul Gsell, who has brought together, under the title "L'Art, entretiens réunis" (Paris: Bernard Grasset), a number of talks with the master, has been quite as successful as his predecessor. The topics range widely. Realism, all beauty is in nature, narrative art and motion in sculpture and painting, the secret of modelling, portraiture, the beauty of women, pagan and Christian sculpture, the usefulness of the artist—here are some of the themes developed with charming simplicity, clearness, and informality. Cuts of the numerous works of art used as illustration have been conveniently fitted into the text. Rodin, at the outset, declares himself an uncompromising realist, an avowed copier of nature. Under M. Gsell's questioning this *credo* reduces itself to the statement that the artist must be faithful to his own vision. From this inconsistency we may draw the maxim that while the artist should modify and in a manner improve natural appearances he should also, for his soul's sake, humbly believe and insist that he is merely a copyist. The best practice in art, in short, has almost invariably been based on obviously false theory. We leave the paradox to pragmatists. Rodin's chapter on the possibility of conveying motion and narrative in sculpture and painting is admirable and almost wholly new. From analysis of Watteau's Embarquement pour Cythère and Rude's group, the Marseillaise, he shows that, as the eye successively grasps the parts of a composition, the gradual revelation may be made to correspond to the steps of an action or narrative. Only there must naturally be exact correspondence between the visual experience and its interpretation. It is all a matter of making us see things in the right order. A statue seems to move when it partakes of two actions—is passing from one to the other. In this spirit, M. Gsell read the story of Rodin's Burghers of Calais, and the master assented to the reading.

The secret of modelling Rodin learned from a fellow workman in a decorator's shop. Modelling is never to be conceived of as extended in a flat plane, but as so many projections, representing so many thrusts of the internal structure. Years ago Rodin ably defined sculpture as "the art of the hole and the lump." The revised definition eliminates the hole. Very interesting, and in the main just, is the startling generalization that classic sculpture affects convex poses, Christian sculpture concave. A corollary to this is that antique sculpture sets the figure in a double equipoise of four planes, which brings all contours into returning curves, whereas Michelangelo, "the last of the great Gothic sculptors," establishes his figures in two planes only, the contours being simple curves and angles. The Christian form *par excellence* is the bracket (*console*). "It is the seated Virgin who bends toward her child; it is Christ nailed to the cross, with flexed legs and head bowed towards the men whom his suffering is to ransom; it is the Mater dolorosa who leans over the body of her son." We can touch only in passing a few points of interest in this fascinating book. In the talk on portrait sculpture Houdon is the hero. Here we learn that Puvis de Chavannes always regarded Rodin's famous bust as a caricature. "Yet," says Rodin, "I am certain of having expressed in my sculpture all the enthusiasm and veneration I felt for him." All of which bears out Rodin's conviction that what the artist really gives is himself. A detached observer will feel that Puvis, in whom sense for limits was so strong, could never fully have relished the impetuosity of Rodin. Rodin, on the contrary, not merely admires Puvis, and his spiritual predecessors, Poussin and young Raphael, but also Rembrandt. Of a certain murky intensity in his own genius Rodin seems fully conscious, for he writes: "I try constantly to make my vision of nature more calm. Serenity must be our goal. There will always remain in us plenty of Christian inquietude before the mystery." In a final chapter on the usefulness of the artist, the talk soars to eloquent heights, comparable to the best passages in the Renaissance apologies for poetry. Such a peroration lends itself ill to selection, and worse to literal translation. And, after all, why discount piecemeal a high pleasure that the reader should enjoy deliberately and in all completeness?

Finance

MAKING FINANCIAL HISTORY.

A very little while ago, it was possible to point out that signs of grave disturbance were visible in the Stock Exchanges and money markets of almost every great financial centre of the world, that each of these markets had its own peculiar explanation of the cause, and that the explanation current on each market differed from that on every other. When the August stock market was collapsing at New York, Wall Street was able to prove to its own satisfaction that the Government's policy toward the Trusts was the single cause. When London went through its spasm of liquidation, in midsummer, there was not a City man who could not show you how Lloyd George and Asquith were the solitary culprits. When Paris began to see the cord of credit tightening, at the end of summer, the cause was imminent probability of an attack by the German army. And when Berlin itself, a week or more ago, fell into agonies of forced liquidation, it was easy for any German financier to see that the trouble lay in the sinister resolve of Paris to revoke all its German loans.

During the two past weeks, however, events in the several markets, which moved very swiftly, were of a character to upset these theories. A week ago last Saturday, the news of the "Morocco negotiations" was more favorable than at any previous time, and that was the very day when the Berlin stock market plunged suddenly into panic. It recovered with almost equal violence on the ensuing Monday, and that was the very day when markets learned that the two Governments were again at loggerheads. Nor was this all of the week's conflicting phenomena. It was Germany whose markets called for help, and France whose smiling serenity seemed to confirm the theory of revengeful recall of capital from Berlin. Yet Berlin exchange on London, which should

Digitized by Google

have moved in the German city's favor if the great central money market of the world was responding to a call for help, last week moved nearly 2 points in London's favor, whereas sterling at Paris broke 9 points—a very extraordinary fall. London was drawing capital from Germany, but sending it to France, and Paris was reporting extreme disorder in its own money market, which it ascribed, not at all to "Morocco," but to a sudden call for payment of their subscriptions by the underwriters of a $70,000,000 foreign loan which investors had refused to take.

And at this very same time, the London market—which by the theory should have been subject to political uneasiness alone—all at once went to work with determined resolution to fortify the position of the Bank of England. Cutting down loans with an unsparing hand, it drew in gold at such a rate that last Thursday's weekly statement showed its gold reserve to be at the highest figure ever reached in the middle of September in the institution's history. On top of all, when the German bankers started concerted liquidation of the Berlin Stock Exchange accounts, it was not the London market which was hit by the recoil, nor the Paris Bourse, but New York, which had nothing but a far-off interest in "Morocco."

But as last week drew to a close, it became at length possible to get a clue to this international financial tangle. What we are learning, for the world at large, is what the American market learned very definitely during 1910—namely, that the panic of 1907 was not a casual and trifling economic incident, but a landmark which showed the break-down of a world-wide and very long continued process of credit over-exploitation. It was long after 1907 before the American community was willing to admit that the panic of that year was not an event restricted to America and probably caused by Mr. Roosevelt. Even when it began to admit that Germany, Denmark, Italy, Egypt, Chili, and Japan had panics in that same year—some of them earlier than our own—it soon forgot, and in 1910 reasoned that Wall Street was the one section of the financial world which needed readjustment. Only now is the world at large beginning to see what the actual state of things since 1907 has been.

Of all the nations hit by the shock of that unpleasant year, Germany and the United States were probably hit the hardest; and of all the nations, it was they which recovered quickest, which were most vehement in declaring that nothing serious had happened, and which first resumed the movement of violent expansion. When it was asked, how they could do that with their impaired resources, the answer of competent observers was that England and France, which had suffered less than any one else in 1907, were busy financing the German markets and our own. It required several years to show two things—one that it is easier to provide for the requirements of a booming and fundamentally prosperous community than for one which has to make good both its losses and its new ambitions; the other, that even London and Paris were not, after all, left quite unscathed by the shock of four years ago.

The process of building up markets which had been badly hurt, through use of the resources of those which were hurt a little less, went on for a considerable time with much success. Berlin and New York were not satisfied with restoring equilibrium; both undertook to restore the huge commotion and expansion of 1906. Nor was this, in fact, the whole; for London and Paris, in the face of their heavy advances to the American and German markets, and of a quite unprecedented output of new securities for the rest of the financial world, have engaged, these past two years, in excited speculations of their own. "Rubber" and railways and "South Americans" and "Russian industrials" called for great supplies of French and English capital for use at home—this at a time when capital was accumulating slowly and when a good part of the existing accumulations had been sent abroad.

Economic law has its penalties for such experiments, as well as for the experiments in the different days of five or six years ago. Perhaps "Morocco" was a highly contributory cause in the final liquidation; perhaps Lloyd George; perhaps Mr. Wickersham. But that is another story.

The Nation

NEW YORK, THURSDAY, SEPTEMBER 28, 1911.

The Week

To a lot of wandering, unhappy Trusts, President Taft has rendered an inestimable service; for the world at large he has made a discovery the stunning effect of which is comparable only to the news of Dr. Cook's finding of the North Pole. He has found a father for the Trusts. We have long known they had a mother; the country years ago accepted as correct the late H. O. Havemeyer's sworn and expert testimony that the mother of this ugly brood was the tariff. But who was the father that was responsible for this overgrown flock? Hitherto nobody has known, least of all the Trusts themselves. People and politicians have long wanted to cite the father to the national court of domestic relations, with a view to compelling him to return to his deserted and abandoned consort and to support and maintain those unpopular children who are now being clothed and fed at the public expense.

It was unkind of the father to remain in hiding so long, for it casts doubts upon the nature of their paternity. Ill-natured persons in matters of this kind are only too apt to shrug their shoulders and mutter the baleful word "illegitimate"—and every one knows the Trusts have been dubbed illegitimate, and evil-born, and had other shocking things quite too awful to print said about them. But Mr. Taft has pulled the rascal by the heels from his hiding, and, lo! it is our familiar old friend, the Standard Oil Company—"the father of all Trusts" Mr. Taft calls him. We thought that every other crime in the calendar had been laid at his doors, but here is this hoary sinner caught red-handed again. We trust Mr. Taft knows what to do with him—if Standard Oil has not a marriage license with him. After that the divorce court, if Madame Tariff pleases. We should not blame her if a realization in her old age and failing strength should come to her of the true character of the company she has been keeping—and then there should be magnificent alimony.

Senator Roosevelt's resolution looking toward the establishment of a law of divorce applying uniformly to the whole nation has been passed by both branches of the New York Legislature. As to the means contemplated in this resolution—an amendment of the Constitution of the United States conferring the necessary power upon Congress—there is room for serious differences of opinion; what the action of the Legislature must chiefly be regarded as indicating is the prevalence and strength of the sentiment that the present condition of divorce law in our country is scandalous, and calls for vigorous efforts for its reform. It is along the line of concerted action between the States that these efforts have been chiefly directed of late, and it is probably along that line that success is to be looked for. Mr. Taft has just come out strongly for this method of obtaining uniformity.

"When a dog bites a man," said the late Charles A. Dana, "that's not news; when a man bites a dog, that's news." Upon this principle, the statement that anybody has spoken against the Gaynor-Murphy charter for New York ought to be barred from publication in the press. Still, when the Board of Estimate comes out, in what is—apart from the Mayor himself—virtually a unanimous assertion of its opposition, the declaration must be regarded as news of decided importance. They make it perfectly plain that even though the provision requiring the separate approval of the Mayor in relation to rapid-transit contracts be taken out of the bill, it would still contain provisions inexcusably interfering with the existing powers and functions of the Board of Estimate. How vitally the primary function of that Board, the making of the city's budget—the function, as the committee of the board says, from which its very name is derived—would be interfered with by the proposed addition of an outside member and by the method prescribed for the formation of the budget committee, is unanswerably set forth in the report.

No less vigorous than its detailed criticism is the committee's general characterization of the scheme:

> At a time when experience in the government of American cities points toward an expansion of the commission idea in the control of the city's financial affairs—rather than its restriction—it is proposed to fly in the face of experience. While the progress elsewhere in America in this respect and in better charter making generally is almost universal, it is proposed that New York shall take a discreditable and discouraging backward step.

As for the proposal to railroad the charter through the Legislature, the report does not go a whit too far in denouncing such a proceeding as "monstrous" and as a manifestation of "contempt for public opinion and public rights." We believe that it would be literally impossible to find, in the whole history of modern legislation, a single instance of such shameless disregard for the elementary principles of decent lawmaking as that now contemplated at Albany. Particular bills have been passed, of course, that were more indefensible; but to force on a metropolitan city an entire new charter which has been riddled full of holes by criticisms from every quarter, and in favor of which not a single voice has been raised outside the little circle of politicians engaged in its concoction—this, we have no hesitation in saying, would be an outrage without precedent.

Pennsylvania is to be congratulated on the report of the grand jury which has been investigating the Coatesville lynching. That body indicts Richard Tucker and Walter Markwood for murder in the first degree and brings the charge of involuntary manslaughter against Stanley Howe, the police officer who was guarding the prisoner at the hospital when the mob came for him, and Charles E. Umsted, Coatesville's chief of police. The grand jury also arraigns in forceful terms the conspiracy of silence which it found pervading the little village in Chester County which was the scene of the atrocity. It cries shame upon the citizens who had full knowledge of the crime before its commission and yet raised no hand to interfere, and who, after the mob fury had cooled, put every obstacle in the way of justice.

Dr. Booker T. Washington is able to get round the Jim Crow law in Texas by chartering a special Pullman car to

Digitized by Google

take him the 200 miles from Austin to Temple. He is about to tour the State with a party of men of both races, as he has recently made trips in other Southern States, Mississippi, Tennessee, Virginia, etc., in which he has rendered service of great value in interpreting the races to each other. But, while Dr. Washington can thus escape the humiliation of the Jim Crow car, there are thousands of others of his race of equal refinement and culture who have no such way out. They must go in the rural South into unsanitary and dirty cars that look as though they had never been cleaned, and that in ninety-nine cases out of a hundred are far inferior to the average white coach. Whether those travelling in these cars are ailing or well, strong or delicate, their plight is the same; it is part of the price they pay for their American birthright! As yet, Dr. Washington has never felt called to speak out very clearly about this gross discrimination against his race, in accordance with his fixed policy of bearing down upon all the favorable signs of the times and touching but lightly on the evils. But if he would speak out, we believe that he could impress the country deeply by telling what he knows about the feelings of the colored people in regard to the Jim Crow stigma daily placed upon them.

Tempting or goading aviators to their death bids fair to take a prominent place among the sane and simple joys of the county fair. Two airmen went to their fate last Friday while supplying entertainment for the rural crowd. One of these men was unwilling to make the ascent, and was only driven to do so by the jeers of the spectators. The mortality list among aviators has attained dimensions where action by the public authorities will soon be called for. Insufficiently trained men are at present at liberty to risk their own lives and those of the crowd below them for the money there is in it, precisely because there will always be found men to risk their lives for money. The effect on the crowd can only be described as demoralizing. "Scientific" interest is lost in the desire for thrills and circus "stunts" carried out at the peril of a man's life. The art of aerial navigation tends to be brought into disrepute by such murderous exhibitions.

The disaster in the harbor of Toulon, more deadly in its effects even than the blowing up of the Maine, will create fresh uneasiness throughout naval circles in regard to the smokeless powder of to-day. How can these modern naval monsters be safeguarded? How can they be prevented from sacrificing their own crews? The question is not an academic one. Many other disasters suggest themselves. It is an open secret that some of our own ships have escaped destruction only by the closest of margins, in one case the flooding of the magazines being necessary to save the vessel. These narrow escapes rarely find their way into the press, though naval circles are fully aware of them. As a result, the newest ships are wholly of metallic construction, even to the officers' furniture, since it has been found that modern battleships under fire could burn within as fiercely as did the wooden walls which once were the glory of nations. Still other measures of safety are the watching of the thermometers in the magazines and the devices employed to reduce artificially the temperature therein. If we are correctly informed, the newest American Dreadnoughts are to have pipes from their artificial-ice plants carried into the powder and shell store-rooms to control the temperature. The striking fact is that makers of smokeless powder are not wholly masters of this terrible agency which they have invented. It is known that, unlike the old brown powder, the smokeless used in our navy, at least, is very sensitive to great heat. What is even more important, it is not an even product; batches of it made under precisely the same conditions may, when tested, be found to have varying strength and properties.

The destruction of the Liberté will inevitably recall the loss of the Maine, particularly as there have just been published dispatches from Havana declaring there is clear proof that a large part of the forward section of the keel had been blown upward. These reports should be taken with much salt. Our latest information is to the effect that the work stopped some time ago for the rainy season; and that at that time it was impossible to tell anything clearly, since the fore-part of the ill-fated vessel was merely a junk-heap, and the naval constructor in charge, with the plans of the vessel before him, could discover almost nothing about the constituent parts of the twisted and distorted mass before him, or their original location. There are those in Havana who believe that the secret will never be discovered, just as there are military and naval men of high repute, like the former Chief Engineer Melville, Rear-Admiral Chadwick, and Gen. W. H. Bixby, the head of the Army's Engineer Corps, who emphatically disbelieve in the possibility of an external explosion. The Russo-Japanese war has reinforced their contentions, in that the Japanese and Russian warships which were sunk by external mines, notably the great battleship Petropavlosk, went down without their magazines blowing up. The Maine's magazines exploded; everybody admits that. The only question is whether they were set off by internal accident, or spontaneous combustion, or by the concussion of an external explosion.

The figures of British foreign trade for August, both import and export, show a marked falling off in comparison with the corresponding month of 1910. The most significant of the declines are those in the imports of raw materials for manufacturing and in the exports of manufactured goods. The falling off in raw materials imported was $11,000,000, while the amount of manufactures exported shows a decrease of $10,500,000. With characteristic fairness, the London *Economist*, while pointing to the labor troubles of the month as the most salient cause of the decline, is careful to state that other adverse factors bore a material part in the result, especially the Moroccan crisis and the slackness of trade in the United States. We say "with characteristic fairness," because the *Economist*, in the same issue, discusses with great force the gravity of the economic injury produced by extensive strikes, making reference to its remark of a fortnight before, that "a strike lasting for a month on a scale like that which actually lasted fifty hours would probably cause more loss of life and more loss of money to the United Kingdom than a whole year of the South African war." This remark, it says, "has been widely quoted, and no writer has ventured to question its truth." Incidentally, we feel moved to commend to those

Digitized by Google

kind-hearted persons on this side the water who have been falling into the habit of looking upon every strike as *prima facie* worthy of support and encouragement, the wise and sober words of Mr. W. Abraham, the miners' leader, showing the folly and injury of ill-considered strikes, which are quoted with warm praise by the *Economist*. That paper is by no means a hidebound supporter of the capitalist side in labor controversies, but it recommends to the working people the same kind of good sense and fairness that it urges upon the employers.

Not till next year will the new Irish Home Rule bill be laid before Parliament, but Ulster is already up in arms, almost literally. It has, of course, been common for the Unionists of the North of Ireland to declare that they would never submit to being ruled from Dublin, but on Monday last they went a step further. At a conference presided over by Sir Edward Carson, who certainly ought to know what illegality is, a resolution was adopted, not only breathing the old defiance, but explicitly announcing the intention to form "a provisional government for Ulster," which should "become operative on the day of the passage of a Home Rule bill." This is no doubt three parts bluster, though the sincerity of Ulster opposition can be called in question no more than its bitterness, but there is at least one part unconscious humor. The great Unionist fight has been against "separatism," yet here are Unionists gravely proposing to be more separate than anybody else. They have cried out that Home Rule would break up the Empire, but they are the very ones to announce an intention of breaking it up into smaller bits than had been suggested in any other quarter. "Ulster will fight," runs the slogan, but the question is whether Ulster will not laugh when she realizes what her representatives have done.

Lord Chancellors of England, from Thurlow and Eldon down, have had a way of delivering themselves freely on public questions, and often getting into hot water thereby. The present Chancellor is no exception. On two matters Lord Loreburn has recently expressed himself in a way to give offence. He has favored a County Courts Bill, as a measure of judicial reform, but the Council of the Bar has opposed it. Thereupon, the Chancellor remarked that this showed one "how lawyers are against legal reform. It is an interested professional opposition, and I feel it my duty to say so." This naturally provoked the resentment of the Bar, which proceeded to pass resolutions repudiating the "imputation." Not content with that encounter, Lord Loreburn fell foul of the Law Society, which has raised objections to a new scheme of transferring land by registration of title. In connection with this the Chancellor had some remarks to make about "the enormous strength of the vested interests concerned in the maintenance of the present system, and the aversion from the learning of a new system, the dislike of innovation, which were, fortunately or unfortunately, characteristic of the legal profession." Result: another swarm of hornets about the woolsack. But the Lord Chancellor seems to enjoy that sort of thing.

The system of inspired interviews, semi-official notes, *communiqués*, *ballons d'essai*, and calculated indiscretions, by which the Foreign Offices of Europe are accustomed to keep the public in touch with the progress of delicate diplomatic negotiations, is one of the most efficient means for driving nations into hysteria ever devised by the wit of man. If from the beginning of the Morocco controversy between the French and German Governments, the newspapers in both countries had been forbidden to print a line on the subject and the authorities in both countries had refused to drop a hint as to the course of events, public anxiety would never have attained the pitch to which it has been repeatedly brought by the "inspired" interpretations of "authorized" comments on the semi-official publications of an editor high up somewhere or other. Only the other day public opinion in both countries had grown highly optimistic, when one of these semi-official notes, intended to inspire still more optimism, appeared in the German press. So highly technical, however, is the language of semi-official diplomacy, and so liable to misconstruction, that this note of hope nearly created a panic on the stock exchanges of both countries. The banking interests were driven to appeal directly to the Foreign Office. They were told that everything was in an eminently satisfactory condition—notwithstanding the optimistic semi-official communication.

The death of Sir Robert Hart removes one of the greatest administrators of this day and generation. For nearly fifty years identified with the Chinese customs, this remarkable man rendered inestimable services to China, and, it is not too much to say, to all the outside world. Nothing could make him abandon his work, in which, as the London *Times* once put it, "posterity will doubtless recognize one of the most striking monuments ever produced by the genius and labor of any individual Englishman." This tribute was called forth by the report of the death of Sir Robert Hart in the Boxer rebellion; he had, therefore, the rare experience of reading extraordinary tributes to himself written with the freedom with which men speak of a great man gone. The truth was that he, being fond of the Chinese, sympathized with them, and was able to look at their questions from their point of view. This led at times to his being criticised as too Chinese; but to his glory be it said, he was neither a swashbuckler nor in his manner an overlord who deemed the Chinese as existing merely to be trodden under foot.

It is this aspect of Sir Robert Hart's life and activity which, it seems to us, will be of greater and greater value to the world as time passes. For the Western nations must now readjust their ideas as to the proper method of dealing with the Eastern ones. It is no longer possible to treat them as hopeless inferiors, to rob and cheat them, or to impose a barbarous vice upon them, as Sir Robert's countrymen did when they fastened the opium curse upon China. Such influence as the West can exert must come not by means of the mailed fist, but by sympathy, appreciation, fair dealing, and coöperation. Sir Robert refused to carry a chip upon his shoulder; it was not possible to offend him by a failure to observe the traditions of the East in dealing with him. For that he was too broad. He simply plugged away at his task, undismayed even when the Taipings rebelled, though affected no doubt by the savage looting of his wonderful home by the Boxers in 1900. His remarkable success not only bespeaks genius; it proves the correctness of his policies and his philosophy.

BUSINESS MEN AND POLITICS.

The pressing and vital need of to-day is a man of the Mark Hanna type, actively identified with big business interests; willing and able to devote his time, his abilities, and his energy to rehabilitate the nation and bring back the same conditions which prevailed before the pernicious activities of Mr. Roosevelt started the country on its downward course.

This extract from a letter prominently printed in the New York *Sun*, by a writer whose name we charitably omit, is in line with a good deal of recent public expression of opinion in that newspaper and elsewhere. Something like an appeal to the business men of the country is being rather widely talked of, in the hope that further disturbing legislation may be prevented, radicalism in general rebuked, and "safe and sane" conditions restored. To dismiss all this as merely a result of unsatisfactory trade at the moment, leading disappointed merchants and captains of industry to an unwonted searching of heart, would be unfair. It is evident that a great deal of attention is now given to this subject, mingled with apprehension, and that multitudes of business men have a vague feeling that if they should only exert their power and do their political duty, affairs might be greatly improved. All the more reason, then, why they should look carefully at the proposed movement, in order to see what are its necessary limitations, and what the lines along which it may usefully work.

One thing the promoters of a Business Men's League, or whatever it may be called, cannot get too early or too clearly into their minds. This is that the day of a close alliance between "big business" and politics has gone by in this country. We used to approve it, then dubiously to tolerate it, but finally the people came to suspect and abhor it; and any political organization now seeking to revive it would be doomed from the start. It is no longer possible to have a great manufacturer, like B. F. Jones of Pittsburgh, made chairman of the Republican National Committee, as he was in 1884, in an election where legislation to increase his own profits, and those of his fellows, was one of the issues. And for any one to propose at present to put a man of the Mark Hanna type at the head of a business men's movement to determine the course of law-making, simply shows that he does not know what time of day it is. As well propose Aldrich.

The difficulty with any plan of that kind is that the country has come profoundly to distrust the patriotic disinterestedness of certain kinds of business men. It has too often seen them going in for the old flag and an appropriation. Particularly in matters of tariff legislation has the rallying of "big business" to the aid of a political party, frequently been only the prelude to swinish demands by it after the election. How much weight does anybody suppose that the American Woollen Company could now add to an association of business men formed for the purpose of averting legislative attacks on commercial prosperity? A prime essential in any such movement is to stamp it with a guarantee that it is entirely without self-seeking. And everybody knows that certain names and interests could not be associated with it without damning it.

This is far from saying that there is nothing in the project, or that it might not be taken up to public advantage. We have had at least one conspicuous demonstration of the part which the solid and sober business interests of the nation may play in a great crisis. Business men's associations and campaign committees and parades were a common and striking feature of the Presidential election of 1896. And they had their due effect precisely because they were tainted by no selfish interest. Their organization and activity were professedly and actually for the purpose of averting a national peril. The business men who then bestirred themselves had, indeed, a stake in the result, but it was only the same stake that the wage-earner and the farmer had. None of them stood to gain or lose more than another. It was a genuinely patriotic movement. And the fact that it was non-partisan was a further pledge of its sincerity. Thousands upon thousands of Democratic business men marched in the great sound-money parades in 1896, and did so on the distinct understanding that they were putting the public weal above party.

For our part, we could but hail any well-reasoned attempt to give the great body of American business men more influence in our politics. There can be little question that they have not taken the place in our public life, or exercised the power, that might easily be theirs. This has been partly due to the fact that, except in such emergencies as the silver peril, they have been too little independent politically. They have allowed politicians to lead them by the nose. Nothing has been more common than to see merchants and brokers and bankers and manufacturers dividing mechanically on party lines. If they had been more independent it is reasonable to believe that they would have been more effective. And we hold it to be certain that if they would now unite to oppose "freak" legislation, to set themselves against any politician who gets up a taking "cry" merely in order to win votes, and to insist that the legitimate business interests of the country, and its social stability, should not be placed in jeopardy solely for the purposes of electioneering and agitation, they could wield an influence that would be wholesome and might easily be decisive. Only, they must see to it that their cause is properly placed before the public, without the fatal handicap of certain names or of the cynical motto: "Business is business."

THE CANADIAN REFUSAL.

The general election in Canada is one of those political events which bulk large on the instant and of which the far-reaching significance grows upon reflection. That it was the voice of the Canadian nation which spoke at the polls, there can be no question. No mere partisan management, no amount of artificial clamor, no effort by special interests, can account for such a startling political upheaval. Wholly unexpected, in any such magnitude, by the press or by news-gatherers or by the politicians of either party, it witnesses to a deep and pervasive feeling among the great masses of Canadian citizens who said very little but who voted in such decisive fashion. Nor is there any mistaking the nature of this feeling. It is that of national pride and national self-sufficiency. To all the evidences of this which Canada has given in recent years, she has now added the crowning demonstration of her desire and determination to work out her own destinies for herself, and to hold herself proudly aloof from anything which might even appear an entangling dependence upon her powerful neighbor to the south. Whether we like it or not, whether we think it a mistake or not, there stands

Digitized by Google

the fact that the electors of 8,000,000 people have declared the national will.

That we regret this tumbling of Canadian reciprocity in a heap, it is needless to say. We have heartily favored the project as not only good in itself but as inevitably leading to the breaking down of superstitious notions about the protective tariff. It still seems clear to us that the reciprocity pact might have been agreed to by the two nations, to the advantage of both. But there is no gainsaying Canada's right to decide the matter for herself, nor can there be any questioning of the vigor and positiveness with which she has now made her decision known. All that is left for this country is to ask what is the lesson for us bitten in by this surprising Canadian election, and what we ought to do next.

First of all, we should read in this rebuff by the Canadian people a severe censure of the Administrations which have been in power in the United States for the past fifteen years, for having neglected the great opportunity to promote closer trade relations with Canada. Her representatives again and again approached the Washington authorities, but were steadily sent away empty-handed. No wonder that they fell back on their own resources and set about working out a national policy that should make reciprocity with the United States a matter of indifference to Canada. Too late our statesmen woke from their sleep. Secretary Root, on his visit to Ottawa during President Roosevelt's second term, found that we had no trade offers to make to Canada that she cared anything about. Finally, President Taft seized what he thought a lucky chance, but as it now plainly appears, the whole effort was tardy. While our protectionists had slumbered, Canada had grown into the consciousness of a self-sufficing nation. If to know the times and seasons be the mark of statesmanship, our rulers have shown themselves in this Canadian business wofully derelict. When they could have had reciprocity, they sniffed at it; when they at last grasped at it, they were too late to get it.

Another thing writ large in the Canadian election is the final collapse of the Republican pretence that the exactions and injustices of a protective tariff can be tempered by reciprocity. For years we have had this preached to us. The high duties might look unjustifiable in themselves, but only think what excellent "trading material" they were, and consider how they might be made the means of opening our markets in a way almost as effective as a tariff for revenue only. From McKinley to Dingley and Payne we have seen these delusive hopes held out. Somehow, reciprocity was to be a kind of salve to put on the high-tariff bruise. But in this supreme test of that theory, it has failed utterly. The country now sees that in the mingling of outrageous tariff taxes with reciprocity, what we finally get is no reciprocity and only an accentuation of the outrage.

The sure result of this bitter experience will be to give a new and great impetus to the movement to take our barbarous tariff laws in hand and strip them of legalized extortion and needless barriers to the flow of commerce. If we desire to open our markets to products that we need, the way to go about it is by general laws, applying to all alike, and not by some special contrivance which breaks like a reed in our hands. If we are to seek new supplies abroad and to look for an enlarged foreign demand for what we produce, we must go at the matter in a large and liberal way, giving up restricted and disappointing devices and striking out on broad lines of legislation to promote trade by removing artificial obstacles to it. Such tariff doctrines as the Democrats proclaimed and sought to live up to in the last session of Congress will now be felt to go more directly to the point than years of vain talk about reciprocity.

We have left to the last the most tragic aspect of the matter, and that is the terrible blow which the Canadian election has dealt President Taft. To him, both personally and politically, the effect for the moment must seem absolutely crushing. Here is the one independent and capital measure of his Administration struck down to the dust. For it he risked everything; rent his party in twain; was compelled to accept the aid of the Democrats; had to submit to the most bitter attacks. In other words, he attempted a bold stroke which, as a matter of political tactics, nothing but success could justify; wreaked himself in labor to assure success; and just as he had apparently won it, sees it dashed to the ground. It is a misfortune so overwhelming to its chief victim that one can think of little to-day but the pathetic situation in which he is left. Upon the party consequences, it would be easy, but is now a little premature, to speculate. Yet no one can be blind to the fact that the entire Republican outlook has been in a day thoroughly confused, and that no man can tell what 1912 will bring forth for that party, in the way of either candidate or programme. If Mr. Taft has the flexibility and the courage to strike out strongly for a tariff-reform policy which may in part make up for the awful fiasco of his reciprocity scheme, he may partly recover; but the general belief is to-day that the great Canadian refusal has given him a fatal hurt.

THE MEDITERRANEAN WAR CLOUD.

The sudden and emphatic manner in which the Italian Government has brought forward its claims to nearly half a million square miles of Turkish territory in North Africa is a direct result of developments in Morocco. It was not to be supposed that France would be allowed to obtain her prize without a demand for compensation by the other Mediterranean Powers. In so far as Spain is concerned, the French Government will have to make some accounting as soon as the German negotiations are out of the way. Italy's course has long been determined. For years Tripoli has been ear-marked as her own. In 1900 France, in a secret agreement that was subsequently communicated to the German and Austrian Governments, recognized Italy's predominant rights in the vast region between Tunis and Egypt and stretching indefinitely southward into the Sahara. The situation in the Central Mediterranean thus obviously differs from conditions in Morocco in that Italy need not anticipate interference on the part of any European Power. Her business is with Turkey alone.

This feeling that she is secure against European opposition probably explains the blunt way in which Italy has gone about the business. The classic excuse for acts of the kind has, of course, been made. Italy's overflow population demands an outlet, and Italy's "legitimate aspirations" point directly across the Mediterranean. The plea of population is nearly always plausible and nearly always a humbug. The Italian emigrant will not go to Tripoli so long as

Digitized by Google

the way lies open to the United States, the Argentine, and the north of Europe. The wastes of North Africa cannot compete against the lure of high wages and easy prosperity which beckons across the Atlantic. It is conceivable that if Italian emigration to America should in some way be cut off, the tide might turn to the south. But until that happens, immigration, like most things in nature, will follow the lines of least resistance. In Tripoli, nearly everything must be created anew, agriculture, industry, the very soil almost. Italy may have men for the task, but she has not the capital; and the colonial game is expensive. United Italy may be prospering, but she is not yet in a position to give up drawing millions of dollars annually from her expatriated sons in America, and to begin pouring out millions instead.

The motives, therefore, behind the move upon Tripoli are those of international rivalry and prestige. In this year of the semi-centennial of the Italian kingdom, patriotic feeling may very well be at the point where an aggressive colonial policy will bring great popularity to the Minister behind it. But an aggressive colonial policy will also ruin a Ministry, as Francesco Crispi found out some fifteen years ago. And with the revolutionary spirit astir all over Europe, the outcome of an unsuccessful policy of adventure might prove fatal to throne and Cabinet alike. The Giolitti Government has undoubtedly weighed the risk. With the Italian fleet in command of the sea and a Turkish garrison of about 10,000 men to deal with in Tripoli, that province can easily enough be overrun. The question is what would happen if the Turkish Government wreaked vengeance on the Italians within the Ottoman Empire, and Italy were compelled to invade the Balkans. In that mountainous country and with the trained European regiments of Shefket Pasha to face, Italy might well take thought of what happened fifteen years ago in Abyssinia.

For the Government at Constantinople the situation is one of bitter difficulty. There is undoubted force in the contention that the Young Turk régime will be doomed if it consents to the further dismemberment of the Ottoman Empire. Turkish feeling against Italy has been peculiarly strong because of Italy's provocative policy in Albania. But, on the other hand, if submission would spell disaster to the Young Turks, an unsuccessful war would bring the same result. Hence the situation points to a probable desire on the part of both nations to avoid coming to blows. Italy would presumably be content with some recognition of her predominant rights in Tripoli that should be quite clear without amounting to a formal renunciation of sovereignty on the part of the Turkish Government. The Ottoman Government would consent to an arrangement that should leave intact its nominal rights to a territory whence it has drawn little revenue or indirect profit; the Turkish population in Tripoli is very small. The question of compensation would enter here. The rôle of peacemaker might very well be taken by Germany, whose interests as the ally of Italy and the particular friend of Turkey fit her for the task.

There is all the more reason for Germany to exercise her good offices in the matter because at the present time the friendship of the authorities at Constantinople is of great moment to German interests. The Baghdad railway has been making its way against British and French opposition. Other German enterprises in Asia Minor may expect to suffer if the present German ascendency at Constantinople should be destroyed and the British and French influence regain its former prestige. Such an outcome would be difficult to prevent if Germany, after permitting one of her allies to make way with Bosnia and Herzegovina, should now allow her other ally openly to gobble up Tripoli.

SPELLING AND LIFE.

A writer in the *Educational Review* discusses with what must seem to the layman great profundity the ways and means of correcting the bad spelling of the day. There is much talk of "end-organs," of "phonetic and associative elements" in the language; and the best method for creating the spelling memory is described in terms as elaborate as Polonius's favorite drama—the "motor-auditory-visual" method. But the writer would doubtless concede that the most significant words in the paper are those quoted from the despairing cry of a college freshman: "Anyway, if English is so bad we *can't* spell it, why do we have to try?" Spelling, it seems, along with the rest of our institutions, is not to be spared the muck-raking of youth. Why should a word be permitted to retain its accumulated, needless wealth of letters while mankind suffers for it? Why should not words, like any other sort of currency, be scientifically investigated and managed? And what's a word anyhow but a slave of thought? It is no longer possible, we are told, to shame a student for writing "goverment."

The attitude of the younger generation toward spelling, it will be observed, involves a question of larger bearings than those which the clamor for the phonetic system suggests. The problem that now confronts the age is one of over-developed broad-mindedness. We like to fancy that this is a great day for thinking things through, that nothing can pass unchallenged, that for a moment at least it must enter the spotlight of an insistent democracy and stand revealed. "What purpose does it serve?" has been asked again and again, not only of public policies, but of nearly every innocent whim as well. The collectors of rare books or coins, along with the man who removes his left shoe first, have been bidden to justify their conduct. Rarely has so much of life been turned over in a single decade as in the one just past. The teaching of Greek is attacked on the ground that it does no one any *real* good. You can't fool the layman nowadays. If he doesn't know what you are about, he asks you point blank and expects no hemming and hawing. Trust him to be intelligent enough to understand you! Little wonder that such broad-mindedness should show impatience in the presence of the freakish spelling which English flaunts, or should feel condescension toward the sticklers for such petty details.

Thinking things through is one thing and thinking them half-through is quite another. The chances are that those capable of the former, if they set about renovating life, would leave many customs and institutions almost untouched; and that the half-through thinkers would put the whole universe in a ferment. Their text would be, the old order changeth, the present age is like no age that has preceded it, and with a whoop the work of total reform would begin. The mild remonstrance that perhaps no single age is wise enough to criticise all past ages, and to prepare

Digitized by Google

for all ages of the future, would probably provoke the reply: "Let the dead bury their dead and the future take care of itself." This is the stage which inevitably arrives when an entire people such as ours undertakes to have opinions on all subjects; a great deal of cerebration goes on, and the level of intelligence about the more obvious things of life grows to be very high; meantime it goes hard with any practice which has come into being by sinuous paths—English spelling, for instance.

Words, says the modern spirit, are merely arbitrary symbols and should be treated as such; reverence for their silly peculiarities shows small courage and a benighted mind. But this brings up the query, When is a symbol something more than a symbol, and who shall be the judge? Plenty of living philosophers would go so far as to say that life itself is but a symbol. Yes, but they are philosophers! However, churches are symbols, so is marriage a symbol, and baptism, and hundreds of other things which those who broad-mindedly refuse to spell correctly apparently hold dear. Casting a custom overboard merely because it is a symbol is pretty sure to play havoc. It is as easy to be broad-minded as it is to be narrow, but wisdom is in a fashion compounded of both elements. The man who clings to a tradition largely because it has perpetuated itself for centuries may do so blindly or because he has confidence in the judgment of the ages, even while not being able to explain the tradition now as anything more than a seemingly arbitrary symbol. With Francis Bacon we may insist that time is the true innovator, and that he is a risky reformer who breaks off the thread it spins with his everlasting challenge, "What's the good of it?"

One reason for feeling opposed to the modern spirit in the form referred to is the inconvenience which it causes. We frankly admit that we cannot justify to every Tom, Dick, and Harry our daily actions. In the process of trying we should be made a fool of easily enough. We really do prefer "precede" to "preceed." We like to be surrounded by books even when we have little time to open them; that situation symbolizes something or other, we are not quite sure what. And if the reader thinks that this is foolish, we grant that he is more broad-minded than we. Sometimes, however, the mind may be so broad that it is unable to focus on some of life's choicest bits.

HOME-SEEKING IN NEW YORK.

As September draws to an end, friends begin to congratulate you on your improved appearance. The fact is undeniable; you have perceptibly been casting off superfluous weight. Even the scoffers are convinced and ask how the thing is done. And when you say, "I have been hunting for an apartment," they say, "Why, of course." Most houses have elevators nowadays, but there are still miles of corridors to walk, and every apartment-house in the city has a view of which it is proud. Leaning out of a window to catch the view brings into play essentially the same set of muscles as stooping in the morning to touch the floor with the finger tips without bending the knees. Of course, merely protruding the head out of a window would not do the work. But fortunately the views to be had from New York apartment-houses are so situated as to call for the emergence of something more than the head and shoulders. Half an hour a day, spent in catching a view of the Hudson River, if kept up throughout the months of August and September, would undoubtedly settle the doctor's business. A view of Long Island Sound is to be more highly recommended because of the greater stress it exercises on the abdominal muscles, but there are not many apartment houses in New York city where this advantage is to be obtained. The same limitation applies to views of Grant's Tomb, the Columbus Monument, and the Sherman statue: such apartments are for the professional athlete only.

The serious drawback to the pleasurable pursuit of apartment-hunting is the unavoidable necessity of disappointing so many renting-agents. The renting agent is so buoyant, so optimistic, so invariably convinced that his rooms are the handsomest and cheapest in town, that sensitive people find it positively painful to disagree with him. An apartment-hunter of this sensitive type will often see at a first glance that the place will not suit at all. But he lacks the resolution to say so. He will allow himself to be conducted from room to room simulating enthusiasm. He will admire the panelling in the dining room and agree to the spaciousness of linen closets, searching all the time in his mind for the easiest way out. He usually musters up courage to say that the bedrooms are rather small. The anticipated look of pain spreads over the agent's face. He knows of two families on the same floor who have succeeded in getting into precisely the same sized bedrooms not only all the essential equipment for a sleeping-room, but an extraordinary amount of furniture of a kind that one would never think of putting into a chamber. The head of one of these families is in the fire-insurance business and the other apartment is occupied by a widowed lady from the South with her three sons. The agent offers to take you into the Southern lady's apartment and show you how *she* managed to dispose of her furniture. He is sure she would not object, provided she is not out shopping. The sensitive seeker, as a last desperate measure, says he will come back with his wife and let her decide. He escapes, but leaves self-respect behind him.

And sometimes even the sacrifice of self-respect will not avail the seeker. The agent is determined to please; he will make any changes that suggest themselves to the unhappy victim. The amount of reconstruction to which a determined renting-agent will consent is really amazing. He will tear down walls, he will insert doors, he will block up windows and hew out other windows. The victim can think of no idiosyncrasy to which his torturer will not consent. Does the seeker want to turn the library into a bedroom? Very well; by next Wednesday the library will be a bedroom and the rear bedroom will be a sitting-room and the sitting-room will be a dining-room. No considerations of cost are allowed to stand in the way. The immediate object of renting out a flat at a reasonable profit seems to have been lost in the overmastering desire to make this reluctant seeker hire an apartment that he does not like. It has ceased to be a matter of business with the renting-agent, and become a matter of art for art's sake, of joy in the battle for the mere lust of thrust and grapple and conquest, as Mr. Jack London might say. A renting-agent will change anything short of putting the third floor of his house below the second, and we don't know but that there may be agents who under

Digitized by Google

sufficient provocation will renumber their floors, starting from the top and going down.

How is the unhappy seeker to tell this cheerful, eloquent demiurge that the trouble is not with the bedrooms, not with the size of the linen closets, not with the vacuum cleaners, but with the name emblazoned in letters of bronze over the iron portcullis by which one comes in from the street? He had entered without noticing the name; he first read it on the hall-boy's uniform: "The Tuileries." There it was again. For weeks he, a modest American citizen, and over-sensitive, had found his footsteps leading him among the memories of kings and emperors. He had rejected numberless handsome apartments because he could not think of coming home from his office to a bath and dinner at The Tuileries or at Buckingham Palace. The names were absurd in view of his daily occupation as a commission merchant dealing in butter and eggs. What if Philip II's Escorial had no telephones and the house on Riverside Drive has? What if Frederick's Sans Souci at Potsdam was unprovided with mail chutes? The seeker feels that he should never muster enough courage to ask a friend to drop in for dinner at the Parthenon, or the Vatican, or the Taj Mahal, or the Louvre. So he tells the renting-agent that he will bring his wife to decide, and slinks away.

NIETZSCHE.—II.

V.

Nietzsche's books are of the same character as his life, are indeed the very mirror of his soul. His writing is too often in a style of spasmodic commonplace, displaying a tortured effort to appear profound; but it is in places also singularly vivid, with the force of clinging epithet and picturesque exaggeration or grotesqueness. To one who dips into his works at random, they will seem dark and tangled. His manner of expressing himself in aphorisms and of uttering half truths in emphatic finality without proper reservations gives to his writing an appearance of complexity and groping uncertainty, if not of self-contradiction; but a little persistence in reading soon shows that his philosophy is extremely simple, and that he had in fact only a few ideas which he repeated in endlessly diversified language. Any one of his later books will afford a fairly complete view of his doctrine: it will be found pretty fully developed in "Beyond Good and Evil"; in "Zarathustra," on the whole the greatest of his works, it assumes a tone of lyrical egotism and prophetic brooding on his own destiny; in "The Will to Power" there is an attempt to reduce his scattered intentions to a logical system, but unfortunately that work was never finished, and is printed largely from his hasty notes. What probably first impresses one in any of these books is Nietzsche's violent antipathy to the past —"'It was'—so is named the Will's gnashing of teeth and loneliest tribulation; impotent before the thing that has been done, of all the past the Will is a malicious spectator." In this apparently sweeping condemnation of the past all that has been held sacred is denounced in language that sounds occasionally like the fury of a mad man. So he exclaims: "To the botching of mankind and the allowing of it to putrefy was given the name 'God'"; and to our long idealization of the eternal feminine he has only the brusque reply: "Thou goest to women? Forget not thy whip!"

But as we become better versed in Nietzsche's extreme manner of expression, we find that his condemnation of the past is by no means indiscriminate, that in truth his denunciations are directed to a particular aspect of history. In the classical world this distinction takes the form of a harsh and unreal contrast between the Dionysiac principle of unrest and growth and creation for which he expresses the highest regard, and the Apollonian principle of rest and renunciation and contraction for which, as Platonism, he has the deepest aversion. The same distinction really holds in his attitude toward religion, although here his feelings are not so clearly defined. For the Old Testament and its virile poetry, for instance, he admits great reverence, reserving his spleen for the New Testament and its faith. To understand him here we must remember that there were, in fact, two elements in Christianity as it developed in the earlier centuries: on the one hand the strong aspiring faith of a people in the vigor of youth and eager to bring into life fresh and unworn values, and, on the other hand, the depression and world-weariness which haunted the decadent heterogeneous people of Alexandria and the East. Now it is clear that for the former of these Nietzsche had no understanding, since it lay quite beyond his range of vision, whereas for the latter he had a very intimate understanding and a bitter detestation. Hence his almost unreserved rejection of Christianity as a product of corruption and race impurity.

It is a mistake [he says in "The Will to Power"] to imagine that, with Christianity, an ingenuous and youthful people rose against an old culture. . . . Nothing can be understood of the psychology of Christianity, if it be supposed that it was the expression of revived youth among a people, or of the resuscitated strength of a race. It is rather a typical form of decadence, of moral softening, and of hysteria, amid a general hotch-potch of races and people that had lost all aims and had grown weary and sick. The wonderful company which gathered round this master seducer of the populace, would not be at all out of place in a Russian novel: all the diseases of the nerves seem to give one another a rendezvous in this crowd.

And elsewhere he says, more generaliy:

After having pondered over the physiology of exhaustion for some time, I was led to the question: to what extent the judgments of exhausted people had percolated into the world of values.

The result at which I arrived was as startling as it could possibly be—even for one like myself who was already at home in many a strange world. I found that all prevailing values—that is to say, all those which had gained ascendency over humanity, or at least over its tamer portions, could be traced back to the judgment of exhausted people.

VI.

Now all this is the perfectly correct statement of a half-truth, as any one must admit who is familiar with the religious history of Alexandria; it is largely correct also as regards the romantic revival of Alexandrianism, which in Nietzsche's eyes made up the whole of modern Christianity. The fact is that his mind was really concerned with certain aspects of society as it existed about him, and his hostility to the past was not to the dead centuries in themselves, but to what remained over from them in the present—for what, after all, is there for any man in the past to hate or fear, except as it lives and will not be put away? In the sickness of his soul Nietzsche looked abroad over the Western world, and saw everywhere futility and purposelessness and pessimistic uncertainty of the values of life. An ideal, as he sees it, is embraced only when a man's grip on this world has been weakened, and in the end such supernatural ideals, as they are without foundation in fact, lose their hold on the human mind, and mankind, having sacrificed its sense of real values and having nursed the principle of decay, is left helpless and joyless. This condition he calls Nihilism. "People have not yet seen what is so terribly obvious," he says—"namely, that Pessimism is not a problem but a *symptom*—that the term ought to be replaced by 'Nihilism'; that the question, 'to be or not to be' is itself an illness, a sign of degeneracy, an idiosyncrasy." And in the first part of "The Will to Power" he unfolds this modern disease in all its hideousness. The restless activities of our life he interprets as so many attempts to escape from the gloom of purposeless-

Digitized by Google

ness, as so many varieties of self-stupefaction. No one can read his list of these efforts without shuddering recollection of what decadent music and literature and painting have produced:

In one's heart of hearts, not to know, whither? Emptiness. The attempt to rise superior to it all by means of emotional intoxication: emotional intoxication in the form of music, in the form of cruelty, in the tragic joy over the ruin of the noblest, and in the form of blind, gushing enthusiasm over individual *men* or distinct *periods* (in the form of hatred, etc.). The attempt to work blindly, like a scientific instrument; to keep an eye on the many small joys, like an investigator, for instance (modesty toward one's self); the mysticism of the voluptuous *joy* of eternal emptiness; art "for art's sake" ("le fait"), "immaculate investigation," in the form of narcotics against the disgust of one's self; any kind of incessant work, *any* kind of small foolish fanaticism.

The attempt to maintain Christianity amidst a nihilistic society which has lost even its false ideals, can have only one result. As these ideals were evoked by the weaker and subject portion of the race, so when they have perished the only thing that remains is the humanitarian exaltation of the humble and common and undistinguished as a kind of simulacrum of Christianity, the unideal sympathy of man for man as a political law, the whole brood of socialistic schemes which are based on the notion of universal brotherhood. These, the immediate offspring of Rousseauism and German romanticism, are, Nietzsche believed, the actual religion of the world to-day; and against these, and against the past as the source of these, his diatribes are really directed. His protest is against "sympathy with the lowly and the suffering as a *standard* for the *elevation of the soul*."

Christianity [he exclaims] is a degenerative movement, consisting of all kinds of decaying and excremental elements. . . . It appeals to the disinherited everywhere; it consists of a foundation of resentment against all that is successful and dominant: it is in need of a symbol which represents the damnation of everything successful and dominant. It is opposed to every form of *intellectual* movement, to all philosophy; it takes up the cudgels for idiots, and utters a curse upon all intellect. Resentment against those who are gifted, learned, intellectually independent: in all these it suspects the elements of success and domination.

All this is merely Nietzsche's spasmodic way of depicting the uneasiness of the age, which has been the theme of innumerable poets of the nineteenth century—of Matthew Arnold, to take an instance, in his gloomy diagnosis of the modern soul. And to a certain point the cause of this Nihilism, to use Nietzsche's word, is the same for him as for Arnold. They both attribute it to the shattering of definite ideals that had so long ruled the world, and especially to the waning of religious faith. But here the two diagnosticians part company. Arnold looked for health to the establishing of new ideals and to the growth of a fresh and sounder faith in the Eternal, though he may have failed in his attempt to define this new faith. Nietzsche, on the contrary, regarded all ideals and all faith as themselves a product of decadence and the sure cause of deeper decay. "Abjection, evasion, joyous distrust, and love of irony," he says, "are signs of health; everything absolute belongs to pathology." Nihilism, as the first consequence of the loss of ideals, may be a state of hideous anarchy, but it is also the necessary transition into the idealistic source of evil, the eyes of mankind are strengthened to look boldly at the facts of existence, then will take place what he calls the Transvaluation of all Values, and truth will be founded on the naked, imperishable reality. There is no eternal calm at the centre of this moving universe; "all is flux"; there is nothing real "but our world of desires and passions," and "we cannot sink or rise to any other 'reality' save just the reality of our impulses—for thinking itself is only a relation of these impulses to one another." So be it! When a man has faced this truth calmly and bravely and definitely, then the whole system of morality which has been imposed upon society by those who regarded life as subordinate to an eternal ideal outside of the flux and contrary to the stream of human desires and passions—then the whole law of good and evil which was evolved by the weak to protect themselves against those who were fitted to live masterfully in the flux, crumbles away: that man, in Nietzsche's phrase, has passed Beyond Good and Evil.

Mankind is thus liberated from the herd-law, the false values have been swept away, but what new values take their place? The answer to this question Nietzsche found by going to Darwinism and raising the evolutionary struggle for existence into new significance; he would call it, not the Schopenhauerian will to live, but the Will to Power. He thus expresses the new theory in the mouth of Zarathustra:

Wherever I found a living thing, there found I Will to Power; and even in the will of the servant found I the will to be master. . . .

And this secret spake Life herself unto me. "Behold," said she, "I am that which must ever surpass itself." . . .

He certainly did not hit the truth who shot at it the formula: "Will to Existence": that will—doth not exist!

For that which is not, cannot will; that, however, which is in existence—how could it still strive for existence!

Only where there is life, is there also will: not, however, Will to Life, but—so teach I thee—Will to Power!

This is Nietzsche's transvaluation of all values, the change from the morality of good and evil depending on a supernatural ideal to the non-morality of the purely natural Will to Power. And as the former idealism resulted in the suppression of distinction and in the supremacy of the feeble, so the régime of the Will to Power must restore to society the sharp division of those who have power and those who have not, the true philosophers who have the instinct to surpass and the slaves whose function it is to serve and obey. The philosopher, to use Nietzsche's famous term, is the Superman, the *Uebermensch*. He has passed beyond good and evil, and Nietzsche often describes him in language which implies the grossest immorality; but this is merely an iconoclast's way of emphasizing the contrast between his perfect man and the old ideal of the saint, and it would be unfair to take these ebullitions of temper quite literally. The image of the Superman is, in fact, left in the hazy uncertainty of the future; the only thing certain about him is his complete immersion in nature, and his office to raise the level of society by rising on the shoulders of those who do the menial work of the world. At the last analysis the Superman is merely a negation of humanitarian sympathy and the socialistic state of indistinguished equality.

VII.

Nietzsche's conception of the Will to Power may seem to have brought us back by a long circuit to Hobbes's definition of human nature as "a perpetual and restless desire of power after power that ceaseth only in death"; but in reality there is a whole world between the two. In the levelling principles against which Hobbes directed his theory of government there was little or nothing of that notion of sympathy which is rooted in Locke's naturalism and has its flower in German romanticism; nor, on the other hand, is there in the Hobbian picture of the natural state of mankind as a warfare of self-interests any touch of that morbid exaltation of the ego which developed as an inevitable concomitant of romantic sympathy. There is, in fact, a colossal self-deception at the heart of Nietzsche's philosophy, which has no counterpart in Hobbism, and to which we shall find no key unless we bear in mind this long and regular growth of ideas from Locke o the present day. Nietzsche looked upon himself as, if not the actual Superman, at least an imperfect type of what the Superman was to be: he thought of his rebellion as an exemplification of the Will to Power; whereas the hated taint of decadence had struck deep into his body and mind, while his years of philosophizing were one long fretful disease. He has himself, with

Digitized by Google

the intermittent clairvoyance of the morbid brain, pointed to the confusion of phenomena which has led his followers to admire his intellectual productivity as a proof of fundamental health:

> History discloses the terrible fact that the exhausted have always been *confounded* with those of the most abundant resources. . . . How is this confusion possible? When he who was exhausted stood forth with the bearing of a highly active and energetic man (when degeneration implied a certain excess of spiritual and nervous discharge), he was *mistaken* for the resourceful man. He inspired terror.

By a similar illusion Nietzsche regarded the self-assertive Superman as a true reaction against the prevalent man of sympathy and a cure for the disease of the age. That much of Nietzsche's protest against the excesses of humanitarianism was sound and well-directed, I for one am quite ready to admit. He saw, as few other men of our day have seen, the danger that threatens true progress in any system of education and government which makes the advantage of the average rather than the distinguished man its first object. But the cure Nietzsche proposed for these evils was itself a part of the malady. The Superman, in other words, is a product of the same naturalism which produced the evil it would counteract; it is the last and most violent expression of the egotism, or self-interest, which Hume and all his followers balanced with sympathy as the two springs of human action. Sympathy, as we saw, gradually usurped the place of self-interest as the recognized motive of virtue and source of happiness, but here this strange thing will be observed: where sympathy has been proclaimed most loudly in theory, self-interest has often been most dominant in practice. Sympathy first came to excess in the sentimental school, and the sentimentalists were notorious for their morbid egotism. There may be some injustice to Sterne in Byron's sneering remark that he preferred weeping over a dead ass to relieving the want of a living mother, but in a general way it hits exactly the character of which the author of the "Sentimental Journey" was a type. I came by chance the other day upon a passage in an anonymous book of that age, which expresses this contrast of theory and practice in the clearest terms:

> By this system of things [that is, the sentimental system] it is that strict justice is made to give way to transient fits of generosity; and a *benevolent* turn of mind supplants rigid integrity. The sympathetic heart, not being able to behold misery without a starting tear of compassion, is allowed, by the general suffrage, to atone for a thousand careless actions, which infallibly bring misery with them. In *commercial* life, the Rich oppress the poor, and contribute to hospitals; a monopolizer renders thousands and tens of thousands destitute in the course of traffic; but cheerfully solicits or encourages subscriptions to alleviate their distress.*

As for Rousseau, the great apostle of humanity, it is notorious that the principal trait of his disposition was an egotism which made it impossible for him to live at peace with his fellow men. "Benevolence to the whole species," said Burke, having Rousseau in mind, "and want of feeling for every individual with whom the professors come in contact, form the character of the new philosophy." No one who has read the annals of the romantic group of Germany need be told how their pantheistic philosophy was contradicted by the utterly impractical individualism of their lives.

The truth is this inconsistency is inherent in the very principles of romantic naturalism. In a world made up of passions and desires alone, the attempt to enter into the personal emotions of others will react in an intensifying of our own emotions, and the effort to lose oneself in mankind will be balanced by a morbid craving for the absorption of mankind in oneself. The harsh contrast of sympathy and egotism is thus an inevitable consequence of romanticism, nor is it a mere chance that Tolstoy, with his exaltation of Rousseauism and of absolute non-resistance and universal brotherhood, should have been a contemporary of a philosopher who made Napoleon his ideal and preached war and the Superman as the healthy condition of society. Nietzsche himself, in one of his moments of insight, recognizes this coexistence of extremes as a sign of decadence. That they spring from the same source is shown by the unexpected resemblance they often display beneath their superficial opposition. Perhaps the book that comes closest to "Zarathustra" in its fundamental tone is just the "Leaves of Grass," which in its avowed philosophy of life would seem to stand at the remotest distance. Nietzsche denounces all levelling processes and proclaims a society based frankly on differences of power; Walt Whitman, on the contrary, denies all differences whatsoever, and glorifies an absolute equality: yet as both start from the pure flux of naturalism, so they both pass through a denial of the distinction of good and evil based on the old ideals, and end in an egotism which brings aristocrat and democrat together in a strange and unwilling brotherhood.

VIII.

To any one caught in this net, life must be a one-sided fanaticism or a condition of vacillating unrest. The great tragedy of Nietzsche's existence was due to the fact that, while he perceived the danger into which he had fallen, yet his struggles to escape only entangled him more desperately in the fatal mesh. His boasted transvaluation of all values was in reality a complete devaluation, if I may coin the word, leaving him more deeply immersed in the Nihilism which he exposed as the prime evil of modern civilization. With Hume and the romantic naturalists he threw away both the reason and the intuition into any superrational ideal beyond the stream of desires and passions and impulses. He looked into his own heart and into the world of phenomena, and beheld there a ceaseless ebb and flow, without beginning, without end, and without meaning. The only law that he could discover, the only rest for the mind, was some dimly foreseen return of all things back into their primordial state, to start afresh on the same blind course of chance—the Eternal Recurrence, he called it. "No doubt," he once wrote, "there is a far-off, invisible, and prodigious cycle which gives a common law to our little divagations: let us uplift ourselves to this thought! But our life is too short, our vision too feeble; we must content ourselves with this sublime possibility." At times he represents the courage to look undismayed into this ever-turning wheel as the test that distinguishes the Superman from the herd. And this is all Nietzsche could give to mankind by his Will to Power and his Transvaluation of all Values—the will to endure the vision of endless, purposeless mutation, the strength to accomplish —absolutely nothing. More than once he admits that the last temptation of the Superman is grief for a race revolving helplessly in this cycle of change. As for himself, what he found in his philosophy, what followed him in the end into the dark descents of madness, is told in the haunting vision of The Shadow in the last section of "Zarathustra":

> "Have I—yet a goal? A haven toward which *my* sail is set?
>
> "A good wind? Alas, he only who knoweth *whither* he saileth, knoweth also what wind is good and a fair wind for him.
>
> "What still remaineth to me? A heart weary and flippant; a wandering will; fluttering wings; a broken spine.
>
> "This seeking for my home: ah Zarathustra, knowest thou well, this seeking hath been my home-sickening; it devoureth me.
>
> "Where is—*my* home? For it I ask and seek and have sought, but have not found it. Oh eternal everywhere, oh eternal nowhere, oh eternal—in-vain!"
>
> Thus spake the Shadow, and Zarathustra's countenance grew longer at his words. "Thou art my Shadow!" said he at last with sadness.

The end of it is the clamor of naturalism at war with itself and struggling to escape from its own laws. As I leave Nietzsche I think of the tragedy of Sophocles in which Heracles is represented as writhing in the embrace of the Nessus-shirt he has himself put on,

*John Buncle, Junior, Gentleman. 2 volumes. London: 1776, 1778. The hero is supposed to be the son of Amory's *John Buncle*.

Correspondence

THE AMERICAN INSTITUTE OF CRIMINAL LAW AND CRIMINOLOGY.

To the Editor of The Nation:

Sir: May I offer a correction of a misconception implied in one passage of your review (August 3) of certain treatises in the Modern Criminal Science Series? The learned reviewer quotes a remark of Professor Gross: "Whenever people delayed in establishing the right thing, and then suddenly tried for it, they went in their haste, too far"; and then suggests that "this might be recommended to the consideration of the American Institute of Criminal Law and Criminology," whose committee is responsible for the above series of books. I desire to explain, to those of your readers who are not familiar with the work of the Institute, that its methods are, and have been from the beginning, entirely in accord with the reviewer's cautionary spirit. The Institute's officers stand with him in opposing the hasty reformer. They represent precisely that body of intelligent opinion which desires to emphasize careful and extensive investigation before advocating any remedy, however plausible. The mere enumeration of its committees of research, who have before them the plans for years of cautious labor, would sufficiently show this. But the Institute has two depressing obstacles, of huge extent, but of opposite character. One is this haste of well-meaning reformers to plunge into experiments, fads, nostrums, sentimental futilities, and theoretic impossibilities. The other is the stolid resistance of philistinism, which is unwilling to join in the work, but is ready to sneer at the workers. The earmarks of the latter class are seen in your reviewer's unjust insinuation upon the Institute. Its work he can certainly never have really investigated.

The Institute has ventured to regard its work as one of science. But your reviewer, in placing "scientific" and "modern science" in quotation marks, whenever he alludes to that supposed aspect of the works reviewed by him, must surely be unfamiliar with the status of the men who lead the work in Europe. Of the authors represented in the Modern Criminal Science Series, the lawyers alone would command the respect of the bar and bench in any country. Garofalo is chief justice of the Court of Appeals at Naples, and a national Senator; Ferri is professor of criminal law at Rome; Saleilles is one of the half-dozen greatest French jurists of this generation; Tarde was a magistrate, and one of the world's great psychologists; Gross is, of course, the best-known criminal magistrate in Europe, and a professor of criminal law. How can such men's best work be sneered at, by quotation marks for its "science," without raising a question as to the critic's own standards?

And I must confidently assert that the reviewer has in this case not given the honor of perusal to the general body of literature which he repudiates. For an example, take his main accusation, that modern criminal science "leaves motive out of account," "represents every conceivable factor but that of intelligible human motive." On the contrary, I should have said that it precisely did consider individual motive as the ultimate crux of all theories in their practical administration. For the Continental literature, Saleilles and Garofalo (authors later on the list in the series) are sufficient examples. For American methods, a notable example is the superb work of Dr. Healy, director of the Juvenile Psychopathic Institute, at the Juvenile Court in Chicago (described in the *Journal of the Institute*, Vol. I, p. 50); in the Boston and New York probation officers' work, and in Mr. Smithers's analysis of the pardoning power in Pennsylvania (all noticed in the *Journal's* pages). Modern criminal science does not break with facts, even though reviewers may wish to break with modern "science."

Crime is the costliest curse of civilization. The American Institute does not commit itself either to new theories or to ancient prejudices about crime. But it does expect to unite both conservatives and innovators alike in the serious and sympathetic endeavor to discover the most efficient methods of carrying on the worldoid struggle for the repression of crime. It asks simply that the same spirit of scientific research which in the last two generations has revolutionized natural science and industrial production shall now also be applied in the field of crime.

John H. Wigmore.

Former president of the American Institute of Criminal Law and Criminology.

Chicago, August 26.

[Professor Wigmore would probably assent to the distinction between the exact sciences, such as physics and chemistry, and in a minor degree biology, which can rely very largely upon definite scientific methods, and the inexact sciences, such as economics, psychology, sociology, and anthropology, in which, however methodical the investigation, the value of the result is derived mostly from the power of judgment of the scientist, developed through knowledge and training. We did not deny that a criminologist may hold a dignified place among scientists of the latter sort—read the review of Gross; and we refrained from passing judgment in detail upon any but the writers before us. But we also abstained from using the name of scientist, just because the indiscriminate use of this name ignores a radical difference of method. Fifty years ago all studies depending largely upon personal intelligence were more accurately distinguished as "philosophy." Now, the failure to observe this difference is "science." The use of these offensive quotation marks is to indicate a study of the second sort which, having set up a scientific terminology of "laws" or "types" and an apparatus of metrics and statistics, proceeds forthwith, on the basis of its good intentions, without inquiring how far it has reached exact results, or how far (in a study of human nature) such results will ever be possible, to claim rank with the exact sciences and, on the basis of such naïve conception as "defective altruism" and "moral insanity," to make merry over philosophy. There is some of this "science" in biology, more of it in psychology and anthropology, but the most notorious illustrations are to be found in criminology, and the best in Lombroso, while the more judicious Ferri and Garofalo are not exempt from it. An extreme, though less important, illustration is De Quirós.

A careful reading of our review will show that these offensive quotation-marks were called forth by "the calm confidence of the General Introduction, together with the list of works," which, as just said, represents a very variable quality of science. Of this variable quality Mr. Smithers gives us not a hint. There are suggestions of "various schools," and of a period of experimentation which European thinkers "have passed through"! but not a word to suggest that Lombroso, at least, belongs to that period while Ferri and Garofalo retain the marks of it, and that De Quirós is a startling representative of its type of thought. All is presented to the public calmly as "results." It then became the duty of the reviewer to show the variable quality of those results.

Following the order of judicial procedure, Professor Wigmore leaves us to call our own witnesses. We shall therefore first call Professor Wigmore to testify that in the letter before us he says nothing of Lombroso and De Quirós. Next, Professor Gross to testify (p. 10 of his "Criminal Psychology") that the sentence which we have recommended to the consideration of the American Institute was a warning against the methods of "science" practised by the Lombrosists, including, we presume, Ferri and Garofalo. Next, Prof. Maurice Parmelee, a member of the Committee on Translations, to testify that, in his scholarly Introduction to Lombroso's work, he has recommended him chiefly, if not exclusively, as an interesting pioneer. Next, Professor Parmelee again, to confess that he, a member of the Committee on Translations, in his review of De Quirós in the *Journal of the American Institute* (note the journal), condemned that work, less vehemently perhaps, but in the same terms, and not less completely than ourselves. Finally, we shall call Professor Wigmore once more to rehearse his delightful cross-examination of Münsterberg in the *Illinois Law Review* of February, 1909, in which he put "science"—our "science"—in a far tighter box than mere quotation-marks. Surely, Professor Wigmore knows the meaning of "science."

It is encouraging to learn that crim-

Digitized by Google

inologists are studying motives, but this does not invalidate our assertion that the opposite is characteristic of criminal science, nor does it accord well with the principles announced in the General Introduction. Who, asks Gross, in the question quoted in our review and apparently ignored by Professor Wigmore, who studies the world-views of criminals? In other words, who studies the *reasons*, or *motives*, of crime? Mr. Smithers replies to the effect that crime, like disease, is a question, not of motives, which express the will of the criminal, but of *causes* which lie beyond his will; and he holds that this principle is fundamental for criminal science.—THE REVIEWER.]

THE STUDENTS OF VIRGINIA.

TO THE EDITOR OF THE NATION:

SIR: In your issue of September 14 appears an editorial, "The College and the Making of Men," very appreciative of the work and record of Washington and Lee University.

Your general position seems to be that, if a college makes men, it is because of the "atmosphere" surrounding the college, and of the teaching capacity of the faculty.

Both of these are, of course, important elements in the training of mind, and in the moulding of character. But to ascribe to them all the credit would involve the omission of the influence of heredity. A brilliant writer has recently said:

> The college does not make the man. If men have come out of any particular college it is because men have gone into it.

This means that the work which a college does is largely dependent upon the quality of the men who are enrolled as students, and this in turn is determined in great measure by the character of the population from which those students come. Thus, the result is the product of three factors—the traditions, the teachers, and the taught. Even Mark Hopkins at one end of the log would get poor results if the students at the other end were not of the right stuff, and the "make-up" of the student is largely determined, as has been said, by the physical, mental, and moral traits of his forebears. If this is true, the facts recorded in your editorial speak well for the character and capacity of the people from whom the students of Washington and Lee University have come. The same test applied to all the colleges of Virginia would show the presence of a population ranking high in the qualities of mind and heart; for all can boast many alumni who reflect honor upon their respective colleges and upon the people from whom these colleges draw their support.

To take a specific case, that of Hampden-Sidney College, the point is made clear by a reference to the general Alumni Catalogue. The summary (p. 171) shows the number of students listed to 1906 to be 3,595, though—the records being incomplete—this is much below the correct total. Of this number, one was President of the United States, four were ministers to foreign countries, ten were members of the United States Senate, twenty-two were members of the United States House of Representatives, eight have been Governors of States. In addition there have been scores of judges, generals, college presidents, and men distinguished in all walks of life. Nor has this been true in the distant past only. The good work goes on. Of her living alumni, two are presidents of important universities (Washington and Lee, and Cincinnati), six are presidents of colleges, 245 are honored ministers of the gospel. Of the general State officers in Virginia to-day the State chemist, the State librarian, the State superintendent of public instruction, the secretary of the commonwealth, the lieutenant-governor, and the Governor are all alumni of Hampden-Sidney. In a review of the Alumni Catalogue, the *Manufacturers' Record* says:

> It would be difficult if, indeed, possible, to match the conspicuous record of ability and public service thus indicated for Hampden-Sidney by that of any other college of like size and length of life. . . . History would lack much were it not for the record of the work of Hampden-Sidney men, not merely in the lofty positions upon which the public eye is usually directed in estimating deeds, but in the more quiet, but none the less influential, places occupied by teachers of men, whether ministers of the Gospel, college professors, physicians, or lawyers.

All of which not only proves the value of the small college, but also goes to show, if the position taken above is correct, that the parents in Virginia who in the past 150 years have educated their sons, have been people of strong intellectual fibre and of unusual moral force.

WM. H. WHITING, JR.

Hampden-Sidney, Va., September 20.

THE UNCLE FROM AMERICA.

TO THE EDITOR OF THE NATION:

SIR: It has been stated in a recent article by Dr. Max Wolff (*Der Türmer*, October, 1910, p. 124) that this uncle of international fame originated with Molière in his "École des femmes." The following quotation from Cornacchini's "Gl' Inganni," Venezia, 1605, p. 54, will show, however, that the great French dramatist was anticipated: "M. Francesco fratello di M. Prospero quello che pose quei danari sù Saluiati, quando tornò dell' Indie doue era stato assai tempo, donò il tutto alla Cognata, con condizione che dopò la morte di lei fussero della prima figliuola, che l'hauesse, che fù la Liuia."

The same play contains the expression *senza dote* rendered famous by Molière.

JOSEPH DE PEROTT.

Worcester, Mass., September 18.

A CUD FOR PUBLISHERS.

TO THE EDITOR OF THE NATION:

SIR: "Rotten pictures, and they spoiled the whole story, so I took them all out." The above caustic legend, pencilled in a firm hand over the "list of illustrations" in a popular novel, was found recently in a public library book. True to his word, the censor had collated the book faithfully, and knifed all the thirteen plates with perfect precision. However reprehensible, as an act of mutilation, such a method of criticism may be thought, will not its utter ingenuousness set the publisher to thinking again about the illustrations which he puts into his books, particularly novels? Whereas the marring of good books by needless and inappropriate pictures is a matter of everyday comment, the novel-reader will have to cudgel his wits to produce a single instance in which a piece of fiction, of recent years, has been distinctly improved by the artist's touch.

ROBERT K. SHAW.

Worcester, Mass., September 19.

Literature

RICHARD HENRY LEE.

The Letters of Richard Henry Lee. Collected and edited by James Curtis Ballagh, Ph.D., LL.D., associate professor of history in the Johns Hopkins University. Vol. I. 1762-1778. New York: The Macmillan Co. $2.50 net.

Although Lee was one of the important leaders in the Revolution, scarcely any of his correspondence has hitherto been available for the purposes of the historian. Most of the letters that have appeared are now largely inaccessible, in such journals as the *Southern Literary Messenger*, besides being printed from unreliable texts. The few accurately printed letters which exist are to be found in Henry's "Patrick Henry," and in such collections as the Charles Lee Papers and the Deane Papers. Professor Ballagh has, therefore, done an excellent thing in collecting and editing the letters—in all about 500. The mere search has been a difficult task, for it appears that Lee kept few copies. Professor Ballagh has given us a detailed list of the collections of manuscripts where letters have been found, as well as of those libraries in which fruitless search was made; and one is left with the impression that if there are any of Lee's letters which he has not seen, the number of them must be small or their hiding place secure. The editing has been carefully done. In the notes, the editor has confined himself, too strictly, perhaps, to the task of indicating the exact location and character of each letter. He has apparently made no modification in the text, either in punctuation, spelling, abbreviation, or capitalizing. Certainly, an editor should exercise great caution in handling a text, but it hardly seems worth while to carry fidelity to the extent of printing, for example, "cOmplaisance."

In one respect, the letters themselves are disappointing, for they throw little light upon that part of the revolutionary movement which has been least studied, and which, in many respects, best repays careful study—the period of beginnings from 1765 to 1775. Of the 250 letters contained in the first volume, only about sixty-five fall within the twelve years from 1762 to 1774, while the remainder fall within the four years from the beginning of 1775 to the close of 1778. But even the letters dating from the earlier period are disappoint-

Digitized by Google

ing if one is looking for light on the controversy with England; they help us to understand neither the economic basis of the colonial opposition nor the fundamental social and political differences among the colonists themselves. We hear much about the "Minions of Tyranny" on the one hand, and of the brave and generous defenders of "virtuous Liberty" on the other, but Lee scarcely ever condescends to discuss the merits of the question. Once, indeed, after the war was well under way, he is rather put to it to explain to his sister why unrepresented widows with property should be taxed to carry on a war in support of the principle that representation and taxation should never be separated (p. 392).

The silence of Lee upon these points was probably deliberate. The belief that England would not press matters if the colonies put up a bold and united front was wide-spread, and it was certainly one of the important factors in bringing on the war. The colonial leaders were quite as often occupied with the probable effect upon England of whatever demands they might make, as they were with determining what demands precisely they were justified in making. In his famous reply to Seabury, Hamilton naïvely justified the action of the first Continental Congress upon the ground that it would probably succeed; and, in the same Congress Lee himself favored a bold stand because he thought it would result in immediate redress, otherwise "he should be for exceptions." ("Works of John Adams," II, 362.) It was part of the game to make it appear that there was no justification whatever for the English measures, and that the colonists were unanimous in opposing them. "The truth is, Sir, that we have only to be cool, firm, and united, to secure as well ourselves, as our fellow Subjects beyond the Water, from a systematic plan of despotism" (p. 108). In this belief, Lee was confirmed by letters from England which stated that the Opposition would shortly triumph and oppressive measures be at an end. And even after the war began he appears to have thought it would not last long. "You no doubt will have a ship here as early as any other," he writes to William Lee, September 5, 1775, "when we are so fortunate as to have peace again restored."

As a member of the Continental Congress Lee was certainly in a position to furnish information about the State and party rivalries that steadily tended to weaken that body. Yet the letters contain virtually nothing about these matters. He speaks of the unanimity of the first Congress, whereas we know perfectly that there was anything but unanimity. Asked why Congress delays so long on the question of independence, he does indeed say "because we are heavily clogged with instructions from those shamefully interested proprietary people, and these will continue until Virginia sets the example of . . . sending peremptory orders to their delegates" (p. 182). Of the necessity of declaring independence Lee has much to say, and the letters confirm what we already know about the forces that led to that result. The truth is that the non-intercourse policy was more disastrous to America than to England: independence, which would open the ports of Europe, was the only alternative to submission and resumption of trade with England. "No state in Europe will either treat or trade with us so long as we consider ourselves subjects of Great Britain. . . . The war cannot long be prosecuted without Trade, nor can Taxes be paid, until we are enabled to sell our produce, which cannot be without the help of foreign ships. . . . Our clearest interest, therefore, our very existence as freemen, requires that we take decisive steps now" (p. 178). Besides, independence would end the anomalous status of the colonial governments, and enable them to employ more forcible measures to restore order and collect taxes. Of the necessity of taxes he was well aware; he was also aware that by converting landed property into money the amount of taxes one would have to pay would be materially lessened (p. 382).

The sequel of independence was, of course, the French alliance, and Lee was constantly urging it. With the close of 1776 his confidence in a successful issue of the war declined. "It ought not to be forgotten," he writes to Arthur Lee, April 20, 1777, "that the simple strength of North America opposed to the united force of Great Britain and her allies may prove an unequal contest, and should not be trusted too far. The difficulty of finding funds whilst our trade is shut up . . . is very distressing" (p. 278). Nor was the difficulty purely a public one. "Heaven knows what I shall do about making remittance whilst our Trade continues so obstructed by British Cruisers" (p. 280). About the negotiations with France the letters, so far as the first volume is concerned, tell us almost nothing. Lee must have been fully informed of Arthur Lee's side of the story, but there is almost no reflection of it in these letters. We do, indeed, learn that Silas Deane was a scoundrel, and although nothing is said of Franklin, we are left to infer that the business would go on better if John Adams were sent over.

Many of the letters, particularly those to William and Arthur Lee, are concerned with private matters. Lee seems to have been pressed for money most of the time, and there are infinite details about the management of the estate, the value of the crops, and the export of tobacco. According to custom, his boys were placed at school in England, and we get an idea of what boys of that class were expected to learn, and of the minimum cost of having them learn it in England. Whatever the inconveniences of modern life may be, there were some in those days which we do not experience. Few of us assuredly would cultivate our gardens, at least in the literal sense, if it were necessary to write to England in order to procure a good hoe. And what would the modern professor think of having his spectacles fitted at a distance of three thousand miles! "I pray you to procure me a pair of the best Temple spectacles that can be had," he writes to Arthur Lee. "In fitting these perhaps it may be proper to remember that my age is forty-six, that my eyes are light-colored, and have been quick and strong. . . . My head thin between the temples." Well, perhaps they enjoyed life even without the expert.

CURRENT FICTION.

The Iron Woman. By Margaret Deland. New York: Harper & Bros.

Morally, this story might be described as the influence upon a younger generation of two mature women: one is the Iron Woman herself, a widow who has been left in charge of a foundry, and whose nature has been harshly divided into the stern energetic mastery of men and business and the starved, concealed cravings of maternity; the other is the awakened Helena Richie, who through sin and renunciation has come to understand the hidden values of life. The younger generation which moves within the circle of their influence consists of four persons: the son and the step-daughter of the Iron Woman, the niece of her head man, and the adopted son of Mrs. Richie. The step-daughter is a shadowy, clinging creature who hangs on the fringe of the story; the real plot revolves about the love of the two men for the niece, who is a being of pure impulse, instinctively noble but subject to wayward bursts of passion. Owing to division in her character the Iron Woman lavishes all her maternal nature on her son, without interference of her practical nature which is absorbed in business, and without the power of awakening filial love in return. The genial weakness of her son and the resolute strength of Mrs. Richie's son play upon the impulsive nature of the heroine with tragic results.

The characterization, though somewhat forced at times, is consistently carried out, the situations are dramatically developed. If there is failure anywhere it is in the climax, where the influence of Mrs. Richie resolves what has become an impossible tangle. She is herself the creation of Dr. Lavendar, or, rather, the channel through which Dr. Lavendar's virtue is extended to lives beyond

Digitized by Google

his ken; and this distance from the centre of power seems to show itself in a weakening of the artist's grasp. Mrs. Richie nowhere appears very real, and her self-revelation at the end is clumsily done. Her remoteness is intensified by the strong characterization of the Iron Woman, a masterly, if somewhat roughly drawn, portrait. Perhaps the best part of the book is the description of the childhood of the four actors, with its foreshadowing of the parts they are to play when the passions of life are stirred.

The Larger Growth. By Constance Smedley Armfield. New York: E. P. Dutton & Co.

The tyranny of the domestic hearth is the theme of the present family chronology, which gives evidence of being inspired by the nine hundred-odd pages that Arnold Bennett has devoted to the uneventful history of Edwin Clayhanger. The resemblance is by no means thoroughgoing. The very fact that there is a theme distinguishes the book sharply from Mr. Bennett's experiment in minute psychology for its own sake. The method, too, is different. Where Mr. Bennett gives us a trickle of dialogue to solid chapters of exposition, Mrs. Armfield supplies us with copious portions of talk; and the result indicates that where one wishes to be minute and untheatrical, exposition is safer than conversation. However, in a quiet way the history of the Maddox family, stretching over a period of some twenty years, is made clear enough. Neither father nor mother could see why the two sons and the elder daughter should long for broader horizons than the four walls of the family best-room, with its blue rep furniture in covers. They learn why; at the cost of a fair amount of pain, but without passing through tragedy. Our author takes a great deal of trouble with the elder daughter, Jessica; but Jessica is not as real as either of her brothers, Charles the stolid and Edgar the artistic and wavering. Real, too, are Isadora Bent and Lettice Lacy, in whom is embodied the truth that differences of temperament and station leave women very much alike in the face of a man about to make a proposal and a man about to break an engagement. This little story, like bigger books that try to be transcriptions from life, proves that while the faithful stenographic report may edify it is still the dramatic and the romantic element that moves us.

Children of To-morrow. By Clara E. Laughlin. New York: Charles Scribner's Sons.

The reader who is not painfully on the lookout for greatness in the American novel should be well pleased with this story. It moves of itself: it concerns real people, who are interesting both as individuals and as types. The style has no distinction, but it is a good, honest, straightforward style, which serves the purpose very well. The action begins in the "executive mansion" of a State not named but not far from Coney Island. The Governor, Lyman Innes, finds himself in a hard place. He is a man of principle, and cannot conceal the fact of his sympathy for the participants in a great strike which is going on in his State. The leaders of the party which has elected him Governor are on the other side, and do their utmost to make him call out the militia for the suppression of the strikers. The Governor stands alone; even his wife, a purely worldly woman, is against him. And at this moment fate throws in his way a woman who does understand and sympathize. They come to love each other deeply and without blame; but both are married and circumstances make a sordid coil of their relation, and bring it to a pitiful end. The Governor is assassinated by the woman's husband. But the act goes down in history as a political crime, and the Governor's memory is unsmirched: his death does much for the cause of the oppressed for whom he is supposed to have died. This is the prologue of the novel proper, which has to do with the second generation. The action has shifted to New York. The Governor's sons and daughter are grown up and successfully busy, though as yet unmarried and living together. One is a literary editor, one an actor—they are of that social sort which is still, against all protests, known as "Bohemian." Into their lives, under a changed name, comes the woman who was indirectly the cause of their father's death. There are, it will be seen, elements of melodrama in the plot, but the book has a value independent of its incidents—in its sincere and often vivid presentations of New York life as it is lived by the workers and dreamers in contrast to the spenders.

The Secret Garden. By Frances Hodgson Burnett. New York: Frederick A. Stokes Co.

This is a story about children and for children which adults may read with pleasure and profit. If two of the three children concerned have been brought up under conditions both distorted and morbid, the getting out of the shadows is accomplished by nature's own healthful agencies. Quite other than angels, Mary and Colin become human by an instructive wholesome following of nature and the nature-loving side of wholesome folk with whom they are happily thrown. The Yorkshire boy, Dickon, charmer of all young animals, including boys, is a captivating figure. Good Susan Sowerby, mother of twelve, and incarnation of "inspired common sense," is a character gratefully to make friends with. The crabbed old gardener, Ben Weatherstaff, is as good as his name. And there are excellent comrades in fox-cub and crow and robin and lamb. The invasion of the secret garden by the children in the spring of the year, and the miracles worked on contrary little Mistress Mary and tyrannical little Colin, by nature's own miracles, make a charming story, fantastic, perhaps, but full of sweet admonition; and possessing besides its charm two negative virtues so often neglected in books for the young that their presence takes on a positive quality. The children's faults are not such as to invite imitation; and the young are not reformers of the old.

ROMANTIC CANADA.

Old Indian Trails. By Mary T. S. Schäffer. New York: G. P. Putnam's Sons. $2.

Were it not for the Grand Cañon of the Colorado River in Arizona, which tempts tourists to cross the Continent by way of the Santa Fé Railroad, and for the Yellowstone Park, which induces many of them to choose the Northern Pacific or the Union Pacific Railroad, the Canadian Pacific would make by far the strongest appeal to lovers of scenery and marvels of nature. The Rocky Mountains grow grander as we go northward, and our Canadian neighbors certainly have the advantage over us in this respect. Whymper, the most famous of English Alpinists, has discovered "fifty Switzerlands" in the Canadian Rockies, but very few except trappers, hunters, and some explorers have gazed on any of these snowy summits beyond those that can be seen from the car windows. Twenty years ago, even these were enjoyed by but few who came specially to be impressed by them. The big hotel at Banff, in the Canadian National Park, had but few guests; Lake Louise had no hotel at all; the Yoho Valley was a mere name, and at Glacier no one suspected the existence of grand caves but seven miles away.

It was at that early period that Mrs. Schäffer began to visit these regions annually. She saw the tourist tide swell from year to year until finally she began to long for "wider views and new untrammeled ways." From hunters and trappers, she heard tales of what could be seen and experienced on old Indian trails to the north of the railway, through a country largely unmapped—trails made by the red men in quest of game and furs; and these she determined to follow in quest of "the great unlonely silence of the wilderness." The trappers and hunters fortunately had not forgotten to tell her that though the region she was headed for was a land of game—of goat, sheep, bear, deer, and caribou—one might travel for days yet see no signs of wild life; and that, although fish are plentiful, yet for weeks,

Digitized by Google

when the summer sun melts everything meltable, and the rivers are clouded with silt from the glaciers, they will not rise to the most tempting bait. Ignorance of these facts had cut short many an attempted invasion of this "beautiful but inhospitable land." Being forewarned, her party (which consisted of two women, two men, and the necessary pack animals) was provided with plenty of condensed foods, chosen after careful tests, besides the usual bacon and beans, flour, sugar, tea, and coffee. And yet mistakes were made. The provisions, having no water-proof covers were not improved by sundry unexpected soakings received in fording swollen rivers, and, worst of all, no one had thought of mosquito nets.

Many were the hardships of trail travel. The horses gave no end of trouble and the elements often combined with the almost impenetrable forests in making life a burden. On the fourth of July shrieking winds pelted their tent walls with snow. One evening the author was so utterly fatigued that even "an aurora which was throwing ribbons and arches with wonderful rapidity across the summit of Mount Robson and dyeing her snow-fields with a constant change of color" could not keep her awake. But this was an exceptional case; as a rule she and her companion endured the fatigue of such an outing as bravely as the men of the party; and altogether she enjoyed the expedition so much that she decided to write a book, to urge others to follow her example. No daring climbs were attempted, wherefore her narrative, unlike that of most of the books on this part of the world, is "a tale of the valleys," including the "golden plains of the Saskatchewan," where she dwelt among the Indians and became familiar with their ways. Relics of the Indians were found at many points along the trails —tepee poles, bones of sheep and caribou littering the ground, racks for drying and smoking meat. The Indians smoke their trout in a dense smudge of sphagnum moss, and Mrs. Schäffer found that this improved them, as the meat of the trout in these cold waters is inclined to be soft and tasteless, even to palates grown uncritical on salt meats and bannock.

Mrs. Schäffer's book includes accounts of two trips into this wilderness, one in 1906, the other two years later. On the second they avoided the mistakes of the first, taking along mosquito nets and waterproof bags for the food. On neither of these trips, notwithstanding the exposures, did any one one catch a cold. Altogether, weighing the pros and cons, one envies the author her experiences in this northland. She is also illustrator of Stewardson Brown's book, the "Alpine Flora of the Canadian Rockies," and her "Old Indian Trails" she has embellished with eighty illustrations which obviated the necessity of descriptive writing.

Der Roman einer Tibetischen Königin. Tibetischer Text und Uebersetzung von Bethold Laufer. Leipzig: Otto Harrassowitz.

In the eighth century of our era the Buddhist monks were in a fair way to get control of Tibet. The religion they professed was not only higher than the unsystematic demonology of the Tibetan savages, but it was much more picturesque, and as such it appealed to the natives, as in our day a ritual appeals to a savage more than does an exhortation. The common people and their "kings," that is, tribal chieftains, approved of the Buddhists; the strongest opposition came from the women. For the women of Tibet were suffragettes. They knew themselves to be better than the men, and no man disputed them. In fact, in Tibet the women were the virile characters. Especially the queens, in whose hands lay the real power, objected to the Buddhists, and they alone apparently saw clearly that when the priest ruled the king in spiritual matters, it was all over with kingship. One of the most striking examples of this has been preserved for us in the so-called Romance of Queen Ts'espon bza, whose euphonious name may, when once mentioned, be sunk in her title. This queen "loved as none other could love in the whole world," and she loved the Buddhist missionary, whose political designs she suspected, but before whose personal beauty, rather than teaching, her heart bowed. Of course, the monk repudiated her with horror. Those who have heard of Potiphar's wife can imagine the completion of the romance. The monk was banished because the queen accused him, though the king feared him. But he returned, and the queen, whose passion had bred illness, ostentatiously repented. But was her repentance genuine, was she really pure of heart? The test prescribed by the beautiful but severe monk was carried out. If pure at heart, the flowers she trod upon in the sacred procession would raise their heads uninjured from her tread. Proudly she comes forth. Anxiously looks the monk, timorously the king. And lo! the flowers are consumed to ashes, for in her heart concealed is still the fire of her unholy passion. Tableau; new trials; happy ending. Why take away the excitement of reading in detail the history, entitled "bTsun-mo bkai t'an-yig," which is really the third division of a greater work (the "bKa-t'an sde-Ina"), the "Exhortations of Padmasmabhava to the Royal Women"?

The text is carefully edited; the translation as accurate as our present knowledge admits (foot-notes indicate dubious points); and the historical apparatus sufficient. This is the only example of its sort in Tibetan literature, and besides this merit it undoubtedly contains historical material. The editor points out that the queen's only sin lay in attempting to overthrow the virtue of a monk, since adultery *per se* was a venial offence, and had the queen been content to have an intrigue with any one else, no one would have objected, the king having no rights in the matter. The attitude of the monk seems to reflect rather an interesting fact, namely, that the first missionaries were able to impress these savages with moral standards which both teacher and pupil really upheld. Of course, it was not long before virtue was as much a jest to the monk as it had been to the native. The Tibetan monk was soon the recognized Don Juan of the country. Dr. Laufer's translation takes in also another history, which belongs to the division of the whole, and is therefore included in the text, but it has nothing to do with the passionate princess. In fact, it is in startling contrast, for in the second story the princess is shy and innocent, the monk-missionary a Lothario, whose actions have to be defended by the chronicler on the ground that the holy man is doing a holy work; he extends the influence of the church in captivating as many ladies as possible by means which he knows will appeal to them. As the monk says, "I sacrifice myself to passion to save the passionate." Probably the two tales reflect two periods in the conversion of Tibet. The work as a whole was probably composed in the ninth century, and possibly printed (on wooden blocks) soon after, for Tibetan works were printed in China by that time and the art of printing was introduced into Tibet in the tenth century. Dr. Laufer tentatively refers the action of the story to the latter half of the eighth century.

The Speakers of the House of Commons. From the Earliest Times to the Present Day. With a Topographical Description of Westminster at Various Epochs and a Brief Record of the Principal Constitutional Changes during Seven Centuries. By Arthur Irwin Dasent. With Notes and Illustrations and a Portrait of Every Speaker where One is Known to Exist. New York: John Lane Company. $6.50 net.

Mr. Dasent's volume is a singularly interesting contribution to the history of Parliament, because it is unlike any other book on any aspect of the House of Commons or the House of Lords, and because of its comprehensiveness, and its topographical as well as its historical value. Besides this book, there are two histories of the Speaker's chair, both published since 1900, and Manning's

Digitized by Google

"Lives of the Speakers," which carries the biographies down to Abercrombie, whose service as first commoner was from 1835 to 1841. Mr. Dasent's volume may be described as combining the plan of the three books, for he is concerned with the gradual development of the office, as well as with the careers of the men who have occupied it; and in addition, he has traced the history of the various buildings at Westminster and Blackfriars in which the Commons have held their sessions since 1295; and for later centuries has included the lives of the men who have sat below the Speaker at the clerk's table. For such an undertaking Mr. Dasent was well qualified, being himself senior clerk in the Commons.

Primarily, Mr. Dasent's interest is with the men who have been in the chair—with their place at the bar or in the House of Commons before they were elected Speaker, and with their careers after their service in the chair came to an end. His research has enabled him to sketch the careers of one hundred and thirty speakers and to bring on the scene many new candidates for the Dictionary of National Biography. He has dexterously interwoven in the biographies notes of development in constitutional or House of Commons procedure, and in the evolution of the office that made a Speaker's tenure of the chair of historical significance. Guildesborough, for instance, in 1380, demanded of the Crown that a schedule of the exact sums asked of Parliament and the purposes for which the grants were required should be laid before the Commons, and the annually recurring phrase in the King's speech at the opening of Parliament that "estimates for the expenditure of the year will in due time be laid before you" is the outcome of a procedure adopted more than five hundred years ago. Bussy, 1393-7, was the earliest Speaker alluded to by Shakespeare. Savage was in the chair when by the Parliament of 1404 heresy for the first time was made an offence against the statute law. Tiptoft, who was in in the chair in 1405-6, was the first Speaker to become a peer. Thomas Chaucer occupied the chair in 1407 when the Commons gained the inalienable right of initiating money grants, and when it was laid down in the Declaration of Gloucester that in making money grants Parliament must not be hampered by the personal intervention of the Crown in Council; and it was during Hungerford's Speakership—1414—that, in response to an urgent appeal, Henry V covenanted that petitions from the Commons, which now for the first time were beginning to take the modern form of bills, should be engrossed as statutes without garbling or alteration of any kind, after passing from the control of Parliament. Scarcely a constitutional development from 1380 to 1895, when Mr. Gully, afterwards Viscount Gully, was chosen Speaker, has escaped Mr. Dasent; and it is the same as regards the evolution of the office. Lenthall and Arthur Onslow are naturally the most detailed of Mr. Dasent's sketches; Lenthall, by reason of his part in the struggle between the Commons and Charles I; and Onslow because he was Speaker for thirty-three years—1727-1761—and did more than any other to advance the office to the dignified place it holds to-day. With Onslow's tenure the chair ceased to be the ambition of pluralists and expectant office-holders, although once later it was held by a pluralist; and it was not until Abbot's time—1802-1817—that it became a rule for a Speaker on his retirement to go to the House of Lords.

Mr. Dasent's history of St. Stephen's Palace is the completest that has been embodied in any modern book on the Houses of Parliament. It is written with a fulness of knowledge of Westminster and of London topography which will appeal to all lovers of old and new London. Aided by John Lane, Mr. Dasent has discovered portraits of no fewer than eighty-one of the one hundred and thirty Speakers of whom he writes. These, together with several unhackneyed illustrations of Westminster, and numerous pictures of the homes of Speakers in London and in the shires, have been reproduced with much care; and equal care has been taken in making the illustrations really permanent portions of the book.

Notes

Beginning October 1, the *Yale Review*, which has hitherto been a special enonomic review, will become a graduate quarterly publication, under the editorship of Prof. Wilbur L. Cross, head of the English department of the Sheffield Scientific School.

In "Mesdames De France," announced by Chapman & Hall, Casimir Stryienski makes a study of the daughters of Louis XV.

"The Religion of the Ancient Celts," by Canon MacCulloch; "Greece and Babylon: A Comparative Religious Enquiry," by Dr. L. R. Farnell, and "A History of Creeds and Confessions of Faith in Christendom and Beyond," by Prof. W. A. Curtis, are in the list of T. & T. Clark of London.

The same house will issue a "Handbook of the Modern Greek Vernacular," by Prof. Albert Thumb, translated by Dr. S. Angus.

The miscellaneous poems of Cervantes, which have been translated by Norman Maccoll, will be brought out some time this year under the editorship of Fitzmaurice-Kelly.

In its review last week the *Nation* credited Turner's "First Decade of the Australian Commonwealth" to Mason, Firth & McCutcheon of Melbourne. The book is published also in this country by Longmans, Green & Co.

Henry Frowde's announcements, made in conjunction with the Oxford University Press, include in history and biography: "History of the Peninsular War," Vol. IV, Dec., 1810-Dec., 1811, by C. Oman; "The Progress of Japan, 1853-1871," by J. H. Gubbins, lecturer in Japanese in the University of Oxford; "The Full Recognition of Japan," by Robert P. Porter, and "Sir John Burdon-Sanderson," by the late Lady Burdon-Sanderson.—In theology and philosophy: "Novum Testamentum Latine," a small edition of the Vulgate, prepared by Prof. H. J. White, "Logic, or the Morphology of Knowledge," by B. Bosanquet, new edition.—Miscellaneous: "Isidori Hispalensis Etymologiarum Libri XX," edited by W. M. Lindsay; "Manili Astronomicon Libri II," edited, with translation and commentary, by H. W. Garrod; "The Oxford Book of German Verse," compiled by Prof. H. S. Fiedler, with a preface by Gerhart Hauptmann; "Platt's Persian Grammar," revised by Lieut.-Col. G. S. A. Ranking; "Peaks and Pleasant Pastures," by Claude Schuster; "Forestry for Woodmen," by C. O. Hanson; "Wordsworth and Coleridge: Lyrical Ballads, 1798"; "Hurd's Letters on Chivalry and Romance," together with the third dialogue, edited by E. Morley; "Scott's Fair Maid of Perth"; "Southey's Life of Nelson"; "Shakespeare's Histories and Poems," with a general introduction by A. C. Swinburne, introductory studies of the revised plays by E Dowden, and a note by T. Watts-Dunton, 3 vols.; "A Year of Japanese Epigrams," translated by W. N. Porter; "Ye Solace of Pilgrimes," a description of Rome about 1450, by John Capgrave, edited by C. A. Mills; "Kallistratus," a classical story by A. H. Gilkes, new edition; "The Poems of Digby Mackworth Dolber," edited with a memoir, by Robert Bridges; "The Works of Thomas Deloney," edited by F. O. Mann; "The Poems and Masques of Aurelian Townsend," edited by E. K. Chambers; "Poets and Poetry," by John Bailey; "Essays and Studies by Members of the English Association," Vol. II, collected by H. C. Beeching; "A Shakespeare Glossary," by C. T. Onions, and "Nature Children," a flower book for little folk, verse by Gertrude M. Faulding and pictures by Eleanor S. March.

Houghton Mifflin Co. will have ready September 30: "The Life of Bret Harte," by Henry C. Merwin; "Kittens and Cats," by Eulalie Osgood Grover; "The Autobiography of an Elderly Woman"; "Touring in 1600," by E. S. Bates; "The Champion of the Regiment," by Everett T. Tomlinson; "Broken Words," by William Bellamy; "American Political Ideas," by John Fiske, with an introduction by John Spencer Clark; "The Navigable Rhine," by Edwin J. Clapp; "The Rhetorical Principles of Narration," by Carroll Lewis Maxcy," and "Milton's Education, Areopagitica, Etc.," with introduction and notes by Laura E. Lockwood.

William Archer's "The Life, Trial, and Death of Francisco Ferrer" is in preparation by Dodd, Mead & Co.

"Hosting of Heroes" is a volume of verse by Eleanor R. Cox dealing with the heroic period of Ireland's history; the book will be issued by Sealy, Boyers & Walker of Dublin.

On September 29, Dodd, Mead & Co. will bring out: A detective story, "Initials Only," by Anna Katharine Green; "Wally," a tale of the West by Guy Steely; "Their Heart's Desire," by Francis Foster Perry; Annie S. Peck's "A Search for the Apex of

Digitized by Google

America"; "Life in the Moslem East," by Pierre Ponafidine, and a biography of the Empress Dowager of China, by Philip W. Sergeant.

"The Mating of Anthea," by Arabella Kenealy; "The Lifted Latch," by George Vane, and "The Dempsey Diamond," by Allen Arnot, are among the novels which John Lane Co. will shortly publish.

The Scribners are about to issue an edition of Thackeray called the "Cornhill Thackeray," and an edition of Dickens called the "Tavistock Dickens," in which all the material of the original editions in illustrations, prefaces, and dedications has been retained.

To the Scrittori D'Italia series, which is issued in brown paper covers but with careful attention to the look of the page, have now been added a fourth volume of Bandello, edited by Gioachino Brognoligo, and Vol. II of Vincenzo Gioberti's "Del Rinnovamento Civile D'Italia," edited by Fausto Nicolini. The series is published by Gius. Laterza & Figli, Bari, Italy.

The Statesman's Year Book for 1911 is a volume of above 1,400 pages. In the preface the editor, J. Scott Keltie, announces the death of I. P. A. Renwick, who was associated for more than twenty years in the editorship of this excellent handbook. Partial results of the censuses taken during 1910 and 1911 in the United States, Great Britain, Germany, Austria, Spain, Switzerland, and Norway have been embodied. The articles on the different States of the Union show the outcome of last November's elections.

Francis Gribble has turned his industrious pen to "The Romance of the Oxford Colleges" (Little, Brown), and has produced a book sufficiently entertaining for those who are not already too familiar with the popular anecdotes of famous and eccentric scholars of that university. The book is divided into chapters devoted to the several colleges, each with an illustration. A bit of history is given, and then the stories, true and fictitious. It was a work easy to compile, and shows no great amount of reading and not more than ordinary skill in writing; but the material itself, when not too hackneyed, is rich in human nature.

In the fourth edition of his "Guide to the Best Historical Novels and Tales" (Putnam), Jonathan Nield prints a list of fifty —chosen from the three thousand stories passed under review—which he believes to be truly representative. The span of time which they embrace is about twenty-five centuries: "An Egyptian Princess," by G. Ebers; "Salammbô," a story of Carthage, by Flaubert; "Philochristus," who was a disciple of Christ, by Edwin A. Abbott; Lytton's "Last Days of Pompeii"; "Marius the Epicurean," time of Marcus Aurelius, by Pater; Newman's "Callista," dealing with North Africa persecutions; Kingsley's "Hypatia," scene being laid in Alexandria in the fifth century; "Ekkehard," a tale of tenth-century Huns, by J. V. Scheffel; "Harold," by Lytton; Scott's "Talisman" and "Ivanhoe," both with scenes dating from the time of Richard I, one in the Crusades, the other in England; Hewlett's "Forest Lovers," about the same period; "Maid Marian," by T. L. Peacock, days of Robin Hood; "The Last of the Barons," by Lytton, dealing with the Wars of the Roses; Scott's "Quentin Durward"—France, Louis XI; George Eliot's "Romola"—Florence, Savonarola; Reade's "Cloister and the Hearth," which introduces the parents of Erasmus; "Niccolò de' Lapi" (The Maid of Florence, about 1530), by M. D'Azeglio; "Chronique du règne de Charles IX," by Prosper Mérimée, wherein is described the massacre of St. Bartholomew.

Four novels do for Elizabeth and James I: Scott's "Abbot," "Kenilworth," and "The Fortunes of Nigel," and Kingsley's "Westward Ho." Twelve others complete the seventeenth century: "John Iglesant," by J. H. Shorthouse; "Maiden and Married Life of Mary Powell" (Milton's wife), by Anne Manning; Dumas's "The Three Musketeers"; De Vigny's "Cinq Mars"; "The Betrothed" ("I promessi Sposi"), by Manzoni; "Twenty Years After," by Dumas; "With Fire and Sword" (first of the trilogy), by Sienkiewicz; Scott's "The Legend of Montrose," "Woodstock," and "Old Mortality"; "The Vicomte de Bragelonne," by Dumas; Blackmore's "Lorna Doone." Eighteenth century: Thackeray's "Henry Esmond"; Scott's "Rob Roy," "Heart of Midlothian," "Waverley," and "Red Gauntlet"; "Dorothy Forster," by Walter Besant; Stevenson's "Kidnapped"; Dickens's "Barnaby Rudge" and "A Tale of Two Cities"; Hawthorne's "Scarlet Letter." Nineteenth century: Tolstoy's "War and Peace," which has to do with Napoleon's Russian campaign; "The Conscript," a tale of the late Napoleonic period, by Erckmann-Chatrian; from the same hand, "Waterloo"; "The Green Book," by M. Jókai—Russia, 1825. Readers who have formed the idea that Scott is become too antiquated to read with pleasure will be grieved to observe that he is included no less than twelve times.

"Louisiana Under the Rule of Spain, France, and the United States, 1785-1807," translated and transcribed from the original manuscripts, edited, annotated, with bibliography and index, by James Alexander Robertson, two volumes (Cleveland: Arthur H. Clark Co.), is a work of real value to the historian, for whose benefit it has been published. The documents that are here printed have been found in the archives of Spain, Cuba, and the United States, and illustrate one of the most interesting, dramatic, and portentous events in the history of the United States, namely the passing of all the country west of the Mississippi River from Spain to France, and from France to the United States. The selection of the documents has been a careful one, made by an editor who understands all the conditions that entered into this historical problem. They are for the most part political in tone, but also illustrate in a graphic way the social and economic conditions of the territory. There are excellent descriptions of the country as it existed under the Spanish régime, sufficient material to judge of Napoleon's intentions concerning the province of Louisiana, and the final establishment there of American government, this last event being illustrated largely from the papers of Gov. Claiborne. The amount of the material was too great to be included entire. This is to be regretted, for from selected documents it is impossible to reach the truth. A visit to the archives will still be necessary. It would have been of greater value had a series of volumes been planned, or a shorter period chosen. It does not completely fulfil the demands of historians either to have the French and Spanish documents, with one exception, given only in translation. Dr. Robertson has had much experience as a translator, but it is impossible to anticipate all questions of interpretation that may arise.

Roger Bacon has always appealed to the scientists of our day as one of their forerunners in the field of physical experimentation. Of late, especially since the publication of his Greek grammar, philologians, too, have turned to him with new interest. His passion for the *ipsissima verba* of the ancient authors and his wide reading in their works are apparent in his "Metaphysica de viciis contractis in studio theologie," the latest in the series of his hitherto inedited works which are now being ably published by Robert Steele (Clarendon Press). The only manuscript of the "Metaphysica" is fragmentary. The portion of the work extant amounts to a general encomium of the ancient philosophers, who, though slighted by the writer's generation, are, he holds, valuable witnesses to the Christian faith. The argument, though flavored with an allegorical interpretation of pagan literature no longer in vogue, is an important document in the history of Christian humanism. He may believe that the ancient schools all derive from Moses and that Plato's dead body bore a golden plate inscribed with important articles of the Creed, but such absurdities aside, Bacon perceives truly that the roots of Christianity go deeply into the past. There is little said in our present fragment about the vices of theology, but the sharp-tongued friar doubtless did that matter justice before he got through. The editor has not tracked down all the citations, and indeed it is a difficult matter to do so; for despite his excoriating criticisms of contemporary scholarship, Bacon has not learned the philologian's first principle of verifying his references. Besides the "Metaphysica," Mr. Steele now publishes Parts iii and iv of the first book of "Communia Naturalium," the first two parts of which appeared in 1909. This work, too, is highly important, especially when considered as a precursor of the "Opus Tertium." Bacon worked over his material constantly, and, thanks to Mr. Steele, we can now watch the development of his thought in several stages.

"Documents Illustrative of the Continental Reformation" (Clarendon Press), edited by the Rev. B. J. Kidd, D.D., will be most welcome to all teachers and students of the history of the sixteenth century, and thoroughly deserves the high honor to which it has attained of being published in the same series with Stubbs's "Select Charters," Prothero's "Statutes and Constitutional Documents," and Gardiner's "Documents Illustrative of the Puritan Revolution." The bulk of the 351 well-selected "sources" which it contains is concerned with the Lutheran, Zwinglian, and Calvinist movements in Germany, Switzerland, and France; but the Netherlands, the Scandinavian north, Hungary, and Poland are not entirely neglected, and there is an admirable section on Scotland. Some few documents on the unsuccessful attempts to introduce the reformed doctrines in Italy and Spain might well have been inserted (Schä-

Digitized by Google

fer's "Beiträge zur Geschichte des Spanischen Protestantismus" would have made the task easy in the latter case); still the omission is not serious. More difficult to justify is the absence of all reference to the reformatory movements in France before Calvin; there is not a word (save in the notes) about Lefèvre d'Étaples, Louis de Buquin, Guillaume Briçonnet, or Margaret of Angoulême. Dr. Kidd, moreover, has limited himself very narrowly from the chronological point of view; virtually all his excerpts and quotations fall between the years 1517 and 1560. Possibly we may venture to hope that other volumes on the conciliar period, and on the years between the beginning of the Counter-Reformation and the close of the Thirty Years' War, will soon be forthcoming. Meantime, we are glad to testify that within the limits he has set himself Dr. Kidd has done his work so well that it will never have to be done over again. The topics with which the documents deal are so various as to preclude the possibility of a general introduction such as illuminates the "Select Charters" and the "Statutes and Constitutional Documents." This inevitable deficiency is in some measure made good by brief paragraphs of explanatory notes, amply supplied with bibliographical data, which are prefixed to each of the twenty-three sections under which the various documents are arranged. It is interesting to note that, though the French (and, of course, the Latin) documents are invariably given in the original, the German ones are all translated—a significant sidelight on the different degrees of acquaintance with these languages, which the average reader of Dr. Kidd's book is expected to possess.

If a respectable Roman matron (provided there were such) had written a diary of life at the court of Nero, it would be not unlike "The Recollections of the Countess Golovine" (London: David Nutt), who frequented the court of Catherine II, Paul, and Alexander I of Russia. Not that she intentionally indulges in scandalous chronicles, but that Russian high life four generations ago was so barbaric that merely to describe its least vicious side shows that it was rotten to the core. Among the interesting episodes in Countess Golovine's journal, is a sojourn in Paris in 1802-05. The book, which has the material for a dozen melodramas, is translated from the French of the well-known student of Russian history, K. Waliszewski.

Two volumes of interest to students of American history have recently been issued by the Canadian government in its series of Publications of the Canadian Archives (Ottawa Government Printing Bureau), which has taken the place of the former volumes of appendices to the reports of the minister of agriculture, commonly known as the Canadian Archives. The first of these publications, numbered five in the series, contains a collection of documents relating to the early history of Canada, and is edited by H. P. Biggar, B. Litt., of the Archives Branch, under the title "The Precursors of Jacques Cartier, 1497-1534." Mr. Biggar has brought together for the first time the chief manuscript sources of Canadian history before the time of Cartier. All but three or four of the documents have been printed before, but many of them in such out of the way places as to be virtually inaccessible. He has added a few new documents from English and French sources, and has furnished a translation of those in Latin, Italian, Spanish, and Portuguese. The French documents he has printed without translation, unfortunately, we believe, since to most readers the archaic French of the sixteenth century is a closed book. They are few in number, however, and their importance is comparatively slight. Furthermore, the translations should not have followed the original text but have appeared side by side with it, after the fashion of the publications of the Selden and other similar societies. Nevertheless, as it stands, the work is extremely useful and Mr. Biggar's introduction, which sums up what is known of early voyages to Canada and of landfalls upon its coast, is a cautious and trustworthy statement.

The second volume, numbered six in the series, contains a "Rapport sur les archives de France relatives à l'histoire du Canada," by J. Edmond Roy, also of the Archives Branch. When we know that but five months was devoted by M. Roy to personal inspection of the French repositories and that the report occupies some 1,100 pages, it is evident that a large part of the work is compilation. M. Roy has not written so much a guide to the archives as a general survey of the documentary collections of France, composed from printed reports, departmental publications, and the writings of his predecessors, MM. Verreau, Marmette, and Tantet, the results of whose searches have already been printed in early volumes of the Canadian Archives. M. Roy does not appear to have employed any uniform plan in dealing with his material, but has combined with his survey of documents a great variety of rather discursive essays, few of which bear the mark of originality, on national, departmental, and communal archives, on the origin and history of ministerial offices, and on the value and significance of local and private collections. Some of the collections he has passed over almost without comment, others he has illustrated by lists of papers drawn in many cases from works already printed, still others he has treated with considerable fulness, even going so far as to print, entire, series of texts which he deems important. As a guide for students the work cannot be called specially helpful, but as a general introduction to French archives, it is bound to be useful. M. Roy has omitted no collection, important or unimportant. The index, unfortunately, is very inadequate.

"My Balkan Tour," an account of some journeyings and adventures in the Near East, together with a descriptive and historical account of Bosnia, Herzegovina, Dalmatia, Croatia, the kingdom of Montenegro (Lane), by Roy Trevor, sufficiently indicates the contents of this bulky volume. It is not without merit or interest, though far less valuable than some other recent books of travel in Balkan lands reviewed in these columns. Its novelty lies not in its descriptions, which, though spirited, are conventional, but in the achievements of "Mercédès," which, penetrating into regions hitherto considered inaccessible to automobiles, is invested by its affectionate owner with almost human virtues. Those fortunate and daring enough to follow the author's example will read with a thrill the account of his hair-breadth escapes from fatal collision on the brink of precipices, and will gladly profit by his practical hints. But even they will draw the line at the author's dry historical information (borrowed from writers who have preceded him), and the crude political or psychological observations which have swelled the story to an unconscionable length. At a roadside inn he meets the proprietress, an old woman, "the most perfect example of a witch I have ever seen," and he gratuitously muses:

> What a history that old woman could tell would she but speak, of many a dark deed performed by the lawless bands of robbers who infested this spot up till a few years ago; of many a helpless traveller murdered as he passed and buried at dusk; of many a fierce carousal and savage division of spoil.

This slap-dash way of treating the subject is also reflected in the author's indifference to the accepted rules of transliterating Serb and Montenegrin names. He leaves the average English reader to wrestle with Crnagora (Tchernagora) as best he may, uses the mongrel "Serbish" for Servian, and coins "Molacci" for Morlaks, and "Slovakians" (misprinted Stovakians) for Slovaks. For errors, like "Carmole" (for Carniola), "Osmali," "Mozelle," "Ludwick," "Lingua Castalleña," and dozens of similar ones, the proofreader may be partly responsible, but the statement that Cetinje is "the tiniest capital in Europe" (San Marino and Vaduz are smaller) is the author's own. The melodramatic "Prologue" and "Epilogue" are the worst things in the book. The illustrations, though graphic as to subjects, are not particularly well executed.

The educational system of India is now a subject of the deepest interest in that country. A notable contribution to a solution of the problems presented by differences of race and religion is to be found in a recent speech by the minister of education in the Kashmir State, Rai Bahadur Dr. A. Mitra. After dwelling upon the three sides of human nature developed by education, the mental, physical, and spiritual, he said: "Education, which only aims at the training of the intellect without any thought to the formation of character is not only valueless but may prove to be a source of peril." Character, he held, was formed by the careful training of the conscience which can only be done "through religious principles. I must here confess that I started with a bias against religious education, but after a very careful consideration of the subject my present conviction is that religion is the only sure foundation on which character and morals can be built." He then proceeded to outline a plan which the Maharajah of Kashmir had resolved to adopt. Hindus, Mohammedans, and Christians will be taught religion in separate rooms by teachers of their own faith, and a "hymn to the universal God" will be chanted by all.

The schools examination by the Oxford and Cambridge board, this year's results of which have just been published, is useful as being a sort of stock-taking of the principal schools in England. The figures are unsatisfactory, and seem to show a lowering of the standard of secondary instruction, the number of schools represented and candidates being less than in 1910, while the percentage of passes—little more

Digitized by Google

than 50 per cent.—being deplorably low. Out of twenty-two subjects presented for examination, mathematics, English, French, history, and Scripture had the largest number of candidates. Latin and Greek were taken by just one hundred fewer candidates than last year. One boy won distinctions in six subjects, and one girl in five.

Dr. James Curtis Hepburn, oldest graduate of Princeton University, being in the class of '32, and pioneer missionary in China and Japan, died just a week ago, at the age of ninety-six. With his wife he made his first voyage to the Orient in 1840, and remained in China at that time for six years. His second voyage was to Japan in 1859 for the Presbyterian Board of Foreign Missions, with which he was associated until 1892. Dr. Hepburn assisted in the first translation of the Bible into Japanese, and issued the first Japanese-English dictionary. He received from the Emperor on his ninetieth birthday, in 1905, the decoration of the Order of the Rising Sun.

Charles Battell Loomis, who died on Saturday at the age of fifty, wrote for most of the better-known periodicals, and was the author of several books, including "Just Rhymes," "The Four-masted Catboat," "Yankee Enchantments," "A Partnership in Magic," "Cheerful Americans," "More Cheerful Americans," "I've Been Thinking," "Minerva's Manœuvres," "Cheer Up," "A Bath in an English Tub," "Poe's Raven in an Elevator," "The Knack of It," "A Holiday Touch," "Just Irish," and "Little Maude."

William Alexander, archbishop of Armagh and primate of all Ireland, whose death is reported at the advanced age of eighty-seven, was as distinguished in literature as in theology. His sincerity, coupled with an extraordinary power of phrase, gives an unusual interest to the volumes of discourses which he has published. He was also a poet of no mean ability, whom many would have been glad to see appointed professor of poetry at Oxford.

Henry Houssaye, French historian and member of the Academy, died in Paris on Sunday. He was a son of Arsène Houssaye, the novelist, and was born in Paris in 1848. He studied to become a painter, but turned early to literature, publishing a history of Apelles when only nineteen years old. A long sojourn in Greece resulted in a work on Alcibiades and the Athenian Republic, which won for him the Academy's prize of 20,000 francs, founded by Thiers. After remaining faithful to ancient Greece for many years, he turned his attention to Gaul, and a clever work, published in 1876, describing the first siege of Paris B. C. 52, was, both from an archæological and military point of view, a real *tour de force*. The history of Napoleon and of the post-revolutionary era in France then interested him, and a brilliant work on the decline and fall of Napoleon I insured his election to the Academy, which his father had satirized with extreme bitterness; the election followed the death of Lecomte de Lisle, in 1894. Henry Houssaye was personally popular in Paris, the more so from the fact that he won his Legion of Honor decoration for gallantry while fighting as an officer of Mobiles under the walls of Paris in the siege of 1870. Among his other works may be mentioned "L'Art français depuis 10 ans," "Les Hommes et les idées," "La Réforme de la loi militaire," and "1815, la Terreur blanche."

RECENT LITERATURE OF AERONAUTICS.

The Conquest of the Air. By Alphonse Berget. Second edition. New York G. P. Putnam's Sons. $1.75 net.

The New Art of Flying. By Waldemar Kaempffert. New York: Dodd, Mead & Co. $1.50 net.

Monoplanes and Biplanes. By G. C. Loening. New York: Munn & Co. $2.50 net.

The Aeroplane, Past, Present, and Future. By Claude Grahame-White and Harry Harper. Philadelphia: J. B. Lippincott Co. $3.50 net.

The Aerial Age. By Walter Wellman. New York: A. R. Keller & Co. $1.75.

Flying Machines To-day. By William Duane Ennis. New York: D. Van Nostrand Co. $1.50 net.

Two years ago there were but few books on aeronautics, and most of these were technical monographs. During the present year a number of excellent works on the subject have appeared. The developments in aviation have been so rapid that the writers of these books have had to depend on a fast moving panorama of progress for their material. So much has been accomplished that there have been many facts, varied, new, and interesting, which could be chronicled.

"The Conquest of the Air," by Alphonse Berget, is an excellent book for those who desire a survey of the entire subject of aeronautics. It is written in a pleasant style and is not too technical. Its first edition in 1909 was one of the early books dealing with the subject in a general manner, and the present edition has been brought up to date in a number of particulars. Approximately the first hundred pages are devoted to the construction and the management of the various successful dirigible balloons, with many excellent diagrams and photographs. The second half of the book is taken up with the principles of aviation and the description of the chief types of aeroplanes, with a chapter on the early days of aviation. In a discussion of the method of control of the aeroplane, particularly in regard to stability, a matter that will always be of utmost importance, the author points out that there have been two schools of aviation, viz., that of the Wright brothers, which demands everything of the aviator (the pilot), and that of Voisin, which requires the minimum from the aviator. These methods have been called the American and the French schools, respectively. To the former belongs the Wright machine, and to the latter the Voisin, Farman, Blériot, and Antoinette types. It is not unlikely that the machine of the future will be one embodying the best features of both types. The book closes with a chapter on the future of aerial navigation, a short summary of the formulas used in aerodynamics relating to the aeroplane, and a glossary giving a number of the words and terms which have come into usage with every forward step of the new science. The book is generally satisfactory and is suggestive in many places.

Waldemar Kaempffert, in "The New Art of Flying," has endeavored with a good deal of pains and with success to explain the many devices used on aeroplanes and the operation of the machines while flying, treating the subject of aviation historically from the glider of Lilienthal to the latest types of aeroplanes. Several of the many illustrations are of particular interest, especially one which shows the model Aerodrome of Professor Langley in flight over the Potomac River on May 6, 1896. This is a photograph taken by Prof. Alexander Graham Bell, and is notable as being the first photograph of an aeroplane in flight. It is pleasing to see that many pages are devoted to the description of Professor Langley's experiments with his larger Aerodrome, which was unfortunately destroyed by an accident at its launching. But for lack of the necessary funds to carry on his experiments Professor Langley doubtless would have demonstrated practically that an aeroplane could fly even when driven by a steam engine. An interesting chapter gives the more essential facts of the results of the research which has been going on concerning the upper atmosphere, including a description of the "isothermal stratum" recently discovered by Teisserenc de Bort, in France, and Richard Assmann, in Germany, almost simultaneously. This stratum is a zone, or region, in the atmosphere where the temperature does not change with altitude. It is generally regarded as one of the most important discoveries in meteorology in many years. A chapter on The Flying Machines in War contains a discussion of the probable uses of balloons and aeroplanes in military manœuvres, as well as detailed descriptions of the newly invented German and French guns for the destruction of aircraft, illustrated by photographs. Another chapter, The Law of the Air, discusses many interesting points, and includes quotations relating to the legal aspects of the subject by eminent lawyers. The book closes with a glossary giving a simple and instructive explanation of aeronautic terms. While the book is not as pretentious as certain others, it is readable, and has special value on ac-

Digitized by Google

count of certain topics which are treated at greater length and with more strength than usual. Chapters on methods of balancing aeroplanes and on different kinds of motors may be particularly mentioned.

In Mr. Loening's "Monoplanes and Biplanes" the treatment is different from that in other aeronautical books. The work is definite in its purpose, and the author has been consistent with the title from beginning to end. Dirigible balloons are not mentioned at all, and little space is devoted to the discussion of the details of motors. On the other hand, the dynamics of flying, or the aerodynamics relating to aeroplanes, has been treated with painstaking care. In this section there are many tables and charts which should be of value for use in aeroplane design. One entire chapter is devoted to the determinations of the "constant of air resistance," a factor which must be used in calculations relating to every surface of the aeroplane. This is an important contribution. One feature that is to be commended especially is a full list of references following each topic treated. In part ii eighteen monoplanes and twenty biplanes are described in systematic manner; each type has been photographed in flight, and its construction is shown by drawings made to scale. Altogether there are nearly three hundred drawings and photographs in the book. In a chapter on aeroplane accidents the author states that more than 80 per cent. of the accidents have occurred in conditions of wind that were easily recognized as dangerous. In this chapter a number of remarkable but distressing photographs are shown in order to aid in demonstrating how such unfortunate occurrences can be prevented. The last section of the book, part iii, is a comparative discussion of different types of aeroplanes and the various appliances used in their operation while in flight, accompanied by tables which should be of considerable value for reference. The work fulfils its object, and will be on the whole appreciated by aviators and aeronautical engineers rather than by those who desire a popular sketch of the achievements in aeronautics. It is based on work done at Columbia University for a graduate degree.

"The Aeroplane: Past, Present, and Future" is a volume tastefully bound for a book of the kind, and the ninety illustrations have been made and mounted with a great deal of care. The authors, Messrs. Grahame-White and Harper, besides their own contributions, have acted as editors of a number of chapters by different writers, including some of the best-known air-men. In the first section, under the title The Pioneers of Flight, C. G. Grunhold of the Aero Club of France and England makes interesting with personal experiences the story of the first aeroplanes. In the second section, which is by the authors, the various aeroplane flights and records are tabulated in a way to reveal their progress at a glance. The next section is entitled The World's Air-Men; it contains a list of the principal aviators in the world, alphabetically arranged, with the aeroplanes they have piloted and details of their achievements. It includes more than seven hundred names and covers fifty pages. This section is by the authors, and is the most important in the book. Then follows a long and timely discussion on aeroplane fatalities with explanations of their causes. At the time the book went to press there had been no less than thirty-five accidents, and since then there have been many more. The manner in which these accidents occurred has been told as accurately as possible, with a technical discussion relating to each. This section is also by the authors; but Prevention of Accidents, which follows, is the contribution of Charles Grey, an expert on the subject. The Aeroplane in Warfare, by Col. J. E. Capper, C.B., R.E., apparently an authority, is an interesting general discussion, the main feature of which is an argument to show that the scope of the aeroplane as a war machine is far greater than is generally supposed. Louis Blériot, famous as a pioneer, pilot, and constructor of monoplanes, discusses the sporting and commercial possibilities of the aeroplane. The next section, although by Mr. Harper, gives the opinions of the late Cecil S. Grace on The Human Factor, as expressed by him the day before he was lost while attempting to fly from Calais to Dover in a fog. Mr. Grace had intended to write his views on the subject on his return to London. Among the best sections of this comprehensive volume is that written by Henry Farman, one of the greatest of the pioneers both as an air-man and as a builder of biplanes. The subject on which he writes is The Constructional Feature of Aeroplanes. Much can be gathered from the writings of these experts. They make the reader feel their enthusiasm and appreciate that flying has its sporting side. Aerial Law is treated by Roger Wallace, K.C., chairman of the Royal Aero Club, England, and the book closes with a discussion on the future of flying by Louis Paulhan, famous as an aeroplanist both in Europe and America, and the winner of the £10,000 prize for the flight from London to Manchester. A quotation from this section is of interest in answer to the question, "How long do you think it will be before the world will see the first aeroplane passenger service established and running regularly between cities?" M. Paulhan gives the following view:

> Although I may be proved to be wrong, and although it may be somewhat unwise to make any prophecy at all in such matters, I shall say that I expect to see such regular passenger services through the air, as are mentioned in the question, in regular operation when we reach the year 1920.

There are additional notes by a number of other writers and altogether the book will make a place for itself for some time to come in aviation literature.

Walter Wellman, the author of "The Aerial Age," a book of adventure, for such it is, has been more or less before the public since his first attempt to reach the North Pole from Spitzbergen in 1907, in his dirigible balloon, the America. Even before that time, he was known to many from his polar expedition in 1894, which was a failure owing to the crushing of the ship in the polar ice early in the expedition. The first attempt to reach the North Pole by a dirigible balloon with a crew of men, equipped with sledges and dog teams, excited considerable interest, but it failed, owing to adverse gales. A second attempt in 1909 was also unsuccessful on account of the breaking of the leather equilibrator, which hung down from the airship into the sea, and which was used to control the altitude of the balloon, and to contain a large store of reserve provisions. These voyages are described with many exciting incidents, suggestive of the stories of Jules Verne. The choice of the title, "The Aerial Age," is unfortunate, since the book is a tale of the author's own adventures, and not a chronicle of aeronautical progress.

In "Flying Machines To-day," William Duane Ennis has written a book that is intended to be more within the reach of the general public than many other books on aviation, some of which are expensive, owing to the elaborate drawings and the large number of diagrams and tables they contain. The present volume is a treatise on aeronautical progress, including ballooning, and therefore the title "Flying Machines To-day" is not well chosen. Flying machines are "heavier than air" aircrafts in the usual terminology, yet much of this book is devoted to aerostats (non-dirigible balloons). There are, however, some unusually good photographs of dirigible balloons, and there is much that is of interest in the book. The arrangement of the chapters and also of the illustrations is bad. For example, the first portion of the book is devoted to aviation, but there is not much plan of treatment, and in most cases little connection can be seen between the text and the illustrations. In a chapter entitled The Delights and Dangers of Flying, there is a picture of a balloon passing through a meteor shower, which is such an unusual phenomenon that it is misleading to say the least. When the subject of balloons is introduced, the latest types of dirigible airships are placed between illustrations of balloons

Digitized by Google

of fifty or a hundred years ago. It would appear that the publishers were as much at fault as the author in the lack of systematic arrangement. It is unfortunate, because there is much good reading matter and there are many interesting photographs that do not appear to be in any other book. Early in the volume the author gives some explanations concerning the relation of the action of the wind on sail boats and on aeroplanes—a matter of interest because there is a pertinent connection between the air currnts playing on the curved sail of a boat and on the curved supporting planes of the aeroplanes.

At the present stage of the literature of aeronautics, it is not best to be too critical in discussing the books on the subject. Progress has been so rapid as to make a completely up-to-date book impossible; so much is new, so much is beyond the expectations of a few years ago, that the fairest course is to endeavor to call attention to the most instructive chapters and to the good points of each book.

Drama and Music

STAGE CARPENTRY.

The successful playwright nowadays objects as a rule to being called a dramatist, or having his work described as art. Something of this may be pose, like the traditional hatred of the American newspaper man for the word "journalism." But whatever may have been his original state of mind, the man of the theatre to-day is quite sincere when he implores you not to call him an Artist or to attribute to him those dreadful things, an Aim, an Ideal, or a Purpose. "Call me a carpenter," he begs, "for that is what I am. I have no other object than to make a lot of money, and I do it by knocking together things for the stage of the kind the people want." And many other pathetic pleas he utters, all expressive of a great fear lest he be in any way mistaken for a "highbrow" or an "uplifter," or be suspected of writing plays "for his health." It is an attitude that deserves praise. It disarms criticism from the start and saves trouble. There is no use in bringing out Aristotle, the Unities, and the Laws of the Lyric Drama against a poor journeyman engaged in earning the family's living.

Well, let us call him a carpenter. Does that end the matter? Does it settle the score between the play-maker and his public? More than that, does it settle the score between the play-maker and his own conscience? There is a hitch somewhere. The name refuses to stick. We say to the critical faculty that is within every one of us: Lie down; remember this man is only a carpenter; he himself has said it; he doesn't give a hang for Shakespeare, or Molière, or Ibsen; his business is just to saw and plane and nail together simple things that the public wants—no fancy carving, no elaborate inlay work, but just every-day tables and chairs and clothes-presses which can be appreciated without a college education. We thus admonish the critical faculty, which yet, perversely and obstinately, refuses to lie down. This critical faculty, as it studies the work of the busy artisans of the stage, soon becomes aware that calling one's self a carpenter is not quite the explanation and defence which it is intended to be. The honest carpenter at his bench is an attractive figure, singing at his work, making simple, strong things out of sound material with as much skill and conscience as he has at his command. And that is where the parallel fails. An honest carpenter—yes; no one will quarrel with him. But how if our carpenter is in the habit of not paying for his lumber but picks it up wherever he finds it? How if he fails to put his very best skill into his work, or any skill beyond the amount necessary to make the thing sell? Our carpenter is entitled to protest against being judged by standards other than those of his trade. But all the same he can be haled into court for taking liberties with his neighbor's toolbox or wood-pile.

In London a great success is scored by a play dealing with life in the Orient; its production in this country is only a matter of time. Another play of the Orient, being the dramatization of a successful English novel, is likewise announced. The signs are unmistakable that this is to be an Oriental season in the theatre, and the dramatic carpenter gets to work. Facile workman that he is, he has turned out a play of Eastern life for us before either of its predecessors has reached this country. In London a great success is scored by a play of crime and mystery, with a courtroom scene for its climax. The play is to be brought to this country, where, judging by the long succession of cross-examination scenes since Henry Arthur Jones wrote "Mrs. Dane's Defence," it promises to go well. Immediately our domestic carpenter sets to work and supplies us with a play centring upon a courtroom scene. This is something more than that blind instinct for imitation which swamped us with sextettes after "Florodora," and with bucolic drama after "Way Down East," and is now swamping us with tinned combinations of Viennese waltzes and kisses. Imitation, after all, implies a compliment, and the carpenter who imitates within limits is not transgressing the laws of fair industrial competition. The carpenter who anticipates is quite another matter. We doubt if the authors or producers of the English plays in question will appreciate the compliment implied in so forehanded a bit of business.

Now, Sardou was a carpenter. He made few pretences at Art, he studied the varying public taste with a keen eye, and gave the public what it would take. But Sardou was an honest carpenter; his output represented his own thought and effort. A man may be a much smaller craftsman than Sardou and still be an honest workman in his line. The self-deprecatory plea of being merely a carpenter will not excuse the appropriation of other men's ideas such as the laws of patents and trademarks punish in the industrial and commercial field. Thus it is not at all a question of high drama or low drama, of plays with a purpose or plays intended to amuse, of "uplift" or writing down. Be a carpenter if you like, but refrain from bringing disrepute on an ancient and honorable trade.

In dealing with melodrama, or so-called realistic comedy, David Belasco is the most accomplished stage manager in this country, and as a notable specimen of capable stage production, his presentation of W. C. de Mille's "The Woman," in the Republic Theatre, is worthy of mention as a matter of record. The play also is noteworthy as a typical example of the purely commercial enterprise. From the dramatic or literary point of view it has small claim to consideration, or respect, however artfully it may be designed to gratify the unreflecting multitude. Professedly, it is a serious attack upon, and exposure of, the system of graft which has brought so much discredit upon local, State, and national legislators, and its illustrations of the rascalities practised under the excuse of party necessity may possibly be regarded as salutary. But the real motive of the piece is the sensational exploitation of the usual sexual scandal in somewhat novel and ingenious, but highly improbable circumstances. Briefly these involve a conspiracy on the part of two men to ruin a reformer by exposing his old, illegitimate relations with an unknown woman, who turns out to be the idolized daughter of the one and the wife of the other. Considerable technical skill is displayed in the construction of the plot, in maintaining melodramatic suspense, and in the creation of an effective but wholly artificial and insignificant climax, which is finally resolved in a feeble, conventional, and unreasonable manner. But the preliminary thrills and the indispensable happy ending are obtained, and nothing else was thought of. The sole value of the exhibition lies in the perfection of the scenic details, the precise realism of all minor incidents, the exclusion of impertinent matter, and the admirably judicious adaptation of the cast to the work assigned to it. If the play had been equal to the performance it would have been a masterpiece.

Ludwig Fulda's dramatized fairy story, "Der Talisman" (Ginn), is, like all of Fulda's writings, characterized by such skilful workmanship and artistic self-sufficiency that we regret the rationalistic manner in which Otto Manthey-Zorn has interpreted the comedy as a satire upon the

Digitized by Google

German Emperor. Whatever the truth may be—and the editor can hardly be right in going so far—the American student will surely care more for the play than for the satire. If this were not the case, the play would not be worth editing. The vocabulary seems more successful than the introduction or the notes. "Burlesque" is not just the adjective to apply to Ferdinand Raimund.

Lillah McCarthy, who is still appearing nightly in London in "Fanny's First Play," is going to give a series of special matinée performances of three short plays: George Meredith's "The Sentimentalists," Granville Barker's "Rococo," and J. M. Barrie's "The Twelve Pound Look."

Austin Strong, author of the new "Rip Van Winkle" and of "The Toymaker of Nuremberg," has written a play, already obtained for production in America, and likely to be done before long at a leading London theatre. All the characters, with three exceptions, are insects. It bears the title of "The Spider's Web," the dominating spirit in the piece being the spider itself. The three exceptions are human beings, who, by way of punishment for their conduct toward insectivora, have been reduced to microscopic proportions. The plot is of a highly melodramatic description.

Alfred Sutro's latest play, "The Perplexed Husband," which has just been produced at Wyndham's Theatre, in London, appears to be constructed upon tolerably old lines, however modern it may be in some of its decorations. It tells of a prosaic British merchant, an admirable but tiresome man, whose wife fell into the hands of suffragettes and Ibsenites, and virtually divorced him because he was so unsympathetic. So he tries to win her back by provoking her jealousy, with which intent he brings to his home a romantic "typist," who has a Greek soul and loves beauty. Unfortunately, he himself falls in love with the Hellenic maiden, and there is the mischief to pay; but peace is restored when Kalleia, as she calls herself, departs with an elderly gentleman who has been captured by her advanced views.

Henry Arthur Jones's latest play, "The Ogre," which has just been produced at the St. James's Theatre, in London, is a modernized version of "The Taming of the Shrew." The hero is a midde-aged husband, made miserable by the temper and views of a second wife and the misdoings of his children. Meeting with financial misfortunes, he sells his London mansion and removes the whole family to a small place in the country, of which he proposes to be absolute master. He encounters rebellion, of course, but he gradually establishes his authority, until his wife vows that she will endure no more, and threatens to go off with another man. He makes no objection, but rather facilitates the elopement, which, of course, ends in comic disaster before it has begun. The lady is glad enough to get home, and in the end—after a brief experience of starvation—to make complete submission.

Gordon Craig is exhibiting in London models of the symbolistic scenery which he has designed for "Macbeth" and other Shakespearean plays.

Madame Simone, the French actress who recently reached these shores, just before leaving Paris expressed great confidence in the success in New York of Bernstein's "La Rafale." The version played here, she said, was so clipped and trimmed that neither life nor spirit was left in it, whereas her translation was so skilful that her English performance would be virtually identical with her French one. "The Thief" she believes to be as effective to-day as it ever was, and she is enthusiastic over Louis N. Parker's adaptation of "La Princesse Lointaine."

The announcement is made that the Shuberts hereafter will assume the business direction of the body of players of which Donald Robertson is the director. This gentleman organized a small stock company in Chicago for the presentation of drama of superior quality. His enterprise, it seems, is to be conducted upon a more ambitious scale, and the practical part of it—such as the provision of theatres, etc.—is to be looked after by the Shuberts, while Mr. Robertson remains the sole arbiter behind the curtain. It is easy to see how the æsthetic and the ideal might profit by this alliance with the commercial. Hitherto, the Chicago Theatre Society, an organization interested in the presentation of drama of the better kind, has been at the back of the Robertson company, and it is now proposed to establish similar bodies in other large cities, in order that the players may be assured of a certain amount of support. Altogether, the project promises to assume dimensions of considerable importance. The repertory of the company is to consist of ten different plays—seven by foreign and three by American authors. The seven foreign plays are "The Upstart Gentleman" ("Le Bourgeois Gentilhomme"), by Molière, translated by Curtis Hidden Page; "The Coffee House," by Goldoni, translated by Henry Fuller and H. Chatfield Chatfield-Taylor; "The Thunderbolt," by Pinero; "The Stronger," by Giacossa; "The Lady from the Sea," by Ibsen; "The Tribune," by Paul Bourget; and "The Voysey Inheritance," by Granville Barker. The three American plays are to be announced in the immediate future. There will be no star in the company, each player being assigned to the part for which he may be best fitted. Among those already procured are Hedwig Reicher, Herbert Kelcey, Effie Shannon, Edward Emery, Charlotte Granville, Sheldon Lewis, and Fred Eric.

Many years ago Franz X. Arens, the excellent conductor of the People's Symphony Concerts in New York, gave a series of concerts of American music abroad, to convince Germans of the fact that good things had been composed on this side of the Atlantic. Since that time the works of MacDowell have become familiar to foreign audiences, and several others of our composers have been heard more or less frequently; but regarding most of our writers dense ignorance still prevails abroad. One welcomes, therefore, the announcement that Schirmer's publishing house has arranged to give in Berlin during the present season three concerts of American music. The first is to be a song recital, at which, besides Mme. Falliero Dalcroze and Franz Stainer, there will be heard the singer concerning whom such wonders are related—Elena Gerhardt. Chamber music will be given at the second concert, with Raoul Pugno, A. Gillet, and the Geloso Quartet. For the third concert the Berlin Philharmonic Orchestra has been procured, with Busoni as conductor, and Rudolph Ganz and Felix Senius as soloists.

Vladimir de Pachmann will favor us with a Liszt programme this season. It will include a concert étude, six transcriptions of Schubert songs, a mazurka, and the ninth Hungarian rhapsody.

Liszt, the greatest of all musical editors, did not undertake to edit a critical edition of his own compositions, a task of herculean dimensions because of the frequent alterations he made in them. It has been undertaken by an imposing array of musicians and scholars, among them D'Albert, Busoni, (Mottl), Reuss, Stavenhagen, Stradal, Weingartner, Wolfrum, Ansorge, Bronsart, Dräseke, Friedheim, Rosenthal, Sauer, Sgambati, Siloti, La Mara, Lina Ramann, Malherbe, W. Barclay Squire, and Johann Batka. The original works of Liszt will make about forty volumes. The arrangements of his own and others' works will be added as the revision committee may decide. The publishers of this monumental undertaking are Breitkopf & Härtel.

Among the novelties in the musical market this month is one which students of Liszt will welcome with special cordiality—the issue of his twelve symphonic poems in the series of absurdly cheap miniature orchestral scores published in Leipzig by Ernst Eulenburg, who also announces in the series of miniature chamber music scores seven string quartets by Dvorák.

Cosima Wagner has also just contributed to the centenary celebration of her father's genius a book entitled "Franz Liszt: Ein Gedenkblatt von seiner Tochter." It includes, besides personal recollections, unpublished letters of Liszt, and dwells particularly on his friendly relations with Wagner and with the Princess Wittgenstein.

Art

Paintings and Studies by Kwanabe Kyōsai. With illuminated frontispiece in 80 color blocks, 33 collotype plates, and 22 pages of half-tone illustrations. By Josiah Conder, F.R.I.B.A. Tokio: Maruzen Co.

This is a volume which every student of Oriental art will wish to possess and which all admirers of the beautiful will desire even for its purely artistic merits. The Japanese themselves have been doing a good deal of late to popularize their art among the people of the Occident, but such works have largely consisted of sentimental generalities, giving little insight into the masters' point of view. While more weighty works of explanation and comment have been essayed by such authorities as Anderson, Gonse, Regamey, Brinkley, Brinkmann, Bing, and others, none of them strikes out on so new and illuminating a path as does Mr. Conder. He has spent a lifetime in Japan, the greater part of which has been de-

Digitized by Google

voted to a study of the nation's art; and as he was a pupil of Kyōsai during the last eight years of the great artist's life, he is eminently fitted to act as a guide through technical processes. In this quarto volume Mr. Conder embodies the copious notes made during his apprenticeship under Kyōsai, concerning which he says:

> Much of my instruction was gained by watching the master execute paintings, in listening to his comments and explanations, and assisting him with such purely technical details as generally fall to the share of a pupil.

The text sets out with a biography of the artist. Kyōsai revealed marks of genius as early as the age of three, when his sketches showed extraordinary insight into weird and ghostly themes. He was always to be found where anything exciting was in progress, and to the end maintained this strong bent toward realism. He was a close student of the most realistic paintings of the West, and his broad mind always maintained that there was a wealth of art beyond the radius of his own opportunities.

The critical chapters deal chiefly with the large collection of Kyōsai's works in the author's own possession, but its many reproductions from paintings and sketch-books render it a veritable treasure of ideas on Japanese art. From the numerous counterfeits of Kyōsai's work that began to appear immediately after his death, Mr. Conder points out the risk of making art collections in the East, and this in spite of the fact that highly prized and genuine works of Kyōsai are by no means rare in European museums and private collections. There is an interesting chapter on the limitation placed upon the Japanese artist by his pigments and materials, with due notice of the advantages he derives therefrom. This, with the chapter on methods of painting, shows that it is only by such knowledge that a student can estimate the merits of a Japanese painting. The advantages and drawbacks of the flexible Japanese brush compared with the more rigid pen or pencil of Europe, the limitations of having to express everything by line only, the absence of light and shade, the importance to the artist of the rough sketch, are all treated with an insight and wealth of detail and illustration that leave nothing to be desired. Special emphasis is laid on the importance of the rough sketch in Japanese art. The nude figure is first thinly outlined and afterwards the drapery of clothing is sketched over it, with great regard to anatomy, the point being that a figure so drawn will be truer to life than if no attention be paid to the exact position and action of the limbs and the poise of the body. Then follows a minute description of how four of the reproduced paintings were executed by the artist. The reproduction of one famous picture, Beauty of the Eleventh Century, in the original colors, which forms the frontispiece, required no less than eighty color blocks, a feat probably never attempted in Europe. The absence of chiaroscuro in Japanese painting is said to be due to the fact that by the Japanese artist the realistic representation of European paintings in this respect was regarded as destructive of a primary object, which was "to adorn a surface without destroying the idea of a surface and converting it into an illusion of space." Mr. Conder is careful to point out how Kyōsai, like all the greatest of Japanese painters, does not regard true art as a mere imitating of nature, but a conscious deviating from anatomical truth to give individuality, life, and incident, and thus always represent nature in motion. The book ends with a glossary of Japanese technical terms that will be found most useful for reference.

Henry Frowde announces the following volumes on art and archæology in his list of Oxford books for the autumn: "Historical Portraits, 1600-1700," chosen by Emery Walker, lives by H. B. Butler and C. R. L. Fletcher, with introduction by C. F. Bell; "A History of Fine Art in India and Ceylon," by Vincent A. Smith; "Bronze Age Pottery of Great Britain and Ireland," by John Abercromby, with upwards of 100 collotype plates; "Byzantine Art and Archæology," by O. M. Dalton, with 457 illustrations; "Christian Antiquities in the Nile Valley," by Somers Clarke; "Military Architecture in England," by A. Hamilton Thompson, and "The Church of St. Mary, Cholsey, Berks," by F. J. Cole, with 23 plates.

"Turner's Golden Visions," being reproductions of Turner's masterpieces, with a biography of the artist by C. Lewis Hind, and a study of English moated houses, with many illustrations by W. O. Tristram, will be brought out by Dodd, Mead & Co.

W. H. Ward will publish through B. T. Batsford of London "The Architecture of the Renaissance in France, 1495 to 1830." Mr. Ward has devoted seven years to the preparation of this book.

The officers of the Archæological Institute of America have received a full report of the discoveries made by its expedition excavating on the site of Cyrene, in northern Africa. The excavations were carried on from the end of October, 1910, to May, 1911, except when interrupted by bad weather. At times as many as one hundred Arabs were employed as workmen. Good progress was made in clearing a group of public buildings discovered on the Acropolis. On the northwest slope of the Acropolis a great deposit of votive offerings, mostly of terra cotta, was found, and many tombs in the extensive necropolis were explored. The "finds" of the season comprise a marble head of Athena, of the best period of Greek sculpture, a masterpiece of extraordinary beauty, and a headless female figure of marble about six feet high, which bears a striking resemblance to the Nike of Samothrace and which was found under such conditions that the recovery of the head is not improbable. There were also four other very fine semi-colossal statues of women, dating from the fourth century B. C., one a seated figure. The heads are as yet missing, but their recovery is hoped for. Of a period somewhat later are fifteen half-length, life-size statues of women, and there is a superb portrait bust of a man belonging to the first century A. D., besides more than twenty other sculptures. Of the three thousand terra cotta figurines unearthed, some resemble the Tanagra types, but the majority are ex-votos and show a variety of unfamiliar forms. A great quantity of fragments of pottery were brought to light, ranging in date from the seventh century B. C. to the time of the Roman Empire, as well as a considerable number of Greek inscriptions, including a few that are metrical. The reports on the finds, prepared by Richard Norton with the collaboration of Joseph Clark Hoppin and Charles D. Curtis, will be published, with illustrations, in the next Bulletin of the Archæological Institute. They will be supplemented by a report on hygienic conditions and diseases among the Arabs, by Dr. A. F. Sladden, physician to the expedition. So numerous and appealing were the applications for help which came from the wretched natives that Dr. Sladden turned an ancient tomb into a surgery and dispensary; in seven months he treated gratuitously 721 cases. The philanthropic character and success of this work became a powerful influence in winning the friendliness of the local Arabs. The task of excavation will be resumed the last week in October. Through the generosity of Mr. James Loeb of New York it has also been made possible to procure the services of a German architect, Buehlmann by name, who is experienced in the interpretation of the remains of classical buildings from work in Asia Minor and who will now become a member of the Institute's staff. Satisfactory arrangements have been made for the protection of the excavators.

Paul Rouffio, the French artist who died recently, painted some notable portraits and historical and allegorical figures.

The death is reported of Léopold-Joseph Flameng, a French etcher and engraver, aged seventy-nine. From 1859 until recently he exhibited regularly at the Salon, obtaining the first medal in 1864. Among his most notable studies are The School of Anatomy, The Night Watch, and The Hundred Guilder Piece after Rembrandt. He was a member of the Institute.

Finance

THE STEEL CORPORATION.

No one familiar with the circumstances of the case believed Mr. Wickersham to have declared last week, for broadcast publication, that "the United States Steel Corporation is plainly a combination in restraint of trade." What he did say in his interview with the New York *World* correspondent seems to be a matter of dispute between the *World* and himself; so is the question whether it was said without thought of publication. Presumably the Attorney-General now realizes that

Digitized by Google

he should have been much wiser in saying nothing at all. For while it is quite incredible that a public man in his position should have assumed offhand to anticipate the Supreme Court's decision in a suit not even instituted, there were other parts of the interview which were manifest indiscretions, whether intended for publication or not; and these Mr. Wickersham, in his subsequent statement of last Monday, did not repudiate.

The interview was published, moreover, at an unlucky moment. This will probably be admitted even by those who do not believe that last week's 15-point decline in the Steel Corporation's shares was wholly or even primarily due to sudden fear of disintegration. There were abundant reasons, other than such over-night expectations, for the movement in the stock. Wall Street itself had been talking of demoralized prices in the market for steel products, as in a number of other important trades. Organs of the industry had been openly discussing the impending necessity of reducing wages because of reduced earnings. This was well understood to be one phase of a large economic situation which, for reasons not confined to the steel trade or to the United States, was causing business reaction.

But this fact does not alter the main question; which now, at any rate, is, whether the Steel Corporation can legally maintain its existing organization. That is a question too serious and far-reaching to be dealt with by off-hand statements of impressions or of annotations in "Moody's Manual."

The statement given out on Friday by the Department of Justice was another matter. That statement outlined with absolute propriety the attitude of the government's law department. The Harvester combination, anticipating suit under the Anti-Trust law, had professed to the department its willingness to conform with the law in advance of prosecution. The Attorney-General's office had agreed, if a satisfactory plan of corporate reorganization were prepared, to submit that plan to the Federal courts. But Mr. Wickersham had also stated that he could not prescribe the plan and could not guarantee its acceptance; that the court alone was entitled to say what would be conformity with the law, and, moreover, that "the law department of the Government cannot undertake to act as universal counsel for the Trusts." This attitude is not only quite in accordance with the rule and usage in such matters, but it has been the unvarying policy of the department. An exactly similar request for advice as to how to avoid collision with the law was made by Northern Securities directors of the then Attorney-General Knox, in 1902, and was refused on exactly the same grounds as by Mr. Wickersham.

Now, undoubtedly, the situation, as it concerned investors in the Steel shares, was vexatious and distressing. They could not surely know, in the absence of the Supreme Court's decision in an actual suit, whether the combination on the basis of which their $868,000,000 outstanding stock was created is repugnant to the law or not. But, on the other hand, it must not be forgotten that the promoters of the Steel Trust accepted precisely that uncertainty in the amalgamation of 1901, and that every subsequent investor in the stock has tacitly accepted it. That the Government, prior to 1901, had been making little effort to enforce the Anti-Trust Law, is an undoubted fact; but the law was on the statute books. And, furthermore, at the time of the Steel amalgamation, there were reasons which had not previously existed for anticipating increased activity in enforcing it. From 1899 to 1901, inclusive, combinations of existing corporations had been pursued on a scale unmatched in history. The whole country discussed not only the possibility, but the probability, that a dozen or more great industries would pass under such control by a group of capitalists as to place in the hands of these dominant financiers the power, at all events, to dictate prices to consumers. It had been publicly declared as a merit of the process, by the most powerful promoter of all, that even the shareholders in these new combinations would be unable to unseat an existing management.

This is not to arraign the Steel combination in particular, or to assume that company to be certainly repugnant to the law. Every one conversant with its history knows that the policy of this great corporation, in its relation to the trade, has in some respects been of a sort to constitute a legitimate plea against such a conclusion. But, on the other hand, there is no basis for the familiar argument, reiterated this past week, that the Government "is applying the law to a new set of conditions, not contemplated by the Congress which passed the law of 1890." So far is this from being true, that the state of affairs resulting from the so-called reincorporation of American industry, after 1899, is precisely what the legislators and warning prophets of 1890 had in mind. People who make the above extraordinary assertion can never have read the records of the first session of the Fifty-first Congress.

But the talk of "voluntary disintegration" of the Steel Corporation, in advance of action by the courts, was to our mind the mere emanation of Wall Street's excited imaginings. No possible good purpose could have been served by such an experiment, at a moment when neither the Government prosecutors nor the courts had questioned the legality of the company's organization, and when there was no more reason than there has been for half a dozen years past to expect that the matter would be tested. It hardly needed Tuesday's positive statement of Mr. Morgan and Judge Gary, on the basis of which the Steel shares recovered violently on Wednesday, to convince thoughtful people that "no negotiations whatever have taken place between the Steel Corporation and the Department of Justice, looking to the dissolution or disintegration of the Corporation." Their further declaration that the directors "believe that the organization is legal," and that they "are advised by its counsel that its existence is not in violation of the Sherman Act as interpreted in the recent decisions of the Supreme Court," was entirely proper, and with it the matter may for the present rightly rest.

Portraits of Eminent Mathematicians

Three portfolios edited by DAVID EUGENE SMITH, Ph.D., Professor of Mathematics in Teachers College, Columbia University, New York City.

In response to a widespread demand from those interested in mathematics and the history of education, Professor Smith has edited three portfolios of the portraits of some of the most eminent of the world's contributors to the mathematical sciences. Accompanying each portrait is a brief biographical sketch, with occasional notes of interest concerning the artist represented. The pictures are of a size that allows for framing (11 x 14), it being the hope that a new interest in mathematics may be aroused through the decoration of classrooms by the portraits of those who helped to create the science.

Portfolio No. 1. Twelve great mathematicians down to 1700 A. D.: Thales, Pythagoras, Euclid, Archimedes, Leonardo of Pisa, Cardan, Vieta, Napier, Descartes, Fermat, Newton, Leibnitz.

Portfolio No. 2. The most eminent founders and promoters of the infinitesimal calculus: Cavallieri, Johann and Jakob Bernoulli, Pascal, L'Hopital, Barrow, Laplace, Lagrange, Euler, Gauss, Monge, and Niccolo Tartaglia.

Portfolio No. 3. Eight portraits selected from the two former portfolios, especially adapted for high schools and academies, comprising portraits of

THALES—with whom began the study of scientific geometry;
PYTHAGORAS—who proved the proposition of the square on the hypotenuse;
EUCLID—whose Elements of Geometry form the basis of all modern text-books;
ARCHIMEDES—whose treatment of the circle, cone, cylinder and sphere influences our work to-day;
DESCARTES—to whom we are indebted for the graphic algebra in our high schools;
NEWTON—who generalized the binomial theorem and invented the calculus;
NAPIER—who invented logarithms and contributed to trigonometry;
PASCAL—who discovered the "Mystic Hexagram" at the age of sixteen.

Prices

Portfolio 1 or 2 (12 portraits) on Japanese vellum, size 11x14..... $5; both for $8.50.
Portfolio 1 or 2 (12 portraits) on American plate paper, size 11x14..... $3; both for $5.
Portfolio 3 (8 portraits) on Japanese vellum, size 11x14..... $3.50; single portrait 50c.
Portfolio 3 (8 portraits) on American plate paper, size 11x14..... $2; single portrait 35c.

Philosophical and Psychological Portrait Series

The portraits are printed on large paper (11x14), with tint and plate-mark, and many of them are reproduced from rare paintings, engravings, or original photographs. They are suitable for framing and hanging in public and private libraries, laboratories, seminaries, recitation and lecture rooms, and will be of interest to all concerned in education and general culture.

PHILOSOPHICAL

PYTHAGORAS	HOBBES	D'ALEMBERT	HERBART
SOCRATES	DESCARTES	CONDILLAC	FEUERBACH
PLATO	MALEBRANCHE	DIDEROT	LOTZE
ARISTOTLE	HERBERT SPENCER	ROUSSEAU	REID
EPICTETUS	SCHELLING	LEIBNITZ	DUGALD STEWART
THOMAS AQUINAS	SPINOZA	WOLFF	SIR W. HAMILTON
ST. AUGUSTINE	LOCKE	KANT	COUSIN
AVERRHOES	BERKELEY	FICHTE	COMTE
DUNS SCOTUS	HUME	HEGEL	ROSMINI
GIORDANO BRUNO	MONTESQUIEU	SCHLEIERMACHER	J. STUART MILL
BACON	VOLTAIRE	SCHOPENHAUER	

PSYCHOLOGICAL

CABANIS	HERING	STEINTHAL	PAUL JANET
MAINE DE BIRAN	G. T. LADD	BAIN	RIBOT
BENEKE	AUBERT	SULLY	TAINE
E. H. WEBER	MACH	WARD	FOUILLEE
FECHNER	STUMPF	C. L. MORGAN	BINET
HELMHOLTZ	EXNER	ROMANES	G. STANLEY HALL
WUNDT			

The Psychological Series (25 portraits) on Imperial Japanese paper, $5.00 (24s.)
The Psychological Series (25 portraits) on plate paper, $3.75 (18s.)
The Philosophical Series (43 portraits) on plate paper, $6.25 (30s.)
The Entire Series (68 portraits), on plate paper, $7.50 (35s.)

The higher prices in parentheses refer to foreign countries. Carriage prepaid. Single portraits, 25 cents.

For subscribers who may prefer not to frame the portraits, a neat portfolio will be provided at a cost of $1.00 additional.

"I have received the first installment of portraits of philosophers, and am very much pleased with them."—*Prof. David G. Ritchie, St. Andrew's, Scotland.*

"I congratulate you on the magnificent character of the portraits, and I feel proud to have such adornments for my lecture room."—*J. J. McNulty, Professor of Philosophy in the College of the City of New York.*

The Nation

NEW YORK, THURSDAY, OCTOBER 5, 1911.

The Week

Mr. Taft's experiences prove absolutely that there is nothing the matter with the manners of Kansas. His presence in the enemy's country has been everywhere attended by exhibitions of that fierce joy which warriors feel. When Kansas disagreed with the President's speeches, it told him so. When it agreed with him, it cheered him. If, on the whole, the people of Kansas have listened to Mr. Taft with thoughtfulness rather than with enthusiasm, it is only what we should expect in a State that is generally reputed to exhibit more serious thinking to the square mile than any other State in the Union. Kansas, being one of the original homes of the Progressives, knows that the progressive idea is not incompatible with the retention of certain standpat national traits, such as our admiration for pluck, good-humor, and sincerity, all of which qualities Mr. Taft brought with him across the Missouri River. At bottom the President's outlook upon life cannot be so very different from that of the Emporia *Gazette*.

A press dispatch from Lincoln states that Mr. Bryan's toast to President Taft was "drunk standing, and at its conclusion Mr. Taft returned the compliments which the man he defeated for the Presidency had paid him." Looking further down to see what these fine compliments were, we find that they consisted in the startling declarations that Mr. Taft is "the highest official in the world"; that "the President's position is greater than a king's"; that "though in campaigns he is the leader of a party, he is, after election, the Chief Executive of the nation"; and that accordingly "he becomes the most exalted of our public servants." Doubtless the Nebraska statesman felt that the exhausting intellectual and moral effort required for the discovery and expression of these great and novel truths exempted him from the necessity of making any reference whatsoever to mere personal qualities or merits of the particular occupant of the Presidential office then before him in the flesh. At all events, he abstained from doing so; and some people will think it would have been in better taste for him also to have kept concealed within his own bosom, for the time being, the thoughts that were burning there as to the hitherto unsuspected importance of the Presidency of the United States.

Upon the awfulness of the dam disaster at Austin, Pa., it is needless to comment. The graphic accounts in the dispatches bring that home to every reader, and carry, too, as usual in such cases, many inspiring stories of bravery. Interest now centres on the question of responsibility. To determine that by the most thorough and exact inquiry, and to fix it in an indisputable way, is a task of very high importance resting upon the Pennsylvania authorities. Not only with reference to similar structures, but also with regard to matters of quite different character but involving the safety of hundreds of human beings, it is urgently necessary that when a disaster of this kind occurs the neglect or miscalculation or imperfection which caused it should be clearly exposed, and the blame for it definitely fixed. On the face of the matter, what strikes one as most salient is the fact that, although a previous break in the dam had led to an examination of it, and to its being repaired in some way, there does not seem to have been any inspection of the result by an outside authority. In other words, after the first defect had been revealed, no assurance was exacted from the owners, so far as has yet appeared, that the dam had actually been so strengthened as to make it safe for the future. Where the consequences of a defect are so appalling, failure to take every possible step to make sure that it does not exist must be regarded as criminal neglect.

There seems to be no question that the proposed new charter for New York is now an abandoned derelict at Albany. The nine Democratic Senators who refused to accept the measure as it had been whipped through the Assembly were actuated by various motives, but their opposition was so generally recognized as insurmountable and fatal that the matter was not even brought to a vote in the Senate. While giving these men their due meed of praise for standing out against the blandishments and threats of Murphy, it is evident that the thing which got home and settled the charter's business was aroused and indignant public opinion. New York city never made a stouter or more successful fight against a bad law which its alleged representatives and official authorities were endeavoring to force upon it. The chief sufferer is Mayor Gaynor. Nothing else that he has done—not all the mistakes that he has made put together—has injured him so much as his course in connection with the charter. Indeed, even if it had been enacted, the harm he has done himself with sober and thinking citizens would have been undeniable. If he had attained the object which he so stubbornly pursued, success might have glozed over, with some, the spirit he had displayed and the methods he had employed; but failure leaves all this in a pitiless light. His conduct throughout has been such that his best friends deplored it; and now the obvious result is that he has lost ground in the good opinion of the very class of citizens with whom he has professed an eager desire to stand well—ground which it will take exemplary behavior during all the rest of his term to enable him to recover.

Discounted in advance as the outcome of the Philadelphia primary has been, it is none the less gratifying to record the overwhelming defeat of the Vare effort to make the government one of, by, and for contractors. "Corrupt and contented" Philadelphia has been, but there is a limit to all things, even in the City of Brotherly Love. At any rate, fraternal affection wisely does not go to the extent of turning the city over to men who were willing to make $900,000 profits out of building a park for the city, after they had through influence and the aid of a complaisant Mayor carefully thrown out the lowest bidders for various contracts. As a result, Penrose, posing as the soul of virtue, wins by the aid of George H. Earle, jr., who will in all likelihood be the next Mayor of Philadelphia. It is not the first time that a frightened or embarrassed politician has won by the familiar trick of "pandering to decency" by putting up

Digitized by Google

an able and clean candidate. In this case, however, it is not certain that he will be able to control Mr. Earle, if that gentleman should be able to prove his eligibility and take his place in the Mayor's office. Mr. Earle's ability no one can question. His bulldog way of sticking to a foe was well illustrated by his attacks upon the Sugar Trust, and his courage is further demonstrated by his effective attacks upon Theodore Roosevelt. Mr. Earle is emphatic in stating that Senator Penrose has asked of him not a single pledge or promise.

On the reformers' side Rudolph Blankenburg's defeat of D. C. Gibboney was even more sweeping than had been expected, the latter polling only 7,488 votes on both the Keystone and Democratic tickets to Blankenburg's 44,947. That so many people should have cast their votes in the Keystone primaries is held by the Philadelphia *North American* to be an encouraging fact. It is hard, however, to figure out how Earle can be defeated at the election, though Blankenburg's popularity is deservedly great. That Mr. Gibboney's political career is at an end is probably true. It must be a source of regret that one who has rendered such yeoman service for reform in the past should in this campaign have been anything but a help to the cause. But no one will, we trust, regard the chief outcome of the election as in the slightest degree whitewashing Senator Penrose or proving that he has seen the light and become a convert to good government. Such conversion as there has been is due to fear of the primary and to the straits in which he found himself.

If any have wondered why Senator Stephenson is popular in Wisconsin, let them read his testimony of Monday before the investigating committee at Milwaukee. A more confiding and free-handed gentleman never lived. He could not bother about details; he simply gave his campaign managers whatever they asked, and told them to go in and win. Accounts? Vouchers? Bless you, how could a man who states that he is "president of more than a dozen active industries" fret himself about such miserable red tape. If he was told that his postage bill was $11,000, was he the man to demand a sight of every cancelled stamp? A similarly magnanimous spirit was shown by the Senator when his managers asked him one day for $10,000 and shortly returned for $15,000. "Didn't you ever ask them what they were doing with all that money?" "No, only in a general way." "You gave Puelicher several thousand dollars. Didn't you inquire what he wanted it for?" "No; I supposed it was some bill." Such ingratiating testimony shows how cruel it would be to deprive Republican politicians in Wisconsin of an unfailing means of outdoor relief, with a hard winter coming on.

The death of Rear-Admiral Schley is a fresh reminder that, if the civil war was fought by young men, the contrary was the case with the Spanish war. Of the distinguished naval commanders, Dewey survives. Sampson, Schley, Taylor of the Indiana, Philip of the Texas, and all but one of the commanders of Dewey's ships at the battle of Manila have died. In the army the mortality has also been great. Shafter, Otis, Lawton, Merritt, Ludlow, Guy Henry, Joseph Wheeler, Fitzhugh Lee, Hamilton S. Hawkins (the real "hero" of San Juan), and Henry C. Corbin have also passed away, leaving not half a dozen names which the reading public would recognize as those of leading actors in the drama of thirteen years ago. On the army side, Gen. Miles, now seventy-two, who has been eight years on the retired list, is the best-known survivor, if we except the colonel of the Rough Riders. Gens. Brooke, Young, Chaffee, and MacArthur, all of whom attained high rank, are also retired officers, as is Gen. James H. Wilson, who made a name for himself forty-six years ago as the captor of Jefferson Davis.

Rear-Admiral Schley was fifty-nine years old when he commanded off Santiago, an age which some people feel is too great to bear such responsibilities. But Sampson was fifty-eight, and most of the battleship commanders were close to sixty. Yet the work of not one of these was questioned on the ground of efficiency and effectiveness, save that of Schley. Young men might have done better, but those veteran captains were all men who had learned to fight in 1861-1865, and had never forgotten their lessons. Such a difference have the years made since our war with Spain that if we should have hostilities now there would be only four veterans of the civil war on duty in the army, and none in the navy, while the commanding officers would be men who were either captains or lieutenants in the regular army or lieutenants in the navy in 1898.

The new Provost of Pennsylvania, Prof. Edgar F. Smith, made an inauspicious beginning on Friday of last week by assailing the gilded butterflies who flit through college. How can he hope to be a popular president if he insists that a university is not the place to idle in genteelly for four years? He actually asserted that "no loafers should be permitted to come to any college." Even more tactless were his remarks that "too many come to college just for the social life and athletics, or because their fathers are members of the alumni, or because their mothers realize the advantage socially of a college degree; a radical reform in our colleges is needed." Evidently, this Provost is a Progressive, not to say an Anarchist. To attack the social value of our colleges is to undermine the fundamentals of our academic world. What will become of our higher institutions of learning if it should become popular to think of them as something else than places to put a polish on young gentlemen or to afford athletes an opportunity for distinction? The athletic craze, Provost Smith also attacks, and then, like that old fogy ex-President Eliot, he pretends to believe that hard, intellectual work is not only the duty of the college-man, but one of the keen, durable satisfactions of life. It is surely highly reprehensible of him to declare:

> Hundreds of young men are ruined annually by four years of dallying at college. These loafers come to college, work several hours a day, write home and tell their parents of how they are working, and then in some manner manage to slip through and graduate. But the dallying habits formed in their college years cling to them and they daily through life and accomplish little.

The action of the Otis Elevator Company in distributing nearly $30,000 among the widows and orphans of the victims of a recent explosion of molten iron by which four of its employees were killed, is highly creditable to that corporation, and is interesting also in its bearing on the general question of compensation in such cases. The coroner had pronounced the accident unavoidable and the corporation blameless; but the officers of the company

Digitized by Google

doubtless acted upon the consideration that the workmen and their wives were blameless, too, and that the company could infinitely better stand the loss of $30,000 than the families of the workmen the blow that had fallen upon them. It is precisely upon this consideration that workingmen's-compensation acts are based—together with the additional, and most important, consideration that if the compensation is required by law, upon definite principles, it can be systematically provided for.

Probably the one-sided character of the Mexican election, as well as considerable skepticism about its fairness, is responsible for the light vote which resulted in the choice of Madero. It takes some time to get a people that has long been the victim of fraud in elections to make use of them when the freedom of voting is restored. There is doubtless much truth in reports that many thousands of votes were purchased at prices at which even a Philadelphia gangster would turn up his nose. But the election at least passed off quietly, and there is no doubt that it registered the desires of the bulk of the thinking Mexican people. The test of Madero is now to come. He has not hitherto made the impression of a very strong man, precisely as those who watched him in the field were convinced that he was not a natural-born successor to Napoleon Bonaparte. But as the man who had the courage to assail the apparently impregnable Diaz and to compel him to leave the country, most outsiders will be inclined to wish Madero all possible success and to give him the benefit of any doubts. He has a wonderful opportunity to make himself beloved of all Mexico. He cannot fail, whatever he does, to write an important chapter in his country's history.

From a man who has long been regarded as on the brink of the grave, the preface written by Joseph Chamberlain for Archdeacon Cunningham's new book, entitled "The Case Against Free Trade," is a remarkable manifestation of intellectual vigor. Indeed, it deserves this characterization without any reference whatever to the age or the health of the veteran statesman. The telling force of his terse English, the compact strength of his argument, the glow and color of his appeal to patriotic sentiment, give to this little address, filling less than a newspaper column, an effectiveness which may well excite the hopeless envy of any of the present leaders of the Unionist party, and make the rank and file of it feel afresh the incalculable loss which the anti-free-trade cause suffered when its protagonist was compelled by ill health to retire from the centre of the field. But it happens that, in spite of all this, his critics should be able to show up two weaknesses in Mr. Chamberlain's plea which, taken together, are absolutely fatal. Originally, and until within the last few years, he rested his case as much upon the alleged failure of free trade from a purely business standpoint as upon the need of his plan of colonial preference from the standpoint of imperial policy. The history of British trade in the past eight or ten years has so completely taken the ground from under the first of these arguments that recently it has fallen completely into the background. But never has there been so complete an acknowledgment of its collapse as is tacitly furnished by the total absence of it from Mr. Chamberlain's preface to "The Case Against Free Trade."

This is the first weakness. The other comes from a blow that has been dealt by fate since Mr. Chamberlain wrote the preface. His appeal turns wholly on the Imperial issue; and its climax is reached in this reference to Canada's reciprocity agreement with the United States:

> Such a state of things cannot last. We are in a position of unsettled equilibrium. The early prophecies of tariff reformers are being only too surely realized, and the neglect of our opportunities, coupled with the increasing pressure of the economic policy of foreign countries, has already driven the Government of one of our dominions to enter into those close ties of reciprocal preference with a foreign country which our refusal, and that alone, has prevented them from establishing with the mother land.

Well, Canada has refused, by an overwhelming majority, to enter into "those close ties of reciprocal preference with a foreign country." She has done so without being brought to do it by any departure of the mother country from its own established policy of free trade. The recent electoral result may prove nothing as regards the strength or depth of Canadian loyalty to England; but if it proves anything, it proves that the free-trade Unionists have been right, and not Mr. Chamberlain. It has been their contention all along that the loyalty of the colonial dominions has a surer foundation if left to rest, as it does now, on the ties of sentiment and tradition and general good will and mutual interest than if it were made to depend on the give-and-take of tariff dickers.

At the recent celebration of the five-hundredth anniversary of the founding of the University of St. Andrews, the Rectorial address was delivered by Lord Rosebery, and it was finely imagined and inspiring. In order to make history live again, the orator fancied the first Rector of the University condemned to an earthly immortality, like one of Swift's "Struldbrugs," and appearing on the festival occasion to speak of his experience of five centuries. In a rapid and piquant survey, Lord Rosebery in this way gave his audience a vivid glimpse of the immense humane progress of the world since the cruel and starveling day when St. Andrews first opened her doors. The inevitable effect was a kindling message of good cheer.

From the lips of the man who, in Lord Rosebery's phrase, had "chewed the cud" of the centuries, the Rectorial address could not fail to be like that of Carlyle at Edinburgh University, in closing with an exhortation to hope. Mere quotation cannot do justice to the sweep and power of such an address, but we must cite a few words:

> How, then, would our undying Rector sum up? "Be of good cheer," I think he would say, "you have gained enormously in my long recollection, much in freedom, much in prosperity, and in the admiration of mankind for your race. If there are momentary shadows, remember that depression often arises from too limited a view. There are ages and cycles in history. The man who judges from a lustre should enlarge his range. He may live under a cloud for a moment, but he should raise his eyes to the hills and remember the eternities. . . . I have seen cyclones in which thrones toppled over like ninepins and sublime heads rolled in the dust like apples in an orchard; I have seen eclipses that seemed eternal and rivers as in Egypt turn to blood; I have seen life and death and glory chasing each other like shadows on a summer sea, and all has seemed to be vanity. But I remain in the conviction that, though individuals may suffer, when we take stock of a century at its end we shall find that the world is better and happier than it was at the beginning. *Sursum corda*," he would continue, "and lift up your hearts, for the world is moving onwards. Its chariot wheels may crush for the moment, but it does not move to evil; it is guided from above, and guided, we may be sure, with wisdom and goodness which cannot fail."

HOW REFORMS GROW.

Scribner's for October has some hitherto unpublished letters by Gen. Grant. They were written between 1877 and 1885 to his old friend, Gen. E. F. Beale, and, while they contain little of public importance, they serve to light up for us again Grant's simple and unsophisticated nature. Writing from abroad in September, 1877, the General touched for a moment upon political affairs. One passage is striking both in itself and for what it suggests:

> The progress of civil service reform—a very flexible reform, or humbug, that justifies whatever a few dissatisfied politicians want—comes by instalments. There are two humbugs which Mr. Hayes will find out—for I believe he is an honest, sincere man, and patriot—one is civil service reform, the other reformers. This is my judgment. Let us see.

In that language we certainly get the blunt quality of Grant, with his contempt for ideas which he did not understand or did not like. As will be remembered, he had been led to make a few experiments toward a reform of the civil service, but they had not turned out well, or interested politicians had assured him that they had not, so that he took a disgust with the whole subject. Possibly it was an old irritation revived in his mind that made him write of the matter to Gen. Beale as he did. Nor would it be wronging Grant to say of him that he never fairly grasped the waste and barbarity of the unchecked spoils system, and never got a clear notion of what the reformers were driving at. Perhaps it was too early for any President fully to enter into the spirit of the agitation; at any rate, Grant was not the man to do it. His letter, however, gives not only his opinion but his prediction, and the latter was ludicrously wide of the mark—he himself lived to "see" how wide.

A good measure of the great change which seven years were to bring is furnished in this same number of *Scribner's*. The historian, Mr. James Ford Rhodes, is the author of an article on President Cleveland's Administrations. It is the first of two which he is to write, and this one is largely devoted to Mr. Cleveland's relations to civil-service reform, and the achievements for which it is indebted to him. It is not necessary to go over the whole story. The President had a firm belief in the reform principle, and did much for it; but he felt the limitations imposed by party; he was sometimes querulous and even angry with "the self-constituted guardians" of the reform, as he called them; and had his backslidings as well as his steps forward. At the end, however, he had made a signal advance, as Mr. Rhodes shows by the official evidence. By the time Cleveland left the White House, he had more than doubled the number of offices in the classified list—the total reached 87,000 at the end of his second term—and he was able to declare in his last annual message that, except for the fourth-class postmasters, "it may be said that practically all positions contemplated by the civil-service law are now classified." So much for what was to Gen. Grant, twenty years before, only "humbug"!

We have referred to the convenient showing within the covers of a single magazine of the way in which reform makes head against skepticism and hostility, not only because the matter has interest in itself, but because it illustrates the method by which all good causes in this world "get forrard." The new ideas at first beat upon the minds of public men in vain. They are thrown back like rubber balls from a stone wall. We say customarily that the time was not ripe, but we mean that men's consciences were not sensitive nor their intellects open. Lincoln was what we should now call a spoils President, mainly because the very conception of any other political method had not risen above his horizon. We can see now that Grant, though some reformers urged his election on the ground that a plain and honest man like him, who was also a rigid disciplinarian, would cast aside the rubbishy spoilsmen, was really hopeless in such matters. They had no appeal to his nature or to the men about him. Yet that was no reason for the champions of the reform to cease working and arguing. It was because they kept on crying out and sparing not that in time the needed atmosphere was created in which the new ideas could thrive. After Grant came Hayes, who did much for civil-service reform, and then Cleveland, who did more, and finally Roosevelt and Taft still further to advance the principle and extend its application. It was the old moral of the stone which the builders rejected becoming the head of the corner.

Most political reforms have their well-recognized stages. First they are described as "humbug" or pure lunacy; then they begin to be talked of as attractive but Utopian; next they are grudgingly accepted in theory but kept out of practice; finally a timid and reluctant experiment with them is tried, they are found to work well, and after that, the breach being made in the dam, the waters come out with a rush. When politicians live long enough, they take pride in advocating the very reforms which as young men they had denounced as dreamers' nonsense or canting hypocrisy. Not everything that is at first unpopular is reform. It is well to make a note of that. Simply because a man is attacked to-day he may not be certain that he will be praised and fêted to-morrow. He may be, and may deserve to be, attacked both days. But any party or group or individual that has hold of a vital and germinating principle of political progress may well take heart of hope from the history of civil-service reform, and other progressive movements, and press on with the confidence of a Gladstone that, whatever may be the temporary ebbing, in the end the flowing tide will be on the right side.

REGULARS AND MILITIA.

In his annual report, just published, Brig.-Gen. Tasker H. Bliss makes severe criticism of the militia which attended the California manœuvre camp. In substance, he finds that some organizations were so imperfectly instructed as to be unable to participate properly in the manœuvres. It was like asking children to go to high school before having mastered the rudiments of an education. Moreover, they were far below par in numbers. Hence, Gen. Bliss thinks that to send any organization to camp until it has been passed upon by a regular officer and found to be qualified and to possess a sufficient enrolment is to waste the Government's funds and to confer little benefit upon the organizations trained. With this opinion most military men will, we think, agree. On the other hand, Gen. Bliss's views are interesting National Guard officers in other States, who question whether their troops can ever be raised to the required standards, under which the maximum benefit may be derived from manœuvres that simulate actual warfare.

Digitized by Google

The difficulty is largely a variance of ideals and aims. From the regular-army point of view manœuvres on a large scale are the thing. Their men are well trained in the school of the soldier, in battalion and regimental drills. What they are lacking in is brigade instruction and divisional experience. The militia officers whom Gen. Bliss criticised might retort by calling attention to the chaos that followed for a time the organization of the Texas manœuvre camp, and ask just how ready that regular column was to undertake an immediate movement into Mexico. They could quote the *Infantry Journal* to prove that the whole military system broke down. But if they thus have their *tu quoque*, this only brings out more clearly the need of large camps to train the higher regular officers in their staff duties, and the generals in the handling of considerable bodies of men. It ought to be the regulars' belief that the general at the head is the man who profits most in the entire camp. Can that, however, be reconciled with the need of the National Guardsman? His drill season lasts from October to May; his instruction is carried on usually within four walls; he marches almost never. Is it best for him to go direct to a manœuvre camp and be a pawn in a *Kriegsspiel*, even though side by side with regulars?

Does he really get the maximum of profit out of his week or ten days in the open? About this there will always, we fancy, be two opinions. With the closer relations of the regular army and the National Guard, the old State's rights ideal of the latter has almost vanished. The training is no longer for riot or police duty; the Guard is now much oftener thought of as a reserve to the regulars than as the force which bulwarks the authority of a State. Hence, instead of having camps of single regiments devoted to teaching individuals how to care for themselves in the field and to instructing them in the battalion and regimental drills they get so rarely in their armories, the effort is to train them to guard the backs of our coast defences, or to use them precisely as regulars are handled in the war-games. It is inevitable that there should be some dissatisfaction and considerable jealousy; that militia officers in many States should regret the change, and insist that the effort to make regular reserves out of their men will spoil useful State troops and produce only half or quarter-baked imitations of regulars; that a wiser policy would be to give a sound primary, or let us say common school, military training before the high school and the college were attempted.

Again, the problem is complicated because of the varying efficiency of the different State units. The militia of a rural State like Iowa or South Carolina is not as efficient as that of a State like New York, or Massachusetts, or Pennsylvania. The raw human material may be finer in Iowa or Kentucky, but the possibilities of training and the advantages of large cities are not there. Perhaps Gen. Bliss would not have made his complaint had his camp been in the East or Middle West. Here in New York, for instance, a majority of the officers believe, if our reports are correct, that their troops are far enough along to profit by joint manœuvres with regulars. But they admit that the Pine Plains camp this year, when two whole brigades were in camp without regulars, was of enormous benefit to their men. There was, it is true, a reaction toward the unnecessary reviews and parades of the "good old militia days." But the usefulness of the programme appears from the following summary taken from the *Army and Navy Journal:*

> Gen. Roe's programme of instruction was progressive, embracing a riding school for mounted officers, schools for officers and non-commissioned officers, a regimental parade nightly, followed by regimental guard mounting; close and extended order drills, practical talks and tactical walks for the officers and non-commissioned officers, exercises in attack by battalions and regiments, exercises in advance guard, rear guard, flank guards, and patrols, outpost duty, problems of attack and defence of a position, and a discussion on the ground.

To our mind this was an altogether admirable programme, save that greater stress might have been laid upon marching and erecting bivouacs for the night. We are entirely clear that the organizations in this camp are to-day better soldiers than they would have been had they instead gone to manœuvres such as those held at Manassas, when the troops were hurried from one place to another over hot, dusty roads, with almost no knowledge of what it was all about. Some good the individual unquestionably got there; our citizen soldiery learns something every time it marches out; but the rate of progress naturally varies. We are not aware just how extensive a manœuvre plan Gen. Bliss adopted at his camp, but his complaint shows that it was beyond the abilities of the militia, and that the time and money would have been far better spent in a camp like Gen. Roe's. Five years from now the situation may be different. At present the development of the militia seems to call primarily for camp instruction of this kind, with as many regular-army instructors, both commissioned and non-commissioned, individuals and organizations, as the War Department can spare.

BUSINESS TIMIDITY.

The large business of the country, we heard over and over again, has been in desperate need of being "reassured." Great bankers and leading captains of industry have been waiting with bated breath for what President Taft might say in his announced Iowa speech on the relations of the Government to business activity. Well, the fateful deliverance was made at last, and what is its tenor? As you like it! One gallant Republican newspaper joins the ranks of the reassurers, and prints the Presidential speech with the big black head-lines, "Taft Calls Halt in War on Prosperity." Another paper is not so reassured, and puts at the top of the column the words, "Trust Laws Must be Enforced—Taft." Still another, a fairly conservative organ, prints: "Taft Insists on Trusts Dissolving." You pays your money and you takes your choice.

The obvious fact is, of course, that the President said nothing on Thursday of last week which he had not said a dozen times before. There was the same firm declaration that the Department of Justice must and would prosecute all business combinations in violation of the law. The Chief Executive could have said no less than this and retained his own self-respect, not to speak of the respect of the nation. On the other hand, Mr. Taft affirmed, as he had repeatedly done before—as Roosevelt did more than once and as every President in his senses must do—that the Government has no desire to injure legitimate business. The President also disclaimed sympathy with those unnamed people who are making attacks upon prosperity and seeking to penalize success in business, and called upon them to come to a better mind. But who are these troublers of Israel? Why, the names

Digitized by Google

most frequently mentioned of late are Attorney-General Wickersham and President Taft himself! It was their pernicious activity in bringing suits and calling upon Trusts to square themselves with the law which was causing stocks to fall and business to halt. If only Wall Street could have a "reassuring word" from the President, has been the despairing cry. But that really meant, if it meant anything, that he was to reassure the business community against himself. Merely to put that Wall Street hope into words was enough to show how illusory and absurd it was.

We are, however, less concerned with the President's speech than with the extraordinary state of mind upon which it fell. Capital is timid, we know, but is that any reason for its being hysterical? It is the duty of business men, we admit, to watch affairs closely and to be on the alert for danger-signals, but is that a justification for being foolish in argument or abject in spirit? The language used during the past few weeks by men of high standing in the commercial world is little creditable to them. We have had the old story over again: can anything go wrong in business and the President not be responsible? Simply because there is a slump in the market and general trade is not satisfactory, we are to believe that the Administration is a dead failure and the Chief Executive recreant to his duty. Mr. Taft is now subject to much the same kind of complaint and even abuse that were visited upon President Cleveland in 1894-95, and upon President Roosevelt in 1907. Business conditions which are the result of large economic forces, and financial strains due to huge speculative folly, are charged directly upon the President, as if he alone were at fault; and because he does nothing to stop what he did not cause, and really has no power to stop, he is called a fool or a knave.

To say that this attitude is unworthy of business leaders, is to put the matter mildly. Their display of moral quality is disheartening. We are accustomed to speak highly of their courage, their sagacity, their far-sightedness and indomitable spirit. That praise is frequently deserved, but it must be said that under the threat of financial difficulties, or in the pinch of market depression, they too often act like men who have no reserves of coolness and pluck. It is most discouraging to find them looking to the Government as the source of all prosperity and the cause of every financial adversity, and going with the multitude of limp dependents on Washington for every blessing. If it were simply a question of getting a plausible "point" for an operation in stocks, up or down, the affair would not be so serious. One knows how speculators grasp at straws, and are influenced, or think their rivals are, by every "rumor" that floats about the Exchange. In such an atmosphere, and upon men so minded, it may well be that the gossip and "tips" and hopes and fears about what the President may or may not do or say, will have temporary effect. But the problem to which sober financiers with a reputation to lose have to address themselves, is far larger and more important. They have to deal with questions world-wide in their scope, and with industrial and financial conditions into which subtle but powerful economic causes enter. What they ought to give us is some reasonable explanation, some steadying point of view, some practical guidance; but instead, they go off with the crowd into the unrealities and superstitions about all coming right if only the President would do something to remove their fright. But their timidity sometimes seems so unmanly as to appear craven.

DISCUSSING THE SOCIAL EVIL.

The decision of some Chicago post-office censors to exclude from the mails the admirable report of the Chicago Vice Commission seems the less excusable the more the facts are examined. The Commission itself was appointed by the Mayor. It was headed by Dean Walter T. Sumner, and comprised thirty of the best known clergymen, teachers, and social workers of Chicago, among them Rabbi Hirschberg, President Harris of Northwestern University, Mr. Olson, the Chief Justice of the Municipal Courts; Bishop Shaffer, Mrs. Ellen M. Henrotin, the United States District Attorney, Edwin W. Sims, and Prof. Graham Taylor. Five thousand dollars was appropriated by the City Council for the use of the Commission in 1910, and a similar amount for 1911. When the Commission reported in April last, the publication of its findings was authorized by the City Council. The post-office authorities have therefore excluded a book bearing the official approval of the city of Chicago, to say nothing of the stamp placed upon it by the character of the public-spirited Commission which compiled it. More than that, this report was sent through the mails from April 5 on, three editions having appeared by August 1, without hindrance from the postal authorities.

Their attention was attracted, it appears, only when Mr. John D. Rockefeller, jr., decided to send out several thousand copies at his own expense to a selected list of sociologists and social workers the country over. Thus it appears that the volume was not being offered for sale, nor being sent abroad promiscuously, to fall into the hands of young persons, for whom it was obviously not intended. But the postal authorities, interpreting some regulation narrowly, have denied to this scientific work the special circulation besought for it. The same post-office authorities made no objection to the printing by the daily newspapers of the disgusting details of the Thaw case and other sensational murder and divorce trials. They look not at the spirit or purpose of this particular book; they are apparently only impressed by the fact that it discusses with frankness, but decency, things that are not usually talked about in polite society. Sanger's standard "History of Prostitution" goes through the mails unchallenged. So does Upton Sinclair's "Jungle," and, more latterly, Mr. Reginald Kauffman's "House of Bondage," a dreadful story written with the excellent purpose of arousing people to the evil alliance of politics and prostitution and the horrors of the white-slave trade. Yet the latter, if it got into the wrong hands, would, it seems to us, be more damaging than the cold statement of facts of the Chicago Vice Commission.

If it were necessary to bear further testimony to the value of this report, we might add that a similar body appointed recently by the Mayor of Minneapolis declared that it could add nothing to the Chicago body's diagnosis of the evil and presentation of facts. It based its recommendations on their statement of the case, modified only by special Minneapolis circumstances. What better proof could there be of the value of the Chicago publication or its fitness to take its place in the libraries of the country? There it will be, whatever

Digitized by Google

the final decision of the Post Office, and there it ought to be. For a remarkable change has of late years come over the public on this very question of vice. Heretofore only a few persons have dared to discuss it; the literature of the subject has been scanty and often untrustworthy; there were few if any places where questions arising out of it could be discussed so that one man could correct his judgment by the experience or knowledge of another. So those who ought to have grappled with this disease of society have played into the hands of the panderers by turning their backs upon it, by ignoring what was happening under their noses, and have actually tried to safeguard the youth of the country by saying nothing about it. Now, people have come to realize that under proper conditions this question must be debated and studied precisely as people have discussed the scourge of consumption. All this does not, of course, mean that the subject is to be bandied about at all times and places or to become a matter of after-dinner discourse. But it is desired to treat the evil without hysteria or sensationalism, as one menacing our homes.

In other words, in our opinion, when the Post Office acts as censor in a matter of this kind, it ought to ask the purpose of a given publication, the character of the people behind it, and the sincerity of the work. There are some books afloat which are, we hear, having considerable influence on the young, the tone of which and their rather morbid character might well be questioned. But if these textbooks are to be tolerated, it ought to be easy for intelligent officials to weed out those publications that under the guise of morality have at bottom no other purpose than to make money by a crafty appeal to the baser instincts or prurient curiosity of the general public.

ITALY'S LAME EXCUSES.

The statement issued to the American press by the Italian Minister for Foreign Affairs, through Italy's consul-general in New York, is characterized by a wealth of detail, where detail is not very important, and by a significant silence on the vital point at issue. The nature of the separate items in the list of Turkey's transgressions suggests that absolutely nothing that could be framed in the indictment has been omitted. Names, dates, and the exact number of dollars involved are given in each case. But when we come to the really important question as to what has been the Turkish Government's attitude in the matter of averting war, we plunge into eloquent generalization:

> We found in Constantinople alternatively either a Government which gave mellifluous words and promises which afterwards were not sustained by corresponding facts, or a Government without authority which was unable to impose obedience on its dependents, a Government which lacked the strength to impose respect and observance of treaties, capitulations, and contracted obligations; in other words, a Government which has failed to keep towards Italy its international duties.

Why are there no instances and dates here of Italy's protests to the Porte, and of the Porte's failure to give satisfaction? What basis is there for the easy assumption that for Italy there was no alternative between submitting to Turkish maltreatment and the declaration of war after twenty-four hours' notice?

Doing business with the Turkish Government is a task that calls for much patience; that is a commonplace of international politics. Every leading Power in Europe, and this country as well, has repeatedly experienced the shufflings and delays and evasions that are the chief characteristic of Ottoman diplomacy. But the civilized world has come to look upon Turkish diplomatic procedure as something that must be taken for granted, in the same way that the methods of Chinese diplomacy are taken for granted. Part of the excuse for this may be in the national psychology of the Turk; but the main reason why the world is patient with the Porte is because the world is aware that this kind of diplomacy is at bottom the only kind of defence left to a Government that for so many years has lived on sufferance. Even diplomacy is human at times and recognizes the right of everybody to defend himself to the best of his abilities. That is why leading Governments will put up with vexations from Constantinople that they would not endure at the hands of a more powerful nation than Turkey. When the Government in question finally does lose patience, a note couched in terms of unmistakable firmness, followed up, possibly, by a naval demonstration, brings the Porte to terms.

Such a course was undoubtedly open to Italy, if she had chosen to follow it. The attitude of the Turkish Government even to the present day shows plainly that Italy could not only have obtained satisfaction of her grievances in Asia Minor, the Red Sea, and elsewhere, outside of Tripoli, but that even on the question of Tripoli Italy could have obtained liberal concessions, if she had only been willing to take into account the necessities of the present Constitutional régime at Constantinople. There is a hypocritical smack to that part of the Italian Government's declaration in which it speaks of its warm sympathy for the Young Turks and its desire "to give time for the consolidation of the new régime." It was not expressing sympathy for the Liberal régime in Turkey to make public announcement that Italy offered the Young Turks a choice between taking indemnity for Tripoli or war. The Turkish Government could not have accepted money for a province of the empire without endangering its own existence. Hence the alternative offered by Italy was no alternative at all. In such crises, the weaker Government is usually concerned with "saving its face," a process in which the stronger Government coöperates. But Italy has refused even this solace to the Turkish Government.

The Italian Government will thus have to do much better than it has done up to now, if it would really convince the world that its attack upon Turkey was necessary or even had any sufficient provocation. Its action throughout seems to show that its object is not even to get Tripoli, so much as to get Tripoli through war. Patriotism was to be gratified by providing a pleasant bit of occupation for the expensive Italian navy. Other nations have been sending gunboats and cruisers to critical places and dragging them across the diplomatic checkerboard and in other ways getting money's worth out of them. Italy alone has had to be content without such excitement and glory. The opportunity may have appealed to an astute Minister with a general election not so far off. For electoral purposes it would presumably not have been enough to cite Turkey to appear before the Hague Tribunal for a permanent adjustment of differences, precisely after the fashion in which Italy is at the present moment settling her differences with several South American republics. Seemingly, even a naval demonstration in force

Digitized by Google

would not have brought glory enough. Nothing but the "hold-up" of a defenceless nation would suit the purpose.

RECENT GERMAN FICTION.

Two novels said to be more or less undisguisedly autobiographical command special attention among recent publications in German fiction. Both are convincingly frank and sincere, yet spare the reader. "Der Erzketzer" (Berlin: F. Fontane), by Ernst von Wolzogen, traces the life of a literary man of aristocratic lineage who is considered an arch-heretic by his family because he has the courage of his convictions and has violated their social code by marrying a girl from the middle class. When the wife proves narrow-minded and seriously hinders him in the work which is their sole source of maintenance, complications set in which apparently corroborate the family's estimate of his character. An interesting episode shows a phase of literary life in Berlin; the centre of a group of types portrayed with striking originality is a generous Jewish publisher and his Circe-like wife, who dispenses fame and works defeat at will.

Helene Böhlau's "Isebies" (Munich: Albert Langen) hardly needed the portrait of the author and the man with whom her life was linked to inform the readers that her own experiences are recorded in that book. The author of "Ratsmädelgeschichten" and other delightful tales of Weimar folk has long been an object of much conjecture on the part of those who had vaguely heard of her unusual career, and it is well that she has given to the world this faithful record. Helene Böhlau, the daughter of an old family prominently identified with the literary life of Weimar, eloped in her teens with a man old enough to be her father. Moreover, that man was married, but his wife was willing to release him from his vows to her; however, to be free to marry his young mate, he went to Turkey and embraced the Moslem faith, wherefore the author has since affixed to her name a parenthetical "Frau Al Raschid Bey." These bald facts do not convey the least idea of the strangeness of this romance, which deserves a place among the love stories of the world. The charm of the book is in the inimitable manner in which the facts of the story are welded into a superbly harmonious and poetic whole. The flexible style of the author has a note for every shade of sentiment, for every mood and fancy of the sensitive, highly differentiated men and women who are the actors in this drama. There are charming glimpses of child-life and girlhood; interesting reminiscences of Goethe and Liszt days; and there are remarkable portraits, foremost among them that of the heroine's grandmother. But, above all, the book fascinates by the spell of the author's rare personality.

The work of Gerhard Ouckama Knoop always suggests a thoughtful observer stationed at some remote point from which he views the passing show with something like an indulgent smile. His latest work, "Verfallstag" (Berlin: Egon Fleischel & Co.), is a fair specimen of his manner. It is a drama of luckless lives set in a period which, immediately succeeding the revolutionary movements of 1848, was one of reaction and in some respects of stagnation. The plot revolves about the fate of two Englishwomen of gentle birth, who have somehow missed their chance of procuring a comfortable berth in the world and drift about helplessly until the tide overtakes them and buries them. Children of a past generation, they are admirably outlined portraits of the non-resistant, the "womanly woman," rapidly becoming an extinct type in the brutal struggle for existence.

Ida Boy-Ed in her new novel, "Nur wer die Sehnsucht kennt" (imported by Lemcke & Buechner), has struck the note of unrest and discontent prevailing in much of the fiction written to-day by women about women. The title suggests an apology for the heroine's course of action. When a bride of some months, her husband, a marine officer, has accepted a commission which has taken him to Asia. In solitude, the longing for him is intensified, because she is about to become a mother. When the child is born and the father is not there to welcome it, she feels as if it had no father at all and begins to harbor resentment against the absent husband. An old lover appears and awakening memories of a happy girlhood brings the emotional crisis. She has almost grown indifferent toward the distant husband, and when he asks her to join him and adds in an offhand manner that the child might be taken care of by his mother, she refuses and suggests separation. The author traces the development of this interesting conflict with such logical consistency that the conciliatory end of the story is unexpected and seems unnatural. The atmosphere of the old Hansa town is palpably conveyed, and the characters, born and bred of its soil, prove the author's intimate knowledge of her people.

Humor is so rare a quality in German fiction to-day that the rapid rise of Rudolf Presber since the publication of his book "Von Leutchen die ich lieb gewann" is not surprising. Readers with a taste for the wholesome have begun to look forward to every new work from his pen and are likely to welcome warmly his latest achievement, "Die bunte Kuh" (imported by Lemcke & Buechner). From the quiet of a South-German town he has transplanted into the noisy bustle of Berlin two old-fashioned provincial bachelors. Kasimir Rübsam has been a tanner, but has retired prematurely from active business to enjoy in leisure his comfortable income. Ignaz Spüry, a repository of stupendous knowledge, as varied as it is unrelated, is ever reading and collecting and holding forth on the bubonic plague and Platonic ethics, the electric eel, and cyanide of potassium, but has never engaged in a professional career and modestly wears the indefinite title "Privatgelehrter." The enterprising Rübsam would like to launch him on the road to fame, but the duty to watch the steps of a nephew who comes from a country parsonage to get his Dr. Theol. becomes all-absorbing. The generous allowance of the unsophisticated youth attracts to him a host of friends whom he supposes to be the leaders of the country's intellectual life. The uncle, too, is victimized by individuals that sponge upon the credulous in large cities. The author makes these three innocents the centre of a canvas populated by as motley a crowd as one can see in the metropolitan panorama, and mildly caricatures the individual personages.

Karl Söhle's bit of fiction, "Der heilige Gral" (imported by G. E. Stechert & Co.) is of a more limited appeal, but in its way is a unique performance, since the love element is absent. The scene is a small German town and the *dramatis personæ* are a group of enthusiastic musical dilettanti, such as one can hardly find outside of that country. The soul of the duo and trio nights when Bach, Mozart, Beethoven, and Schubert transport the performers to higher spheres is a man who, in his professional life, dispenses justice from the bench. He is the patron of a talented young violinist who on going to the city to continue his studies disgraces himself and is disowned. The disappointment deeply affects the judge, who begins to show his age, and though his life receives a new musical impulse by the formation of a singing society of which he becomes the conductor, the musical prestige of the town threatens to dwindle. But when the information is received that the prodigal has redeemed his pledge and has been admitted to a prominent seat among the first violins at Bayreuth, the old gentleman undertakes the pilgrimage, not only to hear "Parsifal," but to see his young friend. The impression which the performance makes upon him is admirably reflected by the author: he himself is Amfortas, redeemed by the Grail, and reconciled with his protégé he returns to startle his Anti-Wagnerian friends with the statement that the music of "Parsifal" has worked his salvation.

Max Geissler records in "Das Heidejahr" (imported by G. E. Stechert & Co.) the experiences of a man of culture who has taken up his abode among the peo-

Digitized by Google

ple of the country, and who becomes not only a sympathetic observer but a helpful neighbor. The plot deals with the loves and hates and family feuds of the native peasantry. A certain Frau Magret reigns over this little world with a measure of justifiable autocracy. Standing out against the specimens of rustic degeneracy which the author portrays with faithfulness, her figure assumes the proportions of a rural superwoman and deserves to rank among the most remarkable heroines of village fiction. The coming into the community of a family of outsiders which Frau Magret has persuaded to settle there, instead of emigrating to America, the founding of a school, and other incidents give opportunity to touch upon economic problems.

The latest product of Hermann Sudermann's prolific pen is a volume of stories under the title "Die indische Lilie" (imported by G. E. Stechert & Co.), which are not likely to enhance his reputation. The burden of the book is the same as that of its slim predecessor of more than twenty-five years ago, "Im Zwielicht." Then the manner of these smart and daring tales of erotic entanglements was new to German readers. Now the teutonizing of Maupassant has been greatly overdone. Nor can it be denied that a comparison of the two books shows that Sudermann's treatment of such topics has deteriorated, rather than improved. He suggests his situations with less refinement; he paints his portraits with coarser strokes, and, however he may vary his favorite types, the man and woman with nothing to live for but animal self-indulgence, he fails to interest the reader in their experiences. Of the five stories dealing with the relation of the sexes "Herbst" has something like an ethical significance and is altogether the most finished. In the story which gives the book its title, the latch-key which so effectively closes a clever sketch in the earlier book is the instrument of dénouement. "Fröhliche Leut'" is a somewhat grotesque Christmas tale. The rambling fantasies over a tea-pot called "Thea" suggest symbolically disguised confessions, and by their imaginative quality and some poetic passages redeem the dominant note of cynicism that runs through the volume. A. von Ende.

NEWS FOR BIBLIOPHILES.

The "Primitiæ" of Connop Thirlwall is now a rare book. The future Bishop of St. David's was an extraordinary instance of juvenile precocity. He could read English satisfactorily at so early an age that he was taught Latin when three, and when four years old could read Greek with fluency, and by the time he was eleven had added French to his repertory. His mother one day asked his elder brother to write on some subject for self-improvement. Connop asked to be allowed to try also. The result was that he produced this little essay, "On the Uncertainty of Life":

How uncertain is life! For no man can tell in what hour he shall leave this world. What numbers are snatched away in the bloom of youth, and turn the fine expectations of their parents into sorrow! The young man may die by evil habits; what a grief to the parent! What a disgrace to the child! All the promising pleasures of this life will fade, and we shall be buried in the dust.

God takes away a good prince from his subjects, only to transplant him into everlasting joys in heaven. A good man is not dispirited by death, for it only takes him away that he may feel the pleasures of a better world. Death comes unawares, but never takes virtue with it. Edward VI died in his minority, and disappointed his subjects, to whom he had promised a happy reign.

This essay, or sermonette, it is noted, was "composed June 30, 1804. Seven years old." Led on by parental fondness, the boy's father made a selection of his essays, which are mostly short sermons, and these, with six pieces of verse, were printed in a volume with this title page:

Primitiæ;
or,
Essays and Poems
on various subjects,
Religious,
Moral and Entertaining.
By
Connop Thirlwall,
Eleven years of age.
Dedicated by permission to the Lord Bishop of Dromore.
The Preface by his Father,
The Rev. Thomas Thirlwall, M.A.
Minister of Tavistock Chapel, Broadcourt, Long-Acre:
Lecturer of St. Dunstan,
Stepney, and Chaplain to the Lord Bishop of Dromore.
London:
Printed for the Author,
by T. Plummer, Seething Lane.
1809.
12mo. pp. xvi+228+xx.

The frontispiece is the portrait of the wonder-child, and shows a broad brow and a lofty head. A friend who knew him in later life said that the picture reminded him of Thirlwall at seventy!

When the young author was sent soon after the appearance of the "Primitiæ" as a day pupil to the Charterhouse, he had for contemporaries Havelock, Grote, Julius Hare, and the two Waddingtons. But in his letters written at this time to John Candler there is nothing about school or schoolmates. His epistolary talk is entirely of books and intellectual interests. And throughout his life, while men paid tribute to his mental powers, they regarded him as a being aloof, and only a few penetrated to the kindliness and nobility of his spirit. He brought a freer breeze of criticism into English theology. Apropos of this, it may be worth mentioning that in the course of the now forgotten controversy over "Essays and Reviews" there appeared a pamphlet entitled "Essays and Reviews Anticipated," which dealt mainly with Thirlwall's translation of Schleiermacher on St. Luke. The pamphlet criticised the action of the Bishop of St. David's in joining the rest of the Episcopal bench in condemning "Essays and Reviews." Thirlwall defended his action in the *Spectator*, April 20, 1861, as well as in a charge printed in his "Remains." At the time this attack was attributed to George Eliot (See Thirlwall's "Letters to a Friend," p. 234). What truth was there in this suspicion?

To return to his juvenile book. There is, of course, no originality in it. It is fluently written, but is necessarily merely an echo of the thoughts and pulpit commonplaces which he would hear from his father and his father's friends. Some of the verses are clever, but they also are echoes of the poetry of Pope and of his imitators. When Thirlwall was a scholar of world-wide fame, this book became a veritable thorn in the flesh to him. In reply to a question about the book, Thirlwall wrote to his Welsh friend, Miss Johns:

I am glad to have a sign of life from you. . . . But it could not have shown itself in a more unfortunate way than such a request. I am sure that if you knew the point in my foot which gives me pain you would not select that to kick or tread upon; and I am equally sure that if you had been aware of the intense loathing with which I think of the subject of your note you would not have recalled it to my mind. When Mrs. P—— in the simplicity of her heart, and no doubt believing it to be an agreeable topic to me, told me at dinner on Thursday that she possessed the hated volume, it threw a shade over my enjoyment of the evening, and it was with a great effort that, after a pause, I could bring myself to resume the conversation. If I could buy up every copy for the flames, without risk of a reprint, I should hardly think any price too high. Let me entreat you never again to remind me of its existence. ("Letters to a Friend." Pp. 155-156.).

But the friends of the family had subscribed so liberally for copies that Thirlwall could not exterminate the book, of which an edition of some six hundred copies at least must have been printed. Bishop Percy led off with an order for forty copies!

What in the world would the good Bishop do with forty copies? The bibliophile of to-day may well rest content if he can procure one copy of this little book, which testifies to the remarkable attainments in his boyish days of one who was to become one of the greatest scholars of the nineteenth century. William E. A. Axon.

Manchester, England.

Correspondence

QUIXOTISM IN HEROES.

To the Editor of The Nation:

Sir: In a novel as in real life, I suppose a dash of Quixotism is necessary to the making of a hero. It helps to preserve him from the insipidity of which Hazlitt complained. But nowadays there seems to be a demand for heroes who shall outdo the Don with Quixotism in general. Are there any imaginable circumstances which would make it right and wise for a man to assume the blame for a detestable act which another man has committed? This is a delicate question, and I don't mean to try to answer it. Possibly there may be such circumstances, though I haven't been able to think of any, and (which is more to the point), neither have the novelists who have made their heroes attack this sort of windmills. The trouble is that in these cases the sacrifice of self is so likely to include the sacrifice of other innocent persons. When a man begins to sacrifice his friends to a fine-spun scruple of honor, I can't help suspecting that he is either of unsound mind or playing to the galleries.

The situation is always triangular: it involves, besides the hero and the villain, a woman with whom either one or both of them are in love. In some instances the

Digitized by Google

villain is the trusted and admired friend of the hero; in others, he is connected either with the hero's family or with the woman's. In William J. Locke's "Where Love Is," the villain is the hero's friend. Under a false name he has seduced a poor man's wife. He is engaged to marry the heroine with whom, of course, the hero is also in love. At a lawn fête at the home of the heroine, the wronged husband, half insane, appears in search of the seducer. To save the situation the hero publicly avows that he is the man, expecting that his friend will later clear him. But the friend instead offers him money, which of course he returns, and thereafter he utterly refuses to expose his friend's rascality. The result is much misery for every one concerned, especially for the heroine and for the hero's adopted daughter, whose engagement in consequence of the affair is broken off. In R. W. Child's "Jim Hands," also, the hero assumes responsibility for the seduction of a woman by the villain, who is in this case his sister's husband. He does this to shield his sister; it results in a long estrangement from his family and friends, and brings much suffering upon them and upon the girl with whom he is in love. In H. S. Harrison's "Queed" we have the same triangle as in "Where Love Is." The hero and the villain (who is weak rather than positively wicked) are friends, in love with the same girl. They are intimately associated, the villain being editor, and the hero (Queed) assistant editor of the same newspaper. At the crucial moment in a struggle to get through the Legislature a bill establishing a reformatory, in which the heroine is deeply interested, the paper, which has been foremost in the struggle for the reformatory, reverses its attitude in a turncoat editorial, and the bill is lost. The editor, who, of course, wrote the editorial after an interview with the local boss, manages by implication to shift the blame on Queed, who has promptly resigned, and to give the impression that Queed was dismissed for his treachery. Queed supposes that the heroine is in love with the editor and engaged to him; and to save her feelings he resolves to accept the blame. In conversation with her he even leads her to think that he is guilty. In other words, to shield her from suffering at the time, he assumes tne blame for a reprehensible act so that she may in happy ignorance marry the man guilty of it. The novelist soon provides a satisfactory solution; and the girl admires the hero more for his folly than for all the sensible things he has ever done. "'And, of course,' he (the editor, who has just made a tardy confession) added more eagerly, 'I supposed that he had told you himself.' 'You don't know him,' said Sharlee. A proud and beautiful look swept over her face."

Similar situations may be found in other recent and excellent novels, such as De Morgan's "Joseph Vance," and Mrs. Watts's "Nathan Burke." But leaving these aside, the recurrence of the situation in three stories as different as those to which I have referred is rather remarkable. It would be hard to think of three characters more unlike than Jimmie Padgate, the Bohemian artist; Bob Harvey, the rich and popular college student, and Queed, the self-made sociologist; yet they all do the same thing—a thing indefensible, it seems to me, on any ethical theory except that self-sacrifice is in itself so noble that it justifies sacrificing others. And this indefensible act we are asked in each case to accept as proof of heroism.

Why should these things be? One explanation is suggested by the attitude of the heroine in "Queed," which is also that of the heroine in "Where Love Is." Each is overcome with admiration of the hero's generosity. Of course the great majority of novel-readers are women, and perhaps their attitude is reflected by that of the heroines. Do all these heroes have to act foolishly because a display of reckless Quixotism will endear them to the feminine heart? HOMER E. WOODBRIDGE.

Colorado Springs, September 24.

WASHINGTON AND LEE UNIVERSITY.

TO THE EDITOR OF THE NATION:

SIR: As the sole survivor of the faculty which was gathered around Gen. Robert E. Lee in what was then Washington College, now Washington and Lee University, I wish to express—may I not say for my departed colleagues as well as for myself?—my grateful appreciation of the editorial, in your issue of September 14, entitled "The College and the Making of Men." Since "Approbation from Sir Hubert Stanley is praise indeed," such commendation from the *Nation* is justly gratifying.

I am struck with the truth of the *Nation's* analysis of the situation. It is true that the historic and local associations of Lexington were already inspiring; it is true that Gen. Lee was followed to Lexington by the "colonels and captains of his defeated legions," for his faculty consisted largely of such men; and it is true also that not a few of the older students had seen service in the war, and now "sought to complete their interrupted education," with all which that implies of purpose and of character. It is also true that, while the choicest youths of the South were attracted to Lexington by Gen. Lee's great name, they came, with very few exceptions, from homes which had been impoverished by war, and in which the sacrifice needed to send sons to college was a constant and conscious inspiration to the student: all this is true, as the *Nation* says, but—to a degree hardly now conceivable—behind, beneath, and beyond all this was love and reverence for Gen. Lee himself, and the ambition, in both faculty and students, to be worthy of his great fame and character. Under such conditions it is not strange that so many students of that period, and of the next under Gen. Lee's son, should have become distinguished in so many States and in so many eminent vocations. Thus, happily, does the influence of a great man extend and multiply itself for good; and I am ready to believe that the tradition of that influence is not yet extinct in Washington and Lee. For myself, near the end of a long service in more than one Southern college of high rank, I look back upon the years spent in Lexington with Gen. Lee as my "golden age"—the privileges of which I now, alas, too late! most keenly feel that I did not then sufficiently appreciate.

But besides these conditions, in part peculiar to Lexington, there were other advantages which college students then enjoyed in the South beyond their successors of the present day. The ideals of college life were then higher and purer than now. Not only did poverty and the remembrance of sacrifice and sorrow then teach their wholesome lessons, so that extravagant self-indulgence was almost impossible, but especially our modern "intercollegiate athletics" had not yet obtruded their baleful influence, encouraging and justifying absenteeism, and substituting wholly new ideals of college excellence, quite apart from scholarship or character, as the standard of college pride and ambition. Such things were unknown in those "golden days," so that, in fact, the opportunity of the college for the "Making of Men" was better then than now.

EDWARD S. JOYNES.

"SÓNNICA LA CORTISANA."

TO THE EDITOR OF THE NATION:

SIR: May I, through your columns, call the attention of classical students, and indeed of all lovers of classical learning, to a remarkable work dealing with ancient themes, that had hitherto escaped my notice? I have never seen it noted in any of the lists of historical novels published by our libraries and colleges. An accident of travel this summer put into my hands a copy of Señor Blasco Ibáñez's "Sónnica la Cortisana." The scene is laid in Saguntum, in Spain, at that most fascinating moment of history when Greece, having done her work, was in decline, and Rome and Carthage were in their death grip. The hero is a Greek who had served with Cleomenes of Sparta, and is left a "masterless man" on the latter's death at the court of Ptolemy.

The knowledge of ancient life and customs displayed by the author, so well known as a student of modern social problems, is extraordinary. I read the book critically as a classical student, and I found few if any errors to correct—nay, even what I found were the accepted facts of archæology twenty years ago, and the story itself is extremely dramatic.

Of course, the comparison with Salammbô imposes itself. But Señor Ibáñez, in my opinion, need not fear the comparison. He undoubtedly owes something to Flaubert, but it is merely the debt of one master to another. As the title implies, the book is not one intended for undergraduate classes in our coeducational institutions, but the mature lover of the classics—and of good literature—will find, I am sure, great pleasure in it. CHARLES ST. CLAIR WADE.

Autun, France, September 12.

WOMAN'S SUFFRAGE.

TO THE EDITOR OF THE NATION:

SIR: The papers report Mr. Taft as saying that he thinks the suffrage should be extended to women "as soon as they all want it," and that he entirely approves "the principle."

Now, a statesman should know that the extension of the suffrage is not a matter of "principle," but of policy. If a principle were involved, its desirability would not be determined by the number of persons asking for it.

But putting that aside—has Mr. Taft

Digitized by Google

considered that what he approves would be the most tremendous and far-reaching revolution in the history of the human race, fraught with consequences which no man can foresee, but certainly momentous? Has he considered that it would revolutionize all political, all social, and all domestic relations? Has he considered that if women vote as the men do, they only dilute the vote; while if they vote against the men, it brings about sex antagonism? Has he thought of the passions and animosities that such a state of things would kindle, and of the new element of discord that it would bring into families, when husbands and wives are opposing partisans with equal political power? Has he thought of these things (and others which will occur to any thinker), weighed them with advantages which he sees will certainly follow—for we cannot risk taking a step so vital and irrevocable on mere hopes and conjectures—and assured himself that the certain good will outweigh the obvious evils? If he has, let him lay the demonstration before the world. If he has not, would it not be well to consider these points before taking a stand? H.

Elder, Md., September 26.

THE UNIVERSAL RACES CONGRESS.

To the Editor of The Nation:

Sir: Under the heading, "Adjusting Racial Differences," your London correspondent writes in your issue of August 31 as follows:

> While Dr. W. E. B. Du Bois of New York, late professor of history and political economy in Atlanta University, takes up fifteen pages of small type to discourse upon "The Negro Race in the United States of America," he merely sets forth the point of view of those men and women of African descent who are out-and-out opponents of Dr. Booker T. Washington of Tuskegee, and others of his school of thought. Fairness would have required that this be supplemented with another paper written from the opposite point of view.

In fairness to the First Universal Races Congress I trust you will permit a comment on this statement. We were well aware of the necessity of having both sides represented. Dr. Booker Washington, who expressed himself in thorough sympathy with the congress, unfortunately could not undertake to write a paper, but he was good enough to arrange that Dr. Augustus Walker should contribute one. Accordingly Dr. Walker's name appeared as that of a contributor, but as the paper did not arrive, in spite of our cabling for it, the final programme did not contain his name. Your readers will, therefore, see that the organizers of the congress meant to be fair.

If they will read Dr. Du Bois's paper referred to, they will find, in addition, that your correspondent is mistaken when he says "he merely sets forth the point of view of those men and women of African descent who are out-and-out opponents of Dr. Booker T. Washington of Tuskegee, and others of his school of thought." As a matter of fact, Dr. Du Bois's comprehensive paper is full of valuable statistics, and his references to Dr. Booker Washington's school of thought do not occupy much more than one out of fifteen pages. It may interest your readers to know that there was no member of the congress more respected and more applauded—next to the proposer of the congress, Dr. Felix Adler—than Dr. Du Bois, and that the present writer cannot remember a word uttered at the congress in direct criticism of Dr. Booker Washington's attitude.

G. Spiller, Hon. Organizer.

London, September 20.

THE YALE REVIEW.

To the Editor of The Nation:

Sir: In the *Nation* of last week the new *Yale Review* was quite inaccurately described as "a graduate quarterly publication." It is, indeed, edited mainly by Yale men, and it bears the name of the university. It will, however, publish articles in science, literature, art, and politics, whether written by Yale men or by others. In this respect it will follow the tradition of its predecessors, the *New Englander*, established in 1843, and the old *Yale Review*, which was conducted for many years as an economic journal. Yale already has a periodical, the *Alumni Weekly*, published in the interest of the alumni. The new *Yale Review*, though bearing a local name, will aim to be national in matter and in spirit.

Literature

THE OLD SKEPTICISM.

Ingersoll: A Biographical Appreciation. By Herman E. Kittredge. New York: The Dresden Publishing Co. $2.50 net.

Between the lines of this poorly conceived and cheaply executed biography appear the lineaments of a great soul. In vain the author underlines the obvious and advances preposterous claims for his hero; the personality is strong enough to surmount the incapacity of the biographer, so that one of the poorest biographies that have ever come under our eye is still worth reading. As one reads, the wonder grows that with the majority of his fellow-citizens Robert G. Ingersoll passed for a ruthless, demoniacal force. As a matter of fact, Ingersoll had many qualities that in all reverence must be called Christ-like. Possibly no prominent man of our time has come so near obeying the injunction, "Sell all that thou hast and give to the poor." No applicant for Ingersoll's bounty was refused. He preferred to aid a dozen rascals rather than by too zealous scrutiny to turn away a needy person. In his house was a drawer constantly replenished with money and freely open to all the household, down to the youngest. No one he loved should have to ask for money. For years his law practice brought in a small fortune annually, and he died a poor man. Spontaneity and sympathy were his master traits. His mere presence was fortifying. There is a story of a man afflicted by periodic attacks of mania who often weathered an attack by passing a night on Ingersoll's porch. No one was more comforting in time of death than this skeptic to whom immortality was barely a hope. So much for the unofficial man, beside whom worked almost incongruously the official enemy of superstition, the professed image breaker, the conscious successor of Voltaire and Tom Paine.

Ingersoll did many things well. He managed a primary school ably, or a regiment, as the case befell. He was among the best lawyers of his day, and unquestionably one of the most effective orators. He won and charmed with equal address the disinterested audiences of the lecture circuits and the hardened and skeptical hearers of the political conventions. If there was weakness anywhere in him it was in his anti-religious campaign, and this is a matter better discussed after some account of his early training.

Robert G. Ingersoll was born at Dresden, N. Y., in 1833. Early bereft of his mother, the boy came up under the rod of his father, a Congregational clergyman and an abolitionist. Dr. John Ingersoll within ten years occupied some dozen charges in New York State and city, ending in Ohio. At Ashtabula, in that State, we first meet the youthful "Bob," a faithful attendant at catechism class. By his twentieth year he was a schoolmaster at the town of Metropolis, Ill., where he emitted the characteristic opinion that baptism "with soap" was no bad thing. Somewhere in the interval of twelve years the hard native sense of the lad had revolted against the still harder orthodox teaching. His own schooling had been the scantiest, but he had read tremendously; Shakespeare and Burns had become his familiars and leaders. Equally desultory was his reading of law, and the young lawyer at Marion shone chiefly as a boon companion. His literary gift had already revealed itself in weakly pretty stanzas for the local press. In his twenty-fifth year, Ingersoll, having passed through Marion, Shawneetown, and other halting places, entered what may at last be called the world at Peoria, and there succeeded greatly as his elder brother's law partner.

We have noted some stages of this youthful Odyssey through the towns of the Middle West because it explains certain things in Ingersoll's character. He was a completely uprooted man. The discipline that comes from long residence in one community, and the resulting tendency to compromise, never were his portion. His remarkable intelligence grew almost in a vacuum, though it doubtless gained impetus in contact with the surrounding formless energy. In the campaign of 1860 the orator emerged in an unsuccessful campaign for Congress. Here Ingersoll, though a Democrat, took the most advanced anti-slavery position, and the scraps of his speeches that are remembered suggest that his gift in invective was already

Digitized by Google

great. As early as this year he was delivering an anti-theological lecture called "Progress." Soon he became acquainted with the Parkers, freethinking and philanthropical wanderers from Boston, on whose book-shelves he first read the names Volney, Paine, Voltaire. In February, 1862, Eva Parker, "a woman without a superstition," became his wife, and a few days later the young colonel of volunteers led his regiment to the front. Creditable service in Tennessee ended with capture and prompt parole.

Political doors swung open to him. In 1867 he was appointed attorney-general of his State. Had he kept politic silence on religious matters, he might have been Governor. In fact, the frequent statement that, for shutting his mouth on religious matters he might have been President, is probably not exaggerated. In the early seventies his anti-religious campaign shaped itself in the lectures on "Thomas Paine," "The Gods," "Individuality," "Heretics," and "Heresies." In his forty-third year he saw for the first time in England and France the visible symbols of the ecclesiastical tyranny he had been fighting. Westminster Abbey seemed to him less than the famous lines cut on Shakespeare's cenotaph—

> And, like the baseless fabric of this vision, The cloud-capp'd towers, the gorgeous palaces, etc.

The opinion is significant of Ingersoll's constant tendency to measure and compare the incommensurate things of life. So far he had been merely a local celebrity. The Republican nominating convention in 1876 made him a national figure. What is now called "the plumed knight speech" is often regarded as Ingersoll's greatest oratorical achievement. His biographer, by printing it in full, gives the materials for a judgment. In the sense of immediate effect and fine adjustment to the actual occasion Ingersoll's brief eulogy as he put James G. Blaine in nomination for the Presidency must count among great oratorical successes. Curtis, who mistrusted Blaine, nodded with involuntary approval to the cadences; Schurz, who loathed "the plumed knight," dashed across the platform to wring the speaker's hand. Yet as one reads this famous address and notes a phrasing now dryly abrupt, now bordering perilously on fustian, one cannot but feel that it lacks the self-subsistent quality of the great historic orations. It counted tremendously in virtue of the fevers of the moment. Here was a convention about equally divided between delegates who believed Blaine to be a common cheat and those who regarded him as a peerless statesman. Here were rumors flying that he was at death's door. Never was an audience more deeply concerned with a single personality. Anything said emphatically about Blaine in that hall was bound to reverberate. Ingersoll fully improved a unique opportunity. His adroitness was quite equal to his luck. It was characteristic of the man that he absolutely refused to accept any political reward from President Hayes, and that for five campaigns, during which he was admittedly the most effective speaker for the Republican party, he took no fees and paid his own expenses.

The Cincinnati speech naturally made Peoria too small to contain Ingersoll. For eight years beginning with 1878 he pursued a broadening legal career at Washington, and added to his fame as a lecturer. During this period his style attained the marked cadences and full-blown eloquence for which his admirers have made the most ambitious claims. In these years falls the most touching of his orations, that delivered at his brother's grave. In such addresses he was at his best. The solemnity of death's presence calmed his exuberance, and for a moment he forgot that the world contained a bigot. The last thirteen years of his life were spent in and near New York. There he increased his renown as a pleader and orator, broadened his associations, gratified to the full a natural love of fine music. Early in the New York period, in 1888, came the climax of his anti-Christian activity in the famous magazine battle which he waged single-handed against Gladstone, Cardinal Manning, and the Rev. Henry M. Field. Symposiums, as the cant then went, were the fashion, and the *North American Review* greatly prospered by the practice. That the debate settled anything will hardly be claimed. Ingersoll, for whom the rest were no match in swift, peppery dialectic, laid down brilliantly the orthodox dogma of agnosticism; the others variously stood by the Augustinian dialectic or took refuge in evasions that have since become usual. Of Gladstone's ponderous apologia, Huxley wrote to Ingersoll: "Gladstone's attack on you is one of the best things he has written. I do not think there is more than 50 per cent. more verbiage than necessary, nor any sentence with more than two meanings. If he goes on improving at this rate, he will be an English classic by the time he is ninety."

Through his remaining years Ingersoll continued valiant in the cause of free thought. No humane movement solicited him in vain. His pathos, humor, energy, were besought for memorial addresses. Besides his famous lectures on Shakespeare, Burns, and Whitman, he constantly added to his anti-theological repertory. He had the satisfaction of seeing many of the doctrines he attacked, particularly that of eternal punishment, in full retreat. Less satisfactory to his ardent, clear-cut spirit must have been the counter growth of the theology of evasion. Worn out by a career in which he had mercilessly spent himself, he died smiling in 1899, in his sixty-seventh year. No man of his time had been better loved or more violently detested.

With much that was lovable and admirable about the man, the conviction grows out of a reading of his life and works that he just missed being first-rate. Of the complexity of religious belief he had no inkling. Creeds he regarded as deliberate impositions or frauds. Of what may be called the natural history of religion he had no conception. All this grew chiefly out of a defective historic sense and training. His habit was to look at the past, barring a few heroes of the intellect, as simply wrong, regrettable, negligible. The inconscient processes that make manners, faith, patriotism, he neither understood nor even admitted. Error to him was always definite and personal, the offence of a given bigot, priest, or council. He never saw or admitted the inevitableness of much that outrages isolated common sense. Even more, the whole unconscious casuistry of religious profession was obscure to him. He could not see that it might actually be creditable to a man to hold, say, the Nicean creed with greater leniency than he himself held the latest dogmas of materialism. It is strange that so sympathetic and humorous a man should not have understood how cleverly life saves itself from the literal cruelty of creeds. When we say "he that believeth not shall be damned," we mean, of course, vague, distant unbelievers, not kinsfolk, friends, fellow-townsmen. To the normal religious mind God is too great a gentleman to enforce his own laws with pedantic accuracy. Most of Ingersoll's polemic, in short, applied not to the average believer but to the exceptional fanatic.

Nor was his own position devoid of fanaticism. He stood on the doctrine of the conservation of energy and the indestructibility of matter. These ultimate verities, he felt, forbade all theological assumptions. That these dogmas of science failed to explain so primal a fact of experience as human consciousness and the significance of that default, he never really perceived. He simply tried to impose upon the world his own tough-minded and easy skepticism.

And here we come to the real issue between faith and skepticism. Upon the matters that as men most nearly concern us, Science has shed no new light. We do not know why we think and feel nor why we are conscious that our thinking and feeling are our own, or right or wrong. That these functions are merely incidental to a purely mechanical process—a theory which Ingersoll tacitly accepted—is a pure assumption and quite as wide and hazardous a

Digitized by Google

one as that of immortality or of God. A truly scientific mind will simply leave these issues contentedly in abeyance. Most men, however, are unable to take so detached an attitude toward their dearest concerns. Such malcontents will perforce bridge the mystery of consciousness with all manner of hypotheses that seem to meet the needs of life, and such hypotheses will inevitably and quite unconsciously crystallize into typical modes of religious faith and feeling. One may doubt if the world can be won over to complete agnosticism. Meanwhile it is doubtful if the agnostic has any right to impose his skepticism upon others, except through the example of his life. What warrant has he for depriving any man of what may be legitimate hypothesis or even necessary illusion? And equally, a really candid and philosophically enlightened believer must admit that the warrant of his faith is purely subjective and of no authority for another. He, too, is reduced to the simple persuasiveness of the life of faith. True skepticism and true faith can afford to be tolerant of each other, leaving time to arbitrate what are temperamentally opposed attitudes according to their respective fruits. But the dogmatism of science and that of religion must inevitably clash, and little good can come of the conflict, for it is based in either case on assumption and ignorance.

Ingersoll was too deeply infected with the pseudo-scientific dogmatism of his day to effect work of enduring value. He lashed prematurely to their graves certain quite moribund Christian doctrines. That was service of a kind. It was service, too, to hold up against prevalent sentimentalism and evasion the robust common-sense inherited from the eighteenth-century thinkers. But in a way Ingersoll may be said to have been lucky in not losing his chance. Lip service to the old creeds provided him with a field and a foe, but lip service was rapidly yielding to a gentle religious impressionism, to assail which would have seemed folly even to his militant soul. Such downy ramparts has the modernistic movement set about Christianity that to charge upon that bulwark would be merely to court suffocation. An Ingersoll to-day would find his occupation largely superfluous. For a thoroughgoing agnostic preacher, conscious of the limits of science and mindful of the real spiritual hardships of the skeptical position, there might yet be much to do. In taking leave of Ingersoll we part with a singularly engaging personality, in which the current dry materialism was shot with alien hues of tenderness and romance. In fact, it was the highly emotional quality of the man, that insisted on exaggerated cadences and oratorical hyperbole and thwarted what under better conditions might have been a permanent achievement in thought and in letters. In the man, with all his fine exuberance, there was some lack of inner harmony and balance, of effective tolerance and complete civilization. His qualities were those proper to the mere orator, and as such he was great. The surplus quality which has made a few great orators also great men of letters was never his. To inquire why the essays of Huxley and the "Apologia" of Cardinal Newman seem likely to live, while the writings of Ingersoll are already dead, is to suggest not unkindly the limitations of Ingersoll's potent and generous personality. He loved liberty in the fashion of Rousseau; all forms of cruelty and oppression he abhorred. He was too intolerant of those bonds which human nature gladly, and on the whole wisely, forges for its own better control.

CURRENT FICTION.

Hilda Lessways. By Arnold Bennett. New York: E. P. Dutton & Co.

That rather surprising promise of the note on the last page of "Clayhanger" that the story of Clayhanger and Hilda was to be developed in two succeeding novels, is already half-fulfilled. The mysterious Hilda, whom we saw in the earlier narrative only through the baffled eyes of Edwin Clayhanger, is here expounded in full. Only Mr. Bennett would have done just this thing. You recall how in "The Old Wives' Tale" different parts of the chronicle are recorded from different points of view. Always there is a virtual interlocutor, the centre of a peculiar world, which impinges upon or overlaps scores of other worlds, but is never concentric with them. To such a world the reader was introduced in "Clayhanger." The son of the Bursley printer does not tell his own story, but in telling it for him Mr. Bennett sticks so closely to his point of view that Clayhanger Senior and the Orgreaves, and Hilda, and the whole Five Towns world, seem to exist only in their relation to this young man. He is not a brilliant young man. His life is tame enough in outward incident, and even when the humdrum is broken by some emergency, he does not always come up to the scratch. He prevents the wreck of the printing office, to be sure, but he is wofully lacking in the matter of the luckless Mr. Shushions. Hilda, it will be recalled, is the champion on that occasion.

But Clayhanger's insignificance is no more clearly proved by his tameness than Hilda's significance by her erratic way. Our interest in him through those seven hundred pages is sufficient proof that he is not merely a commonplace person. It is true that, since we share Clayhanger's ignorance of her true character and motive, Hilda is the more challenging figure throughout the earlier story. The present narrative is not a sequel, but a complement. Much of the old ground is covered, many of the same incidents are recorded. Nevertheless, the scene has definitely shifted. We are now adventuring in another world, a world of which Hilda Lessways is the centre, and in which Clayhanger has a merely contingent place. As we have said, only Mr. Bennett would have been likely to do just this thing in this way. If Mr. De Morgan, say, had been moved to retell a story of his from a different point of view, he could hardly have resisted the temptation to cross-allusion and reminder. Mr. Bennett nowhere hints by a word or a gesture that the earlier narrative exists. And he is bold enough, in several instances, to reproduce the dialogue of "Clayhanger" word for word, or with the slightest omissions. So in describing from Hilda's point of view the striking incident of her nocturnal interview with Edwin on the darkling porch of the Clayhangers' new house, we listen to the same words, but we listen through Hilda's ears. And, of course, the angle of description changes.

There is something very "convincing" in this complementary method. It leaves no doubt that the writer is absolutely in the confidence of his characters. And there is an odd charm in the double approach of the same scenes and the same incidents. The family group of the Orgreaves is the same in both pictures, but with differences in coloring and arrangement. Poor old Mr. Shushions, whose "sole crime against society was that he had forgotten to die," is a less disgustful and more pathetic figure in the woman's eyes than in the man's.

If Mr. Bennett has an obsession, if there is a really morbid streak in the texture of his fancy, it shows itself in the insistent delineation of types of age and decay. That was what chiefly distressed many sensitive readers in "The Old Wives' Tale"; and the dissolution of the elder Clayhanger was unsparingly rehearsed, in all its slow and dreary stages. Wasting and helpless age is again figured in "Hilda Lessways." Sarah Gailey, to be sure, is not much past middle life; but when we are first introduced to her, she has fought her fight and set foot upon the downward road of years. The attempt at suicide which Hilda frustrates is a less disheartening proof of her hopelessness and uselessness than the story of prolonged invalidism which follows. At that moment, indeed, poor Sarah Gailey attains her highest power of self-expression. Hilda does not judge her adversely: "She had a feeling that she ought to apologize profoundly to Sarah Gailey for all that Sarah must have suffered. And as she heard the ceaseless, cruel play of the water amid the dark jungle of ironwork under the pier, and the soft creepings of the foam-curves behind, and the vague stirrings of the

Digitized by Google

night-wind round about—these phenomena combined mysteriously with the immensity of the dome above and with the baffling strangeness of the town, and with the grandeur of the beaten woman by her side; and communicated to Hilda a thrill that was divine in its unexampled poignancy." Hilda is always being thrilled. That harsh and angular manner which so puzzled Clayhanger did not actually repel him, because of the obscurely felt presence of extreme sensibility beneath it. We learn all about it now from the inside: how the world enchanted the vivid nature, how an experience beckoned, how the least promising incident might be invested with romance by her eager fancy. And here, of course, we find the key to her strange desertion of Clayhanger, in the first hour of their triumphant love. It is all perfectly natural and inevitable, since Hilda is what she is. The narrative brings us only to that moment of renunciation, which seems to Clayhanger a moment of betrayal. That is, it brings us only half-way through "Clayhanger," reckoning the length of the record, and far from half-way in point of time. Mr. Bennett has, after all, fallen considerably short of his promise to print a novel this year "dealing with the history of Hilda Lessways up to the day of her marriage with Edwin." It is perhaps as well that this change of plan has been made. We have surely a clear enough notion as to what those sordid and heart-breaking years in the Brighton boarding-house must have been to the dauntless Hilda. But we are glad of the assurance of a note appended to the present volume that the later history of Edwin and Hilda is to form the theme of another novel. May fate have permitted them happiness: it is certain that Mr. Bennett can have had nothing to do with it!

Initials Only. By Anna Katharine Green. New York: Dodd, Mead & Co.

Mrs. Rohlfs's latest story is distinguished by the small number of people involved and by the consequent narrowing and intensifying of interest upon the criminal and the detective, the latter being our old friend Sweetwater, acting under the aid of our older friend Gryce. Outside of her skill in weaving a plot Mrs. Rohlfs has few of the novelist's virtues, and her attempt in the first part of this book to narrate events at second-hand through the mouth of a woman who has nothing to do with the plot is extremely awkward. However, this useless device is soon dropped, and the rest of the story proceeds naturally to its ruthless end. In no other of her stories has she presented a stronger character than the Orlando Brotherson, who is hounded by the relentless Sweetwater, and his character is not extraneous to the plot but essentially involved. There is a bit of unfairness in the climax, which does not come—as it should come in the legitimate detective story—from the direct game of pursuit and evasion.

The House of the Seven Gabblers. By Nina Larrey Duryea. New York: D. Appleton & Co.

A frothy literary confection of the sort that melts in the mouth somewhat inconsequentially bears the above title. Put together into a commodious French château, with plenty of provisions, one small boy and six women, including one American portrait-painting spinster, one American mother—"*riche, jeune, et veuve*," one spirituelle New Englander, and one French maid of smart appearance and exceedingly tender heart. As soon as these begin to settle, add immediately a prepossessing English diplomat, and stir gently. Next introduce a bourgeoise French family, containing a gorgon mother and a crippled lad. Follow by a dash of burglary and a carefully selected Italian patriot-in-exile. Lastly add with a few light strokes several drops each of honorable punctilio and charitable persuasion and a pinch of masculine self-esteem. If correctly mixed, this will make three excellent matches.

IN THE FAR SOUTH.

The Voyage of the "Why Not" in the Antarctic: The Journal of the Second French South Polar Expedition. By Dr. Jean Charcot. English Version by Philip Walsh. With numerous illustrations from photographs. New York: George H. Doran Co. $5 net.

Dr. Charcot's aim in the voyage described in this volume was to continue in fuller detail the work begun in 1903-1905 in the mountainous region south of Cape Horn, which is known vaguely to geographers as Graham Land and which was first sighted, so far as we have reliable evidence, by the English sealing captain, John Biscoe, in 1832. In this region there was, of course, no intention of attempting any spectacular high latitude record. During the winter of 1909, passed at Petermann Island, an expedition southward into the interior of Graham Land was planned, and a detachment of the party spent some days in searching for a route past or over an interposing mountain, but the failure to find a passage, with other difficulties, led finally to the abandonment of the project. The work actually done was almost wholly between the sixty-fifth and seventieth parallels, and the most serious discomfort was suffered not from extremely low temperature, but from the repeated rain and snow storms from the northeast.

Dr. Charcot's vessel was, of course, carefully built for vigorous fighting with the ice, but as the aim was to gather scientific information, and not a "dash for the pole," its outfit was quite different from that of which we have been accustomed to read in the literature of recent northern exploration. As there was no necessity for any counterpart to Peary's numerous Eskimos and sledge-dogs, with tons of decaying whale meat for their subsistence, the deck of the Pourquoi-Pas was duly subject to its master's passion for cleanliness and order. The ship was carefully planned for the comfort of its staff and crew alike. Each of the staff had his individual cabin. Four separate laboratories, for various branches of scientific investigation, were fitted up in convenient parts of the vessel, and a library of about 3,000 volumes was housed in cases in the ward-room and on shelves in the adjoining cabins of the members of the staff. While it was largely scientific, we learn that it was selected on no narrow basis, though Dr. Charcot thought it unnecessary, for the public's peace of mind, for him to say exactly of what volumes the library consisted, or whether or no they were bound in pigskin.

A new feature in high latitude exploration was the extent to which the electric light was brought into service. When the thickening ice had finally bound the vessel fast for the winter, at Petermann Island, and the various observatories for the collection of scientific data had been set up at convenient points on the shore, wires were strung to them all on poles of bamboo and a complete system of electric lighting was immediately installed. The bearings of the motor gave out, but new bearings were at once cast by the handy mechanician of the staff, from a discarded screw of the picket-boat, and the lights shone on, to the great comfort and advantage of all concerned. M. Borgrain, the astronomer of the staff, even rigged up mechanism for the electrical transmission of time from the vessel to the transit instrument, thus avoiding the trouble and risk of moving the chronometers. It is evident that Dr. Charcot picked his staff with an eye to just this stamp of practical resourcefulness.

The party met with no fatalities, though the commander himself, with one or two of his staff, suffered considerably from an excessive diet of preserved foods. On this point he has made a number of interesting observations. The so-called Polar anæmias of recent explorers are all, he thinks, maladies essentially allied to the old-time scurvy. The ulcerated gums and black spots which constituted the most frequently noted symptoms of former days were the particular products of the salted meats so much employed before modern devices of food preservation came into vogue. Œdema of the lower limbs and myocarditis are the most noticeable effects of the latter. A rapid and infallible cure was found in the temporary

Digitized by Google

substitution of seal's meat for all preserved foods. There was evidence, however, that carefully selected preserved foods would not ordinarily give trouble. The illness from this source was all among the staff, the crew remaining immune. Now the crew partook only of the stores carefully chosen from the best houses by Dr. Charcot himself, while the table of the staff was supplied with extras, coming mostly from presents given by friends to individual members when the expedition embarked, and so not subject to the same scrutiny. The snow-ophthalmia, so painful in high latitudes and so inimical to accuracy of scientific observation, was wholly avoided through the use of yellow glasses. These have an additional advantage in that they give a more cheerful aspect to the scene than the sombre smoked glasses in common use, and thus help to keep up the spirits of the men.

The present volume is, of course, directed to the general reader, and does not attempt to set forth the more technical scientific results of the expedition. Geographically, future maps and charts of the land regions south of Cape Horn will gain much in definiteness of the northern margin, and a certain amount of land never before sighted, so far as is known, must be set down to Dr. Charcot's credit. As to the English form in which the story is presented, there is now and then an expression which strongly suggests that the translator may not have done entire justice to his text, but the latter is not at hand for comparison. The book is good to the eye in its physical make-up, yet carries the all too common burden of an incomplete index.

Original Records of Early Nonconformity under Persecution and Indulgence. Transcribed and edited by Prof. G. Lyon Turner. London: T. Fisher Unwin. Two volumes.

These two massive volumes contain an accurate, painstaking collection, carefully summarized and indexed, of hitherto unpublished documents concerning the Nonconformists in England between 1662 and 1676, and will prove indispensable as a book of reference to the specialist on this period, or to the student of the history of Nonconformity in any particular locality. One can see at a glance that the book is not intended for the average reader, who will doubtless thank Professor Turner for his honesty in not attempting to dress up his material in more attractive garb with a view to inducing purchase by the unwary.

The documents here printed are of two sorts: Episcopal Returns made by order of Archbishop Sheldon in 1665, 1669, and 1676, and preserved in the Lambeth Palace Library, and so-called License Documents, preserved in the Public Record Office, and calendared, along with other material, in the Domestic Calendar for Charles II. The Episcopal Returns present us with a picture of the despised and persecuted Nonconformists, sketched by the hand of their foes. With constantly increasing accuracy and fulness they report the number of the conventicles in each diocese, the places where they were held, and the "quality" of the persons attending them: the report of 1676 gives a complete religious census of every parish in England and Wales. By them the enforcement of the great persecuting acts of 1662-65 was made possible. The License Documents, on the other hand, give us information about the numbers, strength, and policy of the Nonconformists, furnished incidentally and unintentionally by themselves. Most of them are applications for licenses during the eleven months of "liberty" granted under the Declaration of Indulgence of March, 1672, and addresses of thanks for licenses already procured; others cast an interesting light on the exact forms licenses were to take, the precise methods of administering them, the question of charging fees, etc., etc. These different documents fill the whole of Volume I.

Professor Turner has not been content with mere transcription of this valuable material. Realizing the hopelessness of searching through such a chaos of names and places for any specific piece of information without some trustworthy guide, he has undertaken the arduous and thankless task of making out a classified summary of the various entries. This is arranged according to counties and towns, each county list being subdivided into four sections according to denomination — Presbyterian, Congregational, Baptist, and Quaker—and every entry furnished with a reference to the original text. This elaborate summary occupies no less than 596 pages, and it is followed by three alphabetical indexes of places, of teachers, and of householders, abettors, signatories of petitions, license agents, etc. Volume II is, in fact, entirely composed of implements to facilitate the handling of the material in Volume I, whose value to scholars is at least doubled thereby.

We have already stated that Professor Turner has produced a book which is to be studied and referred to, but not read. He now knows the material he has made accessible better than any other living man, and is therefore the person best fitted to summarize it in compact, readable form. As his modesty has not permitted him to preface his work with the introduction which usually accompanies a collection of material of this kind, may we not venture to hope that he will embody the result of his elaborate researches in a separate monograph.

Anglo-American Memories. By George W. Smalley. New York: G. P. Putnam's Sons. $2.50 net.

Mr. Smalley was born in Franklin, Mass., in 1833; graduated at Yale in 1853; read law at the Harvard Law School and in the office of George F. Hoar in Worcester; practised in Boston until 1861; drifted into journalism as a war correspondent; became an editorial writer on the New York *Tribune;* was sent by that journal to London in 1866 and remained there as its correspondent until 1895, when he returned to New York and served the London *Times* until 1905. These data are necessary to explain the wide range of Mr. Smalley's recollections.

More than one-third of his volume is devoted to his youth in America, and this section we find not only the more interesting, but the more important. His account of the Calvinistic rigidity of Yale under President Woolsey (to whom he gives the name of the English drawing-room hero, Wolseley), his sketches of Webster and R. H. Dana, his anti-slavery experiences in Boston, and especially his chapters on Wendell Phillips, contain many excellent touches. With Phillips he seems to have been intimate: for he was one of that implacable Abolitionist's body-guard against the attacks of Boston's broad-cloth mob, and he it was, as we infer from his statements, who persuaded Phillips to "come out" for the Union in his famous speech at the beginning of the civil war. During the earlier campaigns of the war itself, Mr. Smalley had the good fortune to be in several critical affairs, not all of which were fought on the battlefield. He seems, to judge by his own account, to have had an unusual influence on Gen. Hooker and others; we say unusual, because military commanders are not in the habit of confiding in civilians whom they meet for the first time. His too brief mention of Horace Greeley's pluck during the draft riots makes us regret that he has so little to say about that unique figure in American journalism whom he certainly knew well.

Next to these matters, we find Mr Smalley's description of the technical side of his London editorial work most entertaining. He sent the first news dispatch by cable in July, 1866, at a cost of twenty shillings a word, thereby initiating what has grown into the unabridged cable correspondence of our time. Most exciting is his account of Holt White's dash from Sedan to London, one of the greatest exploits in war correspondence annals, which enabled the *Tribune* to outstrip even the great London dailies. A more systematic narrative of the business side of Mr. Smalley's earlier years as manager of the *Tribune's* London bureau would be of permanent value to historians.

When it comes to the sketches of the

Digitized by Google

celebrities unto the third and fourth magnitude, of whom Mr. Smalley writes with that familiarity which is part of the kit of the successful journalist, we know not where to choose. Most momentous ought to be the report of his interview with Bismarck just after Sadowa. The Count, he says, told him unreservedly all his secrets, matters of such tremendous import that even now, forty-five years later, when Bismarck and William are dead, and no revelation that might be made concerning Prussian ambitions in 1866 could cause a tremor in any foreign office—even now Mr. Smalley thinks that he ought to keep silent. Either Mr. Smalley is devoid of a sense of humor, or he is blessed with *naïveté* impervious to the wear-and-tear of fifty years' experience in the least *naïf* of callings, if he imagines that, in July, 1866, Bismarck imparted to him, an American journalist whom he had never seen before, secrets which he never intended to be published. This habit of reserve proves tantalizing in other instances, where, just as Mr. Smalley seems to be on the point of revealing something of real importance, he remarks that, of course, he is not at liberty to divulge, etc. While such reticence is honorable, if imposed by Mr. Smalley's confidants, it throws a damper on a book of memories like this, and makes the reader feel like a child who is told to run away and play, while its elders exchange confidences. The obvious deduction is that Mr. Smalley was a very important personage, whom sovereigns, ministers, ecclesiastics, generals, and mere poets and novelists consulted at every step of their work; why, then, we ask, are we not vouchsafed more news of his Olympian confabulations?

Probably this "I could an I would" tone, or the attitude of best friend to celebrities, grows unconsciously on successful correspondents like Mr. Smalley until it becomes a second nature. The need, too, of filling a given space in cable letters must account for the spreading thin of some of his material. The further knowledge that what he wrote would be read by the persons whom he wrote about, cannot fail to have hampered his spontaneity. Hence, the two best portrait sketches are of Lord Randolph Churchill and King Edward, written after their death. And yet, although there is nothing really startling or historically important in Mr. Smalley's English memories, he interjects many anecdotes and personal bits which enliven his pages and help to give a stranger an idea of the externals of British society. Let us hope that he will empower his literary executors to publish the revelations of great historical importance, which he himself deems it necessary to withhold. At his best, he writes so easily that one reads him with pleasure. He often reminds us of the late Dr. E. E. Hale, whose flow of reminiscence was so entertaining that the question of accuracy never troubled his listeners.

Queen Margot. By H. Noel Williams. New York: Chas. Scribner's Sons. $2.

Differing somewhat from the tone of the most recent foreign studies—the "Marguerite de Valois, Reine de France et de Navarre," by Count Léo de Saint-Poncy, her admirer and champion, or the delightful chapters upon her by La Ferrière in his "Trois Amoureuses au xvi siècle"—Mr. Williams's book is notable for its sobriety of style and detail. He evidently intends to be unenthusiastically impartial. No personal deductions or opinions are hazarded: he is neither psychologically nor controversially inclined. Indeed, one sometimes wishes that he were more so, and that after having chosen to place upon the title-page Guizot's pertinent "Voulez-vous du roman: que ne vous adressez-vous à l'histoire?" he had consented to see in those words something more than a gentle reminder as to how history should usually not be written.

Whether we may accept or not the details alleged by the pamphleteers of the sixteenth century, Marguerite's position with posterity is now fixed. She was, and for the great majority must remain, one of the *grandes amoureuses* of French history. To treat her otherwise is, probably, to take grave chances. Her every charm, the causes of her successes and her failure, are to be found in the fact that she was "d'une complexion trop ardente pour ne pas céder à la tentation," as even Saint-Poncy hastens to admit. This point of temperament is all important, especially in forming opinions upon a woman of the Renaissance. One may well refuse to palliate much in the private life of Henry IV, but for the historian-psychologist not to study certain of the qualities which the moralist may at once censure is to ignore wittingly in no small part that which paved the way for his public career and ultimate national success. So in the case of Marguerite. For no matter what reproaches may be spoken against her, we know that in addition to her matchless beauty she was also possessed of a rare *savoir vivre* and of that something which made her *sympathique* to all who came in contact with her—to all except her husband and her brother, Charles IX. In fact, she seems upon this score —and other analogies are not lacking— to suggest the late Queen Isabella II of Spain.

The author's task, then, is not an easy one. From a group of world-famous, strongly-marked characters, from beside her mother, Catherine de' Medici, and her brothers, the three Kings of France, along with the dukes de Guise, the Admiral, Henry of Navarre, and the leaders of the French Reform, he has singled out for intimate consideration a woman whose political influence was almost nil and whose domestic life was a failure. Mere facts, of course, do not suffice to make one feel the romance—for much romance there surely was—in that life and its influence on others. In such a study there needs to be, in addition to a certain infusion of the spirit of the epoch, a strong suggestion of the woman's subtle charm, of her insidious magnetism, the whole expressed with a delicacy of connotation which shall make the reader of to-day feel what made Henry's repudiated wife dear to a whole people as their Reine Margot. This, as we understand it, is the task which Mr. Williams set before himself.

Notes

Scribners' list for October includes "The Early Literary Career of Robert Browning," by Prof. T. R. Lounsbury.

In fiction, the Scribners will publish in October two volumes of short stories, "Interventions," by Georgia W. Pangborn, and "Ship's Company," by W. W. Jacobs; Edith Wharton's "Ethan Frome"; Maurice Hewlett's "Song of Renny."

Books promised this week by Houghton Mifflin Company include: "In the Shadow of Islam," by Demetra Vaka; a holiday edition of "Hiawatha"; "The Dutch Twins," by Lucy Fitch Perkins; "The One-Footed Fairy, and Other Stories," by Alice Brown; "Pay Day," by C. Hanford Henderson; "Letters of Sarah Orne Jewett," edited by Mrs. James T. Fields; "Ebenezer Rockwood Hoar," by Moorfield Storey and Edward W. Emerson; "Walter Pater," by Ferris Greenslet, new edition; limp leather editions of Longfellow's "The Hanging of the Crane," Lowell's "The Vision of Sir Launfal," Whittier's "Snowbound."

The same house states that the title of Mary Johnston's new book, in which she completes the history of the civil war, will be "Cease Firing."

"Adrian Savage," by Lucas Malet; "The Fair Irish Maid," by Justin Huntly McCarthy; "Old Ben," by James Otis, and "Where the Money Grows," by Garet Garett, are announced for immediate publication by Harpers.

Jeffery Farnol, author of "The Broad Highway," will publish, first serially in *McClure's Magazine* and later through Little, Brown & Co., his new novel, "The Amateur Gentleman."

Mr. Huebsch has procured the services of Ludwig Lewisohn to translate Sudermann's "The Indian Lily."

Messrs. Jack of London are publishing their £200 prize story for boys. It is a tale of the modern British navy, entitled "Contraband Tommy," by Charles Gleig, late lieutenant of the royal navy.

Among the new books to be issued by Paul Elder & Co. of San Francisco are the following: "Tony's White Room," by Winifred Rich; "Recipe for a Happy Life," the

Digitized by Google

royal recipe by Margaret of Navarre, amplified by selections from other writers, by Marie West King; "Good Things," by Isabel Goodhue, and in the Berkeley series: Mrs. Browning's "Sonnets from the Portuguese," "The Rubaiyat of Omar Khayyam," and "Abelard and Heloise," a poetical rendering of the love-letters by Ella Costillo Bennett.

The publications of the Baker & Taylor Co. for this autumn include in fiction: "Concerning Himself" and "Off the Main Road," both by Victor L. Whitechurch; "The Third Miss Wenderby," by Mabel Barnes-Grundy; "The Soundless Tide," by F. R. Crichton; "Ember Light," by Roy Rolfe Gilson; "The Long Green Road," by Sarah P. McLean Greene; "The Hand of Diane," by Percy J. Hartley; "Where the Shamrock Grows," by George H. Jessop, and "Carey of St. Ursula's," by Jane Brewster Reid.—In poetry: "Songs of Courage," by Bertha Gordon; "Hard Labor and Other Poems," by John Carter; "Summer of Love," by Joyce Kilmer, and "The Book of Scottish Poetry," by Sir George Douglas, Bart.—Holiday books: "The Poets' New England," by Helen A. Clarke, "Loves of the Poets," by Richard Le Gallienne, and the centennial edition of Forster's "Life of Dickens," containing 500 illustrations.—Juveniles: "A Child's Guide to Living Things," by Edwin Tenney Brewster; "Child's Guide to the Bible," by George Hodges, D.D.; "Alice in Wonderland," by Lewis Carroll; "Little Folks' Books of Verse," by Clifton Johnson, and "Mother Goose," a new edition, edited by Clifton Johnson.—Miscellaneous: "The Women of To-morrow," by William Hard; "The Song Lore of Ireland," by Redfern Mason; "The Paracelsus of Robert Browning," by Christina P. Denison; "The French Blood in America," by Lucian J. Fosdick; "The Etiquette of Correspondence," by Helen T. Gavit; "The Life of David C. Broderick, a Senator of the Fifties," by Jeremiah Lynch; "The Annexation of Texas," by Justin H. Smith; "Corpus Christi Pageants in England," by Lyle M. Spencer; "Verse and Worse," by Jack Hazzard, and "A Tour and a Romance," by Alice E. Robbins.

Henry C. Shelley, the English author and critic, undertakes, in a new book published by L. C. Page & Co., to tell the story of "The British Museum: Its History and Treasures."

Among forthcoming books of the Broadway Publishing Company are: "A Blood-Moon and Other Tales of Divorce," by Irene Osgood; "Abroad with the Boys," by Frances R. Wellens: "Southern Symphonies," by Cordie Webb Ingram; "A Romance Under Western Skies," by Louise Haynes Moorer; "Mentor," by F. Derichmont; "The Women of the Iliad," by Hugh Woodruff Taylor; "The Answering Message and Other Naval Stories," by Rush M. Hoag, and "Christ All and in All," by the Rev. W. Letterman Smith.

A study of the characters of Pascal, Lamartine, Fénelon, and Buffon has been made by Madame Duclaux; Chapman & Hall will be the publisher.

Prof. Alexander Souter of Mansfield College, Oxford, will succeed Sir W. M. Ramsay as regius professor of humanity in the University of Aberdeen.

The *Hibbert Journal*, with the current October issue, enters upon its tenth year. Among the contents of this decennial number we note: "Creative Evolution and Philosophic Doubt," by Arthur J. Balfour; "Life and Consciousness," by Henri Bergson; "The Ethics of Labor Movements," by Prof. Henry Jones of the University of Glasgow; "The Religious Philosophy of William James," by Prof. James Bissett Pratt; "A Psychologist Among the Saints," by Prof. L. P. Jacks of Oxford, and "Another Appeal to English Gentlemen," by the Rev. Winnington Ingram, Bishop of London.

Crowell has brought out the tales of Edgar Allan Poe in a convenient reprint, the usual three volumes being bound together.

William Blake's "Songs of Innocence" has come to us from the press of Dana Estes & Co. of Boston, in an edition of rough, thick pages, with wide, designed margins. There are twelve full-page colored plates by Honor C. Appleton and a short biographical preface by Thomas Seccombe.

"The Good Old Times" (Brentano's), by Frederick W. Hackwood, is mainly a record of Pauperism in England from the Middle Ages to the present. Mixed up with a serious history of humble life and of the various laws and charities dealing with the outcast and disabled, there are many amusing anecdotes and picturesque descriptions from literary sources.

In a new edition of his "Amazing Duchess" (Brentano's) Charles E. Pearce has taken the opportunity to correct a few errors of detail and to add several pictures. These two volumes devoted to the scandalous Miss Chudleigh may seem long drawn out, and they do contain a fair share of that sentimental sort of supposition which is becoming more and more the bane of English biography; but they include also a large amount of amusing details concerning the manner of life and the society through which the heroine picked her precarious way.

"A History of Wales from the Earliest Times to the Edwardian Conquest" (Longmans, Green), by John Edward Lloyd, 2 vols., is a substantial and scholarly work which will take its place at once among valuable books of reference, and it ought also to receive, to a considerable extent, the attention of the general reader. For it deals, in a comprehensive way, with subjects of much interest to the whole English-speaking public. The early chapters on archæology and ethnology, on Britain under the Romans, the Saxon Conquest, and the Celtic church, have direct bearing on the beginnings of English history; and Mr. Lloyd presents an excellent new survey of the results of the extensive investigations made in these fields in recent years. Then the story of the later struggle of the Welsh for independence—unsuccessful, so far as political freedom is concerned, but permanently significant for the development of national life and character—cannot fail to interest any one who reflects on the perpetual problems of race mixture or subjugation. The narrative, too, has no lack of interest on the side of romance and personal adventure, and the author, without sacrifice of the proper austerity of the historian, has given these elements due recognition. His characterizations of the national heroes of mediæval Wales are vivid and enthusiastic, without being uncritical. His style, while it lacks the positive qualities which command or induce attention, is nevertheless adequate and agreeable. If his work fails to be extensively read, as distinguished from being studied or consulted, this may be partly because of the formidable mass of details of which much of the narrative consists, and partly because of the space occupied with technical discussions. The former difficulty was scarcely avoidable, though the reader might perhaps have received more guidance and stimulus in the way of general comment. With regard to the analyses of sources and the discussion of disputed questions, perhaps Mr. Lloyd would have done well to follow the example of Professor Bury's "Life of St. Patrick," an admirable piece of historiography in a similar field, where such matters are consigned to appendixes and the general narrative is left unencumbered. Mr. Lloyd has to some extent adopted the same method, but much of what he has kept in his text is primarily of professional interest.

Bertrand Russell's volume of "Philosophical Essays" (Longmans) opens with a sixty-page outline of an ethical doctrine, which expresses with the utmost clearness, simplicity, and concision the views of an interesting and vigorous new school of moralists, represented in England (with minor variations) by G. E. Moore and Rashdall, as well as Russell, and in America (with some noteworthy enrichments of the theory) by R. B. Perry. The doctrine has shown a certain natural affinity to the contemporary tendency toward realism in metaphysics. Mr. Russell holds that the idea of "good" is an ultimate and irreducible notion, not identical with "the pleasurable" or "the desired" or "that which contributes to self-realization," though these all may be species or concomitants of good. To predicate good of anything is to intend to assert an objective fact, to ascribe to the thing a real quality; thus the moral judgment is never merely a description of the relation of its object to the present or future feelings or attitudes of the agent. Mr. Russell, therefore (in common with all of the school), offers a dialectical refutation of both egoism and psychological hedonism; and defines "rightness" in conduct as action conducive to the realization of the greatest sum of "objective good." In declining to give any really definite qualitative account of the nature of the good, and in asserting that there is no single sort of experience that is to be called good, but rather a heterogeneous manifold of goods, this school of ethical theory seems either to leave the settlement of practical moral issues to the personal tastes of the theorist, or else to abandon the pretension to give any positive moral guidance. Mr. Russell comes near to the latter alternative when he refuses to "give a list of the principal goods and evils" on the ground that his reader is probably as capable as he "of judging what things are good and bad." The greater part of the rest of the volume is devoted to a criticism of pragmatism, which is not sympathetic or altogether just, yet will be found clarifying by all interested in that doctrine. The most striking thing in the book is the brief essay entitled, "The Free Man's Worship"; here Mr. Russell, who has commonly written in a style of colorless clar-

Digitized by Google

ity upon the impersonal issues of logic, permits himself to give expression to his religious philosophy, and in moving and eloquent words sets forth the pieties and the consolations that remain to one who, without reservations or illusions, faces the bleak perspectives of "the world, alien, and inhuman, which science presents for our belief."

That a dictionary of Lowland Scotch which excludes pronunciations, etymologies, and statements of locality, and contains few phrases, should yet run to 717 tolerably closely printed pages, testifies to its fulness in other particulars. Alexander Warrack, in his "Scots Dialect Dictionary" (Edinburgh: W. & R. Chambers), has endeavored to cover the words in use from the latter part of the seventeenth century to the present day, and has certainly given us a good clue to all kailyard novels and the like. To the book is prefixed an excellent historical and phonetic sketch of the dialects by William Grant, with a dialect map. The laborious researches of Ellis, Murray, and Wright are evidently bearing fruit and are now being recast into popular form.

A new volume in the International Critical Commentary is always welcome, especially an Old Testament volume. The latest issue, "First Epistle of St. Paul to the Corinthians" (Scribner), comes from the scholarly hands of Archibald Robertson, the lord bishop of Exeter, and Alfred Plummer, one of the general editors of the series for Great Britain. The merits of this edition are similar to those of Plummer on Luke and Sanday on Romans in the same series—careful treatment of questions of philology and textual criticism, logical exegesis, caution in mooted points of history and theology, and restraint in reference to problems of comparative religion. This volume may be supplemented with advantage by that of J. Weiss in the Meyer series.

In a well-known passage, Eusebius observes that Tatian formed a "certain combination and collection of the Gospels, I know not how, to which he gave the title 'Diatessaron,' and which is still in the hands of some." In 1888, Ciasca edited an Arabic version of Tatian's work, adding a Latin translation of the same and prefixing a brief but scholarly introduction. On the basis of this edition, J. Hamlyn Hill in 1894 published a volume, comprising an introduction, an English translation of the 'Diatessaron,' and a number of useful appendices, of which the present volume, "The Earliest Life of Christ" (Scribner), is a second and abridged edition. The introduction is abbreviated; there are no appendices; but the translation remains in a handy form for the use of the general reader. The only other English translation of which we are aware is the literal version made from the Arabic by H. W. Hogg and published in 1896 in Vol. IX of the Ante-Nicene Fathers.

The period covered by the fourth volume of the Acts of the Privy Council, Colonial Series, 1745-1766, was a time when military activities assumed large proportions in colonial history. Mr. Munro, now sole editor and the successor of his colleague, Mr. Grant, as Beit lecturer in colonial history in the University of Oxford, says in his preface that half of the twenty-one years included were years of peace. In a formal sense, this statement is true, but at most the peace from 1749 to 1753 was official only. To the colonist there was war in the air. The Indian attacks, the attempts of the French to recover Louisburg, the movements from Canada into the Mississippi and Ohio valleys, prolonged the agitation, and in consequence we may rightly speak of continuous war for nearly eighteen years. Yet it is rather surprising that the records of the council, here printed, show few traces of external strain and tension, and scarcely notice the epoch-marking movement which was giving shape to the empire. Nevertheless, these entries from the register, which relate so largely to the disallowance of colonial acts, the hearing of colonial appeals, and the issuing of royal instructions to the Governors, are of great interest and value, because they concern the administrative and legal aspects of colonial control. The council was attempting to overhaul the existing machinery, but the effort was too late for success, and the object sought was rather the remedying of details than the reconstruction of the system. It is a noteworthy fact that this is the only volume of official records issued by the British government that treats of the period from 1745 to 1760. The Calendar of Treasury Papers closes with 1745, and the Calendar of Home Office Papers begins with 1760. For this reason, as for other reasons, it possesses unusual interest for the historian.

One of the best of the books descriptive of the situation in the new Turkey which have sprung up so profusely of late is Lucy M. Garnett's "Turkey of the Ottomans" (Scribner). Miss Garnett, already well known for her folk-lore studies in the Balkans, has an entirely competent familiarity with the farrago of peoples with which she has to deal, though—despite the series-made title—they are very largely neither Turks nor Ottomans. She maintains among them a remarkable impartiality if also a somewhat British attitude. Yet if she minimizes American work in Turkey, many American writers speak of nothing else. She is evidently not an Orientalist in the technical sense, being rather a Hellenist, and no one need turn to her for book-knowledge of Islam, but for the people she understands. So her account is attractive and faithful. The more pity that there are so many misprints and exactly where they will do mischief—in proper names and foreign words. Apparently no one who knew even the Greek alphabet read the proofs.

Rear-Admiral Winfield Scott Schley, retired, died suddenly in New York on Monday. He was born near Frederick City, Md., in 1839. He graduated from the United States Naval Academy at the head of his class in 1860, and the same year was appointed midshipman. He was commissioned lieutenant in 1862, and served commendably in Southern waters. As the head of a relief expedition, he rescued Greely and six survivors at Cape Sabine, receiving for this undertaking a gold medal from Congress. In 1898 he was the senior officer at Santiago when the naval battle occurred. Admiral Schley was the author of two books: "The Rescue of Greely" and "Forty-five Years Under the Flag."

After an illness of several weeks, John Bascom, professor emeritus of political economy at Williams College, died at his home in Williamstown, Mass., last Monday night, aged eighty-four. Born in Genoa, N. Y., the son of the Rev. John Bascom, he graduated from Williams in 1849. He was made professor of rhetoric at his alma mater in 1875, and from 1891 until 1901 was professor of political economy. For four years before joining the faculty at Williams, he was president of the University of Wisconsin. He was the author of many works on economic and philosophic subjects, among which we note: "Historical Interpretation of Philosophy," "Social Theory," "Evolution and Religion," and "Growth of Nationality in the United States."

The death is reported of the French journalist and author, Louis Nemours-Godré, aged sixty-four. He was on the staff of the *Univers*, and was editor of *La France Illustre*, and wrote several books, among them, "Daniel O'Connell, sa vie, son œuvre," "Roman d'artiste," "Les Cyniques," and "La France à Madagascar."

Science

Hereward Carrington is publishing through Harpers a translation of Theodore Flournoy's "Spiritism and Psychology."

The *Geographical Journal* for September contains an account by Capt. C. G. Rawling of some explorations in Dutch New Guinea, the most noteworthy result of which was the discovery of a hitherto unknown race of pygmies. It was also discovered that the great range of snow-peaks in the interior terminated in "one immense unbroken precipice," the greatest perpendicular height being "not less than 10,500 feet or two miles." P. A. Talbot tells of a recent expedition across Lake Chad, and Prof. Nordenskjöld gives some account of the scientific results of the Swedish Antarctic expedition. From the observations it appears that the summers in this region are "beyond comparison, the coldest in the world"; the mean temperature for the three summer months at the station was 28 degrees Fahrenheit, "consequently almost as cold as Stockholm in winter."

To have reached a fifth edition besides passing through a dozen reprintings in the course of sixteen years should seem to make quite superfluous any extended notice of Dr. J. P. Crozer Griffith's "Care of the Baby" (W. B. Saunders Company). The book is unchanged in size, but gives abundant evidence of careful and judicious revision. We still think that the directions for milk-mixing are rather too complicated for the average mother, and believe that simpler rules may be devised without risk to any baby not in need of expert medical supervision.

The present (third) edition of R. C. Punnett's "Mendelism" (Macmillan) is virtually a new treatise, to such an extent has it been enlarged and recast. Like its predecessors, it is necessarily only an outline sketch of a vast domain. But the outlines are well-defined, and the little treatise is a substantial contribution from one of the most active laboratories of genetics, presented in a readable and attractive form. By genetics

Digitized by Google

is meant the experimental investigation of variation and heredity in the animal and vegetable kingdoms, with the view of ascertaining their laws. Professor Punnett also invades the important neighboring field of eugenics, the new science which is concerned with the possible application of these laws to the improvement of the human race. It is interesting to note that this field of research was approached on the neglected side of varieties. The unit of classification in natural history is the species, and hence variations in it, the so-called varieties, have long held only a subordinate place in systematic works on zoölogy and botany. Here and there, some thinkers had recognized their significance, and, like Lamarck, had seen in them the promise of species. And when Darwin and Wallace made their fruitful suggestion as to the bearing of variation on the origination of species, new fields of investigation were opened up in all directions. The neglected variety began to assume an entirely new importance; and after exact measurements were undertaken, accurate counts made, and the minutest variations noted, it became apparent that a new era had dawned. Oddly enough, however, it was found in 1900 that as early as 1865 an obscure priest in a monastery-garden had carried on a series of experiments in crossing plant-varieties and had published his conclusions. To those who wish to acquaint themselves with the chief features of these new sciences, genetics and eugenics, this convenient treatise can be confidently recommended. Parts of it are too condensed and the facts are too briefly stated, but an attentive reader can make his way successfully through all the pages.

To the series of Oxford Geographies, edited by Prof. A. J. Herbertson, is now added "Australia, Physiographic and Economic" (Clarendon Press), by Griffith Taylor. It belongs in the class of very modern books in which a continental area is regarded as the end-product of a long geological development. Mountain ranges, deserts, embayments, and promontories, all have their past as well as their present, and all may be viewed in both lights as influencing human habitation and industry. The book is divided into two parts, a physiographic and an economic. In the first part the physical features are passed in review, and are so clearly described that a reader gains an excellent general grasp of the island continent. At the close New South Wales receives special description not granted to the other states. In the second part, which is constantly explained by the aid of the first, the following industries are described: Stock-raising, agriculture, mining, less important industries, and transport. The subjects are briefly but clearly summarized, and the dependence of nearly all upon the rainfall is convincingly shown. A forecast of Australia's future growth concludes the work. Small sketch maps are freely used in illustration, but for a reader not familiar in a detailed way with Australia, a good general map of size equal to one or two pages of the book, would have been a useful addition.

Dr. Frederick William Pavy, F.R.S., who died a fortnight since, was the leading European authority a half century ago on diabetes. He was born in 1829 and was president of several medical societies.

The death is announced, at the age of fifty-eight, of Dr. Karl Waitz, professor of astronomy in the University of Tübingen.

Gen. Charles Frederick Manderson of Omaha, who died last week on his way home from Europe, had been a Republican United States Senator from Nebraska from 1883 to 1895. Born in 1837, he fought in the civil war, was a member of the bar, and interested himself in scientific subjects, being associated with the National Geographical Society. His only book is entitled, "Twin Seven Shooters."

The Rev. Mariam Balcells, S.J., professor of mathematics at Boston College and an astronomer of note, died at the Carney Hospital in Boston on Monday. He was a native of Tarragona, Spain. He was educated as an engineer. For a time he was connected with the Spanish Geological Survey. He built, as engineering director, the well-known observatory of the Ebro, and later he was director of solar physics at the same observatory. In this chair he introduced into Spain the study of the solar chromosphere by means of the spectrograph. In collaboration with Father Civera he made some discoveries concerning the relations between solar activity and terrestrial magnetism.

Drama

The latest addition to the Plays of To-day and To-morrow (Duffield) is the "Lady Patricia" of Rudolf Besier, which has had a very long and prosperous run in London. In dramatic quality and weight of purport it is altogether inferior to the same author's extremely clever comedy "Don," being essentially nothing more than fantastic farce; but it is written in a facile vein of comic and satirical exaggeration, is swift and interesting in action, contains much varied characterization, and is skilful and original in construction. It is easy to perceive that, if well acted, it might be productive of much entertainment, although the aroma of its humor is not always free from disagreeable taint. Though it has many veracious touches, betokening a shrewd observation of human nature, it is in the main completely artificial and utterly insincere. It deals primarily with theatrical situations, not with life. Michael Cosway and his wife, Lady Patricia, now approaching the confines of middle age, have long been regarded as models of conjugal happiness. They address each other in terms of rhapsodical passion. But each is deceiving the other in spirit, if not in deed. Lady Patricia, neurotic, ecstatic, and romantic, ever feeding her imagination upon amatory poetry and meditating lapses which she has no notion of committing, thinks that she has found her true affinity in "Bill" O'Farrell, a sturdy youth of the illiterate undergraduate type, who yields hopelessly to her mature fascinations, although he is in love with Clare Leslie, a girl after his own heart. Him she pledges to eternal Platonic servitude. Michael, an amateur scientist, has dominated Clare Leslie in exactly the same way, and has induced her to exchange Platonic vows with him, although her heart has long been in Bill's keeping. To add to the complications, Dean Leslie, a suave and worldly cleric, Clare's father, wishes to marry Mrs. O'Farrell, Bill's mother, while both of them are eager for a match between their respective children. It is not difficult to imagine the nature of the entanglements, the misconceptions, and the mutual recriminations which might be manufactured out of such prescribed conditions, but it is impossible to enumerate them within the limits of a brief review. Nor is it desirable to enter into any minute detail. It is sufficient now to say that Mr. Besier has executed this part of his task with uncommon adroitness and with as much external plausibility as could reasonably be expected. His personages are engaged, for the greater part of the time, in a perpetual game of hide and seek in the branches of a great oak tree, in which platforms and summer houses have been built, and the novelty of the design, doubtless, is a great help to the illusion. Excellent comic use is made of the indignation with which each character in turn rebukes the others for conduct of which he himself, or she herself, has just been guilty. In the end, largely by the shrewdness of Mrs. O'Farrell, Michael and his wife are driven to mutual confession and repentance, and the young lovers are happily united. Manifestly the incidents are arbitrary and incredible, but some of the character sketches are wonderfully lifelike. Michael and Lady Patricia, of course, are fantastic. Taken seriously, they would be repulsive. They are acceptable only by reason of their comic predicament and the suggestion, in itself inadmissible, that the passion of which they prate is as unreal as themselves. But Mrs. O'Farrell and the Dean are capitally drawn, Clare Leslie and "Bill" are both live specimens of healthy, unsophisticated youth, and there is a delightful sketch of a dunder-headed old gardener. On the whole, this is a sparkling bit of work, which would have been much more valuable if it had evinced some sense of purpose and responsibility.

Dr. Gilbert Murray, who has laid all lovers of good literature under obligations by his translations of various plays of Euripides, has recently published a translation of Sophocles's "Œdipus, King of Thebes" (Oxford University Press). Dr. Murray shows his customary skill in this version, but it is hard to resist the impression that he loves Euripides and admires Sophocles. We note the same lofty language, the same skill in the handling of the choral odes. Perhaps the blank verse leaves something to be desired, for while, of course, not Greek, it is also in many places hardly English because of the strained order. In a brief but good introduction, Dr. Murray, among other things, revises his criticism of Tiresias, made in his "Ancient Greek Literature" (1899). While he had formerly explained him as "a 'sympathetic' prophet, compact of wisdom and sanctity," he now regards him as a mixture of sanctity and superhuman wisdom, with fraud and mental disease, "a most lifelike as well as a most dramatic figure."

The first appearance here of Margaret Anglin, one of the best of our emotional actresses, in light comedy, is an incident of some theatrical importance. She is making the experiment in "Green Stockings," a comedy by A. E. W. Mason, to be seen in the Thirty-ninth Street Theatre. It is a pity that she could find nothing of higher

Digitized by Google

literary and dramatic quality. Undoubtedly the motive of the piece is fresh, and, for comedy purposes, valuable, but Mr. Mason has treated it, except in one or two isolated scenes, very clumsily, wasting his opportunities in illogical and extravagant farce. A clever and attractive Irish spinster, Celia Faraday, who, in accordance with an ancient custom, has had to wear green stockings more than once when her younger sisters have been married, resolves to end domestic "chaff" by creating a fictitious lover, since she cannot find a real one. So she announces her engagement to an imaginary Col. John Smith, fighting gallantly in Somaliland, to whom she writes absurd but ardent love letters, of which one is accidentally posted. When fully satiated with compliments and congratulations she decides that her Colonel must die (to avoid explanations), and kills him off accordingly, publishing his death notice in the newspapers. But there is a real Col. John Smith, also a Somaliland hero, who has received Celia's letter, and is stirred to active curiosity by the announcement of his death. Tracing this to its source, he visits Celia, in the guise of his own most intimate friend, bearing harrowing details and sad mementoes of his own demise. His first encounter with the amazed and demoralized heroine provides the one really good scene in the play, and upon it the success of the representation will largely depend. The situation is novel, fairly plausible, and highly amusing, and Mr. Mason, rising to his opportunity, has treated it in a vein of genuine comedy. And in this crisis Miss Anglin proves herself a comedian of notable skill, if not of the very highest rank. Many contrasted emotions—surprise, apprehension, suppressed merriment, and (simulated) grief—are involved in it, and she indicates them with charming variety of expression, much delicacy of detail, and a keen appreciation of humor. She acquitted herself admirably, and, with the aid of that clever and refined comedian, H. Reeves Smith, carried the scene to a triumphant conclusion. In the final act, which, of course, brings the Colonel and Celia into each other's arms, the piece degenerates into farcical extravagance, very rarely rising to the comedy level, and in these cruder episodes Miss Anglin was seen to less advantage, her acting showing signs of effort and artifice. Evidently the matter did not appeal to either her artistic instinct or her natural intelligence. In legitimate comedy she ought to find great opportunities.

Charles Frohman has obtained "The Marionettes," in which Sir John Hare and Miss Marie Löhr are acting in London. The piece is the work of Pierre Wolff, and has been adapted by Gladys Unger.

"Sumurûn," a condensed version of which has attracted a great deal of public attention at the London Coliseum, and been the subject of much critical praise, is now to be produced in full at the London Savoy under the supervision of Professor Reinhardt.

Arnold Bennett's new comedy, "The Honeymoon," in which Marie Tempest is to enact the principal character, will be produced in the London Royalty next week. Dion Boucicault is the stage director. The Scottish Repertory Theatre has just opened its season with another play by Mr. Bennett, an adaptation in four acts of his novel "Buried Alive."

Miss Gertrude Kingston intends to resume charge of The Little Theatre, in London, next January, when she hopes to have an active partner in the enterprise. In that case, Lillah McCarthy would have to look for another house in which to produce her promised new plays by John Galsworthy, Granville Barker, and others

Some months ago Sir Herbert Tree acquired the English rights in a play called "Prophet Percival," by Melchior Lengyel, the Hungarian dramatist. To James B. Fagan has now been assigned the task of preparing the version which will eventually be seen at His Majesty's Theatre in London.

Reports from Australia say that H. B. Irving has been received there with wonderful enthusiasm and is playing to houses packed to their utmost capacity.

The indefatigable Sarah Bernhardt is playing again in the Coliseum, a London music hall. She is appearing in fragments of "Théodora," "Fédora," "Le Procès de Jeanne d'Arc," and "La Dame aux Camélias." She is wildly applauded by crowded houses and is reaping rich profit, although it may be doubted whether she is adding to her renown.

A prominent London critic, speaking of a recent performance of "King Henry V," by the Benson company, says that the piece as produced by Mr. Benson is a much graver and more solemn affair than some versions have been:

There is very little swagger about the play as thus played, and very little of the swashbuckler, bragging monarch who has got of late years into the heads of the more daring commentators. What is emphasized in this production is rather the gravity of the whole affair; the heavy responsibility of the young King; the sore straits of the English troops; the part in the victory ascribed to the God of Battles.

"Le Mariage de Mlle. Beulemans" the comedy of Franz Fonson and Fernand Wicheler, which was so highly praised in Paris when first played there some months ago, has reached London, where it was played in the Globe Theatre by Mlle. Legrand and a French company.

Music

The Oldest Music Room in Europe. By John H. Mee. New York: John Lane Co. $3.50 net.

Boston Symphony Orchestra Programmes. 1910-1911. Boston: C. A. Ellis.

After a careful search, Mr. Mee has failed to discover anywhere in Europe a music-room as old as that of Oxford, which was opened in 1748. The famous abode of the Gewandhaus concerts in Leipzig did not come into use till 1781. Nor is it strange that England should have thus anticipated the Continent, for there, in the early part of the eighteenth century, the musical interest was centred in the opera, and concerts were usually given in the opera houses, whereas in England opera was an exotic always, and concerts appealed more strongly to the musical feeling of the nation; a tendency which was emphasized when Handel deserted the opera and wrote for the concert-halls those oratorios which soon took first place in the estimation of the English musical public. As far as Oxford itself was concerned, concerts on a considerable scale had been in vogue for above half a century before the building of the Music Room; yet from the way in which people wrote about this room it is clear that it was an unusual thing, and one of which those connected with it were extremely proud.

No one who has experienced the toil involved in the perusal of a century and a half of newspapers will be surprised, the author declares, to find many errors of omission in his book. As a matter of fact, it would have been improved if many more errors of omission had been made. There is a considerable amount of extremely superfluous and entirely uninteresting information about a multitude of persons whose names and titles and activities are of no historic importance whatever. On the other hand, one gets from a glance at the 216 pages of this volume a close view of musical conditions during the century (lacking eight years) that the Oxford Music Room was consecrated to concerts. The entertainments began as early as 6:45 and lasted two hours. In 1792 one of the official notices reads: "No person to take a dog into the room." Even in those days there were soloists whose terms were held to be exorbitant. There were prodigies, too. In a single year (1779) two were heard in the Music Room: a Miss Pool, "not eleven Years of Age," sang two songs by Dr. Arne; and the *Oxford Journal* of July 3 contained an advertisement by which "Mrs. Crotch from *Norwich* begs Leave to acquaint the Ladies and Gentlemen of this University and City that her CHILD, who is not yet *Four Years of Age*, will, by permission of the Vice-Chancellor, and the Stewards of the Musical Society, play upon the ORGAN at the Musick Room, this day at Twelve o'Clock." This Master Crotch subsequently became professor of music at Oxford and the first principal of the Royal Academy of Music.

Troubles of various kinds harassed the managers. Discontented subscribers wrote letters of complaint to the newspapers, even as they do to-day. The privilege of borrowing music from the library was abused by many, who forgot to return the volumes lent. But these were trifles compared with the pecuniary difficulties which frequently confronted them. For want of sufficient support the weekly concerts had to be suspended altogether for four years, beginning 1793; but the stewards averted the dissolution of the band, feeling confident that it would be possible to "pull

Digitized by Google

things round," as proved to be the case. Finally, however, in 1840, the concerts came to an inglorious end, and the Music Room was taken up by an upholsterer and auctioneer, who used it for his own business and let it for exhibitions and miscellaneous concerts. The programmes included in the volume give a good idea of the state of musical taste at the time, and there are numerous illustrations of the Music Room itself and of various notabilities who were prominently connected with it.

There was a time when Boston, Mass., had a Music Hall which was also, like the Oxford Music Room, let for exhibitions, including dog and poultry shows. But when Mr. Higginson became sponsor of the Symphony Orchestra, Symphony Hall was built, consecrated solely to music. One of the many benefits resulting from this backing of a generous millionaire is the programme book which is on a much more elaborate scale than any similar publication in this country or abroad. For every one of each season's twenty-four concerts there is issued a pamphlet of above seventy pages, half of them devoted to reading matter; and at the close of the season the twenty-four are bound into one volume—a book decidedly worth preserving, for perusal as well as for reference. Boston concert-goers evidently desire much more than mere musical pabulum when they go to Symphony Hall; they get in these programme books, which are distributed free, not only full analyses, with comments on all the pieces to be played, but "Entr'-Actes," in which the editor of the book, Philip Hale, either gives his own views and historic researches on diverse topics, or quotes from other writers. Among the most valuable of these excursions in the volume for 1910-1911 may be named "Bach's Music in England," "Boïto," "Bülow and Richard Strauss," "Famous Clacqueurs," "Elssler and Rachel in America," "Music in Finland," "Goethe and Beethoven," "Music through Hypnotism," "Smetana's Deafness," "Dvorák's 'American Symphony'," "Liszt," and reprints of a dozen of the admirable short essays on musical topics which the London *Times* has taken to printing, and of which "English Folk Music," "Mispronunciation in Singing," "The Small Orchestra," and "Rhythm and Tempo Rubato" may be mentioned as particularly valuable. Fifty composers were represented on last season's programmes by 102 works, of all of which Mr. Hale has something to say that is worth reading.

A story of the opera "Königskinder" has been made for younger readers by Anna Alice Chapin; it will be brought out by Harpers.

Harold Bauer will be the soloist at the Liszt centenary concerts to be given by the New York Symphony Society, under Walter Damrosch, on October 27 and 29. The programme will include the "Faust" symphony. Among the soloists engaged for later concerts are Katharine Parlow (her first appearance in New York this season), Harold Bauer (his first appearance in New York this season), Mme. Jeanne Jomelli (her first appearance in New York this season), Wilhelm Bachaus (his first appearance in America), Arthur Shattuck (his first appearance in America), and Miss Christine Miller, contralto. On March 1, the St. Cecilia Club of women's voices (Victor Harris, conductor) will take part in the programme. George W. Chadwick, the eminent Boston composer, will conduct his new Symphonic Suite, and other soloists will be announced later. Among the orchestral novelties announced for the season, including Elgar's New Symphony No. 2, in E flat, which will have its first performance in New York on December 8 (repeated December 10), American composers will be represented by George W. Chadwick's new Symphonic Suite and by "The Culprit Fay," a symphonic poem by Henry Hadley. Besides the Liszt centenary, as announced above, the season will include two Beethoven programmes, the suite "Die Königskinder," Humperdinck; legend, "Zorohaida," Svendsen; and symphonies by Mozart, Schumann, Tchaikovsky, Enesco, Dvorák, Rachmaninoff, Berlioz, and others.

As evidence of the growing popularity in England of America's foremost composer may be accepted the arrangement, by C. Charlton Palmer, organist of Canterbury Cathedral, England, of transcriptions for the organ of six of MacDowell's most charming pieces: "Nautilus," "A Sea Song," "Romance," "Meditation," "Melodie" ("To a Water Lily"), "In Nomine Domini." The publisher is Arthur P. Schmidt. Thousands of American organists who believe in giving the public what it desires to hear will welcome this announcement. Works by Foote, Whiting, and other American composers are included in "Twenty Preludes and Postludes," issued by the same publishers.

A clever paraphrase of Strauss's "Rosenkavalier" for the piano has been made by Otto Neitzel, and published in Berlin by Adolph Fürstner.

That Frederick the Great was a skilled flute player and writer of innumerable flute concertos (which no one would dare to play in public to-day) is generally known; also, that he wrote marches, arias, and opera librettos, and that he gave a cordial welcome to Bach in Berlin, making him try all his pianos and organs before the great cantor had had time to wash his hands or brush his clothes after his dusty stage trip from Leipzig. It has only now, however, come to light that this Prussian monarch also wrote the Spanish national hymn. He gave the tune to the Spanish ambassador, who took it to Madrid. Then it was forgotten till 1869, when it was adjudged the best of five hundred marches, and adopted as the national hymn. Such, at any rate, is the story of one of the scholars who have written articles to commemorate the one hundred and twenty-fifth anniversary of Frederick's death.

"An age of Napoleonic musical undertakings" is the way in which the London *Musical Times* characterizes the present, with special reference to the operatic enterprise of Thomas Quinlan, whose tour with his opera company will include England, South Africa, and Australia. The list of operas to be sung—all of them in English versions—includes four Italian works: "Aïda," "Madama Butterfly," "La Bohême," and "The Girl of the Golden West"; three operas by French composers, "Carmen," "Faust," "L'Enfant Prodigue"; and six masterworks by Germans: "Hänsel und Gretel," "Tales of Hoffmann," "Tannhäuser," "Lohengrin," "Tristan und Isolde," and "Walküre."

Portland, Ore., just now the fastest growing and most prosperous city on the Pacific Coast, has been casting envious eyes on Seattle, San Francisco, and Los Angeles because of their permanent orchestras, and now proposes to have one of its own. It was at first suggested that several members of the orchestra should alternate as conductors; but that foolish idea was soon abandoned. It is more important to have a great conductor than a great orchestra, just as it is more important to have a good pianist than a good piano. A city so wealthy and aristocratic as Portland ought to be able to procure one of the leading conductors in the country—a man, for instance, like Franz X. Arens, or Frank Van der Stucken, both of whom were among the pioneers in breaking ground for American music and musicians.

Dvorák's posthumous symphony will have its first performance in Vienna by the Philharmonic Orchestra. Other novelties to be produced by that famous orchestra during the season are André Gédalge's third symphony; Glazounoff's "Poème lyrique," op. 12; Mahler's fifth symphony, Reger's "Comedy Overture," Sibelius's "Dryade," Sinigaglia's "Piemont" suite, Strasser's G major symphony, Wagner's C major symphony, Weingartner's "Realm of the Blessed."

The grand opera company headed by Andreas Dippel will be heard not only in Philadelphia, New York, Brooklyn, and Baltimore, but in a number of Western cities—Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, St. Paul, and Des Moines. The season opens in Philadelphia on the third of November.

Carl Pohlig, conductor of the Philadelphia Orchestra, became an intimate friend of Richard Strauss last summer. He was charmed with Strauss's latest opera, the "Rosenkavalier," and has put the waltz from it on his opening Philadelphia programme. As a great Liszt champion he will, of course, observe the Liszt centenary, producing among other things, the "Battle of the Huns." He found that in Europe Dvorák's fourth symphony is almost as popular as the "New World" and will produce it—an example which New York conductors would do well to follow. Another novelty of which Mr. Pohlig is enamoured is Weingartner's new (third) symphony, entitled "Vienna." In a conversation printed in the *Musical Leader*, Mr. Pohlig said that while in Europe he encountered a new invention for producing a prolonged tone with a single breath in the wood wind instruments, which is likely to revolutionize the playing of the oboe and the English horn. It is the invention of Bernhard Samuels of Schwerin. It will probably prove almost as potent a mechanical change in the orchestra as the discovery of the valve trumpet.

The Italian government, conscious of the importance of preserving the country's folk-songs, has requested the directors of conservatories to instruct their pupils to take down in notation such popular songs as they happen to hear.

Art

An interesting contribution to the literature of city planning is John Nolen's "Madison, a Model City," published by the author for the Madison Park and Pleasure-Drive Association. It is a handsomely printed book of 160 pages lavishly illustrated, with more than a hundred photographs, which show what has been done for the beautification of Madison and other cities, and what can be done. It constitutes the report of Mr. Nolen, who is a landscape architect, to the association which engaged his services to suggest a plan on which the capital city of Wisconsin might in the future be developed. The author points out that more than fifty cities in the country have undertaken comprehensive improvements on a large scale within the past five years, and that a new standard of city-making has been set. The Madison Park and Pleasure-Drive Association has been at work doing what it could to beautify Madison for the past seventeen years, and has expended more than a quarter of a million of dollars in the work. Mr. Nolen believes that it is now time for the city and State to unite and take advantage of the almost unsurpassed advantages Madison offers for a constructive rebuilding along farsighted artistic lines. Of the unusual opportunity at Madison he writes: "Of all the cities in the United States it appears to me that Madison has the best opportunity to become in the future a city of this type. (He had been referring to Geneva.) It has the site, it has the environment, the climate, the population, the high civic spirit, the traditions, the permanent attractions of government and higher education. It is within the power of the people of Wisconsin to make Madison in future what Geneva is to-day—a beautiful, well-ordered, free, organic city."

Sir Barclay V. Head's revised edition of his important "Manual of Greek Numismatics" ("Historia Numorum"; Frowde) is a book indispensable to every coin collector and student of classical archæology. The first edition of 1887 was a complete manual of the subject at that time, and the second edition embodies the results of the latest researches. The new edition, in which Sir Barclay has been assisted by G. F. Hill, George Macdonald, and W. Wroth, follows the first in the geographical arrangement. Beginning with Spain and Gaul in the West, the book covers the whole of the Greek world, reaching eastward to India, northward to Dacia and Moesia, and southward to the northern coast of Africa. This purely geographical scheme is familiar to all students, and, while not to be recommended for the classification of coins in comparison with the arrangement of geographical areas within fixed chronological periods, as in the elaborate "Traité des Monnaies grèques et romaines," by Ernest Babelon, it is the only one possible without an entire recasting of the book. The introduction contains some new matter, chiefly concerning coin-standards and the significance of Greek coin-types. It is now universally recognized that the designs or *types* on Greek coins are the badges of the issuing authority or state, and that various motives besides the religious governed the selection of types proper, and *symbols* or adjunct types. In the section on Italy, the Roman *æs grave* is discussed in the light of Haeberlin's new theories, which form the best available explanation of the reduction in the weight of the Roman *as* from 338 to 268 B. C. The Greek coinages in the south of Italy and the coinages of the central and northern states are so closely connected that no treatise on Greek numismatics would be complete without an account of the early Roman bronze issues. The sections on Parthia, Syria (Seleucid Kings), the Ptolemaic Kings of Egypt, and especially on Bactria and Northwest India, are among the noteworthy portions thoroughly revised. In the last section, the Kushan chiefs who conquered the Greek kings appear in their proper dress as Kanishka and Huvishka in place of Kanerkes and Hooerkes. A table of the Kharosthi letters has also been added. In the indexes and the bibliography references to all the latest material may be found. There is no doubt that this new edition will remain as long, if not much longer than its predecessor, the principal reference work in its field.

The Pennsylvania Academy of the Fine Arts and the Philadelphia Water Color Club announce that under their joint management an exhibition of original work in water-color, black and white, pastel, or drawing with pencil, crayon, or pen, or illustrations in whatever medium, will be held at the Academy, beginning Monday, November 13, and ending Sunday, December 17, both inclusive. The jury of selection: Colin Campbell Cooper, Henry McCarter, Violet Oakley, Harriet Sartain, Thomas P. Anshutz, and Everett L. Warner. The hanging committee: George Walter Dawson, Violet Oakley, and Hugh H. Breckenridge. Academy's committee on exhibition: Clement B. Newbold, chairman.

Finance

A CURIOUS WEEK IN FINANCE.

It was well understood in financial Europe, during all of last month's disturbances on its markets, that the full strain of the season would be felt in the first week of October. It is then that European markets effect their largest quarterly readjustment of financial accounts. Especially at Berlin and Paris, demands on banking credits are at that time exceptionally heavy. In this week falls the semi-monthly settlement on the Bourse, when outstanding speculations must be liquidated or extended, and the last previous settlement, on September 15, had so far strained available resources that the Paris broker holding stocks on borrowed money had been compelled to pay as high as 8 per cent. to carry them over to this week.

With this position immediately confronting Europe's markets, war broke out in the Mediterranean. When the Italian Government—of whose dispute with Turkey most of the world first learned at the opening of last week—sent warships to Tripoli on Wednesday, demanded on Thursday that Turkey should give up two cities in the province, and on Friday afternoon declared that a state of war existed, financial Europe listened with frank bewilderment. Germany was sudden enough in sending the Panther to Morocco. Japan recalled its envoy from St. Petersburg on one day and attacked Russia in Port Arthur on the next. Our own country demanded that Spain should withdraw at once from Cuba, under penalty of invasion, at a moment when our ambassador at Madrid was earnestly pointing out that Spain was ready to make terms. But the Morocco dispute was several years old; Japan and Russia had been on the admitted verge of rupture for two months; and in 1898 the De Lome incident, the "Maine" affair, and a long exchange of diplomatic notes, had at least prepared the public mind. None of these incidents took financial markets by surprise.

Sometimes, on such occasions, markets make thorough preparation in advance. They had made such preparations in advance of our Spanish war, whose outbreak found the markets ready and unruffled. Sometimes they think they have prepared and find that they have not, because some factor in the case had been forgotten; that was so in the Transvaal war of 1899, when England had not allowed either for the secret preparations of the Boers or for the instantaneous effects of the blockade of gold supplies. Sometimes they look for serious complications, and find that no financial markets are very much incommoded; such was the outcome of the Greco-Turkish war of 1897, which became a brief and not very interesting spectacle, with no disturbing influence on finance.

But war is at all times an uncertainty, and in the present case the markets were taken by surprise. It was evident, at last week's close, that the true financial significance of Italy's extraordinary action would depend, first on the question whether Turkey would fight back, and what her fight would be; next, whether the rest of Europe would take a united stand of neutrality or disapproval; and finally, whether the recent prolonged liquidation on the bourses of Continental Europe, and the rise in European money rates, might not turn out to have been such as not only to have overdiscounted "Morocco," but unconsciously to have discounted "Tripoli" as well.

All three questions were promptly an-

Digitized by Google

swered in the present week. The Turco-Italian news over Sunday was obscure, as war news always is when cables are cut and newspapers of the fighting nations provided with canards. But it indicated that Turkey was hopelessly outclassed by Italy's naval resources, that neutral Governments were trying to end the war, and that Italy's one remaining danger was the over-confidence and bad judgment which she has rather frequently shown at crises of the kind. The European stock exchanges seemed at the opening of the week to be waiting for more definite information; but they were notably free from agitation. Consols went higher on Monday; French 3 per cents rose sharply, and even Turkish bonds regained 4 points of last week's 10-point loss.

This response was certainly not less interesting from the fact that Monday's Continental markets disclosed to the full the expected strain on credit. The Imperial Bank of Germany made its weekly statement, which was in some ways the most extraordinary in its history. The figures of changes on its balance-sheet spoke for themselves. The Bank's cash reserve was $39,000,000 lower than a week before, $24,000,000 of that outgo being gold. Loans and discounts expanded in the week no less than $144,500,000; note circulation increased $154,300,000. These were movements of wholly unprecedented volume. The largest previous changes came in this week of 1907, on the eve of the German commercial crisis and our own Wall Street panic; the Imperial Bank's reserve then decreased $34,900,000, its loans and discounts rose $107,000,000, and its circulation $98,500,000. Those were huge figures, but, as comparison will show, far less sensational than the past week's changes. The week's expansion of loans and discounts at Berlin, moreover, followed an increase of no less than $61,000,000 in the preceding fortnight; in other words, the Imperial Bank had found it necessary to increase its outstanding credits $205,000,000 since the calling-in of French capital from Germany began in earnest.

But the fact of largest significance was the ability of the great state Bank to make such provision for the market. The response of the Berlin market to this remarkable statement of the Bank was not an advance in money rates, but a decline of nearly ¾ of 1 per cent.; which proved that however urgent the needs of borrowers may have been, they had been satisfied. Even the stock exchanges at Berlin, London, and Paris opened the week with moderate recovery.

All this recalled the action of the markets after the Russo-Japanese war broke out in February, 1904. The financial shock was then only momentary; there was no lasting unsettlement on stock exchanges; not even a stringency in money. But the attack on Port Arthur occurred when financial markets in both hemispheres had just passed through six months or more of the most drastic liquidation. Stock Exchange operators had sold out; the investing public, at the existing range of prices, was more ready to buy than to sell. The salient underlying facts in the present situation are the same.

They are, in fact, even more reassuring, from that point of view, than they were in 1904; for whereas financial markets of that period had in substance "discounted" war through discounting other things, the markets of to-day, in Europe at any rate, have actually discounted war. It is true, they prepared for a Franco-German war about Morocco, whereas the real event is Turco-Italian war in Tripoli. But since the other conflict has not happened and is less possible now than ever, and since the European bourses had not witnessed the recovery which would have been expected from official news that France and Germany had come to terms, the Italian matter figures as a curious sort of substitute. It is at least a welcome substitute, in so far as the dangers involved by it to the larger interests of the nations are of the slightest when compared with the Morocco complication.

BOOKS OF THE WEEK.

Allen, A. E. Joe, The Circus Boy. Boston: Page.

Aristotelian Society Proceedings. New Series.—Vol. xi, containing papers read before the Society, 1910-11. London, W. C.: Williams & Norgate.

The Literary Sensation of the Year

My Own Story

By LOUISA OF TUSCANY

Ex-Crown Princess of Saxony.

In this volume Princess Louisa gives for the first time the *authentic* inside history of the events that led to her sensational escape from the Court of Saxony and her meeting with M. Giron, with whom the tongue of scandal had associated her name. It is a story of court intrigue that reads like romance.

With 19 illustrations. $3.50 *net.* (*By mail* $3.75.)

The Nation

NEW YORK, THURSDAY, OCTOBER 12, 1911.

The Week

People have been of two minds regarding the net result of President Taft's present stumping tour, but there is no longer reason for hesitation. Champ Clark declares that Mr. Taft is hurting himself by his much speaking, and that if he keeps on talking he will talk himself to death. Coming from the greatest authority on suicidal oratory, this must be taken as conclusive. If there is any form of indiscretion or of opening the mouth to put a foot in it or of general spilling over which Speaker Clark has not at one time or another illustrated, it would puzzle most of us to say what it is. He pronounces his opinion on the President's mistaken speech-making as one who is entitled to say *haud inexpertus loquor*. Mr. Taft may well dread that he may next be rebuked for loquacity by Mr. Bryan.

At the recent Internal Revenue Officers' convention in Detroit, President Taft challenged those who had charged him with "using patronage to accomplish something" to join with him in legislation which would enable him to put every local officer, "be he postmaster, internal revenue collector, customs collector, or anybody else filling an office of the United States in any of the States of the Union, under classified civil service." The challenge has provoked two sorts of replies. The more heartless recall the Norton letter of last summer, with its bald declaration that "the President felt it to be his duty to the party and to the country to withhold Federal patronage from certain Senators and Congressmen." The prompt dropping of this short-sighted policy, however, makes a consideration of the President's record as a whole the fairer basis of judging the Detroit avowal. On September 30, 1910, by executive order he transferred to the competitive service more than 3,500 postal employees, and the next day announced his intention of urging upon Congress the placing of postmasters of the first, second, and third classes under the merit system. In his December message he went further than this, advocating the classification of the heads of local offices of the customs and the internal revenue services as well as of the postal. Bills to carry out his recommendations were introduced in Congress. They are there still. As is pertinently pointed out in *Good Government*, a Democratic House which began its career by lopping off sinecures has not taken the most cursory notice of the bills, in which do-nothing policy it has been ably seconded by a Republican Senate.

Again the moral of Senator Stephenson's $107,000 is said to be that "direct" politics is too expensive for anybody but millionaires. Under the good old system of appealing to the politicians instead of to the people, the poorest might aspire to a seat in the Senate. But direct primaries require huge funds. This mournful view we get from the Chicago *Inter Ocean*, which, it is to be feared, nothing but a "vindication" of Senator Lorimer can restore to cheerfulness. One thing, however, may be suggested for its comfort, and that is that the publication of expenses permits everybody to know, instead of being compelled to guess, the amounts. That is more than most Chicagoans know or ever will know regarding the sums that Mr. Yerkes and his kind expended at Springfield and Chicago in days when the indirect system was at the height of its glory. But limitation of expenditures is a salient part of "direct" politics. The Federal law imposes a limit of $10,000 upon Congressional candidates, New Jersey prescribes a limit in expenses, and such a provision was a vital feature of the Hughes measures in this State.

Gov. Dix may be excused for a little exaggeration in his praise of the direct-primary bill which he forced through the New York Legislature. To have so much as got his hat back from this Legislature naturally exhilarates the Governor. The bill is far from being perfect, and can be hailed as a fulfilment of pledges only in the sense that a half-loaf is better than no bread. At the same time, the violence of Republican attacks upon it is a little overdone. The *Tribune's* Albany correspondent frankly declares: "As a matter of fact, the bill in its present form isn't quite so bad as its antagonists say." It can fairly be said of it that it makes an advance over the present system, and will be a beginning in the application of the reform idea, upon which improvements may hereafter be made. The greatest objection seems to lie against the form of the primary ballot, and against the power given to party committeemen to nominate their own "regular" successors. But if there is anywhere in the State a revolt against the party management, the means of making it effective are placed in the hands of the opposition. More than that was hardly to be expected from a Tammany-controlled Legislature, and even this would not have been obtained but for Gov. Dix's insistent demand.

Senator Lodge and his machine were in full control of the Massachusetts Republican Convention last week. Not a Progressive was allowed to peep, and all was outwardly harmony itself. The Senator was at his best in dealing with the sacred tariff. In schedules "which have outlived their usefulness" there is to be, not an abolition of the tariff—oh, dear, no!—but a downward revision. By its friends, of course. Lodge is strong on that. There is to be no "crude and haphazard revision"; as we all know, between a haphazard Payne-Aldrich revision and a haphazard Underwood revision there is all the difference in the world. Subtle psychological influences give an entirely sinister bend to a revision by men who bear the Democratic label. Next Mr. Lodge cleverly follows up Mr. Taft's lead in injecting national politics into the Bay State situation by pointing out that, with a single exception, Massachusetts is the only State in which State officers are elected this year. Hence, says Mr. Lodge, Massachusetts's verdict will "be read by the entire country as first judgment upon the doings of a Democratic and Insurgent Congress and upon the wisdom of the Executive checks placed upon it."

The renomination of Gov. Foss is coincident with the adoption by the Massachusetts Democrats of a radical platform. It favors the submission to popular vote of a woman's-suffrage amendment, endorses the initiative and refer-

Digitized by Google

endum and the direct election of Senators, urges immediate tariff revision, and expresses the hope that reciprocity with Canada may be obtained. The campaign thus opening will be especially interesting because the lure of this platform should draw to it Republican Progressives who can find nothing in the Lodge platform to encourage them. In other words, the election should show whether the popular Western doctrines of government have in any wise affected the conservative Massachusetts electorate. So far as the two candidates are concerned, the advantages of the campaign will be on the Democratic side. Attractive personally as Mr. Frothingham is, and widely popular, he is no orator to charm or to arouse enthusiasm. The chief question seems to be now whether Gov. Foss can make such a campaign as he did last year.

As in Massachusetts, so in Rhode Island this year's campaign finds the Republicans in a stand-pat position, with the Democrats as the party of progress. At least the latter advocate a Federal income-tax, ask for the direct election of United States Senators, "reasonable regulation" of the Trusts, and vigorously condemn President Taft for vetoing the tariff bills. This may not seem very radical in Iowa, but in Rhode Island, home of Aldrich and Wetmore, it is progressive enough. While the Republican Convention has not yet met, it is already assumed that its utterances will be far more conservative. Last year the Democrats came within 540 votes of electing Lewis A. Waterman as Governor. This year he is again to be the standard-bearer, with four other vigorous men to canvass the State with him, and, as in the contest between Frothingham and Foss in Massachusetts, the result will be of great value in indicating the extent of the Progressive movement in New England, if there is one. It is significant of the change which has come over the whole spirit of our politics that this question of progressiveness or conservatism is the real issue.

Mr. Henry T. Hunt, the Democratic, anti-Cox candidate for Mayor of Cincinnati, has issued a straightforward appeal to the voters of that city which leaves no one in doubt as to what his policies will be if he is elected. To an outsider it is precisely the statement an honorable man induced to run for high office would naturally put forth; but to Cincinnatians it must sound well-nigh revolutionary. Thus, Mr. Hunt pledges his word to end favoritism in the police and fire departments; to enforce the civil-service laws; and "to inaugurate free and open competition in all public work, and destroy immediately the present system of favored contractors and materials." More than that, Mr. Hunt is rash enough to promise to have the specifications for public work scientifically drawn, and then to follow them up with a system of inspection which will see to it that the city gets a dollar's worth of work for every dollar expended.

The triumph of Dr. Wiley calls attention to one important class in the community from whom no wailing appeals have arisen to high heaven to cease enforcing the laws and hurting "business." We refer to the ultimate consumer, who seems to have latterly dropped out of sight. When the Department of Agriculture rules against artificial or "process" methods of ripening fruit for the market it refuses to take account of the fact that a shortage in California citrus fruits has worked for high prices. People are not ignorant enough to suppose that adulterated and unfit foods can be driven from the market without some increase in the cost of food that is not adulterated or otherwise unfit. Here is a way, then, in which the enforcement of the pure food laws distinctly interferes with the "business" of every family in the land. Dr. Wiley's activity is apt to be felt in every moderate-sized domestic budget. Nevertheless, the country has rallied to the support of Dr. Wiley with a unanimity that must have been a revelation to his enemies. The American housewife's willingness to have her "business" interfered with if honesty and the law demand it, offers a refreshing contrast to certain howlings in the name of "big" business.

Chicago's investigation of crime and of the relation to it of the police begins to wear a very serious look. Following the discharge of a patrolman comes the conviction of a lieutenant upon the charge of allowing gambling at one of the leading ball-parks of the city, or at least of failing to show that any one else was responsible for it. This conviction followed the conclusion of his trial before the Civil Service Commission, which Mayor Harrison entrusted with the work. The importance of this action lies less in the rank of the officer involved than in its menace for the thirty policemen who testified that there was no gambling as charged. The Commission got at the matter directly by putting the lieutenant himself on the stand, despite the protests of his attorney. There he was forced to admit that he was convinced that there had been gambling at the park, and that none of his men did anything to stop it, although he had been officially informed of its existence, not only by private citizens, but from police headquarters. Mayor Harrison has apparently turned loose upon a long-existing but unmolested evil a determined body of intelligent men. If he holds to this line, the results will be as valuable for a truly Greater Chicago as a short time ago they would have been pronounced impossible.

It cannot be said that matters are progressing well at Coatesville. The first of the men under arrest charged with murder in connection with the burning of the negro Walker was released when brought into court, as the District Attorney announced that the State had no evidence upon which to convict the defendant. The next case was that of Joseph Schwartz, whom the State, represented not only by the District Attorney, but also by Deputy Attorney-General Cunningham, tried its best to convict. The jury promptly acquitted the man, although the Deputy Attorney-General declared that "no man was ever more guilty of a crime." The crowd in the courtroom "cheered wildly" when the verdict was rendered "for the defeat of justice and the victory of the mob; the jurors departed and were lionized by the cheering crowd." Mr. Cunningham is right in saying that this acquittal reveals the condition of affairs in Coatesville; that it was a "travesty on justice and proof that the mob is more respected than the law" in Chester County. By his own admissions, it was plain that Schwartz had gone into the Coatesville hospital masked and had helped to drag the victim to his death. What Northern State can hereafter criticise Southern leniency toward lynchers? And what does the sound citizenship of Pennsylvania say to it all?

The circumstances attending the destruction of a Wisconsin town by the breaking of a power dam emphasize several phases of a problem that is rapidly forcing itself upon public attention. In Wisconsin there was hardly any loss of life. That was due to the fact that for some hours the dam had been known to be in danger, and the inhabitants of the valley were forewarned. But while a few hours' warning may be sufficient to avert loss of life, it is not enough to prevent the destruction of property, in which respect the Wisconsin town suffered as completely as Austin did. What the situation therefore demands is not a sporadic display of vigilance on the part of threatened communities after heavy rainfalls, but a systematic inspection of dams and reservoirs at regular intervals throughout the year. It is a function which the State might well assume without adding greatly to its burdens. The cost of a single disaster like that at Austin would defray the outlay upon such service for a generation.

The statistics of divorce among women college graduates show that only one out of fifty-seven of the unions entered into by them ends in this way. That is satisfactory, but not surprising. The familiar statement that one out of every twelve marriages in this country terminates in divorce is highly misleading, and misleading in a way that has mischievous consequences. The fault is not with the statistics, which are doubtless quite correct; the fault is in that too-ready reliance on the significance of averages which is the bane of the "average" commentator. The people among whom one marriage in twelve is dissolved by divorce belong to certain types, either personally or in environment, which it may be difficult to define, but which are certainly not what we are in the habit of regarding as the normal type of American man or woman. It is even probable enough that in certain perfectly definable classes the proportion of divorces is one-half, or even more, while in the great mass of the population, which lies outside of these classes, the proportion is perhaps one-fiftieth, or even less. That women college graduates, as a class, belong to the happier general body of the community, and not to the exceptional section of it that breeds the great bulk of divorces, is what might have been expected, and what the figures published indicate.

Garibaldi's only living son has come to the rescue of Italy's good name in the matter of the seizure of Tripoli. It pains him to hear on every hand that other nations regard the action of his own Government as an act of piracy, and so, asking for a hearing by virtue of the honorable name he bears, Ricciotti Garibaldi undertakes to set the matter straight. And here is the language in which he does it: "We are charged with piracy abroad. How can this be explained? Quite simply. Italy offered to buy Tripoli from Turkey. The offer was rejected, and Italy proceeded to take what Turkey would not sell." This is put forward with the air of being what Machiavelli called "verità effettuale," but we must say that the fifteenth-century Italians could say such things with a better grace than the moderns. Ricciotti Garibaldi goes on to remark that "many other nations have gone free of the charge of piracy, although they have taken lands without offering to buy them." No doubt; and there is the example of the man who boasted that he "took" Panama, and afterwards wrote that neither Washington nor Lincoln ever did a more honorable thing. That sort of talk will perhaps come later for Italy, but just at present she is having an unhappy time. It is too bad for the land-grabbers and the civilizers by force that there are still some dregs of international conscience left.

Mr. Balfour is not an ideal leader for a party in straits, but neither is the party of which he is the chief an ideal party to lead. His present stand, so far as it can be gathered from the reports of his speech at Haddington on Saturday, seems to be all that the situation admits of. It might be thought that the "last ditchers" had had enough, in the way of demonstration of their futility, to cause them to be content for a while with a display of prudence and calculation in the conduct of the Unionist party's campaigns; but it is stated that they bitterly resent the failure of Mr. Balfour to breathe fearful threatenings of what the Opposition will do in case the people of the United Kingdom, by their elected representatives, shall vote to grant Home Rule to Ireland. The fire-eaters had their way in the rejection of the budget by the House of Lords, and the consequence was that the House of Lords has been shorn of all but a remnant of its ancient power; if they had had their way again last summer, even that remnant would have lost most of what value it still has, through the swamping of the membership by hundreds of new creations. Mr. Balfour is lacking in that masterful human quality which makes the great leader; but he has a deal of shrewdness and common sense, and his idea of rebuilding, as far as may be possible, the power of his party and of the House of Lords is infinitely more promising than the blind pertinacity of the last ditchers in a policy of unthinking defiance.

In a letter received by the London *Economist* from "a distinguished German publicist, who is in very close touch with the Government," the writer, after setting forth his view of the Morocco question, indicates what is, in his judgment, the only way really to put an end to the tension both between Germany and England and between Germany and France:

> Despite the great bitterness that has been caused here by the attitude of English statesmen, and, at the same time, of the English press, I still hold to my previous conviction that the safety of the future depends on an Anglo-German understanding. And this end can be reached if the two Governments will coöperate in carrying out the policy of the open door throughout the whole world. Only when we two have come to an agreement is it possible to think of an improvement in the relations between France and Germany.

How close is the connection between the spirit of protectionism and that of international hostility and violence, such a view of the underlying cause of Anglo-German and Franco-German friction should serve to remind us. It is therefore all the more gratifying to see multiplying signs of the way in which the high prices of the time are provoking discontent with the protectionist system in Germany and other countries. The Berlin *Tageblatt*, in an article elsewhere cited by the *Economist*, gives a comparative table of the price of wheat at New York, Liverpool, Berlin, and Paris, showing that the price of a ton at these four centres (in marks) is 154, 166, 206, 211, respectively; and the German paper comments bitterly on the deliberate placing of this burden on the people by the protective tariff.

PINCHOT'S ATTACK.

In last week's issue of the *Saturday Evening Post*, Gifford Pinchot has a long article severely attacking President Taft and calling upon the Republican party to prevent his renomination, partly on the ground that "the battle for Mr. Taft's election would be lost in advance." Mr. Pinchot assigns many general reasons: the people have "lost confidence" in the President; "Mr. Taft has himself supplied the proof that he cannot be trusted"; "there can be no reason" why the President's "recent turning in the direction of Progressive policies should deceive the rest of us"; "the renomination of President Taft would drive great numbers of Republican voters, who believe in principles rather than in names, either to refrain from voting at all, or to vote for a Progressive Democrat." That Mr. Pinchot himself would be found among the latter class, he leaves no doubt: "I am loyal to the Republican party . . . but I reserve the right to vote for the principles I hold wherever I find them."

Mr. Pinchot disclaims, quite unnecessarily, the suspicion that he is arraigning the President out of "malice," or "in revenge for any fancied injury." His motives are not in question. Nobody whose opinion counts has ever challenged Mr. Pinchot's sincerity, or his entire devotion to the causes with which his name has been identified. But he has frequently given occasion to doubt his good judgment, and to deny the force of his reasoning. He does that glaringly in his present article. A good part of it is taken up with a letter which he wrote to Col. Roosevelt on December 31, 1909, when the latter was in Africa. This was an amazing production at the time, and its publication now is still more amazing. For among the sixteen specifications which Mr. Pinchot then gave the ex-President in proof of his assertion that "Mr. Taft has gone far toward a complete abandonment of the Roosevelt policies," there are some that are simply puerile, others that betray an entire lack of the sense of humor, others that have been destroyed by the lapse of time, and still others that it is hard to conceive how any man in full possession of his reasoning faculties could put forth.

"Dear Theodore" was told that it was "too bad" to have such a letter reach him at Khartum. The traveller must indeed have thought it too bad to read of the crimes of his successor which were virtues in himself. He must have been tempted to chuckle when told by the serious Mr. Pinchot that President Taft had wickedly striven for "party solidarity," and had "yielded to political expediency." This to the man who had been the most regular of the regulars and had never hesitated to make a "practical" political bargain! The Colonel must have grinned broadly when he read of another of Taft's misdemeanors, "the appointment of Hitchcock" and the "spoils system" in filling offices. It was this same Hitchcock who was Roosevelt's right-hand man in rounding up the Southern postmasters and collectors in order to force Taft's nomination. And we should fancy that Mr. Roosevelt's laughter could almost have been heard in Cairo when he read that Mr. Taft's villany was shown by his having "affiliated himself in Congress with Cannon, Aldrich, and Hale." What else had he himself been doing for six years? At one point, however, the Colonel must have ceased smiling. That was where the letter spoke of "the attacks upon yourself in Congress during the last session of your term," which Taft might have checked by "a word" but did not. This was getting on the raw.

Perhaps the most telling example of Mr. Pinchot's loose reasoning occurs in the ninth specification of President Taft's high crimes and misdemeanors: "He signed and now defends a tariff bill . . . following the passage of which the cost of living rose beyond all precedent." It certainly is "too bad" for "Dear Theodore" or anybody else to have such a jumble put before him. Mr. Pinchot would know how to deal with a person who attacked the conservation policy in this fashion. He would insist upon first having the facts established and then upon drawing the correct inferences from them. But in this particular assault upon Mr. Taft he stopped for nothing of that kind. The world-wide rise in prices, which had been going on for years, he was ready to attribute to an American tariff law which had then been in effect less than five months! By that sort of thing, any man puts himself out of court.

There will be, of course, a great many inquiries why this carefully prepared attack on the President by Mr. Pinchot should have been made just at this time. Is it merely a part of the general hostility of the Progressives to Mr. Taft? Was it published with a view to the effect upon their coming conference to plan their campaign against the President's renomination? Some will believe that there is more in it than that. They will ask if Mr. Roosevelt was privy to the publication of the article, and if there is not special significance in Mr. Pinchot's reprinting to-day his language of 1909: "The hold of your policies on the plain people is stronger than ever. Many of your former enemies are now your friends." In other words, the Progressive and Insurgent Republicans, if they are to make head, must be not simply *against* a given candidate, but *for* one. Who is the latter to be? Not La Follette; most of them admit that he is impossible for next year. But who then? There really can be no doubt what Mr. Pinchot's choice would be. But, then, there is that formal appeal of the Colonel to all his loyal friends not to "embarrass" him by bringing forward his name in 1912, since a movement to nominate him in that year would be a "genuine calamity." So Mr. Pinchot has to remain vague and keep us guessing. But it is a good guess that before the Progressives get much further some of them will be sending urgent appeals to the great original Progressive to lead them.

EVERY MAN HIS OWN JURIST.

Each day adds to the number of men who are ready to advise the country just what is involved in the Supreme Court decisions against the Standard Oil Company and the American Tobacco Company, and to pronounce confidently upon the next step that must be taken. Mr. Bryan was, of course, early in the field—so early, in fact, that he had apparently not read the decisions. At all events, he did not correctly state their import, and has since been pretty quiet about the matter. Somewhat more authoritative utterances than his have since come from President Taft and from lawyers like Mr. Hornblower. The latter's address before the American Bar Association was instructive in showing that the latest decisions of the Supreme Court were really in line with earlier ones. But the flood of comment and criticism has been by no means confined to those who might claim special competence to speak on these intricate legal

Digitized by Google

matters. Every American enjoys the inalienable right to express his opinion freely upon what he does not understand. Laymen rush in where lawyers fear to tread. Mr. George Perkins has placed his vast knowledge and unselfishness at the disposal of the public, in his repeated elucidations of the Anti-Trust law and the court decisions under it. No man need feel himself so ignorant as to shrink from giving his view of what the judges meant, or should have meant.

All this is really a good old American custom. It is a part of our "manners of liberty." Nor should we dwell merely upon the humorous aspect of these reviews of the Supreme Court by farmers in *banc* around the stove in a country store. If we have really gone in for government by discussion, we can put no limit upon popular threshing out of all sorts of public questions. In guaranteeing to citizens "freedom of speech," the Constitution does not say that only those shall speak freely who are worth hearing. And even from uninstructed discussion some good is to be got. From it we may at least learn the immense difficulty of making government by consent work well when it sometimes seems as if there were as many opinions as men.

It must not be forgotten, however, that while democracy is committed to this kind of rough-and-tumble debate on all questions that deeply interest the people, every man turning his mind inside out that we may see its contents or emptiness, it is important not to attach factitious importance to what any individual says. We are all in danger of being misled by names; and it is easy to carry over authority in one sphere to a realm where it may be no authority at all. For example, there has just come to our notice an article on the Sherman Law and the Supreme Court by the President of the Massachusetts Institute of Technology. Published in a Boston financial journal, it is evidently put forth as of great weight on account of its author's scientific eminence. We hasten to add that the article is no haphazard affair. It contains much good sense soberly expressed. In its strictly legal parts President Maclaurin seems to be as one walking on unfamiliar ground, but that is only natural. Taken for what it is worth, his discussion of the situation as it is left since the Supreme Court spoke is entitled to a respectful hearing, even if it is not particularly illuminating. But the tendency always is to exaggerate the importance of what a man distinguished in one province of thought or activity may have to say about quite another.

One recalls the great acclaim which John Tyndall received from the English Unionists when he came out against Home Rule for Ireland. There you had the voice of "science," and were the Liberals so besotted that they would not listen to it? This was eminently the scientific age, and what hope was there of making our political verdicts sound, if we despised scientific authority? It was, of course, easy to riddle this argument. No Socratic dialogue was needed to show that a man who knew all about heat and so-called spontaneous generation was not necessarily the one to speak the final word about a great healing policy of government. To assert the contrary was good neither for politics nor for science. Now, we have not the slightest idea that President Maclaurin would claim anything like scientific precision or authority for his views about combinations in the business world, and what the law has to say of them, but others may not be so discriminating. For them it will be enough that the head of the great technical institution of Boston declares that the decisions of the Supreme Court have left us "little wiser than before as to what constitutes illegal restraint of trade," and they will say that to differ with that view is to be disrespectful to "science." "Oh, star-eyed science, hast thou wandered there?"

It is one thing to admit that we have to endure the strife of tongues in the ongoing of democratic government, but quite another to say that unfounded assumption of authority, or folly, or clamor, is certain to get the best of it in the long run. With the speaking faculty, Americans have also the listening. Even the amusingly bumptious man may be quick to detect and resent bumptiousness in another. "The idea of Hezekiah Hopkins setting up as an authority on currency and banking!" "Well, I see that Squire Peterkins has told them Washington judges a thing or two!" It is that kind of breezy comment upon the commentators which helps to save our democracy from being led by the nose by charlatans, or from being carried away by every wind of doctrine. Every man may feel competent to be his own jurist, and yet scorn the suggestion that Tom, Dick, and Harry have any right to attempt to settle the Supreme Court's business. So we do, in the end, get opinions weighed as well as counted, and find order coming out of the hurly-burly.

WORKINGMEN AND DISEASE.

No less than three of the leading magazines this month devote long and thoughtful articles to the subject of "industrial," or "occupational," disease. The question of workingmen's compensation has been actively discussed of late. Legislation, following in the wake of public opinion, has accepted the principle that what we describe as accidents are to a very great extent only a regular incident of industry as it is carried on to-day. Two lines of action necessarily follow. Accident in industry must be reduced to a minimum by the adoption of all possible safeguards; and where accident cannot be eliminated, it must be recognized as a constant factor to be taken into account and provided against by some form of compensation or insurance. The latest advance has been made in recognizing that the American workingman is subjected, as a necessary incident of his daily occupation, to various forms of disease which may maim or slay less rapidly than "accident," but which in the long run are as surely fatal.

Occupational disease harvests its victims in two ways. Special industries give rise to their own peculiar ailments, or render the workingmen susceptible to certain common types of disease. In this country there are few statistics dealing with disease or mortality as an accompaniment of industry. German statistics have been utilized by one of our leading insurance actuaries in forming an estimate of the prevalence of occupational disease in this country, and its significance when translated into money values. Assuming an industrial population of 33,500,000, German experience would indicate 13,400,000 cases of sickness during last year, with an aggregate ailment period of 285,000,000 days, and a waste in wages, medical cost, and employers' losses of nearly $800,000,000. More striking even than this vast money waste is the preventable loss of life, which our expert estimates at one-fourth of the total number of 330,000 among American wage-earn-

Digitized by Google

ers. Here, indeed, is a problem of "conservation" that calls for our closest attention.

It is not necessary to go into a lengthy enumeration of the special forms of occupational disease. "Phossy jaw," caisson disease, lead poisoning, eye-disease among coal-miners, deafness among steel and iron workers, are some of the common forms. As for the general forms of disease to which workingmen are susceptible, experience is supplemented by such fragmentary figures as we have on the subject. Earl Mayo, in the *Outlook*, cites a report issued by the Bureau of Labor at Washington dealing with the prevalence of pulmonary tuberculosis and pneumonia among workers in dusty trades, compared with the same diseases in non-dusty occupations:

CASES PER 100 WORKERS.

Class of employment.	Tubercu-losis.	Pneu-monia.
Workers in metallic dust	28	17.4
Workers in mineral dust	25.2	5.9
Workers in mixed dust	22.6	6.
Workers in animal dust	20.8	7.7
Workers in vegetable dust	13.3	9.4
Workers in non-dusty trades..	11.1	4.6

A similar state of affairs is revealed by the mortality report of the United States Census, although the subdivision of occupations is not carried far enough for accurate deductions. But foreign experience confirms the facts underlying the problem. We have referred to German figures. In England, the Workmen's Compensation Law, adopted in 1906, placed six industrial diseases in a class with accidents for which compensation was allowed. At the same time the public authorities were empowered to add to the list as necessity demanded. Within five years the number of recognized diseases has risen from six to twenty-seven.

But while there is no need of formal statistics to prove the existence of a problem, we must have figures as a preliminary step toward effective remedial legislation. And more than that: figures that bring out the seriousness of the evil and place it in contrast with the comparative ease of remedying it, cannot but act as a spur to the public conscience. A harmless process of manufacturing matches has been discovered, but since it increases the manufacturing cost of matches by about *five per cent.*, the new method has failed of general adoption "through the fact that those makers who used it were placed at a disadvantage in competing with others not employing it, so long as its use was not compulsory." In other words, the wasting of one match in twenty necessitates the continuation of phosphorus-poisoning with its attendant horrors. Figures can be made to bring out the difference, as measured in life, between a conscientious attempt to safeguard the workingman and the neglect of him. Of two Illinois factories engaged in the production of white lead, one in which no effort was made to safeguard life, although employing only eighty hands, was compelled to renew virtually its entire working force every ten weeks; the other establishment, conducted on a more civilized basis and employing twice as many hands, took on less than a hundred new hands during the year. Such figures cannot fail in their effect on public opinion.

THE PROFESSOR AND THE PRESIDENT.

With the opening of the academic year the question of the university presidency and the university professorship, what they are and what they ought to be, again comes to the fore. In accordance with a growing custom among us, the installation of a new president for the University of Vermont has been made the occasion for gathering educational magnates from far and wide, and has been invested with as much impressiveness as possible. The new head of the institution comes out of the West, and there is in the utterances with which he inaugurates his career in the staid little old State of Vermont a certain *naïveté* and also a certain exuberance to which the people of that longitude are not altogether accustomed. "Let dumbness strike him who would use his voice against the songs and shouts of joyous college men when they triumph in oratory or debate. Restrained be the arm of the tyrant who would reach out a hand to throttle class spirit. Blinded be the eyes of him who will see nothing but evil in devotion to fraternity." This little extract from President Benton's address, at his formal inauguration last Friday, gives an impression, conveyed also in passages from his other addresses, of a man belonging to a somewhat simpler type than that which we generally associate with the idea of a university or college president.

We find in the newspaper report of the present address only one passage that bears pointedly on the question of the professor's place in the universe—that question which has, in recent years, been so constantly on the minds of American university presidents. "Personally," says President Benton, "I should rather have an institution with five big men in it as leaders in instruction than to have an institution with fifty little men on its staff." The sentiment that seems to be conveyed in this utterance we most heartily approve; it looks away from the mechanical notions of university "organization" that have lately been so much in evidence, and that have become crystallized even in the habitual forms of speech of many university presidents. We constantly hear of measures taken to insure the efficiency of the "teaching force," in language precisely modelled upon that which the foreman of a machine shop might use in regard to the workingmen under his orders. It would be a pleasure to note, even in the case of a minor institution like the University of Vermont, an utterance from its administrative head that indicated intelligent protest against such an attitude.

But, in spite of Dr. Benton's appreciation of "big men" for professorships, we are constrained to deny ourselves this pleasure. Indeed, the particular motive for giving to his address such extended notice lies in the instructive nature of the incongruity between this desire to have big men in the professorships and the methods of university "organization" and "management" which are laid down in the new president's programme, as given in his address to the faculty at the opening of the academic year a fortnight ago. From this we see that the new president has instituted a "Committee on Efficiency," which is to ascertain "just how much work each member of the educational staff is doing in the matter of instruction, what he is producing in connection with the literature of his chosen line of specialization, and—in short—to determine his value to the institution as compared with that of his colleagues." We have had occasion heretofore to notice a similar application of modern business methods to university organization; and the general idea which it embodies appears to have gained foothold among up-to-date college presidents. It is therefore worth while to say some plain words about it when occasion offers.

Digitized by Google

It cannot, then, be too directly stated that this cult of "efficiency" in universities involves a gross and fundamental error. It transfers, with crude and blundering literalness, principles that may be of the highest moment in the world of industrial production to a domain in which, if they have place at all, they are of altogether secondary importance. Nor is the proposed method defective simply because the value of the teacher's and the scholar's work is incapable of the kind of quantitative measurement which suffices for the output of a factory; this alone is a most serious, if not fatal, objection, but it is the least of the reasons against the application of the ways of factory supervision to the conduct of institutions of learning. Not only is your measurement liable to grievous error, but in the very act of subjecting to systematic inspection and appraisal the intellectual activities of the professors of a university, you are pronouncing in advance the doom of your aspirations for real excellence, for genuine superiority. Most men who have it in them to become "big men" will be fatally repelled from a calling in which their tenure depends on periodical committee verdicts as to their efficiency. Such of them as do enter upon it will have their sense of independence and individuality sadly impaired by the consciousness of such a status. The devotees of "efficiency" overlook the fact that, whereas the factory superintendent has only to think of the output, the wealth of the university lies in the men themselves. It was not through any system of inspection, but through the firm establishment of the principles of personal independence and permanence of tenure, that the universities of Europe achieved their greatness; and the advance of this country toward their standards has been accomplished along the same lines. To substitute "scientific management" in place of this broad and inspiriting policy is to practise the greedy and short-sighted thrift of him who kills the goose that lays the golden egg.

OVER-SCIENTIFIC FOOTBALL.

It is no new idea that intercollegiate sport, and especially football, has grown to be too terribly in earnest. We are not speaking just now of the well-grounded objection to its excessive notoriety or of its extravagant demands upon a student's time. We mean a protest formed in the minds of those who give such criticisms little thought and who would be disappointed if the "big games" were abandoned—that is, the general graduate body. For them it used to be an impressive spectacle to see the strength of one college set against that of another. Here were young warriors invested for the nonce with all the symbolic power which traditions of long standing—created not only on the gridiron, but here, there, and everywhere in the wide domains of these institutions—could possibly bestow. They became, let us say, Yale and Princeton endurance, resourcefulness, ambition matched. The men were not merely themselves, they were enlarged heroes such as Homer knew, they were, in a word, the idealized presence of "Eli" Yale and John Harvard exchanging noble buffets. Of late, graduates have found that picture somewhat blurred.

The reason for it is clearly to be sought in the greater science which is entering more and more into the conduct of all branches of the game. As one writer has put it, who has his eye on the new rule permitting players to return to the game after being removed:

> A goal might be kicked: so a strong line-plunger is removed that a man who can do little else but kick may make the score. A strong defence is needed near the goal; take out the fast back and put in the burly one. Revert to the original player when the offence begins!

The rule, as we understand it, was introduced for humane reasons, to give a player injured or temporarily exhausted a breathing spell. In that respect it serves a good purpose. But, practically, it tends to make the game more "scientific" and the players puppets, by placing the chief control at all stages in the hands of the coach. In mid-field the generalship is left by courtesy to the quarterback; when the ball reaches the danger zone the coach virtually gives the signals himself. Not only does he reinforce the defence, but sends a man in to whisper to the quarterback his orders. With the present rule this can happen whenever a tight pinch arises. As may be imagined, the resourcefulness and quick thinking which should be present in players to justify sport have been, to no small degree, transferred to a supposedly omniscient brain on the side lines.

Coaching has undoubtedly come to stay, for by it games are won, just as in professional baseball the manager is all-important. Players cannot of themselves, it seems, learn "inside" tactics, or even apply them after they are taught, without unremitting aid of the coach. The problem thus created is serious, and not to be solved offhand. So long as intercollegiate games are played the desire to win is inevitable. And the coach who should say to his men before a clash, "Never mind if you don't win; it's no disgrace to be beaten," would be held to be as clearly futile as a general who should so address his army. A certain fanaticism in sport, provided it does not countenance unfair tactics, has always been relished and may be praiseworthy. In a smaller way than in football the man who would just as lief lose, or at least would not exert every ounce of himself to win, in tennis or golf, makes it "no fun" for his adversary. To go through a set of exercises listlessly is perhaps excusable; to show the same spirit toward a game, some would call contemptible. For this reason undergraduates should not themselves be blamed for trying to procure for their football teams the best possible equipment.

The problem is one for older heads to tackle. In trying to keep up with the efficiency of professional sport is not football becoming professional, and, for all its vaunted man-producing qualities, is it not sure to impress upon players, under the present system, a professional caste? The man who can merely punt and is not strong enough to tackle and is no runner, may prevent defeat for his team by entering the game for a moment only; he cannot be called a real football player. And the quarterback who is all the time looking to the coach for his signals receives no proper training in generalship. If the characteristics are to be instilled which supporters of the game insist that it does create, players should be left, when a contest once begins, to carve out their own fortunes, and substitutions should be made only when signs of weariness are evident. There is interest in intercollegiate tennis and golf, and yet there the participants follow methods and plans of their own.

The point and protest we record are confirmed by a growing feeling among thinking graduates that an infinitely versatile "machine" is not the highest

Digitized by Google

thing to be desired, even though it be the most effective. And on this very point the doubt is arising whether "machine" football is not a mistake in the sense of losing games sometimes that might have been won by individual initiative. Team-work, all admit, is necessary in football, but this is far removed from the present system of shaping a player for one sort of attack or defence only, or a policy approaching that at least. Football, to be at its best, should turn out men of well-rounded ability, which will never be the case so long as the rules permit of minute specialization and invest the coach with so much directing power. The change, we realize, is not for one college to make, but for all.

ON ENGLISH VERSIFICATION.

Is the popular desire for enlightenment on the technique of verse growing? Three manuals, coming together, suggest at least that the teachers of English, in the several countries of their authors, think that the means at hand for widening the circle of such enlightenment can be improved.*

I.

The first is just what Professor Matthews calls it, "a textbook of metrical rhetoric," aiming "to explain to the inquirer the technique of verse-making and to show him how the poets have been able to achieve their effects." The author has partly in mind college classes who are studying that element of poetic form, preferably with practice in writing in as many forms of verse as possible. He emphasizes the value of such practice, of course not with a view to making poets, but as an aid to flexibility in prose-writing and to livelier appreciation of the verse of the masters. But Mr. Matthews writes quite as much for the general reader whose interest in poetry leads him to study the mechanism of versification; and he does not in the least fall between two stools. Historical development is never forgotten, but it does not provide the framework. The order of topics, a chapter to each, is rhythm, metre, rhyme, tone-color; then the stanza, the sonnet, other fixed forms, rhymeless stanzas, the couplet, blank verse, poetic license. An appendix offers good suggestions for study and a brief bibliography. The latter might well have been longer; it is odd that the fullest bibliography of all, T. S. Omond's "English Metrists in the Eighteenth and Nineteenth Centuries" (Oxford University Press, 1907), is not mentioned. There is an adequate index. On the heroic couplet and on blank verse the treatment is more historical than elsewhere; the examples and excellent comments thereon should enable any one to hear and appreciate the subtle modulations whereby those simple instruments have been made to yield so various music. The book is eminently readable, direct, well adapted to cultivate the ear and taste of any one who has not already gone far in the study. Occasionally Mr. Matthews is careless; how came he to weaken Tennyson's line,

> And murmuring of innumerable bees,

by dropping the last syllable of the second word? For amateurs and students he is undoubtedly right in urging that rhyme should be perfect. But is not something to be said for the artistic judgment of the great poets, when they have thought good to employ those less perfect rhymes in which Mr. Matthews can see only defect?

Professor Saintsbury's title indicates his different aim. Historical development is his main thread; prosody is his theme, rather than the larger subject of versification, though, in fact, he includes most of Mr. Matthews's topics. His 347 pages are larger than the 275 of Mr. Matthews, from whom he differs also in giving some space to Old English and Middle English pre-Chaucerian verse. He, too, writes in part for students corresponding to our college students and in part for the general reader. The work is not simply an abstract of his "History of English Prosody" in three volumes (the third of which was noticed in the *Nation* of July 28, 1910), but rather, in the author's phrase, "a parallel with a different purpose." Like Mr. Matthews, he reduces prosodic theory to the minimum, and would teach mostly through annotated examples. To his examples, only one American is allowed to contribute; some lines are taken from "Evangeline," and the "reasoned list of poets" in book iv includes Poe and Whitman, of course, but no others from this side of the Atlantic. In an "historical" manual, perhaps, that does no injustice. Mr. Matthews, as we should expect, draws largely from our native poets, as well as those of the mother country. This of itself would lead an American instructor to prefer the American book, unless, indeed, historical development is to be the sole interest. But there are other reasons for such a preference. Mr. Saintsbury's arrangement involves some needless confusion and repetition. And it must be added that other faults characteristic of Mr. Saintsbury are not quite outgrown in this latest volume. Yet it is so good on the whole that any teacher who is using the book of Mr. Matthews ought to have this at hand for comparison; the general reader, especially if an American, may be content with that of Mr. Matthews, which may be placed beside the admirable little book of Professor Lewis on "The Principles of English Verse." It is fuller than the latter, less personal in tone, but similar in spirit, and equally good reading.

The third volume in our list is a textbook, written originally for German students of English philology. The preface promises a "strictly scientific account" of the development of English prosody from the earliest times. About a third of the book (pp. 1-126) is devoted to Old English (Anglo-Saxon); to all Modern English is allowed about the same space, beginning with page 266, though some pages of the intervening section on Middle English are given to a description of stanza-forms current later. These proportions indicate the author's interest and his point of view. Æsthetic criticism is nearly excluded, probably as not "strictly scientific"; the treatment of verse from Chaucer down is evidently inadequate, occasionally quite wrong. Of American students, probably all who would care for Professor Kaluza's careful statement and brief discussion of discrepant views on the structure of Old English verse could use without difficulty the original German, or would go to the fuller discussion of the scholars whom he summarizes. One hardly sees, therefore, why the book needed to be translated, or just what public it would serve.

II.

All three authors agree on the general nature of the foot as a time-measure, with one syllable made prominent by accent; they agree also in stopping short at the critical point, declining to follow out logically the principle they accept, and to describe the foot in terms of time, which is all that quantity means in prosody. Mr. Saintsbury occasionally solves a problem quite correctly by this means; but more often he shies at it. To this criticism all three would reply that they avoided that subject on principle and for good reasons; it is contentious matter, on which they could not touch without giving it too much space and changing the character of their books. The answer to that is, that by lack of clarity on this point each author leaves obscure several topics on which a thoughtful reader seeks light, and by so much the books fall short of their purpose. Controversy was not necessary. Definite acceptance of the logical results of their own doctrine would have added much to the usefulness of each book, and not five pages to its length. It is easy to see what restrains Mr. Matthews and Mr. Saintsbury. Those who describe the rhythm of English

verse in musical terms and musical notes make mistakes sometimes—like other people; and some try to express in musical notes the subtlest variations of rhythm, confident of their ability to record them with precision, however complicated. That does not win friends for the method. But occasional error, and occasional extravagance of an extremist, cannot change fundamental facts. Let us look at these a moment.

Poetry appeals primarily to the ear. It is rhythmical in so far as the lines, when heard, consist of a definite number of units, commonly little groups of two or three syllables, that appear to occupy substantially equal intervals of time, each unit being marked by an audible prominence of one syllable over others. That unit-group, so marked, is called a foot. Thus far our three authors, and most recent metrists, are agreed—which is a great advance over Guest, for example. When, now, we would analyze the rhythm of a line, how shall we mark off these feet? The prominent syllable is unmistakable, but does it come at the beginning or at the end of its group, or within it? If all the feet of a poem were of the same pattern, it would make no difference where we assumed the beginning and end of the foot, provided all feet were treated alike. But the charm of English verse is largely in the fact that it exhibits an extraordinary variety of movement within each rhythmical type. Greek recitative verse had nothing like it, nor did Sappho or Anacreon; the choral lyric, as of Pindar and the drama, was alone richer in this regard. Our heavy stress-accent and the phonetic structure of English syllables, with the temporal elasticity of a large part of them, make possible in our spoken verse what in Greek was impossible, except in song. Not only that, but those same qualities of our speech make it natural for us, without losing for an instant the sense of a fixed pattern underneath, to depart pretty freely from that pattern in the rendering of some lines. This latter kind of departure from the definite pattern is so largely a matter of individual taste that practical schemes and formal scanning cannot record or regard it; they need note only the mathematical pattern beneath. Mr. Lewis puts this well in his first chapter. But the variations that can be readily noted, and should be, are such as to make trouble under any method of division between feet, save one. Take, for example, the lines cited by Mr. Saintsbury (p 67) from "Romeo and Juliet":

For fear of that I still will stay with thee,
And never from this palace of dim night
Depart again.

Is it not evident that the second line differs in rhythm somehow from the most regular form of the line, as illustrated in the first? The variation is common, beautiful, in a sense regular; but no one can dispute the variation. It is part of the fixed pattern, too, not of the individual reader's free expression. What is it? The foot-division and description on the system of Mr. Matthews or Mr. Saintsbury, quite correct as far as they go, give no answer. Accents—or at least the verse-beats—are as regular in one as in the other. The clearest difference is in the words "never" and "palace"; that in "of dim" is nearly the same, but is not so obvious, and we will leave that. There is a large class of words, of which *never*, *palace*, *sorrow*, *borrow*, *sunny*, *little*, *middle*, *folly*, *spirit*, are examples, in which the accented syllable is short Tennyson remarked on the inability of Englishmen to see this. To lengthen those accented short syllables in scanning the line in question would be—to use a favorite word of Mr. Saintsbury—hideous. But rhythm depends wholly on time-intervals; the feet of a given line occupy substantially equal time-intervals. What becomes, then, of the equality of the feet, if we divide

And nev | er from | this pal | ace of | dim
night?

Yet no one feels that the line is essentially irregular. The rhythm is varied; it is not destroyed. What the ear reports is that the time *from one beat to the next* is equal throughout. And that equality is what constitutes the feet. If we divide

And | never | from this | palace | of dim |
night,

the audible equality, the real nature of the foot, is brought out; we have simply been led, as musicians were finally led somewhere in the later Middle Ages, to adopt a principle of division more convenient than that of the ancients, who were as hard put to it in describing their lyric rhythms on that basis as the moderns are. But Mr. Saintsbury, speaking (p. 99) of a line from "Christabel," declares that this method of marking the scansion "would exceedingly spoil its beauty." He means that it would change an iambic line to a trochaic; and on page 80 a mark of exclamation points his scorn of those who can scan as identical in rhythm the two couplets,

King Pandion he is dead,
All thy friends are lapped in lead,

and

Let the bird of loudest lay
On the sole Arabian tree.

Mr. Matthews also is strenuous on the same subject. Just here lurks the fallacy that is so hard to reach. How can a method of notation, on paper only, alter a rhythm of speech? Does any one *hear* that vertical mark, or the corresponding division in music? Must we scorn the musician, too, as dull on the subject of rhythm? The distinction between rising and falling rhythms is as real in music as in verse; no one fancies that the universal method of marking the bars obscures the distinction. The same considerations that drove musicians to adopt the simpler method make for the like method in metric; why adhere longer to the clumsier procedure, when that is also misleading? No vagaries of elaborate musical notation of verse are involved here, and no difference of theory; only convenience, and accuracy in some not unimportant details. One other illustration. Mr. Saintsbury cites (p. 179) and marks:

The ani | mal spirits | that from | pure
blood | arise.

This is correctly marked; in this case the "resolution" of the unaccented part of the foot permits his method to preserve the equality of feet, and his ear was true. But the same method would in the other line,

And ne | ver from | this pa | ace of | dim
night,

require the division between feet to fall in the middle of the syllables "-ver" and "-ace," which are unaccented and long—a frequent case.

Take again the variation in the opening line of "Enoch Arden,"

Long lines of cliff breaking have left a
chasm.

To Mr. Saintsbury we have here simply a trochee, "breaking," substituted for the third iamb. That is really nothing more than the explanation of the "accentualists," whose inadequacy he mocks. Does Mr. Saintsbury think the rhythm is sufficiently indicated by the scheme,

Long lines | of cliff | breaking | have left | a
chasm,

which conforms to his method? To the ear, surely, the prolongation of "cliff," with a minute pause which the ear does not measure precisely, makes up the full time between this beat and the next; if "of cliff" is the foot, it is longer than any other in the line. But the time between the beginning of the beat on "breaking" and the adjacent beats is neither longer nor shorter than usual. The true division, rhythmically, leaving the minute pause unmeasured (*pace* Mr. Matthews), is

⏑ | – ⏑ | ⌊ | – ⏑ | – ⏑ | –

where ⌊ is the ancient sign for one syllable equal to three shorts, and – ⏑ is a modern sign for what seems like a dactyl, but has no more time than a trochee. This again is no question of theory, but of fact, to be determined by the ear. The notation is nothing but a device for representing on paper the facts, so determined. Several systems of notation may serve, but we must have one that doesn't tell falsehoods. Let whoever is interested try over this

Digitized by Google

line, and others like it (there are plenty of them), and settle in his own mind what the fact is. "Regularity of time-intervals is a *sine qua non* of rhythm"; the instinct for rhythmizing our free muscular activities leads us to put the beats in verse of a given type at as nearly equal intervals of time as the circumstances, sometimes including several considerations, allow.

III.

The treatment of rests in rhythm by Mr. Matthews calls for a word. In Browning's lines,

Kentish Sir Byng stood for his king,
. . . . . .
And pressing a troop unable to stoop,

he assumes a rest of two syllables' length in the first line after "Byng," and another of one syllable after "troop." That is his method of noting the variation in rhythm, in that "Byng" and "stood," each receiving full stress, have no light syllables between, as the general swing may lead one to expect, and "troop" is followed by one light syllable instead of two. But do our ears really report any period of silence in these lines? To adopt another phrase of Mr. Lewis's, when one says, "You are a bad man," does one make a pause after bad? Surely not. The syllable is prolonged, in obedience to our innate rhythmizing instinct, until it is time for the next beat. So in Browning's lines, "Byng" receives three rhythmic units of time and "troop" two. In Mr. Matthews's notation the macron (—) means only that the rhythmic ictus is there, the breve (⏑) means the absence of the ictus; he treats the prominence given by accent or ictus as equivalent in effect to a long, and always marks it long. This is legitimate, of course, after he has told us what he is doing; but it leaves him no means of indicating a real long or a real short, as Mr. Saintsbury occasionally does, still less a means of indicating a three-timed long, such as we often have.

Even more conspicuous is the defect of notation and the error of reading—rather the error in reporting his reading; for no doubt we should read in exactly the same way—in the nursery jingles (p. 21f),

Pease porridge hot, etc.,

and

Down came a blackbird and snipt off her nose.

His method requires him to note a pause after "pease" (and in the corresponding place in the other lines) and between the syllables of the compound "blackbird." Clearly there is nothing of the kind; the words and syllables are as closely joined as they ever are. But there is another error in his report. We have here two clear cases of another type of rhythm that the non-musical metrists refuse to admit. It is not common in English, but there is quite enough to throw much light on the whole subject. The familiar hand-play that accompanies the first jingle is unmistakably in even time, speaking musically. In the other case, no one who hears children reciting the line with childish gusto can doubt that it, too, is in the same time. The second line quoted is a dactylic tetrameter catalectic, in the precise Greek sense. There is no rest in it.

And this brings us, finally, to the dactylic hexameter. If Mr. Matthews and Mr. Saintsbury had learned as schoolboys to read Homer or Virgil in true dactylic time, arsis and thesis equal, the difference between that rhythm and the rhythm of Longfellow's hexameter could be perfectly clear to them. Musically speaking—because the musical terms are exact and not ambiguous—true dactyls are in 2-4 time and the verse of "Evangeline" is in 3-8 time. Whatever theory Longfellow had in mind, a poet in composing pays no attention to theory when it conflicts with his ear. Considering the small number, even of professional scholars, who even now read Homer or Virgil in 2-4 time, one may safely wager that Longfellow never did. But he wrote verses that seemed to him good. The popularity of the poem is evidence that they are good. They haven't the swing of Homer's, but they have a swing of their own that is perfectly legitimate. It is quite true that imitations of classical metres are generally poor stuff, and the true dactylic hexameter is not possible in English for many lines together. Dactylic is a complete misnomer for the English hexameter; but a classical scholar ought to be able to share the popular liking for "Evangeline" notwithstanding. If we omit the adjective and call the verse simply hexameter, he will have no cause for offence.

THOMAS D. GOODELL.

Correspondence

PEDAGOGY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of September 7, Mr. Warner Fite gives voluble expression to his feelings about pedagogy. Certainly he has been unfortunate in the experiences which have come to him, and one ought to allow him to record his emotions and views without restraint of any kind. I should not venture to do more than listen if it were not the end of a long vacation when one wishes to warm up for the task of teaching these very subjects to freshmen and other new students in the department.

First, Mr. Fite is right, departments of education are as numerous as universities, and almost as numerous as colleges. These departments are recognized in State laws, and by faculties which are made up of well-trained people like Mr. Fite himself. The reason is that superintendents of schools and others who employ teachers have found by long and bitter experience that graduates of colleges and others are better teachers after they have thought about teaching. Most students have not thought about teaching and its difficulties. The ordinary college teacher does the work of teaching with such conscious fluency that the student never gets a hint that there is any machinery of teaching. As a result, when he begins work in some remote high school, where the college teacher's illuminating example is lost in the distance, he finds out several things that he never thought of before. A great many members of university faculties have pointed out for a number of years the uselessness of supplementing their examples by thoughts on how they do it, and yet the market for pedagogical thoughts goes on improving. Indeed, it is rumored that even the more progressive illuminating examples are devoting thought to the problem how to do it. At all events, departments of education multiply at such a rate that, as Mr. Fite has pointed out, untrained men have to be drafted to fill the demands.

Is there any such thing as intelligent, scientific school management? Mr. Fite pays somewhere, let us hope, a school tax. He wants this money well spent, of course. The probabilities are that his money, until recent years, has been badly spent because no one of the natural administrators whom Mr. Fite praises had taken the pains to tabulate the relations between such matters as attendance and the need of various types of support, such, for example, as State and local support of schools. In New York city to-day there is a special committee of the city's financial board at work inquiring by scientific methods into the efficiency of New York's school system. In Baltimore they employed some of the best students of school management to look over their system. Of course, Mr. Fite may tell these municipalities that it is all nonsense, that they had better send young men to take courses in political economy or ethics, or what not, but the fact is that there are special problems of school organization which never appear in the general treatises on political economy or even ethics. Whether Mr. Fite likes it or not, the principles of school taxation are fairly clear, and he can find them in an excellent book by Professor Cubberley.

Educational psychology is a topic which one approaches with modest hesitation, in view of Mr. Fite's authoritative dicta concerning it. Yet, one might venture the assertion that an encouraging part of current psychology is devoted to the scientific study of educational problems. Why quarrel about where educational psychology ends and general psychology begins? The fact is that every one who is intelligently interested in psychology is interested in educational science. But general psychology cannot, and does not, enter in detail into school problems. Take, for example, the psychology of reading. Of course, the student of general psychology is interested in the process of reading, but it was not until recent interest in education became intense that the psychology of reading became a special topic of investigation. There is to-day a respectable body of fact on the psychology of reading. There are, as a re-

Digitized by Google

sult, new and more economical methods of teaching reading in the schools. If this is news to Mr. Fite, he should look up Huey's book and Dearborn's monograph and Meumann's lectures on the subject. If he knew about all these and wrote what he did for the *Nation* of September 7, he ought, for the sake of his own conscience, to show a single text in general psychology that contains this material. Or, to plunge further into detail, the mere difference between reading aloud and silent reading is a scientific topic on which we have some knowledge that has large educational significance. Does Mr. Fite know of a course in general psychology which acquaints students with this distinction and its psychological nature and consequences? Mr. Fite is a little behind the times in ordering teachers back to the general psychologies. They have read these books and they are stimulated by their readings to ask questions which are not answered there. May they and their friends not push the frontier of psychology out into the school processes, and yet be included under the broad mantle of Mr. Fite's charity?

When it comes to educational philosophy, the present writer will have to plead ignorance. Mr. Fite is a specialist in philosophy, and he has spoken. His speech in this matter does not seem to agree with the views of such eminent philosophers as John Dewey. Perhaps some philosopher will feel moved to discuss philosophy with Mr. Fite. When the present writer opens his class in experimental education next week, he will confine his attention to the scientific aspects of education, for his training does not qualify him to deal with other phases of the subject. CHARLES H. JUDD.

Director of the School of Education of the University of Chicago.

Chicago, September 27.

THE SIMPLICITY OF THE TARIFF.

TO THE EDITOR OF THE NATION:

SIR: The following incidents throw a bright light upon the principles and methods of the officials charged with the administration of our tariff and may be of some interest to your readers.

I arrived in New York not long ago and duly declared all things purchased abroad, among which were certain works of art, made about 300 B. C. and therefore free of duty. I learned:

(1.) Since I had failed to provide myself with a consular invoice issued by that eminent expert, our consul in London, and certifying to their antiquity, they must be regarded as modern imitations and therefore dutiable.

As such, observe, they were worth less than a tenth of the price I had paid and declared.

(2.) Nevertheless, I must pay duty upon the price paid and declared.

It is surely of interest to know that the government officially denies the validity of the law of contradiction.

(3.) If I refused to pay, the articles in question would be sent by a common drayman to the General Stores. Since they were very fragile and had been packed to carry in the hand, they would probably be destroyed, in which case I could recover nothing. Moreover, I should have to appear in person to reclaim them, and the consequent expense would be much greater than the duty.

(4.) If I paid under protest and removed the articles from the government's custody, I could recover nothing.

I was therefore urgently advised to pay and make no more fuss about it.

I did, however, make more fuss, and learned:

(5.) In default of a consular invoice the opinion of the government's expert might be accepted, but he was not on duty and could not be reached.

(6.) The collector on the pier might dispense with the consular invoice, but the cases in which he was willing to do so were rare indeed, and it was hardly worth while to appeal to him. Why not pay and say no more about it?

I did appeal and he passed the articles in question.

In other words, the Administration, having resolved to convert the $100 exemption clause, originally adopted as a means of "protection," into an instrument for the collection of revenue, and having, with that end in view, made it still more burdensome by certain arbitrary definitions which exclude from its operation many articles formerly included, now enforces the above administrative rules in order to force the passenger to accept as final the decision of the customs officials on the pier.

Now these officials are as capable and well-meaning men as the government pay and the conditions of service can attract, but they are not omniscient; they are forced to decide a vast number of diverse questions in the briefest possible time; they are deeply imbued with the well-founded belief that virtually every passenger will smuggle if he can, and, last but not least, they know that their efficiency as officials will be measured by the amount of revenue they can turn in.

How much downright robbery is perpetrated under this precious system nobody will ever know. And the responsibility for it rests upon the shoulders of two or three men, whose names I need not mention.

MNO.

Philadelphia, September 28.

"CURIOUS TO KNOW."

TO THE EDITOR OF THE NATION:

SIR: Since writing to the *Nation* last August about Boswell's use of the expression, "Curious to know," my attention has been called by anonymous correspondents to two earlier examples of its employment. The first is found in Evelyn's "Diary," near the middle of the long entry under date of August 19, 1641, as follows:

The Chimes of Bells are so rarely manag'd that, being curious to know whether the motion were from any engine, I went up to that of St. Nicholas, etc.

Dr. Thomas Wilson was bishop of Sodor and Man for more than fifty years following 1698, and was the author of a little work, "Sacra Privata," which still holds a respectable place in Anglican church literature. In its introductory chapter the reader is exhorted thus:

Never be curious to know what passes in the world any further than duty obliges you: it will only distract the mind when it should be better employed.

A correspondent of the Chicago *Tribune* notes that Dickens caused Mr. Pickwick to indulge himself in the use of the locution, and also one of the characters in "Barnaby Rudge." But that was subsequent to Miss Martineau's example cited in the Oxford dictionary, and mentioned by me with too little attention to the punctuation. I wish to thank Professor Hart for his correction of my mistake in quoting the same. THERON WILBER HAIGHT.

Waukesha, Wis., October 2.

INQUIRIES INTO THE EFFECTS OF ARDENT SPIRITS.

TO THE EDITOR OF THE NATION:

SIR: In my possession is a book, published sixty years earlier than Dr. Benjamin Rush's tract, "Inquiries into the Effects of Ardent Spirits," referred to on page 118 of your issue of August 10. Its title-page reads:

An ESSAY of HEALTH and LONG LIFE. By George Cheyne, M.D.F.R.S. The Fourth Edition. . . . London. Printed for George Strahan, at the Golden Ball overagainst the Royal Exchange in Cornhill; and J. Leake, Bookseller at Bath. 1725.

This treatise covers 232 pages, and is inscribed:

To the Right Honourable SIR JOSEPH JEKYLL, Master of the ROLLS. . . . As a Testimony of Respect, and Gratitude, By His most obliged faithful humble Servant, GEORGE CHEYNE.

Below are a few extracts from Chapter II, which is headed:

OF MEAT and DRINK.

12. . . . Two Ounces of *Flesh Meat*, well digested, beget a greater Stock of more durable and useful *Spirits*, than ten Times as much *strong Liquors*, which nothing but *Luxury* and *Concupiscence* makes necessary. Happy those, whom their *Parents*, their natural Aversion to Strong Liquors, or whom kind *Providence* among the *better Sort*, has brought to the Age of *Maturity* and *Discretion*, without dealing in or desiring any great *Quantity* of *strong Liquors:* Their *Passions* have been *calmer*, their *Sensations* more *exquisite*, their *Appetites* less *unruly*, and their *Health* more uninterrupted, than any other *natural Cause* could have produced. And thrice happy they, who continue this Course to their last Minutes. Nothing is more ridiculous than the common *Plea* for continueing in drinking on, large *Quantities of spirituous Liquors; viz.* Because they have been accustomed so to do, and they think it *dangerous* to leave it off, all of a sudden. It were as reasonable for him that is fallen into the *Fire* and *Water* to lie there, because of the Danger of removing him suddenly. For neither *Element* will destroy him more certainly, before his Time, than wallowing in *strong Liquors*. . . .

15. I have no Intention here to discourage the innocent Means of *enlivening* Conversation, promoting *Friendship*, comforting the *sorrowful* Heart, and raising the *drooping* Spirits, by the *cheerful Cup* and the *social Repast*. Perhaps I may like the harmless *Frolick*, the *warm Reception* of a Friend, and even the *Dulce Furere* (*Horat. i. e., An agreeable Frolick or Extravagance*) itself, more than I ought: Persons sober in the main, will receive little Prejudice from such a *Fillip*, when the Occasions happen but seldom, and especially when they make it up, by a great Degree of *Abstinence* afterwards. But a *Sot* is the lowest Character in Life. . . . A little *Lowness* requires *Drops*, which pass readily down under the Notion of *Physick;* Drops beget *Drams*, and *Drams* beget more *Drams*, 'till they come to be without Weight and without Measure; so that at last the miserable Creature suffers a true *Martyrdom*, between its natural *Modesty*, the great Necessity of concealing its

Digitized by Google

Cravings, and the still greater one of getting them satisfied *some how*.

18. Since the Time *foreign Luxury* has been brought to its Perfection here, there are a kind of Liquors in Use among the better Sort, which some great *Doctors* have condemn'd, by *Bell, Book,* and *Candle,* and others have as extravagantly commended: I mean, *Coffee, Tea,* and *Chocolate*. . . .

Of his "General Rules for Health and Long Life," drawn from the Head of "MEAT and DRINK," at the close of Chapter II, note the following:

8. Nothing conduces more to *Health* and *Long Life*, than *Abstinence* and *plain Food*, with due *Labour*.

15. *Water* is the most natural and wholesome of all *Drinks*, quickens the Appetite, and strengthens the *Digestion* most.

16. *Strong* and *spirituous* Liquors freely indulged, become a certain tho' a slow *Poison*.

17. There is no Danger in leaving them off all at *once;* the *Plea* for continuing them being false and groundless.

20. Strong Liquors do not prevent the Mischiefs of a *Surfeit*, nor carry it off, so safely as *Water*, tho' they seem to give present *Relief*.

21. The frequent *Use* of *Spirits* in *Drams* and *Cordials*, is so far from curing *Low-spiritedness*, that it increases it, and brings on more *fatal* Disorders.

23. *Malt Liquors* (excepting clear small Beer, of a due Age) are extremely hurtful to *tender* and *studious* Persons.

CHARLES MEIGS SCHENCK.

Denver, Col., October 2.

COUNT THORANE.

TO THE EDITOR OF THE NATION:

SIR: In your review of "The Mother of Goethe" (*Nation*, September 14), you say:

It is curious that the name of the distinguished French guest of the Goethehaus should be spelled in this book with a final *e*, although both Goethe in his autobiography and Gutzkow in his "Königslieutenant" have a final *e*.

The question of the spelling of the family name of François de Théas, Comte de Thorane of Grasse in Provence, is discussed at considerable length by the late Professor Schubart of Munich (whose widow presented to the Goethehaus in Frankfort many of the pictures originally painted for Thorane in Frankfort and purchased by her husband in France from his heirs), in his interesting book, "François de Théas, Comte de Thorane; Goethe's Königslieutenant." It appears from this book (chapter iv) that "Thorane" is a German corruption of "Thorane." There seems to be at least this authority, for what it is worth, for Miss Reeks's spelling of the name.

A QUERY.

TO THE EDITOR OF THE NATION:

SIR: In an old examination paper in English literature, set to candidates competing for the English Civil Service, I came upon the following question: "'When Milton lost his eyes, poetry lost hers.' Discuss this aphorism."

Perhaps one of your readers can tell me whence the quotation is taken.

COMUS.

TALLEYRAND.

Talleyrand the Man. Translated from the French of Bernard de Lacombe by A. d'Alberti. With two portraits in collotype. Boston: Dana Estes & Co. $3.50 net.

This volume is in no sense a biography of Talleyrand. It is a series of extended essays which have appeared from time to time and which deal with certain episodes in the life, not so much of the great figure in the affairs of Europe as of the individual. "We know," says the author in his preface, "Talleyrand the Bishop, Talleyrand the deputy of the Constituent Assembly, Talleyrand the diplomatist, the Grand-Chamberlain, the Minister, and head of the provisional government, Talleyrand the courtier and statesman, but Talleyrand the private man is comparatively unknown. Yet it would be interesting, if only for the sake of the conflicting sentiments which he inspired, to be admitted to intimacy with a man the faithful affection of whose friends, kindred, and servants equalled the bitter hatred with which some of his political partners have pursued him even beyond the grave."

Hence the first glimpse which M. de Lacombe gives us of his hero is after his initial fall from power, in 1792, when, armed with a passport, he fled from Paris to London, and became an *émigré*. The question here at issue is whether Talleyrand at this time was entrusted with a mission by the provisional executive council for which he had acted as counsellor, for a few months, in the conduct of foreign affairs. Later, in 1795, when he wished to clear himself of the stigma of emigration, he boasted that he had had such a mission, but in 1792 all his complaints are that he is left without employment. Which are we to believe? asks M. de Lacombe, and answers, the latter, without hesitation:

In the autumn of 1792 neither Danton nor Lebrun had made Talleyrand his agent in England. They would both have been too much afraid of compromising themselves. Besides, though many contemporary documents may be found in which Talleyrand offers his services . . . there is not one which shows him at work, unless we believe in his famous correspondence with Mme. de Flahaut and the Minister of Foreign Affairs, published in 1793, but who would venture to do so?

His proscription early in 1793 put an end to his hopes, and he was content to live quietly among such friends as he had in England, until, one year later, charged with projects of Republican propaganda, he was ordered to leave that country. He set sail in January for Philadelphia, and entered upon that two years' sojourn in America of which M. de Lacombe gives a detailed and interesting account. He was well received on his landing, and although, for reasons of state, Washington would not grant him an audience, he had no lack of high political society among the Federalists, Hamilton himself standing sponsor for him.

For a time Talleyrand was dazzled by the prospects of making a fortune in land speculation:

My reason tells me [he wrote to Mme. de Staël] that it is necessary to acquire a small competence so as not to be in constant poverty and dependence when one grows old. . . . There is plenty of money to be gained here, but only for those who have it already. If you know any who would like to speculate in land here I would willingly undertake their business. If I had a sufficient number of clients who would entrust their business to me and allow me an interest in it, both parties would profit largely; the clients, because American merchants are not very trustworthy in business, and myself, because I could thus earn some money without investing capital. See if you can manage this.

Talleyrand did actually embark at one time in an agrarian enterprise. It is asserted that "he bought, jointly with Beaumetz"—his travelling companion—"a settlement in Maine which belonged to Gen. Knox, Secretary of War. He divided it into lots represented by shares, and thought that, like Noailles and de Talon, he would find it easy to place them among the *émigrés*." But how this business turned out M. de Lacombe does not tell us. For Talleyrand himself it naturally lost interest when, in 1795, his name was removed from the list of the *émigrés*, owing to the efforts of Marie-Joseph Chenier, and he was free to return to France. This he did the following year.

Six years have elapsed at the opening of the second section of the volume. Bonaparte is now first consul, and Talleyrand his minister of foreign affairs. There is a rumor that the latter is to be married, and that his wife is to be the "beautiful Indian" who had long presided at the magnificent fêtes at the Hôtel Gallifet. It was Napoleon who had forced the matrimonial issue for his minister. Touched in his pride by the slurs cast upon his court throughout Europe, Napoleon determined to clean house, and began by giving Talleyrand the alternative of separation from his friend, or of giving her his name. The whole incident is a difficult one to explain in the career of the ex-Bishop of Autun, since it is impossible to see what he gained in proportion to what he hazarded, and even lost by the transaction. That he was deeply in love with Mme. Grand is out of the question. M. de Lacombe paints a vivacious portrait of this lady whose origin he establishes beyond a doubt as French, and not Danish or English, as has sometimes been supposed. After her mar-

Digitized by Google

riage to a young Englishman, a clerk in the Indian civil service, she left India, where she was born, like so many heroines of Anglo-Indian novels a hundred years later, to escape an unsavory past, and begin life anew.

In Paris, after participating in the emigration, she became one of the great *courtisanes* of the Directory and Consulate. She was very beautiful, but she had little wit, unless it be of that special kind with which women are commonly credited, and it is hard to see how she kept her hold upon her princely lover save on the ground, here hinted at, that she was in possession of compromising information, and was thus in a position to force Talleyrand to marry her. Needless to say, the marriage was not a success. Talleyrand scarcely tolerated her in his salon, where it was his kindly habit to turn her mistakes to ridicule, and finally he effected a complete separation from her. She was one of the serious mistakes of his career, and he had cause to regret his rash step in more ways than one. That which most immediately concerns us is its effect upon his relations with the Church, since these assumed supreme importance toward the end of his life. When, in 1802, Talleyrand, aided and abetted by Napoleon, deliberately violated the conventions of a papal act of secularization which permitted him to leave the priesthood, but expressly forbade him to marry, he doubtless scarcely foresaw the time when he should wish to return into the fold of the Church. This time did actually come, however, and Talleyrand was forced to make humble confession and abnegation of sin and error, almost amounting to a repudiation of his whole past life.

Whether this reconciliation, so famous in history, was really sincere, has been more widely discussed than any question of its kind in modern times. All those who have read Renan's "Souvenirs d'enfance et de jeunesse" will recall that writer's sneer at the transaction. "Toward the month of April, 1838," writes Renan, "M. de Talleyrand, in his hôtel in the rue Saint-Florentin, feeling his end approaching, believed that he owed to the human conventions a last lie, and resolved to become reconciled, for the sake of appearances, with a Church whose truth, once recognized by him, convicted him of sacrilege and opprobrium." It has, of course, always been the effort of those directly interested in the case to prove that Talleyrand's reconciliation was no lie and that, above all, it was the result of no sudden resolution. M. de Lacombe is one of this number. In a long series of chapters at the close of his book he gives a detailed account of the successive steps of the "conversion," as it has been called. To aid him in this work he has had unusual advantages. His father was the friend of the Abbé Dupanloup—Renan's Abbé Dupanloup of the "Petit Séminaire"—to whom the work of redeeming the distinguished soul was entrusted, and who bequeathed to the elder Lacombe fourteen volumes of documents. But such an advantage is, one feels, somewhat offset by the sort of prestige always possessed by family papers for those who have grown up in their shadow. Piety predisposes to their acceptance in an almost Biblical sense, and distorts the critical faculty in an estimate of their documentary value. The most conspicuous item in the present instance is from the hand of the abbé himself. But this account of his relations with Talleyrand, here printed for the first time in full, as an appendix, seems to us, in spite of the importance attached to it by M. de Lacombe, to have psychological rather than historical significance. It is a remarkable piece of self-portraiture, and confirms in every way Renan's deliciously ironical sketch of the elegant young cleric who was chosen by the Archbishop of Paris, Mgr. Quélen, because what was wanted was "a worldly priest, of literary tastes, as little of a philosopher as possible, in no wise a theologian, having, with the old classes, those relations of birth and social standing without which the Gospel has little access in those circles for which it was not fashioned. The Abbé Dupanloup . . . was just the man needed to participate innocently in a collusion that susceptible souls could regard as an edifying *coup de la grâce*."

And this is precisely the impression one derives from his narration of all the little manœuvres on both sides, in which the *bon ton* of the polite world was invariably preserved. First, Talleyrand invites the abbé to dinner, and is annoyed because the invitation is refused. Then M. Dupanloup yields to a more urgent command, and is duly edified by the great man's saintly conversation at table. Talleyrand delivers an address at the Academy of Moral and Political Sciences upon the death of his friend and colleague, M. Reinhard, and sends a printed copy to the abbé, who returns the compliment with his own book, "Christianisme presenté aux hommes du monde par Fénelon," together with a very graceful and tactful letter. Throughout this whole intercourse, it is impossible to escape the impression that Talleyrand is playing a game with his young friend, and seeking very deliberately to produce a definite impression upon him. Especially toward the end, when Talleyrand fell sick and felt his strength failing, does this sinister note of calculation and of play-acting grow pronounced and unmistakable. Talleyrand clearly is trying, with great craft, to drive his last *rusé* bargain, to gain the maximum of advantage for himself with the minimum of concession to his opponents. How else can one explain the grim comedy of that death-bed scene, the procrastination in the signing of the paper of recantation from which he withheld his signature almost to the last gasp? In the final analysis, and with all the evidence in, one is forced to accept the conclusion of Renan that this boasted reconciliation was but a final effect arranged with great care by the man of many wiles to disconcert friend and foe alike, and to purchase the pardon of the Church when it had become too cheap to cost him anything.

If it was the intention of M. de Lacombe to rehabilitate the memory of Talleyrand, he has scarcely been successful in the undertaking. He has shown, what could equally be shown of the most abandoned of wretches, that he had those who were attached to him, and that he possessed traits of kindly interest and consideration which came out in the intimate intercourse of his family life. But these scarcely suffice to offset what is shallow, shabby, and even sordid in the character of the man. In seeking to soften and refine the features of this cynical master of duplicity and chicane, M. de Lacombe, one feels, serves the ends neither of truth nor of art. On the whole, as often happens in works controlled by similar motives, the sole result is to make a singularly distinct and dominant personality seem rather pettier than in real life. Certainly, the author has failed utterly to let the reader catch even a glimpse of the secret of Talleyrand's unquestioned power. He has shown us a clever rascal, but not a great rascal, and in this he has, many will think, done a greater injustice to the memory of his subject than if he had allowed it to rest under the worst imputations of impiety and impenitence.

CURRENT FICTION.

A Portentous History. By Alfred Tennyson. New York: Duffield & Co.

This Alfred Tennyson is the poet's grandson. For some time he has been serving a literary apprenticeship, and this is his most pretentious effort so far. It bears the mark of effort a little too plainly, and in nothing more than in its attempts at the good-humored ease and colloquial freedom of the Fielding-Thackeray-De Morgan school—or line. No youngster need try for that jovial manner: it is alien to the storm and stress phase, native to maturity and temperamental well-being. So the reader rather resents Mr. Tennyson's effort to babble like the masters about his scenes and persons. He has a machinery of the intimate style; he himself is "the philosopher," "the biographer"—a functionary to be elaborately sniffed at, but by no means ignored. "The philosopher turns up his cuffs," "the philosopher dips his pen," and so on: unluckily the philosopher hasn't the knack of getting us interested in him: we wish

Digitized by Google

he would let himself be a plain story-teller and get on with his story.

It is a good story—remarkably good if we are to believe the author's account of its origin, which is simply that the chance seeing of a famous Scotch giant inspired him to look into the facts of the monster's life. He visited the giant's birthplace, and got up his subject methodically. Whether this is literally true or not, the result is not a mere piece of "copy." Jim Macdonald is taken as a type of all "freaks." His physical peculiarity is looked upon as a deformity by his fellow-villagers, from his early childhood. Being extremely sensitive of nature as well as slow of wit, he is thrown back upon himself. Nobody understands him, and though there is nothing vicious in him, he is steadily forced by chance and prejudice into the position of village ne'er-do-weel. His family relation becomes a mockery, and his love a curse. The story of his steady driving to the wall is told with a feeling above mere pathos. In the end, at the moment when, now fairly desperate, he promises to become a dangerous animal, an odd rescue comes. He is discovered by a great collector of freaks, and removed to the safer isolation of the "curio hall," where he is not unhappy. Oddly enough, the showman is represented as a Jew and not an American, but we may comfort ourselves with the reflection that he has all the hustling traits of his cis-Atlantic kind. He has his own theory of benevolence allied with business. When big Jim balks at the prospect of exhibiting his huge frame, of which he is ashamed, the "Tickler" is prompt with his argument. His freaks, he says, are better off with him than they can be elsewhere: "They were not born like ordinary human beings, and in so far as they were in touch with ordinary humanity they were miserable. The unnatural could not mix with the natural. The natural were too many, too hard, too strong. Now they have withdrawn to a place of refuge." The "Tickler" is a well-drawn if not novel type; and so is Dr. Spens; but Jim Macdonald is the figure which gives the book its power. If the writer could have been persuaded to leave out his bogus confidences, and to boil down his material here and there, he would have done a big thing for himself and for his readers.

The Common Law. By Robert W. Chambers. New York: D. Appleton & Co.

If it were only for Mr. Gibson's drawings, of which there are sixty and more, this volume would stand out from the mass of current novels. That master of black and white has grown out of his second and rather splashy manner into a refined and even finicking style—delicate outlines against elaborate cross-hatching. The effect is distinctly English—very unlike the Mr. Pipp sort of thing; and yet unmistakably Mr. Gibson's. Whether the present game is worth the candle depends on one's view of the game. In this story Mr. Chambers has at least abandoned his scenes of luxury and high society. The hero is a scion of the elect, but a professed renegade. His fancy does not ride in gold-fitted motor-cars, or swim in seas of Pommery. He is, in fact, a painter, a Bohemian. Mr. Chambers, to tell the truth, has merely shifted his action to a realm as popular, even, as that of high life; and in his opening scene he flings the gauntlet to every adventurous reader. The qualms and distresses of a young girl who has offered herself as model to a strange young painter are not here interpreted for the first time. But the young girl is commonly driven to her desperate act as a last resort against starvation. Valerie West has no such goad. Though she is perfectly beautiful and full of mental charm, she has grown up in seclusion, making no friends, and enjoying no youth. Hence her determination to enter the life of the world of artists, because she hopes to find there her belated share of youthful joy. She admires the work of Louis Neville, a brilliant decorative painter, and presents herself to him without warning as a model. He takes her to be a professional (without inquiry), and gives orders accordingly. Hence a scene which, however trumped up, may be allowed to be sufficiently "piquant" to whet the appetite of the most jaded story-devourer.

From this point of vantage, the tale works on to a larger situation of equal piquancy. Valerie becomes a professional model, in much demand among the more distinguished New York painters. She leads an unconventional but blameless life, not without its amatory episodes. But Louis Neville and she have unwittingly made exchange of hearts and in due season they discover the bond. Neville wishes to marry Valerie, but she will not because she knows his social and family circles would not accept the marriage as desirable. This is perfectly according to the fashion—in England. But instead of saying "we must part," she offers herself as his mistress, the relation to begin on a specified date, and to be officially known as "the Great Change." In the end, after some hundreds of pages, "the common law" enforces itself—that is, the pair at last discover that their only path to happiness lies through the old form of wedlock. This is tame enough; but the piquancy of the intermediate situation is drawn out to its utmost. Whether such a story should have gone through publication in one of the greater magazines is a question of taste rather than of morals. The whole affair, like all of Mr. Chambers's affairs, is insincere and vulgar. With much pretention of mental and moral subtlety, Valerie and her young man remain obvious and insignificant persons. The intent and effect of the story are mildly sensational.

Perpetua, or the Way to Treat a Woman. By Dion Clayton Calthrop. New York: John Lane Co.

This might well be a story of Alice and Lewis Carroll. The characters are not so named, and the author never lays himself open to the charge of imitation. But we recall no other recent book that so surely sets forth the mysteries of Wonderland or so nicely adjusts the lives of a little girl and a bachelor. Perpetua Mary—no other name can she remember—has been left in her eighth year by the death of her mother to shift for herself, the father having ridden away shortly after the marriage. But she had posed before for Brian O'Cree and now confidently comes to his studio in Kensington with her small bundle, a stuffed elephant ("Shadrach by name, since it had been rescued whole—miraculous moment—from the fire"), and with a strange message:

> "Do I understand," he asked quite seriously, "that you have adopted me for a father?"
>
> "I wondered——" she began, perilously near tears.
>
> In the firelight they made a curious picture: Brian standing there, big and bushy, in a gray flannel suit, and the long slip of yellow body, Perpetua—a kind of human fairy, trying to explain to a giant that the dreams of fairyland were more real than life. . . .
>
> "Perpetua," he said, and his voice had the coax of an Irish accent, "tell me just what has happened." "I knew people adopted people," she answered, "and I wanted a father, and I like you better than anybody, so I did it."

Even though time flies, child dreams continue with these two. Because Perpetua loves elephants and because Maria Theresa is "l'éléphant le plus extraordinaire du monde" in a French circus, they join the caravan, Brian ostensibly to procure an opportunity to paint rare scenes. Many things indicate that the author himself is at home in this strange company. Perpetua is at length placed in a convent to be educated, and the plot is left to develop—would that this were not necessary! The real father turns up, a swindler sucking the wealth of a young profligate. The resulting melodrama is regrettable save for one powerful scene which it precipitates. Brian, confronted by the father, feels his position of adopted father transformed into that of lover; whereas Perpetua, cherishing a missionary love for the profligate, still looks to Brian as her "daddy" and is conscious of the other sort of love for him when honor tells her that it is too late. Minor characters in the story are usually clearly drawn. We may mention as typical Brian's mother, with her delightful understate-

Digitized by Google

ments. To Perpetua concerning Charles I: "A most unfortunate man, my dear—most unfortunate, losing his head in that way."

The House on the Mall. By Edgar Jepson. New York: G. W. Dillingham Company.

There is a fairyland of crime as well as of fancy, and this house of many inventions is there situated, though it is said to be in London. A supposed suicide comes to life as a criminal with the combined resources of a Monte Cristo, an Edison, and a Vautrin. The detective in the book is a poor creature, of whom little is seen except as a victim locked up in the dungeons of the hero. In fact the book is scarcely to be classed as a detective story at all, but owes its interest to the pleasant way the hero has of getting rid of his tools and confederates. The way involves a good deal of bleeding and fantastic torturing, but the blood and the pains belong to the fairyland of crime and awaken no disgust in the reader. There is a love story running through the horrors that is really clever and pretty. The book, as a whole, is ingenious, and, to those at home in its geography, entertaining.

PRACTICAL REASONING.

The Application of Logic. By Alfred Sidgwick. New York: The Macmillan Co. $1.60 net.

Mr. Sidgwick has performed the really remarkable task of making logic entertaining. Moreover, he has done this without at all sacrificing exactness of thought or precision of expression—"logic is logic" still. Yet so surprising and delightful is it, in a treatise on this subject, to read page after page without a single technical term, without a rule or reference to Barbara or the Four Figures, that one has to rub one's eyes and reread the title to make sure that it is logic after all. Mr. Sidgwick has gained this surprising result by leaving the abstract altogether, by following out the course of real disputes as they actually occur, by avoiding all technical language (it is so unnecessary!), and by dealing always with meanings rather than with words. The neglect of this latter precaution, in fact, seems to be the chief cause of the misapplication of the old logic. Purely formal logic plays with words and propositions as if they were counters in a puzzle and could be treated quite independently of the particular meanings the expression of which alone gives them any value. Consequently logical argumentation, as our author points out, has usually been regarded "as a structure formed by taking isolated terms, putting them together into isolated propositions, and then putting these together into a syllogism. This conception, by its assumption that the logical character of terms is fixed independently of their use in particular assertions, and that the logical character of propositions is fixed independently of their use in particular arguments, does as much as is possible to obscure the fact that the syllogism is essentially the form of argument which consists in *applying general rules to particular cases.*"

These last words give Mr. Sidgwick's definition of the syllogism, and an admirable definition it is. And with this view of its nature, it is plain that the major premise is simply the "general rule," and the minor premise the "particular case." The newer application of logic for which Mr. Sidgwick stands would by no means do away with these useful and venerable terms. The old logic did well in inventing and retaining them. But, as our author shows, in analyzing out the two premises in any particular argument, formal logic has usually made much too easy work of it. In simple arguments like those of Euclid all will agree on the premises, and these may be regarded as themselves perfectly simple. But, as a fact, no real disputes are ever simple, and most disputes begin with a disagreement as to what the major premise, or general rule, really is. Now there is a difference between "general rules"; a few of them are absolutely general, and the great majority of them are nearly general, but not quite so. If the major premise, when found, turns out to be of the former kind, as in mathematics, then, of course, all will agree and the dispute will be settled—in fact, there will hardly be any dispute at all. But just for this reason we are not, as practical logicians, greatly concerned with this type of argument. It is in *real* disputes that we are interested; and in real disputes there is no such unquestionable major premise—no such absolutely general rule.

When once the disputants have analyzed out and agreed upon the general rule on which the conclusion shall be based, the next step is ordinarily to see whether this rule may rightly be applied to the case at issue (the minor premise). And here again we come upon one of the misleading tendencies of formal logic. It is easy to divide your argument into two premises, see whether each is correct, and then draw your conclusion. But the important question is whether the two premises really belong together, *whether the rule applies to the fact;* whether *this* case really comes under the rule or possesses a detail which makes it an exception. This question, as is obvious, usually narrows the discussion down to an investigation of *causes.*

In determining a causal sequence—that is, in answering the question whether a given detail of the case is relevant—we may be aided by experiment and observation and an attempted application of Mill's principle of "Single Difference"; but in inductive no less than in deductive logic we must remember that form alone cannot answer our questions. Every experiment must be interpreted, and the interpretation may again be a subject of disagreement, and if it is so the point at issue will still be, as before, *the simplicity of the fact.* Was it *simply* A that gave rise to B, or was it a particular kind of A? Is A merely A, or has it some additional characteristic which, for our purposes, takes it out of the class of the other A's altogether? It is right here that nearly all real disputes centre. For "a fact may be correctly described as A, and yet A may be the most misleading possible description of it in a given context. Thus a thermos flask strictly *is* a hot-water bottle, and yet a person wanting a foot-warmer would find the description false."

Concrete observation and increasing definiteness of statement may help us here, but the traditional formal logic certainly cannot. This most vital difficulty it scarcely notices, or if it does so at all, it passes by at once with the dignified remark that "A is A." This venerable Principle of Identity, however, does not prove very helpful. "When we already know that a thing is A we do not need to be told that if it is A, it is so. So that either the axiom must be admitted to be superfluous, or it must be so interpreted as to be applicable before the event—that is to say, while there is still some need to be assured that A really is the best description." As a matter of fact, the Principle of Identity can never give us any such assurance, and when it is used with that end in view, it ceases to be superfluous only by becoming deceptive. It could be useful and trustworthy "before the event" only in a world whose facts were absolutely simple. But in this world of ours, no fact is simple or can be. Nothing can be a fact for us "until we recognize it as a particular kind of fact—say A." We must have a way of classing and naming it if it is to be a subject of discussion and not a mere blank *this.* And such a process of naming and classing inevitably results in a description that is incomplete and somewhat vague. "To recognize a fact as A is to view it as *essentially resembling* the other members of the class A, in spite of all the differences between it and them." All naming and classing is therefore ultimately based on *analogy.* This important and simple fact is not commonly understood. "To the unreflective it seems that classes *exist,* and that since they exist they have to be named; that our ancestors kindly named them for us—after the example of Adam in the Garden of Eden. . . . Like the cricketer who was asked why a certain kind of ball

Digitized by Google

should be called a 'yorker,' they would answer that they failed to see what else you could call it."

Once it is fully understood that names do not grow on things, but that we have to stick them on, and that, though we must do so, we do it at our peril, it becomes clear that the central question of most disputes is how the fact under discussion should be classed. And it is now evident that this question can never be answered by any abstract Principle of Identity or any linguistic considerations, but only by an appeal to the particular situation and purpose which are relevant to the fact in question. Ultimately every fact is what it is in virtue of the context and the purpose involved, and only so can it be interpreted.

The pragmatic nature of Mr. Sidgwick's logic is now perfectly clear. "Purpose," "context," "consequences," are the things that give meaning to propositions, and without such concrete meaning they could be neither true nor false. "Every statement depends for its meaning on the *use* it is intended to be put to." "The purpose and the purport (or meaning) of a statement are the same thing. To say that truth is not independent of purpose, therefore, is no more than to say that statements without a meaning cannot be recognized as either true or false —that they are mere noises in the air, or marks on paper, till some sort of meaning is apprehended in them." This, of course, is the primary and fundamental doctrine of pragmatism, and Mr. Sidgwick's exposition and demonstration of it would make this book an excellent introduction to pragmatism as well as to logic. The pity is that so sound a doctrine should be carried to such extreme conclusions as are to be found in the writings of most pragmatists—conclusions which this book of Mr. Sidgwick's has wisely avoided.

My Own Story. By Louisa of Tuscany, Ex-Crown Princess of Saxony. New York: G. P. Putnam's Sons. $3.50 net.

In December, 1902, Louisa, daughter of Ferdinand IV, titular Grand Duke of Tuscany, and wife of Friedrich August, crown prince of Saxony, fled from Dresden to Zurich, where she lived for some time in the company of M. Giron, who was French tutor to her children. She was the mother of three sons and two daughters. A third daughter was born several months after her abrupt departure from Dresden. In 1903, a specially constituted tribunal pronounced a divorce in favor of her husband, who succeeded his father on the throne in the following year. For some time, the scandal was kept alive by the efforts of the Saxon monarch to get possession of his youngest daughter, supplemented by the eccentric career of his former wife, who took a second husband to herself in the person of an inconspicuous Italian gentleman. The present volume is the reply to what the author describes as a campaign of persecution and calumny extending over a period of ten years. Published originally in the Paris *Matin*, it was prepared for the English-speaking public with the aid of Mrs. Chester ffoulkes, to whom the author expresses gratitude. The hand of the English editor is easily perceptible.

The apologia fails to be convincing on crucial points. We may find it credible that this high-spirited young woman with more than a dash of Hapsburg irresponsibility in her, should have found herself from the very beginning out of place in a social circle where the men are described as fanatics and martinets and the women were dowdy. Princess Louisa accuses her father-in-law of hating her for her gayety and democratic ways. To his machinations, aided and abetted by court chamberlains and ladies-in-waiting, she ascribes her ruin. What is not so easy to believe is that King George should have carried his animosity to the extent of entering into a conspiracy to destroy her reputation. When that failed, he openly threatened to have her incarcerated in a home for the insane. The husband, Friedrich August, appears as a good-natured innocent who refused to believe in the plots against his wife and so left her without a defence. In the winter of 1902 the princess was awaiting the birth of a child, and the king's threat became a besetting horror. She left Dresden and sought refuge with her parents at the castle of Salzburg in Austria, and when her parents insisted on her return to her family, she fled to Zurich in the company of her brother, the Archduke Leopold. Determined to cut off all possibilities of a return to Dresden, this desperate and neurasthenic woman, as she describes herself, summoned to her side the man with whom her enemies at court had tried to link her name. It was her deliberate intention to compromise herself beyond hope, and she succeeded.

Such is the burden of the defence. It is a line of conduct which does not sound probable in a woman who describes herself as in love with her husband and passionately devoted to her children. It is at variance with the highly damaging testimony brought forward by persons intimately connected with her fortunes. Part of such hostile testimony the author explains away as inventions made possible by the control exercised by her enemies over the newspapers and the courts; part she passes over in silence. The book, as a whole, impresses one as being written with extreme artfulness as well as with literary skill. The earlier chapters, dealing with the author's childhood and youth, are charming; at the same time, in the picture they invoke of an impulsive and pleasure-loving young aristocrat, they create an excellent basis for the case that is to be developed. The specific improbabilities in that case have been mentioned. The tone of the narrative in itself does not always ring true, and largely because at frequent intervals the effort to write for an English audience is quite evident. It is plainly not the author but the English editor that was responsible for the incident of the American reporter who approached the fugitive princess at Zurich and said, "Say, Princess, I've the power to cover this stairway with banknotes for you to walk on, if you will just let me have a few words with you. Is it a deal?" The "Say, Princess." betrays the light British touch at once.

Wordsworth and the English Lake Country. By Eric Robertson. Illustrated with forty-seven drawings by Arthur Tucker. New York: D. Appleton & Co. $2.25 net.

This is a well-worn theme, but we recall no other book which treats the subject so systematically and fully. Part of the bulk of the present volume, to be sure, is due to superfluous members. One scarcely sees the advantage, for instance, of going into the ancient history of Inglewood Forest, and certainly the long prose paraphrase of "The Evening Walk" is an impertinence. Mr. Robertson's attitude toward Wordsworth is, moreover, of that suffusedly enthusiastic sort which rather irritates a reader of critical mood. It is late in the day, even for a pure Wordsworthian, to say that he can be fretted in one of Wordsworth's poems "at the constant suggestion of Goldsmith's medium of expression." To speak thus of the medium of expression of "The Deserted Village" and "The Traveller" is to admit that one is still hidebound in the narrowest of romantic conventions. But withal Mr. Robertson has written a book which, for the greater part, will add to the genuine and critical appreciation of Wordsworth. By an ingenious device of circles he has made the various Wordsworthian regions stand out graphically to the eye, and he has given to the Lake Country almost the force of a living entity. By the way a number of moot questions are discussed, and his answers are generally convincing. One of these is a local matter, of no stupendous importance to the world at large, but not devoid of interest to any who care to tread in the poet's footsteps. There are five theories in regard to the exact location of the "meeting of the ways" ("Prelude," xii, 287). That chosen by Mr. Robertson for his map accords with the opinion of Gordon Wordsworth. The view from this point is reproduced in a two-page picture by Arthur Tucker, who furnished the illustrations for the volume.

Mr. Robertson is at his best when he

Digitized by Google

discusses such questions as the identity of "Lucy" and "Matthew." In the case of the Lucy poems he puts together several scattered stanzas from the ballad of "Lucy Gray":

> No mate, no comrade Lucy knew;
> She dwelt on a wide moor,
> —The sweetest thing that ever grew
> Beside a human door. . . .

and compares their tone with the so-called Lucy group. His deduction is clever:

> Here we have a lyric which, though it be as abstract as the accepted Lucy poems, yet moves us with the same force that they contain. Had Wordsworth presented us with "Lucy Gray" in this form, we should have been eager to find a child-original for it in his own circle of experience—a needless quest, since the whole lyric is evolved from a girl, unknown to the poet, who fell into a canal. The example proves that, for all we know, Wordsworth at Goslar marvellously evolved the accepted group of Lucy poems from a basis of fact just as minute. Nevertheless, Lucy and Wordsworth's feeling for Lucy remain at least as high in the poetic firmament as Burns's affection for that immortal beauty.

In the case of the Matthew group, Mr. Robertson shows convincingly by his analysis that the person of the poems cannot correspond to any one individual of Hawkshead. His conclusion conveys a bit of excellent psychological criticism:

> The short and long about the Matthew compositions is—these poems are each exquisite; as a group intended to portray one ideal character, they are unacceptable. Given enough time to brood over a character, Wordsworth almost inevitably blended it with other personalities. One hardly knows whether this tendency in him was a merit or a defect. We shall be able to consider the tendency later, in connection with "Michael." So inveterate was the habit, that even the lines Wordsworth wrote in Thomson's "Castle of Indolence" present us with a composite, blurred image of himself and Coleridge, clear to no perception except the stereoscopic mind of its creator.

Perhaps the most novel and interesting discovery made by Mr. Robertson is the Wordsworthian or "Lakist" quality of the poems, otherwise anything but remarkable, in Charles Farish's "Minstrels of Winandermere." The copy of this rare book which fell into the hands of Mr. Robertson is inscribed on the title-page to "W. Wordsworth," and was probably given by the poet to his friend John Fleming in memory of old days. It was published in 1811, and though written in apparent unconsciousness of the earlier work of Wordsworth, depicts the life at Hawkshead with an occasional touch that is curiously Wordsworthian. It shows that the new manner was, so to speak, in the air.

A concordance to the names of persons and places belonging to Wordsworthshire, as referred to in the Oxford one-volume edition of Wordsworth, is a useful appendix to the book. There are also several letters now first published by the kindness of the present Earl of Lonsdale.

The Dawn of Mediterranean Civilization. By Angelo Mosso. Translated by Marian C. Harrison. New York: The Baker & Taylor Co. $4 net.

To write a book of popular character on the neolithic culture of the Mediterranean regions is an excellent idea. The Late Minoan, or so-called Mycenæan, civilization, which has in the last few years emerged from oblivion, was so far advanced in artistic development that its origin and growth are matters of high interest to the archæologist and student of human progress. The material, both in Crete and in other places, which gives an idea of the Pre-Mycenæan culture, has been accumulating very rapidly of late, and a clear and well-illustrated account of the present stage of knowledge would be welcome to archæologists, particularly to those whose special work lies in later periods. A book for the Mediterranean, somewhat on the lines of Sophus Müller's little "Urgeschichte Europas," but with a larger number of illustrations, is about what is needed.

Dr. Mosso appreciated this need and has sought to meet it. Unfortunately, he has hardly succeeded in doing so. His book is put together loosely, without clear order and sequence, the result is that the reader gets no distinct picture. There are many good observations scattered throughout, but they are mixed in with much that seems irrelevant and often trivial. Matters which might perhaps have been appropriately mentioned in footnotes are included in the text, so that attention is constantly diverted from the main theme to distracting details. Important conclusions are stated with too little evidence, as, for example, where the author seeks (p. 183) to connect palæolithic paintings in Spain with Minoan Crete. A resemblance in boots, the chief reason given, is hardly sufficient to make so unusual a view convincing. It is, moreover, hard to believe that we can at present get so definite a notion of the early Cretan religion as is here given. Altogether, the work is like a rather miscellaneous note-book containing material which, after rearrangement and judicious omissions, would be ready for publication. To review such a book in detail would be unprofitable and would also create a wrong impression of Dr. Mosso's work, for, even in its present loose form, this is by no means without value. The many references in the notes make the book a useful guide to a wide range of scattered material, and the large number of good and not easily accessible illustrations, as was the case in Mosso's earlier book, "The Palaces of Crete," adds greatly to its worth.

The translation has been on the whole well done, though a few unfortunate slips have crept in, apparently through unfamiliarity with archæological matters. "Kratera" (p. 195) for crater, "palæ-ethnology" (p. 42); and the Italianized Greek "galopetre" (passim) are examples. Once or twice these last are very properly called "milk-stones." Why not always? On Page 3 read "Mrs." for "Miss" Quibell. The index should have been fuller. There is no excuse for the use of such very highly glazed paper; good "half-tones" may be had without it.

Notes

Five new books are soon to be issued by Harpers: "The Mansion," by Henry van Dyke; "Serving the Republic," by Gen. Nelson A. Miles; "The Power of Tolerance," by George Harvey; "Tom Brown's School-Days," with an introduction by W. D. Howells and thirty-six full-page illustrations by Louis Rhead, and "Tommy's Money," by John R. Coryell.

Among the volumes of fiction announced by Doubleday, Page & Co. are Mrs. Humphry Ward's "The Case of Richard Meynell," and "The Recording Angel" by Mrs. Cora Harris.

"Voices in the Crowd" is the title of the new volume of poems by Herbert Everett, to be issued by Moods Publishing Co.

"In Northern Mists," by Fridtjof Nansen, is a title in Stokes's November list.

Francis Woodward Tyler has prepared a baby record, entitled "In the Beginning," to be published by Paul Elder & Co.; it provides, among other things, mounting leaves for a photographic record of the baby's experiences.

William E. Burghardt Du Bois's "The Quest of the Silver Fleece," announced by A. C. McClurg, describes the struggles of the negro who attempts to develop his personality. The same house will issue Randall Parrish's "My Lady of Doubt," the scene of which is the American Revolution.

Miscellaneous books in Putnam's autumn list include: "South America To-day," by Georges Clemenceau, and "Helen of Troy, and Other Poems," by Sara Teasdale.

The house of Grant Richards of London is bringing out: "Empires of the Far East," a story of Japan, China, Manchuria, and Korea, by Launcelot Lawton; "Platonica," by Herbert Richards, and Lafcadio Hearn's translation of Faubert's "The Temptation of St. Anthony."

J. M. Barrie has turned his play "Peter Pan" into a narrative, having heightened and embroidered it with many new fantasies. Scribners will publish the book within a fortnight.

The list of announcements of Longmans, Green & Co. includes: "Memoirs and Letters of the Right Hon. Sir Robert Morier, G.C.B. From 1826—1876," edited by his daughter, Mrs. Rosslyn Wemyss; "The Pacification of Burma," by Sir Charles Crosthwaite; "The King's Caravan: Across Australia in a Wagon," by E. J. Brady; "The Story of My Life," by Emily, Shareefa of Wazan; "Alexander Viets Gris-

Digitized by Google

wold Allen, 1841-1908," by Charles Lewis Slattery, D.D.; "God in Evolution," by Francis Howe Johnson; "The Reason of Life," by William Porcher Du Bose, D.D; "The Romance of the Holy Land," by Dr. Charles Leach; "More Ghost Stories," by Dr. M. R. James; "My Adventures in the Congo," by Marguerite Roby; "Peru of the Twentieth Century," by Percy F. Martin; "The Holy Eucharist," by the Rev. W. C. E. Newbolt, and "Primitive Catholicism," by Mgr. Pierre Batiffol.

Henri Bergson's "Laughter," which is described in the sub-title as "An Essay on the Meaning of the Comic," will be brought out soon by Macmillan in an English version.

The same house has in hand "From Constantinople to the Home of Omar Khayyam," by A. V. Williams Jackson.

Mrs. Thomas Wentworth Higginson is preparing a memoir of her late husband, and asks the loan of letters written by him to friends and acquaintances. These letters will be promptly and carefully returned, intact. Any characteristic anecdotes or reminiscences of Col. Higginson will also be gratefully received. Address Mrs. T. W. Higginson, No. 29 Buckingham Street, Cambridge, Mass.

The "Diary" of Gideon Welles is promised by Houghton Mifflin Co. for October 28.

October publications of Small, Maynard & Co. include: "The Marriage Portion: The Mystery of a Man," by Julia Magruder; "The Young Gem Hunters, or, The Mystery of the Haunted Camp," a story for boys, by Hugh Pendexter; "The Librarian at Play," by Edmund Lester Pearson, and "Literary Pilgrimages of a Naturalist," by Winthrop Packard.

There are a number of historical works in the autumn list of Stanley Paul & Co., among them Lewis Melville's "Life and Letters of Sterne," in two volumes; "Fourteen Years of Diplomatic Life in Japan," leaves from the diary of Baroness Albert d'Anethan, whose husband represented Belgium at the Court of Japan; "Intimate Memoirs of Napoleon III," the reminiscences of a lifelong friend; "The Life of Cesare Borgia," by Rafael Sabatini; "Duchess Derelict," a study of Cesare's wife, Charlotte d'Albret, by E. L. Miron, and "The Royal Miracle," a collection of rare tracts and broadsides concerning the wanderings of Charles II after the battle of Worcester.

Included in the Huth collection, a portion of which will be sold November 15 at Sotheby's, are a few interesting manuscripts: a fifteenth-century English Antiphonarium, an Apocalypse written by Margaret of Burgundy, a French manuscript on Peru.

Crowell has just published a reprint of Kingsley's "Westward Ho!" The book has a handsome cover of dark blue with a golden sunburst.

The latest issue in the Riverside Press Editions of Houghton Mifflin Co. is a slender volume containing the book of Ecclesiastes. The work has been done under the direction of Bruce Rogers and is in his best vein. The borders, adapted from Geofroy Tory, are particularly fine. Altogether the little book is precious in the best sense of the word.

One could wish that Mrs. James T. Fields, in her introduction to the "Letters of Sarah Orne Jewett" (Houghton Mifflin), had not started the reader wrong by likening them to "the famous journal of Dean Swift to Stella." A more unfortunate comparison you would not easily conceive; it merely calls undue attention to the weaker side of these letters. For it cannot be denied that there is in them a little too much of the "dear" and the "good," of that peculiar sweet optimism, in a word, which has been the bane of so many New England writers among the *epigonoi*—even the "Georgics" of Virgil are "pretty" in Miss Jewett's vocabulary. This was not exactly the character of Swift's "little language." But it need scarcely be added that the author of "The Country of the Pointed Firs" has also better stuff in her correspondence than falls under such criticism. The book offers, indeed, a variety of interests. From the editor we learn, if we did not already know, that Miss Jewett's father was a physician and that, "when the weather was pleasant, he would take his wise little girl into the chaise by his side in the morning, instead of urging her to go to school." What she learned in these tours of the country, no lover of her books need be told. She was in fact herself well versed in medicine, and in one of her letters of 1882, when she was in her thirty-fourth year, she speaks of reading "a handbook of anatomy" in bed. Possibly a selection of the letters might have been made to give a more intimate picture of life in South Berwick, Me., which was always Miss Jewett's home, and which furnished so much of her literary baggage. We do get glimpses of that life, finely phrased—of a visit, for instance, to "a house unlike any other, with a sense of space and time and *uninterruptedness*"—but so many of the letters are from different parts of the world that the atmosphere of the book is almost one of restlessness instead of gentle calm. Yet, on the other hand, we could ill spare the delightful letters from France. Best thing of all in the correspondence is the revelation of the writer's character—the character of the author of "Deephaven" and "The Country of the Pointed Firs." She says somewhere that at the back of her desk she had pinned up, so as to be constantly before her eyes when writing, the "two wonderful bits of Flaubert—'Ecrire la vie ordinaire comme on écrit l'histoire'; and the other, 'Ce n'est pas de faire rire—mais d'agir à la façon de la nature, c'est à dire de faire rêver.'" One sees in these letters how deeply the best of New England was imbedded in the author's own heart, and why ordinary life, as she describes it, is at once history and an evocation of dreams.

As the American wife of an Englishman Mrs. John Lane, one may suppose, loves two countries, and is rarely fitted to chasten wisely where she loves. Her score of essays just published, under the title "Talk of the Town" (Lane), leaves the first point in no way doubtful. Though her eye is quick to discern modern follies, her tone is always genial and full-hearted. Nor does she waste words on small doubtful matters, both countries being pricked at vital points:

> In his constancy he [the Englishman] is quite devoid of humor; in fact, the Englishman dreads humor. He, who by some curious freak of nature, has, as a nation, given the world its greatest humorists, is, as an individual, afraid of it. And, indeed, he is more afraid of laughter than he is of tears. In fact, if he had more humor, it would have had a wholesome effect on British art, and by and by he would cease to love the feeble [in art].

And American smugness wins no ruth:

> To say in America that you are going abroad puts you at once on a superior social footing. It is a kind of self-bestowed order of knighthood.

The American business man is well caught in a single episode. One was heard asking a porter in a Geneva hotel:

> "Is there a museum in this town?"
>
> "No, sir," said the porter, humiliated by this disgraceful confession. "Thank God," the young American cried fervently, and shook the astonished man's hand.

The author's position on women's rights stands apparent in one of the titles—"Men's Wrongs." The question is already more than settled, to judge by her admonishment of men to demand, in exchange for what women have, "the liberty of the needle." An interesting light is thrown on the position of vice-presidents. About three months before his assassination President McKinley was visited by an Englishman who expressed regret and surprise that John Hay had left England to enter the Cabinet:

> "To be ambassador to England is, of course, the greatest office in your gift," he said, conscious that there is only one England.
>
> "No," the President replied, "it is a much greater position to be Secretary of State. He comes next in importance to the President." Here he paused and then added casually, as an afterthought which had nearly escaped him, "I mean, of course, with the exception of the Vice-President."

The happiest essay in the volume is, to our thinking, "The London Bus," which for keen observation coupled with an airily by-the-way philosophizing compares favorably with the early eighteenth century manner.

The fifth volume of F. B. Dexter's "Biographical Sketches of the Graduates of Yale College with Annals of the College History" (Holt) carries the record from the year 1792 to 1805, and shows the same careful scholarship as its predecessors. These sketches are not only valuable on account of the great mass of genealogical and biographical details they contain, but also because, in brief and perhaps unintentionally quaint statements of fact, they depict so graphically the nature and life of Yale College a century ago. Thus, under the year 1792, we read:

> The newly organized government of the College, consequent upon the Act of the General Assembly in May, 1792, came fully into operation with the meeting of the Corporation at Commencement on September 11. Delicate questions of precedence in the order of procession to the public exercises had to be settled; but the most important action taken was with reference to the new building to be built from the funds supplied by the State, the estimated cost of which was £2,500. Ebenezer Gay, of the Class of 1787, resigned the tutorship at Commencement, and his place was filled by the election of Jonathan W. Edwards, of the Class of 1789.

The uncertain state of the Colonial government, the gift, even then, of $10,000 by the State, and the fact that commencement was really the commencement of studies and occurred in the autumn instead of in June, are a few of the interesting things brought to light by this one suggestive paragraph. In the eight hundred pages of

Digitized by Google

Mr. Dexter's volume there is much of a kindred nature.

"The Danger Zone of Europe" (Little, Brown), by H. Charles Woods, possesses among other merits that of unusual timeliness. The author touches, with a hand sure of its grasp, upon many problems which the present war has brought to the fore of public discussion. The successes and failures of the Young Turks are set forth impartially, and on the basis of extensive information. The new régime, as the author shows, has unquestionably diffused a sense of greater personal security throughout Turkish territory. Travel is safer, the peasant gathers his crops with more freedom, the spy system has been largely abolished, and the censorship of the press has been relaxed. There is also noticeable a slight improvement in the social status of married women, and some efforts are being made to raise the standard of education for girls. But the reform element is greatly hampered by the condition of the civil service. The corrupt officials dismissed when Abdul Hamid's power ended were replaced by inexperienced men whose honesty and efficiency are still to be tried. Liberalism meets with the opposition of the fanatical believer in the letter of the Koran. The Christian races are tenacious of their old-time privileges, which, under the new constitution, must be withdrawn. The Greek patriarch has been shorn of his power over schools, churches, and hospitals, as has also been the Bulgarian exarch. In Macedonia the great landowners, who are chiefly Moslems, now devote more attention to their properties, and have become more exacting toward their Christian tenants. The law against brigands bears heavily on the Christians, who are compelled to surrender their firearms, while Moslems are leniently dealt with. In Albania the taking of the census, with its questioning of women, has exasperated the population. The warlike Arnauts, moreover, hate to furnish the Government with information disclosing their numerical strength. The Northern Albanians, who have in the past professed allegiance to no one, regard compulsory conscription in the Turkish army as a breach of faith. They are willing, for the protection of their homes, to fight Greeks, Bulgarians, Servians, and Montenegrins, but they object to serving the Sultan in a war which does not concern them. The army which brought about the triumph of the Young Turks, in July, 1908, still controls both the internal policy and the foreign relations of the empire. The committee of the Union and Progress party was, at the outbreak of the war with Italy, supported by the army, but its tenure of power is evidently involved in the fortunes of the struggle. Shefket Pasha, whom Mr. Woods describes as a very moderate man, holds the key to the internal situation. Even while nominally only inspector-general of part of the Turkish army, he was in reality "a sort of secret lord and master of all he surveyed." Kiamil Pasha is, in the author's opinion, the ablest Turkish statesman, but he speaks somewhat guardedly of Hilmi Pasha, the grand vizier retired at the end of 1909, whose reappointment recent reports have foreshadowed. The complicated financial situation of Turkey receives due consideration at the hands of the author. A particularly interesting chapter is devoted to the causes and results of the Armenian massacres of April, 1909. But for these matters and the chapters on Greece, Bulgaria, Servia, Montenegro, Bosnia, Asia Minor, and the Cretan question, we must refer our readers to the book itself, which is valuable in all its parts.

The 1911 edition of Prof. George Chase's "Code of Civil Procedure" (Banks Law Publ. Co.) comes out in its usual compact and convenient form. The compilation consists of the New York Code of Civil Procedure, the Constitution, General Construction Law, the Rules of Court, and the Municipal Court Act, with indexes and notes. The only original parts, of course, are the indexes and notes. The Code professes to be complete up to September 1, 1911, but on opening the book, we find a very serious fault on the title-page in the words "as amended to the close of the Legislative Session of 1911." The session did not close until October 6, and he had no assurance that no further amendments would be made. It is highly important in a work of this sort that the date to which amendments and annotations have been carried should be clearly stated. No fewer than fifty-five sections of the Code have been amended by the Laws of 1911 so far. It is unsafe for any practitioner to rely on an old edition of the Code, and it is quite possible that a section taken from this book published in September, 1911, may be amended before October by the very Legislature whose work the title-page claims to cover. The same criticism applies to the annotations. They have evidently been carried forward to a very recent date, but we have searched in vain for any statement in the preface, title-page, or head-note to indicate the date or volume of reports up to which the work has been brought. No really satisfactory index has ever been made of the Code of Civil Procedure, probably because the work is so cumbrous and ill-arranged that such an index is virtually an impossibility. The index of this book is for the most part satisfactory. On the whole, the book is neither better nor worse than other pocket editions of the Code.

The indefatigable William Eleroy Curtis wrote up Turkestan in a series of newspaper letters now issued in book form by the George H. Doran Co. ("Turkestan the Heart of Asia"). He went from Baku by steamer across the Caspian to Krasnovodsk, thence by the central Asian railway to Askhabad, Merv, Bokhara, Samarkand, and Tashkend, and straight back. On the way he observed and recorded enormously and questioned voraciously; and in consequence he has produced a very vivid description, often witty if of the newspaper fashion, but throughout interesting and suggestive. Of course, on ancient and mediæval history he requires allowance, but he has known how dexterously to interweave brilliant and picturesque bits from contemporary chronicles. His estimates, too, of the present economic situation and of the Russian methods of dealing with the people, are sane and balanced. Their contrasts with those of the English in India on the one hand and of the French in North Africa on the other might with advantage have been pushed further. How best to handle less developed races is perhaps the greatest problem of civilization, and Mr. Curtis's ideas are worthy of attention. There are 34 good illustrations and a map.

Of the forty-volume Propyläen-Ausgabe of Goethe's works (Munich: Georg Müller) there have appeared thus far the first eight volumes. They contain, in chronological arrangement, the literary output of the poet from his earliest verses (1757) to "Wilhelm Meisters Lehrjahre" (1795) and are interspersed with a few typical letters from each period. The large octavo volumes are beautifully printed on excellent paper and suitably bound, making the edition one to appeal primarily to the lover of handsome books. No editor is mentioned, and there are neither introductions nor commentaries. Evidently the publisher does not look to scholars for his purchasers, since no special value is attached to the text. He has simply carried out in a general way the idea of Hirzel's "Der junge Goethe" through the whole of the poet's life, and no doubt this plan of arrangement, which so admirably serves the purpose of the student, will be favorably received by the general reader. On the one hand the edition is not absolutely complete, even aside from the letters; on the other it contains a few items of doubtful authorship and others that nowadays no recognized scholar ascribes to Goethe. But these defects are of small import. Of the three supplement volumes the first has appeared, with the title "Die Bildnisse Goethes," and is issued by Ernst Schulte-Strathaus. This book is a real contribution to Goethe literature. Based on the publications of Rollett and Zarncke and supplemented by their later unpublished corrections and additions, it is now the best source of information concerning Goethe portraits made from life. It has 167 plates, excellent reproductions of new photographs (except the 45 drawn from Zarncke's collection) of the original 45 drawings, 42 paintings, 37 silhouettes, 18 busts, and 2 masks, together with the reliefs, medals, engravings, statuettes, and models. A table is inserted showing the corresponding numbers in Rollett and Zarncke, from which it appears that Schulte-Strathaus has added to the collection over fifty numbers unknown to Rollett and over thirty unknown to Zarncke. While the editor has limited himself for the most part to works drawn from life, the reader turning the pages is sometimes put to it to imagine that the same subject could have posed for such dissimilar pictures. Why Goethe should have sat for some of them, or granting that he had a good reason for doing so, why he should have allowed them to be preserved, it would be hard to say. The editor refrains almost altogether from entering into the question to what extent each picture is a true likeness, preferring to quote instead the reported opinions of Goethe himself and, whenever he could find any, of those who knew both the picture and the original. An index of names of artists adds to the convenience of the work for reference.

The Rev. James Mitchell, D.D., whose death is announced from Edinburgh at the age of eighty-one, was the author of "The Church and the People," "Rulers and Subjects," "The Voluntary Question," and "Significant Etymology."

William Eleroy Curtis, one of the best-known journalists in this country, died sud-

Digitized by Google

denly a week ago in Philadelphia, at the age of sixty-one. Mr. Curtis, who was a special writer on the Chicago *Record-Herald*, had in the last few months been gathering material in the South for articles. He had a life contract with that paper to write a daily letter. The contract was made in 1887, when the *Record-Herald* was the Chicago *Record*. For nearly a quarter of a century he carried out his contract, writing from the four quarters of the globe. Among the books which he wrote are "Capitals of Spanish America," "The Land of the Nihilist," "The True Thomas Jefferson," and "The True Abraham Lincoln."

Science

Horace B. Woodward contributes to Putnam's History of the Sciences series, "History of Geology"; it will be ready shortly.

Dr. Charles S. Myers's "Text Book of Applied Psychology," revised and enlarged, has just been published by the Longmans, in two volumes which are not sold separately.

The Troglodytes or cave-dwellers of southern Tunisia are described by F. E. Johnson in the *National Geographic Magazine* for September, and with the help of sixty illustrations one gets a vivid impression of their life in their strange homes. They seem to be divided into three groups, those who live under the earth, in holes in the hillsides, and the climbers. He is enthusiastic in his praise of the work of the French, especially in the establishment of law and order where thirty years ago was rapine, fire, and sword. L. Kennedy gives an account of a journey to the highest known waterfall, the Kaieteur on the Potaro River in British Guiana. At the brink the river is 369 feet wide and the fall is 741 feet, nearly five times as high as Niagara.

Remarkable progress in the education of the deaf is shown in the report for 1 of the New York Institution for the Instruction of the Deaf and Dumb. It differs from similar institutions in being a military school—the first of the sort—having been put on this basis by its principal, Prof. E. H. Currier, soon after his appointment in 1893. The ethical value of military training he held to be in teaching the child obedience and self-control. His success has been great. He has established a band composed entirely of the pupils, to ascertain whether the hearing of the partially deaf might not be developed by musical massage. There are now twenty-nine musicians, with a repertoire of 185 selections, which are played with great accuracy and sweetness. The vibrations of music seem to vitalize the hearing nerves and to restore partially the hearing faculty.

To present an attractive and helpful account of the relations of organisms to their surroundings is, at the present time, a difficult task. The study of them is largely a matter of physiology, the science which consists essentially in the application of chemistry and physics to life and growth. Now it happens that recently there have been revolutionary changes along the border between chemistry and physics which necessitate a partial restatement of the general physiological principles. Professor Duggar of Cornell University has now done this on the side of vegetation, in the new volume "Plant Physiology" (Macmillan). He has interwoven in a satisfactory manner the new conceptions with the old, and has constructed a strictly modern and cautious treatise In range it goes beyond the limits of physiology proper into the neighboring field of ecology, being all the better for that. Primarily, it is a textbook for horticultural and agricultural students, but the style of presentation renders the work suitable for amateurs also. The author has the happy faculty of stating his facts strikingly. The laboratory practice is well ordered.

The "Practical Medical Dictionary" (Wm. Wood & Co.), compiled by Dr. T. L. Stedman, is a handsome as well as handy volume of a thousand pages. The book is laid down on broad lines and the author endeavors to cover a large field, in which synonyms and variations of names and biographical memoranda rankly grow and in which are many pitfalls for those unwary students whose linguistic deficiencies are deplored in a preface that is not without hope of better days. The general purpose of Dr. Stedman is excellent, and his efforts in the direction of correct pronunciation and exact, concise definition are most praiseworthy, but the inclusion of all medical terms is an almost impossible task. We have just tested the book by a single recent number of a well-known American medical journal, picked up quite at random, and have noted above a dozen words or terms which would have difficulties for the average medical student using this dictionary. On the other hand, it must be said that the book is exceedingly rich and helpful in the enumeration of appliances and special methods, although some of the illustrations seem to us superfluous in a work of this kind.

The popular mispronunciation of *angina* is carefully corrected, but Dr. Stedman seems to overlook the prevailing misconception of the quantity in *vertigo*. The pronunciation of the name of Virchow indicated by *"fer-khov"* is fairly in accord with the general rules of German pronunciation but is not that used by his family, who pronounced it *"fer-kho."* Some other pronunciations are also not quite impeccable, and that of Cheyne, a hard name for the beginner, is not given at all. By an unfortunate slip of the typesetter, the distinguished Saemisch is described as an "Australian ophthalmologist," nor is the probably intended "Austrian" properly descriptive of him. There also seems to be some confusion in attributing to the anatomist, Moritz Nussbaum, matter which belongs to the noted surgeon bearing the same family name. The well-established distinction between *albumen* and *albumin* ought to have been preserved and confirmed, and we note that the derivation of *opsonin* is not the one given by the author of the word, and also that the definition of the *purin bodies* takes no account of the present view concerning these important substances. These comments touch only one line of topics. We might easily pursue the subject further along other lines did space permit, perhaps *ad nauseam*, a phrase which should be conspicuous in any dictionary dealing with medicines but to be found in this only by the constructive effort.

Drama

The Aran Islands. By J. M. Synge. Boston: John W. Luce & Co. $1.25 net.

Riders to the Sea. The same. 50 cents net.

The Tinker's Wedding. The same. 75 cents net.

From these three volumes it is possible to form a clear conception of the genius of the late J. M. Synge, its power, its charm, and its limitations. If they do not reveal him as the inspired dramatist he has been described to be by some of his most eulogistic compatriots, they prove at least that he had the true poetic vision and sensibility, the zeal of the student, the fervor of the patriot, a passionate sympathy with Nature in her wildest moods, and a keen appreciation of the rugged virtues of an unsophisticated and virile race. It is as a literary artist that he shines most in these pages. The diaries of his sojourn in the Aran Islands, those bleak rocks that endure the fiercest onset of the Atlantic storms which rage along the coast of Galway, are as full of interest for the general reader as for the ethnologist or for the lover of fairy legend or Gaelic. They have an especial value, because the patriarchal conditions of life which they depict, with convincing veracity, are already subject to the changes inevitably caused by increasing contact with the forces of modern civilization. Being a poet, Mr. Synge throws about the islands and their inhabitants a glamour which would not be felt by the ordinary visitor, but he was in many respects an ideal reporter. As he had the gift of insight as well as of observation, no incident or characteristic was too trivial for his record, and in so primitive a community no incident or characteristic was without its peculiar significance. The habits, the speech, the dress, and the manners of men, women, and children are noted with the minutest accuracy and with a descriptive skill which gives continuous fascination to the narrative. The hardy fisher folk in their curaghs—crank as the ancient coracles—the forlorn old widows, the full-blooded maidens, and the rheumatic grandsires, with their inexhaustible stores of folklore, are sketched with a vivid fidelity that stamps them as the natural product of their harsh and awe-inspiring environment. Facing from infancy a fierce struggle for existence, dependent for food upon scraps of barren soil or the scanty harvest of the devouring sea, perpetually beaten by storm or drenched by mists, with death threatening on every hand, and no hope of any greater luxury than a brief respite from hardship, how could they be other than a strong, simple, hospitable, self-centred, and imaginative folk, jealous of

Digitized by Google

liberty, rebellious against a law or an authority they did not comprehend, patient and strangely philosophic in calamity, but capable, upon occasion, of almost hysterical outbursts of emotion? Thus it is that Mr. Synge represents them. He tells a story of a man who killed his father with a blow of a spade in a sudden fit of fury and who was successfully hidden from the police by his friends, who, while they in no way excused the deed, argued that no man would kill his father if he could help it, and that, if he were unfortunate enough to do so, it would be ridiculous to hang him afterward, as he could never repeat the offence, while his remorse would be sufficient punishment.

During his different visits to the islands Mr. Synge lived among the natives as one of themselves, passing his days and nights in intimate converse by the fireside or on the shore, and sharing in all their simple joys or sorrows. He risked his life with them in tempest, fiddled for them when they wanted to dance, participated in their tragedies of death or eviction, rewarded their fairy tales with conjuring tricks, and became so much of an islander as to be affected by the physical phenomena around him. At all events, he tells of a dream of unearthly music which stirred him to such a frenzy of excitement as left him trembling and exhausted when he awoke. It would be interesting to quote many of his experiences, observations, and conversations as he reports them, and especially some notable passages of description of the beauties and terrors of the ocean in calm and storm; but such fragmentary excerpts could but faintly reflect the varied charm of a book whose refined, simple, vigorous prose exhibits throughout the taste of the scholar, the perception of the humorist, and the fancy of the poet.

It is from the Aran Islands that Synge derived his inspiration for the "Riders to the Sea," which some of his most ardent admirers have called the greatest tragedy of modern times. This is the language of extravagance, although the modern output of stage tragedy is small. Actually, the piece cannot rightfully be called a tragedy, in the proper sense of the word, at all. It lacks the essential elements of a work of that kind, being merely an episode of fisher life, culminating in a catastrophe following a vision. But it is told with a directness, a rapidity of action, and an impression of impending and inevitable climax which are truly dramatic, while the pathos of it is deep, eloquent, and pathetic. In its way it is, undoubtedly, a little masterpiece, patterned closely after the model of an early Maeterlinck conception. The scene is the hut of Mawreya, a fisherman's widow. She is awaiting news of her missing son, Michael. His sole surviving brother, Bartley, who is about to put to sea in a terrible storm, brings in fragments of clothing found on the body of a drowned man, for his sisters to identify. They recognize them as having belonged to Michael, and strive to dissuade Bartley from undertaking his voyage. But he is obdurate even to the supplications of his mother, who is yet ignorant of her other son's fate. He departs without the old woman's blessing, whereupon she follows him out to bestow it, but is prevented from doing so by a vision of Michael riding in attendance upon him. This she accepts as a sure token of his coming death, and soon afterward his dead body is carried into the house. The curtain falls upon the bereaved mother's outcry of despairing resignation. Nothing could be much more moving than the cruel unadorned realism of it all or more truthfully characteristic of the supposed actors and the scene. As a poignant extract from the book of life it has theatrical value of a very high order.

"The Tinker's Wedding" may be dismissed briefly. It is well known and has been acted in this country. As drama it is inconsiderable, being in the nature of broad farce. That the types are more or less veracious need not be disputed, but it offends against discretion and good taste, while the humor of it, though positive, is not extraordinary. The genius exhibited in these works of Mr. Synge is much more literary and poetic than dramatic.

The Unionist-Gazette Association of Somerville, N. J., announces, in an edition limited to a thousand copies, "The Shakespeare Autobiography of Dr. Appleton Morgan."

The arrival in this country of Lewis Waller, the popular English actor, who is to play the leading male character in "The Garden of Allah" in the Century Theatre, is an interesting theatrical incident. For many years he has been accounted one of the ablest representatives of romantic heroes upon the British stage. In the legitimate drama his Henry V has generally been regarded as his greatest achievement, and it is gratifying to hear that he intends to give some performances of this character here before his return to London. The best interpretation of it seen in this city in modern times was that of George Rignold. "The Garden of Allah" is to be produced on the afternoon of Saturday, October 21.

"Macbeth" is expected to run until Christmas at His Majesty's Theatre, in London and perhaps longer, but in the holidays its career will be interrupted for a revival on a grand scale of Offenbach's "Orphée aux Enfers." Mr. Zangwill's new play, "The God of War," is to be given soon at morning performances. The interesting announcement is made that some of Shakespeare's historical plays will be revived at the festival next year.

Concerning his new play, "The God of War," Mr. Zangwill says:

It is an effort to deal in artistic form with the problem of universal peace. It is not an allegory; the time and the characters are modern—in fact, entirely up-to-date, as befits the theme. I have endeavored to do two things: First, to show to what extent the gospel of good will or general peace among nations has really taken hold of civilization; second, to inculcate that gospel with all the artistic strength of which I am capable. The great problem of the present is the liberation of thought, which means thinking along new and original lines of course, with a general betterment of the race. In the very fact that the science of war has advanced to the plane of an almost perfect science of destruction, we see the dawn of universal peace.

The Adelphi Play Society, in London, is preparing an ambitious programme for the coming season. It will give "The Father" and the "Fräulein Julie" of Strindberg; incidents from Nietzsche's "Also Sprach Zarathustra"; "Othello," in full, and without waits; "Pippa Passes" and "Peer Gynt"; Hauptmann's "Biberpeltz," in a new translation by C. E. Wheeler, and Arthur Schnitzler's "Das Märchen."

The Drama Society of London, a newly-formed body, will produce during the autumn "Pietro of Siena," a hitherto unacted play by Stephen Phillips; the last four acts of Ibsen's "The Wild Duck," Oscar Wilde's "A Florentine Tragedy," and "Souls on the Tramp," a new farce dealing with theosophy and reincarnation, written by Paul Hyacinthe Loyson and Leonard Henslowe.

Music

Franz Liszt. By James Huneker. New York: Charles Scribner's Sons. $2 net.

No living author is better equipped for writing the definitive, standard life of Liszt than Mr. Huneker. More than a quarter of a century ago he began to collect books, articles, and anecdotes on that pianist-composer; he has been personally intimate with many of Liszt's pupils, among whom some became almost as famous as their master; and he has enjoyed the advantage over most biographers and commentators of being able to play on his own piano the Liszt pieces, including the most difficult. Thus prepared, he projected, nine years ago, an exhaustive biography of Liszt, with analyses of the bulk of his works, like those contained in his admirable book on Chopin. Appalled, however, by the vast amount of raw material before him, he changed his mind and has written instead a book of 458 pages in which certain aspects of Liszt's life and art are studied without much regard for chronological sequence. The standard "Life and Works" therefore still remains to be written, for the books of Kapp, Nohl, Göllerich, Vogel, Hervey, and others are mere sketches, while Lina Ramann's three volumes, though invaluable as a trustworthy source of information, are incomplete on the biographic side and uncritical in their persistent adulation.

Thus Mr. Huneker's book, though it has fallen short of his original ambition, may nevertheless be commended to music-lovers as the one which will give them the vividest impression of the

Digitized by Google

most brilliant and many-sided of all musical geniuses; and at the same time a clear idea of the qualities which distinguish Liszt's most important works from those of other composers. There are in it excellent analyses of the twelve symphonic poems, the "Faust" and "Dante" symphonies, the B minor sonata, the études, the "Dance of Death," the concertos, the "Rakocsy" march, the choral and sacred works. Mr. Huneker is far from being a full-blooded Lisztite; he is not always successful, unfortunately, in sorting the chaff from the wheat. His remark, for example, that "one Chopin Mazurka contains more music than all the Liszt rhapsodies," is preposterous. The bitterest of Liszt's enemies, Dr. Hanslick, was so enthusiastic over these pieces that he called them "milestones in the history of art"; they are epitomes of the best melodies of one of the most musical nations—the one to which Liszt himself belongs; yet Mr. Huneker calls them "empty." By giving five pages to a citation of August Spanuth's admirable remarks on these same rhapsodies, he atones, however, for his own lapse from critical sanity—a lapse which should perhaps be taken no more seriously than his extraordinary assertions that "there is nothing new since Beethoven"; that "opera is the weakest of forms"; or such cynical exclamations as "fancy the pianoforte inciting to tears!" or "the New Zealander is already alive, though young, who will visit Europe to attend the last piano-recital."

In his first chapter, Mr. Huneker gives a summary view of Liszt, "the real and legendary," traversing his career and dwelling briefly on points that are more fully elaborated in later chapters, among them his "youthful extravagances, inseparable from his gipsy-like genius." He tells here also why "Germany set the fashion in abusing Liszt. He had too much success for one man, and as a composer, he must be made an example of; the services he rendered in defending the music of the insurgent Wagner were but another black mark against his character." Liszt's frequent remark, "I can wait," is of course cited, but in his remarks on the present status of the Liszt cult, Mr. Huneker is not entirely consistent. He thinks the "martyrdom motive has been sounded too often"; and denies that "the Liszt compositions have unduly suffered from the proverbial neglect of genius." But they have; he himself admits this on p. 66 in speaking of certain études, "those wonderful continuations of the Chopin studies," of some of which not only the public, but most pianists, have "never heard." And surely there was cause for sounding the martyrdom motive in the fact that New York will this winter hear for the first time the "Dante" symphony, which, as Weingartner has justly said, marks the summit of Liszt's creative power, being at the same time "the ripest fruit of that style of programme music that is artistically justified, since Berlioz."

With fascinating inconsistency, Mr. Huneker himself sounds the "martyrdom motive" again and again. Nothing in all musical literature is more eloquent than the two pages (26, 27), in which he shows how Liszt, after creating the symphonic poem, inventing a musical phrase, novel in shape and gait, perfecting the leading motive, employing poetic ideas instead of the antique and academic cut and dried square-toed themes, "was ruthlessly plundered almost before the ink was dry on his manuscript, and without due acknowledgment of the original source." The leading composers of Germany, France, and Russia benefited by his new ideas while he "sat in Weimar and smiled and waited, and waited and smiled." Wagner was one of the pilferers. "The later Wagner would not have existed—as we now know him—without first traversing the garden of Liszt"; it was the study of Liszt's symphonic poems that bridged over the "yawning chasm between 'Lohengrin' and 'Tristan'." The modern Frenchmen, from Saint-Saëns to Debussy, and most of the modern Russians "stem from Liszt." His influence was as wide, as deep, as Wagner's, or Beethoven's, or Chopin's; yet how few give him credit therefor! "The true history of Liszt as composer has yet to be written."

No fewer than 126 pages of this volume go to a chapter entitled "Mirrored by his Contemporaries." Vast as is the Liszt literature—a far from complete bibliography fills 27 pages of Kapp's book—nothing of importance or special interest seems to have escaped Mr. Huneker's drag-net; and in these brief extracts from the writings of men and women who knew Liszt and his compositions one gets a wonderfully vivid and varied idea of his many-sided character and activity. Beginning with Von Lenz's account of the blasé young pianist in Paris in 1828, we read what such men as Berlioz, Moscheles, John Dwight, Hans Christian Andersen, Heine, Schumann, Grieg, such women as Caroline Bauer, Fanny Kemble, Lola Montez, George Eliot, and others had to say at various times. Nearly everybody knew Liszt; five pages of Mr. Huneker's book are covered by the names of Liszt's pupils. The last chapters contain brief remarks about the most important of these and other "Modern Pianoforte Virtuosi." Under the head of "At Rome, Weimar, Budapest," copious details are given regarding piano tours, friendships, notable persons met, among them Gregorovius, who wrote of Liszt that "he and his instrument seemed to be grown together—a piano centaur." The important rôle played in Liszt's life by religion and by women, especially princesses, is dwelt on—"one naturally drops into the Almanach de Gotha when writing of the friends of Liszt"; in short, no phase of the past is neglected, and in a further chapter, "In the Footsteps of Liszt," we get an interesting glimpse of the present condition of the cities and places which were the great man's favorite haunts. Eighteen illustrations of these haunts and of friends and relatives add to the attractiveness of this volume, which is as entertaining and as brilliant in style as it is timely.

Caruso is evidently himself again, judging by the enthusiastic tributes paid to his voice and his singing when he broke his long silence by appearing at the Imperial Opera in Vienna last month.

One of the most interesting features of the coming New York season will be a concert at Carnegie Hall by the Theodore Thomas Orchestra of Chicago, under its famous conductor, Frederick Stock. Thirteen years have passed since this admirable orchestra was last heard here.

Ossip Gabrilowitch, the eminent Russian pianist who married Mark Twain's daughter and now lives in Munich, will play in European cities this season, but will probably come to America next season. Recognizing the fact that good conductors are even in greater demand than good pianists, he has also undertaken the leading of the Konzertverein Orchestra in Munich, with which he will give five concerts this winter, with eminent soloists, including Schumann-Heink and Sophie Menter.

The first of the Hippodrome Sunday night concerts will be given on Sunday evening, October 15, when Jan Kubelik, the distinguished violinist, will make his reappearance in New York after an absence of four years. Mr. Kubelik will be assisted by Nahan Franko and his orchestra of sixty musicians. Concertos by Tchaikovsky and Mendelssohn are on the programme. The American tour will include a hundred concerts.

Maud Powell has selected for performance this season the new suite for violin and orchestra, by W. H. Humiston, which had its first hearing in August at the Peterboro MacDowell Festival, where the soloist was Miss Grace Freeman of California. Mr. Humiston was a pupil of MacDowell at Columbia University. His "Southern Fantasy," which was played at Carnegie Hall by the People's Symphony Orchestra, will shortly be published by Breitkopf & Härtel, who also have in press an album of five songs by the same composer.

The programme for the Oratorio Society's concerts this season differs greatly from those hitherto presented; the usual "Messiah" concerts will occur at Christmas, and in the week of March 25 a Brahms Festival of four concerts, given in connection with the New York symphony Society, the programmes of which will be devoted exclusively to the compositions of Johannes Brahms. In these concerts the Symphony Society, under Walter Damrosch, will have an equal part with the Oratorio Society, two of the four festival concerts being choral and two orchestral. A special edi-

Digitized by Google

tion of the choral works to be sung has been prepared for the society, in order that the language of the text shall, in some measure, be as beautiful as the music of its setting. One of the four symphonies of Brahms will be performed at each of the four festival concerts, and will be conducted by Walter Damrosch. The choral works will be conducted by Frank Damrosch. They will include the "Song of Triumph," "Nänie, and the famous "German Requiem." The "Messiah" will be sung on December 27 and 29; Brahms's "Nänie" and "Song of Triumph" on March 25, and the "German Requiem" on March 30. The dates for the orchestral Brahms concerts are March 27 and 29.

The Volpe Symphony Society of New York, under the direction of Arnold Volpe, will give a series of four subscription concerts at Carnegie Hall on Tuesday evenings, November 2, January 9, February 20, and March 26, instead of Sunday afternoons. The artists engaged to assist at this, the eighth season, are: Rudolph Ganz, pianist; Ludwig Hess, tenor; Albert Spalding, violinist, and Leo Ornstein, pianist. The standard symphonies to be given will include: Beethoven's No. 3 ("Eroica"), Schumann's No. 4, Cesar Franck's Symphony in D minor, and Tchaikovsky's No. 4. The plan, inaugurated last season, of having at least one American composition in each programme, will be continued, and the works to be given in pursuance of this plan are: "Christmas Overture," by Percy Goetschius; "The Mystic Trumpeter," by Frederick S. Converse; "Comedy Overture," on negro themes, by Henry Gilbert. To these will be added the Symphony in D minor, by Pietro Floridia, an Italo-American, who has already become known in this country through his opera "Paoletta." The symphonic poem "Les Préludes," by Liszt, will be played at the initial concert, in commemoration of the centennial of the composer's birth.

Art

"Epochs of Chinese and Japanese Art," by Ernest F. Fenollosa, will be brought out in November by Frederick A. Stokes Co.

The Putnams will publish in October "Illuminated Manuscripts," by J. A. Herbert and Evelyn Underhill.

The publishing firm of Calzone in Rome will shortly issue the first two numbers of the official catalogue of all the antiquities and works of art in Italy: Aosta and its neighborhood, by Dr. Toesca, and Pisa, by Dr. Papini. This catalogue will deal exhaustively with the art treasures of Italy and will be fully illustrated.

The scope of Walter H. Godfrey's "A History of Architecture in London" (Scribner importation) is described in the subtitle, "Arranged to illustrate the course of architecture in England until 1800, with a sketch of the preceding European styles." Mr. Godfrey's survey has been made in very workmanlike fashion. Virtually every building treated is represented by a plan which shows clearly the original structure and the extant portions. There are in all upwards of two hundred and fifty maps and illustrations. An alphabetical list of important buildings, with a key map, is a useful feature. For the leisurely tourist the book is admirably contrived, and even the professional architect will find it convenient as a source of first reference. Indeed, it may be warmly recommended to all who would know their old London well.

Henry C. Shelley's "The British Museum, Its History and Treasures" (L. C. Page & Co.) is a very readable but one-sided manual. Satisfactory on the side of the history of the Museum, which requires about one-third of the space, the text is perfunctory on such important matters as the Greek marbles and the drawings and engravings. The Egyptian, Babylonian, and prehistoric sections, however, are written with much judgment and enthusiasm. For the accessibility of its collections and the ready courtesy and helpfulness of its officials, the Museum fully deserves Mr. Shelley's repeated commendations. The book contains fifty halftone cuts from well-chosen originals.

Hard upon the Vasari quattro-centenary appears the first volume of "Scritte di M. Giorgio Vasari Pittore et Architetto Aretino," mit Kritischem Apparate herausgegeben von Dr. Karl Frey (Munich: Georg Müller). It is impossible within the allotted space to do more than signalize a few points of importance in this monumental undertaking. Only continued use could prove the accuracy of critical apparatus crowded with documentary material. For the first time we have a letter perfect edition of Vasari's issue of 1568 with all the variants of the first edition of 1550. The annotation is extraordinarily full. We have, for example, a complete reprint of the Strozzi compilations from the account books of the Florentine wool guild. The fortunes of the Baptistery are followed year by year. All contentious points in these early lines are discussed in interchapters. So complete is this material that this bulky first volume contains besides the introductory material only the lives of Cimabue, Arnolfo, and Nicolo and Giovanni Pisano. The first volume of Milanesi's edition in nine volumes contained some twenty lives. Accordingly, it seems impossible that this new edition should be rounded out within the seven or eight volumes announced as the limit. On this matter of space Dr. Frey reminds the reader that these earlier lives require a fulness of annotation superfluous in later and more accurate portions of Vasari.

In general Dr. Frey's discussions are clarifying. With steady hand he holds apart the proved from the merely probable. He has brought to bear upon the open questions all relevant documents, in extract. One learns from his pages precisely the present state of the subject. These leisurely reviews of the great open questions are generally so clearly and sensibly done, that most scholars, we presume, will reconcile themselves to the great but necessary *longueurs* involved. Into this admirably objective survey Dr. Frey's pet theory of two Arnolfos intrudes with something of a shock. Whether there was alongside of Arnolfo di Cambio of Colle, architect, an Arnolfo of Florence, sculptor, is still an open question. Dr. Frey's ingenious argument is far from a demonstration. There even seems to be a lack of candor in failing to quote from de Rossi the inscription Arnolphus Architectus which some scholar of the sixteenth century read on the tomb of Boniface VIII. If the inscription be genuine—and no good reason for doubting it has ever been given—we have very strong grounds for believing that there was but one Arnolfo, as Vasari states, and that he was both sculptor and architect. Apart from this natural overemphasis of a personal theory, the book is a prodigy not merely of profound learning but of good judgment. Upon the successful launching of this great work Dr. Frey is to be heartily congratulated. As it proceeds, all earlier editions of Vasari perforce become obsolete.

Finance

TAKING THE RECKONING.

When a ship has drifted for a considerable stretch of time under stress of stormy weather, her navigators greet with as much curiosity as interest the first opportunity to take the reckoning. They are likely to learn that their position on the chart is very different from what they had supposed. A somewhat similar experience awaits the financial pilots, when a tempest on the stock exchanges and the money markets has sufficiently abated to make possible some calculation as to where the markets stand.

The surprise which has confronted them, on the present occasion, consisted in their discovery that, at the very moment which they had expected to bring them on the rocks, they were actually in placid waters. Nothing more uneventful, on the home or foreign money markets and stock exchanges, could be imagined than the present week, in which those markets have been face to face with the "October settlements" and a European war. Money has, if anything, been easier; stock markets have grown inactive and in many localities have recovered; the great banks of Europe, whose credit facilities showed so heavy a strain in last week's reports, have this week shown large gain in cash and extensive reduction of loans.

That the "quarterly settlements" should have produced so slight disturbance, resulted clearly from the fact that they had prepared abundantly in advance. The apathetic response to the Mediterranean episode may have had other causes. In some ways, it was not very complimentary to Italy that the world's financial markets should have treated its war with such indifference. It might, no doubt, have complicated the diplomatic end of things if consols had gone to 70, and Paris had faced a panic instead of last Thursday's easy-going Bourse settlement, and the German bank rate had advanced to 7 per cent. That might have given the Continental Ministries a new view of Italian statecraft. But large affairs impress the markets, and the presumption is bound to linger, if the markets refuse to be impressed, that the affair is not large. Europe did

Digitized by Google

not like Napoleon any better because consols went to 50 when he resumed his military intrigues, but at all events it took him seriously. There was a week or two when our own war with Spain had a bit of the opera-bouffe complexion; but we fought two first-rate naval battles, nearly came to a brush with Germany's Admiral Diedrich, had some words with France, and the markets saw that they must reflect things. There was not quite the air which surrounds the Italian adventure, of calling on an enemy to fight whose hands are tied, and of prowling about the sea after ships which do not exist.

Financial markets, however, judge these matters philosophically, and are quite content that this quarrel should be kept in one back-yard. If they have not been able even to go through the motions of an orthodox "war scare" on the present occasion, they are at least aware that a real disturbance of the political equilibrium would have been most inconvenient.

It was to be expected, in the natural order of events, that when markets would not break on the invasion of Tripoli and the "October settlements," some one should draw the inference that prosperity once more had us in its grip. The president of the New York Central sounded the first note of optimism. Whether it was or was not a fact of particular reassurance, that the "prosperity coming for all" should be discovered by the telescope which first detected impending railway bankruptcy when the Interstate Commerce Commission held up the general advance in rates, is perhaps a question. One might even criticise the remark ascribed to James J. Hill in another interview, to the effect that nothing now is needed to insure "a period of prosperity never before excelled" except "complete restoration of confidence." There are such things as truisms, or, as Wall Street would express it, predictions with a string to them.

Nevertheless, in some directions there are signs of slowly improving business. It is easier to detect them when the stock market is advancing. But it is also true that autumn is apt to bring some turn for the better after a long depression. This is not wholly because of that favorite and unanswerable argument that "business can never stop entirely in a nation of ninety million souls." It results more particularly from the fact that, when stocks of goods have been allowed to run almost to the shelf in a time of general depression, arrival of the period when merchants have to make preparations for the regular needs of another season usually shows that matters are not quite so bad as we had imagined.

Perhaps it is more than this. Wall Street no doubt is skeptical, on the basis of its traditional belief that a break in stocks, like that of August and September, must find its counterpart, later on, in shrinkage of trade activity. But there are some things at least potentially very favorable. Every one in his senses ought to know that the trouble with trade, as with the Stock Exchange, was the obstinate maintenance of high prices. People would not buy stocks at the figures of July; but they would not buy iron either, or cotton goods. The story really was the same in all three industries, and in many others. Actual consumers could not be interested, save by a lowering of prices, and presently merchants with stocks of steel or cottons to sell were competing to mark their prices down and get the trade. But iron is now down to the lowest since 1906; cotton to the lowest since 1909, and stocks have followed their example. Wall Street said it was President Taft and Mr. Wickersham, or "Morocco," or the attack on the House of Lords, which had caused the lower prices. But possibly there were other causes also, and if there were, they have been in a considerable degree removed.

Naturally, it cannot be assumed that, merely because prices have come down, the entire consuming community will rush headlong into the market. That is not so on the Stock Exchange, and it is not the rule in outside trade. There is usually a period of inaction, in which both buyers and sellers are getting used to the lower prices, and trying to make sure that they will not go still lower. That period is often uncomfortably prolonged. But the main thing is to discover which way the wind is blowing. This is not wholly easy to do as yet, either in America or in Europe; but the horizon at any rate is clearer.

A BOOK FOR ALL THE PEOPLE OF ALL THE STATES OF THE UNION

"He looks long at something we do not see."

One of the 136 beautiful pictures in *The Land We Live In*

THE LAND WE LIVE IN

THE BOYS' BOOK OF CONSERVATION

By OVERTON W. PRICE

Vice-President National Conservation Association

With a foreword by **GIFFORD PINCHOT,** President National Conservation Association

Illustrated by reproductions of 136 photographs. 8vo. $1.50 net; by mail, $1.70.

"The Land We Live In" is a book of the utmost importance. Says **Mr. Pinchot:** "I have never seen so good a statement of the great Conservation problem as this."

It covers the whole subject in the broadest way and tells the great story fascinatingly. "America Three Hundred Years Ago," "America To-day," "How the Forest is Used, Abroad and at Home," "In a National Forest," "The Farmers' Farms and the Nation's Farm," "The Treasures Underground," "Wild Life," "The Rivers," "What This Means to Us," "How We Can Help," etc., etc.—these are some of the chapter titles.

Mr. Louis D. Brandeis writes:

"You have performed an important public service in preparing 'The Land We Live In.'

"It will make Americans, old and young alike, feel the fascination of conservation. It will make them realize that conservation implies use, growth, development, and that it is not 'cold storage.' It will make them feel something of the thrill which attends the scientific management of our natural resources and how poor a thing wasteful destruction is."

Hon. James R. Garfield writes:

"I am delighted with 'The Land We Live In.'"

Former Governor George C. Pardee of California writes:

"I have read it with consuming interest, although you say it is addressed only to the boys. It ought to be in the hands of every boy in the country. It will prove of great interest to the girls—my own girls are greatly interested in it. And the 'grown-ups,' all of them, can read it with profit to themselves and the country."

"I do not know," writes **Jessie Bryant Gerard,** "of a better way to teach children real patriotism than to give them this valuable contribution to our country's own history. One young teacher of my acquaintance has aroused the greatest enthusiasm in her class by using the book. Every mother, teacher, and librarian should know and use as a part of her educational equipment 'The Land We Live In.'"

In a speech at the recent great National Conservation Congress at Kansas City, **Hon. A. B. Farquhar,** President of the Pennsylvania Branch of the National Conservation Association, said: "It would be well for every family to have a copy of 'The Land We Live In,' a new book by Overton W. Price, vice-president of the National Conservation Association, published by Small, Maynard & Co., of Boston."

We urge every one who sees this advertisement to send to us for specimen pages and special descriptive matter—free.

The Nation

NEW YORK, THURSDAY, OCTOBER 19, 1911.

The Week

Mr. Taft leaves San Francisco with his prestige visibly increased, we learn from the New York *Tribune's* correspondent. What a fickle thing must this Presidential prestige be which rises and falls like the thermometer, with the day and the hour. At Kansas City it rains, the crowd is rather undemonstrative, and Taft stock breaks for a sharp decline. At Tacoma Mr. Taft greatly improves his standing by calling it Mt. Tacoma and not Mt. Rainier. In southern Idaho the President suffers from a sore throat and the outlook for 1912 grows correspondingly gloomy. At San Francisco he turns the first sod for the Panama Exposition and La Follette's chances dwindle to ridiculous proportions. A Presidential swing around the circle thus assumes the character of an elaborate plucking at the petals of the daisy, with "He loves me" and "He loves me not" following each other in regular succession. In spite of the volatile nature of our democracy we do not believe that the fortunes of a public man are made, unmade, and remade within the space of a day or two. The Western trip will undoubtedly have its effect upon Mr. Taft's political fortunes, but that effect will be visible only months afterward, when the country has had time to appraise the President's record as a whole.

Monday's meeting of Progressive Republicans in Chicago seems to have been shunned by several Republican Senators and other leaders who had been expected to be present, but it went through its business directly and promptly. The platform adopted suffers from the weakness of most political platforms in being conveniently vague. It explicitly favors a Presidential primary, but its programme of Trust legislation seems to have been modelled on the good old Republican planks about protection—duties to protect the manufacturer, yet so adjusted as in no conceivable way to injure the consumer. Similarly, the Progressives are to make big business "safe and stable," while at the same time "fully safeguarding the interests of the public." At one point the drafters of the platform did not wholly escape a logical pitfall. Their movement, they assert, aims to "wrest the control of the government from special privilege," yet in the next breath they add that "the present condition of uncertainty in business is intolerable and destructive of industrial prosperity." The inference appears unavoidable that special privilege in control has not known how to care for its own. Possibly, it has not been so entirely in control as the Progressives, for the sake of campaign argument, feel bound to affirm!

That the Chicago meeting should have endorsed Senator La Follette for the Presidency was a foregone conclusion. His friends were in a great majority, and they know exactly what they want. As much cannot be said for men in the reputed attitude of ex-Secretary Garfield, who was understood to be on the ground in the interest of Mr. Roosevelt. This would mean that Mr. Garfield was there to keep in touch with the Progressive movement, to lay a restraining hand upon it, and to prevent it from committing itself too definitely to the fortunes of any man except the one whose candidacy next year—nothing said about 1916—would be a "genuine calamity." If all this was as reported, however, it must be admitted that Mr. Garfield bore himself as a thorough Rooseveltian. That is to say, finding himself in a small minority, he went cheerfully with the majority.

Inasmuch as Mr. Roosevelt's stand on the passport controversy now under way between this government and Russia is unmistakably on the right side, it does not matter that the reasoning by which he approaches his position is completely at variance with what he has recently written concerning international disputes, national honor, and arbitration. Speaking of Russia's refusal to admit American citizens of the Jewish faith, Mr. Roosevelt asserts that "under no circumstances would we now make with Russia or with any other Power a treaty which explicitly permitted such discriminations as Russia actually makes against certain classes of our citizens." But if our feelings in the matter are so unmistakable, what sense is there in appealing to the Hague Tribunal, as Mr. Roosevelt suggests, for an authoritative interpretation of our present treaty with Russia? Why does he not simply order the treaty to be abrogated?

As a matter of fact, it is still to be shown that abrogation of the treaty of 1832 is necessary, in order to bring Russia to terms. The Czar's Government has taken no absolute stand in the matter, but has displayed to the full all the evasive and dilatory tactics of Oriental diplomacy. During the campaign of 1908, Mr. Taft gave his explicit pledge that Russia's refusal to recognize an American passport in the hands of a Jewish citizen should be promptly dealt with. Little evidence of zeal on the part of the State Department in this matter has so far been made apparent. A vigorous stand by our Government would bring the problem to a speedy solution.

The adoption by the male voters of California last week of a Constitutional amendment giving women the right to vote is easily the most momentous decision yet given in this country in favor of woman suffrage. That must be admitted as well by the opponents as by the advocates of votes for women. So long as women could vote only in four Rocky Mountain States, of comparatively small population, the movement to enlarge the political rights of their sex might be dismissed as almost negligible. Women could vote in Idaho, to be sure, but Idaho had only 325,000 inhabitants—not enough to make one large city. Wyoming also allows women the ballot, but that State is still more inconsiderable, its population in 1910 being but 154,000. Of the two other suffrage States of long standing, Utah numbered but 373,000 people, while Colorado's population was 799,000. It was evidently a much more important event when the State of Washington adopted woman suffrage, for that commonwealth had 1,141,000 residents in 1910. And now comes California, with a population of 2,337,000, to join the ranks of the suffrage States. This means nearly doubling at one stroke the number of wo-

Digitized by Google

men in the United States with the legal right to vote.

The challenging of talesmen in the McNamara case on the score of their views concerning the conflict between labor and capital has a significance extending far beyond anything involved in the case itself. With the meagre details that have appeared in the dispatches, it is impossible at this moment to say on precisely what basis Mr. Darrow is placing his challenge; but if it rests on any such broad ground as that of mere hostility to the avowed aims and policies of trade unions, the granting of the challenge would constitute a precedent of alarming scope. The difficulty of obtaining a jury, on account of unlimited challenges allowed for so-called prejudice in regard to the individual case in hand, has been one of the notorious evils of our criminal procedure; if now a man's views on broad public questions are to be a bar to his eligibility as a juror, there is no telling where we shall stop. The question in the McNamara case is not a question of trades-unionism, but of murder. If a talesman has a fixed opinion that trades-unionists in general are ready to commit murder in promoting their cause, that would be a sound basis for a challenge on the part of the defence; as, on the other hand, if he holds that murder in that cause is justifiable, he would justly be excluded by the prosecution. But we have come to a strange pass if mere sympathy with the labor cause, or mere antipathy to it, is to be regarded as incapacitating a juryman from judging of the question of fact whether a given trades-unionist did or did not participate in a given act of violence, or from passing a true verdict upon him.

The advantages of Vice-President Sherman's plan of using up our resources as fast as we like and letting posterity do its own worrying, are evident. Economically, we should be vastly better off with the Guggenheims breaking their necks to serve us with the products of Alaska or any other unexploited region. A greater gain would be political. Who can estimate the increased prestige of President Taft at this moment if there had never been any falling-out over the question of who should profit by our untouched and therefore wasted wealth? Not the least of the merits of the plan is its contribution to mental comfort. From the beginning, conservation has been a peculiarly harassing problem. Are we wrong in thinking that there are millions of Americans who will give a sigh of relief, now that they see how the whole matter can be dropped as safely as the Vice-President explains? Note also the value of the idea for that posterity which it seemingly ignores. The less we pass on to the future in the way of resources, the more will it be spurred to devise those inventions that give Mr. Sherman such anticipatory pleasure. The question just who, at present, should control these resources he does not appear to have considered. But why worry over that, either?

A faint suggestion of the kind of trouble with which both politics and business would be filled if the railway system of this country were to go into the possession of the Government is furnished by the suit of the *Review of Reviews* against the Postmaster-General of the United States and the postmaster of New York, asking for an injunction restraining them from enforcing the new postal regulation under which that magazine is to be carried by fast freight instead of on regular mail trains. The arrangements of the post office are of infantile simplicity in comparison with those of the railways, and the fact that the postal regulations have not, for the most part, brought about any serious complications between business and government is due entirely to the cast-iron uniformity of the few simple rules which govern the department's action. The moment a discrimination has to be made that is not absolutely mechanical, trouble begins. The part played by railway transportation in America, in the determination of prosperity or failure, not only for particular enterprises, but for whole communities, is something to which European conditions afford nothing like a parallel. With us government ownership would mean a tremendous plunge of politics into the deep waters of business.

Whatever allowances are to be made, the incident that has brought Coatesville into its latest prominence is remarkable, if not absolutely unique. The successful plea of a fifteen-year-old girl victim for the legal punishment of the man who assaulted her, instead of a repetition of the mob violence of a few weeks ago, may have been partly due to other reasons than the plea itself. The interference of the State Constabulary had prevented her father from carrying out his threat to kill the man upon his arrest, and this time there was a District Attorney who argued strenuously for orderly procedure. But it would be rash to assert that, if the girl herself had taken a different tone, the community would not have been disgraced a second time. The important thing is that in this affair some one made a stand for law, and seven hundred excited men subsided. How much this is to be attributed to the flood of censure that has poured upon the town since August 13, may be beyond reckoning, but it is significant that, almost from the beginning of the search for the assailant, members of the searching-party have been quoted as remarking that there must be no burning this time, owing to the talk it would cause outside.

"There will be more idle men this winter than ever before" is the cheerful prophecy made by Mr. James J. Hill, as reported in the newspapers. His judgment may be correct, for aught we know; but it would be more impressive if the analysis of the causes of our troubles with which he accompanies his forecast hung together better. In the first place, he says:

> This is the reason: Our capacity for production along industrial lines has grown faster than our consumption along the same lines. Some years ago the farmer had to raise enough to feed himself and another man in the cities; now he must raise enough for himself and for two other men, on account of the movement to industry rather than farms.

This is perfectly clean-cut, standing by itself; but Mr. Hill goes on:

> Business is sound, but no new enterprises are being started. The politicians and newspapers are to blame. There is too much political ghost dancing.

Well, if we are already doing too much "along industrial lines," and if the trouble lies in "the movement to industry rather than farms," it is difficult to see that there is any great misfortune in a checking of the pace at which "new enterprises are being started." Like the judge who was warned never to give the reasons for his decisions, Mr. Hill would often command more authority for his dicta if he refrained from explanatory comment.

Who wants to give a library? Harvard University, rich as it is in so many other directions, has long been handicapped by a pitifully inadequate library building. It is unable to accommodate its readers, and many of its books are hidden away in cellars for lack of shelf-room. The stacks themselves have never furnished the accommodation needed by advanced classes, and with each year the conditions become less tolerable. Now a committee of architects has evolved an excellent plan for the construction of a new building on the present site, plus considerable additional ground and on the instalment basis. Thus the first section, to accommodate 834,000 volumes, can be built at a cost of $433,400, and four other sections could be built thereafter to complete the whole structure. This is estimated to cost $1,953,000, and to give space for 2,370,000 volumes. That such an opportunity to be of service to our oldest university has not yet appealed to her many wealthy graduates—to say nothing of the great giver of libraries—is really surprising. Only $2,500,000 is needed in all, for the college has sufficient funds available for maintenance if an endowment of $500,000 be added.

The new Lord Mayor of London, Sir Thomas Crosby, who was elected two weeks ago, is entitled to write M.D. after his name. He is said to be the first physician ever chosen as Lord Mayor. Sir Thomas is also in all probability the oldest citizen ever elected to his present office, his age being eighty-one; but that, of course, is not so very old for English public life. He has had a long and distinguished medical career, and has been in municipal service since 1877, so that the honor which has now come to him may be regarded as a fitting recognition of the public spirit which he has displayed. Of course, there will be many jokes about a doctor presiding over the City of London. Guarantees will doubtless be offered that the Lord Mayor's banquets will know nothing except pure food, and that the turtle soup which Disraeli said made all men brothers will not be "mock." There was once a Prime Minister of England who was a doctor, and of him Lord Rosebery wrote, in his Life of Pitt, that "Addington carried into politics the indefinable air of a village apothecary inspecting the tongue of the state." Sir Thomas Crosby, M.D., may as Lord Mayor expose himself to a similar fling, but it need not be so bad a thing for London to have an expert in hygiene at the head of her government.

In the new English Court of Criminal Appeal, the first capital case was recently passed upon, and it revealed a serious defect in the law creating the court, novel in British judicial procedure. A convicted murderer appealed on the ground that the jury in the court below had been improperly directed as to certain corroborative evidence. The judges on appeal found the plea to be well taken. Without asserting the innocence of the accused man—indeed, it is evident that they believe him guilty—the judges declare that they cannot be certain that the jury would have convicted him if it had not been misinformed as to the nature of part of the evidence against him. Hence the verdict was quashed; but now comes the surprising thing—the Court of Criminal Appeal is not able, under the law, to order a new trial! Over this lack of power, Justice Darling expressed sincere regret, saying that the court felt that the case was one in which it was eminently desirable that "all the facts should again be submitted to a jury with an adequate and proper direction." Justice Darling significantly added that he hoped that what the court said on this point would be "considered by those who had power to amend the law in this respect." One would think so! The right of criminal appeal was established in England as a safeguard against possible injustice to the innocent; it could never have been intended to permit a man charged with atrocious crime to escape by means of a loop-hole in the law.

Then why have the Italian Government and people gone into this adventure? Because they are dominated by the old hypnotism of conquest, the mirage of the map, the old illusion that some great national advantage will accrue from widened territory and increased political power; because the old catchwords and the old habits of political thought have blinded statesmen and people alike to their best interests.

In these words Norman Angell, the author of "The Great Illusion," explains the Italian attack upon Turkey. Mr. Angell derides the popular fallacy that the capture of a province, instead of being merely a change of administration, is in some ways an addition to the wealth of the conquerors. He insists that, "when we have conquered a territory, its wealth has to remain in the hands of its original owners; the conquerors get nothing. Conquest in the modern world is a process of multiplying by X and then obtaining the original resultant by dividing by X." It seems to us that Mr. Angell could strongly reinforce his point by demonstrating that the purchase of the Philippines has added nothing whatsoever to the wealth of this country, but has been a steady drag upon it by reason of the expense and burden of administration. We know that Washington bureaucrats have skilfully demonstrated, by means of trade figures, that we really have a credit balance to our account, but the ordinary man who thinks for himself will hardly be convinced that the Philippines have really added anything substantial to the wealth of the nation, or to its prestige, or brought us any trade we could not have obtained years ago by common-sense tariffs and business enterprise. The "mirage of the map" no longer deceives.

The task of suppressing the rebellion in the Yang-tse provinces has been entrusted to Yuan Shih Kai, the creator of China's modern army. The former Viceroy of Shan-tung is thus experiencing the usual treatment which China metes out to her strong men. Instead of utilizing their abilities in the permanent service of the Empire, the system at Peking demands that the really able men in China shall be held in reserve for the periodical crises that punctuate Government sloth and incompetence. If Yuan Shih Kai can live up, even in part, to the high expectations that were formed of him by European observers during the years following the close of the Russo-Japanese war, he should be able to cope with the present menacing situation. The first news that came out of China bore the impress of panic. With the passing of the early fright, the situation, though undoubtedly disquieting, is seen to be by no means hopeless. The rebellion may drag on or even spread slowly, without bringing any decisive overturn. That is the advantage of the Chinese system of decentralized authority. Where a highly organized governmental system might speedily go to pieces, inorganic China may suffer and endure.

WILSON ON TAFT AND TRUSTS.

With the Presidential nominating conventions only nine months off, the public outgivings of a man in the position of Woodrow Wilson are invested with exceptional importance. He is one of the two or three men from among whom the candidate of the Democratic party will almost certainly be chosen. Moreover, his emergence into the Presidential class has been so recent that, in spite of the extraordinary popularity he has attained, and of the enthusiasm some of his acts have evoked, the estimate of his qualities, in that thinking class which so often determines the final result of an electoral struggle, is still in the formative stage. Accordingly, when he thinks fit not only to pass a severe judgment on the course of the President of the United States in a leading department of governmental activity, but to give emphasis to his strictures by repeating them in a second speech on the following day, it becomes a matter of real interest to inquire into the merits of the criticism.

Gov. Wilson's dissatisfaction appears to rest partly on alleged shortcomings of Mr. Taft, and partly on a condition of much longer standing than the present Administration. "President Taft," so runs the report of Mr. Wilson's speech, "says one day that he is absolutely going to enforce the Sherman law. After reading the papers, however, he thinks perhaps he has excited too much of a tremor and decides that what he intended to do was wrong." In the heat of a campaign, such a statement on the hustings might be quite pardonable; in the quiet atmosphere of the university of which he was recently the head, and in these serene October days of an "off-year," it is not the sort of thing the friends of Woodrow Wilson have a right to expect from him. If President Taft has been wabbling in any such way, has been making any declaration on the Trust question which he has afterwards retracted on account of the "tremor" that it has excited, if he has been indicating any act that "he intended to do" in relation to the Sherman law and has afterwards decided that it "was wrong," the fact has wholly escaped our observation. If Gov. Wilson has caught him in such performances, he ought to be able to furnish a bill of particulars.

Mr. Wilson's criticism of the President, however, though apparently careless and certainly inaccurate, was, we have no doubt, but incidental to his general arraignment of the existing state of our public policy in regard to Trusts; it was meant rather to illustrate the natural consequence of an unsatisfactory method than to point to any special fault on the part of an individual. "The business man wants to know where he is," and "there has been nothing but guesswork for the last decade as to what is going to happen in business." No one will deny that there is some ground for such a complaint; nor will anybody deny the desirability of that which Mr. Wilson declares ought to be substituted for existing conditions:

> We want to put business on a sound basis and with the assurance that when we have done it we have not destroyed anything, but have reconstructed. We want definite information as to what the law means and what it provides. We don't know now what the offence is and what the penalty is.

So say we all of us. Business on a sound basis, the law made as plain as the multiplication table, many things reconstructed but nothing destroyed—what could be finer? Surely, Mr. Taft cannot harbor any desire to stand in the way of a consummation so devoutly to be wished. Surely, the eight Justices of the Supreme Court who concurred in the Standard Oil and Tobacco Trust decisions must approve such an aim. So far as we know, the only thing that stands in the way of its complete attainment is the difficulty of discovering just how it can be done.

If Gov. Wilson had given us the benefit of such a discovery, the question of the accuracy, or even the justice, of his critical remarks would become entirely trivial. But in the published reports of his speeches there is no sign of such an achievement. He tells us that we are in a sad mess, and he leaves us in it. There are, indeed, before the public, two proposed solutions of the problem, each of them having the unquestionable merit of extreme simplicity, whatever may be said of them in other respects. One is the solution of the out-and-out Trust advocates, who say that all the Government ought to do in regard to the problem of combination and monopoly is to let it alone; business knows best what is good for it, and what is good for business is good for the country. The other is Judge Harlan's solution: apply the Sherman law in the most sweeping way, taking no account of degree or "reasonableness," but putting under the ban every business arrangement that sins against the letter of the law. Mr. Wilson is not for the first of these policies, for he says that "the people of the country have made up their mind that they won't stand for monopoly and restraint of trade"; is he for Judge Harlan's root-and-branch plan? If he is, does he think that it will put business on a sound basis, reconstructing much but destroying nothing? And if neither of these two simple solutions satisfies his mind, what does he propose himself? We have no doubt that he has thought a great deal on the subject; but we would suggest, in all friendliness, that when a man of his antecedents attacks a question so vast and so complex as this of the control of business combinations, the country has a right to look for something more than mere general denunciation on the one hand and the utterance of a counsel of perfection on the other.

SUPREME COURT TIMBER.

Such tributes as have been called forth by the death of Judge Harlan help laymen to understand why lawyers regard an appointment to the Supreme Court of the United States as the blue ribbon of the profession. It is not, of course, a question of money rewards; these are to be looked for elsewhere. The statement is made that Judge Harlan, even after a judicial service of more than thirty years, leaves but a small estate. For a large part of the time that he was on the bench, he was clearly underpaid. Salaries of Federal judges have recently been somewhat increased, yet are still smaller than they should be. But the opportunity and the distinction which the Supreme Court offers have always been rightly regarded as independent of anything pecuniary. What they are we see illustrated in Justice Harlan. They are an appeal to the noblest ambition. To be able to spend years in studying and applying the principles of the supreme law of the land, and in doing one's part to uphold the honorable tradition whereby the decisions of our highest court are made continuous and yet responsive to public needs as these arise; to be animated by the sole desire to do justice, and, in doing it, to make the country safe and strong—when all this has been considered, it is not necessary to speak of the dignity or emolu-

Digitized by Google

ments of the Supreme Court in order to understand why any member of the American bar should feel that the offer of a position in that court is the highest honor that can possibly come to him.

The death of Judge Harlan heightens the already sufficiently remarkable part which President Taft has had in re-constituting the Supreme Court. Within the first half of his term in the Presidency it fell to him to appoint four associate justices, and to name the Chief Justice; and now, with the choice of a successor to Judge Harlan, Mr. Taft will actually have selected a majority of the Supreme Court. This is unexampled since the original nomination of the first Supreme Court of the United States by Washington. It might be regarded by some as almost a special Providence that this re-manning of our highest court should have devolved upon a President who had himself been a Federal judge, and whose veneration for the Supreme Court he has manifested on so many occasions and in so many ways. If Mr. Taft could have followed his own preference, instead of what he felt at the time to be his duty, he himself would have been a Supreme Court judge. In that court it is now to be presumed he will never sit; yet he certainly will be entitled to the satisfaction of knowing that his mark will long remain written upon it.

There is no probability that the President will designate a judge to succeed Harlan until Congress meets. He may not be ready with a nomination even in December. A great deal of advice, however, is already showered upon him in the newspapers; names are suggested, and the principles upon which he should go in making his selection are indicated. It is said that he must pay great heed to locality, choosing the new judge from the "right" Circuit or section. Political considerations are frankly put forward: it might be good tactics for the President to appoint a justice who should be pleasing to the Progressives. Some argue that, a Republican having been named to succeed the late Chief Justice Fuller, a Democrat should now be named to follow Judge Harlan. A dozen other hints or recommendations are given the President—all of which he should, in our opinion, entirely disregard; and it is probable that he will.

The search for a fit man to go upon the Supreme Court bench may be long and difficult, but about the light which should burn in the lantern with which he is looked for there need be no doubt whatever. Arguments from locality ought to have little weight. It is, indeed, tentatively desirable that each of the Circuits should be represented; and if a candidate, otherwise admirably qualified, should chance to live in a Circuit now without a judge, that would be one thing more in his favor. But Presidents have frequently set aside such considerations of residence, and there is no reason why Mr. Taft should be swayed by them. Politics should be wholly left out of the question. The task of the appointing officer is merely to discover the man who, on the whole, appears to be best fitted to do the work demanded of a Supreme Court judge.

Legal attainments and character naturally stand first in the list of qualifications. Judicial experience is, of course, reckoned of high value, but it is not indispensable. A man may have eminently the judicial mind without ever having been a judge. Such was the case with Justice Miller, long an ornament of the Supreme Court. The question of age is important. A judge going to the Supreme Court ought to have a reasonable expectation of twenty years' service. Hence he should be not much if any above fifty. President Taft disregarded this good rule in the case of Judge Lurton, but allowed it to be understood that he would not do so again. Another point relates to the recorded judicial opinions of a possible nominee, or to the positions he may have taken respecting questions of corporation control, and so on. Now, of course, a President could not overlook the disqualification which would go with extreme views expressed by a judge on one side or the other, but, short of that, this is a matter into which it is not needful or desirable too nicely to inquire. If a man has shown himself to be a good judge—able, industrious, incorruptible, high-minded, justice-loving—it may be just as well that his opinions about the anti-Trust law, for example, are not specifically known. The main things to make sure of are that he is duly learned in the law, that his repute is of the best, and that he promises to be resolute in all things to bear himself "as becometh a judge."

THE TOBACCO TRUST DISSOLUTION.

The Supreme Court decisions of last May, ordering dissolution of the Oil and Tobacco Trusts, left a weighty problem still to be settled—how these two aggregations of competing corporations, under the ownership of the two central holding companies, should be distributed on a new basis of ownership. Of the two combinations, the American Tobacco was much the more intricate. The plan of distribution drawn up by the Tobacco company is about to come before the court. In brief, its proposed basis of dissolution as stated by its lawyers is:

> To restore lawful conditions by dividing the business in tobacco and related products, heretofore dominated and controlled by the American Tobacco Company, or companies in which it has held a large or controlling interest, among fourteen separate and independent companies, no one of them having control of or dominance in the trade as to any of the products manufactured by it.

In advance of the hearings before the court, we shall express no opinion as to the merits of this plan, from the standpoint of the varying interests and equities of the Tobacco Trust's security-holders. But there is one aspect of the matter which has already taken a foremost place in public discussion, and which bears, not only on the Tobacco reorganization, but on all others of similar character. This consideration the committee of the National Cigar Leaf Association, representing independent manufacturers, has set forth as follows:

> Any plan of dissolution which leaves the effective control of the separate parts of the combination in the hands of the same small group of individuals who now control the present solidified combination, cannot bring about a restoration of competition. The result would be that the last condition would be worse than the first, because after such a dissolution the same control would continue to be exercised as before, with the added advantage that it would have . . . the sanction of the courts.

Obviously, this means that if one man or one group of men had held a controlling interest in the stock of the holding company, they ought not, after the dissolution, to be allowed to hold a *pro rata* control in the released subsidiaries. Two questions are involved in such an argument: one, whether such a resultant situation would be repugnant to the Anti-Trust law; the other, whether disintegration on such basis would leave the conditions in the trade as obnoxious to public policy as they were before. As regards the first question, we are not

Digitized by Google

without guidance in previous court opinions. When the Northern Securities combination was ordered dissolved by the Federal courts in 1904, its management proposed and its shareholders ratified a *pro rata* distribution, to Northern Securities shareholders, of the shares of the two competing railways owned by the holding company. This plan was contested by the Harriman interests, who alleged in their petition for injunction that "the plan proposed . . . would leave control in the hands of the same people who now control, and would defeat the ruling of the Supreme Court." In so far as the Hill-Morgan interest had controlled the holding company, and would, on *pro rata* distribution of its assets, continue to control the competitive Northern Pacific and Great Northern railways, ownership after liquidation would apparently have been as alleged.

Nevertheless, the Circuit Court which had ordered the Northern Securities dissolution, and before which the injunction suit was argued, unanimously refused to intervene. Its reason was that, according to well-established rules, such petition on grounds of public policy could not be entertained "so long as the Government is present by its Attorney-General, and expresses its disapproval of such intrusion." It intimated, however, that a hearing might be allowed in a suit on the question whether certain interests were unfairly treated by the plan, introduced with witnesses and evidence; and three months later, as a result of fresh petition and argument, Judge Bradford of the Federal District Court granted at Trenton a preliminary injunction against the *pro rata* plan. But in January, 1905, the Circuit Court, having heard argument on appeal, dismissed the injunction suit, and in April the Supreme Court upheld its action, the gist of the decision being that "the title to these stocks having intentionally been passed, the former owners, or part of them, cannot reclaim the specific shares, and must be content with their ratable proportion of the corporate assets."

Now, no two cases of this sort run on all fours with each other; but the legal points at issue in the Tobacco Trust and Northern Securities situation are pretty close. The Supreme Court decision of April, 1905, appears at all events to dispose of a conceivable demand for return of the Tobacco company's holdings of securities to the original owners from whom that company purchased them. Indeed, such a proposition, baldly stated, hardly conforms to common sense. Mr. James J. Hill quite aptly suggested, of that proposal in the Northern Securities case, that "one might as well go to a bank and demand a return of exactly the same money that one had deposited there." Beyond even this, it is certain that, taken as a whole, the present holders of Tobacco securities are not the parties from whom the Trust originally bought the stock of the smaller companies.

All this undoubtedly leaves open the large question whether *pro rata* distribution of the Tobacco Trust's assets would or would not continue the trade domination and the monopolistic tendencies as they were before, supposing the same investors who controlled the Trust to receive and hold a similar working ownership in the released subsidiaries. Our own answer to this question would be that the resultant situation, even then, would differ radically from what it was in the days of Trust control. The purpose of the holding company was to prevent for all time exactly what would now be again a normal probability—change of ownership in the old-time constituents of the Trust, whether through death, or through individual sales, or through purchase of a dominating interest in the smaller companies by people who could never have aspired to obtain a footing in the $119,000,000 combination.

It must be remembered that whoever controls these companies hereafter, their actions, joint or several, will still remain subject to the law. Not least of all, it is pertinent to ask just how we are to prevent such private control of several separate companies, whether through shares allotted in dissolution of the Trust or through subsequent purchase for investment. Counsel for one of the independent companies suggested, in a published interview of Monday morning, that this could be done "by compelling this coterie of insiders to dispose of their stock to others not in any way connected with themselves, and by perpetually enjoining them from re-acquiring it, or from resuming control of any of the companies, or from interfering with the tobacco industry." We must confess that this would be a highly novel and formidable undertaking.

BRITISH HYSTERIA.

Imperial fashion notes from London for the approaching season indicate that sackcloth and ashes will continue to be worn extensively in the United Kingdom and its dependencies. The sun is not the only thing that nowadays refuses to set upon the British Empire. The sun has a close rival in the panics and alarums and excursions which during the last half-dozen years have traversed the British horizon in unbroken continuity. The fear of invasion has ceased to be an emotion, and has become to sensible people an intolerable bore. It is impossible nowadays to escape the lesson of Imperial duty. It pops out upon Englishmen from political discourses, from drapers' advertisements, from directors' meetings, and from funeral orations. Worst of all, it has entered literature. Kipling's words of warning have been seized upon by the single ladies in parsonages who write novels and memoirs for the great British public. In the midst of the tenderest passages we are reminded that Britain's womanhood can never know the bliss of untroubled love until all possibility of a German landing in Yorkshire is removed. And it is not the fourth-raters who are writing this stuff. Conan Doyle has done almost as badly, and there are others.

What, then, has become of the British sense of humor? *Punch* still appears in print; Lord Rosebery still flashes his rare epigrams; Mr. Chesterton writes faster than ever. Humor as an isolated function presumably still exists in England, but as applied to the practice of life the sense of the comic seems to have disappeared when first the armed spectre loomed up across the North Sea. The shifts to which Imperial Britain finds herself put, in order to save her liberties from being ground under the German heel, are as various as they are desperate and amusing. A few years ago, England was to be saved by rifle clubs. Later, she was to be saved by boy-scouts. To-day, she is to be saved by a device that comes straight from Aristophanes. That staid, conservative London journal, the *Standard*, prints a letter which shows how England is to be kept from destruction, by her women. In the first place, all marriageable Englishwomen are to shame into action the flannelled fools at the wicket and the muddied oafs at the goal, by taking a

Digitized by Google

vow of celibacy for a period of five years, "or until such a time as England shall be placed in a posture of defence commensurate with its wealth and responsibilities and worthy of its history." And secondly, the women of England are to be organized into an "army of home defence." Visitors who have stood shaken before the "Quand Même" in the gardens of the Tuileries will now realize that there is no situation which cannot, by taking thought, be rendered ridiculous.

Now, British hysteria, in spite of its comic aspects, might have come in for something of that respect which attaches to sincerity, even when it is misguided. But with Great Britain to-day the lack of sincerity is strongly apparent. Not patriotism, but party-politics, is at the bottom; it is not national hysteria, but the wailings of a beaten political party. Imagine that the Conservatives and not the Liberals had been in power for the last half-dozen years. The lessons of the South African war might have been learned, but there would have been comparatively little talk of decadence, and invasions, and the failure of Britain's manhood, and approaching Imperial collapse. If Mr. Balfour were now holding Mr. Asquith's job, Tory confidence would have been what it has always been, a fine faith in England's destiny, manhood, pluck, and luck. The methods of "somehow" by which the British Empire was built up would still have found defenders. It is only when Mr. Asquith and Mr. Lloyd George took hold that decadence sets in and the storms refuse the sea-girt isle the protection they have hitherto vouchsafed her. British panic is to be interpreted in the light of the fact that the middle classes which write and read newspapers and books are strongly anti-Liberal.

Decadence to-day is not with England's frenzied footballers in corduroy and peaked cap, but with England's ruling class. What has become of the poise and the dignity and the sense of fair-play that were the hallmark of the English gentleman? They seem to have been thrown overboard in the vehemence of party-strife. Waterloo may have been won on the cricket-fields of Eton, but well-born Englishmen have latterly been resorting to tactics that are distinctly not "cricket." The men who howled down Mr. Asquith in the House of Commons were not vulgar football players, but very vulgar gentlemen. The manner in which wealthy Unionist M.Ps.'s have exploited the new provision for the payment of members of Parliament is atrociously vulgar. The manner in which Unionist Ulster rages against Home Rule and threatens civil war, death, and damnation apparently shows that Englishmen have forgotten how to be cheerful losers. It would be interesting to see within how many weeks after a Tory Ministry came into office British decadence would be completely checked, and the Empire put well on its feet again.

WEEDING OUT THE HYMN-BOOKS.

Gov. Wilson's quiet protest, a few days ago, against the use of silly hymns had a remarkable sequel. The Governor specifically objected to "Beautiful Isle of Somewhere," which had just been sung in his presence, pointing out that its language was mushy and its sentiment vapid. But in the Baptist church at Tarrytown which Mr. Rockefeller attends, the pastor triumphantly refuted Gov. Wilson. He did it by himself singing the hymn as a solo, and then asking the congregation to say whether they liked it or not. "All in the church except one aged woman raised their hands" to signify that the hymn was very much to their mind. It is hard to get around such a canon of good taste fixed by popular vote. Mr. Rockefeller added his own high literary authority to the approval of the hymn, so that we cannot deny that those who like this sort of hymn will find this one exactly the sort of hymn they like. They will go on devoutly singing:

> Somewhere, somewhere,
> Beautiful isle of somewhere,
> Land of the true, where we live anew,
> Beautiful isle of somewhere.

We would not treat the matter flippantly, though the thing certainly invites ridicule. To many good people, no doubt, the subject appears sacred. They think of this "somewhere" hymn, and others like it, as somehow bound up with their religious faith. To them it represents the aspiration for immortality. The "Beautiful Isle" they vaguely suppose to mean Heaven, and to typify that rest which remaineth for the people of God. Against that we have nothing to say; but would merely ask if the same pious idealism is not expressed with equal intensity, and with far greater dignity, in those hymns of the church which have come down the centuries, and are now richly freighted with precious associations. If worshipping congregations desire to lift their hearts in contemplation of the heavenly hope, what better can they do than use one of the hymns of Bernard? For example:

> Jerusalem the glorious,
> The glory of the elect,
> O, dear and future vision
> That eager hearts expect!

Or again:

> They stand, those halls of Zion,
> Conjubilant with song;
> And bright with many an angel,
> With many a martyr-throng.

The sentiment is far more inspiring, and its verbal expression infinitely more worthy, than in the case of the rubbishy modern improvisations which some attempt to substitute. When we have hymns of lofty words wedded to noble music, why should they be displaced by nonsensical compositions, with catchy tunes, simply on the plea of novelty?

As a matter of fact, there is a movement in several churches, as we are glad to note, to revise their hymn-books. The plan is to exercise a severer taste than formerly in deciding what shall be allowed to hold a place in them. Some years ago the tendency was to make hymn-books encyclopædic. Rival compilers strove to see which collection could be made the larger. The result was such a huge array of good, bad, and indifferent as used to be found in earlier editions of "Songs for the Sanctuary." But the inevitable reaction set in, and we have since had volume after volume showing a more exacting selection. The later aim has been not to see how many hymns could be got together, but how much useless lumber—or how much actual doggerel verse—could be left out. An instance of the better method is "The University Hymn-Book," in which the collection is comparatively small but choice. Surely, if we are told to listen to the solemn voice of the church's unending song, we are entitled to hear something not so offensive to every right standard of taste or religious feeling as

> Somewhere the sun is shining,
> Somewhere the songbirds dwell;
> Hush, then, thy sad repining,
> God lives and all is well.

The whole question of an inspiring hymnology in our churches is one of much more importance than some people seem to be aware. An uplifting hymn is

Digitized by Google

one of the most moving appeals which a church service can make. To many it remains a tie of attachment to religious worship after most others have snapped. A sermon they will sit out much in the spirit of Tennyson's Yorkshire farmer, or will find that interest in it which George Eliot remarked to be so common—the interest of the audience when the sermon is finally done. Even praying in the churches may easily become with some a wearisome form. With Lowell, they may come to feel dissatisfaction with the "drony vacuum of compulsory prayer." But a noble hymn, borne up by the voice of the great congregation, retains its power to warm and even thrill many hearts that have ceased to respond to other religious appeals. The conclusion is obvious that the church cannot afford in any way to weaken or sacrifice this potent form of influence. To weed out transitory and tawdry matter from the hymn-books is to do much to preserve not only the dignity, but the stirring power of religious services. In this matter the moderns cannot boast of an advance. With so few even tolerable hymns written in recent years, we had better stick to the voices that carry to us from the Middle Ages. Fancy a worshipper of the fourteenth century asked to join in singing "Beautiful Isle of Somewhere," after having been accustomed to hear organ and choir roll out the majestic:

Veni, pater pauperum,
Veni, dator munerum,
Veni, lumen cordium.

THE LIFE OF A LAUREATE.

I.

In a day when ancient manuscripts are opened and made to yield up misprized and forgotten geniuses, it is singular that no one seems to have discovered Alfred Austin. Fortune, who deals inscrutably with the reputations of poets, has apportioned him a unique destiny. To some she has given merit without fame; to others, fame without merit; to him alone, fame without being read. Both before and after he entered upon the laureateship, his works were regarded as inessential to salvation. But upon his assumption of the singing robes of Lord Tennyson, he stepped at one conspicuous stride into the hot sunlight of journalistic derision. His own long participation in Conservative journalism as leader-writer for the *Standard* contributed to the acrimonious hilarity of his reception. Liberal knives hitherto exercised against his politics were now for the first time fleshed in his poetry. Little Englanders, become for the nonce literary critics, collected and reprinted all the hasty and unfiled lines in the lays of the "hysterical Helot of Imperialism." The merciless cartoonist elevated him to the ancient throne of Dulness and twined the Parnassian laurels about his girdle. The wits of the press undertook to commit him with his peers, sagely debating whether to lodge him by copious Southey or elegant James Pye, or whether to bid Shadwell lie a shade nearer McFlecknoe and make room for the newcomer by Colley Cibber. His name has thus become a household allusion; his works—who has read them? Here was surely a porridge to have killed a stouter poet than the Quarterly's martyr.

Mr. Austin is different; at seventy-six he is still apparently as hale, happy, and industrious as ever. Within a twelvemonth he has composed his memoirs,* now given to the world in two volumes comprising some six hundred pages written with unflagging zest and genuine power in self-revelation. All the evidence indicates that Mr. Austin became his own biographer, as he became his own poet, on the principle that if one would have a thing done well one should do it one's self. His self-complacency appears in the record of his influence with political leaders; in the glimpse that he offers us of Parliamentary honors proffered him but thrust aside for higher rewards; in his words to young writers on the secrets of style; in his hints for future pilgrims to Italian shrines consecrated by his verse; and, above all, in the account—since Wordsworth's "Prelude," unequalled in minuteness and self-reverence—of his own poetical development.

His early satirical poem entitled "The Season" contains, he tells us, in spite of the faults of irresponsible youth, "the germ of what Matthew Arnold called 'the criticism of life' to be gathered from *one's* works in their entirety." (A peculiar substitution of "*one*" for "*I*" is a "note" of Mr. Austin's style.) From this germ, he traces with retrospective, brooding, and affectionate finger the movement—ofttimes unconscious—of his poetical powers toward that far-off, divine event, his masterpiece, "The Human Tragedy." Pointing out that Italy cradled, though England bore, his poetry, he declares that his Italian sojournings "stripped" him "of that insularity of familiar knowledge that marks so much of English literature." Recalling early days in Rome, he speaks with wonder of his unawareness of the divine things then a-brewing:

> I little knew that "The Human Tragedy," not to come fully and finally to the birth till more than ten years later, was already germinating, and was waiting only for the simultaneous occurrence of the mighty European events between the years 1866 and 1871 and the much-needed expansion of my own mind.

This Little-did-I-wot runs like a silver thread throughout the autobiography. Mr. Austin is the most spontaneous of poets. This sense of cosmic gestation, then carried so blithely, but almost oppressive in the retrospect, reminds us of Eckermann and Goethe marvelling together over the genesis of "Faust." And sure enough, a few lines later, Mr. Austin adds in the benevolent tone which he adopts toward his period of poetic adolescence: "But, as Goethe said, 'No youth can be a master,' and *one* was young." His appreciation of his own poetry—nowhere deficient in delicacy—reaches its tenderest expression in his comment on certain villages in northern Italy once visited by him: "Suppressing their less attractive features, imaginative memory transfigured them later in the grave, sad journey of Godfrid and Olympia to Milan from the little chapel in Spiaggiascura, that closes with the melancholy line,

> Ah! life is sad, and scarcely worth the pain."

This is, indeed, a melancholy line, but though it illustrates Mr. Austin's sympathetic imagination and his power over the sententious poetic phrase, it by no means represents his criticism of life. As I have already intimated, a divine satisfaction with his own position, a bland unconsciousness of contemporary feeling and opinion—these are precisely the startling and notable traits of the Laureate's character. They are startling because at first view one cannot see what supports them. They are notable because, as one considers the pages of this autobiography, one sees exactly what supports them. One perceives that these traits are not mere personal idiosyncrasies, but the traditional and distinguishing marks of a diminishing but dogged literary, social, and political group. Mr. Austin, though he wots it not, is the last minstrel of Toryism. As he writes, he feels himself soothed, sustained, and magnified by the support of the landed gentlemen of England. He is not, he fancies, dipping his pen into the shallow well of egotism, but into the inexhaustible springs of English sentiment. We can make no sound valuation of his poetry without some consideration of the origin and nature of his ideas.

II.

Like Sir Walter Scott of Abbotsford, who first made him conscious that he was a poet, and like Lord Byron of Newstead Abbey, whose verse and romantic pilgrimage he has imitated in "The Human Tragedy"—though without passion, rebellion, wit, or *diablerie*—Mr. Austin is a great respecter of fam-

ily. On the bases of his trivial mention of literary contemporaries and his ample enlargement upon his intimacy with baronets and lords, we can easily credit his declaration that "no one admires honorable descent and the easy gradations of English society, from class to class, more than I do." This feeling, eminently becoming to an official singer to the royal household, is apparent in his treatment of his own lineage. Born of Roman Catholic parents in this best possible of worlds six years after the Catholic Emancipation Act, Mr. Austin is derived from what every American would regard as comfortable aristocratic stock, his family for three generations before him having dealt in wool. And yet with a peculiarly Victorian instinct for adorning whatever he touches, he contrives to cast an additional glamour over his family-tree. Though he does not attempt to follow his physical ancestry beyond his great-grandfather, he shows at any rate—with the aid of "Chambers's Encyclopædia"—that the "honorable trade of Wool-stapling" flourished as early as the time of Edward III; and he has himself seen houses of "striking architectural beauty" which belonged to wool-staplers "in the days of the Plantagenets." Furthermore, as he playfully reminds us, Shakespeare's father was a wool-stapler; Dante belonger to the Guild of the Woolcombers. So much for his main inheritance in the paternal line. The blood of the Austins, conspiring with Shakespeare, Dante, and the Guild of the Woolcombers, determined that he should be a poet.

The special character of his poetry, however, appears to have been strongly influenced by the Hutton strain which came to him through his grandmother. Close attention will be required here, for heredity is a slippery matter at the best, and the argument runs at this point through a narrow defile: Mr. Austin "seems to remember that there existed a floating tradition that the Huttons had at one time been among the *landed gentry*." Skeptical biologists may cry out that land is an acquired and non-transmissible characteristic. Socialists—of which sect there were none in the England of the elder Huttons, merry England, the real England, the England of Mr. Austin—socialists are said to hold similar views. The incontestable fact remains that Mr. Austin received from the Huttons, or from somewhere, an impulse inclining him affectionately toward land, and land in large parcels. From childhood, he tells us, he has experienced "a passionate clinging to the country, a keen admiration of territorial homes, with their deer-parks and wide-stretching woodlands, and an unconquerable antipathy, of a most prejudiced character, to towns, mills, and manufactures." At first thought the unwary reader may suspect a conflict between the hereditary Austin instinct for commerce and the Hutton impulse toward the serene life of the landed gentry. But wool-stapling as well as the business of owning land, we are assured, was in the time of the poet's childhood "a singularly light occupation," with ample margins for a nine o'clock breakfast and a half hour's lingering before business among "the flowers, the poultry, and the pigeons."

III.

In such a mould heredity cast him. "*Qualis ab incepto*," says Mr. Austin; as he was in the beginning, so essentially he has remained, except that he has relinquished the Roman faith which was not quite English. He came into the world with a few strong innate ideas, and has neither discarded nor added many since. Pigeons, poultry, and flowers surrounding a territorial home with background and foreground of deer-park and wide-spreading woodland—these constitute his central conception of nature. These things the Laureate has sung with sweetness and sincerity, both in prose and in verse—in "Veronica's Garden," "Haunts of Ancient Peace," and in many a lyric, vernal, æstival, autumnal, and hibernal. None but a resolutely incredulous critic would question his knowledge of English seasons; and, in spite of his deprecatory "such gardening knowledge as I may later have acquired"—*cf.* Professor Saintsbury's "If-I-have-any-skill-in-criticism"—there is no reason for doubting his intimate acquaintance with English flowers. If poetry avails at all in these evil days, his songs must have done something toward keeping alive a love of territorial homes in the hearts of their owners. Nor has Mr. Austin confined himself to groves and gardens. He has sung also of man and especially of woman—the occupants of territorial homes, and of all the prejudices and sentiments that uphold and beautify them.

Though not a poet of wide-ranging passion, he has given their due to English love, courtship, and marriage. Summing up at the close of his first chapter, the forces that most moved his childhood, he mentions "a dim sense of the magnetic differences of the sexes." The maturer phase of this sense and its important place in Mr. Austin's work are symbolically adumbrated in the poem called "In the Heart of the Forest." The poet, accosting the shrilling missel-thrush, inquires the meaning of his music:

Then louder, still louder he shrilled: I sing
  For the pleasure and pride of shrilling,
For the sheen and the sap and the showers
    of spring
  That fill me to overfilling.
Yet a something deeper than Springtime,
    though
  It is Spring-like, my throat keeps flooding:
Peep soft at my mate—she is there below—
  Where the bramble trails are budding.
She sits on the nest and she never stirs;
  She is true to the trust I gave her;
And what were my love if I cheered not
    hers
  As long as my throat can quaver.

In this shy lyric, Mr. Austin hints darkly at the true solution of the vexed woman question. Fortunately, I am able to illuminate this matter by a gloss extracted from the series of articles which he contributed to the *Spectator* in 1894, reporting his researches through England for "haunts of ancient peace." One of these haunts was the household of the fourth Countess of Leicester:

In the church at Penshurst, where we abode that night, there is a monument to the fourth Countess of Leicester, and on it is recorded, *presumably in obedience to her own wish* [my italics], that "Her sole desire was to make a good wife and good mother." Could there be a nobler ambition? And shall I be forgiven if I add that when the little "emancipating" hubbub of our day has subsided, the ineradicable instinct of women will re-echo that devout and humble vow?

In the seventeen years since these lines were written the "little 'emancipating' hubbub" does not seem to have subsided much. While Mr. Austin was penning the pages of his autobiography, young women wearing a bandeau inserted with the motto "Votes for Women" were parading in Piccadilly. The tumult, however, has not reached the Laureate among the primroses and lady-smocks of Swinford Old Manor. While we who do not live in territorial homes have been asking, "*Où sont les neiges d'antan!*—where are the wives who sit on the nest and never stir?" he has sung on imperturbably, celebrating the Lucille, the Dora, the Maud of the mid-Victorian dream.

The remote charm that invests Mr. Austin's conception of the eternal-feminine pervades also his picture of man in family relations—a picture which helps us, since the family is a little image of the state, to understand his political ideals. To men of the modern democratic way of thinking, marriage exists in order to give representation to the Opposition. When a man marries, as we view the matter, he grants voice and vote to his sharpest and most remorseless critic. And this concession, most of us are agreed, whatever difficulties may attend it, is good for the government. To Mr. Austin, on the other hand, ideal marriage means a man's quiet and unchallenged assumption of the domestic throne of his fathers and his mild paternal reign over devoted and adoring subjects.

Now the nimbus as a domestic ornament is no more hopelessly out of date than the whole social and political order which Mr. Austin has celebrated. In 1790, Burke saw it already in the last ditch; because it was no more, Carlyle declared that the nations were hurtling

Digitized by Google

pell-mell into the Pit; Ruskin loved it still with a passionate regret as an exile in a strange land. It remained for Mr. Austin to declare that it has not been and never shall be shaken. His present attitude toward internal affairs may be suggested by the postscript to a letter of his to the *Times* which he has deemed worthy a place near the close of his autobiography. The sentiment, endorsed by Mr. Austin, was originally uttered by the Comte d'Haussonville, nephew of the Duc de Broglie, and friend of the Duc d'Aumale, "and whose reception by the Académie Française I had the good fortune to attend, taken there by the late Lord Lytton, when English Ambassador in Paris," etc. Here is the sentiment:

> The speeches of members of the House of Lords during the Election, so superior, even as platform oratory, to those delivered by the members of the House of Commons with one or two exceptions, would alone suffice to save from successful attack any assault upon its existence.

With democracy long since triumphant, with socialism on foot, while dynamite is laid in broad daylight under the House of Lords, Mr. Austin still confronts the times with comfortable mien and inquires whether we shall exchange for a modern democracy without a throne, with no towers, with "mean plots without a tree" [small holdings cultivated by the owners?], a "herd of hinds, too equal to be free," dwelling together in "greed, jealousy, envy, hate, and all uncharity"—shall the gentlemen of England barter for this, he asks, our ancient, unaltered Motherland, "where sweet Order now breathes cadenced tone," with its lambs going "safe to the ewes" and its "calves to the udder," its "whistling yokels" guiding the "gleaming share" hard by the home where "gentle lordship dwells"? Shall this exchange be made?" cries the Laureate in feigned and rhetorical consternation. "Banish the fear!" he replies in his poems called "Why England is Conservative," "Look Seaward, Sentinel," and in many another patriotic lay of unique and incomparable insolence. While the "wild-beast mob" of the nations whine with envy at her peace and prosperity, or, roaring and sweating under their armor, menace her across the "bastions of the brine," she towers and shall forever tower supreme, "victor without a blow," "smilingly leaning" on her "undrawn sword."

IV.

I have made this review of Mr. Austin's leading ideas because it has been falsely rumored that he has none. It should now be apparent that, far from being content with the fame of an idle pastoralist, he challenges recognition as a poetical representative of the conservative spirit. It should also be clear that the value of his representation is impaired by his complete identification of conservatism with Toryism—a confusion due to his obliviousness to the flight of time. I suppose it is more or less of the essence of genuine Toryism to confound the amenity and stability of one's own fireside with the welfare of the country; in so far as that is true, Mr. Austin seems to be a good Tory. In his system of ideas, furthermore, I can detect little that would have been repugnant to the sense of a country gentleman in the reign of Farmer George. But the possible historical value of his expression of Toryism is destroyed by a serious anachronism: the foundation on which his Georgian ideas rest, the sentiment which suffuses them, and the artistic coloring which invests them are mid-Victorian. Mr. Austin upholds the House of Lords, the territorial homes, and the whistling yokel, not like a true-blue Tory—because they were ordained by God; nor like the later philosophical Tory—because they were ordained by nature; but like the unphilosophical, atheistical, pseudo-Catholic Pre-Raphaelite—because they are æsthetically gratifying. That explains his "unconquerable antipathy" to towns, mills, and manufactures, and at the same time his fondness for depicting Britannia leaning smilingly on her undrawn sword. That is why he hates and fears liberalism, and at the same time makes conservatism ridiculous by representing it as invincible. That is why his poems, if read, and his picture of happy England might loosen all the bricks in the pavements of Manchester and Liverpool. For the sentimental romantic Toryism of Mr. Austin is not so much dull as false; false and at the same time obsolete; obsolete but not yet old enough to have acquired an antiquarian interest.

NEWS FOR BIBLIOPHILES.

In the *Nation* of December 23, 1909, I was able to call attention to a number of brief essays belonging to Poe that had hitherto not been accredited to him. I have since come across several other items that have escaped his bibliographers.

These are as follows:

(1.) A review of R. M. Bird's "Calavar," in the *Southern Literary Messenger* of February, 1835. That this is Poe's is established by his references back to it in his reviews of Bird's "The Infidel" and "The Hawks of Hawk-Hollow," published respectively in the June and December issues of the *Messenger* for 1835 (see the "Virginia Poe," VIII, 32 f., 63 f.). The item is of special interest as being, so far as we have any tangible evidence, the earliest of Poe's contributions to the *Messenger*, and the first of a long line of book reviews.

(2.) A notice of Anthon's edition of Smith's "Dictionary of Greek and Roman Antiquities," in the *Southern Literary Messenger* for May, 1845. This paraphrases in part Poe's notice of the same work in the *Broadway Journal* of April 12, 1845 ("Virginia Poe," XII, 129 f.). I am aware that some doubt is thrown on the authenticity of this item by Mr. B. B. Minor's statement, in his history of the *Southern Literary Messenger*, p. 140, that Poe, who, as announced in the *Messenger* of the month preceding that in which this article appeared, had been engaged by the editor (then Mr. Minor himself) to furnish "monthly a *critique raisonnée* of the most important forthcoming works," did not fulfil his engagement "in the least part." But the most reasonable assumption to be made is that Mr. Minor's memory played him false in this matter, and that Poe simply made his article do double duty, as he did, we know, on more than one other occasion. Poe had also been engaged to write for the *Messenger* in the autumn of 1844; and in accordance with this arrangement he did send to the editor "two or three articles"—so Mr. Minor wrote Prof. James A. Harrison ("Virginia Poe," I, 220)—though only one of these, "The Literary Life of Thingum Bob," in the *Messenger* of December, 1844, can now be traced. It is probable, I think, that Mr. Minor confuses the two engagements.

(3.) A brief but lively notice of Grattan's "Highways and By-Ways," in Burton's *Gentleman's Magazine* for June, 1840. This article subsequently appeared either *verbatim* or in paraphrase in two separate instalments of the "Marginalia" (see the "Virginia Poe," XVI, 63, 140 f.).

(4.) A review of a pamphlet detailing the "Discoveries and Results of the United States Exploring Expedition" into the South Seas led by J. N. Reynolds in the late thirties. This appeared in *Graham's Magazine*, September, 1843. The item is acknowledged by Poe in a memorandum sent to Graham in 1845 or thereabouts, and is included by the latter in his article on Poe in *Graham's* for March, 1850.

(5.) A series of five editorials on the "Pay of American Authors," in the New York *Evening Mirror*, published, respectively, in the issues of October 12, 1844, and January 24, 25, 27, and 31, 1845. The first is entitled, "The Pay for Periodical Writing," the fourth has the sub-title, "The Magazines," and the fifth the sub-title, "Synopsis of the International Copyright Question." Poe's authorship is established in two ways: first, by Willis's announcement in an editorial on October 10, 1844, that Poe would take up the subject of "Authors' Pay in America," in the columns of the *Mirror* ("We have hot coals smouldering in the ashes of 'things put off,' which we poke reluctantly to the surface just now—reluctantly only because we wish to light beacons for an authors' crusade, and we have no leisure to be more than its Peter the Hermit. We solemnly summon Edgar Poe to do the devoir of Cœur De Lion—no man's weapon half so trenchant!"); secondly, by the reappearance, in close paraphrase, of the last four paragraphs of the concluding article of the series in a set of the "Marginalia," published in Godey's *Lady's Book* in September, 1845 ("Virginia Poe," XVI, 78 f.).

(6.) An editorial, entitled "American Diffuseness—Objectionable Concision," in the *Evening Mirror* of January 22, 1845. A part of the fourth paragraph is compiled from the ninth paragraph of a "Marginalia" item on Gibbon and Carlyle, published

Digitized by Google

in the *Democratic Review* for November, 1844 ("Virginia Poe," XVI, 16).

(7.) "Why not try a Mineralized Pavement?" an editorial, published in the *Evening Mirror*, February 8, 1845. The ninth and tenth paragraphs reappeared with slight changes as the seventh and eighth paragraphs of Poe's article on "Street Paving" in the *Broadway Journal* of April 19, 1845 ("Virginia Poe," XIV, 164 f.). The article is valueless as literature, but possesses significance as showing the variety of Poe's interests.

I wish also in this connection to point out that Poe's tale, "Diddling Considered as One of the Exact Sciences," of which the place of original publication has been advertised by Poe's editors and biographers as unknown, first appeared in the Philadelphia *Saturday Courier* for October 14, 1843. It there has the title, "Raising the Wind; or, Diddling Considered as One of the Exact Sciences." In the same journal there appeared on June 24, July 1, and July 8, 1843, a reprint of the "Gold Bug" as originally published in the Philadelphia *Dollar Newspaper* of June 21 and 28, 1843. This text of the "Gold Bug" has heretofore been held to be inaccessible, owing to the fact that no copy of the *Dollar Newspaper* for 1843 has been found. A file of the *Saturday Courier* for the years 1838 and 1840 to 1849 is preserved in the library of the Pennsylvania Historical Society, at Philadelphia.

Correspondence

A LETTER OF HAZLITT'S.

TO THE EDITOR OF THE NATION:

SIR: There are a number of prominent gaps in our information concerning Hazlitt's life, and few periods in his career are more obscure than that in which he practised the painter's art before he made his earliest tentative appearance as an author in 1805. Hazlitt was a scant letter-writer during all his days, and there may therefore be a special interest in reclaiming for this period a letter which is assigned by his descendant and biographer to a date ten years earlier than it was apparently written.

In his "Lamb and Hazlitt: Further Letters and Records hitherto unpublished" (1900), Mr. William Carew Hazlitt prints a letter bearing the heading "Sunday, October 23," and supplies "London" and "1793" in brackets, as if the contents pointed to its having been written by Hazlitt in his sixteenth year, while he was a student at the Hackney Theological College. I quote one of the sentences:

> Amidst that repeated disappointment, & that long dejection, which have served to overcast & to throw into deep obscurity some of the best years of my life, years which the idle and illusive dreams of boyish expectation had presented glittering, & gay, & prosperous, decked out in all the fairness and all the brightness of colouring, & crowded with fantastic forms of numerous hues [?] of ever-varying pleasure,—amidst much dissatisfaction and much sorrow, the reflection that there are one or two persons in the world who are [not] quite indifferent towards me, nor altogether unanxious for my welfare, is that which is, perhaps, the most "soothing to my wounded spirit."

What a melancholy experience of life for a youth of fifteen! It out-Byrons Byron, and it might expose to suspicion the one quality of Hazlitt's character which his severest critics have not called into question, his downright sincerity. But in spite of the inherent incongruousness, Mr. Birrell in his "Life of Hazlitt" unhesitatingly accepts the date, and remarks:

> There are many allusions at this time to "repeated disappointments," "long dejection," and other symptoms of boyish melancholy, and it is plain that Hackney College was not congenial.

But would not these expressions assume a more coherent significance if we ascribed them to a young man who had actually issued forth for his first battle with the world and had met a repulse? If we continue to read the letter with this notion in mind, we find confirmation for our view in the following allusion:

> As to my essay, it goes on, or rather it moves backwards and forwards; however, it does not stand still. I have been chiefly employed hitherto in rendering my knowledge of my subject as clear and intimate as I could, and in the arrangement of my plan, I have done little else. I have proceeded some way in a delineation of the system, which founds the propriety of virtue on its coincidence with the pursuit of private interest, and of the imperfections inseparable from its scheme. . . . I write more easily than I did. I hope for good. I have ventured to look at high things. I have toiled long and painfully to attain to some stand of eminence. It were hard to be thrown back from the midway of the steep to the lowest humiliation.

We must marvel at the owl-sightedness which can overlook such glaring evidence. Apparently, Mr. W. C. Hazlitt sees in this passage a reference to the political essay which Hazlitt wrote for his master at Hackney in place of one of the prescribed themes. But "a system which founds the propriety of virtue on its coincidence with the pursuit of private interest" can refer to nothing more plainly than to the "Essay in Defence of the Natural Disinterestedness of the Human Mind," the idea of which he had already conceived when he talked with Coleridge in 1798, and which at last struggled into print, though scarcely into light, in 1805.

With these limiting dates in our possession, and with Sunday, October 23, as a clue, it only remains for us to consult the almanac in order to determine the precise time of writing. In the course of the search we are confirmed in our suspicions of the slovenly editing, for we find that October 23 did not fall on Sunday in 1793, but that it did so fall in the years 1796 and 1803. Hazlitt was at home in 1796, and so could not have addressed the letter to his father, but everything in the letter suits excellently with 1803, and we must therefore accept the last as the year of composition.

Nothing in Hazlitt's expressions will now impress us as either precocious or affected. At the age of twenty-five Hazlitt had much cause for melancholy. Youthful idols had been shattered, for Coleridge had already joined the apostates from the ranks of liberty. England was again at war with humanity as embodied in Hazlitt's lifelong hero, Napoleon; and then there were private disappointments. Already the splendid vision of triumph in the company of Titian and Rembrandt was suffering dissipation, and Hazlitt was seeking mental relief in elucidating his cherished metaphysical discovery, and here also encountering little but pain and vexation. Read in the light of facts like these, Hazlitt's letter is both interesting and intelligible.

JACOB ZEITLIN.

Urbana, Ill., October 10.

"CURRENT MONEY."

TO THE EDITOR OF THE NATION:

SIR: In order to make a card index as exhaustive as was practicable, the Deed Books of Prince Edward County, Virginia, have recently been examined by order of the Board of Supervisors of that county, the period covered being from 1754, when the county was set off, to 1850, the year in which the office index begins. During the progress of this work, notes were taken, among other subsidiary items, regarding the phraseology adopted as to currency considerations. Beginning these notes, with strictness about the year 1821, it was supposed that the colonial terms, "current money of Virginia," "Virginia currency," and the like, would soon disappear from usage, at least holding on no longer than the British reckoning by pounds, etc., which seems to drop away about 1829. As advance was made after the year 1821, it was observed with surprise that the phrases, "lawful money of Virginia," "current money of Virginia," "current money of this commonwealth," etc., were frequently employed, and it appeared very much of a paradox that this terminology should be found recorded quite to the end of the period under review—twenty-eight instances in 1844, eleven in 1849, and ten in 1850, all the deeds for 1850 not having been examined. For the year 1850, the usual terminology of this sort is "lawful money of Virginia"; "current money of Virginia" appearing twice (D. B. 25, 503 and 525), and "currency of Virginia" once (D. B. 25, 536). There are thirty-eight deeds recorded for the year 1754, in twenty-five of which appears "Virginia currency," or some such term.

As the investigation was not particularly directed toward this matter, it cannot be stated with absolute certainty in what year the phrase "current money of the United States" appears for the first time. From the memoranda, the first occurrence is in 1821 (D. B. 17, 398). Some such wording is used fifteen times between 1821 and 1850.

"Current money of the United States" is used five times, in 1821, 1834, 1840, 1843, and 1845—in 1843 the instrument is the work of a "freeman of color" or his attorney. "United States currency" is twice used, in 1822 and in 1825. "Money of the United States" is twice used, in 1825 and in 1836; in 1825 by parties removed to Missouri. "United States money" occurs twice, in 1837 and in 1844. The usage in the remaining instances, for the years 1848 and 1850, is "lawful money of the United States."

WHY SHAKESPEARE LEFT STRATFORD

To the Editor of The Nation:

Sir: May I offer a new theory in regard to the vexed question of the cause of Shakespeare's departure from Stratford? Various reasons for his course have been assigned—among them the financial stringency of his father, domestic infelicity on his own part, histrionic aspiration, and a dispute with Sir Thomas Lucy about a matter of deer-poaching. My explanation is based upon a line in "Titus Andronicus" (I, i, 314):

These words are razors to my wounded heart.

The comparison is, beyond question, intended to suggest pain. Now a writer may refer to a rose as an instrument of torture, for a rose has thorns as well as beauty; but if he does so in a casual and matter-of-fact way, we can hardly help inferring that his own experiences with roses have not been pleasant. The same thing holds true with razors. When Shakespeare compares the agony produced by harsh words to anything connected with a razor, we are forced to conclude that he had either a dull implement or a beard as tough as wire. In his youthful manhood (the period in which we may assume that he shaved), he would naturally have been impatient in regard to such matters. *Ergo*, Shakespeare went to London for the sake of better tonsorial accommodations.

So momentous is this discovery that I hasten to give it to the world, without stopping to collate the passages that bear on the subject. The point most damaging to my case is the fact that there is something of a probability that Shakespeare himself did not write the line in question. But the theory is altogether too plausible to be rejected on any such grounds. The Baconian theory is far less solidly based, and look at the popularity it has attained!

Garland Greever.

The University of Arkansas, October 2.

SIMPLIFIED SPELLING.

To the Editor of The Nation:

Sir: Will the gentleman who recently told us of some of his personal preferences and prejudices, under the head of "Spelling and Life," kindly inform us further just what of "life's choicest bits" will disappear when we have reduced to some logical basis the spelling of the last syllable of *proceed* and *precede*? When he has done that, possibly he will be kind enough to let us know what "choice bits" we have lost by living in a day when *fysshe* has become *fish*, and *musick* has degenerated into *music*.

Contrary to current Tory opinion, those of us who are trying to rationalize the spelling of the English language are at least as anxious as are the Tories about the finer things of life; in fact, we are so much interested in them that we long to save for future generations the precious months (estimated by some at two years) which we older ones wasted in learning an orthography without one respectable excuse for existing in its present state. We believe that the time thus saved could be spent in becoming familiar with many more of "life's choicest bits." We also think that the process of learning a rational and logical orthography would in itself help to sharpen the wits of our backward race, whereas just the opposite is now going on. One would think that such aims were worthy of the support of the *Nation*, instead of its sneers.

In reply to our plea, sleepy and ignorant old Rip Van Winkle first trotted out the "etymological argument," but even intelligent conservatives have begun to perceive that hundreds of our worst spellings not only ignore etymology, but even give false leads (*e. g., aisle* from *ala, forcign* from *foraneus*). Then there was pious talk of loyalty to literary tradition, until some cruel scholars showed that we are in principle no more loyal to Shakespeare's spelling to-day than we are to Chaucer's. Finally, the argument from sentiment is used, and we are asked to listen to silly comparisons of the meaningless folly of our spelling habits with such significant ceremonies as marriage. I know not what can be going on in the mind and conscience of the writer who allows an ambiguous use of the word "symbol" to leave the impression that marriage has no better rational basis than the *c* in *scent* (from the Latin *sentire*). And, if the sentimental attachment to shelves of unused books could be proved to waste about a year of the school-boy's time and to train him in ways of unreason, as well, there might be some reformers cruel enough to protest against that exquisite pleasure. Meantime, so long as association with the backs of a non-circulating library is at least harmless, it does not argue for a very firm grasp of the situation, nor for a very fair attitude of mind, to try to make the cases parallel.

If there were even half the force in the arguments of the simplifiers that they seem to think there is, the situation would not justify misleading witticisms. But, as the matter is one that may mean great things to the intellectual life of a whole race, it at least deserves respectful consideration from the smartest of us. Information upon the subject is near at hand. If one objects to the tracts of the Simplified Spelling Board, one has but to read Professor Lounsbury's charming book on "English Spelling and Spelling Reform" to see what a real scholar who honestly faces facts and argues in the open has to say on the question. Chapter ii, on the unintelligent opposition of the intelligent, is to be particularly recommended.

Philip H. Churchman.

Clark College, Worcester, Mass., October 5.

[We still believe that the knowledge, even if true, that English spelling is largely arbitrary and perverse, should be a secret for popes and cardinals, who have little need of English anyhow. As soon as it is broadcast the youth of the country at once take the contemplated reform into their own hands and spell phonetically; and as their speech is slovenly, there results not only such a word as *goverment* which we cited, but something close to the spelling on a bill-of-fare which we have seen—*constarge, cullash, fennan haddée*. Our real point was that so long as there is a battle among adult spellers, younger minds will spell to suit themselves. The history of English spelling in the past is a witness to this. —Ed. The Nation.]

SPELLING REFORM AND PRONUNCIATION.

To the Editor of The Nation:

Sir: There is one aspect of the question which was not touched in your article on "Spelling and Life" in your issue of the 28th instant, and that is the influence of "reformed spelling" on pronunciation. Programme, for instance, when disguised as *program*, salutes the ear as *progrum*, and thought emerges as *thott*. To be sure, only a small amount of written and spoken English is thus maltreated, but I have noted this tendency whenever, in the course of my duty, I have been compelled to listen to speakers afflicted with the spelling-reform fad. On the other hand, one hears from the same people *cult-your* and *literat-your*, but never *furnit-your* or *pict-your*. Bought and caught seem to have escaped the fate of *thott*. Thorough and though, passed through the steam roller of the Committee on Simplified (or Stultified?) Spelling, issue as *tho* and *thoro*. Phonetically considered, *thoro* is a gem of purest ray serene. M.

Chicago, October 8.

IN THE SHADOW OF ISLAM.

To the Editor of The Nation:

Sir: The title of a recently published novel is almost exactly that of Isabelle Eberhardt's "Dans l'Ombre chaude de l'Islam," the volume of fragments gathered by a friend after the tragic death of the young author, which to those who know and love the Sahara has a unique value. Was it atavism that led this daughter of Russian parents (one of whom was a Christian, the other a Mussulman), who was born and brought up at Geneva under French influences and in a French *milieu*, to feel so profoundly the splendor and cruelty, the sad and mysterious fascinations of the great solitudes, and to reflect so truly the character of the Arabs of the South, nomads and ksouriens? At any rate, nothing so penetrating and so poignant as the few pages which record her impressions of a summer's sojourn at the Moroccan Zaonia of Kenadsen has ever been written about the country, and about the life of people for whom the world has stood still for centuries and who are in entire ignorance of the ways and manners of our civilization.

Does it not seem a desecration to have the title of this little record, all that remains of an ardent, restless young life, used as that of a novel?

August F. Jaccaci.

New York, October 11.

DR. MACLAURIN AS JURIST.

To the Editor of The Nation:

Sir: The *Nation* is usually so sure of its premises that, in "Every Man His Own Jurist" of the current issue, the column devoted to Dr. Maclaurin makes delightful reading in view of the fact that Dr. Maclaurin is not only a scientist but a lawyer.

Having won the McMahon law studentship and by his thesis (published later in three languages) the York prize at Cambridge University, having been a member of

Digitized by Google

the Honorable Society of Lincoln's Inn; studied German law in Germany; been dean of the College of Law of the University of New Zealand; and having earned from Cambridge the degree of doctor of laws as well as doctor of science, Dr. Maclaurin is surely more entitled than most men not only to be his own jurist if he chooses, but to be listened to seriously by other men when he speaks on legal subjects.

A. M. BAER.

Baltimore, October 13.

[We were aware of Dr. Maclaurin's early legal studies, but our point was that prominence was given his article as coming from him not as a lawyer but as a scientist.—ED. THE NATION.]

Literature

THE HITTITES.

The Land of the Hittites. By John Garstang. New York: E. P. Dutton & Co. 390 pages. $4 net.

Until the recovery of Egyptian and Babylonian-Assyrian sources of history through excavations and decipherment, there was no Hittite problem, and it is one of the many merits of Professor Sayce to have called attention some thirty years ago, in conjunction with the late Dr. William Wright, to the evidence of an extensive empire in Asia Minor which at one time proved a serious rival to both Egypt and Babylonia, and subsequently came into frequent conflict with Assyria. Since that time a large amount of additional material has been brought to light through the combined efforts of many explorers, and it is one of the chief purposes of the work before us to summarize our present knowledge of the Hittite empire.

The territory embraced by the traces that have been discovered of Hittite settlements now stretches from Northern Syria close up to the Black Sea and across Asia Minor, following the line of the Taurus and Anti-Taurus range. Curiously enough, no indications have been found to show that the Hittites settled along the coast of the Black Sea or of the Mediterranean, and it seems safe to say that they represent essentially an inland and largely a mountainous population. This, however, did not prevent them from passing southward into the plains of Babylonia, and in fact our first glimpse of Hittite history shows a Hittite group actually in possession of the Euphrates Valley. This conquest took place *c.* 1700 B. C., and for about twenty years a Hittite ruler occupied the throne in the city of Babylon. There is now nothing improbable in the supposition that the sons of Heth in southern Palestine, with whom Abraham had commercial relations, should represent a branch of this same Hittite group; and Professor Garstang is inclined to see in the "Hyksos" who overran Egypt a mixed multitude in which the Hittites form one of the elements, though it would also appear that the Semites constituted the predominating contingent. Significant in this respect is the statement in Ezekiel (xvi, 3) that the father of Jerusalem was an Amorite, and the mother a Hittite, in which combination the Amorites represent in the mind of the prophet the pre-Hebraic Semitic element, and the Hittite the non-Semitic element. It is, therefore, not surprising to find Hittites occupying prominent positions at the court of Solomon and David. The centre of the Hittite power, however, even in this early period, appears to have been in northern Syria, and from here it should seem to have spread both to the south and to the north, northeast and northwest.

But the ethnic problem is still far from satisfactory. It is complicated by the proof furnished through representations on Egyptian monuments of two distinct Hittite types, one Mongolian with a clearly recognized pig-tail, high cheek bones, and oblique eyes; the other designated by Professor Garstang as proto-Grecian, though one may question the justification of this term. At all events, the two types point to an admixture of various ethnic elements to form the Hittite group. Indeed, it is more proper to speak of Hittite groups, united only in so far as they were submitted to the same cultural and political influences. These influences are to be seen in the style of the building remains, in the art and the religion; but before turning to these it may be proper to dwell a little longer on the historical material. This has been largely increased through the successful work of Dr. Hugo Winckler at Boghaz-Keui, near the northern boundary of the Hittite dominion, which in the fourteenth century B. C. became the capital city. As yet only a preliminary study of this material has been made, which is partly in Babylonia, partly in Hittite, though written with the cuneiform script; but enough has been published to show that an official archive has been discovered embodying treaties with various nations, including Egypt, the Amorites, and Mitanni in northwestern Mesopotamia, as well as official correspondence with Egypt, Babylonia, and Mitanni. At least six generations of Hittite rulers are covered by these archives. During the past summer Dr. Winckler has again been at work at Boghaz-Keui, and it is to be hoped that the systematic publication of these important collections of texts will soon be begun.

The chief movement of this period appears to be the advance of the Hittite ruler Subbi-luliuma, who, in a succession of bold campaigns enlarged his dominion which was originally limited to the district around Boghaz-Keui to embrace virtually the whole territory to the south, including northern Syria. The objective point of his conquests was the kingdom of Mitanni, whose ruler at that time was a certain Tushratta, known to us from his correspondence with Egypt included in the Tell Amarna archive. It is not improbable that the people of Mitanni belonged to the Hittite group, as should appear certainly to be the case with the States of Arzawa and Khalrabbat (or Khani-rabbat), which lay on the way to northern Syria. Subbi-luliuma succeeded in this endeavor, and his growing strength prompted the Amorites who had hitherto been the allies of Egypt to cast their fortunes with the Hittites. The next step would have been an attack on Egypt which had up to this time retained a measure of supremacy over Palestine and Syria. Instead, however, we find Subbi-luliuma making a treaty with Amenophis III, which was renewed by Amenophis IV, when, in 1375 B. C., he came to the throne. A limit was thus put to any further extension of the Hittite power in one direction, while, to the East, Assyria formed an irresistible barrier, though it now turns out that the Assyrian Kingdom itself was established, *c.* 2000 B. C. by a branch of the Hittites who subsequently, however, lost control. Subbi-luliuma could well rest content with what he had accomplished, and the extensive empire that he had created by his exploits, stretching from the Halys Basin to the Euphrates, remained in the hands of his successors for a period of nearly two hundred years.

This, then, is the Empire of the Hittites in the period of its greatest strength as revealed to us in its general outlines. During the next century they were kept busy resisting the inroads of Assyria and Egypt, and, although they succeeded in holding the Egyptians under Rameses II at bay in a severe encounter at Kadesh on the Orontes, the decline of the Empire may be said to set in after this battle, which took place in 1288 B. C.

After *c.* 1200 B. C. we hear little more of the Hittite power in the annals of Egyptian rulers. They are replaced by the Muski, who, for a time, become the dominant force in Asia Minor and who, as Professor Garstang believes, may have been a European people, akin to the Phrygian conquerors of later times. The Hittite states were split up into a number of principalities, and during the following centuries it is a Hittite state with its centre at Carchemish with which Assyrian rulers like Tiglathpileser I (1125-1100 B. C.) come into conflict. A decline of the Assyrian Empire which sets in after Tiglathpileser I enables the Hittites to regain some of their lost prestige. During the tenth century, they succeeded in shaking off the yoke imposed upon them by the Assyrians, and until the middle of the ninth century, when a renewal of Assyria's power be-

Digitized by Google

gins, the Hittite states, at all events the one with Carchemish as its capital, were free agents. An internal disruption may also be assumed as one of the factors which led to the gradual loss of one stronghold after the other. Carchemish, Kummukih, Milid, Samalla (or Sindjerli), Gurgum, were obliged to acknowledge the suzerainty of Assyria. In the latter half of the sixth century, the Persian power under the lead of Cyrus and his generals appears on the scene, but the ineffective Persian rule leaves few traces in the region in which Greek influence and Greek ideas were steadily advancing. With the conquest of Asia Minor by Alexander the Great a new era, marked by the more or less complete Hellenization of the interior section, sets in. There thus result three periods of Hittite history: the first in the second millennium before our era, marked by the control of the Euphrates Valley for a short time and by settlements as far south as Hebron in Palestine; the second in the fourteenth century, leading to the establishment of an extensive Hittite Empire in Asia Minor and embracing northern Syria through the union of the various Hittite states with its centre at Boghaz-Keui; the third in the tenth century, which may be designated as a Renaissance, brought about again by a union of Hittite states, this time with the political centre at Carchemish.

The recovery of this significant chapter in the history of mankind is all the more noteworthy if it be borne in mind that the Hittite inscribed monuments, of which we now have a large number, have not yet been deciphered. Various attempts have been made during the past two decades, notably by Professor Jensen of Marburg and by Professor Sayce; but Jensen's learned method has been rejected, and Sayce's ingenious method has not been accepted. Progress has been made in determining the general character of the inscriptions, some of which are clearly of a votive character, while others are quite certainly historical, and a few ideographic signs, such as those for king and country, may also be regarded as satisfactorily settled; but all this represents only a small beginning, and the key to a solution of the mysterious problem is yet to be discovered. There are, however, good reasons for believing that a definite basis will be obtained through the publication of the Boghaz-Keui archives, containing in all probability Hittite documents transcribed into cuneiform characters.

Not only have the general outlines of Hittite history been recovered through the laborious researches of a number of European scholars, but the careful study of the monuments from a geographical and archæological point of view, in connection with supplementary evidence from other sources, has revealed much valuable information regarding the religion, art, architecture, habitations, and customs of the various Hittite groups. Professor Garstang has performed this part of his task in summing up the data procured in this way in a most satisfactory manner. In addition to a chapter on the geography of the region covered by Hittite settlements, in which what might have been a rather dry narrative is relieved by interesting glimpses of present conditions and by a large number of good illustrations, he furnishes a valuable summary of the sites, more than fifty in number, in which monuments of an unmistakable Hittite character have been found. The Hittite sites so far identified include walled towns to the number of about seven, in most of which remains also of Hittite palaces have been unearthed. In addition we have found Hittite fortresses, rock carvings with or without inscriptions in about a dozen places, and, lastly, movable stones, embracing sculptures in the round, mural reliefs, reliefs representing ceremonial feasts, offerings, hunting scenes, inscriptions accompanying human figures, and inscriptions only at more than thirty sites. Of stones that were certainly found *in situ* we have, to be sure, only two—one at Kuru-Bel, close to the modern Comana, and one at Bogche, not far from Cæserea; but supplementary evidence shows that with the exception of a small number of monuments, evidently carried far away from their original position, the rest belong to the district in which they were discovered. Dividing the monuments into five groups according to the place of discovery, (a) monuments of northern Syria, (b) monuments in the Taurus and Anti-Taurus range, (c) monuments of the Halys Basin, (d) monuments of the West, and (e) monuments of the southeast, Professor Garstang proceeds to a detailed description of these remains, accompanied by numerous illustrations. A site particularly rich in its yield of Hittite monuments is Marash, among which are two stone lions, covered with inscriptions, that originally stood at the entrance to a palace or other large building. Both the art displayed in the sculpture and the subject are characteristic of Hittite works, for the lion and the eagle (or the double-headed eagle) are the two most prominent emblems in Hittite religious art, and at Boghaz-Keui they are found in association. Of the lion we can now say definitely that it is the animal associated with the great mother goddess and her son who in various forms and under various designations in the ancient Orient correspond to the Semitic Ishtar and Tammuz, while the eagle is in all probability the symbol of the sun-god, as it appears also in Babylonian art.

The most elaborate sculptures discovered up to the present time are those two miles to the east of Boghaz-Keui and known as Jasily Kaya—the "Inscribed Rock." Winding around the smoothed surface of the rocks at this place, there are two large processions of figures approaching one another. On the left-hand side there are no less than 43 figures sculptured on the rocks, on the other side 22 in number. The head of each procession is clearly a deity—on the left side a god, on the right a goddess followed by a god who, there is every reason to believe, is the son of the goddess. It is clear from this that the entire scene is of a religious character.

In each procession Professor Garstang has also succeeded in identifying a large figure as the king acting also in a priestly capacity, and on the whole one inclines to the view that it is the same royal personage who is here twice represented. But exactly what kind of religious scene is portrayed in this remarkable group must for the present remain doubtful, though there is much to be said in favor of our author's suggestion that the scene represents the symbolical nuptials of the male and female principle in Nature indicated by the chief male and chief female deity.

This leads us to say a word about the religion of the Hittites, on which Professor Garstang touches only incidentally. Indeed, it is one of the defects in this work, so complete in almost all other respects, that the author has not put together in systematic form the data from the Hittite monuments and from the Egyptian and Babylonian sources regarding the Hittite gods and the nature of their worship. Much is to be gathered also from seal cylinders of Hittite origin, as may be seen from the chapter on the subject in Dr. Ward's "Seal Cylinders of Western Asia." To mention only one point, Dr. Ward has made it probable that the type of the naked goddess in Babylonian art is an importation due to Hittite influence. Whether in return we are justified in tracing the cult of the mother-goddess in Hittite regions to Babylonia is open to question. The idea seems to have been common to the Semites, and it may well be that it spread into Asia Minor without the direct intervention of Babylonian culture. The lion in Babylonia and Assyria is the symbol of Marduk, who is a solar deity, and not, as among the Hittites, of the mother-goddess whose emblem, in Assyria at all events, appears rather to have been the dove. As for the chief deity, while it is true, as Professor Garstang also points out, that he has the qualities of a solar deity, there is another phase of nature associated with him that is equally important. As is natural in the case of a mountainous people, the god who stands at the head of the pantheon is also the storm whose voice is heard in the thunder, who

Digitized by Google

drives along in the wind, and who hurls the lightning. Such a god is preëminently a warrior-deity, and as such is also represented with an axe. The bull—the symbol of strength—becomes the animal with which he is associated. In Babylonia, in the same way, the sun and the storm, with the accompanying thunder, lightning, and rain, are combined into a single conception, and the chief deity, in the various periods, now Enlil, later Marduk, in one place Ningirsu, in another Ninib, manifests both the traits of the sun-god and of the warring storm-god.

The two chief religious ideas present in Semitic religion—the male and female principle—are also to be recognized, as we have seen, in the Hittite religion, but there is no indication that among the Hittites the ascendency was given to the female principle. A development in this direction does, in fact, take place in Asia Minor, but not until a comparatively late date. The cult of the mother-goddess survives after the Hittites themselves have passed away and the Kybele or *mater magna* of the Phrygians is a survival of the old Semitic Ishtar, only slightly transformed through Hittite influences. We question, however, whether Professor Garstang is right in tracing the tradition of the Amazons back to Hittite days. That the Amazons are originally the priestesses of the mother-goddess is quite likely, but the conception of the Amazon itself seems to be due to other influences—Aryan or proto-Aryan. But we will not quarrel with our author on this and other points in his work which might be controverted and in regard to which more material is needed before a definite decision can be reached. Professor Garstang will probably be the first to recognize the defects of his work, but his grasp of the wide subject is so thorough and he has made such a careful study of the material now at our disposal that we can well afford to overlook any shortcomings which do not affect major matters.

Professor Garstang has had the advantage of two journeys of exploration in Asia Minor, so that his study has been supplemented by what he has seen and observed; and many of the photographs in the volume are the fruit of these journeys. How great the interest in the fascinating subject is may be gathered from the expedition organized this very year, under the auspices of the British Museum, to carry on excavations at one of the most important of Hittite centres—Carchemish. Work was begun last March by Prof. D. G. Hogarth, the eminent archæologist, whose wide knowledge and experience fitted him admirably for the task. From the first report published a few weeks ago, it appears that already a large number of important finds have been made, including the largest and about the most perfect Hittite text as yet discovered, in connection with a series of thirteen slabs depicting a battle scene which the text evidently commemorates.

Mention ought to be specially made of the three important plans of Hittite structures and the three useful maps in the book, of the alphabetically arranged list of Hittite sites, with detailed indications of the monuments found at each, as well as of the Bibliography, which, while not aiming to be complete, comprises all of importance and of permanent value that has been published on the subject.

CURRENT FICTION.

Her Little Young Ladyship. By Myra Kelly. New York: Charles Scribner's Sons.

One's first notion of the book would be that it is an early and more pretentious effort on the part of the popular chronicler of East Side childhood. But the date of the dedication shows that it must have been virtually the last thing written by Miss Kelly. It has the defects noticeable in so many novels written by those who have been successful with the short story. It is made out of whole cloth, cleverly enough, but with effort. As a mere invention, it is hardly notable. The plot is not new—even its touches of melodrama are of conventional sort. The American girl who marries the Irish lord, and finds herself in hot water with his family, is a lady with a long pedigree. Here, to be sure, instead of the angry dowager, her "little young ladyship" has to contend with a jealous twin-brother who feels that mere chance has ousted him from his birthright. Unluckily, this gentleman is painted so black as to be hardly visible to the imagination. Cruel to inferiors, faithless to equals, envious of his betters, he is a very pretty figure of malice—for a lay figure. His only good trait is love for the home of his ancestors, and this becomes the foundation of his villany. After the birth of a son to her little young ladyship, the villain turns his mind deliberately toward schemes for getting rid of the mother and child, and even of his brother. His lordship, after the fashion of heroes in fiction, refuses to see what everybody else sees, and continues to regard his brother as a fine fellow in hard luck. But murder is out at last: all the younger brother's perfidy is made clear, and it only remains for him to depart from the scene by way of an epileptic fit. There is another unmitigated brute in the neighborhood of Glendaire Castle—a sporting baronet, M.F.H., utterly heartless and inhuman. Miss Kelly has written with feeling of the condition of the peasantry in Ireland, and we suspect from the opening of the story that some solution is to be offered. The suspicion proves idle: the story is a romance, nothing more nor less. Her ladyship's American father and mother, self-made and independent, are well drawn. Abraham Petty, an American rustic of whom a good deal is made, is simply a "comic" in the Sunday-supplement understanding of the word. There is amusing dialogue, and there are one or two well-managed situations in the book, but we should hardly judge from it that Miss Kelly would have developed power as a novelist if she had lived. She will be remembered for the humor and fidelity with which she painted a picturesque and passing phase of life in the American metropolis.

White Motley. By Max Pemberton. New York: Sturgis & Walton Co.

A titled scalliwag, a lovely, long-suffering wife, and a very perfect gentleman of humble antecedents—upon this well-established triangle is erected a thoroughly up-to-date romance. The inevitable elbow-rubbing incident to travel is, for the nonce, curiously prominent in the mind of the insular novelists. The phenomenal opportunities which the public hostelry affords for contact between different strata of English society, have been made the basis of at least four novels within the last six months, and this is at least the second in which we have been treated to the edifying spectacle of the Briton shedding his shell under the recreative influences of Alpine sport. Thus it will be seen that in bringing together a heroine from the upper class and a hero from the middle class, amid the rout of merrymakers at a Swiss resort, Mr. Pemberton is in line with the best current English practice; while in the aeronautical feats which he imputes to his hero he is well ahead of the game. Ghostly trial flights by moonlight, followed by a spectacular prize-winning voyage over the great peaks of the Pennine Alps, easily put "Benny" into a class by himself. It only remains for him to establish a record for the aviator in fiction by flitting over the inferior Alps into Italy on a little private errand of chivalry, in order to demonstrate that the magic carpet and the seven-league boots are already things of the past.

House of Torment. By C. Ranger-Gull. New York: Dodd, Mead & Co.

As "Guy Thorne" Mr. Ranger-Gull is known as the author of "When It Was Dark" and other pseudo-religious novels of a distinctly High-Church tendency. "House of Torment" is in intention an historical romance, dealing with the adventures of John Commendone, gentleman to King Philip of Spain at the English court. Queen Mary of England plays a prominent part in the story and several other historical personages are introduced. Part of the action occurs

Digitized by Google

in Spain, and the author describes the tortures of the Inquisition in great detail. Yet all his labored effort fails to produce that thrill of horror which an artist in fiction could cause in a few paragraphs. The story is not without interest, and there are colorful descriptions, brisk dialogues, and dramatic crises. But persistent harping upon bigotry, cruelty, and licentiousness grows monotonous; tragedy heavily and evenly spread becomes wearisome. His best writing concerns a subject likely to offend his usual constituency. He describes minutely and vividly a house of ill-fame frequented by Philip of Spain. The proprietress, the inmates, the unsexed attendant, the exotic and decadent trappings of vice—these are set forth with a skill that cannot be denied. That this passage, however well written, is in place in a book of this character is doubtful. The lascivious side of the King's character could be less offensively indicated. The author would do well to rid himself of his fondness for stating that sounds shiver. "The lutes shivering out their arpeggio accompaniment," "A high tenor voice shivered out in song," "A little shivering noise rang out into the room," "A sweet tenor voice shivered out beneath the bellying sails"—surely, Roget's Thesaurus would furnish Mr. Ranger-Gull with some usable synonyms. And after studying the Thesaurus he might turn to the novels of Sir Walter Scott with pleasure and profit. For Sir Walter knew how to write historical romances.

The Heart of a Woman. By Baroness Orczy. New York: George H. Doran Co.

The author of this book set out with a clever idea for a murder story, and so far as it keeps to murder and mystery it is neither unsuccessful nor uninteresting. But the language of the writer in summoning her characters into action, the language of the lovers, the behavior of the accused and the guilty, are on a plane quite apart from the main issue, so that the reader who should be thrilling is compelled to smile. The author continually insists upon the fact that her two young Londoners, the plighted pair, members of the great world of society, are commonplace and conventional. It is not to dispute the point that the reviewer notes it, but to ask why, being indisputable, it need be maintained early and late and almost rancorously? It must be said that for commonplace folk they indulge in an unusual plethora of language bordering at moments upon the grand manner. He, on the point of becoming "a fugitive from justice," makes a long speech to her, expressing his envy of the slaves of olden days, that he might kneel before his lady-love and have her place her naked foot upon his neck. "The light of this lamp throws a golden radiance over you, your lips are quivering—oh! ever so slightly, and your eyes reveal to me the exquisiteness of your soul." For her "there was a quaint joy in hearing him thus rambling on—he, the reserved man of the world." Then she gives him "in that even, contralto voice of hers which he loved to hear," a discourse on feelings generally, her own specifically, telling him in conclusion: "You have no right, having once come into my life, having once given substance and vitality to my love, to withdraw yourself away from me." And this with the police nearing the door! It is rather a pity that the central theme had not been treated by another hand than that which strewed the flowers of love and minstrelsy.

Phyllis in Middlewych. By Margaret Westrup. New York: John Lane Co.

Phyllis shone like a juvenile goddess among the dull earth-born inhabitants of Middlewych. Silly old maids were tremulously eager for her society, and easily mistook her lightly veiled contempt for flattering partiality. Little lads who suffered from over-doses of coddling grew quite manly after associating with her for a few days. On Phyllis's advice children were adopted, by Phyllis's example rude manners were rebuked, Phyllis herself, besides being extremely well-bred in an English way, was altogether a jaunty little sportswoman. With her parents, who were really quite a credit to her, she maintained the most cordial relations. Their informality was such jolly good form, you see. "Old girl," says her father to Phyllis. "Old man," responds she to him, in the most enviable, off-hand style imaginable. We had hoped in our crude American hearts that the race of "wise children" to which Phyllis belongs was by this time totally extinct.

ESSAYS OF PROFESSOR MAITLAND.

The Collected Papers of Frederic William Maitland. Edited by H. A. L. Fisher. 3 vols. Cambridge University Press. New York: G. P. Putnam's Sons. $10 net.

The death of Professor Maitland at Grand Canary in 1906, at the all too early age of fifty-six, cut short the activity of one of England's most remarkable scholars. He at first planned to practise at the bar, and had time to write very little until well past thirty. But in 1885, his love of study led him to a lectureship at Cambridge. In the score of years which remained to him he won for himself, by his rich output of raw material from the Year Books and by his finely finished work in a number of volumes, a foremost place among the great contributors to the history of English law. In fact, we fancy that those who are fit to judge will regard him as the most important legal writer since Blackstone.

Some years ago Mr. Balfour, then Prime Minister, spoke in the House of Commons of the trade unions as corporations. A distinguished lawyer on the opposition benches interrupted him with, "The trade unions are not corporations." "I know that," retorted Mr. Balfour; "I am talking English, not law." Maitland knew how to talk both. It was part of his rare gift to treat legal subjects with equal learning, lucidity, and charm. As in the case of William James, his pages often have the fascinating playfulness of a kitten with a ball of yarn. He will pounce upon an idea, toss it in the most amusing directions, and unroll unsuspected lengths of subtle speculation. "He was always learned, always original, and in ninety-nine cases out of a hundred he was transparently right." In addition to his delightful style—not too common among writers on law—Maitland was distinguished from many lawyers and legal historians by a scientific habit of thought and an abounding common sense which freed him from pedantry and conventional conservatism. He reverenced ancient law. He delighted to trace the origin of legal rules in the social and economic conditions of a bygone age. But with all his knowledge of and reverence for the dead past, he had a keen appreciation of the living present. He hated to see an old rule unfitly surviving in a changed environment. One of the most vigorous chapters in the "Collected Papers" is his plea for the modernization of the frightfully complex and anachronistic English law of real property (I. 162 ff.). In contrast, he praises the Germans. In their new Civil Code there is incorporated, indeed, a great deal of old law which reaches back to ancient Rome or to mediæval Germany. "But all this stuff," Maitland says (III, 485),

> wheresoever obtained, has recently been passed through modern minds, has been debated, criticised, refined; and an endeavor has been made to present it as a single, coherent, homogeneous whole. Could anything of the same sort be said of us? Are we facing modern times with modern ideas, modern machinery, modern weapons? I wish that I could think so. Some of our ideas seem to be antiquated; some of our machinery seems to me cumbrous and rusty; some of our weapons I would liken to blunderbusses, apt to go off at the wrong end. . . . I would mention in particular a great deal of what we call the Law of Real Property. It seems to me to be full of rules that no one would enact nowadays unless he were in a lunatic asylum.

This passage suggests another characteristic of Maitland's mind and work which unfortunately has not been shared by a sufficient number of English, or even American, legal historians—his acquaintance with foreign, especially German, scholarship and jurisprudence. It used to be a habit of his to look over

Digitized by Google

the weekly lists of the tons of legal literature which fell from the German presses. He believed (and his writings bear the fruits of his belief) that the student of English law can be greatly illumined by a study of foreign systems. No Englishman was more keenly sensitive than Maitland to the fact that Brunner and other Germans had been invading the field of English history in a superior fashion. Yet no man was more generous and hearty than he in his appreciation of their services. And if England had had more scholars of Maitland's mould, she would scarcely have had to wait so long, and in the end be beholden to a German—Dr. Liebermann—for an adequate edition of her own precious Anglo-Saxon laws.

The three volumes here presented do not, of course, include any of Maitland's integral and earlier published works—"English Law before Edward I," "Canon Law," "Township and Borough," "Domesday Book," "Political Theories in the Middle Ages," "English Law and the Renaissance," the "Life of Leslie Stephen," or the posthumous "Constitutional History." Nor do they include those admirable prefaces which he wrote for the documents which he edited for the Selden Society and for the Rolls Series; these are easily accessible to students and could not without injury be wrenched from the texts which they were intended to introduce. Otherwise these three volumes contain, so Mr. Fisher assures us, substantially the whole of Maitland's scattered writings. With two exceptions the papers have been printed before, but we are grateful to Mr. Fisher for gathering them together from their inaccessible or unknown lodgment in various periodicals and encyclopædias. Arranged mostly in the order in which they were written, they enable us to trace the growth of Maitland's interest and activity along special lines. They begin with a philosophical dissertation on "Liberty and Equality" submitted by the author as a young Cambridge graduate in competition for a Trinity fellowship. They end with beautiful appreciations of the character and work of his good friends, Bishop Stubbs, Lord Acton, Leslie Stephen, Henry Sidgwick, and Mary Bateson. The other chapters cover a variety of subjects, of which not even a list can here be given. The professional lawyer will enjoy the chapters on the peculiar origin and character of English Trusts and corporations. The layman and historian will be most interested in Maitland's criticism of Herbert Spencer's theory of society, his plea for a reform of the land laws, his "Reasons why the history of English law is not written," his brilliant sketch, which followed five years later, of the "Outlines of English Legal History," his objections to Sir Henry Maine's generalizations in regard to early village communities, his account of the making of the German Civil Code, and his reviews of various books. Many of the papers, however, are very technical and deal with problems the simplest terms of which are not to be apprehended except by the trained student of English history.

Mr. Fisher has added an excellent index. We should have been glad if he had reprinted by way of introduction the discriminating biographical memoir of his brother-in-law which he published a year and a half ago, and which contains a few of Maitland's letters.

Briefe Kaiser Wilhelms des Ersten. Nebst Denkschriften und anderen Aufzeichnungen in Auswahl herausgegeben von Erich Brandenburg. Leipzig: Insel-Verlag.

The editor of this volume tactfully refrains from unconditional eulogy, admitting that the success of William I. was less due to his own merits than to his choice of the ablest men of his time to pilot the ship of state through perilous situations. To hold in check and induce to work harmoniously two such strong individualities as Bismarck and Moltke was indeed proof of superior judgment, and to yield to their better counsel with no loss of dignity to himself was one of his greatest achievements as sovereign.

The main interest of the book lies not, as one would expect, in its glimpses into political machinery, but in its human quality. It shows the founder of the new German empire divested of imperial purple and gives an opportunity to trace his personal development. The first entry in the book is a childish bit of writing from the prince's eleventh year, a page from a diary, reflecting the zest with which the prince, who had then no prospect of succeeding to the throne and was destined for the army, entered upon the methodical routine of his future career. The serious tenor of these reflections and of some of the earlier letters is rather amusing. Only once is it interrupted by an outburst of spontaneous youthful enthusiasm, when on April 4, 1814, he writes from Paris, which he had entered with the victorious army. Referring his correspondent to Count Schwerin for news regarding the army, he plunges straightway into an enumeration of the sights of the city, not forgetting the elephant in the Jardin des Plantes and the Palais Royal. His impressions are emphasized with a profusion of exclamation points and culminate in a postscript which reads: "Nein, die himmlischen Balletts der grossen Oper!!! Göttlich!!!!" Close upon this bit of boyish enthusiasm follow some pages of maxims dated 1815, which show quite a different phase of his character. They are replete with moral precepts and resolutions of a commonplace Sunday-school variety, and sound very strange to the ears of a more sophisticated generation.

With advancing years the pious note obtrudes itself more and more in both his personal and his official utterances. Perhaps no other monarch of modern times was so sincerely convinced of the "Gottesgnadentum" of royalty as was William I. It was probably the secret of his popularity with a great part of the people, who admired him for his simple faith, and saw in him a man endeavoring to the best of his knowledge and ability to fulfil the duties of his responsible position. No less firmly was he convinced of Prussia's right to supremacy over the other German states when the question of uniting them under one government began to be discussed. He was, indeed, during the tumultuous fourth and fifth decades of the past century, the very backbone of conservatism. He writes on the 11th of December, 1849, that the Constitution should not acknowledge civil marriage, and that it should limit the people's right to meet in public and organize societies; and he recommends a parliamentary body similar to the English House of Lords to support the conservative elements against the encroachments of democracy. He refers to his reputation as "Revolutionsriecher." His was an ideal of military rule, and in that curious document drafted April 10, 1857, and called his last will, he thanks his brother, the King, for having allowed him to restore "Zucht und Ordnung" in Germany. There is a letter from the same year in which he sharply distinguishes between parliamentary legislation and parliamentary government, accepting the former but decidedly rejecting the latter. Though he would not have a Cabinet appear infallible, he desires to see it protected against the possibility of impeachment and dismissal.

Of the letters of a later period those addressed to Bismarck throw light upon the peculiar relation between the sovereign and his prime minister. It is quite evident that Bismarck's far-reaching political schemes sometimes went beyond the comprehension of William I. There is a guarded self-consciousness in his replies, showing that he was overawed by admiration for Bismarck's genius, and had implicit faith in his superior judgment. The book fitly closes with a letter dated December 23, 1887, in which he consults Bismarck with regard to the advisability of initiating his grandson into the affairs of state, since the illness of the crown prince gave cause for alarm.

A peculiar feature of these letters is their language. The sovereign who spoke so frequently and emphatically of the force of moral example, did not write an exemplary German, but interlarded his language with an amazing amount of foreign expressions and quotations. True to his conservatism he

Digitized by Google

persisted in the use of linguistic hybrids which his mother-tongue owed to the Gallomania of Frederick the Great, at a time when the reaction against them was already strong. In a letter to Bismarck of April 16, 1864, occur the terms "inquietirt," "maliziös," "Rhein-Grenzenrektifikation," "perhorreszirt," "koalisiren," "realisiren," etc. In a personal note to Generalmayor von Boyen he thanks him for the "deliziösen serrepapiers, der das Geschmackvollste ist, das man sich denken kann inklusive des attentiösen Blaus." A letter to the Queen contains the French phrases "mettons," "sous main," "entre nous soit dit," and "qui vivra, verra." On becoming acquainted with the German language as it was written by the founder of the new empire, it is not surprising that one of the high officials during his reign, Dr. Stephan, inaugurated the movement to purge the language of its foreign ingredients and restore it to its original purity.

The Cambridge History of English Literature. Edited by A. W. Ward and A. R. Waller. Volume VII: Cavalier and Puritan. New York: G. P. Putnam's Sons. $2.50 net.

The last two volumes of this work brought down the account of the drama to the closing of the theatres in 1642. In the present volume the history of non-dramatic literature is resumed, and we have a survey of the Cavalier and Puritan writers whose activity, although in some instances extending beyond the Restoration, is identified at least in spirit with the reign of Charles I and the period of the Commonwealth. The age embraces, of course, some of the principal names in English literature, and we have here consequently a corresponding gain in interest as compared with some of the preceding volumes. The reader who recalls Professor Saintsbury's article on Shakespeare in this history will observe with some misgivings that about one-fourth of the entire volume is from his pen. It is only fair to acknowledge, however, that of the three chapters which he has contributed—those, namely, on the Lesser Caroline Poets, Milton, and the Antiquaries—two are of excellent quality, and if the chapter on Milton can hardly be said to fulfil all legitimate expectations in the treatment of the second greatest figure in our literature, it is at least not exasperatingly bad like the contribution on Shakespeare. Milton moves in a clearer historical light, and his production has not the endless variety of the Shakespearean drama, so that no vast body of critical literature has grown up about his life and writings, as in the case of Shakespeare and even Chaucer. Thus in the present instance one great stumbling-block is removed from Professor Saintsbury's path, for, however much the individual critic may chafe under the necessity, it is impossible to offer any adequate contribution to a work of this character without giving due consideration to the labors of other men. As far as the chapter on Milton is concerned, those portions are most satisfactory which make the least demand on the writer's critical powers. Thus the life and prose writings are well described, and Professor Saintsbury's unconventional habit of mind stands him here in good stead, when without mincing words he sets down to a want of practical sense so much in Milton's public and domestic life that the world has been inclined to gloss over. But the poems are another matter, and whereas Professor Saintsbury brings to his task the great requisites of sympathy and admiration, one cannot but feel that the result falls far short of what many of his predecessors in the interpretation of Milton have achieved. This is particularly true of the pages that are devoted specifically to "Paradise Lost," which for the most part consist not so much of criticism as an evasion of criticism. To be sure, the concluding sentence of this discussion sums up well the spirit of the poem, and later on we have the generally recognized peculiarities of Milton's versification accurately stated, with some additional observations on his style, but, on the whole, it is only too plain that the writer has here failed to rise "to the height of this great argument." As regards the minor poems, how can Professor Saintsbury, in his effort to make it appear that Milton's development was slow, say of the "Vacation Exercise" that only in the summoning of the rivers at the close is there any approach to individuality, "and even then there is a strong suggestion of Spenser." If any poet but John Milton could have composed the magnificent vision of heaven in this poem beginning:

> Yet I had rather, if I were to choose,
> Thy service in some graver subject use,

we should like to know who he was. As intimated above, Professor Saintsbury is much more successful in his other contributions to this volume. He is, of course, the recognized authority on the minor Caroline poets, and his chapter on the antiquaries—Browne, Fuller, Walton, and Urquhart (the translator of Rabelais)—was evidently written *con amore*. To some readers the quaintness of Browne's diction, his curious learning, and his solemn and splendid rhetoric are hardly an offset for the rather meagre intellectual content of his writings, but Professor Saintsbury's wide reading and *flair* for style qualify him especially for critical sympathy with this most distinctive representative of seventeenth century prose. No mention is made here of the fact, which seems, however, well established, that Sir Thomas Urquhart drew his amazing vocabulary very largely, if not mainly, from Cotgrave's French-English Dictionary. Happiest of all in this chapter is the characterization of Walton's "Compleat Angler," whose landscape and company are those "of 'The Faerie Queene' passed through a slight sieve of realism and crimeless; only in the distance, perhaps, an erring gentleman, who reprehensively derives his jests from Scripture or from want of decency." But the whole passage is worth reading.

We have dwelt thus at length on the contributions of Professor Saintsbury, because to him have been assigned not only the master-poet of the period, but, John Bunyan excepted, the most interesting of the prose-writers. Of the remaining chapters in this volume, four deal with subjects which, though of great importance, form, as it were, merely the background of literature—namely: Scholars and Scholarship, by Foster Watson; English Grammar Schools, by J. Bass Mullinger; The Beginning of English Journalism, by J. B. Williams; The Advent of Modern Thought in Popular Literature, by Harold V. Routh. Mr. Williams's contribution contains much that is amusing and characteristic, as in the account of the patriarch of English journalism, Samuel Pecke, who was capable of quoting Hebrew sentences under the impression that he was quoting Greek. Among the other chapters on the various branches of literature especially to be commended is that of W. H. Hutton on the Caroline Divines—Traherne, Herbert, Jeremy Taylor, and the rest. The style possesses something of the meditative and spiritual quality of these classics of seventeenth century piety and eloquence. F. W. Moorman, author of the "Life of Herrick," gives an adequate account of the Caroline lyric, and A. W. Ward a full and interesting discussion of the historical and political writings in which the characterization of Clarendon is particularly felicitous. Few readers, however, will rate so low as Dr. Ward the "Autobiography" of Lord Herbert of Cherbury—a human document of first-rate importance, as it seems to us, for the life of those times. The able article on Hobbes and Contemporary Philosophy by W. R. Sorley should also not go without mention. The only American contribution to the present volume is by Prof. J. E. Spingarn, from whose authoritative pen we have the chapter on Jacobean and Caroline criticism.

The bibliographies in this volume occupy an even larger space than heretofore. Not being prepared by the contributors they occasionally include material not used in the text. Thus Traherne's "Poems of Felicity," edited last year by H. I. Bell, is recorded (with a brief indication of contents) in the bibliography to the chapter on the Sacred Poets, although it is barely referred to

Digitized by Google

in the text as being still in manuscript. One is rather surprised that Mr. Dobell's most recent find, the poems of William Strode, is not mentioned in this chapter. The following omissions in the Milton bibliography seem worthy of note: Paul Chauvet's valuable thesis, "La religion de Milton" (1909); A. F. Leach's "Milton as Schoolboy and Schoolmaster," in the Proceedings of the British Academy (1908). Moreover, if Latin translations of "Paradise Lost" are to be included that of Hog should not be omitted, since, owing to its early date (1690), it affords striking proof of the rapidity with which the fame of Milton's great poem became established.

Louis XIV and Madame de Maintenon. By Charlotte Lady Blennerhassett. New York: Charles Scribner's Sons. $3.75.

Lady Blennerhassett's study of the political and social fortunes of Madame de Maintenon—for she rather than Louis is the editor's chief concern—is admirable for its virile scholarship and for its charming facility of expression. She has prepared a book which the student of French history may well keep on his shelf of ready reference and which the layman may read with quickening interest. For the subject matter is much more comprehensive than the title indicates. It is a history of the career of Agrippa d'Aubigné's granddaughter, first in her relations with the King, but secondly and principally as a figure in the various political and religious crises which are coupled more generally with Louis's name than with hers. Somewhat as Sainte-Beuve in his "Port Royal" wrote a literary and spiritual history of a century and more of French life, so the present editor has known how deftly to connect Louis's uncrowned wife with all that was of most importance in his reign. Thus we find excellent chapters on the Spanish Succession, the Princesse des Ursins, Fénelon and Bossuet, Quietism, the Great Military Reverses, and Jansenism. And yet the book is no apologia of the erstwhile wife of Paul Scarron. Madame de Maintenon is treated with sane and just consideration. No new materials have been adduced for the hazarding of a new judgment. Nor can this probably ever be done, as Madame de Maintenon gratuitously destroyed all letters and journals touching in any way upon the mooted question of her marriage to the King. She will always remain a sort of biographic sphinx. As Lady Blennerhassett aptly says in conclusion:

> It sounds like a fairy tale that the mightiest and most charming sovereign of Europe fell in love with the elderly widow of a not very respectable playwright and made her his wife. She never said so, and carried her secret to the grave. This also was very extraordinary, and, moreover, very grand.

One often judges incorrectly both of the character and the rôle of Madame de Maintenon, because one judges them according to her fortunes, truly extraordinary. The great height to which she rose as if by a miracle makes one suspect in her an equal height of ambition and intelligence. It is a suspicion which she foresaw in her own lifetime and protested against. "People think," said she, "that I reached the place where I now am by the tenacity of my purpose and by unceasing efforts, . . . that I possess a singular strength of mind and a surpassing intelligence to be able to shape the plan of an elevation such as mine. Oh, no. All this was no work of mine. I could neither have intended nor achieved it. God alone has been leading me to the place where I now am. . . ." Yet she certainly had her distinctive originality, especially, and perhaps uniquely, as "institutrice de la maison royale de Saint Louis," a modest title though a proud one, and the only one that she wanted placed upon her tomb. And if more could well be asked of the present work it might be a few short chapters of detailed study of Madame de Maintenon as "institutrice," her pedagogic theories, their success and weakness, the relation of teacher to student; in a word, the psychology of education as practised at Saint Cyr. Many of her recommendations, as we find them in her correspondence, are strikingly modern. "You will get along much better"—it is to two teachers that she is writing who complained, *qu'il faut toujours parler*—"if you talk less. . . . You talk too much and too fast in your instruction: it is impossible for your girls to follow you. You do not make them talk enough. It is by what they say to you that you can determine whether or not they are profiting. Apply yourselves then to talking in few words. Every thought which suggests itself should not be uttered, even though good."

There is no bibliography in this work or list of works consulted; but the editor cites her authorities freely. These are merely references, however, and—unless it were to make the work too bulky—one would be glad to see occasionally the very words of the original. They always add zest and interest, not infrequently another shade of meaning. By way of illustration we may take an incident recounted on pages 305-6. Briefly relating the visit of Peter the Great, who was inspecting the curiosities of France, in 1717 (Madame de Maintenon is now seventy-three years old), Lady Blennerhassett writes:

> She received him in bed: he asked her through an interpreter what was the matter, and she answered that what afflicted her was old age. He seemed not to understand and drew back her curtains. "You may imagine if he was satisfied," was her amused remark when describing this most unwelcome visit to Madame des Ursins.

Here there is apparently a slight inaccuracy or omission. At least the incident in question may be found in a letter of June 11, 1717, to Madame de Caylus:

> Le czar est arrivé à sept heures, et s'est assis au chevet de mon lit. (Elle s'était, selon l'usage, couchée pour le recevoir.) Il m'a fait demander si j'étais malade; j'ai répondu que oui. Il m'a fait demander ce que c'était que mon mal: j'ai répondu: "Une grande vieillesse avec un tempérament assez faible." Il ne savait que me dire et son truchement ne paraissait pas m'entendre. Sa visite a été fort courte. . . . J'oubliais de vous dire que le czar a fait un peu ouvrir le pied de mon lit pour me voir: vous croyez bien qu'il en aura été satisfait.

The slight difference which makes us see in Peter the barbarian that he really was recalls a simple sentence in a grammar used by many not so long ago: *Ce qui n'est pas clair n'est pas Français.*

The First English Life of Henry V. By an Anonymous Author commonly known as the Translator of Livius. Edited, with an Introduction, Annotations, and Glossary, by Charles Lethbridge Kingsford. New York: Henry Frowde. $2.90.

It has often been justly remarked that the European wars of the first half of the sixteenth century, though essentially modern in many respects, were deeply tinged with mediæval practices and ideas. This is as true of the brief occasions when England took a hand in the struggle, as of the campaigns between the Continental combatants. The very policy of fighting France was profitless and out of date; the methods of waging the war were antiquated in the extreme; but the arguments of those who opposed it were thrown away on the vainglorious young Henry VIII, the dearest wish of whose early years was to prove his personal superiority to Francis I and to revive at his expense the glories of Edward III and Henry V. So much, in fact, was this latter idea in the air during the early years of Henry's reign, that one of the lesser of that group of men whose literary and intellectual productions have added lustre to the age, conceived that he could do his young sovereign no better service than to compose, for his example and instruction, in the vernacular, a life of the victor of Agincourt.

What this man's name was we do not know. Internal evidence proves that his book was written in 1513 or 1514. Its sources are four in number: the "Vita Henrici Quinti," written about 1440 by the Italian scholar, Tito Livio da Forli; the chronicle of Monstrelet; Caxton's "Policronicon," and a life of Henry V written shortly after the middle of the fifteenth century from materials gathered by or under the direc-

Digitized by Google

tion of James Butler, fourth Earl of Ormond, the constant companion of the Lancastrian King in England and in France. The first three of these sources are, of course, accessible to-day, but the last is apparently no longer extant, so that the passages in the present book which are derived from it contain precious material which is not preserved elsewhere. The author has used and combined these different authorities with a considerable degree of historical skill. In his preface, or "proem," he only claims to have "translated" Tito Livio and Monstrelet; but in reality he does far more than that: he paraphrases them, and checks and controls them, in some degree, by the "Policronicon" and Ormond's Life; and thus he imparts to his narrative a personality which is quite his own. Moreover, he deserves high praise for the scrupulous care with which he cites his authority for every sentence, in the margin. Such literary honesty was by no means common in those days. Simplicity and freedom from affectation are the salient characteristics of his style. While inferior in this respect to Sir Thomas More's "Life of Richard III," which was also written in 1513, his book need not fear comparison with Hall's chronicle, nor with other historical productions of the reign.

Though unprinted, the "First English Life of Henry V" was evidently familiar to later Tudor historians, Harpsfield, Holinshed, and Stow all utilized it; the last-named possessed a copy and quoted verbatim from it, while professing to translate directly from Tito Livio and Monstrelet. As reproduced by the chronicles of Stow and Holinshed it was known and used by Shakespeare and his contemporaries. The "First English Life of Henry V" may thus be said to have exerted considerable influence in fixing the traditional conception of that monarch as a hero-king.

Two seventeenth-century manuscript copies of this interesting work exist to-day: one in the Bodleian Library at Oxford, the other in the Harleian collection in the British Museum. The former is by far the better of the two, and Mr. Kingsford has printed directly from it, with some small textual corrections from the Harley MS. and from Stow. It is needless to add that he has done his work with profound learning and great accuracy. The Introduction is a model of painstaking and unpretentious scholarship: Mr. Kingsford has spared no labor to discover the essential things, and he tells them simply and clearly; on the other hand, he does not waste a word on irrelevant topics. The present book, like his edition of "Stow's Survey of London," leaves a pleasing impression of finality.

Notes

John Bigelow, at the age of ninety-four, is engaged upon the fifth volume of his "Retrospections of an Active Life." Three volumes of the work have already appeared and the fourth is completed. The Baker & Taylor Co. has the book in hand.

Recent or forthcoming books in the list of Fleming H. Revell Co. include "The Bible Zoo: Talks to Children about the Birds, Beasts, and Insects of the Bible," by Albert C. MacKinnon; "Arnold's Practical Commentary, 1912"; "Woodsy Neighbors of Tan and Teckle," by Charles Lee Bryson; "Tarbell's Teachers' Guide, 1912," by Martha Tarbell; "Frank Field Ellinwood, His Life and Work," by Mary Gridley Ellinwood; "Zig-zag Journeys in Camel Country," by Samuel M. and Amy E. Zwemer; "The Negro and His Needs," by Raymond Patterson; "Islam and Missions," by Samuel M. Zwemer; "The Love Story of a Maiden of Cathay, Told in Letters," by Yang Ping Yu; "Down North on the Labrador," by Wilfred T. Grenfell; "The Gist of the Lesson, 1912," by R. A. Torrey, and "Modern Church Brotherhoods," by William B. Patterson.

Among Duffield & Co.'s autumn books are, in handsome editions: Palgrave's "A Golden Treasury of Songs and Lyrics," illustrated by Maxfield Parrish; "A Child's Book of Stories," illustrated by Jessie Willcox Smith and selected from the old favorites by Penrhyn Wingfield Coussens; Kellogg Durland's "Royal Romances of To-day"; Edward Lear's "The Complete Nonsense Book," with new illustrations and new material, with introduction by Lord Cromer and edited by Lady Strachey; "Byways of Paris," translated from the French of George Cain by Mrs. Louise Seymour Houghton, and "In the Heel of Italy," by Martin Shaw Briggs.—In fiction: "Children of the Night," by Mary Hulbert Rogers; "Old Man Greenhut and His Friends," a collection of poker stories, by David A. Curtis, and "The Ginger Cure," by William Ganson Rose.—Juveniles: Mrs. Foster's "Sewing for Little Girls"; "Stories from the New Testament for Children," by Elsa Barker; "The Cruise of the Kingfisher," a tale of deep-sea adventure by H. de Vere Stacpoole; "Mocco: An Indian Boy," by S. M. Barrett: the second series of "Grimm's Animal Stories," with pictures in color by John Rae, and "Picture Plays," by Marguerite Merington.

"The All Sorts of Stories Book," announced by Longmans for Christmas, is the twenty-third annual collected by Andrew Lang; it differs from the others in that it contains some tales that are true.

The University of Chicago Press has in hand: "The Historicity of Jesus," by Prof. Shirley Jackson Case; "Sociological Study of the Bible," by Louis Wallis; "American Poems," selected and edited with explanatory notes and bibliographies by Prof. Walter C. Bronson; "Statistical Studies in Education," by Prof. W. F. Dearborn, and "Assyrian and Babylonian Letters Belonging to the Kouyunjik Collection of the British Museum," edited by Robert Francis Harper, Vols. X and XI.

In Scribner's announcements for this month we note, in fiction: two volumes of short stories, "Interventions," by Georgia W. Pangborn, and "Ship's Company," by W. W. Jacobs—Handsome editions: Stevenson's "Treasure Island," and Mrs. Burnett's "Little Lord Fauntleroy.—Miscellaneous: a new edition of Ellis Paxson Oberholtzer's "Referendum in America"; "The Story of Korea," by Joseph H. Longford.

"The Little Lad of Bethlehem Town," a drama-poem telling an imaginary incident of the first Christmas Eve, by Emily Huntington Miller; "Jingles of a Happy Mother Goose," by Emma S. Seale, revised, and "Tahquitch Maiden," by Phebe Estelle Spalding, will be brought out shortly by Paul Elder & Co.

"The Librarian at Play" is the title of Edmund Lester Pearson's new book, announced by Small, Maynard & Co.

October 21 is the date set for publication for the following of Houghton Mifflin's books: "Broadway," by J. B. Kerfoot; "Two Years Before the Mast," by Richard H. Dana, jr., illustrated copyright edition; "A Safety Match," by Ian Hay; "The Autobiography of Sir Henry M. Stanley," edited by his wife, popular edition; "Sunday Evenings in the College Chapel," by Francis G. Peabody; 'The Man of To-day," by George S. Merriam; "The Life of George Cabot Lodge," by Henry Adams; "Poems and Dramas of George Cabot Lodge," and "Leaves from the Diary of an Impressionist," by Lafcadio Hearn, Riverside Press edition.

Putnam's list of announcements includes: "South America To-day, A Study of Conditions, Social, Political, and Commercial, in Argentina, Uruguay, and Brazil," by George Clemenceau; "The Greatest Street in the World" (Broadway), by Stephen Jenkins; "The Following of the Star," by Florence L. Barclay, and "The Romantic Life of Shelley, and Its Sequel," by Francis Henry Gribble.

The continuation of Romain Rolland's "Jean Christophe," entitled "Jean Christophe in Paris," issues from Holt's press on Saturday. The work consists of three books: The Market Places, Antoinette, and the House.

On the same day Holt will publish: "The United States Navy, a Handbook," by Henry Williams; John Buchan's "Sir Walter Raleigh," and Mr. Hunting's "A Hand in the Game."

"A Life of Andrew Jackson," by Prof. John Spencer Bassett, and "An Enemy to Society," by George Bronson-Howard, are in preparation by Doubleday, Page & Co.

The following are included in the autumn and holiday announcements of Forbes & Co. of Chicago; "Love's Purple," by S. Ella Wood Dean; "Ben King's Southland Melodies," illustrated; "The Twelfth Christmas, the Christ Child's Revelation," and "To Mother," twenty-five sonnets, both by Marjorie Benton Cooke; "Human Confessions" and "God and Democracy," both by Dr. Frank Crane; "A Calendar for Saints and Sinners," published annually.

George H. Doran Company's autumn announcement includes the following books in fiction, some of which have already appeared; "Corporal Cameron," by Ralph Connor; "The Life Everlasting," by Marie Corelli; John Verney, by H. A. Vachell; "The Notorious Miss Lisle," by Mrs. Baillie-Reynolds; "The Cage," by Harold Begbie;

Digitized by Google

"The Faithful Failure," by Rosamond Napier; "Letters to Patty," "The Search Party," "The Simpkins Plot," "Spanish Gold," "Lalage's Lovers," by G. A. Birmingham; "Whom God Hath Joined" and "The Man from the North," by Arnold Bennett; "The Fourth Watch," by H. A. Cody; "The Tenderfoot," by Anna C. Ruddy; "The High Calling," by C. M. Sheldon; "The Yellow Pearl," by Adeline M. Teskey.

The same firm is also issuing "Round About the Black Sea," by W. E. Curtis; "The Golden Land," by A. E. Copping; "Australian Impressions," by Archibald Marshall; "Expositions on Dante," in three volumes, by John S. Carroll; "Recreations of a Booklover" and "The Shining Hour and Other Essays," by F. W. MacDonald; Complete Works of Emily Brontë, edited by W. R. Nicoll and Clement Shorter; Collected Poems of Herbert French; "A Keeper of the Robes" (Fanny Burney), by F. Frankfort Moore. Among the religious books will be "The Expositor's Dictionary of Texts," edited by W. R. Nicoll, Jane T. Stoddart, and James Moffat; "The Psychology of the Christian Soul," by George Steven; "New Testament Criticism," by J. A. McClymont; "The Sacramental Covenant," by David Smith; "Studies in the Messianic Psalms" and "The Book of Jeremiah," by Canon S. R. Driver; "Spiritual Interpretation of Nature," by J. Y. Simpson; "The Testimony of St. Paul to Christ," by J. Knowling; "Preparing to Preach," by David R. Breed; "The Problem of Human Suffering," by Buchanan Blake; "Social Advance," by David Watson; "The Church and the Divine Order," by John Oman; "The Problem of the Work," by J. Wilbur Chapman; "The Death of Christ" and "Sermons on Texts," by James Denney; "The Indwelling Spirit," by W. T. Davidson; "The Cardinal Elements of the Christian Faith," by D. S. Adam; "Studies in the Highest Thought," by A. T. Schofield; "In a Wonderful Order," by J. H. Swinstead; "Miracles and Christianity," by J. Wendland; "Religious Thought in Holland," by J. H. Mackay; "Christ on Parnassus," by P. T. Forsyth; "The History and Witness of Evangelical Christianity," edited by Principal Selbie; "Later Letters of Principal Marcus Dods"; "Pulpit Prayers," by A. Maclaren; "Historical Commentary on the Pastoral Epistles," by William Ramsay; "Studies in Pauline Theology," by Principal Garvie; "Christian Counsel," by David Smith; "The Work of Grace," by J. D. Jones; "Devotional Hours with the Bible," Vol. V, and "The Life of Christ," by J. R. Miller; "The Commonwealth of the Redeemed," by T. G. Selby; "In Silver Chains," by Dinsdale T. Young; "The Creed in the Pulpit" and "The Road to Unity," by Canon Hensley Henson; New uniform edition of the works of George Matheson; "The History of Dogma," by Professor Haering; "The Mysteries of Grace," by John Thomas; "Fifty-two Sermons to Children," by James Vaughan; "A New Volume on the Life of St. Paul," by A. Deissmann. Missionary books include: "My Half-Century in China," by Archdeacon Moule; "An Englishwoman's Twenty-five Years in Tropical Africa," by Gwen Elen Lewis; and "Christ in India," by C. F. Andrews.

In "The Old Order Changeth," a volume which Smith & Elder bring out this month, Frank Dilnot narrates the events of the constitutional struggle in England from the day the Budget was introduced, on April 29, 1909, to the time at which the Parliament bill became law, August 18, 1911.

Edmund Gosse is publishing through the same firm "Two Visits to Denmark, 1872-4."

"The Dialogues of St. Gregory, Surnamed the Great," edited by Edmund G. Gardner, is announced by Lee Warner.

The "Lysistrata" will be added shortly to Benjamin Rogers's translation of Aristophanes. Bell & Sons have it in hand, who also promise for early next year the third and final volume of Swift's correspondence, edited by Elrington Ball.

In the list of Sands & Co. we note "The Mirror of Oxford: Being a Catholic History of Oxford from the Earliest to Present Times," by the Rev. C. Dawson, S.J.

The marriage of Goethe to the low-born Christiane is made the subject of a novel by Sir James H. Yoxall. Smith & Elder are the publishers.

A special edition of the works of Asbjörnsen will be issued in Norway to celebrate his centenary.

Sturgis & Walton have brought out a cheap edition ($2.50 net) of W. E. Geil's "Great Wall of China." In commenting on the original publication, our reviewer (May 19, 1910) described it as "full of a strange fascination for every reader who is fond of geographical and historical novelties."

Thomas Y. Crowell & Co. have reissued their edition of Tolstoy's Works in fourteen volumes of pocket size, with photogravure frontispieces. The editor is Nathan Haskell Dole, who also furnishes the translation of "Anna Karénina." Other translators are Isabel F. Hapgood and Aline Delano. In its present form the edition is handy, but in some of the volumes the "Bible paper" is not perfectly opaque.

The sale of the first portion—1,228 lots—of the Huth library will begin at Sotheby's November 15. This first portion extends to the end of the first two letters of the alphabet, exclusive of the Shakespeareana to which the eighth day will be devoted.

The formal opening address of President Elihu Root, delivered on April 27 last, before the annual meeting of the American Society of International Law, which was summarized in our notice of the October *Journal* of that society, followed, as the proceedings of the meeting now issued show, more general remarks in which the speaker surveyed the achievements of the preceding year in the interests of peace. The North Atlantic Coast Fisheries arbitration decision was supplemented, early in the year, by the work of a conference, held in Washington, at which representatives of Great Britain, Canada, Newfoundland, and the United States stipulated their desire to substitute, as Mr. Root expresses it, a settlement *inter partes* for the further judicial proceedings provided for by the award of the Hague tribunal. They thereby obtained the result that the first fruits of the judgment of the arbitrators are concord and a peaceable arrangement, in place of former strife, and the judicial settlement of fundamental questions, and rendered it possible to proceed amicably to the adjustment of subsidiary and practical questions, in a manner never before possible. Mr. Root also adverted to the Canadian boundary waters treaty, providing for the use and disposition of the waters which constitute the greater part of the eastern half of the boundary between the Dominion and the United States. Note was made of the modification of the treaty of 1894, with Japan; the result being that apparently the only question between the two Governments on which disagreement or irritation was possible had been adjusted. On the question of immigration of laborers, Japan had agreed to issue no passports to any; so that it remained simply to watch the Mexican and Canadian frontiers, to make sure that none were surreptitiously brought in. The above, with the other achievements mentioned, constituted an encouraging record.

Prof. C. N. Gregory's statistics showing the number of exclusions and deportations for the last two or three years are significant. In 1910, 969 Chinese were deported; 24,270 aliens were debarred during the same year, with 2,695 arrested and deported after entry, an increase of nearly 100 per cent. over 1909. Of these, 3,128 were rejected on account of physical defects, 379 on account of mental defects, 1,215 on account of moral, and 312 on account of minor physical or mental defects sufficiently grave to affect their ability to earn a living. There were actually expelled, in contradistinction to being excluded, during the same time, on warrants of deportation, 315 because of physical, 709 because of mental, 554 because of moral defects—in all, 1,578, so that 6,602 aliens were returned through unfitness. Also, during the same period, 1,786 alien contract laborers were debarred and 78 deported; 15,907 were debarred as likely to become a public charge. Professor Gregory classifies these under the head of financially defective. He concludes that all the cases were within the recognized powers of the Government. The extent to which a carrier who is compelled to deport an alien can claim protection or indemnity therefor under the law of the country whence the one deported comes, on action brought in a foreign jurisdiction by one deported, has never been conclusively determined. Mr. Van Dyne points out that the State to which an expelled person has emigrated has a right to know the grounds on which the case has been decided. He then discusses recognized grounds of exclusion. Secretary of State Gresham is cited as having taken the stand that unless the expelling Government were to establish by proof the justice of the expulsion, it would be liable to damages; and in one case, that of Jewett, we obtained such an indemnity from Venezuela.

Lewis Melville, already author of a life of Thackeray and a book on the "Thackeray country," contributes to the centenary literature a collection of fourteen light but readable papers under the title "Some Aspects of Thackeray" (Little, Brown & Co.). Three of the chapters are here printed for the first time—Thackeray and the Dignity of Literature, Thackeray and the Newgate School of Fiction, and Some First Editions of Thackeray. The remaining eleven, dealing pleasantly with the criticism, the ballads, the drawing, the illustrators, the cult, etc., of Thackeray, have appeared in various English and American periodicals. The suitability of the volume for post-prandial refreshment is increased by some fifty illustrations, including fascimiles of rare title-

Digitized by Google

pages and sketches, and a portrait from an unpublished water-color drawing of 1850.

Houghton Mifflin Company has observed Thackeray's hundredth anniversary by issuing in an edition of 550 numbered copies on hand-made paper nine hitherto unpublished letters, together with a sheaf of recollections by Blanche Warre Cornish, daughter of his friend and kinsman, William Ritchie—the whole numbering 77 pages and entitled "Some Family Letters of W. M. Thackeray." Our opinion of Mr. Titmarsh will not be altered by this fresh handful of his correspondence; the letters are spirited and characteristic, entirely creditable to his humor and good heart. His woe at the prospect of a domestic dinner party is delightful: "The house is turned upside down, frantic knife-cleaning goes on, sham footmen prowl about the premises—I wish we might do it at a hotel. My rest is destroyed and my mind troubled with fear and fluster a week off—I asked William Sterling to meet you, but my dinners ain't good enough for him or he is going out of town. But you shall see a few small lions, and I hope we shall get on." *I hope we shall get on!* Add to that Mr. Thackeray's dictum on salad and you have a compendium of his philosophy of life: "When you think you have put in enough oil, drop in as much more."

"Finland To-day" (Scribner importation), by George Renwick, is a welcome addition to the scant stock of authoritative English books on that fascinating country. The author, a genial Scotchman of wide sympathies and much knowledge of affairs, is—what so few English travellers are—sufficiently familiar with the idiom of the country to converse with the natives. He quotes intelligently bits of Swedish and Finnish prose, and even amends, here and there, existing English translations of Finnish poetry. It is a pleasure to follow him in his wanderings, and his boundless enthusiasm for fjords, cataracts, and the myriads of tiny islets is as infectious as his flowing praise of the excellence of the town hotels and of the hospitality of the simple villagers. He furnishes much valuable information concerning the industrial development of the country, but the most novel feature of the book, to English readers at least, will be the chapters on the literature, music, and art of Finland. Mr. Renwick does no more than justice to the great trio, Runeberg, Snellman, and Lönnrot, who, in the first half of the nineteenth century ushered in the literary renaissance of Finland; but the note of admiration in the chapter on art is somewhat strained. The world has not taken the painter, Edelfelt, or the sculptor, Vallgren, at Mr. Renwick's valuation. Of the latter he says that "there seems to be no limit to his genius." It would have added to the value of the summary of literary celebrities if Mr. Renwick had clearly distinguished between purely Finnish writers and those who used also, or used exclusively, Swedish. Franzén and Topelius, like the poet Runeberg, wrote only in Swedish, and the works of the modern novelist, "Juhani Aho" (some of which have been published in English translations), appear simultaneously in Swedish and Finnish. The eminent philologists, Castrén and Ahlquist, are, strange to say, absent from the list of authors. Mr. Renwick's sympathies with the Fins in their struggles against Russian oppression are deep and outspoken, but he has no word of condemnation for Finnish illiberality toward the Jews. Though there are few errors in the book, a misprint (p. 219) charges the people with "a slight sense of honor," instead of humor. The year 1885 (p. 94) stands for 1855, and there are conflicting statements as to the sobriety of the Fins. The remark that in the towns, wines and spirits are always taken "at breakfast, dinner, and supper," and that "Finland is cultivating a taste for whiskey," does not seem to bear out the assertion that "she is the most sober nation in the world."

In his "Customs of Old England" (Scribner) F. J. Snell does not attempt a comprehensive picture of mediæval life. He limits himself to selected topics, but among these are included many that illustrate the most important aspects of English customs and institutions in the centuries that lie between the Norman Conquest and modern times. Moreover, as the author states in his preface, he deals with these matters not so much in their picturesque aspect as in their fundamental relations to the organized life of the Middle Ages. The university life of the period comes in for the fullest treatment, and next to this judicial and urban customs. Somewhat less full are the chapters on rural and domestic life. From the almost boundless field of ecclesiastical customs and institutions in the Middle Ages only a few matters of antiquarian and literary interest have been chosen. The work is one of popularization drawn from good sources, but it is a pity even in a book of this character that the writer should not have given us more definite references to his authorities than are contained in the merely general acknowledgments of his preface. Within the limits which he has set himself he has managed to place before the reader a great deal of information—for the most part fresh and unhackneyed. We only regret that, even among the topics he has chosen, owing to the small size of his treatise, he should have dealt so briefly with some important matters, such as the life of minstrels and the evil custom of maintenance and livery, which, by keeping at the disposal of the nobles a retinue of lawless followers, was so largely responsible for the disorders of society. Among the corrections to be made we note that a wrong date (1099) is given to the "Assises de Jérusalem"—that is, the code of laws established by the Crusaders in their Oriental dominions. No part of this code is earlier than the last quarter of the twelfth century. What, moreover, does Mr. Snell mean by quoting a "play" of Lucian's? The reference should evidently be to the charming dialogue between Cronos and the priest.

In reissuing his "Eastern Asia" (Stokes), Ian C. Hannah has corrected details and lightened the narrative of many unnecessary names and minor events. In consequence the book is now a fair historical sketch of Asia apart from the Mediterranean area. The style is somewhat exclamatory and even flippant, but good authorities have been followed.

Another life of Charles II has come out under the title of "The Gay King" (Brentano's). The author, Dorothy Senior, attempts to explain the inconsistencies of the King's character as the result of his treatment in Scotland in 1651. The book is on the usual lines, with the usual anecdotes and sketches of character. Its manner of telling is rather more entertaining than the average of its class.

"In the Heel of Italy," by Martin Shaw Briggs (Duffield & Co.), is based on articles originally prepared for the English *Architectural Review*. The city described is Lecce, and Mr. Briggs is to be congratulated on having opened for English readers a new field of remarkable interest. His descriptions and drawings of Leccese architecture will be a surprise to all but the few travellers who have visited Southern Italy. There are many fine survivals of the Norman period, and still more of the Baroque, besides the antique remains which crop out everywhere in the Terra di Otranto. Mr. Briggs devotes most of his book to the history of the city, down to the end of the Bourbon régime, fifty years ago. His last chapter, on the manners and customs of the people to-day, and on the environs, including Otranto, should be read by Americans who desire to know out of what conditions one stream of South Italian immigration flows. Mr. Briggs writes without pretence, as a good draughtsman should. Many of the excellent illustrations are reproduced from his drawings.

The three years covered in the last volume of William Foster's calendar of documents relating to the growth of the East India Company ("The English Factories in India, 1634-1636"; Clarendon Press) were unusually eventful. The English settled at last their long-standing feud with the Portuguese and established with them an attitude of cordial friendship and mutual assistance in Indian affairs which has continued without a break to the present day. In 1635 the English sent their first ship to China—to Macao. It was during these years also that Charles I injured the Company and infringed their solemnly secured monopoly by chartering and assisting the rival and irresponsible body of interlopers known as Courteen's Association. On these and many other matters Mr. Foster sheds new light, as usual, by his judicious analysis of the documents and his careful index. One document reveals a pirate named David Jones, who caused some terror and probably scuttled some ships. May we not trace to him the origin (unknown to the Oxford Dictionary) of "Davy Jones's locker," and of that sailor's superstition, of which the earliest mention appears to be in "Peregrine Pickle," more than a century later?

The twenty-five papers by the late Edmund Clarence Stedman now brought together under the name of "Genius and Other Essays" (Moffat, Yard) represent the occasional work of forty years. Much of this material is rather slight, but the level of judgment and workmanship is ever high. Stedman took his function as a man of letters with priestly seriousness, and nothing perfunctory ever came from his hands. The deft precision of his manner appears to advantage in short notices of Austin Dobson, Landor, Sidney Lanier, Mrs. Stoddard, and William Blake. Very diverting are the reminiscences of Eugene Field, to whose professional buffoonery Mr. Stedman is indulgent. The essay on Edwin Booth's acting in 1863 is of permanent worth, and the author's discrimination of that feminine something

Digitized by Google

which made Booth's position different from that of the great tragedians *pur sang* is fine and accurate. In reviewing Bryant's translation of the "Odyssey," Stedman, following Matthew Arnold, indulged the hope that an English hexameter suitable for the task would yet be beaten out by some poet of genius. He made it clear that no other verse form would quite do. Since then has come the age of the translation into rhythmical prose, the English hexameter still remaining a desideratum. The title essay on Genius, born of a controversy with W. D. Howells, possibly does not deserve its prominence. The briefer paper, "What Is Criticism?" contains some of Mr. Stedman's best thinking. We opened this volume with some misgiving. It seemed impossible that such a presentation of minor work should not diminish a fair but tenuous fame. Such fears were groundless. The fine breeding of Stedman, his background of the best reading, his scrupulous standards, are as prominent in this casual collection as in his coherent works. One recalls with gratitude that for fifty years mostly given over to irresponsible puffery and equally irresponsible censoriousness, Stedman pursued the task of criticism upon the theory that the critic must be at home in the entire world of letters. It is this fine breeding and complete absence of provincialism that may give Stedman's best criticism a chance for life beside the works of greater genius. He was saner and safer than either Lowell or Poe, admittedly our greatest critics, and but little their inferior in adroitness. Of the critic's office he held a finer and juster ideal than either of his more famous predecessors.

The death is reported of Sir Herbert Risley, who distinguished himself as a member of the Indian civil service and as a student of anthropology and ethnology. He was the author of "Primitive Marriage in Bengal," "Widow and Infant Marriage," "Sikkim and Tibet," "Tribes and Castes of Bengal," "The People of India," and other works.

Addis Albro, author of "Our Country's Flag," the first book on the origin of the American flag, died last Sunday in Columbus, N. M., at the age of fifty-six. He was known as a clergyman, educator, and lecturer, as well as writer. At the time of his death he was collector of customs at Columbus. He was a personal friend of Theodore Roosevelt, and was a delegate to the Republican convention which nominated Roosevelt for Vice-President. For two years he was chaplain of the New York Senate. He was instrumental in forming the tentative Constitution of New Mexico.

Philip Verrill Mighels, a well-known writer of short stories, died October 13 at Reno., Nev., from a gunshot wound which he accidentally inflicted on himself. He was born in Carson City, Nev., forty-two years ago. He studied law and was admitted to the bar at the age of twenty-one. Two years afterward he went to San Francisco and engaged in newspaper work. His stories and sketches soon attracted favorable attention, and he came to New York in 1894. From that time he devoted himself solely to writing. Besides the poems of "Out of a Silver Flute," he was the author of "Nella, the Heart of the Army," "When a Witch Is Young," "The Crystal Sceptre," "The Inevitable," "Bruvveh Jim's Baby," "The Ultimate Passion," "Chatwit, the Man-Talk Bird," "Dunny," "Sunnyside Tad," and "The Pillars of Eden," which he also dramatized.

Henry Broadhurst, the first British workingman to become a state minister, died October 11 at the age of seventy-one. He was member of Parliament from 1880 to 1892, and for a while in 1886 was undersecretary of state in the Home Department. He published an autobiography and, with Sir R. T. Reid, a "Handy Book on Leasehold Enfranchisement."

Science

SOME KINDS OF EVOLUTION.

Some Neglected Factors in Evolution. By Henry M. Bernard. New York: G. P. Putnam's Sons. $3.

Hereditary Characters. By Charles E. Walker. New York: Longmans, Green & Co. $2.40 net.

Convergence in Evolution. By Arthur Willey. New York: E. P. Dutton & Co. $2.50 net.

The Mutation Theory. By Hugo de Vries. Vol. II. Translated by J. B. Farmer and A. D. Darbishire. Chicago: Open Court Pub. Co. $4 net.

There are few persons who will doubt that the general acceptance of the theory of evolution was a distinct advance intellectually over the traditional cosmological views of the creation of animals and plants. It must be conceded, however, that the advance was largely a substitution of one belief for a better one on the basis of circumstantial evidence, for while there is an abundance of what is sometimes called "indirect proof" of evolution, there is little that may be called direct evidence to establish that principle. If this statement is challenged it need only be pointed out that those who hold fast to the theory of evolution differ widely in their *opinions* as to how the process has taken place and equally widely as to the causes involved. Until it becomes settled as to how animals and plants have evolved no amount of circumstantial evidence can do more than make the theory of evolution a matter of great probability rather than of scientific proof. It is not strange, therefore, that books about evolution continue to be written and published, in which the author, while disclaiming the use of technical language, does not hesitate to address to a popular audience a plea for some new interpretation of how the process of evolution has taken place.

Two appeals of this kind are made in two recent books. Henry M. Bernard writes on "Some Neglected Factors in Evolution." His study of the retina of the eye convinced him that "the simplest possible combination of chromatin bodies and delicate filaments" yield a hypothetical unit of organic structure, the chromidial unit which is capable of manifesting all the phenomena of life. On this slender basis he proceeds to build up an imaginary and highly fantastic account of a conceivable process of evolution. The organism is treated as a network of threads with nodes. The author's attempt to bring such an interpretation into accord with physiological processes shows only too clearly the purely fictitious character of his conception.

In a smaller book, C. E. Walker, director of the Glasgow Cancer Hospital, presents in a popular way the problem of heredity from the point of view of the cells, which are to him "the ultimate units of living matter." He shows a wide and somewhat superficial knowledge of modern biological work on heredity and cytology. His attempt to set up "two classes of characters that behave in different manners with regard to inheritance" cannot be taken seriously, and his hope to bring harmony between biometricians and Mendelians is likely to be treated lightly by both schools. Instead of a scholarly and critical treatment of such difficult questions as the topics discussed, we find a one-sided and arbitrary mode of settling matters that is not likely to appeal to any one familiar with the evidence at first hand.

In a treatise whose range is less pretentious than the preceding two, Arthur Willey presents a collection of heterogeneous facts to support his contention that again and again dissimilar structures or functions have been changed into very similar ones through adaptations to the same end, and hence are hard or impossible to distinguish from resemblances based on a common descent. Since the entire evidence from comparative anatomy in support of the theory of evolution rests on these resemblances, Mr. Willey is consciously undermining some of the props of evolution itself. The author's efforts are, however, so palpably literary, and the lesson intended so out of date, that the damage done to the theory of evolution is not more serious than the author himself would no doubt be the first to admit.

In a different category belongs the already famous book of De Vries, "Die Mutationslehre," which now after eight years appears in translation. Both the original and the translation are printed in two volumes, with the contents somewhat rearranged and abridged in the translation. Here we have a serious and technical book, with the evidence furnished in full to support the author's far-reaching conclusions. Yet despite its erudition and the freshness of much of the new evidence discovered by De Vries, it is surprising to find, within the few years that have elapsed since the German edition appeared, how far our ideas in regard to mutation have advanced, until some parts of the book

Digitized by Google

seem to be already behind the times. In two very essential points the central contention of the mutation theory is endangered, or in need of better evidence than that first advanced to establish evolution by mutation. De Vries based his theory of heredity mainly on the behavior of the evening primrose, Œnothera Lamarckiana. This plant, introduced from America, has escaped from European gardens, and at Hilversum, in Holland, De Vries found that eight or nine new types appeared annually. A large part of his book is devoted to a description of the origin and heredity of these new mutants. His studies have led him to the view that the older types of Linnæus are collective, made up of a number of *elementary* species or mutants. These he believes arise suddenly at a jump, as it were, as do the new types from Œnothera Lamarckiana. Instead, therefore, of the slow origin by means of selection of individual differences postulated by Darwin's theory of natural selection, the elementary species arise suddenly. The new types are not only discontinuous, but are definite from the beginning, and do not require a selective process to maintain them in their pure form. That elementary species exist in nature, cannot be disputed, but recent studies have revealed two very serious flaws in de Vries's argument that such processes as these shown by O. Lamarckiana furnish evidence as to how the process of evolution has gone on. In the first place, it has been suggested that O. Lamarckiana is not a wild type at all, but a hybrid, and in consequence the mutation observed by De Vries represents a process of "splitting" and disintegration into the original types, or into combinations of the original characters of the hybrid parents. Leclerc du Sablon in Europe and Davis in America have discovered evidence that throws serious doubts on the purity of O. Lamarckiana. To this is to be added the fact that, despite a thorough search, no such type as Lamarckiana has been found growing wild in this country, whereas a cross between the common species, O. biennis and O. grandiflora, gives a hybrid remarkably like, though not identical with, O. Lamarckiana. It is true that these new hybrids show at once, when inbred, their hybrid origin, while Lamarckiana breeds true, giving for the most part only 2 per cent. of new forms. But even this apparent contradiction may be met on the grounds that Lamarckiana is a very old hybrid that has eliminated most, though not all, of its possible hybrid combinations. Should Lamarckiana prove, then, to be a hybrid, a hard blow will be dealt to the very foundation of the theory that such mutations furnish the basis for progressive evolution.

This brings up the second point. Most of the mutants that are now known are unquestionably due to losses of some one or more characters of the wild type. De Vries called these retrogressive mutations. They follow Mendel's law of heredity. On the other hand, the question is still an open one whether new types that represent something added to the original type arise in this way. It is true that among domesticated races of animals and plants there are many types that appear to have added something to the original type from which they sprang, but a careful examination of the origin of these progressive types often furnishes little evidence that they have arisen suddenly by a single step, or else the examination shows that some inhibitory factor has dropped out whose loss permits the new character to develop further than it did in the original type. The latter cases, therefore, are still retrogressive mutations. Until these matters are cleared up the evidence for evolution furnished by the mutation theory must hang in the balance.

Even supposing, however, that it should turn out that all mutations are losses, and that therefore mutation has played, so to speak, the losing game in evolution, it does not follow that the older Darwinian idea of progressive advance through selection of individual differences is the alternative left; for, whatever discoveries the future has in store, one fact has in recent years been clearly established, namely, that selection of individual differences can produce no such result as was claimed by Darwin. In a word, the kind of variations on which Darwin rested his theory of selection has been convincingly shown not to yield the result that Darwin's theory has maintained.

There are three science books in the list of University of Chicago Press: "Heredity and Eugenics," edited by Prof. John M. Coulter; "American Permian Vertebrates," by Prof. S. W. Williston, and "Agricultural Education," by Benjamin Marshall Davis.

Dr. E. B. Lowry has written for Forbes & Co. of Chicago, "Herself Talks with Women Concerning Themselves."

The attempt which Prof. J. Arthur Thomson makes in his book, "The Biology of the Seasons" (Holt), to unite poetry and pure science is so nearly successful that we readily overlook any shortcomings. He has written a year-book of natural history, devoting about ten chapters to each of the four seasons. The central thesis holds that "life is rhythmic, and that it is punctuated by the seasons and by other external periodic influences." Some of his illustrations follow:

Many vegetable cells, such as simple Algæ, feed during the day and divide at night. The deeply rooted inherent contrast between nutrition and reproduction is externally punctuated. Flowers open and shut, wake and sleep, periodically. Some flowers are intermittent even in their fragrance. The lines of growth on shells and on some bones indicate periodicity, like the rings of growth on a tree, or the rings on the rattlesnake's rattle, and this self-registering of alternations is widespread—as the four illustrations may suggest—in organic nature. In most cases it seems that the punctuation is from without, while the necessity of the alternation is from within. We can read summer and winter on the scales and otoliths of fishes, just as we can read day and night on a bird's feather. The increase to the scales in the summer period is different from that in the winter period, and the daily variations in the bird's blood-pressure are sometimes registered, when feathers are a-making, by the beautiful crossbars.

The first chapter in each part is impressionistic and gives charmingly the season's chief traits. Professor Thomson has selected his subjects with care and has presented them in admirable form. The most serious drawback to the volume is its altogether English character. Except when the most general subjects are under discussion, one is conscious of a foreign atmosphere. The birds are English birds, so that such inaccurate statements as that which says the red grouse is the "only bird peculiar to Britain" has little significance for us. Even in a list of modern traveller-naturalists there are only English names, and more than once we find expressed rather caustic disbelief of facts obtained by American ornithologists and by other aliens. It is a pity that an American edition was not issued, with the facts and names translated. But any one with more than a passing love for our own fields and woods will find great pleasure in this volume.

Dr. Agrippa Nelson Bell, one of the widest-known physicians in the country, and an authority on hygiene, died last Sunday at his home in Brooklyn, at the age of ninety-one years. He was greatly interested in quarantine work, and was largely instrumental in bringing New York's quarantine station to its present efficiency. Dr. Bell was a native of Virginia and a veteran of the Mexican and civil wars. He served for many years in the navy as an assistant surgeon, and was the author of several medical books.

Drama

"NATIONAL" PLAYS.

Mr. Yeats's attempt to set the Irish in this country straight on the nature of J. M. Synge's drama, "The Playboy of the Western World," was not surprising, considering the amount of opposition which has been shown. The main grounds for objection are said to be the immorality of the principal character—a man who kills his father, and as a fugitive from justice is sustained by other Irishmen. Mr. Yeats asks whether any one would prefer to see his country represented by a Macbeth, a Falstaff, or a Don Quixote. He insists that the central incident is not to be taken as typical of Ireland, and that to conceive of it as such is to show no artistic discrimination. The author has selected a specific—not a general—situation "around which to build his superstructure." If the play is immoral, which Mr. Yeats will not admit, it is no more an affront to the Irish than to

Digitized by Google

any others in the audience. He suspects that the parricide is not wholly responsible for this violent antipathy, but that Irish-Americans dislike to see certain characters and conditions of their native land realistically presented, and he warns them that Irish art will never flourish until a writer is free to figure life as he sees it.

Race or national sensitiveness may, it is true, be as unfair to a writer as it is unreasoned. Usually, burlesque, even though it results from an author's shot at the truth, causes no hurt. In London playhouses what American but is amused by the impersonation of a compatriot chewing tobacco, inordinately "guessing," and hot-foot to buy the Sistine Madonna? And we fancy that English and French equally cast sickly smiles —but still a smile—at the "Bah Jove!" and "Oui, oui" men who represent their countries on the American stage. It is the same off the stage as on. Uncle Joe Cannon only grew the happier the more the cartoonists tilted his cigar and the longer his cake-walk strides were made. But as soon as rank exaggeration ceases, sensitiveness begins. As the legal saying has it: "The greater the truth, the greater the libel."

What undoubtedly makes the Irish uneasy in the present instance is the authority given to the portrayal by its Irish authorship. Still, they might reflect that few countries are better off in this respect than theirs. The French look almost in vain for a single drama which sets forth their life typically, and remind us that as a people they are not wholly given to domestic intrigue. And even the world which Shakespeare created is not an accurate or representative mirror, though now and then a character in his works, as, for instance, Henry V, is hailed as embodying typically English traits. Our own country is in the same predicament. Lately, we have stood before the world in terms of unscrupulous captains of industry, or virtuous young college graduates matched against cruel hard-headed adults, or mothers willing to sell their daughters, etc. If various peoples were asked what plays they would each care to be known by, the list would surely contain as false fabrications as those to which they object. "The Rivals" and "She Stoops to Conquer" leave a pleasant taste in all beholders, and Englishmen would like to have us believe that their land is full of such attractiveness. But what of "The Second Mrs. Tanqueray" and "Mid-Channel"? If Americans were subjected to the same test, would they not still choose "The Old Homestead," rather than "The Easiest Way"? The Irish in this country are frequently confronted on the stage, without great irritation, by a corrupt Irish politician. But, then, he is always pictured as being good to children and dogs, and that helps.

The problem created by "The Playboy" is probably one, even as Mr. Yeats insists, not for the Irish merely, but for others as well, to pass upon; is in fact æsthetic, not national. One may coolly consider the desirability of an author's choosing for his central situation a remote instance. There may be cases in actual life of a man killing his father and later through repentance and struggle meriting prosperity, but instinctively one trusts that they are rare. Flying in the face of probability makes a proportionate demand upon the writer. It may be that Synge has lived up to the high praise artistically, which Mr. Yeats is trying to win for him. If so, he has created a picture which is great and true, not by virtue of its Irish setting, but because human nature in one of its most appalling aspects has been wrought to a noble purpose. Yet, successful or not, the play will never be dubbed typically Irish for centring upon parricide.

Ben Greet is publishing, through Doubleday, Page & Co., "Shakespeare a Child Can Read and Act."

Houghton Mifflin Company adds this week to its Riverside Press series, "Romeo and Juliet."

Gordon Craig's forthcoming book, "On the Art of the Theatre" (Chicago: Browne's Bookstore), tries to explain the art of preparing a play for the audience.

Maeterlinck's "Aglavaine et Sélysette" will be published shortly by Dodd, Mead & Co. in an English version.

On or about November 25 the Broadway Publishing Co. will issue, under the title "50 Years in Theatrical Management," reminiscences of M. B. Leavitt; the volume will have 485 separate portraits and will be sumptuously produced.

"What the Public Wants" (George H. Doran Co.), a four-act play by Arnold Bennett, is on the same general subject as, and might have been inspired by, "The Earth," of James Bernard Fagin, which is a much stronger work on the dramatic, or, at any rate, on the theatrical, side. Both are satirical attacks upon the modern monopolistic commercial journalist. Mr. Bennett's experience of newspaper life enables him to lift the veil from some editorial mysteries, and to make some fairly interesting copy, but it may be doubted whether a publication office conducted upon any such prodigal plan as he indicates would produce the millions of which he speaks so glibly. Like most facile writers, he falls easily into exaggeration, but there is a good deal of truth, unquestionably, in his conception of the character of the newspaper proprietor whose rule of life is to make money by printing stuff that the lower, more numerous, and least fastidious classes of the community are willing to pay for. He depicts a man who, though completely devoid of moral instinct, scholarship, or natural refinement, desires to figure as a patron of the arts, and therefore confers benefactions on Oxford and assumes the management of an independent theatre, which he proceeds promptly to make profitable and popular. He even dreams of establishing a salon, and, with that end in view, engages himself to a clever actress, who, in the end, dismisses him, despite his vast wealth, on account of his indifference to all dictates of social decency. Mr. Bennett exposes the meanness, the greed, the vulgarity, the hypocrisy, and the callous degradation of the yellow editor, and employs many humorous and forceful touches, but he has not succeeded, as Mr Fagan did, in drawing a powerful and menacing personality. As drama, his work is of small account, but as a satirical squib, it may amuse many readers, especially those who can recognize the original identity of some of the fictitious characters beneath the very thin veil of disguise. Mr. Bennett assails managers and critics as well as editors, and lays himself open to the suspicion of paying off old scores.

Otto Ludwig's "Erbförster" is a play which students of German may be expected to read with pleasure and profit, and in which students of the drama find much to admire and much to dubitate about. The edition (Holt) by Prof. M. C. Stewart is more nearly adequate to the needs of the first class of students than to the needs of the second class. The Notes interpret most of the difficult passages of the text, though the explanations given are not always either precise or satisfying; but the Introduction, unoriginal and uninspiring, does not lead to a just appreciation of Ludwig's drama. The immediate ancestor of "Der Erbförster" is Iffland's "Jäger," and every discussion of the question whether "Der Erbförster" belongs in the category of the dramas of fate must be based upon Jakob Minor's articles on this subject.

The popular and critical welcome extended to "Bunty Pulls the Strings," the Scotch comedy by Graham Moffat now to be seen in the Comedy Theatre, is due chiefly to the realistic quality of the piece, which is in effective and pleasant contrast with the artificiality so generally prevalent upon the stage. The play itself is not remarkable for either the strength or novelty of its motive, the ingenuity of its construction, or the brilliancy of its dialogue, while the humor of it, though positive and constant, is not always of the tonic or agreeable sort. Actually it is a somewhat cynical satire, in spite of its comic illustrations, upon the selfishness and hypocrisy of ordinary human nature as exhibited in a rural group of Scotch Presbyterians. The senior elder of the kirk, a flourishing grocer—who will not permit his children even to look out of the window on the Sabbath—has appropriated trust funds in order to pay the debts of a son whom by his severity he has driven into evil courses, and has changed his name in order to escape a woman with whom he has broken troth. The sanctified old spinster, whom he has defrauded, insists upon marriage as the price of silence, until she is proved to be a thief herself. The heroine uses her lover's savings to prevent a family scandal, while the minor characters are either ludicrous or insignificant. But each individual personage is real enough to be a copy from the life, and, moreover, there is nothing in their composite action that is not entirely plausible and consistent. For once, apparently, the mirror has been held up to nature and no attempt made to tamper with the reflection.

Digitized by Google

Herein lie the power and the value of the whole thing. The author evidently is much more of an observer than a creator. Tammas Biggar, the pharisaical grocer; Susie Simpson, the vinegarish and canting old maid; Bunty herself, the bustling little Scotch body who manages so successfully her own affairs and those of everybody else; the foolish, "goody-goody" lover, Weelum Sprunt; the buxom boarding-house keeper, Eelen Dunlop, who is willing to be either wife or housekeeper, on conditions, and the miscellaneous folk who gather in the church scene, are, in almost every instance, closely akin to very old stage figures, but have been made to act and talk like veritable human beings. If they were less photographically accurate, more broadly typical of national characteristics, they would, of course, be infinitely more valuable from the dramatic and artistic point of view. As it stands, the piece is an exceedingly lifelike and amusing sketch, which is important as a comparatively new experiment in the direction of Scottish comedy. But it cannot be placed in the same category with the best Irish plays of the Abbey Theatre. Mr. Moffat is not a J. M. Synge or a J. M. Barrie.

Madame Simone, for whom Henri Bernstein wrote his play, "The Thief," and who was greatly praised in Paris for her performance of the heroine, Marie Voysin, played that part in English for the first time in Daly's Theatre on Monday evening, and won a decided though not an overwhelming success. Evidently she is an artist of fine training and rare intelligence, though not, probably, of great emotional force. When "The Thief" was produced here originally the character of Marie was interpreted by Margaret Illington with much emotional vigor and eloquence, if not with any particular subtlety. The American actress strove—and, to a certain extent, successfully—to create sympathy for a distressed woman without much reference to her conduct or deserts. Her performance appealed to sentiment rather than to the understanding. Madame Simone's interpretation, on the other hand, is intellectual rather than emotional, and is more artistic—because more consistent and logical—if less theatrically impressive. It is probable also that she depicted it in the spirit designed by the author, who, doubtless, had her artistic limitations in mind when he wrote it. Briefly Marie is a woman so infatuated by her somewhat untrustworthy husband that she will stick at nothing to retain his favor. In her utter selfishness she remorselessly sacrifices an innocent youth to conceal her own treachery and crime. Madame Simone presents a woman manifestly capable of the actions ascribed to her, which Miss Illington did not do. But it must be noted that it is extremely doubtful whether Madame Simone could have exhibited the emotional abandonment of Miss Illington even if she had so desired. The impression created by her first appearance is that she is a charming and able, but not a great, performer. Her English is excellent except in passionate passages, when it is apt to become indistinct.

E. H. Sothern and Julia Marlowe, who will soon return to this country from their summer vacation abroad, will open their season at the Shubert Theatre, Brooklyn, on October 30. They will then play a four weeks' engagement at the Manhattan Opera House in this city. Their season this year will be a long one, extending to the first of July. No new Shakespearean play will be added to their repertory, but they will rely on "Macbeth," "Hamlet," "Romeo and Juliet," "The Merchant of Venice," "The Taming of the Shrew," "As You Like It," and "Twelfth Night." Next year they will make two new Shakespearean productions, one of which will be "Cymbeline."

"Whether or not 'The Sentimentalists' is 'a play,' or would have been 'a play' if Meredith had ever finished it, it is delightful to see and hear it again," says a writer in the London *Times*, "especially after fearing that one would never see it again. Further acquaintance further reveals its wit, its wisdom, and the beauty of its language; it is the essence of Meredith, the burden of some of his 'stiffest' poems, set easily and attractively before you."

A London journal describes one of the latest scenic inventions which Gordon Craig has patented:

The device is extremely simple. It consists of folding screens, which will stand of themselves without being fastened either to the stage or to ropes, rollers, or beams in the "flies." The screens can be made of any size required. They may be thirty feet high or only eight feet; they may have three folds or a dozen, and each fold may be one foot wide or six feet. Three men in three minutes could move or remove a whole scene, and, folded flat, each screen would take up very little space. The obvious advantages are the ease and quickness with which these things can be handled, and the simplicity of the manipulation. To change a scene would no longer be to roll up or roll down great canvases, to screw and unscrew bolts, to adjust and fasten ropes, to remove entirely an elaborately built-up set, and put another in its place. A complete change of scene can be obtained merely by rearranging a few screens. And when it is necessary (as in the case of touring companies) to take away the complete scenery of a play, the carpenters, instead of working all night and losing some very important piece of the outfit, could transport the folded screens to the van at a reasonable hour.

Music

Voice and its Natural Development. By Herbert Jennings. New York: The Macmillan Co. $1.25 net.

The Philosophy of Music. By Halbert Hains Britan. New York: Longmans, Green & Co. $1.35 net.

Unfigured Harmony. By Percy C. Buck. New York: Henry Frowde. $2.

School of the Piano Pedal. By W. S. B. Mathews. Boston: Oliver Ditson Co. $1.50.

Great as is the number of books on the singing and speaking voice, after reading Mr. Jennings's little volume of 220 pages one welcomes his announcement that he is at work on a larger book which will more exhaustively consider both the cultivation of the voice through its various stages of development and the correction of defects. The present volume touches only those points in training the voice for public speaking and singing that are absolutely essential to obtaining clear enunciation and to protecting the vocal organs from fatigue and overstrain; but it treats these topics with a directness, a lucidity, and an aptness of illustration that make it one of the most valuable of all publications on these topics. It is still as true as it was in the days of Locke that "too little care is taken to improve men in their own language so that they may be masters of it," and most actors still, as in the days of Shakespeare, mouth the speech instead of pronouncing it trippingly on the tongue. The average Englishman's delivery is, as the author remarks, loose, muffled, and "fluffy," and in the theatres it is no unusual sight to perceive people putting their hands behind their ears in order to catch a sentence. The dwindling congregations so often complained of are, in Mr. Jennings's opinion, due in some measure to the great lack of rhetorical power amongst the modern clergy. Most singers and speakers, too, suffer from frequent huskiness—one variety of it is clergyman's sore-throat. The case is mentioned of one clergyman of seventy in a busy London suburb, whose speech had become so husky and indistinct that his discourses were painful to utter or to listen to, and he was nigh losing his position; but with less than two months of correct vocal study he was completely restored. The method by which such a cure can be effected is set forth here convincingly in chapters on increasing the power of the voice, defective utterance, tone and its cultivation, natural pitch, articulation, followed by sections on public speaking, emphasis, gesture, and facial expression.

From Lewiston, Maine, one would expect a book on pioneer work in some improved form of lumbering or manufacturing, rather than a treatise on the Philosophy of Music. Dr. Britan, who is professor of philosophy at Bates College, is quite mistaken in supposing that in writing his book he was doing pioneer work in musical æsthetics. There are hundreds of books, chapters, and essays on the subject quite as important as the list of seventeen treatises which make up his bibliography; a list which does not include the writings of Hegel, Schopenhauer, Eduard von Hartmann, Lotze, Engel, Stumpf, Helmholtz, Wallaschek, Seidl, Ehrlich, and others who have contributed important data or suggestions. Most of the things Professor Britan says are true, many of them self-evident; his style is usually so dry and abstruse that his pages make dull reading. Had he read the treatises just named, particularly those of Eduard von Hartmann and Stumpf, he would have seen that he is entering as a pioneer a field which has already not only been long cultivated, but in some parts intensively so. To many professionals, and especially to musical critics, we nevertheless commend a careful perusal of Professor Britan's pages (207-227) in

Digitized by Google

which he shows conclusively that the final test of the value of a musical composition is not its sensuous beauty, or its form (as so many hold), but the inherent worth of its thought content.

Thought content is what one usually misses in the music of England. Possibly this is due in part to the fact that English composers are brought up too exclusively on figured-bass as a means of teaching harmony. Percy C. Buck, who is professor of music in the University of Dublin, is at any rate convinced that the musical knowledge acquired by figured-bass exercises, which are used almost exclusively, can by itself produce only a bricklayer, whereas every worker should cherish the hope of becoming a master-builder. His book on unfigured harmony is an attempt to teach writers how to acquire the sense of style and build on their own initiative. What a student most needs to know is how to harmonize melodies, and to this problem, in its advanced and elementary stages, the greater part of this treatise is devoted. The chapter on Harmonization of Melodies is preceded by one on Modulation and followed by three entitled Unfigured Basses, Inner Melodies, and Ground Basses. The illustrations and examples in musical type are useful and good in every way. One marvels at the thoroughness expected of students who try to pass the musical examinations in the Irish and English universities. Incidentally, the author pens a number of aphorisms, such as: "Few tunes start on an accented note"; "constructive ability is notoriously less common than analytic"; "the whole art of repetition in any form of art is the deliberate increasing, or abating, of emotion." Most timely and commendable is the warning given as to the true meaning of the word modern: "There is an unpardonable tendency amongst young students to imagine that they bring music up to date by cramming in all the accidentals possible. It is scarcely untrue to say that the reverse is the case."

One of the leading musical educators in America for many years has been W. S. B. Mathews. Among the many contributions he has made to tone pedagogy none is more valuable than his School of the Piano Pedal. It was not till the time of Chopin and Liszt that the extraordinary importance of the pedal for enriching tones and combining them into novel harmonies was understood, and to this day the majority of teachers devote most of their time to finger exercises, neglecting the pedal. To pedal a piece well is, however, as Mr. Mathews says, "more difficult than to write out a really artistic fingering for an individual hand." To teachers, therefore, as well as to pupils, his treatise must be commended; in fact, there are not a few among the best class of concert pianists who might profit by reading this book. It has special sections (with abundant citations from the works of great masters) on the pedal for legato playing; for connecting basses with the chords and chords among themselves; for atmosphere; and for curious and unusual effects. The only thing to regret is that Mr. Mathews did not discard the misleading traditional word "damper" pedal for the mechanism on the right which *removes* the damper. The expression is as foolish as the word "nasal" applied to tones which are *not* enriched by nasal resonance.

Ernest Ford is publishing through Treherne of London "A Short History of English Music."

"The Musical Amateur," by Robert Haven Schauffler, is issued this week by Houghton Mifflin Company.

Christopher Welch has written "The Recorder and Other Flutes"; it will be published shortly by Henry Frowde, with 112 illustrations.

"Thirty Songs by Liszt" is a timely addition to Ditson's Musicians' Library. They are selected, edited, and annotated by Dr. Carl Ambruster, the eminent pianist, conductor, and lecturer, who is at present musical adviser of the London County Council. Other new volumes in the Ditson series are: "Selected Piano Compositions of Schubert," edited by August Spanuth; "One Hundred Folk-Songs of All Nations," edited by Granville Bantock, and Krehbiel's selection of "Songs from the Operas," for baritone and bass voices.

Of the many biographies of Beethoven, the best is still that of the American, Alexander Wheelock Thayer. The Germans themselves have acknowledged this without dissent, and two of their scholars, H. Deiters and Hugo Riemann, have in succession incorporated in its text the results of the latest researches. Among the shorter sketches, none is more serviceable than that of H. A. Rudall, who was able to build on the labors of Thayer and also those of Grove. A new edition of his "Beethoven" has just been issued by the Scribners, in company with new editions of "Mozart," by Dr. F. Gehring; "Purcell," by Dr. William H. Cummings; and "English Church Composers," by William Alex Barrett. Gehring is a well-known German scholar, a contributor to Grove's "Dictionary of Music and Musicians." His biography of Mozart embodies many of the most valuable points in Jahn, without any of that specialist's prolixities. In writing the life of Purcell, Dr. Cummings had no easy task, as the historians whose duty it was to gather information regarding England's foremost composer—Sir John Hawkins and Dr. Burney—neglected their opportunities. His own sketch of Purcell's career was first printed as long ago as 1882, in Novello's Great Musicians series (a fact which it would have done no harm to mention in the new edition), and it is still the standard treatise on this master, whose genius had so great an influence on Handel. Because of the exhaustive treatment of his labors by Dr. Cummings, Mr. Barrett disposes of him briefly in his volume on English Church Composers, reserving his space for Tallis, Birde, Bull, Morley, Gibbons, Barnard, and a multitude of others who won fame in this field.

Art

Houghton Mifflin Company will issue shortly: "The Life and Works of Winslow Homer," by William H. Downes, and "Portraits of Dante," by Richard T. Holbrook.

Oxford books announced by Henry Frowde include: "Byzantine Art and Archæology," by O. M. Dalton of the British Museum.

Bell & Sons announce a volume of papers and addresses by Walter Crane, called "William Morris to Whistler," and Reginald Blomfield's "History of French Architecture from the Reign of Charles VIII to the Death of Mazarin," 2 vols., and above 300 illustrations.

In "Furniture," announced by Duffield & Co., Esther Singleton undertakes to trace the history and evolution of this art from early times.

A volume dealing with Chardin, whose significance in the development of painting Herbert E. A. Furst, the author, holds to be great, is this month added to the handsome Classics of Art series (Scribner).

Paul Elder & Co. have in hand, under the title "Envelope Brochures," a series whose purpose is to present exquisite examples of typography.

George H. Doran Company's latest additions to art gift books include: "Stories from Hans Andersen," illustrated by Edmund Dulac; "David Copperfield," illustrated by Frank Reynolds; Tennyson's "Idylls of the King," illustrated by Eleanor F. Brickdale; Sheridan's "School for Scandal," illustrated by Hugh Thomson; Dickens's "Christmas Carol," illustrated by A. C. Michael; "Arundel Library of Great Masters"; "Below Zero," with colored plates by Noel Pocock, and verse by A. E. Johnson; "The Story of France," by H. E. Marshall, illustrated in color; "Fairies I Have Met," by Mrs. Stawell, illustrated by Edmund Dulac; "Golden Treasury of Songs and Lyrics," by Francis T. Palgrave, illustrated by leading artists; "Stories From the Arabian Nights," retold by Laurence Housman, drawings by Edmund Dulac; "Days With Great Composers, Beethoven, Mendelssohn, Schubert," illustrated by portraits; "Days with the English Poets, Tennyson, Byron, Browning," with twenty plates in color; "The Garden of Love," anthology, by May Byron; Walton's "The Compleat Angler," with color plates by J. H. Thorpe; "Thoughts on Hunting," by Peter Beckford, illustrated by G. D. Armour; "The Power of the Dog," done in color by Maud Earl, described by A. Croxton Smith; Children's Series, including: "The Treasure-Book of Children's Verse," edited by Mabel and Lilian Quiller-Couch; "The Kewpies and Dotty Darling," verses and pictures by Rose O'Neill; "The Book of Baby Beasts," illustrated by E. J. Detmold, described by May Byron; "Cecil Aldin's Happy Family," illustrated; "This Year's Book For Boys," illustrated by color plates; "The Peek-a-Boos," color and verse by Chloë Preston; "The Teddy Bearoplane," "The Little Small Red Hen," and "Adventures of Dumpy Dimple, and His Dog," by May Byron;

"Fables from Æsop," illustrated by Percy Billinghurst.

The greater part of Cecilia Waern's "Mediæval Sicily" (Dutton) is devoted to an account of the arts and crafts of the island in the brilliant century of Norman rule. Mosaic had not yet given way to fresco, and stone-carving had not reached the dignity of an independent art, but the churches and palaces of the Normans were decorated with all the beauties that the workers in glass and wood and marble could supply, and there remain vases, ivories, jewels, and a wealth of woven stuffs, to testify to the skill of the lesser craftsmen. The art was Norman only in its patronage. Church plans were almost invariably Byzantine, and the decoration was now Byzantine, now Saracenic, now South Italian. Miss Waern's descriptions are no less careful than enthusiastic, and she is familiar with the best technical studies of the several monuments. Her interest is in the whole life of mediæval Sicily, as well as in its art. She traces the old streets and quarters of Palermo, and quotes at length from the curious records of travellers and geographers of the Norman period. The humble life of peasants and city workmen and the luxury of the palaces are alike reflected, and bits of modern folklore that seem to be survivals from mediæval times are reported *con amore*. The book is finely illustrated.

A. L. Baldry has inquired into the methods of nineteen British painters in water-color, and the result of the quest is a quarto volume, with thirty-eight good color plates, called "The Practice of Water-Colour Painting" (Macmillan). Among these painters the most prominent perhaps are Alfred East, Frank Brangwyn, Arthur Rackham, and Arthur Wardle. Considered as a picture-book, this work has much to commend it. Whoever looks for practical guidance in it will be disappointed. There is no modern method of water-color painting. Wardle's amazing animals are gouached upon colored paper. The method is that of oil. Brangwyn paints either in water color or body color, but regards the mixture as a solecism. Some painters leave the original wash, some build upon it tenderly, others scrub and wash it out vigorously for texture. Some wash out when they must; others do so regularly. Some regard retouching in body color as a necessary evil, others as a usual resource. In short the much vaunted school of British water-color painting rejoices in complete anarchy, or let us say more politely in untrammelled individualism. For Mr. Baldry all ways are good, even combinations of pastel and aquarelle do not offend him. To the present writer few of the reproduced pictures seem of a quality to make the analysis of their *facture* either important or exemplary. It may be noted, perhaps, that men in whom the inventive quality is unmistakably strong—men like Rackham, Weguelin, and Brangwyn—have a tendency to the old-fashioned practice of leaving the original washes in their fair transparency.

The veteran landscape painter, James Aumonier, the report of whose death has reached us, was one of the few survivors of the company of English landscape painters who succeeded the pre-Raphaelite movement. Associated with him in particular were Buxton Knight, Charles, and Fisher.

Finance

EUROPEAN LENDERS AND AMERICAN BORROWERS.

Foreign financial critics have laid emphasis of late on one aspect of the present confused position which amounts to a financial innovation, and which has come into stronger light this week. In virtually every disturbance of Europe's money markets for a decade past, until this year, the urgent borrowings by Wall Street in Europe were an aggravating cause. This was particularly true when the foreign bank rates were concertedly advanced in 1905, 1906, 1907, and 1909. Even in 1910, the salient fact of the day was New York's besieging of foreign money markets, Paris particularly, to raise money on new bonds, new stocks, short notes, and finance bills. What is happening this season is that, while Europe's money markets have been confronted with stringency and disorder through causes in which America had no part, New York is doing its best to stop the trouble by enormous loans to Europe.

This European borrowing from our banks began a month ago; it was Berlin particularly which asked for loans, and offered 6 per cent. or more for them. That demand was commonly ascribed to the German crisis of the first week of September, and to preparations for financing the extraordinary requirements of the October settlement week. But the borrowing continued after the German market had recovered and the October account had been adjusted.

Last week, the inquiry broadened to a point where international bankers estimated that our market's loans to Paris, Berlin, and London exceeded $150,000,000. More than half of this sum has been advanced to German borrowers, whose aggregate demands on this market, during the past six weeks, have been quite unprecedented. The inquiry for exchange with which to transfer these credits explains why foreign exchange has ruled firm this month, in the face of shipment of cotton and other merchandise from New York of unprecedented magnitude for this month—which would usually have broken foreign exchange and caused gold imports.

From the home money market's point of view, the inducement to make these foreign loans lay in the fact that Wall Street borrowers were last week bidding only 3½ per cent. for ninety day secured loans, when virtually 4½ per cent. was offered by German borrowers. Further inducement, having great weight with the large New York banks, arose from the consideration that an institution making such an advance to a Berlin bank does not necessarily have to tie up its funds for a fixed period, as would be the case in making a ninety-day loan here. That is because the three months bill, which the German borrower gives as evidence of his indebtedness, can always be converted into cash before maturity, should the New York lender suddenly wish to use the money otherwise.

Since our banks cannot possibly, under present conditions in the speculative market, lend out on call the money ordinarily employed in Stock Exchange demand loans, without breaking the Wall Street rate to less than 1 per cent., they are naturally glad to make quick loans to the great banks of Europe at such advantageous terms. The situation has even been taken advantage of by the foreign buyer of our cotton, to finance his purchases in this market. Ordinarily he would discount his bills abroad; he is able now to procure his accommodation on this side through the Wall Street correspondent of his London, Paris, or German bank.

The episode is most unusual. It is not, to be sure, the first occasion when New York has loaned money on the grand scale to Europe. Our bankers took some $200,000,000 of the British war loans in 1901 and 1902, besides from twenty to forty millions of new bond issues by the German Empire and the German cities. We also bought up, at a prodigious price, the English steamship lines. But that was not a result of home reserves of capital greater than home demands; for American money rates were high in that period, demands of domestic finance and industry unprecedented, and our own borrowings from Europe on finance bills had been some $250,000,000. We were actually lending Europe's own money back to her.

Since then—except for 1904, when our $150,000,000 loans to Japan may possibly be described as indirect advances to Europe—New York has been a persistent and at times enormous borrower abroad for all sorts of purposes, including the financing of "booms" on our Stock Exchange. We drifted very far away from the days, in 1900 and 1901, when excitable Wall Street used to talk of New York supplanting London as the financial centre of the world. But here is Wall Street again financing Europe, and even London explaining how another advance in the Bank of England rate may be avoided if New York will send it gold—which virtually means, if New York will lend enough more money.

The explanation is not altogether difficult. Financial America saw its own reckoning ahead, nearly two years ago. It tried to avert this, first by strengthening its home bank position, next by selling to Europe all the securities and merchandise it could place with foreign buyers. All that did not prevent the impending liquidation, which was thorough and drastic on every American market, whether financial or industrial, and which released very large

Digitized by Google

amounts of tied-up capital. But the necessary upshot of this coincidence of so many measures of relief was, in the end, an American money market oversupplied with unemployed liquid capital. Just at the moment when this state of things became visible in America, Continental Europe entered on the phase of drastic financial strain which had confronted America at the beginning of 1910.

No doubt the problem of chief interest is, what the state of markets, home and foreign, will be when the European liquidation also has been completed. The one certain fact is, that these recent events in international finance throw light on the unusually strong position of this country.

Some of Henry Holt & Co.'s Fall Books

Published at 34 West 33rd St.

Fall Announcement Pamphlet on Application

BIOGRAPHY HISTORY TRAVEL, etc.

A new series edited by *Prof. W. P. Trent.* With portraits. Probable price, $1.75 net.*

H. W. Boynton's **The World's Leading Poets.** Homer, Virgil, Dante, Shakespeare, Milton, Goethe. (Nov. 11.)

G. B. Rose's **The World's Leading Painters.** Leonardo da Vinci, Raphael, Titian, Rubens, Valasquez, Rembrandt. (Nov. 18.)

W. L. Bevan's **The World's Leading Conquerors.** From Alexander to Napoleon; and other volumes are in preparation.

Fournier's **Napoleon I.** New edition. Revised and greatly enlarged, containing some letters of Napoleon's never before published. [*The Literary Digest* says that it was "immediately accepted as the standard work on the subject. . . . the final result of research and scholarship . . . bright and readable."] (2 Vols. 8vo. $8.00 net.*

Henry S. Williams' **The United States Navy.** A handbook for the general reader or enlisted man by Naval Constructor Williams, which has been passed by high authorities and officially sanctioned, apparently the first American book of the sort. With 32 full-page illustrations and others in the text. 8vo. Probable price $1.50 net. (Oct. 28th).

E. J. Dingle's **Across China on Foot.** A trip (1909-10) from Shanghai, 1,500 miles by river and 1,600 miles by foot to the other edge of China, on the frontier of British Burmah. A good, vigorous narrative with personal interest and a spice of danger. He shows us China from the inside. Profusely illustrated. 8vo. $3.50 net.

Lovat Fraser's **India Under Curzon and After.** With four photogravures and four maps. 8vo. The country and the people of India are becoming the dominating factors in Asiatic politics. Lord Curzon's vice-royalty was marked by a vigorous handling of the modern problems of colonial administration. Probable price $4.00 net. (October 28th).

CRITICISM POETRY and MUSIC

Frederic Taber Cooper's **Some Representative American Story-Tellers.** Papers by a favorite contributor to *The Bookman* on the work of Crawford, Herrick, Glasgow, Chambers, Atherton, Churchill, Wiggin, Phillips, Norris, Henry, Wister, Tarkington, Wharton, and Bierce. With portraits. Probable price, $1.50 net.* (Nov. 4th).

Pancoast and Spaeth, (Eds.) **Early English Poems.** A collection of famous old English verse modernized when necessary. [Selections from *Beowulf, Cynewulf, Historic War Poems, Gawayne, and The Green Knight, The Debate of the Body and Soul, Chaucer, Dunbar, Lyndsay, Wyatt, Surrey, Sir Philip Sydney,* and numerous songs and ballads.] With an introduction and full notes. 12mo $1.50 net.*

Charles G. Ross's **The Writing of News.** A practical handbook by a trained newspape man, with illustrative cuttings, "heads," etc. Probable price $1.50 net.* (Nov. 4th.)

March-Phillips' **Architecture and Environment.** Admirably written chapters on the art and architecture of Egyptians, Greeks, Romans, Saracens, and later European races viewed from the standpoint that these arts reveal man and furnish a key to the understanding of racial characteristics and geographic and historical conditions. About 300 pp. 8vo. Probable price, $2.00 net.* (Oct. 28.)

Filson Young's **Wagner Stories.** The author thinks he would have had Wagner's approval in not attempting to prime his readers with *motifs* and other high mysteries, though he has tried to "inspire the prose of these narratives with some breath of the emotional atmosphere, which it is the peculiar quality of Wagner's music to produce." From the 6th English edition. $1.50 net—*gift edition, limp leather, boxed $2.50 net*.

Filson Young's **Mastersingers and More Mastersingers.** *Mastersingers* (2d American from 6th English edition) includes *Tristan und Isolde, Tschaikowsky's "Pathetique," Beethoven's Pastoral, The Music of the Cafés, Berlioz,* etc. *More Mastersingers* (just out), includes The Musician as Composer, Interpreter, and Hearer, The Music of the Salon, Debussy, The Old Age of Richard Wagner, etc., etc. Either book $1.35 net.*

NATURE BOOKS

Douglas H. Campbell's **Plant Life and Evolution.** A non-technical and decidedly readable account of the evolution of the vegetable kingdom. (American Nature Series.) Probable price $1.75 net.*

J. Arthur Thomson's **The Biology of the Seasons.** The author of "Darwinism and Human Life." "Studies the drama of the year with the sympathetic feeling of the old naturalists." With 12 plates in color. 8vo. $2.75 net.*

FICTION

Mrs. Inez Haynes Gillmore's **Janey.** A humorous and sympathetic book about a little girl of nine, by the author of "Phoebe and Ernest." $1.25 net.*

Rolland's **Jean Christophe in Paris.** (The Market Place—Antoinette—The House.) The Springfield Republican called the earlier *"Jean Christophe"* "A book as big, as elemental, as original as though the art of fiction began today." $1.50 net.*)

DeMorgan's **A Likely Story.** A story in Mr. DeMorgan's old vein that should be as popular as anything he has ever written. $1.35 net.* (*Nov. 4.*)

H. Rider Haggard's **The Mahatma and the Hare.** A Dream Story. One of the great stories of animals. With 12 full-page illustrations by H. M. Brock and W. T. Horton. $1.00 net.*

Hunting's **A Hand in the Game.** An unusually good story of love and adventure in an American village. With colored frontispiece. $1.20 net.*

*Postage on net books 8% additional.

The Nation

NEW YORK, THURSDAY, OCTOBER 26, 1911.

The Week

It would doubtless be impossible to prove that any positive neglect of the public business is involved in the President's prolonged tour of the West. Yet it is evident that there is in Washington a feeling of uneasiness about the many important topics which will need to be brought to Mr. Taft's attention on his return. This feeling has obviously been heightened by the announcement that the President has decided to extend his trip, planning now to travel in the South and not to reach the capital until about the middle of November. That would certainly leave him scant time to make his preparations for the assembling of Congress, to say nothing of executive matters waiting for his decision. With the political effect of his journey at least of doubtful advantage to the President, it has frankly to be said that his example in being so often and so long away from Washington, or his "summer capital," is one that his successors will be well advised not to follow.

It was high time for Mr. Hitchcock to notify postmasters that the enforcement of the regulations concerning improper matter for the mails "should be characterized by wise conservatism and justice." He himself had already ruled in favor of the report of the Chicago Vice Commission, at least to the extent of permitting it to be mailed to the list of social workers to which it was being sent through the generosity of John. D. Rockefeller, jr. We are not as yet familiar with the alleged offences of the Richmond *Journal* and *News-Leader*. If they were similar to those of the metropolitan yellow press during the Thaw trial, the Department is in a strong position. But this question demands something more than the bureaucratic rule-of-thumb procedure which marked the opinion of the fourteenth or fifteenth Deputy Assistant Attorney-General for the Post Office Department who blundered in the Chicago case. Not only is the character of the matter to be considered, but its purpose, as well as that of its publishers. If the work is a genuine scientific undertaking, not scattered promiscuously or intended for general sale, it should not be debarred from the mails.

Senator Cullom's abandonment of his undertaking to restore harmony among Illinois Republicans, in despair at the hopeless split, is as significant of the Senator's own loosened hold in Illinois as of the seriousness of the division which he laments. Going to Illinois from Washington two months ago, he has had to listen ever since, not to plans for composing the differences between Lorimerites and Progressives, but to arguments against his own candidacy for reëlection to the Senate. Speaker Cannon discovered the temper of his party in a somewhat similar way a few years ago, when he left Washington in all the glory of his freshly won Speakership to break the six-fold deadlock for the nomination for Governor. The convention made him its presiding officer with enthusiasm, but the potency of his gavel was limited to questions of procedure. In the end the man who had made it impossible for Lorimer's candidate to win on the first ballot became the nominee and has been Governor of Illinois ever since. One thing Speaker Cannon was spared, however. No one told him that harmony would be nearer, the farther he was away. The rout that began in the Old Guard in the Senate seems destined to reach every member of it. There is pathos as well as unconscious humor in Senator Cullom's announcement that he is giving up the task of straightening things out in Illinois and going back to Washington to take up the consideration of the peace treaties.

Mr. Hearst's formal announcement of his return to the Democratic party will be received by Democrats in New York with mingled emotions. Does he come back as a Prodigal Son, tired of wasting his substance in the far country of the Independence League? Or is it his idea that the party ought to acclaim him as a conqueror? As for the Independence Leaguers, they may easily be imagined dolefully chanting "The Lost Leader"—just for a Democratic ribbon to stick in his coat! For them there must be dejection not only on account of the great cause abandoned, but because of the cashier who now fails them. Republicans, too, will feel that Hearst has done them an ill turn in abandoning his rôle of free lance. They can no longer find comfort in the thought that even if Democratic prospects looked bright, Hearst could be depended upon to make mischief; and his rushing back to the Democratic fold now will be taken as a sign that he sees not a ghost of a chance next year for either an irresponsible guerrilla like himself or for the Republican party.

The announcement that Senator Penrose favors the commission form of government for Philadelphia will startle no one who has followed the course of the Senator's excursion into the politics of his own city. Conditions in Councils, he finds, despite the many good men in both branches, "are admitted to be unsatisfactory," so that from this moment their reformation is worthy of most serious consideration "by every one interested in the betterment of municipal conditions." Being thus interested, the Senator looks about for a remedy, and his eye lights upon—Pittsburgh. The Pittsburgh Councils, too, sad to say, were formerly corrupt, so corrupt and incompetent, indeed, "that the Legislature was obliged to rip them all out of office," and put a commission in their place. Of course, no one will think of doing anything hastily, and "nothing will be done ultimately except what is in accord with the best public sentiment of the people of Philadelphia." But if Mr. Earle should be elected Mayor, and then be declared ineligible, might not a commission be the wish of those who assume to speak for "the best public sentiment" of Philadelphia? And who better fitted to head such a commission than Mr. Earle? It is safe to say that the new form of government will wait a long time before procuring a more influential convert than the senior Senator from Pennsylvania.

In Charleston, South Carolina, a fight is on against the establishment of a race track. Apparently that city feels the force of the widespread sentiment against the evils bound up with racing in this country. The same interests

Digitized by Google

which formerly maintained tracks in Florida are behind the project, and the example of Florida in abolishing racing is now used as a weapon against them. They have the necessary charter, but the Charleston newspapers are predicting that it will be revoked by the next Legislature. Against the chief argument in favor of the track—that of commercial advantage to the city—an overwhelming weight of testimony is presented from representative business men of the Florida cities where the experiment was tried.

A remarkable state of mind is presented by the desire of Fremont Older, editor of the San Francisco *Bulletin*, for the release of Abraham Ruef, the notorious boss whose conviction and imprisonment were brought about primarily through Older's unremitting efforts. Mr. Older declares that in his hunting down of Ruef he was vindictive and savage:

> I went to Washington and enlisted Heney in the fight. William J. Burns came and I persuaded Spreckels to help us. At last, after years of a man-hunting and man-hating debauch, Ruef became what I had longed and dreamed that he might become—a convict.
>
> Then I said to myself, "You've got him. He's in stripes. He is helpless, beaten, chained. You've won. How do you like your victory?" . . .
>
> Well, my soul revolted. I thought over my own life, the many unworthy things I have done to others, the injustice, the wrongs I have been guilty of. . . . I see myself now stripped of all sham and pretence and self-righteousness, holding the key to another man's cell. If society will let me I want to unlock that barred door, and for the rest of my life try to get nearer the spirit of Christ.

There is no question of Mr. Older's sincerity, and it is impossible to withhold respect for the humane feeling and the personal humility that he expresses. But it is essential to distinguish between the question of the sincerity or beauty of such feeling on the one hand and that of the clearness of the thinking that accompanies it on the other. "I think vengeance—and by vengeance I mean punishment—makes us all worse rather than better," says Mr. Older. But, whatever may have been his own personal feelings or motives in bringing Ruef to justice, the motive of the community was neither "vengeance" nor the desire to make Ruef "better." The prime instigator of the movement to put an end to Ruef's reign of scoundrelism, and to warn others of Ruef's stripe that they engage in similar work at their peril, may have been led by some blind instinct to do the great public service which stands to his credit; if so, we can only say that he builded better than he knew. The need of holding forth the bitterness of punishment as an agency for deterring men inclined to certain forms of evil from which society must protect itself is the beginning and the end of the justification of punishment. And whether, in the judgment of God, other forms of evil, of which judge, or jury, or lawmaker may be guilty, are more or less reprehensible, has absolutely nothing to do with the case.

A food expert without a fad looks almost like a contradiction in terms, but it is the ideal that Dr. Wiley professes to follow. In proof of his sincerity, he has now ranged himself on the side of the feasters as opposed to the fasters, and thereby finds himself once more in the ranks of the majority. It is so refreshing to be advised to continue doing the thing which we have always done, and which we are bent upon doing to the end, that we cannot restrain our admiration for the man who sets the seal of his approval upon it. This is particularly true because of the innumerable warnings showered upon us of what we must not do again if we expect to live out half our allotted days. Once all we had to do, even in a crisis, was to take the most awful chemical compound that the wit of doctors could devise. Now, nothing less than the complete alteration of one's habits of life will tide one over the most trifling trouble. Dr. Wiley comes, therefore, as a novel and delightful sort of practitioner, bearing the glad tidings of a double emancipation, from regulated mastication and partial starvation no less than from drugs.

The late Clark Russell would have found in the sea-wanderings of the "Holy Ghosters" yacht Coronet a tale upon which to found another sea-yarn fairly rivalling the "Wreck of the Grosvenor." To parallel the sufferings of those sixty-six people on a 133-foot yacht, undergone for the sake of what can only be termed a religious aberration, one must go back to some of the early efforts to reach America in the search for religious freedom. Their craft itself was once a noble one; it has twice been around the world and once won a transatlantic race. But those four months spent in the endeavor to sail from Hayti to Greenland have been severe enough to wear out many a sturdier ship. It is to be hoped that the authorities may now find some way to interfere with this fearful dragging of defenceless children over the seas. But as for the Rev. Mr. Sandford, there is no breaking his spirit. Now that a summer in Africa and a winter in Greenland have been denied him, it may be that the salvation of Maine will have to occupy him for a little while. It will take time to repair his religious letter-of-marque and to assemble the necessary funds to cruise again. He has been around the world once in the Coronet; yet the silly old world still talks of Protestants and Catholics and Mohammedans and all the rest of the faiths which Sandford has placed on the rubbish heap.

Prof. Basil L. Gildersleeve completed on Monday his eightieth year, with no apparent diminution of his intellectual vigor and alertness, or of the sparkling and pungent humor which has been so vital an element in the influence he has exerted upon students and scholars for more than half a century. The place of Greek in the college and university world is very different now from what it was when the young South Carolinian, at the age of twenty-two, gained his doctorate of philosophy at Göttingen, among the first of the long line of American scholars who were to bring to this country the ideals and standards of German learning and science; but in Professor Gildersleeve's lecture-room, as in his published writings, the lamp has been kept burning as bright as ever, through all the changes of time. How little he answers to the vulgar notion of the Greek or Latin specialist has been evidenced month after month, for more than thirty years, in the delightful wit and almost encyclopædic range of his "Brief Comment" in the *American Journal of Philology*, of which he has been the editor from its foundation in the early years of Johns Hopkins University. Of that institution, as of the intellectual and social life of Baltimore, he has been a leading light during the thirty-five years of his professorship there, following upon twenty years as professor in the University of Virginia.

Europe's welcome to Thomas A. Edi-

Digitized by Google

son was so whole-hearted and universal that we cannot wonder at the look of pain that appeared on the face of the Continent at the distinguished guest's blunt and ready judgments on things European. The trouble is this: Europe has not yet grasped the truth, which with us has become a commonplace, that eminence in one particular field makes a man an oracle in every other field of human endeavor. That is why a champion polo-player returning from abroad is asked whom he picks for the Republican nomination in 1912; why the leading lady in a musical comedy outlines for us the future development of aviation; why novelists are hired to write picturesque accounts of baseball games that have to be supplemented by a statement of what happened at the game; why stock brokers continually lay down new principles of political economy, and why Trust magnates are in a position to define the religion of the future.

One of Mr. Borden's Cabinet appointments has provoked warm discussion in the Canadian press. It is that of Mr. Monk to be Minister of Public Works. The point is that he has been Bourassa's chief lieutenant in the Nationalist movement. Of that French-Canadian agitation, a leading feature was protest against the building of a Canadian navy, to be put at the disposal of the British Admiralty, and it is accordingly natural for a paper like the Toronto *Globe* to assert that, since Mr. Monk joins the Government as "the mouth-piece of Mr. Bourassa," the Navy Act will be "repealed or suspended." This is partly borne out by the organ of the Quebec Nationalists, *Le Devoir*, which thinks that Mr. Borden will not go on with the navy plans until they have been submitted to the people, "either in a general election or in a referendum." The journal quoted hastens to add, however, that on this question the Nationalists stand ready to acquiesce in the verdict of the majority. All this makes it probable that the naval programme of the Laurier Government will not be openly abandoned by Mr. Borden, but that he will go slow with it and seek to modify it. What seems certain is that Canada, in her present temper, will insist upon keeping for her own use whatever warships she may build, and will make no direct contribution to British seapower.

Technical education in Germany has often been highly and enviously praised, and the authorities in that country are evidently awake to the advantage of maintaining and extending it. A recent step in advance is the organization of special courses for graduates of technical schools. In Bavaria, as we read in the *Frankfurter Zeitung*, it is now made compulsory upon engineers in the employ of the state to attend a certain number of these *Fortbildungskurse*. This is particularly the case with structural engineers. Graduates of ten or fifteen years' standing may not in all cases have kept up voluntarily with modern methods in building, and the aim is to help them to be level with progress in their profession by hearing lectures on its latest phases. Among the topics which they were to hear discussed this month at the technical school in Karlsruhe are "Progress in Building and in the Transport of Materials," "The Economic Bearings of Gas-Industry," and "Problems of Finance and Personnel in Modern Industry." It is by such methods that the Germans aim not only to educate technically but to make the processes of technical education continuous.

Two Italian professors have recently had their say concerning the raid upon Tripoli. One is described as the head of an Italian archæological mission in North Africa. Interrogated by the Italian Government with regard to the natural resources of the coveted territory, this expert replied in a manner calculated to make the patriotic bosom swell indefinitely. There is plenty of rich soil in Tripoli, if you know how to look for it. There is no dearth of water, if you sink enough artesian wells. There is a great deal of timber on the mountains at a considerable distance from the coast. The natives are not hostile to Italy, if you find the right kind of natives. In other words, throughout this "scientific" report our expert is desperately trying to make out a case for his employers, who in the present instance are the Italian Government. Having been accused of criminal conduct in seizing land belonging to some one else, and of foolish conduct in seizing land that has little value, Italy is determined to prove that the second charge at least is untrue. In doing so she has shown once more that, when patriotism calls, star-eyed science will frequently consent to shade the truth a bit.

But there are honorable exceptions. Another Italian professor, Guglielmo Ferrero, has refused to kow-tow to the idol of Imperialism. He has not come out in open opposition to the Italian Government's policy, but in an article written for *Figaro*, on the abstract problem of ancient and modern Imperialism, he expresses little confidence in the classic argument for land-grabbing, namely, that it is all for the benefit of civilization and of the inhabitants of the land seized upon. Professor Ferrero admits that the superficial benefits of modern civilization follow in the wake of European conquests—railways, sanitation, public security, justice. Judged by such standards, the work done by France in Algeria and Tunis would seem to justify Italy's mission in Tripoli. But Professor Ferrero has spoken with men of affairs in Tunis and Algeria, and upon the question of the ultimate outcome these men have shaken their heads. When the railways and wireless and European civilization in general have bitten far enough into Moslem society to engender decay and decomposition, what will happen then? The conflict between a civilization triumphant and a decadent civilization at bay has several times remade history.

The people of Japan are learning that it is one thing to get rid of a Cabinet, but quite another thing to set aside a policy. They have exchanged Katsura for Saionji, but Saionji's programme promises no radical departure from Katsura's. Expenditure is to be maintained, as by the late Administration, and no new schemes are to be adopted, owing to the difficulty of finding funds. One of the well-informed Japanese newspapers announces, as an important part of the financial policy of the new Government, a thorough overhauling of the whole system of taxation. But no one will expect this to be accomplished at once, if it is accomplished at all. The "Pay, pay, pay" stage of expansion is not so easy as the drum-and-fife stage, but it follows that stage inevitably. Any Cabinet in Japan will find its path difficult until this part of the nation's route is past—more especially until the Japanese people see that no Cabinet can perform what must be left to time.

LYNCHERS TRIUMPHANT.

The failure of justice at Coatesville is now virtually complete. Five men have been put on trial, only to be acquitted without the slightest attention being given to the evidence. In one case the State's Attorney had to stand by and watch the crowd cheer the acquittal of a man who had confessed his participation in the burning of the negro Walker. The jurors who are false to their oaths are lionized by the community. There is hardly a citizen in this Northern community who has not been more or less *particeps criminis*, chiefly through a refusal to uphold the law by word and deed. The lynchers are on top. They have not only defied the machinery of justice in their county; they have mocked that of the great State of Pennsylvania. They have flouted their own Governor who declared on September 12: "I am determined that, no matter at what cost, the offenders who have brought such a blot on the State of which I am the presiding Executive, shall and must be brought to account for their dastardly crime." In reply Coatesville answers the Governor by placing laurel wreaths on the jurors who connive to acquit the lynchers.

The lynchers are triumphant. Yes, not only in Coatesville. Before us lies the Topeka *Plaindealer* with the horrible story of the lynching at Durant, Oklahoma—on the *same day* as the Coatesville burning—of an unknown negro. Here the white fiends who shot down the man without giving him a chance to defend himself, were so proud of their work that they bound the body to some planks, and, as the picture before us shows, posed around their victim while the photographer recorded the scene. Even with such proof, we are sure, a Coatesville jury would acquit. In Oklahoma apparently nobody has stirred, despite this convincing evidence. The lynchers are on top. Their victim was a stranger in a strange land; the woman in the case identified him *after* the mob had killed him—what else could she do, in the presence of a half-drunken and violent mob? Then these exponents of American civilization piled fagots around the body and danced around the fire as it consumed their victim. Is it any wonder that the *Plaindealer* begs every negro newspaper in the country to reprint this cut, that "the world may see and know what semi-barbarous America is doing"; and may know how they scorn the "white ministers and Christian workers who are bent on Christianizing the heathen Chinese"?

The lynchers are on top—near Charleston, South Carolina. There a despicable wretch was lynched two weeks ago. It was done, says the Charleston *Evening Post*, in the "most approved and up-to-date fashion." Automobiles filled with "prominent citizens" took part in the chase. "Among those present" was a Representative in the General Assembly, the Honorable Joshua Ashley, who with his son took the prisoner from the sheriff. But, of course, now that the event is over, nobody knows anything about the crime. As the Charleston *Evening Post* puts it:

> It is obviously impossible, in all the circumstances, that anybody of the neighborhood should be able to say just who had a hand in the lynching. Indeed, it would seem as if none but the sheriff who lost his prisoner and the coroner who took down the body—and, of course, the good folk who cut the negro's fingers off for souvenirs—knew that there was a lynching, and even they cannot be sure that the man didn't hang himself by his foot and riddle his own body with bullets.

Brave as these exponents of white civilization are, our Charleston contemporary asks why they should also be so modest about concealing their services to humanity, and refuse to come forward and accept the plaudits of their State. It points out that their Governor and their senior Senator have themselves lauded lynching to the skies. A Sumter, S. C., jury has just freed under the "unwritten law" a white man who killed a negro in the dark by mistake, believing that this victim, who was admittedly innocent of any wrong, was a white man who had invaded the sanctity of the murderer's home. Why should not the Honorable Mr. Ashley and his son openly avow their having taken the place of the law and the courts, and so put lynching on a sound and recognized footing?

The lynchers are almost on top in New York. Two police officers have recently shot innocent negroes without the slightest excuse, seeking revenge apparently for the wanton killing of a policeman by a negro last spring. In one case the victim is probably crippled for life; the detective who shot him has been suspended for three months—and the majesty of the law is upheld! The other day, a negro who got into a dispute in a drug store was so frightfully beaten by the police that the magistrate before whom the victim was brought protested hotly. With such official sanction for abusing men because of their color, is it any wonder that a mob the other night tried to lynch a colored man who, for all they knew, was but using his revolver in self-defence? An actual killing in the streets may take place any day, as it did in the draft riots of 1863. Who shall say when, in a gust of passion, a street crowd in New York will not slay guilty and innocent alike?

Is it any wonder that the colored people are looking to Washington for aid? The Topeka *Plaindealer* declares that it must seem to foreigners the height of hypocrisy for President Taft to be talking about peace among nations when such diabolical acts of private war at home go on unchecked. As for the *Crisis*, which speaks for the educated colored man, it asks the President how he can keep silent "in the face of a record of murder, lynching, and burning in this country which has appalled the civilized world." Certainly, there are no topics the President has discussed on his present trip that are of equal moment with the question of the rule of the mob. The lynchers are on top, North, South, East, and West. Who shall say what deadly blows they will not yet deal to our civilization, our self-respect, and our honor before the inevitable revolution against their domination takes place?

ALDRICH'S REVISED PLAN.

Ex-Senator Aldrich has submitted to the Monetary Commission a completed draft of his suggestions for a plan of banking and currency reform. This plan has not been officially adopted by the Monetary Commission; indeed, there has been, so far as we are aware, no official determination as yet even of the lines on which the report that the Commission is to submit to Congress next January will run. In some respects it is unfortunate that the only perfected plan in the field should be that of a single member of the Commission, and should have been made public in advance of the public hearings and deliberations which must precede the final report. But Mr. Aldrich's plan has served the valuable purpose of giving a nucleus for discussion, and its reception in both legislative and financial circles has already made it virtually certain

Digitized by Google

that the Monetary Commission's report will follow his in the main.

This by no means signifies, however, that Mr. Aldrich's plan is likely to be proposed in Congress or enacted into legislation exactly as it stands. No preliminary draft, on such a subject as banking reform, could in the nature of things be perfect—much less, satisfactory in every particular to Congress, the bankers, or the people; and even when Mr. Aldrich's plan is accepted as the basis of discussion, it is reasonable to expect wide difference of opinion regarding its financial and political merits. In advance of last Friday morning's revised proposal, amendments and alterations in his plan as previously proposed have already been discussed. Gov. Folk of Missouri, in a public interview this past week, while approving the main details of banking machinery as proposed by Mr. Aldrich, and while, in fact, repeating verbatim many of the clauses in Mr. Aldrich's plan, would have the directors of the National Reserve Association chosen by the President of the United States, and not elected, directly or indirectly, by the banks. On the other hand, ex-Controller of the Currency Charles G. Dawes, in an interview last Friday morning, declares himself "opposed to governmental representation in the management of the proposed institution, because of the opportunity it would give a national administration to inject politics into the affairs of the banks."

This may give some notion in advance of the wide range of opinion. So far as concerns the additions or changes made to his previous plan by ex-Senator Aldrich, his proposals as published last Friday have to do mainly with the question of note issues, and with a scheme for admitting other institutions than national banks to the scope of the new banking plan. Instead of imposing a progressive tax of 3 to 6 per cent. on all note issues in excess of the amount already outstanding when the new association shall be formed, Mr. Aldrich now proposes that issues in excess of $900,000,000 and not in excess of $1,200,000,000, which are not covered by an equal amount of lawful money in hand, shall pay a special tax of one and a half per cent. per annum, with a five per cent. tax on notes in excess of $1,200,000,000.

In regard to the trust companies and State banks, the proposal in the earlier Aldrich plan, creating a new class of national banks, to exercise trust company powers as well as the powers now allowed under the law, is withdrawn from the scheme. Instead, it is now proposed that State banks and trust companies be admitted to membership in the national association upon conforming to the general stipulations, regarding capital and reserves, that are applied to national banks. This is a highly interesting and important part of the proposition. It will undoubtedly impose on the trust companies, as a whole, considerably increased requirements in the way of cash reserves. The interesting question follows, exactly to what extent the State institutions would see fit to conform to the terms laid down in such a plan, for the sake of the privileges which they would manifestly gain through membership.

One other change made by Mr. Aldrich from his plan of last January deserves careful notice. In the earlier plan, it was proposed that there should be no change in the percentage of reserve against deposits required from national banks, but that the credit balance of any national bank in the reserve association should be counted as part of its legal reserve. In the revised plan as given out last Friday, it is proposed that the banks may not only count as part of their reserve their several deposit balances with the central institution, but that they also may be allowed to count any notes of the national association which they may hold in their vaults. This change has been made under rather strong pressure from numerous well-known bankers, chiefly from the West. The idea of counting notes of the central institution as reserve for individual banks was based by these bankers on the theory that when banks were allowed to count their credit balance in that institution, it was illogical that they should not be allowed similarly to count the notes received in discharge of such a balance.

We have never been able to agree with this view of the matter. On the contrary, we believe that use of the notes as lawful reserve money, under any circumstances, would serve to defeat the real purposes of the note circulation, and might easily, under certain conditions not at all inconceivable, create an engine of inflation. The reason why a bank is allowed to count as part of its reserve its credit balance with a central institution is that such institution is supposed to hold itself always ready to provide the lawful reserve money on recall of such balances. A national bank drawing on the proposed reserve association might ask for gold, silver, and United States legal tender paper, or it might ask for notes of the central institution. If it wanted to build up its reserve, it would naturally make the first request. But if it asked for notes, its purpose manifestly would have been to provide for the hand-to-hand circulation of its business district. In other words, its legitimate object would be to get the notes into the people's hands with the smallest possible delay when business needed a larger circulating medium, and to get them back again to the central association's redemption office the moment they were no longer required for purposes of trade. But once give these notes the right to serve permanently as reserve money for the individual banks, and what becomes of the automatic expansion and contraction of that part of the currency, in response to the needs of trade?

THE TORY HAPPY FAMILY.

Cable dispatches from England have been referring to the serious divisions in the Conservative party, but they have not fully conveyed the excessive bitterness with which the faction opposed to Mr. Balfour is attacking him. The question is not only of leadership, but of party policy, yet everything is for the present made to turn upon getting another Conservative leader. The "die-hards" and "last-ditchers" of the recent struggle in the Lords have invented a new sort of password—B. M. G., which, being interpreted, means "Balfour Must Go." Those letters are signed to an article in the ultra-Tory *National Review*, in which Mr. Balfour is held up to scorn as "The Champion Scuttler," and is described as a politician who can, indeed, "command an unlimited amount of simulated indignation," but who has shown himself absolutely unfit to lead the Opposition.

The singular thing is that these ferocious assaults upon Mr. Balfour and Lord Lansdowne, with the formation of a "Halsbury Club" within the Conservative party, whose avowed object is to depose the leader, fall at the very time when the urgent cry is going up for Conservative harmony. From many

Digitized by Google

sides and from many men of weight has the appeal come for united action. Professor Dicey has been writing about the constitutional effects of the Veto bill, and showing how important it is that Conservatives should stand together not only in resisting forced or wrong interpretations of that measure, but in preparing for its amendment or repeal. For other reasons, Lord Roberts recently made a strong plea for Conservative unity. He thinks of this as only a form of "Imperial Unity," and dwells upon the issues which, in his mind, touch "the very fountain-head of the Empire's life"; asking, "Is it too late to hope that the Unionist party will come forward to lead the millions that wait for a leader?"

This letter by Field-Marshal Roberts was published almost at the very time when Mr. Balfour was making his first important speech after the adjournment of Parliament. It was delivered at a great Unionist meeting in East Lothian, and has to be regarded not only as Mr. Balfour's sketch of the party programme, but as his bid for continuance in its leadership. So far as specific reference goes, he quietly ignored the existence of dissidence, or, rather, something like a mutiny, in the Conservative ranks. Mr. Balfour calmly alluded to himself as "the Leader of the Unionist Party," and spoke as though no rebels against his authority had ever been heard of. True, he alluded to differences of opinion at the time the Veto bill was before the Lords, but he declared that those controversies had "no longer any living or practical interest," and that to revive them now would merely make more difficult "the union which is the first secret of political success." Thus easily does he think to dispose of the Chamberlains, father and son, of F. E. Smith and Lord Hugh Cecil, and of all the irreconcilables who vow that there can be no peace with or without honor until Mr. Balfour is compelled to give up the party leadership! Those troubled and troubling spirits, he has found by now, are not so soothly to be laid. As for the rest of his speech, Mr. Balfour had nothing either very new or very inspiring to say. He used, indeed, some stout language about Irish Home Rule and the duty and determination of the Conservatives to resist it to the death, but even in this part of his address one catches the Balfourian note which gives color to the sneers of the *National Review*:

> Unionists will once more be led into battle with all bands playing, colors flying, and their splendid chief riding gallantly in front. But the moment the battle waxes hot the bands will stop playing, the banners will be furled, and the great chief will be found calmly riding off to Gastein or some other place, having concluded the usual compact and ordered a general *sauve qui peut*.

From all this, it is readily to be seen that the Tories are not a happy family. They had been predicting that it was the Liberals and their allies who would fall to quarrelling and become a prey to dissensions, but here the nation sees the great party of the intellectuals and landed gentry, the party which for years boasted, like our own Republican party, that it alone was "fit to rule," now torn asunder and filling the air with taunts and angry accusations. It would be going too far to say that the whole trouble lies in the party leadership. Any leader would find it almost impossible at present to unite the Conservative party and kindle it with enthusiasm. It may be doubted if Disraeli could do it, were he alive to-day. If Joseph Chamberlain were ten years younger and in full health, his political genius might be equal to coping with the task; but when one looks about for any other Tory to put in Mr. Balfour's place, with a better promise of success, the man does not appear. Yet it cannot be denied that there is warrant for the feeling that Mr. Balfour is not the man for the hour. With all his distinction of intellect and of manner, his nature is cold, and he too often appears like a mere logic-chopper. He thinks strongly and on great subjects, but he does not think with passion. The faculty of communicating impulse and of thrilling with zeal does not appear to be his.

THE CHINESE REVOLT.

The possibility of a Government overturn in a country occupying the peculiar position of China or Turkey gives rise to a double problem. A revolution in Portugal means simply a change of régime for the Portuguese people. A revolution in China inevitably brings up the question of foreign interference and its effects upon national integrity and independence. It is quite true that the outsider may lay undue stress on the international phase of the question. To the people of China, the immediate necessity of putting an end to a bad governmental system may be so pressing as to throw every other consideration into the shade. The outsider, for instance, is in no position to grasp a condition of mind which makes the Chinese people, after more than two hundred and fifty years, still look upon their Manchu rulers as foreigners and oppressors. That, however, does not do away with the fact that to the world at large the problem whether China shall be ruled by a Manchu dynasty or a Chinese dynasty is of infinitely less importance than the question whether China shall be ruled in accordance with modern constitutional principles, and, more than that, whether China shall continue existing at all. The outcome of the fighting at Hankow does not render it less certain that a long and bitter warfare must be passed through before the Manchus can be expelled from Peking. And such a protracted state of civil war is bound to let loose all the pent-up forces of destruction in Eastern Asia and pave the way for radical changes of the map compared with which the results of the Russo-Japanese war may easily prove insignificant.

If the uprising in the Yang-tse provinces were nothing more than an anti-dynastic movement, there would be little hesitation in declaring that the game was not worth the candle. The satisfaction of setting up a native dynasty in place of a "foreign" one is incommensurate with the risk involved. But it is the contention of the revolutionary leaders that their aims are progressive as well as anti-dynastic, that Manchu and reaction are synonymous, and that an overturn at Peking would be followed by the establishment of a constitutional régime; some even speak of a republic. These assertions may be well-founded, so far as the intentions of the revolutionary leaders are concerned. It is not so sure that they correctly describe the attitude of the Peking Government itself toward the great problems of political and social reform. The situation resolves itself into the question whether constitutionalism and reform have more to gain under the present system or under the system that the revolutionist leaders propose to set up, taking into account the ever-present possibility of foreign intervention. In other words, would the Chinese people do better to

Digitized by Google

choose reform under the Manchus without the danger of intervention, or to get reform a little more swiftly by totally upsetting things and taking chances on what the Powers will do?

It is well to notice that the record of the present régime in the matter of reform is far from bad. In the short space of half a dozen years, China has passed through all the preliminary stages of constitutionalism, until it stands to-day on the threshold of parliamentary government. What the compelling motives have been is of little consequence. It may have been ambition on the part of China's rulers to follow Japan's example and obtain for the Empire a footing among the Powers. Nor does it matter overmuch that the progress of reform has been marked by conflict between the forces of reaction and progress at the Imperial court. Other countries than China know what court intrigue and party struggle mean. The fact is that progress has been made. A mere summary of events since 1905, when the Imperial commissions for the study of parliamentary institutions were sent abroad, should suffice on that point. In September, 1906, an Imperial edict set forth the solemn promise that a Parliament would be established as soon as conditions favored the change. Just a year later, the new Government Council was created for the purpose of formulating the necessary preliminaries of parliamentary government. Within a few days, the organization of Provincial Councils was decreed. In August, 1908, the opening of Parliament was fixed for the year 1917; this delay of eight years aroused dissatisfaction. In 1909, elections to the Provincial Councils took place. An Imperial edict fixed October 3, 1910, as the date for the assembling of the Senate, or the upper house of the proposed Parliament

The proceedings of the Senate, as soon as it had assembled, and the attitude of the Government toward that body, seem to constitute a sufficient reply to the charge that the Manchu element in China is opposed to progress. The Senate is constituted on a non-popular basis. Of its ninety-one members, no less than twenty are drawn from the Imperial clan, and thirty-two are Ministers and office-holders, thus establishing a Manchu preponderance in numbers and influence. Yet the first thing the Senate did was to petition the throne for an immediate convocation of Parliament. The Government endeavored to meet the Senate half-way by advancing the date for the meeting of Parliament from 1917 to 1913. But the Senate held out and the Government yielded. Toward the end of December, an Imperial edict ordered that steps should be taken toward the organization of a constitutional cabinet. The census intended to serve as a basis for the parliamentary elections was to be hastened. On May 8 of the present year, an Imperial edict abolished the Grand Council and erected a constitutional Ministry in its stead, though the question of responsibility to the Parliament was left open.

The cycle of Cathay has thus been revolving rapidly enough. And that is to look merely at the political side. If we add to this record such notable reforms as the virtual solution of the opium question, the abolition of footbinding as an incident in the campaign for the emancipation and higher education of women, the progress of railway building, and, more than all, the decisive steps taken toward a solution of the currency problem, which many observers have declared to be at the bottom of China's troubles, the charge of reaction is fairly refuted. It may very well be that intrigue is still combating the progress of reform at the Imperial court, and it is in protest against vacillation and delays that the present revolutionary movement is in part directed. But judging by the past, the petty politics of the court cannot stay the wheels of progress. Given a popular trend toward reform, the Chinese Government is in no position to oppose it, for the simple reason that the Chinese Government is not an absolutist monarchy backed by a powerful army, but a Government that rules with a loose hand over a group of semi-independent satrapies.

Thus revolution and civil war, while they might hasten by a little the political reconstruction of China, cannot hasten it by so much as to justify the enormous risks to which they expose the country. Already the prophets of white imperialism are predicting the dismemberment of China. Russia is eyeing Japan, and Japan is watching the situation in the Yang-tse valley. If the revolutionists in China think that the innate merits of their cause must win the sympathy of the foreign Powers, they might call to mind how the European Powers have been exerting themselves to make things pleasant for the constitutional régime in Turkey.

COPYRIGHT CHANGES.

In Europe some notice is taken of the fact that this year marks the twenty-fifth anniversary of the first Berne Convention. During the quarter of a century since the formation of that international union for the protection of literary and artistic property, many advances have been made along the lines of the original proposals. The number of signatory countries has increased, though the United States still remains among the few outside barbarians. There have been two international congresses to revise and extend the Berne Convention—that in Paris of 1896 and the latest one of 1908 in Berlin. It is the changes advocated at the latter that the several Governments interested have since been discussing and preparing to enact into law. At its last session the House of Commons passed the new British Copyright Act, and this is expected to go through the Lords, without serious opposition, soon after Parliament meets next week.

Of the changes proposed in this bill, full accounts have been given in our own London correspondence and in other publications. The *Publishers' Weekly* printed the entire text of the new law. It undertakes no radical departures from existing principles and practices. The term of copyright is now made the life of the author and a period of fifty years after his death. It is provided, however, that under certain conditions, including payment of royalties to the owner of the copyright, a work may be reproduced after twenty-five years, or thirty years in some cases, without infringement. This is obviously intended to license the reprint of books out of the market. Objection to this provision was made by some publishers, but the prevailing opinion seems to be that there could be no great danger in it, since its application would necessarily be restricted, and could operate only in case of works kept out of sale for other than commercial reasons. It is plain that a protected book which is worth reprinting would ordinarily be supplied to the trade. Other changes proposed in the new British law are, as were some of those made in our own revision of 1909, designed merely to bring

Digitized by Google

the statute up to modern methods of reproduction. For example, the owner of copyright has the sole right, "in the case of a literary, dramatic, or musical work, to make any record, perforated roll, cinematograph film, or other contrivance by means of which the work may be mechanically performed or delivered."

There is, however, one change in British copyright legislation to which little attention has been directed, but which may prove to be of serious consequence, especially in this country. Hitherto, the copyright laws enacted by Parliament have been valid and binding for the whole Empire. But now the new policy is to be followed of permitting the self-governing colonies to pass their own laws on the subject of literary or artistic property. This privilege will undoubtedly be seized by Australia, the South African Union, and Canada. In Canada, in fact, a copyright bill is pending which will undoubtedly receive the force of law soon after the English act is approved by the House of Lords and the free hand of the Dominion definitely established. Now, this proposed Canadian law has several bad features. We can say this with confidence, because they are manifestly copied from our own statutes. There is the "manufacture clause," for instance; Canada is to embody that in her copyright law, although, we believe, not in so extreme and offensive a form as in the American measure. It will be possible, we understand, to import plates into Canada, on payment of duty (which is more than this country permits), but the printing and binding must be done in Canada.

There can be no question that this is a bad leaf torn by Canada from our own book. It stands in the act of 1891, which the Register of Copyrights printed in the volume, "Copyright Enactments," under the almost ironically descriptive heading, "so-called international copyright act." But we trust that no good American will be deterred by the fact that his own country's statutes limit copyright to books "printed from type set within the limits of the United States," from denouncing the similar Canadian proposal. Let us characterize it as it deserves—a short-sighted device of purblind protectionism. Canadians ought to be told in good set terms by Americans that any such step is a step backward; that its benefit even to Canadian printers will be extremely doubtful, while the effect on Canadian standing in the eyes of the world will be of the worst. If there is need of extreme arguments, we can ask the Canadians if they really intend to fall into as low a repute in matters of international copyright as that now enjoyed by Americans!

Professor Röthlisberger of Berne, writing in the *Frankfurter Zeitung* of the history of the movement for an international literary union which dates from 1886, declares that the ardent hope of the members of the Berne Convention from the first was that the Governments of all civilized countries would sooner or later join them. That hope has been largely realized. A great common understanding has been wrought out and put into effect respecting rights in the fields of literature and art. But the United States remains conspicuously aloof. Everybody knows why. We have been kept from adhering to this liberal and civilizing agreement, based on equal privileges for authors and artists in all lands, solely by the baleful influence of the protectionist spirit. As there are now, however, so many signs that it is losing its power in the United States, we may hope that the day will soon come when this country will leave off its unworthy fumbling with the question of international copyright, and go over unreservedly to the enlightened position of the Berne Convention.

THE NEW BRITANNICA.

Although the circumstance that all the volumes of the new Britannica were prepared simultaneously ought to render it unnecessary to make any special comment upon the contents of the second half* of the work, issued within a few months of the first, still it would be ungracious to leave the concluding fourteen volumes altogether unnoticed. To pick out a miscellaneous handful from the imposing array of new articles on old subjects whose presence or extent evinces the enlarged scope and greater fulness of this edition as compared with its predecessor, mention may be made of Ship, Railways, Water Supply, Painting, Museums of Art, Theatre, Temple, Vision, Spinal Cord, Map, Logic, Rumania, Magnetism (Terrestrial), Tool, Typography, Lighthouse, Lighting, Ordnance, Polar Regions, Trade Unions, Strikes and Lockouts, Papacy, Liquor Laws, Japan, Song, Metternich, Picaresque, Novel, Science, Leviticus, Textual Criticism.

The article Ship fills 62 pages, besides 28 pages of plates. Here we find on turning to the ninth edition (the "tenth" edition was merely the ninth edition plus a huge supplement) one of those extraordinary lapses that marked the nonchalant spirit of the old Britannica, whose failings were on a par with its transcendent qualities. The subject was disposed of in just five pages. These five pages contained a good deal of scholarly information about the war vessels of the Greeks and Romans, and something about the mediæval galleys, and there the story abruptly ended. To add insult to such outrage, a table was inserted in the article, borrowed from a learned German antiquary, which would lead the untutored reader to imagine that the ancients had ships of war nearly as big as Queen Victoria's battleships. Of course, there was an article on Shipbuilding, but this did not contain the information that was so mysteriously absent under Ship. The new article on Shipbuilding is four times as long as the old one, covering 57 pages, besides 13 pages of plates. It is in great part a sealed book to all but advanced students of marine engineering, and, if the truth has to be told, one would almost be glad to barter it for the sixteen-page article on Seamanship in the ninth edition, still reflecting the spirit of the romantic days of wooden ships. The subject of Sea-Power, hitherto ignored, is discussed in a twelve-page article by Sir Cyprian Bridge. Another maritime topic not represented in the old Britannica is Steamship Lines, occupying 11 pages of small type. Shipping (5 pages) gives statistics of the commercial navies of the world. These various articles on naval matters, with the addition of the eighteen-page article on Navy and Navies (defective in the scant reference to the Italian republics and in the inadequate history of our navy) and the 14 pages on Navigation, would make about 1,000 duodecimo pages.

By the side of all this, the article on Railways (42 pages, the equivalent of about 250 duodecimo pages), although it is twice as long as the one in the ninth edition, which did not concern itself with railway legislation and, among other things, omitted the whole subject of train resistance, strikes one as being too brief. This impression is strengthened when we come to the section on construction, the author of which ought to have indulged in the recital of the great epic of railway engineering from the Stephensons and I. K. Brunel down to Harriman's levelling of the Rocky Mountains to a gentle gradient, the piercing of the Simplon, and the subaqueous creations about Manhattan. The interesting subject of the interchange of freight cars is not discussed

*The Encyclopædia Britannica. Eleventh edition, Vols. XV-XXVIII. New York: Cambridge University Press.

Digitized by Google

in the article. The lengthy section dealing with locomotive power, which contains nearly all that the Britannica has to say about steam locomotives—there being no separate article on the subject (not even a cross-reference under Locomotive!) and less than a page on it under Steam Engine—should have dealt more fully with the anatomy of the various types of engines and reproduced pictorially some of the forms from the little four-wheelers of the early days to the leviathans of the Santa Fé.

In a publication claiming to be an Anglo-American encyclopædia (a claim fully justified with respect to the departments of geography, biography, and history) space should have been found for the early history of railway construction in the United States. In the section on railway accidents, the United States figures in a gruesome way. That numerous class of legislators, who, yielding to popular clamor, are intent upon keeping rates below the level at which our railways could afford to bring their physical condition up to the requirements of safety, should ponder the figures here given. We may also observe that the inadequate biographies of George and Robert Stephenson have passed from the ninth into the eleventh edition.

The new Britannica has an article of 59 pages on Painting, the joint contribution of several writers. Schools of Painting in the ninth edition, covering nearly the same ground, filled only about one-fourth of the space. The United States has not been generously dealt with here, receiving less than a page. Rumania (24 pages) occupies about four times as much space as it had in the ninth edition, which took the liberty of omitting the literature of the country. The shifting of the relative importance of geographico-historical subjects is well exemplified in the articles on Japan and Persia. Japan has 119 pages in the eleventh edition (about as much as the United States), and Persia 65; in the ninth edition, Persia had 100 and Japan 23. One's sense of proportion is offended on discovering that the Transvaal has a longer article than Bohemia or Sicily. Prominent among the articles on celebrities who have but recently passed away is the eight-page essay on Tolstoy, by C. T. H. Wright, librarian of the London Library. The old Britannica was niggardly in its treatment of the labor problem. It had only 3 pages on Trade Unionism, a subject now covering a dozen larger pages, which still appears too little for an encyclopædia that can afford to give 15 pages to Plate, 10 to Lace, and nearly 12 to Totemism. We have 14 pages on Strikes and Lockouts, where there was no such caption before. Labor Legislation (21 pages) is more than twice as long as the corresponding article in the ninth edition. It is regrettable that the article on Socialism, from the able pen of James Bonar (not quite 8 pages), is much shorter than the one it has supplanted. The article Negro in the ninth edition, a very unsympathetic production, has been superseded by a longer one, conceived in a more humane spirit. The fulness of the new Britannica in everything pertaining to war is not calculated to reassure those who believe that *aspera mitescent sæcula*. Ordnance, for example, has 47 pages, or nearly three times as much space as was occupied by the corresponding article, Gunmaking, in the ninth edition. It is gratifying, however, to discover that the longest biography in the Encyclopædia Britannica belongs no longer to Mars, but to the Muses, Napoleon having been dethroned by Shakespeare. A serious omission is the absence of an article on the Peasants' War. The subject of Peace is discussed by Sir Thomas Barclay, who has hopes of a brighter future for the world, in spite of Nietzsche's rhapsody about war reproduced at the end of the article. Those people who cannot get themselves wrought up by Italy's dastardly breach of the peace, on the ground that the Turks are a nation undeserving of sympathy, would be edified if they happened to light upon the following passage in the article on International Law, contributed by the same distinguished publicist to the new Britannica:

> Turkey too has the advantage of possessing a code of morals which produces so high a standard of right conduct in private life that very little in the way of moral lessons will have to be learned by the Ottomans from Western civilization.

The more closely one examines the fabric of the splendid work before us, the more clearly is its dual character brought into relief. It is a vast storehouse of information for all people of culture, upon which is reared an imposing superstructure, accessible only to a few, comprising the weightiest elements in the whole edifice—the lengthy scientific treatises designed for the specialist. Much of what might be put within the reach of the ordinary reader is placed aloft where he can not easily get at it or where it is presented in a form too intricate for his powers of apprehension. At times, there is even something like a wanton indifference to what is demanded of a general work of reference. A feeling of this sort comes over us when we turn to Rain, Lightning, Wind, Trade Winds, and Tornado, the treatises under Meteorology and Atmospheric Electricity not affording an adequate substitute for what we should like to find under the special heads. The Britannica is conceived on too exalted a plane to permit of its being an embodiment of the ideal of a great encyclopædia constructed on practical lines. Its fidelity to the tradition that it shall be an exhaustive summary of man's attainments in every branch of research and investigation militates against its being invested with such a character. Could not an encyclopædia, it may be asked, answering in an equal measure the needs of the great mass of cultured readers, be got into a much smaller compass by not being made so top-heavy? Undoubtedly it could, but it is questionable whether, without the lofty aims that have actuated the successive editors of the Britannica, as manifested in the desire to make the work transcendent as a monument to the sciences, the encyclopædia would ever have risen to its present high level as a book of general information. LOUIS HEILPRIN.

THE CONGRESS OF THE "DANTE ALIGHIERI."

ROME, September 27.

In addition to the international congresses held this year at Rome and Turin in connection with the commemorative exposition, there is also a large number of national conventions that for the most part have to do solely with national organizations and interests. To this rule, however, the twenty-second annual congress of the Dante Alighieri Society, which was held at Rome from September 20th to the 24th, forms an important exception. Though the organization of this society is national, it has many chapters in foreign countries, and its aims and scope are truly international. On March 25, 1889, the first meeting of a provisional committee of twelve was held in Rome. On May 29, of the same year, when they met again, they were thirty-one, and among them was the poet Carducci. In July, the Constitution was finally adopted and signed by one hundred and fifty-nine charter members, who represented the best of Italian public and intellectual life.

The society has grown and prospered from the first, but its object has remained the same as in the time of small beginnings. Its first preoccupation was that the Italian language and culture should not, in countries ethnographically Italian but subject to a foreign power, be displaced by other languages and cultures. These countries are entirely Mediterranean, are, in large part, contiguous to Italy, like the Trentino, Italian Switzerland, and Malta, and were under foreign domination before the union of the kingdom. And further away, as, for example, on the Dalmatian coast, in the Ionian Islands, and in Asia Minor, there are many places, where the Italians are not, indeed, indigenous, but are long established, in most cases going back to colonies sent out by the Venetians. In countries like the United States, to which emigration has been recent, the aims of the Dante Alighieri are much more modest. For the many emigrants who return home,

Digitized by Google

it is expedient that they should not forget, nor begin to forget, their language and other national attributes. While for the many who become permanently expatriated, the Society, while recognizing that they and their children must eventually become a part of the land of adoption, speak its language and share its institutions, yet wishes them to know that they are not forgotten in the home country, and still to keep alive the memory of her ancient traditions and civilization.

In such an arduous and varied endeavor, the society employs many agencies. It founds and endows schools and promotes their efficiency by prizes and other distinctions. It institutes courses of lectures, coöperates in the establishment and maintenance of popular and circulating libraries, and distributes books and other publications. Above all, there are chapters, both within and without the kingdom, whose members are expected to promote the cause by collecting funds, by winning new members and by devoted labor and well-directed enthusiasm in every way. The chapters in Italy number a little more than two hundred, those in foreign countries about seventy. Of the latter thirteen are in the United States, namely, in Baltimore, Boston, Chicago, Cleveland, Hudson County, New Jersey, with headquarters in Jersey City, Los Angeles, New Haven, New York, North Dakota (in the State University), Pittsburgh, Rochester, San Francisco, and Washington. There is one in Canada at Toronto.

To give some idea of the scale on which the Dante Alighieri now works, a few figures may be cited. From 1903 to 1911 there have been sent to foreign countries six hundred collections of Italian books, adapted to the various schools, libraries, and clubs for which they were destined, comprising in all 115,000 volumes. A single energetic and devoted member of the Turin branch, Signora Ildegarde Occella, in the year just ended, collected 21,000 francs and 22,000 volumes. The total income of the society this year from invested capital and contributions, excluding gifts of books and other printed matter, was 330,125 francs, of which 160,000 have been spent for the "defence of the language," as the report says, in Italian-speaking communities under foreign rule.

The deliberations of this congress were especially important. For some time the question has been agitated of the foundation of a periodical devoted to the interests of the Society and of the Italian propaganda in general. As three publishing houses have now offered to publish such a magazine at a low subscription rate and without expense to the Society, it was voted to instruct the committee in charge to accept one of these offers and to begin publication some time in the coming year. It was also voted to fix April 21 as "Dante Alighieri Day." All schools and other organizations that are beneficiaries of the Society or affiliated with it in any way will be expected on this day to make their supreme effort for the cause by enlisting new members and raising money and awakening enthusiasm.

It is much to be hoped that the American chapters will soon become strong enough to carry on the work in their own country, or at least to contribute much more largely to it than they do at present. The report of the Consiglio Centrale for this year testifies with much satisfaction to the part taken by Americans in the work. Special mention is made of the Hon. Curtis Guild of Boston, who, although he has gone as ambassador to Russia, has again accepted the honorary presidency of the Boston Society, of Miss Isabella McClung of Pittsburgh, and of Mrs. Harold McCormick of Chicago.

The congress of 1912 will be held at Catania in Sicily. A suggestion privately made by the present writer that New York would be a good place for a meeting in the near future was favorably received by a number of delegates. The journey would be long and expensive for the Italian delegates, but if the New York members and their friends can find them their transportation going and coming, it is probable that a congress could soon be arranged to take place in the Western metropolis. H. E.

Correspondence

THE "SOCIAL" EVIL.

To the Editor of The Nation:

Sir: May a chronic grumbler presume to criticise your use of the English language? A fortnight ago you published an editorial headed "The Social Evil." Concerning the substance of the editorial, I need only say that it has my hearty approval. The action of the Post Office in excluding from the mails the admirable report of the Chicago Vice Commission seems to be, briefly, asinine. No; my objection is aimed merely at the heading, "The *Social* Evil." Why should any one call the evil in question "social"? Emphatically, this evil is anything but social.

Let me illustrate by means of examples of evils which are genuinely social. The order, you will note, is *crescendo!*

First, there is the tiresome five o'clock tea. One cannot make an afternoon call without being asked by the gracious lady of the house, young, old, or middle-aged: "Sha'n't I give you a cup of tea?" If you accept all these invitations, you are in danger of nervous prostration, neuritis, or other ailment of the sort. If you decline, you are set down as a boor or an ignoramus.

Next, there is bridge. Think of the thousands of rational beings, especially in smart gowns, now wasting daylight—and money—over luck at cards.

Then, there is drinking. True, the Glasgow factory hand is capable of finding delight in solitary "booze." But mankind in general drinks in company. Conviviality nearly always includes drinking. What I have in mind more especially is the practice of men to get together in the evening, in clubs or similar places, theoretically to talk over the events of the day. Practically, of these sessions one may say: No drink, no talk.

Last, but not least, there is the automobile. By tens of thousands men and women are now chasing over Europe, Asia, America, even Africa, for the mere fun of the chase. Like Rosalind's traveller, they waste their own lands in order to see other men's. And all in company. No one rides solitary in an auto, except on strict business.

All these abuses, and many more, are genuinely social. They spring from one's desire to associate with one's fellow beings. But the vice which you discuss shuns society, shuns the light of day; indeed, shuns all light. Why, then, should the *Nation*, of all papers, indulge in mere euphemism? Why not call the evil in question by a name which fits? Name it the *sex* evil, or the *sexual* evil, or, in one word, prostitution? Perhaps, even sex or sexual is not precise enough; for dancing might be defined as an entertainment of the two sexes. At any rate, "social" will never do; it completely obfuscates the problem. H.

October 16.

THE PENNSYLVANIA LYNCHING.

To the Editor of The Nation:

Sir: In an article on the Coatesville lynching (*Nation*, October 12), you conclude with the question: "And what does the sound citizenship of Pennsylvania say to it all?" As a life-long resident of Chester County, and a descendant of Quaker ancestors, I feel free to state unqualifiedly that the "sound citizenship" of Pennsylvania has the same feeling about the affair that all the rest of the civilized world has or should have, if American civilization is anything but a very thin veneer on primeval savagery. For above twenty years my occupation has required me to travel extensively in the South and West, and it has frequently happened that I have been in or near places where lynchings by burning have been committed shortly after the crime has taken place. I have always felt it my duty to speak strongly on the subject, and have done so in many cases, in the face of an inflamed public opinion. I have had this experience in West Virginia, Kentucky, Georgia, Texas, Kansas, Oklahoma, and Missouri, and have known of cases of this crime in Illinois, Ohio, and Delaware, the Coatesville case being the first in Pennsylvania and, it is to be hoped, the last. It is written that "faithful are the wounds of a friend," and it is well to state the facts fully, which your article does not do. In its presentment, submitted on September 20, 1911, the grand jury says: "Throughout the whole course of our inquiry we have been hampered and obstructed by the attitude of the citizens of Coatesville and vicinity having knowledge of the commission of the crime and the identity of the criminals," and again, "the testimony we have taken clearly dem-

Digitized by Google

onstrates that immediately after the commission of the crime a conspiracy of silence was formed and the citizens of Coatesville who have knowledge which would assist in the administration of the law have deliberately concealed that knowledge and have refused to aid the officers of the law and this grand inquest in its administration." This position on the part of the citizens of Coatesville, taken, as is well known, by leading citizens who were called by the grand jury with the idea that they might suggest some course of action that would lead to the conviction of the criminals, can only be explained by the coarse materialism of an industrial town—indeed, it was openly stated that a complete exposure of all the facts would "hurt the town." So far, it is bad enough, but when it is remembered that, in the Swartz case, the defendant had made a confession that he had taken an active part in the crime, said confession having been legally admitted as evidence by the trial judge and having been corroborated by other testimony; and that he was forthwith acquitted by the jury, one of whom, after being discharged, offering to bet that the State would not obtain a conviction in any of the other cases—what can be said of a public sentiment that makes such a verdict possible? A study of the conditions under which this crime of lynching by burning has taken place will show conclusively that it is a distinctly American crime, committed by men who have been through the public schools, and, as a rule, in Protestant communities. Every man indicted in connection with the Coatesville crime bears an unmistakably American name, and the crime was planned in the house of the local fire company, which was presumably a body of trained men.

I am free to say that, in arguing this question of lynching, I have heretofore taken the position that, while violence of this nature might crop out anywhere under great provocation, in the older States it would surely be punished, and I must admit that I was mistaken. So far as I know, the old State of Virginia has the best record in this respect, probably because its citizens are not altogether "up to date" and have not cut loose from all the duties and responsibilities of civilization in the mad race after wealth. If we are to be a law-abiding people, our public schools and higher educational institutions cannot begin too soon to instil into the minds of the young men the importance of the fundamental principle of Anglo-Saxon civilization—the supremacy of the law.

GEORGE ASHBRIDGE.

Whitford, Pa., October 16.

"WHERE SWART PAYNIMS PRAY."

TO THE EDITOR OF THE NATION:

SIR: The writer must ask pardon for recurring again to the well-known and much-tortured line from Keats's "Eve of St. Agnes" (see *Nation* May 11 and June 22, 1911):

Clasp'd like a missal where swart Paynims pray.

He does so only in the hope of offering for the second half of the line a more reasonable interpretation than has yet been given.

"Shut," the rejected variant for "clasp'd," is a sufficient gloss on the first half. But why "shut" if the missal is employed by pagans in prayer; or, if the sense of the line is merely that it is closed and unused "in Heathenesse," why the misleading phrase, "where . . . Paynims *pray*," for the last word suggests at once the use of the missal? This, I believe, is indeed the poet's intention. But, while the literal meaning is that the devotion of the pagans is in some way connected with the missal, we are to think of it as stirred rather by the loveliness of the sleeping Madeline, of which the clasped missal is one among other beautiful images.

This rapid transference of a quality from the object to the image has an exact parallel in two lines from "The Rape of the Lock":

On her white breast a sparkling cross she wore,
Which Jews might kiss and infidels adore.

Here we are by no means to infer that the adoration of Jews and infidels was attracted chiefly by the ornament. The "silver cross" "on Madeline's fair breast" might even suggest that Keats had this very passage in mind. An earlier parallel, and one in which the notion of heathen worship of Christian beauty rises naturally from the situation, occurs in Thomas Hudson's translation of the "Histoire de Judith" of Du Bartas, included in the 1608 and later editions of Sylvester. The passage is in book iv, lines 357 ff., and describes the sensation created by Judith as she is led captive through the Syrian camp:

Her ivry breast, and neck of Alabastre,
Made heathen men of her more Idolastre.

The phrasing is not felicitous, but the story is always attractive, and the passage a small oasis in the wastes of Hudson's translation. The travels of either Keats or Pope in "realms of gold" might easily have led him to one of the old folios in which the poem occurs.

Aside from the possibility that the line in Keats is reminiscent of his reading, the interpretation offered seems, if not obvious, at least more pleasing than one which would involve the poet in an obscure reference to some missal, ornamented with kneeling converts, and known only to himself and his friends; or, still worse, one which would substitute *prey* for *pray* and convict him of misspelling and of an inevitable pun. ALLAN T. WESTCOTT.

Columbia University, October 18.

AN OLD SPELLING REFORMER.

TO THE EDITOR OF THE NATION:

SIR: The subject of spelling reform is still sufficiently alive, I hope, to make an early attempt toward it interesting. In 1765 appeared "An Account of the Trial of the letter Y, *alias* Y," the posthumous work of Thomas Edwards. Edwards is known to the few who know him at all as the keen critic of Warburton's Shakespeare, as one of the revivers of the sonnet, and, perhaps, to some as a friend and correspondent of the novelist Richardson. It was with the seventh edition of his "Canons of Criticism," the exposure of Warburton's critical methods, that the "Account" appeared. Edwards was not an innovator, but a reactionary in orthography, his objects, as he tells us in the preface, being "Uniformity . . . and, Preserving . . . the marks of our Etymology." It is interesting to note that some of the spellings which the Simplified Spelling Board is to-day trying to introduce, Edwards urged in 1765 as etymologically correct, while others were then generally used.

"Once on a time," the "Account" begins, "the English Commonwealth of Letters, generally called the Alphabet, was very much disturbed." The cause of the disturbance was the intrusion of the letter Y into such words as *Wyfe, Lyfe, Knyght*. Apollo, being appealed to, gave Y about the position it occupies to-day, and then asked if the letters had any other grievances. D and TH each seized this chance to complain of the position of the other in *Murder* or *Murther*. The matter was referred to a committee of Anglo-Saxons—Apollo apparently not feeling at home in the language of our forefathers—"and in the meantime the Poets had liberty given them to use either, as would best suit their rhime." OUGH then petitioned "to be restored to the end of the words *Tho'* and *Thro'*." The request was granted, with an emphatic censure on the "new-fangled way of leaving out such letters as are not pronounced." After S had got back his place in *Defence, Pretence*, etc., a complaint was presented "of O against U for intruding into the words *Honour, Labour, Superiour*, and the like. The Judge discharged U with a reprimand from the final Syllable of all words derived from the Latines ending in OR." The next matter was not so easy. It was the petition of N "that G might be excluded from the words *Forcign* and *Sovereign*," seconded by A, who begged that he might have the place of E and I in the same words. Apollo, who seems to have been attending a German seminar since leaving Parnassus, decided to "take time to consider the case." He granted, however, the request of E 'that those [words] which are now absurdly writen *Claim, Prevail*, &c., may hereafter be spelled *Clame, Prevale*, &c."

Then followed "A Complaint of ED against T, for justling him out of the ends of Verbs of the preterperfect Tense, and of Participles." But here Apollo, with a shrewdness for which he has not always been given credit, concluded that "The Court had sat late, and therefore referred this petition to another Day; and adjourned." RAYMOND D. HAVENS.

The University of Rochester, October 15.

INGERSOLL'S WRITINGS.

TO THE EDITOR OF THE NATION:

SIR: Though we naturally differ from the estimate you place upon our biography of Robert Ingersoll, yet the facts contained in the review (*Nation*, October 5) are in the main correct. One glaring error, however, is your statement that "the writings of Ingersoll are already dead." For a number of years we have published the Dresden edition of Ingersoll's works in conjunction with Mr. C. P. Farrell, representing the Ingersoll estate, and in that time have sold above 70,000 volumes at prices ranging from $2.50 per volume up. During the same period, Mr. Farrell has sold hundreds of thousands of the lectures in pamphlet form. These are facts, not estimates, and prove

Digitized by Google

conclusively that Ingersoll's writings are very much alive.

DRESDEN PUBLISHING CO.

New York, October 17.

[We admit that we had no notion of the continued and extensive sale of Ingersoll's works. Such a sale manifestly represents a certain kind of vitality. The almost complete absence of reference to Ingersoll in the serious literature of to-day does, nevertheless, indicate that he has quite lost such significance as, in his lifetime, could provoke the controversial ire of Gladstone. His particular method of attacking Christianity is a dead thing of the past.—ED. THE NATION.]

The Overture and Other Poems. By Jefferson Butler Fletcher. New York: The Macmillan Co. $1.25 net.

It is so unusual nowadays for a poet to stick for any length of time to his lyre that the reappearance of a familiar name seems a distinct poetic merit in itself. How much more so a collection of nearly five hundred pages, like Professor van Dyke's "Poems," which evinces a lifelong devotion to the muse. And yet the critic can hardly sympathize with his half expressed regret that he has not done more. Good in its way as is much of what he has done, it would probably have been still better if he had done less. As it is, his weakness is diffusion. What his verse lacks is concentration, intensity, and suddenness. Like so many of our American poets, he versifies too readily; and it is only when he confines himself to the stricter forms of stanza that he gains a relative concision and vividness. At best, he never astonishes. His quality and charm consist in a sort of gentleness or kindliness for his subject, expressed in familiar associations and allusions—a kind of innocent intimacy with nature and the passions. A stream reminds him of going a-fishing; the stars, of little watchmen; love, of "home-sweet-home." With this easy sympathy for his themes, it is not surprising that he should be at his best with those which possess in themselves a certain elevation and dignity, as in his "Milton":

Lover of beauty, walking on the height
  Of pure philosophy and tranquil song;
  Born to behold the visions that belong
To those who dwell in melody and light;
Milton, thou spirit delicate and bright!
  What drew thee down to join the Roundhead throng
  Of iron-sided warriors, rude and strong,
Fighting for freedom in a world half night?

Lover of Liberty at heart wast thou,
  Above all beauty bright, all music clear:
To thee she bared her bosom and her brow,
  Breathing her virgin promise in thine ear,
And bound thee to her with a double vow—
  Exquisite Puritan, grave Cavalier!

But Professor van Dyke is not quite alone in constancy to his art. Mr. Cawein, too, has come to a point where he is able to get together a very respectable body of selected verse. His collection, which includes a preface by Mr. Howells, is remarkable for the keenness of its interest in nature and all that is hers—in her moods and affections, "dusk in the woods" or "drouth" or "autumn sorrow"; and most of all, in the myriad tiny creatures that populate her, the locust that makes "meridian music" or the cricket with its 'elfin pipe." But always about Mr. Cawein's nature, there is a kind of human immanence. It is quick with feminine influences and suggestions, as though Pan and Eros and Psyche were a-maying together. Or else it is conscious in some vague way of the presence and passions of man. It is this latter quality which enables him to insinuate descriptively, as it were, the story of the ground, as he does with singular vividness in such poems as "Lynchers," "Ku Klux," "The Man Hunt"—or in his "Feud":

A mile of lane—hedged high with ironweeds
And dying daisies—white with sun, that leads
Downward into a wood; through which a stream
  Steals like a shadow; over which is laid
A bridge of logs, worn deep by many a team,
  Sunk in the tangled shade. . . .

Fields over which a path, o'erwhelmed with burrs
And ragweeds, noisy with the grasshoppers,
Leads—lost, irresolute as paths the cows
  Wear through the woods—unto a woodshed; then,
With wrecks of windows, to a huddled house,
  Where men have murdered men. . . .

Within is emptiness: the sunlight falls
On faded journals papering the walls;
On advertisement chromos, torn with time,
  Around a hearth where wasps and spiders build.
The house is dead: meseems that night of crime
  It, too, was shot and killed.

Nor is Mr. Baring's "Collected Poems" a contemptible evidence of poetic activity. Fully a half of his volume is made up of dramatic verse, of which "Tristram and Iseult" is the most ample and satisfactory illustration. Indeed, his vein is distinctly romantic and heroical. Even of his non-dramatic work, his "Sigurd" is in many respects the most poetical. But he has, in addition, a knack with the sonnet and no little lyrical appropriateness, particularly in the songs with which he is fond of interspersing his plays:

Farewell! this is the last, the saddest tryst;
For I am of the valley and the plain,
And you are of the mountain and the mist;
Farewell! We shall not say "Farewell" again.

You will forget the swearing of the oath;
You were the wind and I the bending tree!
Alas! I am the rock and you the froth,
That lightly comes and goes upon the sea.

Among a great deal of new verse so occasional and casual as to seem little more than an exercise, Mr. Palmer's ode on the unveiling of the equestrian statue of Marcus Aurelius at Brown University reaches at times an unusual pitch of seriousness and sobriety:

From dreams that fever and enthrall,
  From greed of gain, from crass display,
From fickle Glory's fretful call,
  The Stoic tempts the world away;
As when above the troubled street,
  Where party's futile voices float,
We hear, serenely near and sweet,
  The unvexed oriole's treetop note.

Around his throne the Emperor saw
  His armies surge like troubled seas.
They bore the tables of the law
  To the white-foaming Hebrides.
From Thebes to York they flashed their might,
  But he, the master of his soul,
Wrought out beneath the starry night
  The larger law of self-control.

Here in a land beyond his ken,
  Where Roman eagles never flew,
We raise his lifelike form again,
  And sound his pagan praise anew;
For still his quiet lips may preach

Digitized by Google

Of transient passion's foolish quest,
And still his healing thought may reach
The envious and untranquil breast.

In a world of echoes and routine it is, perhaps, the freshness of Mr. OSheel's lyrics, as much as anything, which lends them their peculiar attraction—freshness and a kind of disarming ingenuousness. There is a great deal in them of the poet and the lover to his lady; for after the manner of youth Mr. OSheel, too, has suffered much for love. And if his passion seems a little ideal and idyllic, even a little tenuous and airy, and his artlessness a little artful, it is all the prettier in its kind for that. And yet fanciful as he is, his fancy is that of the Celt and not without the shadowy overcast of his race:

They went forth to battle, but they always fell;
Their eyes were fixed above the sullen shields;
Nobly they fought and bravely, but not well,
And sank heart-wounded by a subtle spell.
They knew not fear that to the foeman yields,
They were not weak, as one who vainly wields
A futile weapon; yet the sad scrolls tell
How on the hard-fought field they always fell. . . .

They went forth to battle, but they always fell:
Their might was not the might of lifted spears;
Over the battle-clamor came a spell
Of troubling music, and they fought not well.
Their wreaths are willows and their tribute, tears;
Their names are old sad stories in men's ears;
Yet they will scatter the red hordes of Hell,
Who went to battle forth and always fell.

After all, in spite of their little air of romantic aloofness, their little assumption of "primitiveness," Mr. OSheel's verses are thoroughly modern. Thoroughly modern, too, in their own way are Mr. O'Hara's "Pagan Sonnets." Though their reminiscence is that of classical antiquity, they have very much the same symptomatic nostalgia of the past. Marked as they all are in a high degree by recollection, it is in "The Latin Sea" that their author's power of illusion is at its best, notwithstanding a want of "richness" in some of his rhymes:

The wonder of its blue is under us;
We see, with glamor of Homeric lore,
Shimmer the wave that lured Ulysses' oar
And Jason faring for the fabulous.
Yon trellised slopes were thine, Theocritus!
And those trim galleys, bound for Capri's shore,
Dart from the cove and follow, as of yore,
The burnished trireme of Tiberius.
Hellas and Rome, templed antiquity,
Looming along thy shore, O Latin sea,
Live once again beneath the dreaming glance;
Around thee clings the virgin world's romance;
And there, beyond the Pillars of Hercules,
Glimmers the Isle of the Hesperides.

To these lines Mr. Stacpoole's verses on Athens make an interesting pendant, with their slightly different range of association and their exclusively literary suggestion:

Upon the hills the shepherds feed their flocks.
Afar the sea—the violet-tinted sea—
Still floods in foam around the Pontic rocks,
And with the golden sun holds revelry;
Lulling the hyacinths with drowsy rhyme,
About Pentelicus still floats the bee;
All is as fair as in the olden time,
All is as fair as then—
But where are ye?

Where art thou now, O Pindar? in what land,
Demosthenes, what tongue dost thou now speak?
Far from the plane trees by the spring wind fanned,
Far from Piræus where the blue waves break.
The plane trees bend them to the winds of spring,
And echoes answer to the breaking sea;
Sweet from the olive groves the wild birds sing
Forever of their love—
But where are ye?

It may be merely mirage which inspires these regrets for a vanished past. It is a little difficult, however, not to read into them a vague distaste or suspicion of the present—now particularly when the air is shrill with voices uttering with no uncertain sound their distrust and discouragement, not merely with a day or generation, but with man himself and the human spirit. To say that such is the dominant of Mr. How's "Lyrics and Sonnets" would be hardly fair—he sings in divers tones—but such at least, as he strikes it in his verses on the Protestant Cemetery at Rome, is his most penetrating and haunting chord:

I know not who was Caïus Cestius.
His pyramid is by the city gate,
Where rows of cypress, standing black and straight,
Mark their own city, quiet, ominous.
Poor little Keats, no longer amorous,
Or unrequited, lies there, now grown great:
And Shelley, who may be aware—too late?—
If he was right or merely marvellous.
Certain have knowledge of Heaven; I have none.
I were content to learn the earth beneath,
The hearts of men, the secrets in them hid.
Knowing, perhaps I'd long that life were done
And I were lying, careless of a wreath,
Near Caïus Cestius's pyramid.

More subdued and resigned but no less unmistakable Miss Salaman's "Mood in the Silence" echoes an answer like a distant reverberation of the same call:

Let us be quiet now; let all the voice
Be of calm waters, while the silence sings,
Like a vast rumor of unheard-of things
That know not grief, nor dream how men rejoice.

The low hills love the silence; in the haze
They dream of what the sea is murmuring
In dim reverberance—some hidden thing
The sea learns from its heavenward endless gaze.

These things hold perfect knowledge; lo! the sea,
The hills all satisfied for ever; lo!
The full sun seeth, and the great winds know;
And these things are, while we but strive to be.

After this partial eclipse of confidence in what Huxley used to call "men and their ways" it is reassuring to feel the mild buoyancy and ready acquiescence of Mr. Drinkwater's verse in what humanity is prone at present to regard as the worst of evils—criticism and war. His lines on "The Dead Critic" are admirable in their manner, and no less so his "At Waterloo":

Great peace is over Hougomont,
And over La Haie Sainte is peace,
The level lands are ploughed and rich
With promise of increase;
The sleepy cattle graze along
Beneath the scarred historic walls,
And here where nations spent their blood
The flush of sunset falls.

No pride nor pity touches me
Nor hatred's fire and ancient stings,
Only a sense of strifes outworn,
And strange ironic things:
And stirrings of some broken strain
Of sounding hoofs and answering guns,
And faith that Europe now as then
Can breed heroic sons.

Mr. Sterling's is already a familiar name. And if there is little or no change of feature in his new book, it does at all events contain some interesting pieces, as his new books always do. Of these the best appear to have been inspired by contemplation of the solemn and sobering eternity of ocean:

Thou seem'st to call to that which will not hear,
As man to Fate. Thine anthems uncontrolled,
From winnowed sands and reefs reverberant rolled,
Shake as with sorrow, and the hour is near
Wherein thy voice shall seem a thing of fear,
Like to a lion's at the trembling fold;
And men shall waken to the midnight cold,
And feel that dawn is far, that night is drear.

Thou wert ere Life, a dim but quenchless spark,
Found vesture in thy vastness. Thou shalt be

Digitized by Google

When Life hath crossed the threshold of the Dark,—
When shackling ice hath zoned at last thy breast,
And thy deep voice is hushed, O vanquished sea!
One with eternity that giveth rest.

It is the same subject but in another mood, the mood of elusiveness and mystery, which gives Miss Cheney occasion for some of her happiest lines:

Dull gray sky, the sand more pallid gray,
White line of lapping surf and silken swish of the sea;
Gulls' plaining sharp, and shadowy slow, slow sail
Gliding in mist away.

Tang of brine and murmur and mystery,
Dreams of the fair lost ships and those that have reached their port;
Of alien wonders they bring and rich, haunting, strange,
Myths and songs of the sea.

It is an anxious moment when the scholar makes an excursion into poetry. His very reputation in his own subject is a disadvantage to him in another. Expectation is pretty nearly bound to be disappointed. So it is with Mr. Spingarn's "New Hesperides." In comparison with his studies of criticism it does not seem a thoroughly happy venture. The verse has certain felicities, to be sure; but on the whole his conceptions hardly appear to have been presided over by the "divine faculty." His manner of treating a traditional theme, however, may be judged by the following quotation from his "Prothalamion," which exhibits his versification pretty nearly at its best:

Oh, dawn that ushers in the bridal day,
And with the twilight brings the bridal joy,
Yours is the torch that once would light the way
Of that fair pagan boy,
Who guided hearts, and married their delight,
And closed the portals on the nuptial night.
. . .
Long years ago, when on the Syrian hills
A glory shone, and all the world grew light,
Ours was the day, and his the endless night;
We left him dreaming on Hymettus mount,
Where murmur of the bees his slumber fills,
And all the bubbling rills;
The honey stolen from the wilding hive
Clings to the dryad's lip; he dreams it sweet,
And her fond kisses keep his hope alive,
But waking finds the sun upon the plain,
With all the world in combat at his feet,
And all his vassals fallen from his train.

Nor is Professor Fletcher's "Overture" all that could be wished. His verse is very uneven, varying at its highest from a kind of earnest dignity to the frank banality of "A Nice (?) Distinction" and "The Lesson." Even at its best it is a little rugged, frequently it is crabbed; as though the fusion of thought with form were never quite perfect. Something he has got from Browning, no doubt; more from Meredith. Indeed, it is hard to keep "Modern Love" out of mind in reading his "Ransom." Perhaps the best, at all events the most interesting, things that he does are *genre*, like the "Seven Sandwichmen on Broadway," and his little sketches about New York, like "Riverside":

Windless waters roll aglaze
Under smoke-swept purple haze
Streaked with long, slant, lurid rays.

Heights across the river seem
Drifting off like hills of dream,
On which silvery steam-wraiths gleam.

Eerily, as daylight dies,
Motor-cars with nightmare eyes,
Scuttle past with croaking cries. . . .

Where dim buildings loom aline,
As from many a cliffside shrine,
Lights in cavelike chambers shine.

Past the moon-path in midstream
Lithe tugs leap with sudden scream;
Huge, squat barges, beam to beam

Like slaves fettered, three and three,
With the slave's pace, patiently
Bear their burdens out to sea.

CURRENT FICTION.

Ethan Frome. By Edith Wharton. New York: Charles Scribner's Sons.

More than ten years ago Mrs. Wharton published a short story called "The Duchess at Prayer." Since that time we have cherished an estimate of her powers which no intermediate accession to her repertory has raised, nor even, to speak truth, quite justified. Practised, cosmopolitan, subtle, she has seemed, on the whole, to covet most earnestly the refinements of Henry James. In spite of her habit of a franker approach, her consistent rating of matter above manner, and the gravitation—we should hesitate to say transfer—of her interest from exotic to native themes; we might have been reasonably content to rank her as the greatest pupil of a little master, were it not for the appearance of "Ethan Frome." This startling fulfilment recalls not only the promise of the early story, but its revelation of a more potent influence—the inspiriting example of a greater novelist to whom Mr. James's *devoirs* have been paid in the phrase, "The master of us all." Exactly how much the inception and execution of "The Duchess at Prayer" owed to Balzac's "La grande Bretèche" is beyond our present point, which is, specifically, that the excellence of Mrs. Wharton's work in this case outstripped the charge of imitation, and allied her with that company of splendid talents whom neither magnificence nor the catastrophes of passion can abash.

There is certainly no imitative strain in "Ethan Frome." The style is assured and entirely individual, the method direct and firm in its grasp upon substantial fact. Yet here is the companion-piece to the "Duchess," a variation upon the same theme of triumphant malice and tortured love, evoking the same emotions. And here as there the genius of a place presides, and the scene and the hour conspire to meet the racial temper. But there is this great difference: in the place of sumptuous memories, decaying under the sultry oppression of Italian noon, she was, at heart, a stranger; whereas she writes now of New England as one writes of home, plainly, and with a wealth of understanding and familiar allusion. Even the arrangement of the narrative is designed to fit the life described and its probabilities rather than to satisfy any precious scruples. A winter-bound stranger in an out-of-the-way Massachusetts hamlet recognizes in the limping figure of Ethan Frome the "ruin of a man," and apprehends some singular misfortunes behind his obvious plight. The sparse comment of a community respectful of privacies and little indulgent to curiosity yields but scanty information. Out of the native's penury come at length hours of enforced companionship, the daily rides to the station during which "Frome drove in silence, the reins loosely held in his left hand, his brown, seamed profile, under the helmet-like peak of the cap, relieved against the banks of snow."

"It was that night," explains the visitor, "that I found the clue to Ethan Frome, and began to put together this vision of his story." Such an approach could not be improved, forbearing, as it does, to violate the seal of silence; nor could, we think, the conclusion of village confidences be spared, with its ultimate breaking down of reserve between the initiated, its natural cadence of secret curiosity, and its softening echo of unavailing human sympathy.

Surely, the melancholy spirit that haunts the remoter byways of rural New England has entered into this chronicle; over all its scenes breathe the benumbing and isolating rigors of her winters, a sense of invisible fetters, a consciousness of depleted resources, a reticence and self-contained endurance that even the houses know how to express, retired from the public way, or turned sideways to preserve a secluded entrance. Yet it is with a softly-breathed strain of native romance that the drama opens. As well try to transplant arbutus from its native habitat as to dissociate this exquisite burgeoning of passion from its homely circumstances and the inflexible trammels of a local speech meant for taciturnity rather than expression. Thriving on meagre opportunities and pleasures—the coasting, the picnic, the walk home from the "church sociable"—and on the sharing of frugal household cares, the love between the young farmer and the little dependent who inefficiently "helped" in his home, spread like a secret flowering too innocent and too fragrant to escape the wife's malicious eye. The

Digitized by Google

brave and fragile figure of Mattie Silvers is not an idealized one, although this is the type of New England girlhood whose modesty and touch of fairy grace have been the subject of much poetry.

The wife who stands for fate in this drama is a curious and repugnant figure. She introduces the same vein of close-mouthed malignity which darkens local history. The helpless fear and loathing she inspires in her husband is the essence of supernatural terror without its obsolete husk of ignorance. By showing this instance of a hypochondriac roused by jealousy out of a "sullen self-absorption" and transformed into a mysterious alien presence, an evil energy secreted from the long years of silent brooding, Mrs. Wharton touches on a very radical identity. We realize that the same gloating satisfaction that made the wife smile upon the parting lovers, had something to do with her capabilities as a nurse. Her pleasure at the sight of pain she had inflicted—was it, perchance, from such an evil spring that her strength was drawn for the long years of drudgery between two cripples?

No hero of fantastic legend was ever more literally hag-ridden than was Ethan Frome. The profound irony of his case is that it required his own goodness to complete her parasitic power over him. Without his innate honesty and his sense of duty he could have escaped her demands and her decrees, refused the money for her nostrums and "doctor books," followed the vision of a new free life "out West." In his submission to obligation and in his thwarted intellectual aspirations he typifies the remnant of an exceptional race whose spiritual inheritance has dwindled amid hard conditions until all distinction is forfeited except that of suffering; but which still indicates its quality, if only by its capacity for suffering.

The wonder is that the spectacle of so much pain can be made to yield so much beauty. And here the full range of Mrs. Wharton's imagination becomes apparent. There is possible, within the gamut of human experience, an exaltation of anguish which makes a solitude for itself, whose direct contemplation seals the impulse of speech and strikes cold upon the heart. Yet sometimes in reflection there is revealed, beneath the writhing torment, the lineaments of a wronged and distorted loveliness. It is the piteous and intolerable conception which the Greeks expressed in the Medusa head that Mrs. Wharton has dared to hold up to us anew, but the face she shows us is the face of our own people.

The Autobiography of a Woman Alone. New York: D. Appleton & Co.

A note states that "this book is not a novel, but a record of the actual experiences of the woman, who is the narrator." One wonders, in all courtesy, if the little boy lied? or if the little girl did? One feels rather sure in either case that the writer had in mind an American Marie-Claire. America is a less picturesque field than France for such adventure, and the style of the American wage-earner lacks the finish of her French sister's. We cannot recall in the Parisian seamstress's vocabulary any word corresponding to the New England college graduate's "cute," for instance. In self-pity Dorothy Baldwin far outdoes Marie-Claire. The parallel indeed may be dropped as the book advances, since it is with life in a great city that this book mainly concerns itself.

Miss Baldwin's country life and country college career are quickly disposed of. From self-sacrificing motives she betakes herself to New York to earn her living. There is an original touch here in her meeting with both kindness and success instead of rebuffs and starvation. As secretary to a woman philanthropist she works early and late, but she makes always a reasonably comfortable living. Policemen, car-conductors, boarding-house keepers, are universally kind and pleasant. The emphasis is laid on the loneliness of one dwelling under the abnormal conditions of a toiler, solitary in a crowd, with no relatives, no domestic hearth; in particular, no husband. Dorothy's first high hope of one were rudely dashed to the ground by a man of protecting nature, manly yet sweet, whose cloven hoof is clumsily fitted upon a chivalrous, flower-and-candy-bestowing exterior. The hoof having demolished her prospects, she turns more assiduously than ever to business. Seeking employment, she finds misunderstanding, and returns to her charity work. Next she enters upon a trial marriage, feeling that her "motive was honest" and her "heart was pure." Disillusionment succeeds this step. Thereafter he of the cloven hoof reappears proposing marriage, and is scorned. At last a real husband is procured. In her "plenitude of joy" she is enabled, let us hope, to forget to be "baffled by her own intensity." Her story, as we see it, is a study in self-commiseration, a wail, sincere but far from tonic, for the lone woman worker, and a warning against trial marriages.

The Last Galley. By A. Conan Doyle. New York: Doubleday, Page & Co.

The present volume falls apart into two sharply defined sections. Concerning the eight stories that make up the second half of the book, the author says in his preface that they explain themselves. What he means is that they stand by themselves, on their own merits as bits of imaginative fiction. As such they are quite readable, without reaching a very high level, either of invention or of narrative skill. A possible exception is the story of the English noblewoman during the sporting times of good King George the Fourth; she hires a professional pugilist to trounce her husband, who is a bully and beats her. In the first half of the book, Sir Arthur has made an attempt at developing a new literary form which is to stand halfway between fiction and history and find its interest "not in the happenings to particular individuals, their adventures and loves, but in the fascination of the actual facts of history themselves," colored with the glamour of fiction. The experiment might be worth making; but what our author has given us is not imaginative history, but a series of sermons on British imperialism after Mr. Kipling's latest manner. The sinking of the last Carthaginian galley is obviously a plea for anti-German Dreadnoughts. The evacuation of Britain by the Romans is an argument against the evacuation of India by the British. It is a form of preachment which has been done to death in England. We are grateful that no scene from ancient Athenian history has been evoked in favor of the Boy Scouts or against the payment of the members of the House of Commons. Where the writer forgets to play Cassandra, as in the chapter on Nero the musician or the coming of the Huns, he is entertaining.

OLD BOOKS.

Frankfort Book Fair. By Henri Estienne. Edited by James W. Thompson. Chicago: The Caxton Club.

Frankfort-on-the-Main was founded by Charlemagne, who built a fortified villa there. It early gained importance as a trading centre. Its fairs, of which the first record dates from 1240, soon were prominent among those of the German cities, and retained that prominence for several hundred years. Not long after the invention of printing, the city became the centre of the local book trade, then of the German, and finally of the international trade. In the latter part of the sixteenth century, Henri Estienne, of the famous family of French printers, who frequently visited Frankfort for the sale of his publications, was so pleased with its spirit that he wrote, in Latin, and published in 1574, a small volume in its praise. The volume, now very rare, has recently been published by the Caxton Club of Chicago, with an original English translation, an historical introduction, and notes. By this venture, the Caxton Club has again put in its debt lovers of fine books and students of the art of printing and of the history of book-selling. The club has published many interesting books, has given to their preparation much care and expense, but upon none of them has it put as much research and care as upon this "Frankfort Book Fair" of Henri Estienne.

Digitized by Google

The format was designed by Ralph Fletcher Seymour of the Alderbrink Press of Chicago, with suggestions and criticisms from Frederick W. Gookin. Those learned in books of the sixteenth century can find defects. But the defects are nearly all such as must appear, at the present stage of printing in this country, in any volume which involves as wide a range of typographic problems. As a whole, the book gives one the impression of breadth, generosity, and richness; and all without raising in the observer any unpleasant sensation of wearying labor on the part of the makers. The paper, unbleached Arnold handmade, is very nearly eight by eleven inches; the type page proper is five by seven and three-fourths, to which marginal notes, where they are needed, add about an inch and a quarter of width. The type, which was designed by Mr. Seymour and is a bold Roman on a sixteen-point body, produces a page of good color, holding its own, even where notes in smaller type of the same cut confine it at bottom and side. Had the page been opened with very thin leads, the occasional dark spots caused by the conjunction of ascenders and descenders would have been lightened; but the page as a whole would probably have lost much of its vigor. To design a type face, even a good one, is almost to invite defeat in the opinion of the critics, partly because we are so far from having any standards save those born of precedent and personal taste. The saving grace is always simplicity, and this Mr. Seymour has used. If the cross-bar of the capital A had been dropped a little, perhaps the space above would never have filled and produced a black spot, as it sometimes has, and the letter would have lost nothing in dignity. One may ask why, if the top serif of the M be left square, that on the N should have a curve. But these are very minor points; the new letter composes well and gives a very legible and dignified page.

The many illustrations enrich the text without enfeebling it or giving the reader annoyance. They are included, not simply as ornaments, though most of them serve well as such, but to illustrate and enliven the text. They would perform this function much better if their proper legends were set below them, instead of being placed only in the list at the front of the book. To have given to the illustrations their own notes would have added to their value to the reader without weakening or spotting the page. The side notes come dangerously near the margin of the leaf. Here lies perhaps the typographic feature which will be most criticised. But the book is large enough already. The page proper is admirably proportioned and placed, and why may not the modern printer, if he is moved thereto, give his notes the secondary air they are entitled to by crowding them a little? There has been a little too much of law laid down in recent years concerning the sanctity of margins. It is well to find now and then, in the art of printing, a successful violation of over-stringent law.

The Latin text of Estienne's book, set in a trade italic which harmonizes admirably with Seymour's Roman face, is put opposite the English translation. The latter is, of course, much the longer; but the page-for-page balance is cleverly retained by placing in the Latin text reproductions of old wood cuts taken from books printed in Frankfort and bearing upon the general theme of the volume. The head and tail pieces and all the illustrations, a total of 187, are likewise from Frankfort books. The initials, designed by Mr. Seymour, are in keeping with the type and the wood cuts. Among the inserts are four large reproductions in collotype of early Frankfort views. Mr. Seymour designed for the end-paper a large, bold decoration, with an old seal of the city and the device of the Caxton Club for its main features.

For the selection of the book, the editing, and the historical introduction, Prof. James Westfall Thompson, associate professor of European history in the University of Chicago, is responsible. Professor Thompson has long been known as an enthusiast in bibliography and a student of the better phases of book madness. He has here attempted a very difficult task and the measure of his success can be grasped only by one who has labored long in the same field. The book centres, of course, upon Estienne's brief encomium; but this with its translation form simply a text on which Professor Thompson hangs a discussion of European fairs; a history, the first in English, of Frankfort and its fair; and a history of Frankfort book printers, the first of this subject in any language. The available information in these fields is vast. The list of as many of the books consulted as Professor Thompson thinks it wise to give in an appendix runs to sixty titles. The other apparatus comprises, besides the illustrations and the bibliography, a good index, a copy of Michael Harder's manuscript catalogue of the books he offered for sale at the "Frankfort Lenten Fair" of 1569, and many very complete tables of the number and character of books printed and sold in Germany and other countries in the fifteenth, sixteenth, and early seventeenth centuries.

As early as 1498 books came to the fair from as far as Venice, and by 1540 came printers, book-sellers, proof-readers, wood-cut makers, and binders from all parts of Europe. Noted European scholars came to enjoy one another's companionship, and to browse. Professor Thompson shows us what a tremendous incentive Luther gave to book-making and what the rivalry was between books in Latin and books in German. He describes also the development of the book catalogue and gives an interesting account of that imperial control of book catalogues which seemed to mark the beginning not only of press censorship but also of the recognition of the rights of authors and printers in their publications.

The somewhat pompous tone of Estienne's little treatise is properly reflected in Professor Thompson's English version; and in general the rendering is accurate. Curiously enough, a slip in the opening words deprives the senate of Frankfort of the adjectives "honorable and most worthy" and the city of its "renown."

Of the many enthusiasms in which Estienne indulges as he recounts the beauty of Frankfort, the excellence of its government, its moderate prices, the marvellous gathering of the world's products which the fairs display, the power they exert in the promotion of trade, and the honesty and fair dealing shown by buyers and sellers, even by the Jews, naturally the most characteristic, intense, and interesting is that wherein he touches upon books, printers, and scholars:

> The Muses assemble their printers and book-sellers in the city at the time of the fair, and order them to bring with them the poets, the orators, the historians, the philosophers, and not only those whom Greece and Italy once had, but also those to whom the lands which are visited by the nine Muses daily give birth. . . . For one is mistaken who supposes that only the writings and not the writers themselves are to be seen in this city which, as I have said, could well be called the Frankfort Athens. . . . Here all may enjoy the living voice of many honored persons, who gather here from many different academies. . . . The Italians speak falsely when they insist that the Germans have all their genius located in their fingers; as if this nation excelled only . . . in the mechanical arts. Let them visit, let them visit, I say, the Frankfort fair, and this Athenian fair which it has associated with it; and the first sight of the latter will convict their statement of falsity. . . . This fair, indeed, can provide one with a library hardly less rich than were those libraries, so celebrated in the past, of Ptolemy, of Polycrates, of Pisistratus, . . . and at no monstrous expense. . . . While Germany thus gathers in Frankfort this abundance of books for those interested in literature and the liberal arts, she adds a new service to the old, . . . that service by which he who invented the art of printing was unwilling to cherish that invention in his own bosom, but shared it with all the world to the highest good of the human race. For this one and the same act of his shattered and dispelled the dense shades of ignorance; struck from its throne and drove afar that barbarism which had so long reigned everywhere; brought back the exiled Muses and gave to literature its greatest impulse and its strongest support.

Notes

Among the Oxford books in Henry Frowde's list are: "The Memoirs of Sir John Burdon Sanderson," the work of Lady Burdon Sanderson, who is now dead, completed by J. E. Haldane and Miss E. S. Haldane; the fourth volume of Professor Oman's "History of the Peninsular War," and Robert P. Porter's "The Full Recognition of Japan."

The Columbia University Press will soon publish a volume of "New Poems of James I of England," edited by Dr. Allan F. Westcott. More than half of these poems are from a hitherto neglected manuscript in the British Museum, and are now printed for the first time.

Forbes Lindsay's new book on "Cuba and Her People" will be brought out by L. C. Page & Co., early in November.

Lemcke & Buechner are to be the American agents for a volume of "Lettres inédites de John Locke à ses amis Nicolas Thoynard, Philippe van Limborch, et Edward Clarke," edited by Henry Ollion.

Dr. McGiffert's "Martin Luther: The Man and His Work" is now announced by the Century Company for immediate publication.

Tunis of to-day is the subject of an interesting article by F. E. Johnson in the *National Geographic Magazine* for August. With the help of the illustrations one is able to get an idea of the attractions of what is regarded as one of the most beautiful cities of the Orient, a city which in ancient times was one of the principal places in the "granary of the world," so marvellous was the Roman system of irrigation. Prof. T. L. Blayney's account of a journey in Morocco enables one to realize the present conditions of this bone of contention, as well as the tremendously difficult problems the French must solve if they undertake its overlordship. The starting point was Tangier, the other important places reached being Fez, one of the sacred cities of the Moslem world, and Mequinez.

An enthusiastic account of the development of Canada and the geographical conditions affecting it is given in the *Geographical Journal* for October by Prof. W. L. Grant of Queen's University, Kingston. He even intimates that in the future it will be the centre of the British Empire, and that London is to be replaced by Winnipeg. The well-known Kashmir medical missionary, Dr. Arthur Neve, gives an account of some of his numerous journeys in the Himalayas, in which he studied the great factors of erosion, rain, glaciers, and earthquakes. In the animated discussion of the paper at the meeting of the Royal Geographical Society, Sir Thomas Holdich asked the members "to recognize the enormous amount of assistance to geographical inquiry, which is due, not only to Dr. Neve, but to the whole of the great fraternity of missionaries."

"Masks and Minstrels of New Germany" (John W. Luce & Co.), is the result of Percival Pollard's enthusiasm for Otto Julius Bierbaum, a troubadour, novelist, traveller, and critic, whose songs of wine and women represent the tone of revolt and negation now prevalent in German letters. The new nationalism, also a conspicuous note, he discusses only incidentally, in connection with the military lyrics of Detlev von Liliencron. His great interest is in spontaneous drinking songs and blithe voicings of nature and the ego without regard to the conventions of morality. Liliencron, Bierbaum, Hartleben, Dehmel, and the other poets reviewed have been strongly influenced by Nietzsche. Yet their neo-pagan spirit is not esoteric or the product of a coterie. Their songs have been popular in the variety theatres and are still heard on the streets of Munich and Berlin. Owing to this fact the Ueberbrettl' movement comes in for comment. This effort to render the entertainments of the music hall more artistic was first promulgated in Bierbaum's novel "Stilpe" as the project of a half-mad journalist, conceived in the fumes of a drunken orgy. But within three years the satiric pronunciamento had been carried out in Berlin by the author and his friends. It began as a joke and went to pieces when the joke grew stale, but the influence spread over Germany. Even America has seen the effects in "The Merry Widow" and the succession of Viennese operettas. For Americans, however, the most interesting part of Mr. Pollard's book deals with the dramatists. Hauptmann and Sudermann, being already buried under academic criticism, are passed by in silence. But Wedekind, the author of "Spring's Awakening," and Schnitzler, whose "Green Cockatoo" was presented by Mrs. Fiske last season, and Hermann Bahr, whose "Concert" has had a remarkable run in New York, are dealt with at length.

To refer to Mr. Pollard's volume as a critical work would be highly displeasing to its author. It purports to be simply a record of sensations and impressions. It tells of turning the pages of a magazine, the *Island*, and of thus entering fresh fields of literature full of alluring prospects. It lingers over the delight in some erotic or neurotic poem that reminds the author, queerly enough, of the minnesingers of the Middle Ages. In another chapter it describes with the most unprejudiced impartiality the product of Wedekind's diseased imagination, or the devilish perversity in Arthur Schnitzler's portrayal of Viennese fastidiousness in amatory etiquette. Mr Pollard should hardly be expected to furnish a study of the ideas of these new writers, since most of them had little interest in ideas; they lived for novel and varied sensations. But he might have attempted an analysis of the prevailing attitude toward life and destiny, or have indicated the significance of these decadent movements in the history of the German lyric and drama. Such attempts, however, Mr. Pollard would classify as the deadening preoccupations of literary Brahmins.

It is with a distinct sense of gratitude for a small favor that one welcomes the facsimile of the English edition of Samuel Blodget's "Prospective Plan" of the battle near Lake George on September 8, 1755, with its accompanying explanation (London: Henry Stevens Son & Stiles). No one can understand that somewhat important episode in the Seven Years War without studying the observant sutler's record of what he saw, and the English version of his sketches is a good deal better than nothing. It is almost equally far from being as illuminating as the original Boston engraving, of which an excellent facsimile was issued in 1902, by the librarian of the Massachusetts Historical Society. This facsimile was not accompanied by a reprint of the pamphlet issued at the same time as the original engraving, containing explanations of the data on the plan, which without these explanations is quite unintelligible. Both the plan and the pamphlet were reprinted in London the same year that they appeared in Boston, and it is this London reprint which has now been facsimiled, with an editorial note by Henry N. Stevens. Doubtless it is just about as good as the Boston edition, which it would have been as easy, and much more satisfactory to students and bibliophiles, to reproduce.

Volume V of "A Historical Geography of the British Colonies" (Frowde), which is being brought out under the editorship of Sir Charles P. Lucas, gives a large place to Canada. The volume has four parts; the first two, comprising the bulk of the historical considerations, were published some three years ago as the work of Hugh E. Egerton. Parts iii and iv, which are now published, are by J. D. Rogers. Part iv contains not only the geography but the history of Newfoundland, which explains away the seeming lack of balance in assigning an entire part to that single colony. Part iii is given up to the geography of the Dominion.

Mr. Rogers sketches in part iii the features of the Dominion as they were discovered and explored by adventurers from the days of Queen Elizabeth onward to the final accomplishment of the Northwest Passage by Amundsen in 1903-6. The whole volume is occupied with the ethnological problem rather than with what would ordinarily be termed geography. Geographical features are only emphasized in order to explain the distribution of population, and Mr. Rogers is careful to bring out the preponderantly British character of the population of Canada, in spite of the large infusion of non-English-speaking immigrants which has gone on in recent years. In Quebec, the French are still largely in the majority—forming, in 1901, 76 per cent. of the population; but in all the other provinces the inhabitants of British descent greatly outnumber Germans, French, and other European races. In the new provinces of Manitoba, Saskatchewan, and Alberta, where the greater part of the non-English-speaking immigration now goes, 70 per cent. of the population are of British origin and 11 per cent. come from the United States; besides, there are communities of Germans, Galicians, Doukhobours, Hungarians, Rumanians, Scandinavians, and half-breeds from Mesopotamia.

In the volume on Newfoundland, Mr. Rogers's chief problem has been to unravel the politics of cod-fishing. Newfoundland is even yet inhabited chiefly on the coast, with no inland towns. Although responsible government was introduced into the island in 1855, it was 1902 before any town or city had municipal institutions. St. John's obtained a town council in 1888, but it was not wholly elective, and had no power to levy or collect revenue. In 1902 the city obtained full self-government, but St. John's is the only city which up to 1910 had progressed so far. Harbor Grace, Carboneur, Heart's Content, and Tullingate are moving for similar powers; but at the time Mr.

Digitized by Google

Rogers wrote they had attained only the stage reached by St. John's in 1888. The long series of complications both with France and with the United States over the cod, herring, and lobster fisheries are carefully detailed; and an excellent summary of the natural history of both land and sea in Newfoundland makes clear the prime importance of the fishing industry. The Newfoundlander thinks in terms of fish, and to him fish is cod or cod bait. Mr. Rogers shows how this peculiarity of the island colony has made for isolation both in interests and character—an isolation that so far has foiled all attempts to make Newfoundland part of the Dominion of Canada.

The eleventh publication of the Irish Texts Society is a volume of the "Poems of David O'Bruadair," edited and translated by the Rev. John C. MacErlean, S. J. The edition is to be completed in three parts. Father MacErlean, who is already favorably known to Celtic scholars by his edition of the poems of Keating, has shown the same competence in the present production. His text is carefully constructed, after what appears to have been a thorough collation of the manuscript materials; his translations are trustworthy; and his introduction and notes supply full discussion of O'Bruadair's life and of the text, metre, and subject-matter of his poems. If we were to single out a less satisfactory part of the editor's work, it would be found in some of his general literary observations. We do not follow him, for example, when (on page xxi) he denies all influence of Latin literature on Irish poetry, and then explains its absence by the "extraordinary refinement of Irish poetry, which rendered its style and spirit impregnable to the assaults of foreign literatures." We feel the more bound to take exception to such a comment because remarks of the sort, it is our impression, are too common in the writings of the native Irish scholars who are doing a really important service in the publication of Gaelic texts. The edition of O'Bruadair, when completed, will be admirably representative of the Gaelic poetry of the seventeenth century. The volume now published contains hymns and elegies, epithalamia, and personal and political satires. While many of the pieces are conventional in language and structure, some depict with vividness the Irish life of the time, and some have decided lyrical beauty. All of them, moreover, merit the consideration of the historian as expressing the mind and spirit of the Gaelic population of Ireland in the age of the Stuarts and the Commonwealth. Regarded thus as historical documents, a number of the Publications of the Irish Texts Society have a value which is sometimes forgotten.

Col. Charles Edward Stewart was an officer in the Indian army and later in the diplomatic service. He went through the Mutiny and the Umbeylah campaign against the Wahabis and the Akhund of Swat—famous even in these western lands—and travelled much in Persia and Afghanistan on his way to and from his appointments and on boundary commissions. Especially he made a journey, disguised as an Armenian horse dealer, which carried him across Persia and far up into the Turkoman country, then just feeling the restraining shock of the Russian advance. Wide experiences followed as consul and consul-general at Resht, Meshed, Tebriz, and Astrabad. His last seven years of service were spent more quietly at Odessa, the last year being 1899. His book, "Through Persia in Disguise" (Dutton), takes its title from the most picturesque but hardly the most important episode in his life. It consists of full extracts from his diaries, extending from his first going to India in 1857 to the end of his official life; it was worked up into a continuous narrative after his death by Basil Stewart. But though the East is supposed to be unchanging and in certain respects really is so, and though he left Persia only in 1890, yet the most striking thing about this book is that it deals with a situation utterly gone by. The present series of crises in Persia would have been unthinkable, certainly unintelligible, to Col. Stewart. He had evidently no idea of the ferments which, even in his time, were working beneath the surface and which are now transforming the East. For him these countries contained no hope in themselves, but were to be kept in order by pressure from without or, if there were absolute need of it, were to be annexed and administered. And to very few, at that time, it is true, had other possibilities appeared. But though this book gives pictures of the past, its pictures are interesting and vivid. In them there is an unchanging East, too; Herodotus knew it and Alexander met it. And similarly Col. Stewart also as a soldier, a geographer, and, above all, a practical, clear-sighted man, has his contacts with the modern world. There are parts of Khorasan, where his surveys are still the only authority; he was early interested in central Asian railways; and he was one of the first to urge in the West the use of petroleum products as fuel in steamships and locomotives. There are two good maps and some illustrations, three Oriental.

How long the journalistic mill of the late William Eleroy Curtis will be kept grinding by enterprising publishers we have no means of telling, but apparently his letters to newspapers from Eastern countries will furnish grist as long as the present war lasts. Following closely upon his "Turkestan," there appears now "Around the Black Sea" (Doran), which is as readable, discursive, and in part, it must he said, as little authoritative as most correspondence of this sort. The topics are not closely related, and some of them, like "Florence Nightingale and Her Work," and the conventional descriptions of Odessa and other cities, are pure padding. Of the English transliteration of Russian names the author has no idea, and the haste in putting out this volume did not allow the proofreader to correct such misprints as "Galatzin," "Malikoff," "Luxenburg," "Van Wied," etc., etc. The volume has good illustrations and a map of Asia Minor, the Caucasus and the Black Sea to which the publishers justly call attention. This map, an admirable product of the Stanford Press, is alone worth the price of the book.

In the literature of Western railway and land exploitation there is no better known name than that of Robert E. Strahorn, whose book on the resources and attractions of Wyoming Territory, published in 1877, brought him to the notice of Jay Gould, and placed him for many years at the head of a literary bureau and advertising department of the Union Pacific Railway Company. The tender of this position was made to Mr. Strahorn just after his marriage, and he accepted, upon the condition that his wife should be permitted to accompany him in the arduous and constant travel necessary to the work in hand. After much objection, the point was yielded and the result has been a career of travel and sight-seeing under rigorously primitive conditions such as probably no other American woman has ever experienced. Mrs. Strahorn kept no systematic diary, and the volume before us—"Fifteen Thousand Miles by Stage"; Putnam—is made up in the main from memory, checked and supplemented by her husband's writings, newspaper work of her own, and especially her constant letters to her mother, a few of which are inserted in the text. As literature, the book naturally suffers somewhat in style from the surroundings out of which it came, though it must be said, on the other hand, that many of Mrs. Strahorn's relations of fact could never have gained acceptance in her husband's volumes of—we shall not say fiction, but description of the marvellous resources and beauties of our grand and glorious West. Tales of the same type have been so often told that it is needless to indicate here, either by quotation or otherwise, the general nature of her narrative. A book of frontier travel and adventure can no longer win its way by novelty, but must depend upon the reaction of frontier life upon an original and engaging personality. Mrs. Strahorn has met this requirement sufficiently to present a very readable book. With some allowance made for rhetorical hyperbole, her book must be taken as a fairly accurate picture of a phase of American life of which she herself has been a part, and which she has seen pass away through the very influence which brought her upon the scene, the growth of Western railway enterprise. The book has a certain value for the light which it throws upon some of the methods called into play in stimulating that enterprise. On one occasion Mr. Strahorn was called upon by his superiors, without previous warning, to produce six separate pamphlets of 100 pages each, on as many different States and Territories, all to be printed and ready for distribution within ninety days. It is little wonder that, even with his wife's assistance, the conclusion of the task found him ordered to the South for recuperation from complete physical collapse.

Richard Kendall Munkittrick, the writer of humorous verse, died at Stamford, Conn., on Tuesday of last week in his fifty-ninth year. He was born in Manchester, England, but was educated in this country. From 1881 to 1889 he was on the staff of *Puck*. He was the editor of *Judge* from 1901 to 905. He was the author of several books, among them "The Moon Prince and Other Nabobs," "New Jersey Arabian Nights," "The Acrobatic Muse," and "The Slambangaree."

From London comes the report of the death of Miss Sarah Smith, better known as "Hesba Stretton," at the age of seventy-nine. Her "Jessica's First Prayer," published in 1867, was enormously popular, and was translated into many languages. Among her other books are "Alone in London" and "Pilgrim Street."

The death is announced of Dr. Wilhelm Dilthey. He was born in 1833, and from 1882 to 1905 was professor of moral philosophy in the University of Berlin. Among his works may be mentioned "Das Leben Schleiermachers," "Das Schaffen des Dichters," "Beiträge zum Studium der Individualität," "Die Funktion der Anthropologie in der Kultur des 16ten und 17ten Jahrhunderts," "Studien zur Grundlegung der Geisteswissenschaften," and "Die Jugendgeschichte Hegels."

The Parisian journalist J. Vibert has just died. He was the author of "L'Œuvre de M. de Bismarck."

Characteristics of Existing Glaciers. By William Herbert Hobbs. New York: The Macmillan Co. $3.25 net.

The late Professor Israel C. Russell of the University of Michigan issued some fifteen years ago a series of works upon physiographic topics to be used as reading texts. The glaciers, volcanoes, and lakes of North America were successively the subjects of individual volumes. Prof. Wm. H. Hobbs, his successor in the chair at Ann Arbor, is maintaining the traditions of the department, and to an earlier work on earthquakes now adds this excellent summary of the main points relating to glacial ice. The basis of the book consists of three papers upon as many different topics, published in physiographic journals within a year or two past. As now brought together, they treat, respectively, mountain glaciers, arctic glaciers, and antarctic glaciers. They cover thus the chief manifestations of ice in nature. To the three is prefixed a general introduction in which emphasis is laid upon the evolution of glacial theories and upon the contrasts of the smaller and larger masses of ice.

In discussing the mountain glaciers the author has before him chiefly their physiographic effects. The resulting landforms are described in detail and a number of features not generally familiar to the casual student or reader are well illustrated. The sharp conical peaks of northern Norway will surprise those who have not chanced to see them in travels. The dissection of restricted table-lands from which glacial ice flows outward is clearly set forth, as are the cirques, the U-shaped valleys, the fjords, and similar phenomena. In accord with the book's title, it is these characteristics, with which the author is here concerned, rather than with the deposition, cause of movement, and life-history of the masses of ice.

In the part on arctic glaciers the observations hitherto made by the various polar expeditions are naturally the sources of information. Greenland is necessarily the chief topic, but other portions of the frozen North are not overlooked. In the case of mountains, the local relief greatly influences the movement and effects produced by the ice; but in Greenland and similar areas, the relief is overwhelmed by the huge ice-cap and the local topography is of little moment, except at the edges. The area of accumulation in Greenland and the cause of the precipitation which yields this continental, glacial mass seem to be still a matter of some uncertainty. The author opposes the view of Drygalski that the moisture comes from the east, and favors an anticyclonic descent of air-currents upon the lofty area, and their subsequent outward flow. The topic of icebergs closes the second part of the book.

The third part is devoted to the vast mass of the south polar ice sheet, which, resting as it doubtless does upon greatly elevated land, possesses peculiarities all its own. The wonderful marginal ice with its precipitous escarpment, many miles in extent, impresses readers at a distance scarcely less than observers along its immediate front. Its extraordinary jointing, and the great, rectangular icebergs which it consequently yields, are different from the arctic ice-sheet. The several expeditions which are now engaged in the dash for the South Pole give this region special claims to interest.

From many sources, Professor Hobbs has brought together in condensed and readable form the most important observations upon the subject which he treats. He writes generally in a clear style and makes an interesting book, even though he is a trifle pedantic at times and a little inclined to take himself too seriously, and to bring in uncouth words from languages with which English has little in common.

In "The Dawn of the Health Age" (P. Blakiston's Son & Co.) Dr. Benjamin Moore makes an interesting attempt to solve several social problems relating to the practice of medicine. He starts with the general thesis that if we looked after the death rate the birth rate could be trusted to take care of itself. This would be done by the establishment and development of a National Health Army, that is by making the ordinary practice of medicine in large measure a systematized national service, in which properly qualified medical men, and only such, are in charge of all matters in any way connected with the public health, including much that concerns the health of the private citizen. The evils of the present system, or rather lack of system, are discussed at some length, and Dr. Moore shows forcibly how poorhouses and hospitals as now conducted are inadequate or even futile in protecting the community against itself. He also shows the harmfulness of the existing methods of poor relief and the growing evils of the fee system and of club and lodge practice, which result in the demoralization of the doctor and completely fail in giving the poor timely and sufficient attention. All these difficulties are to be removed by having a properly trained medical officer, a government official for every 400 to 500 houses or families, with other medical officers in charge of the necessary hospitals and establishments to which may be promptly sent all sick persons that cannot be satisfactorily cared for in their own homes. The gain in working power, in "efficiency," to use a much overworked word, and the incidental diminution of cases of chronic disability likely to become a public charge, together with the economy of hospitals and other establishments conducted by the state, are expected to do more than make good the expense of conducting a salaried public medical service. This book, of course, deals with conditions as met with in Great Britain, but the intelligent reader in any degree familiar with our social problems will find that the American conditions are in many respects similar, and may profitably ponder the details of Dr. Moore's plan, a part of which at least has already made its appearance in Parliamentary discussions in England. The adoption of any such proposal here, except perhaps in certain thickly settled States, presents greater difficulties than on the other side of the ocean.

Drama

Henry Rose's interpretation of "Maeterlinck's Symbolism: The Blue Bird" (Dodd, Mead) will be welcome to those who find comfort in the reference of the points in a novel and brilliant spectacle to moral maxims of the most reassuring longevity and popularity. Mr. Rose's public will not be troubled by the reflection that the author of "Monna Vanna" and the essays is hardly the man to set forth a body of doctrine not one point of which would perplex the intelligence or offend the prejudices of the well-disposed middle-class American. The literary poverty of symbolism is suggested in the fact that the analogies to which Maeterlinck is supposed to have given scenical elaboration have less aptness and point than the majority of the brief similes and metaphors scattered with careless prodigality through his other work. Of positive intellectual value Mr. Rose's essay contains little; but it merits praise for its avoidance of those refinements and subtleties which have made a venture into the field of symbolic interpretation almost tantamount to a renunciation of sanity. The second essay in the volume, "The Optimism of Browning," is a corrective to certain misinterpretations of "Pippa Passes" which would make even Robert Browning an apostle of the lotos-eaters. The third essay, on "The Musical Mind," is negligible.

The production of "The Garden of Allah," in the Century Theatre, is worthy of a certain amount of respectful attention, not only as the first effort of a new management on the most costly and best equipped stage in New York, but because it is the result of a really conscientious and ambitious, though not wholly successful, effort to provide an entertainment at once popular and artistic. From the first great stress has been laid upon the magnificence of the spectacle to be provided, and it is scarcely too much to say that no play has ever been presented in a finer setting. The trouble is that the

Digitized by Google

piece itself, like the original story, is deficient in true dramatic quality, and that it suffers from the attempt made to supply the lack of action by attractive but irrelevant decoration. The spectator has to wait until the fifth scene before what plot there is begins to unfold itself. Of the descriptive and explanatory writing that forms the great bulk of Mr. Hichens's romance little or nothing, of course, is preserved in the play, and the characters of the two leading personages have been so modified that their conduct is not always intelligible, whereas clearness is vitally essential in dramatic construction. In the theatre the sudden fascination exerted upon the beautiful and idealistic Domini by the renegade and fugitive monk, Androvsky, who inspires distrust in almost every other person, appears artificial and improbable. But it is in its final outcome that the play seems most at variance with the ordinary experience of human nature. Here are the main facts as presented: Domini and her newly wedded husband are enjoying the first fruits of love in the desert, when they are discovered by Count Anteoni, Domini's friend, who recognizes the ex-monk and compels him to reveal the whole truth to his devoted bride. The confession made—in a really eloquent and moving scene—Androvsky pleads his passion as his one and sufficient excuse for having betrayed her into an unholy union, and implores pardon. She, in an apparent rapture of mingled horror and pity, bids him pray—which hitherto he has been unable to do—and he sinks upon his knees. Then the curtain falls and in the next scene Androvsky and his wife are at the doors of the monastery from which he had fled. At her bidding he has consented to renew his broken vows and do perpetual penance. His last momentary hesitation is overcome when she tells him that she is about to become a mother and that the child will be a constant memento of their past happiness. In other words, the revolting monk who dared run the risk of eternal damnation for the sake of forbidden freedom, is willing, just as he has realized his wildest hopes of happiness, to renew the yoke that had galled him to desperation. It is not thus that such a man would act in such circumstances. He might kill himself, or both, or bide his time or seek oblivion in dissipation, but he would not return meekly to his cell, even at the behest of such a woman. Moreover, there is something repellent in the suggestion of a repentance that leaves an innocent associate to suffer alone. A conventional happy ending would have been as easy as it would have been absurd, and the joint adaptors, Mr. Hichens and Mary Anderson, deserve credit for rejecting so conventional an expedient. There are only two strong scenes, one Androvsky's declaration of love and the other his confession of guilt, and in both the English actor exhibited eloquence and passion. The most highly finished and artistic performance was the Count of Eben Plympton. Miss Mannering was a sympathetic but scarcely brilliant Domini. The stage settings, especially the desert scenes, were rarely realistic and beautiful, being notably fine in spaciousness and color.

A new production by David Belasco always commands public attention on account of his preëminence as a stage manager; but his latest play, "The Return of Peter Grimm," is more remarkable for the novelty of its theme than for any high dramatic or literary quality or serious significance. Dramatically, indeed, it is an altogether conventional and clumsy affair. But the fact that the action is supposed to be dominated by a ghost is certain to appeal to public curiosity. It is conceivable that a drama of absorbing interest might be founded on an impressive use of such preternatural agency, but the imagination of Mr. Belasco is not equal to the task. The spirit is simply a human being divested of his material properties, without any considerable accession of spiritual advantages. Having in his life time, with habitual obstinacy, enjoined upon his adopted niece a loveless marriage with a rascally nephew, Peter returns from the grave—in a ghostly reproduction of his habit as he lived—to undo the mischief he has brought about. As he is inaudible, invisible, and speechless (except for the audience), he can work only by means of suggestion, except in the case of a dying boy, with whom, in the end, he is able to establish direct communication and thus effect the exposure and defeat of the wicked nephew, the union of the true lovers, and the general fulfilment of his ante-mortem designs. The philosophy of the piece is so confused that it is difficult to fathom. The spectral Peter speaks dogmatically of the superior state into which he has entered, but apparently has acquired no special knowledge or authority. He is credited with no other powers than those of mundane mesmerists and mind readers. As an example of persistent energy he is decidedly inefficient. He owes his final success far more to the incredible carelessness of his criminal nephew than to any preternatural influence exerted by himself. As a plausible illustration of any of the many various theories concerning the possible nature of a future life, or of the continued participation of the departed in the worldly troubles from which they are generally supposed to have been freed, it is altogether unsatisfactory. The simple truth is that the author has chosen a subject much too profound and intricate for his capacity, but which will provoke discussion and attract large audiences. Moreover, Mr. Warfield, as the human ghost, acts with the charming naturalness, quiet humor, and sympathetic tenderness which long have characterized his style.

Music

THE LISZT CENTENARY.

Six of the greatest composers of the last century were born within five years: Mendelssohn in 1809, Chopin and Schumann in 1810, Liszt in 1811, Verdi and Wagner in 1813. Verdi's centenary is to be celebrated in Milan by devoting the whole operatic year to the production of a cycle of his works, while in Germany great preparations are already under way to honor Wagner. There was also due recognition of Mendelssohn, Chopin, and Schumann, but Liszt's centenary is celebrated this year with unprecedented ardor and universality. In all Europe and America there is hardly a concert pianist or an orchestral association that has not announced a Liszt programme or two, and in some places, as at Heidelberg and Budapest, there are festivals lasting nearly a week, at which some of the greatest pianists of the time, mostly former pupils of Liszt (among them D'Albert, Friedheim, Lamond, Rosenthal, Stavenhagen, Sauer, Vera Timanoff, Sophie Menter, and Saint-Saëns), are coöperating with eminent singers and orchestral conductors. Of the Budapest festival, the Hungarian Government itself has charge—which is also an honor without precedent.

All this is, like the triumph of Wagner after many tribulations and delays, a gratifying illustration of the fact that professional pedantry, critical conservatism, and prejudice cannot in the long run stifle genius. Had Liszt in his compositions been merely a virtuoso, a brilliant technician, as his enemies asserted many thousands of times, he would now be a mere memory, like his once celebrated rival Thalberg, whom Fétis and others placed above him as a composer. Liszt was generally underrated until long after his death To-day, there are few piano recitals the programmes of which do not include one or more of his pieces, Chopin alone being more frequently represented. His songs are still unduly neglected, but his orchestral works are now played in Germany oftener than those of any other masters except Wagner and Beethoven—oftener than those of Brahms and Richard Strauss, who have been in fashion for a decade or longer.

The desire for more information about the life and works of Hungary's famous son has led to the publication, within a few years, of several biographies, of which Mr. Huneker's is the best. The colossal achievements of Liszt, not only as pianist and composer, but as missionary for all that is best in music, new and old, as teacher and helper of hundreds of aspiring musicians, and as reformer in general, loom up larger and larger, although a quarter of a century has passed since his death. It was the many-sidedness of his genius that made Wagner call him the greatest musician of all the ages. Only five other composers—Bach, Schubert, Beethoven, Chopin, and Wagner—wielded so deep and lasting an influence on musicians and the development of their art—and none of them in as many directions—as he did with his piano, his pen, his instruction, his example, and, above all, with his perfecting of the alliance between poetry and music, his infusion of fiery Magyar and gypsy elements into the sluggish current of European musical art, and his innovations in musical form. These last were particularly important, and were the source of virulent opposition, abuse, and hatred. He hacked at the very roots of the traditional sonata and symphonic form, planting in their place the symphonic poem which imparts unity to a composition in place

Digitized by Google

of the mere sequence of four unconnected pieces that constitute what is called a sonata or a symphony. The new procedure also made it possible for composers to give their pieces an endless variety of novel forms, and for these reasons all the great composers of France, Russia, and Germany, except Brahms, promptly followed in the footsteps of the "emancipator of orchestral music," as Saint-Saëns called the creator of the symphonic poem, the highest type of programme music.

While Liszt was one of the most modest and generous of men, it was not these traits alone that made him for many years discourage rather than encourage the playing of his own works in various cities. Attempts to produce them were likely to prove unsatisfactory because they needed for their effective performance a new kind of conductor—not the old-fashioned time-beater, or the man who thinks he has done his duty when he attains precision and tells the different groups of players when to come in, but a man who interprets an orchestral score as Liszt interpreted piano pieces, putting into them his own individuality, searching their inner meaning and proclaiming it eloquently, with elastic tempo and telling accents. At Weimar he simply applied the principles of his poetic piano playing to the interpretations of orchestral pieces. The results were the same as those achieved by Wagner's reforms in operatic conducting; but Liszt did not learn his art from Wagner, nor did Wagner learn his from Liszt. The two share equally the honor of having given existence to the modern orchestral and operatic conductor.

Through his example and his many pupils, including nearly all the prominent young musicians of his time, Liszt effected a similar and equally radical transformation in piano playing. He, the greatest technician of them all, sounded the death knell of mere technique, of display for its own sake. He created a new kind of piano-playing, which, without ceasing to be as idiomatically pianistic as Chopin's, is at the same time orchestral in sonority and variety of tone-color.

The world is just beginning to get the measure of Liszt's genius. Some of his achievements are still virtually unexploited, notably his church and organ compositions, and his literary works, a rich storehouse of wit and wisdom of which even his biographers have not availed themselves—there is so much to be said about him! Nor has the musical world as yet learned the lesson he set by tolerating and helping all, even his opponents. When a friend asked him why he was always, at social gatherings, genial toward his bitterest critical enemy, Dr. Hanslick, he replied: "I know only two kinds of persons—the clever and the stupid; with the clever ones I am always glad to converse, even if our views diverge widely; the stupid ones I avoid, even when they burn incense for me."

Art

OLD MASTERS AT THE GRAFTON GALLERY.

LONDON, October 11.

The exhibition of old masters at the Grafton Gallery two years ago was such a success that it is not surprising a second should follow it. The fairly large profits of the first were presented to the National Gallery, which the Government, never liberal where art is concerned, leaves always in need of money. The profits of the second, whatever they may be, are to go to the National Art Collections Fund, which has already helped the National Gallery out of more than one tight place. And, again, the series of paintings and drawings got together is less interesting in itself than in the opportunities it offers to modern art authorities and patrons—to the authorities for the airing of their erudition and the exercise of their ingenuity in making new attributions; to the patrons, for self-congratulation in belonging to a country rich in genuine old masters and not, as some unfortunate nations are, our own for instance, forced to put up with what Lord Curzon described in his opening speech as the cruel fates of the Metropolitan Museum and other New York collections. As for the ordinary visitor, there is the chance to enjoy his own intellectual appreciation of art without the uncomfortable feeling modern work gives him, that he may be appreciating the wrong thing.

More remarkable shows of old masters have often been held in London. The Royal Academy, justly criticised as it is in many respects, deserves little but praise for its long succession of winter exhibitions, though the organizers of the shows at the Grafton are hailed in certain quarters as if they were pioneers. In the present collection the important pictures are in the minority. A number have already figured at one time or another, and not a few quite recently, in the Academy, the New Gallery, the Guildhall, the Burlington Fine Arts Club, or Continental exhibitions, where, either because they were better hung or better aranged according to school or period, they appeared or could be studied to greater advantage. Indeed, the arrangement at the Grafton leaves much to be desired. It is hard to understand the system, or want of system, adopted. Decorative effect, if aimed at, has not been achieved, and so little have schools and periods been considered in most of the rooms that Goya and Rembrandt are found side by side, Watts is discovered in a corner with Titian and Tintoretto, Romney and Sassoferrato stare at each other in discomfiture from the same alcove.

Where something like system has been observed, as in the first, small, Octagonal Gallery, the result is so admirable that the wonder is it did not serve to set the standard. Here are the early masters of the fourteenth and fifteenth centuries, mostly Italian—Giotto, Benozzo Gozzoli, Masaccio, Vermejo, Signorelli, and others whose methods are sufficiently in sympathy for their work to be in harmony, and whose designs, though seen on gallery walls instead of in the churches or monasteries still remain decorative. One of the most talked-about paintings in this section is the Masaccio, a Madonna Enthroned with Angels. It shows the disastrous wear and tear of time, but its adventures through the centuries have not destroyed the fine composition nor marred the decorative effect obtained by the careful placing and beautiful balance of the Mother and Child and the surrounding angels. It is talked about, however, less because of its beauty and dignity than because it was once attributed to Gentile da Fabriano, because the new attribution is so recent that the discussion may be prolonged, and because it is supposed to be a part of Masaccio's altar piece for the Church of the Carmine at Pisa, described by Vasari, the other parts of which are said to be in Pisa, Naples, Vienna, and Berlin. As it has not been previously exhibited, probably the last has by no means been heard of it or of its origin and history. But far more interesting, because more impressive as a design, is a noble-spirited St. Michael Overcoming Satan, with the Figure of a Kneeling Donor, ascribed to Bartolommeo Vermejo, a little-known first-century Spanish artist born at Cordova. This painting also appeals to the scientific critic, for the present attribution has not been reached without doubt and discussion, and, indeed, I believe a new master was once invented to account for the picture, not so much, because of any special qualities in it as because of the signature, "Bartolomeus rubens." The exhibition may revive the controversy, but nothing can alter the fact that the man who painted the panel was a master of decoration. Against a gold background, the archangel in shining coat-of-mail and splendid crimson-lined gold mantle, with a wonderful rhythm of movement and line, attacks the dragon, squirming, if subdued, at his feet. The youthful figure of the archangel, all action and energy, is astonishingly alive, real despite its amusingly artificial swagger, and full of charm, while the dragon, fiery-eyed, its mouth wide open to display an alarming and impossible set of teeth, is the most naïve, most charming, most decorative beast

Digitized by Google

that ever defied knight or saint from a painter's panel or canvas.

That the subject was one often to inspire the early masters, there is a reminder in the adjoining room, where, in a crowded landscape, Sodoma's little St. George, alert, eager, dashing, and from a horse that shares his vivacious enthusiasm, charges a dragon hardly less horrid and primitive and decorative than Vermejo's. But it is in this second room that the difficulty of adjusting one's vision, or one's point of view, increases at every step. From Piero di Cosimo and Filippino Lippi, in examples that can be outdone in beauty and interest by themselves in many a permanent collection of old masters, one passes on to a stiff, archaic Christ Taking Leave of His Mother Before the Passion, by Altdorfer, and an amusing little Venus attributed to Lucas Cranach the Elder, and then, as swiftly, to portraits of women, pretty and sentimental, by Gainsborough and Romney, the Gainsborough notable chiefly, incredible as it seems, because it has been included in no previous exhibition. These portraits frame in a rich, flamboyant Bacchanal by Poussin, and two large paintings, presumably of the Adriatic and the Lagoon in Calm and Storm, by Guardi, with just sufficient of the quality of his work to make one wish so fine an artist had been represented by more characteristic pictures. After this the strange medley of Watts and Titian and Tintoretto, Romney, Sassoferrato, and Goya, leads to Rembrandt, of whom there is less to say because the principal examples were hung in the Rembrandt Exhibitions of Amsterdam and London not much more than ten years ago, and then fully described.

One Rembrandt in the third gallery, however, attracts particular attention just at this moment. I refer to Le Commencement d'Orage, the large, sombre landscape under a cloud-laden sky, lent by Lady Wantage, and by some critics claimed for Philips de Koninck. It was exhibited at the Guildhall in 1903, when I remember describing it in the *Nation*. As it happens, there is now hanging close by a large, somewhat similar landscape under a sky heavy with clouds, by de Koninck, lent by Mrs. Bischoffsheim, so that there is a chance for comparison. As the two are seen together, the de Koninck landscape has none of the sombre mystery and dignity so impressive in the Rembrandt, though there are paintings by him that would stand the test much better. However, the special interest of the Rembrandt at the moment is that, also hanging in the same gallery, are a copy of Rembrandt's Mill, said to be by Crome, and A River Scene by Hercules Seghers, whose signature is reported to have been found on the original Mill after it passed into Mr. Widener's possession. In this copy there is far more of the feeling and character of the big tragic Commencement d'Orage than of Seghers's tranquil, rather characterless pale green river banks under a pale sunlit sky covered with white cumulus clouds. A still further comparison is suggested by Turner's Windmill and Lock, possibly inspired by the Mill, which Turner seems to have known, and now placed on the wall beside Crome's copy. Altogether, for many reasons, this is one of the most interesting groups in the collection. Here and there are other paintings of note. J. P. Haseltine has lent his collection of Dutch drawings, and on the wall opposite to them is an historical collection of British water-colors, including a number of the Turners from Farnley Hall. But I have said enough to explain that whatever may be said of the merits of the show, there can be no question as to its variety. N. N.

December 1 Paul Elder & Co. will issue "The Laws of Japanese Painting," by Henry P. Bowie. The author has studied in Japan for more than nine years under Oriental masters, and ought to speak on the subject with authority.

There would be an impropriety in praising Louis Hourticq's "Art in France" (Scribner, in the "Ars Una" series) at the length it deserves. The conciseness and wit of the author put severe restraint upon the reviewer. It is the first complete history of French art, and the necessarily hasty survey is throughout sympathetic, learned, and brilliant. The book contains the data needed by the beginner, but it will be read with keen delight by the initiate. M. Hourticq's point of view is that of a tolerant classicism. Lucidity he believes to be the native quality of French art. The work of René Ménard especially appeals to our author. Of the neo-impressionists he entertains small hopes. In general, the book is pervaded by sweet reasonableness, relieved by an occasional touch of Gallic irony. It is a remarkably successful accomplishment of an inordinately difficult task. The French and English editions contain the author's complete text and illustrations. The editions in other languages are in both respects somewhat abridged. The English translation lapses too frequently into French idiom. On page 425 we read: "The Impressionist method is solvent for design." It will be a clever reader who sees at once that this means Impressionism destroys structural drawing. This is merely an extreme instance of a recurring defect.

In the *Bulletin* for October the Metropolitan Museum reproduces and describes two very important acquisitions, Meditation on the Passion, by Carpaccio, and Miracles of St. Zenobius, by Botticelli. Both these pictures come from that fount of surprises, the Abdy collection. In the Meditation on the Passion we have a mystical subject of unusual type. The dead body of Christ is seated askew in a ruined throne, behind is a noble landscape. To the right and left in the foreground sit hermit saints, bearded, and almost nude. Of their meditation the central Christ is an embodiment. The picture bore a false signature of Mantegna. It has recently been ascribed to Carpaccio by Sir Claude Phillips, in the *Burlington Magazine*. The links which attach this picture to Carpaccio's work are palpable, but we feel that the question of attribution is still open. This and several other pictures of allied quality show a Carpaccio almost impossible to reconcile with the master of the legend of St. George and St. Ursula. But the picture is so fine that the question of attribution may comfortably wait.

A schedule of lectures for three years has been arranged for the Charles Eliot Norton Memorial Lectureship. During the present season part of the societies of the Institute will be visited by Prof. Franz Cumont of the University of Ghent, Belgium; the rest by Prof. Caspar René Gregory of the University of Leipzig. Professor Cumont's subject will be "Astral Theology of the Monuments"; Professor Gregory will speak on "Mt. Sinai; Its Monasteries and Its Manuscripts." In the autumn of 1912 Mrs. S. Arthur Strong (née Eugenie Sellers), assistant director of the British School in Rome, will lecture before all the societies on some subject in the field of Roman Sculpture; in the autumn of 1913, Prof. Georg Karo of the Imperial German Archæological Institute in Athens will have appointments on all the circuits, speaking on some phase of Greek art.

Finance

"SOLD-OUT MARKETS."

When the long decline in prices slackened or ceased last week the explanation was put forth with singular unanimity that "the markets were sold out." This is one of those technical terms of the market-place and the counting room which sometimes need elucidation, and the existing state of affairs makes such elucidation more timely than usual.

On Wednesday of last week, the rumor suddenly ran through Wall Street, and was afterward confirmed, that "the Steel Trust" was "planning to surrender its ore-land lease"; that it was preparing to take this action (it would have a year or two in which to make preparations) in order to conform to the Government's criticisms of its status in the iron ore trade under the Anti-Trust law. Now when one recalled the sequel, a month or so ago, to a more or less similar report that the Harvester Trust was planning to shape its corporate organization to the Anti-Trust law, it is not strange that a thrill of terror should have run through holders of "Steel common." Another fifteen-point decline was plainly enough foreshadowed.

But the next day, the stock advanced, two days after the ore-lease news, it was up 2 points, and people who had sold it, expecting to buy it back at lower prices, had to pay a point or so more than their selling price and pocket the losses. It was explained, of course—explanations after the event are always abundant—

Digitized by Google

that the "ore-land lease" was a very doubtful bargain for the Trust, that some high authorities in the trade had pronounced it a mistake, and that the Steel Corporation would quite possibly have rescinded it any way in 1915. But that was not the point. There were also people, in September, who described the rumor of Harvester readjustment as reassuring, but whose conclusions had no effect in averting the break in stocks. The thing of importance last week was tnat something had been said of a Trust's unexpected move to avoid complicity under the Anti-Trust law, and that instead of a sudden avalanche of realizing sales, people were bidding up the stock.

Most of the Wall Street constituency eventually accepted the explanation that the stock market was "sold out." On the one hand, pretty much all of those people who had been carrying on borrowed money stocks which they could hold no longer, had got rid of their burden and been eliminated from the field. On the other, people who would not buy at the September prices were ready to come in as purchasers at concessions now. There were few necessitous sellers left, and a good many potential buyers.

This is interesting enough, merely as picturing the change in the Wall Street situation. But perhaps it is even more interesting as a photograph of conditions in other industries. While the low prices on the Stock Exchange of a fortnight or so ago found Wall Street with greatly reduced supplies of securities in hand which were trying to find a market, the low price of print cloths had found spinners and merchants with comparatively empty shelves, the low price of iron and steel had found mills with smaller unsold piles of finished material stacked in their yards, and so on through the other trades. In some of these industries, moreover, the consumer had begun to take notice of the price lists. With rather few exceptions, and those governed by more or less peculiar circumstances, it is a series of "sold-out markets."

Usually, such a condition of things means that while the prospective buyer need not be in any great hurry to place his orders, he will make no mistake in acting immediately, and may possibly lose a bargain if he waits too long. There are exceptions to all such rules, and certainly no one looks for a "runaway market" in any trade not subject to harvest dearth. But the consumer of steel who is waiting to place his orders until the Government sues the Steel Trust, the spinner who postpones laying in supplies until 8-cent cotton is a permanency, and the investor who should prefer to keep his money at 2 per cent. in a trust company until next year's Presidential election has been decided, are not the safest guides to business policy. It is occasions like this which bring to mind the legendary millionaire who confessed to having made his fortune through never buying at the bottom and always selling too soon.

The action of prices is not the only consideration which suggests some new views of the business outlook. The really extraordinary statement of September's foreign trade set many people thinking. A foreign market, had its own country made a parallel exhibit, would have called it indisputable proof of prosperity. Merchandise exports larger by $27,000,000 than in any September of our history, and merchandise imports $7,800,000 above the month's high record, are not altogether what one looks for in states whose industry is crushed by political machinations and paralyzed by social unsettlement. It is quite true that the increased exports (notably cotton) have been made on the basis of lower prices, whereas dearness in many foreign products has helped in the increased value of our imports. But that most precious of achievements in the eye of American markets, the "outward balance of trade," has also broken all September records. The excess of exports over imports for the nine completed months has itself been matched in only three previous years of American commerce—1908, 1900, and 1899.

It is easy enough to dismiss such a showing with the comment that hard times in the home consuming market have driven our manufacturers to sell abroad at a sacrifice. But that was also a favorite answer of the pessimists in 1897, and it was just as true then as it is to-day. But it missed the essential point of the matter then, and so it does on the present occasion. For such an argument overlooks the fact that precisely such courageous grappling with trouble has always been the plain way out. With an industrial nation, one must judge the large trend of affairs as he would judge the personal attitude of its citizens. Every successful merchant or manufacturer knows what he did, as a matter of policy, when he found his customary market slipping away from him.

He faced the situation boldly and aggressively, went out in search of new buyers, worked off his surplus supplies at prices which less quick-moving competitors would not meet, and meantime set at work his own wits and the wits of every inventive employee, in reducing cost of production. When the tide turned, as it always eventually did, these captains of industry found that they had control, not only of the newly-obtained constituency, but of the old one too, reinforced in purchasing power by prolonged economies. But the merchant or manufacturer who confined his activities to lamenting the good old times and storming at "the Government," had probably by that time put up his shutters.

The Nation

NEW YORK, THURSDAY, NOVEMBER 2, 1911.

The Week

Most people find it a good plan not to say everything that comes into their head, especially in public; and if this is a good rule for ordinary folk, it is a still better one for Presidents of the United States. If Mr. Taft had had it in mind when he made the big opening speech of his reciprocity campaign, he might not have committed the blunder of talking about "the parting of the ways," which was made so much of by the Canadian Opposition. And we cannot help thinking that another instance in point is furnished by these remarks in his speech at St. Paul on the Panama Canal:

> Then there is the question of tolls. We have agreed that we will charge equal tolls to all countries and there arose the question how far we may favor our own vessels between coast and coast, as we exclude vessels of any other country from that trade. The question is whether if we remit the tolls we are in a sense discriminating against any other country that has no right and no power to enter upon that trade. It may be that it will be held that the rule can apply to them as to others; if so, there is nothing to prevent our voting back to the coastwise vessels the tolls which they would be required to pay.

Was ever a proposal to whip the devil round the stump made with such childlike innocence? Perhaps the rule against discrimination can be got over, says the President, on a special plea; but if that special plea should be decided to be baseless, then there is nothing to prevent our getting by a trick what we have had to acknowledge we could not get fairly and aboveboard.

The delightful simplicity of Mr. William Allen White's analysis of the Republican Presidential situation must commend it to all devotees of the science of political prophesy. A few bold strokes of insight, and poor Taft's business is settled. He can't be nominated without getting the Southern delegates, and he can't get the Southern delegates if Wall Street wants to take them away from him, and Wall Street will take them away from him, because it knows he can't win. The circle seems quite complete. But let us see. Wall Street hates La Follette like poison, and cannot be satisfied to knock Taft out if that should mean the nomination of the Wisconsin Progressive; so the question arises, who is to be set up against La Follette in place of Taft? That difficulty may possibly be got over by putting up "some fine, unimpeachable, dignified candidate like Seth Low, President Butler of Columbia, Senator Lodge, or Senator Burton of Ohio." Thus we have the circle complete again—but for one trifling gap. If Wall Street has intelligence enough to know that Taft cannot be elected, what sort of intelligence will it be exercising in trying to get a man elected whose nomination would be brought about primarily by its control of Southern delegates through its ownership of Southern railways, and whose candidacy would bear the mark "made in Wall Street" all through the campaign? Thus the case is not so simple as it seems, and Mr. Taft still has a fighting chance for the nomination in spite of Mr. White's diagnosis of the condition of Wall Street's mind.

Why go further than Albany for a Democratic candidate for the Presidency? Here is Gov. Dix telling us—as the newsboys would say—"all about" the Trust question, and surely that is *the* question of the day. "The great need of the time is to cease ill-considered interference, and, consistent with human rights, give the fullest play possible to the energy and resourcefulness of the American people." No objection to well-considered interference, please notice; and a reservation is clearly made for the claims of "human rights." That is the way to solve the Trust problem, and the wonder is that nobody has thought of it before. Perhaps one reason, however, for this failure has been the neglect of other people, in the pressure of politics and law and business complications, to take a philosophical survey of the fundamental factors in the case. These are set forth by the Governor with a firm hand and an unflinching pen. He sees plainly that "capital has a just claim to remuneration commensurate with the hazard and risk of business and financial enterprises, and the compensation of labor should be far above the line of bare subsistence," and he does not hesitate to say so.

Secretary Fisher's address on "Alaskan Problems," before the American Mining Congress, is wholly free from controversial or partisan spirit, and is manifestly the result of painstaking inquiry and observation, and of impartial thinking. Upon many aspects of the agitation over the exploiting of Alaska's resources, Mr. Fisher's statements throw a milder light than has beaten upon them in the pages of some of the muck-raking magazines; but upon the central question involved in that agitation his conclusions are as clear and as emphatically expressed as the most determined conservationist can desire. "The time has passed," says the Secretary, "when the Government should convey an unrestricted title to its coal fields. The day is done in which the Government should deliberately encourage the unrestricted private exploitation of the sources of power."

On the contrary, Mr. Fisher declares unqualifiedly for the working of the coal lands under a system of leases and royalties, the ownership remaining with the Government. Proof of the practicability of this plan he adduces from experience in this country, in Australia and New Zealand, and in the Yukon territory adjacent to Alaska. So far as the question of delay in the using of the coal is concerned, Secretary Fisher's statement is that "by making the terms of our leases liberal we can make them even more attractive to capital than if we adopt the policy of an outright sale of the fee"—provided we understand by "capital" working capital and not speculative capital. As for the objection that it would be impossible to get any leasing legislation through Congress, this is neatly and completely dispatched by the Secretary in the simple remark that, in his judgment, "Congress is far more likely to pass a rational leasing measure than it is to throw the coal fields of Alaska open for unrestricted private exploitation."

It is twenty-five years since Archbishop Gibbons of Baltimore was made a member of the College of Cardinals in succession to McCloskey of New York. During that quarter of a century the Catholic population of this country has greatly increased in numbers, in wealth,

Digitized by Google

and in prestige. The enlarged representation among the Princes of the Church which the remarkable growth of Catholicism in this country long ago justified is sometimes supposed to have been delayed by the conflict of opposing currents within the American Church. Such controversies are apparently no longer a living issue. At any rate there is handsome compensation for the long-deferred honor in the unexpected number of American prelates upon whom the distinction has at last been bestowed. The United States will now have four Cardinals out of a total of seventy-three, which is not greatly out of proportion to the number of Catholics in this country. The new creations are indicative, however, of something more than the growth of Catholicism in the United States; they recognize also the larger place which this country occupies in the eye of the world. At a time when the Church in Europe is sorely beset in many places, the new appointments are a tribute to the friendly relations between Church and State which are the only ones conceivable in our system.

The remarkable personal qualities and the extraordinary career of the late Joseph Pulitzer deserve such recognition as his sudden death has called forth. His story of struggle upward from the lowliest beginnings is what we like to think typically American. His rise was no accident. He had the mind and will to carve his way anywhere. To an energy which was both restless and untiring, he added a marked intellectual grasp. And the way in which, during the closing years of his life, Mr. Pulitzer kept his intellectual interests alive though in the grip of relentless disease and stricken with blindness, witnessed to an inner spring of vitality in the man, and an indomitable resolution. As a newspaper proprietor and editor, Mr. Pulitzer is to be credited with having championed many of the good causes of his time. Under him, for example, the New York *World* was early a stout advocate of the reform of the civil service. This implied sincere conviction on Mr. Pulitzer's part, for at the time the movement was not popular. Perhaps it was related in his mind to that general fight for the people against privilege in which he thought of himself as engaged—the spoils of office being, in this case, the privilege which politicians arrogantly claimed. Also for a revenue tariff and for sound money his newspaper valiantly contended. Indeed, it was a part of Mr. Pulitzer's instinct for politics and sagacity in reading the future in the present that he should have been so often on the right side of important public questions.

It is a different matter when we consider the type of journalism which Mr. Pulitzer first fully exemplified in New York. About that, it is notorious that doubts arose in his own mind! He came to feel that what he had helped create had somehow become too powerful and had got away. It is known that he often expressed some such idea about his own paper; what he thought of the imitators who had bettered his instructions, may easily be imagined. From the first days of his control of the *World*, he struck out boldly for a new kind of "publicity" in journalism. But that word means many things. It covers not only the exposure of political scoundrels, but it denotes, in practice, a kind of constant clamor rising into a shriek, with a daily prying into private affairs as if nothing existed anywhere which should not be dragged into the light of day, and, worse than all, a lurid exploitation of crime and nastiness. Attempt has been made to justify such methods on the plea of "appealing to a wider audience," and acquiring the greatest possible "influence." But there is always a danger lest influence be confused with circulation—meaning profits—and the wider audience be only another way of spelling larger dividends. At any rate, the admittedly evil means remain evil and work evil, even if they are adopted in the hope of attaining good ends. "The Press and Crime" was one of the topics discussed at the meeting of the American Academy of Medicine, last June, and the author of a paper on "Neurotic Books and Newspapers as Factors in the Mortality of Suicide and Crime" specifically accused the *World* of having given a lead and a vogue to "prurient and crime-inspiring periodicals."

Mr. Taft, as a consistent advocate of peace, endeavored at the University of Minnesota to show that peace hath not only her victories, but her heroisms as well. Braver deeds may have been done than Mr. Taft's when he told his college audience that their favorite yells were senseless and barbaric; but history has not recorded them. The miracle was that the President's words were not immediately drowned in a roar of

Rah, rah, rah, Ski-U-mah,—hurrah—hurrah 'Varsity—'Varsity!—Minne-so-ta!

And the indignant cry would have been caught up by one seat of learning after another, Dartmouth flinging in an indignant

Wah who wah! wah who wah! da-da-da, Dartmouth! wah who wah! T-i-g-e-r!

Benzonia College rising to an angry staccato,

Ski-yu-bah! Ky-yi, Ky-yi, Ky-yippy, Ki-yah! Ben-zee, Ben-zee, Benzonia, Yippi, Ki-yi, Ky-youshl

Ohio Wesleyan remarking somewhat sardonically,

O-we-we-wow! A-la-ka-zu-zi-zow! Razee-zi-zu! Viva! Viva!-O.-W.-U.!

and Georgetown announcing with tremendous Wagnerian finality,

Hoya! Hoya! Haxa! Hoya! Hoya! Georgetown Hoya! Horah Doray Hai I Hickey, Hickey, Kai, Kai, Moky, Moky, Hay I, Toe Me!

Before this avalanche of wrath, even the number of first-voters Mr. Taft may have alienated would have sunk into secondary consequence.

In his address at the unveiling of the Bryant statue in New York, Dr. Van Dyke wisely gave to Bryant's poetry the first place in the appeal which he makes for lasting remembrance. Prize as we should the service of the public-spirited citizen, and praise as we may the long labor of the newspaper man, it is the imaginative quality of the poet, and his representative position in our literary history, which are the best claim of the name of Bryant to be commemorated. In an age beset by materialism and sordid tendencies, this public tribute to a poet seems to acquire special meaning. It is the protest of the spirit against the things that would quench it. In honoring a poet we somehow record our belief that a man's life does not consist in the abundance of things which he possesses, and that there is something finer than luxury and nobler than power. Even when we are fallen on prosaic days, and it should seem that the voice of the singer fails and his vision perishes, there is still the invincible hope that a poet will arise, in answer to invocations like that of Clough, to interpret our time truly to us. A statue to Bryant the poet thus becomes a significant treasure of New York.

G. B. Shaw has had to wait some time for an endorsement of his conviction that he could write as well as Shakespeare, and that he had never done anything as poor as "As You Like It." It has now come, however, and from no less an authority than a Western high school. The literary societies managed by the pupils are at one with the faculty in declaring the Stratford dramatist "licentious, unclean, and objectionable," and in demanding the withdrawal of his productions from the curriculum in favor of those of Ibsen and Shaw. The strongest point of their indictment is that the "bard of Avon" was "a cheap grand-stand player." This puts the antithesis between present and former playwrights perfectly. It is the greatest of pities that the Marlowes and the Shakespeares were so shortsighted as to prefer momentary success, however won, to the lofty ideal of writing for posterity, which dominates the immortals of our own time. Had it not been for the factitious importance given to the sensational author of "Hamlet" by prescribing his works for study in our schools, he could not have obtained such a hold upon us.

Irresponsible muck-raking appears at its worst in an article in the *Cosmopolitan*, purporting to describe the "carnival of corruption" in Mississippi culminating in the election of Leroy Percy to the United States Senate in 1910. The writer seeks to show that the same interests which elected William Lorimer in Illinois operated in the choice of Senator Percy over Vardaman by a vote of 87 to 82. The whole case hinged upon the testimony of Bilbo, a State Senator, and one of Vardaman's henchmen, that he had trapped L. C. Dulaney, Senator Percy's manager, into bribing him for his vote. Dulaney was indicted and tried, but acquitted, the writer charges, by a packed jury of Percy supporters. As a matter of fact, the jury, of whom eight were Vardaman men, acquitted Dulaney upon the testimony of Bilbo himself, when it had been proved that the banknotes which he swore were the identical ones handed to him had been issued by a bank in his home town, on a date after that on which the bribery was said to have taken place. Moreover, the Legislature, in joint session, after a complete investigation, exonerated every one concerned save Bilbo—and this, not by a partisan division as a whitewashing measure, as the writer alleges, but by a unanimous vote.

Madero's enemies in Mexico evidently find any kind of stick good enough for their purposes. We imagine that even the German Kaiser could venture to say, as Madero is charged with saying, that he should rather govern with the cooperation of the people than with the aid of bayonets. Why this should have been construed into an insult to the Mexican army and should have thrown the Chamber of Deputies into a fury of protest, does not appear from the context, the situation, or the record made by the Mexican army against Madero himself. The situation is complicated by the peculiar nature of the charges brought against Madero in connection with the insurrectionary movement led by Gen. Zapata, with whom the President-elect is supposed to be in connivance. Why Madero should conspire to ruin his own Administration right from the start does not appear. There is a different explanation that suggests itself. Madero, in assuming office, finds this fairly serious revolutionary movement on his hands. He does not want to begin his Presidential career by initiating a civil war, and believes that a policy of conciliation might bring the rebels to terms. Hence the expression about cooperation and bayonets, and hence the wrath of those Deputies who are his enemies or who do not understand his motives.

Those people who have described Italy's advent into Tripoli as a campaign for civilization, are now in a position to record the first decisive victory scored for civilization—namely, the indiscriminate massacre of thousands of non-combatant natives by the panic-stricken Italian soldiery. It is not to be supposed that Italy entered upon her adventure in Tripoli without being prepared to pay a heavy price. Putting aside the disastrous experiences in Abyssinia, the Italian General Staff must have been fully aware that campaigning in the tropics is a very expensive bit of business. Even the model German army found that to be the case in East Africa and Southwest Africa. The French Government had to throw nearly fifty thousand troops into Morocco during the campaign that followed the occupation of Casablanca, and Italy must count upon severer opposition than the French encountered. The Turkish army in Tripoli, while unimpressive in point of numbers, nevertheless constitutes a nucleus about which the desert horsemen may be brought into something like military discipline. And in the Turkish officers the natives will find leadership of a kind that the Beduin tribesmen in Morocco were entirely without. That brilliant young officer Enver Bey, one of the pillars of the new régime at Constantinople, is reported to have arrived in Tripoli, or to be on his way there. Ultimately, it is to be supposed, the Italians will make themselves masters of the country. The national honor is now so deeply engaged in the enterprise that any sacrifices necessary to the end will be forthcoming. But Italy will be fortunate if she comes out of the struggle with merely a heavy loss of men and money. The reaction upon conditions at home is one that the Government must look forward to with no little anxiety.

The necessity of saving one's face, which has always been a cardinal point of Chinese diplomacy, apparently no longer holds, or applies only to dealings with the foreign devils. Certainly the Imperial edict issued at Peking on Monday is one of the most notable examples of eating humble pie on record. It is an extraordinary document. The child Emperor, pleading his immature years as an excuse for ignorance, scores his former Ministers and pledges himself to rule henceforth in complete accord with the desires of his people. For a little boy of five the paper is not a bad showing either from the tactical or the stylistic point of view. There should be a great literary career in store for the Emperor Pu-Yi. As for the general situation, the Imperial edict merely puts into immediate effect the promises of earlier years. The exclusion of the Manchu princes from a voice or place in the Constitutional scheme was bound to come as soon as a real Parliament was assembled. If it should turn out that the reported Imperialist victory at Hankow is as complete as it has been reported to be, conditions leave both parties in a fit mood for compromise. And that is the best that can happen to China if her democratic institutions are to have a fair test, unhampered by the interference of the Powers.

THE SUIT TO DISSOLVE THE STEEL TRUST.

We suppose that most people who have observed attentively the course of recent events were not greatly surprised at the news that the Government had entered suit against the Steel Corporation. This great trade combination occupied what at any rate was admitted, even by its friends, to be debatable ground under the scope of the Anti-Trust law. To suggest that even the sensitive financial markets may sooner or later experience a feeling of relief at having the question tested and settled by formal suit, may seem to be speaking paradox. Yet the bringing of the billion-dollar organization before the courts was the only way, short of voluntary and complete disintegration, by which the constantly overhanging uncertainty could be removed. If the law officers of one Administration should not challenge the Steel Trust's legality by entering suit, that would be no guarantee that the next Administration would refrain.

The case of the Steel Corporation, it hardly need be said, differs in many respects from that of the Standard Oil or the American Tobacco. Its ten years of history have not been marked by the ruthless trampling out of competition which characterized the one, or by the industrial sharp practice which characterized the other. Pittsburgh itself, the centre of old-time "open markets" in the steel trade, concedes that the Trust has in a certain sense fostered competition by refusing to use its great resources to invade the territory of rivals. Its management is admitted to have stopped the excesses of a rising steel market, in times of excited speculation and urgent demand, by refusing to mark up prices to the extent of its opportunity.

Steel prices have admittedly been more stable, since the corporation was organized in 1901, than they were under the Carnegie régime; and if the Steel Trust has stimulated in the stock market, in a way to expose its management to grave criticism, that spirit of reckless speculation which it has kept in leash in the market for its products, this is not what the Anti-Trust Law undertakes to deal with. In advance of the present suit, the Trust has served notice of cancellation of the lease under which it held the iron ore lands which the Commissioner of Corporations denounced as virtual monopoly, and it probably would have consented to relinquish the Tennessee Coal and Iron, concerning the motives for whose acquisition, in the panic of 1907, controversy is still active.

All this shows why the Steel Corporation will come into court with a far better case than the Oil Trust or the Tobacco Trust. This prosecution will necessitate some much closer definition of restraint of trade. The weakest point in the Steel Trust's case is undoubtedly the powerful influence applied by its management toward preventing concessions in the price of steel, through "moral suasion" and the "Gary dinners," at such times as the year which followed the panic of 1907. When the head of the organization resorted to the assertion that supply and demand no longer had any business to regulate prices, proposing, as an alternative economic law, the rule that prices "should at all times be reasonable and fair," it was quite inevitable that somebody should ask who was to settle the question of fairness. Supposing the Steel Corporation to have the deciding voice, would its judgment ever be influenced by the pressure of shareholders for higher dividends? And supposing that Judge Gary and the present board could be trusted to ignore such ulterior influences, could the consumer be sure of the policy of the management which in due course would succeed them? For ourselves, we believe that it was his own instinctive recognition of these serious difficulties which led the chairman of the Steel Trust to his extraordinary advocacy, before the Stanley Committee, of the fixing of prices by the Government.

The Steel Corporation's history has been in many ways an epitome of the history of its times. When the Trusts are attacked indiscriminately, as malign conspiracies against the liberties of the people, it is only fair to remember that the people were not free from whatever blame may have attached to the construction of these huge trade combinations. It is not only that no effort was made in 1899 or 1901, when most of them were formed, to enjoin their organization under the Anti-Trust Law, which had then been for a decade on the statutes. There is something more than this to say of the public's attitude at the time. The investing community, small and large, was combination-mad. It hailed each successive amalgamation of the sort with enthusiasm; it rushed tumultuously into the market for their shares. College professors set forth gravely, to students and readers, that the manufacturing business of the future could be conducted successfully in no other way.

All this, in our opinion, was part of the derangement of ideas which marked that extraordinary period—when serious men in the high places of American finance insisted that the old laws of political economy were obsolete and fit for the rubbish-heap. But the very fact that responsibility for the conditions which then arose in corporate industry rested largely on the community as a whole, makes it all the more right that the pending inquiry into the legal status of these combinations should be pursued with sobriety and with no spirit of vindictiveness. This reminiscence of the conditions prevalent when the Trusts first rose to their formidable power shows the utter impropriety of that indiscriminate clamor for the Government to "put some Trust magnates in jail," which has been persistently raised by some of our newspapers. Where promoters of monopoly have acted in open and knowing defiance of the law, the penal clauses of the Anti-Trust Act may be, have been, and will rightly continue to be, invoked. But in the case of combinations regarding whose lawfulness or unlawfulness the courts took ten or a dozen years to decide, it is certainly enough to say what must be done no longer by the corporations and their owners, and what must be undone.

THE BOSS SELF-DEFINED.

The appearance of Mr. William Barnes, jr., as a witness at the Albany investigation, has a value beyond anything that may be proved or disproved by his testimony. For he is that most interesting and instructive of political figures—a boss assisting at his own unveiling. One's mind reverts to Richard Croker's examination by the Mazet Committee in 1899. He gave to the public reluctantly and perhaps all unwittingly a picture of himself and his methods—"working for his own pocket all the time," was one of his brutally frank admissions—that was of great help in rousing the city against him. Mr. Barnes, no doubt, is too astute and self-possessed to repeat Croker's blunders on

Digitized by Google

the stand. The Albany boss is able and he is cool. Yet it will be found that, in essence, his conception of his power, and of the way in which it may legitimately be used, is the same as that of the Tammany boss.

After considerable skirmishing, Mr. Barnes finally conceded that he was the "local leader" of the Republican party in Albany County. Asked then to say what he understood by the term, he replied: "I suppose a political leader in a colloquial sense means a man whose advice is taken quite largely, pretty generally, by the men with whom he is associated." Mr. Barnes was probably unaware how closely his definition followed that of Croker. When the latter was on the stand twelve years ago he, too, was a little slow in acknowledging that he was the "leader" of Tammany Hall, but finally said: "If others think I am, I am willing they should." On the point of the nature of his leadership, he fully agreed with Barnes. It was "advice" and "judgment" that he was expected to give to the "organization," and they were "generally considered," since it "does not do to have divided councils at the head." The inquiry was also made of Croker whether his "wish" was not "a powerful wish" with Democratic Senators and Assemblymen at Albany. The boss answered grimly: "I try to make it that way." Croker, however, was consistently at one with Barnes in alleging the influence of the boss to be purely moral, and his power over those associated with him to be due solely to his reputation for superior political sagacity.

Now, it is evident that this leaves the whole thing in the region of mystery. The strange deference to the wisdom of the boss, as the bosses themselves set it forth, has to be ranked with the greatest puzzles and wonders of politics. The somewhat obscure process by which the leader of a party comes in England to be recognized as such is transparent simplicity by comparison. Outsiders are sometimes surprised that the King should know whom to send for when it is a question of forming a new Government, but that is nothing to the mysterious way in which all the Republican workers in Albany with one consent point the finger at Barnes and say: "He is our leader." The boss seems to stand on the same ground as a Prime Minister. According to the old story, a member of the Cabinet said to a Premier that he didn't see the difference between a Prime Minister and an ordinary Minister. "The difference is this," he was informed, "that when we disagree it is you who resign and not I." Barnes would undoubtedly take the same view of his own supremacy. Those Republican workers who do not take his "advice," are expected promptly to file their resignations. Any other course would be flat *Majestätsbeleidigung*.

All these cloaks of modesty and mystery in which the boss wraps himself, when called to the witness stand, really conceal nothing and deceive nobody. The innocents must be few who are in any doubt about the kind of "advice" which the boss gives, or the means he uses to force its acceptance. Again take a look back at the Croker examination. Making allowance for the differences between Albany and New York, there can be no question that the same sort of thing has gone on for years in the former city under the Barnes régime:

Q. Is it not a fact that upon the success of the Tammany ticket in the election of the fall of 1897 there was a gathering at Lakewood of the important members of the Tammany organization, including yourself, at which was discussed the offices that were to be filled and the candidates for these offices? Is not that so?

A. Oh, yes.

Q. And at that conference at Lakewood practically all of the important offices of the city and county government were selected, were they not?

A. Well, pretty much.

Q. And your advice was asked upon them all, was it not?

A. Mostly all, yes, sir.

Q. Do you recall any member or any important officer of the city government now who was not discussed with you and your advice asked about him?

A. No, I do not.

Q. These men were all agreeable to you, were they not?

A. Yes, sir.

This gives us some idea of the meat on which our Cæsars feed that they have grown so great. It is the power of official life and death that is lodged in the boss's hands. In Albany as in New York he nominates mayors and judges and county officers, dictates the appointments, and orders those in office what to do. He has at his disposal money-prizes in the shape of contracts and "honest graft." In public—especially when he is undergoing investigation—the boss appears as a very quiet-spoken citizen who is amazed at his own political importance. All he ever thinks of doing is to give advice. Yet what he is when actually functioning as boss, no one is in the slightest doubt. Surrounded by his cronies and his tools, he issues his orders like a satrap and is as remorseless as a Sultan in throwing an enemy into the Bosphorus. For all his mild manners and unimpassioned speech, Barnes is known to have ruled with an iron hand in Albany. His "advice" has often been given with a club. And the sources of his power are an open secret.

DR. COOK REDIVIVUS.

The cruelty of the Danes to Dr. Cook at Copenhagen shows up in all its baseness when we turn to the pages of the warm-hearted doctor's just-published and elaborate book, "My Attainment of the North Pole." "With sweet memories of the warm hospitality of Danes in Greenland," says Dr. Cook in his preface, "I here subscribe my never-to-be-forgotten appreciation; . . . and above all I am grateful to the Danes as a nation for the whole-souled demonstration of friendship and appreciation at Copenhagen." Such were the sentiments of the illustrious discoverer as he sat writing the preface in the Waldorf-Astoria Hotel, so lately as June 15, 1911; what must have been his feelings the other night, when all these sweet memories were ruthlessly blotted out by a fickle and heartless populace? "There is something rotten in the state of Denmark," he must have felt, as the eggs came pelting into his carriage.

In this hour of his humiliation, struck down as he is in the house of his friends, we turn eagerly to his large and handsome volume to find the long-delayed refutation of the slanderous charges against him. Throughout the 594 octavo pages—not counting preface or index or table of contents—we are delighted, of course, to find an unfailing stream of that fervid enthusiasm, that gushing rhetoric, those iridescent descriptions, which have always furnished such convincing proof of the sterling purity of the doctor's soul. But, pleasing as these are in themselves, we know full well that they will not satisfy the carping critics. We turn, therefore, with joyful expectation to the nine precious pages appearing under the heading, "Copy of the Field Notes." It is not a facsimile copy, photographically made or otherwise—which is a pity; still we

Digitized by Google

may hope that some of the doctor's opponents will have enough humanity in their composition to overlook this little weakness. Taking the column headed "Observations, Etc." to be what it is stated to be, an "exact copy from original field papers," we scan the entries from day to day, to find just what observations—particularly of the sun's altitude—Dr. Cook took as he advanced upon the Pole. Unfortunately, however, he made a bad selection from among his notes. We get the latitude day by day, just as we got it in the first reports as they appeared in the New York *Herald* two years ago. But latitude is not written in the heavens; neither is it got directly from a reading of the sextant; it is a pity that Dr. Cook should have felt it more to the purpose to reproduce the result of his daily calculations than to give us the record of his actual observations day by day. And this is especially regrettable because it was owing to the total absence of such observations in the "proofs" he sent to Copenhagen that the scientific authorities there rejected the claim which they had so impulsively granted on his first appearance.

However, let no one rush to the conclusion that the original observations are wholly unrepresented. Opposite page 292 there is a photographic reproduction of the original note of the observation taken on the day of days—April 21, 1908—with the calculations deducing the latitude from this observation. If there had been plenty more of the same, and if the doctor had shown the originals themselves two years ago, instead of a professed photographic reproduction of a single one of them after the lapse of all this time, we venture to say that even in this hard modern world he would have found his claim to the discovery of the Pole generally recognized. As it is, we fear that even those who are not mathematicians or navigators will only be reminded of the famous Dunkle and Loose episode—the offer of those worthies to perform for the gentle doctor the simple task of constructing by calculation the altitude observations that would fit his daily figures of latitude.

That Dunkle and Loose business combined human and scientific interest in a higher degree than any other phase of Dr. Cook's story. It is, therefore, a satisfaction to know just what view Dr. Cook gives of the matter, after plenty of time for mature reflection. This is what he tells us:

> He pointed out, what I myself had been thinking about, that all observations were subject to extreme inaccuracy. He suggested his working mine out backward to verify them. As I regarded him as an experienced navigator, and moreover had had no chance of checking my figures, so, desiring an independent view, and thinking that another man's method might satisfy any doubts, I told him to go ahead, using the figures published in my story in the New York *Herald*.

Were it not for our abiding faith that Dr. Cook, in spite of all appearances to the contrary, is a man both of sound knowledge and of spotless integrity, we should be puzzled in several ways by this. We should ask first, how in the world the accuracy of *observations* could be tested by working back from their results to recover the original figures. But perhaps Dr. Cook, being somewhat perturbed in mind, was not quite clear in his ideas at the moment, and what he really desired was to verify not his observations, but his calculations. If Dunkle's calculations gave back the original figures, that would be a proof that the calculations had been correctly made, though it would tell nothing whatever about the correctness of the observations. Well, did Dr. Cook avail himself of this excellent opportunity to check his reckoning? Not at all. When they brought their "faked" observations, he examined them, and, seeing "the game the rascals had been playing," he sent them to the right-about, papers and all. Dunkle and Loose were not permitted to see Dr. Cook's original figures, and Dr. Cook lost the great opportunity to compare them with theirs; and so the world will never know whether the two sets of observations—the set "faked" by the gallant mariners and the set which Dr. Cook has been so carefully screening from the world's gaze—are in agreement or not. Thus does an evil fate still pursue this heroic discoverer.

THE EXPIRING REICHSTAG.

The definite fixing of the date for the election of a new Reichstag marks the active beginning of an electoral campaign which bids fair to be one of the most momentous in the history of the German Empire. The last elections were held in January, 1907; Von Bülow was then Chancellor, and the resulting disaster to the Socialists, who lost 38 of their 81 seats, was heralded not only as a great personal triumph for the Chancellor, but as a definitive check to the Socialistic movement. That it was a distinctly reactionary victory was clearly apparent, both from its moral effect and because nearly one-half of the lost Socialist seats went to the Conservatives or the Centre. The reactionaries so regarded it. The Agrarians became more than ever convinced that, owning a large share of the land, they should, therefore, have the controlling voice in the nation's affairs. The widespread agitation in Prussia for the abolition of her suffrage evils was the more readily defeated as a result of this election, while Von Bülow got a free hand in both foreign and domestic policy. Altogether, the privileged and bureaucratic classes had every reason to be satisfied with the Parliament chosen in 1907.

Within six months, however, the tide began to turn. A number of causes, of which the rise in the cost of living is one, combined to set the electoral tide to ebbing away from the Government and its majority. Virtually every bye-election has shown a remarkable trend toward the Left, until, only the other day, in an election in Düsseldorf, a veritable fortress of the Clericals, with its 80 per cent. Catholic population, was actually wrested from the Centre, for the first time since the earliest days of the Empire. As if this were not shock enough, in the elections for the Oldenburg Landtag, the reactionaries were completely routed, the Socialists and Radicals capturing 26 seats out of the 45, with the National Liberals holding six more and the Centre only nine. The particular significance of this lies in the agricultural character of Oldenburg. In the cities, a heavy Socialist vote is expected, but not so among the landowners and peasants of this North German state. Moreover, this success was won by a coalition between Socialists and Radicals of the kind so long urged by the late Dr. Theodor Barth. If the National Liberals, who hold 56 seats in the present Reichstag, should turn in this direction, the Chancellor might easily find himself confronted next spring by a very different kind of *bloc* from that which has supported him heretofore.

And it is a different Chancellor who will lead the Government forces in the

Digitized by Google

coming election. Unquestionably a man of ability, Von Bethmann-Hollweg has none of the charm of Count Bülow nor his gift of graceful and moving eloquence. He has failed to impress his personality upon the public in any marked degree, despite the adoption through his efforts of a Constitution for Alsace-Lorraine and his revision of the workmen's insurance law. The nation has not been enthusiastic over the latest Moroccan incident, although it has stood solidly behind the Chancellor. The Germans feel themselves isolated in national politics, despite the Triple Alliance, and they cannot understand why, when others grab African territory unchallenged, their slightest move in this direction meets with criticism not merely in Europe, but in America as well. Moreover, their domestic problems are too pressing to admit of the ordinary citizen's becoming enthusiastic over an increase in the German sphere of influence in Africa. He is really interested in the effort of his Government to provide cheaper supplies of food—particularly in that of the Berlin municipality to furnish fish direct to the public. The tariff problem exists in Germany also. Von Bethmann-Hollweg's last speech shows that the tariff on cattle is not to be wholly abolished, and the excessively strict quarantine against American cattle is to be kept up unaltered. And the trust problem begins to cause uneasiness, despite the belief in this country to the contrary.

But some things are to be done for the laboring classes before the present Reichstag expires. There is a labor exchange bill pending and one for the insurance of "private officials." The whole complicated procedure of the criminal courts is to be revised, though the antiquated criminal code itself remains virtually unaltered. It is to be patched up in default of the scientific revision it needs. All of this is to be done between the expected exciting debates on the cost of living and the Moroccan affair. But, excellent as this programme may be, it does not, after all, go to the heart of things. One's mind invariably turns back to the hundreds of thousands who live on horseflesh and are now in such need of good food that municipalities feel themselves compelled to go into the fish business and are making every effort to cultivate vacant city lands for market-gardening purposes. A boundlessly prosperous industrial country, teeming with factories, in the very front rank of energetic producing nations, still finds itself unable to supply cheaply the food needed by hundreds of thousands.

That all of this will help the Socialists and the Liberals would be perfectly plain if there had been no bye-elections. The Reichstag is expiring amid a greater longing for a truer democracy than Germany has yet seen. The victory of 1907 for reaction was but the flickering up of a doomed cause. In Germany, as well as in England, the attack upon privilege cannot be stayed. The industrial growth of the nation means that men are leaving the old beaten paths. The German bayonets have, moreover, begun to think; the very drill of the service is in the direction of individual instruction and responsibility, the final wind-up of the idea of docile masses. Why, then, can it be surprising that men are more and more thinking for themselves politically and declining to accept the word of the privileged classes? At this distance it seems as if the next Reichstag could pretty well be foreshadowed—a reëstablishment of the Social-Democratic representation at the old figures, at least, with the largest popular vote in the history of the party, and a corresponding increase in the Radical and Liberal groups.

DEMOCRACY AND POETRY.

There is in Professor Gummere's theory of the communal origin of all poetry something of the fine fervor and simplicity of the older days of German scholarship, when the *Volk* was raised into a transcendental creative entity and when a man in his study would not hesitate to explain a vast mythology by reference to the dawn or the storm-clouds, or whatever other special phenomenon struck his imagination. With unabated ardor he has once more charged the skeptics, in his N. W. Harris Lectures delivered at Northwestern University this year and now brought out in book form. Again we see the Faroe folk and the Botocudan folk dancing with joined hands or woven arms, and under the excitement of this rhythmic motion pouring out traditional chorus and improvised song in unison by a kind of mystic and sympathetic inspiration—*das Volk dichtet*. And the true poet to-day is still but a voice for this communal instinct:

> No one would dare to blot out the function of the poet, or make him mere mouthpiece of his environment; but it is to ennoble his function when one marks the progress of it from improvization in the primitive choral throng up to the lonely splendors of the bard in meditation of his lay. And the survival is plain. The poet who makes verses by the most private act of composition, in that dream-state which Professor Stewart has described, never cuts loose from the conventions of his art; he has the throng always with him. They sustain his verse in the uninspired intervals which even with the noblest poets are so frequent and so long. The throb of his metre still echoes those ordered steps and voices; and without the instinct of kind, the appeal to human sympathy, the survival of communal emotion, he would not compose a single stave.

In all this there is an element of truth; but it errs in that zeal for logical simplicity which results so easily in confusion of ideas. The sense of rhythm is too innate and too universal to admit of any such exclusive source for rhythmical language as the communal dance—has not the very course of the blood in our arteries its swell and subsidence? In the same way when Professor Gummere extends these communal origins to a theory of "Democracy and Poetry"—which is the title and the main theme of his book—he touches on a real truth, but confuses it by what may be called a sophisticated simplicity. He sees creeping upon us a spirit of reaction which shows itself in a self-seeking individualism, in a cynical aloofness from the passions of the people, in the materialistic trend of science, and, above all, in the silencing of that "democratic note of enthusiasm and faith" which is the genius of poetry and which, he firmly believes, "will sound again, when and how we cannot tell, but in its right season, and in the large utterance which hope always inspires." Professor Gummere's lectures are a stirring appeal to the poet and to the poet's audience to sink themselves once more in the communal spirit of democracy. Only that rebaptism is needed to bring back the larger utterance of the Muse.

Much in the appeal is sound and timely. It would have been more effective if Professor Gummere had himself been a little clearer as to the nature of democracy and of democracy's influence in art. As it is, he rather adds confusion to darkness. "The central democratic idea," we are told, is "the active and

Digitized by Google

supreme function of the imagined community." That sounds like good Rousseau; but Professor Gummere spurns Rousseau, "for in politics as in life he was a picturesque tramp, and his reformed state is simply a tramp's paradise." On the contrary, Montesquieu was the real inventor of the democratic idea, which he found in the spirit of the laws. "Make that spirit dominant," says Professor Gummere, "and the actual ruling of a country may be monarchical, republican, or even socialistic, without prejudice to its success." We are getting into strange regions for democracy and the "imagined community," and the strangeness is not removed when we hear that Taine, though in politics the commune meant to him merely unbridled license, is the most perfect type of the democrat in letters because, forsooth, he believed a piece of literature was the absolute product of convention. To add to our bewilderment Professor Gummere, the champion of Montesquieu, the repudiator of Rousseau's ideas as fatal at once to government and literature, upholds Herder, the great transmitter of Rousseauism to Germany, as the divine herald of the new word, "humanity":

> He set it vibrating with emotion. . . . And then the People! . . . "People" was no new word, but it got a new meaning: all the living sons of the earth had now a share in it, and all their utterance was sacred. It was Herder who opened the gates of human literature for outcasts and wayfarers upon the cypaths of song.

To such confusion does the communal theory of poetry come in the end. If Professor Gummere, instead of driving his theory to logical extremes, had rested in common sense, his plea for the democratic influence in poetry might have been as sound as it is actually eloquent. Long ago Addison knew that "human nature is the same in all reasonable creatures," and that the great poems of the world, whether the simple ballad of "Chevy Chase" or the "Iliad" or "Paradise Lost," endured in memory because they were inspired by the universal passions of the human heart. That is the true communal origin of poetry, the real democracy; and the writer who in pride or ignorance withdraws from that influence, as Professor Gummere sees so many withdrawing today, may be witty or fine or sensuously beautiful, but he will not be great. There is no mystery in Addison's easy theory of human nature, no learned peering into the backward abysm of time. But it avoids the error of confusing the universality of true emotion with specious theories of the community. It leaves room also for the complementary influence, which may be called the aristocratic sense of distinction, as equally necessary for the creation of noble forms. Without this sense of form no work will endure the rigid inquisitions of time, just as without the appeal to the common, fundamental emotions of mankind no work will be truly cherished, even if remembered.

FRENCH FICTION FROM LAST SEASON.

PARIS, October 20.

"Les Exilés" (Plon; 3.50 francs), by Paul Acker, is dedicated "to the memory of my father who rests in the land of Alsace." It digs deeper the groove begun in "Le Soldat Bernard" by this very personal author, whose stories are likely to last. They are real novels of Alsatian sentiment dammed or turned violently into alien channels by annexation to Germany. It is not a book of politics, but a touching romance of "exiles" in a world which differs from that of all of us only in this peculiar wrenching of home ties. Those whose dead have led them to love the bright life and culture of the French have now to submit to unsympathetic foreign rule and transformation or go into exile. It is the Alsatian side as distinct from that of Frenchmen pure and simple, like René Bazin in "Les Oberlé," or even the "Colette Baudoche" of Maurice Barrès, who is Lorraine-born. That such masterpieces of recent French literature should spring from a war forty years past shows how enduring is the wound in the consciousness of well-nigh two million human beings trans-civilized against their will. The comparison with the romances of Erckmann-Chatrian, so Alsatian before the war and so anti-militarist and pacifist, is most striking. Paul Acker, who is relatively young and new, holds his own with all these as a writer.

"Pour tuer Bonaparte" (Ollendorff; illustrated; 3.50 francs), by Georges Ohnet, is the thirty-fifth novel or romance of this author, who has held his popularity at home and abroad ever since his first—"Serge Panine"—was crowned by the French Academy. His career is a direct answer to foreign critics who have eyes in French literature only for impropriety and worse. Technically, Georges Ohnet does not belong to "literature," not so much as Marion Crawford and not much more than E. P. Roe. Like these he can tell a good story in language and adornments easily understanded of the innumerable middle class to which most of us, like Gladstone, are proud to belong, and which included Queen Victoria. The present story, as the author candidly remarks in a sub-title, is at once legend and history—one of the plots against Napoleon's life made by the Chouan chief, Georges Cadoudal. By the way, one of its principal actors escaped to lead a life of penitence, violent as in all else that he did; and he ended his strenuous life an aged priest and chaplain in the placid Visitation Convent of Georgetown, near Washington. Naturally, the novel takes no cognizance of this other real story; but it appears, with its own strong romance, in the bits of history gathered from "old papers" by G. Lenôtre.

"Le Métier de Roi" (Calmann-Lévy; 3.50 francs), by Colette Yver, is also something of an historical romance, but of these latest days. It deals with Anarchists—philosophically and religiously and fanatically so—plotting against some king. "It is a risk of the trade!" said King Humbert of Italy after the failure of one such plot; he fell a victim to the next. Perhaps the title was suggested by this; but the book makes no pretence to revelations of underground Revolution, as Wilkie Collins and William Black and so many other English story-tellers have done in more or less naïve novels. It is a romance of sentiment among those who take the world as it is hardly, their counsel being darkened by all sorts of ill-considered wisdom from Tolstoy and Herbert Spencer and such. The story shows the deftness of touch of the provincial lady who signs "Colette Yver" and, from her first book, won popularity and the French Academy's crown.

"Le Cœur se trompe" (Calmann-Lévy; 3.50 francs), by Louis Delzons, is the fifth book of fiction of a Paris lawyer who seems headed straight for the Academy and a substantial place in French literature. His first novels, doubtless for professional reasons, were published under the name of "Louis Lestang." He has a penetrating as well as keen vision of society as it is organized in France of to-day—of the honest trials and frequent good-for-nothingness of people such as you and I may see daily, with their humdrum love strained to heroism or crime. His style is clear and strong, with the realism of a master who has no intention of forming a school. His French men and women are not saints; but for a modern lawyer there is a curious and tonic mixture of religion in their failings, as there still is in real French life, in spite of literary efforts to the contrary. The book, however, does not belong to the "reaction," that terror of the nineteenth century Frenchman who has lived to see the strange turns taken by the twentieth. Its literature is of life, not of philosophy, like Anatole France's. His hearts—in three longish stories of pro-

Digitized by Google

vincial life—deceive themselves for reasons which reason does not know; and this, as Pascal wisely remarked, is the regular course of human life.

"La Bachelière en Pologne" (Mirasol; 3.50 francs), by G. Réval, is a sequel to "La Bachelière," which continued the series of novels devoted by this author to French college girls; that is, to the new set of French women who go up for university degrees. Her first book stirred attention greatly. It was "Les Sévriennes," dealing with life at the first state normal college for the higher education founded by the French Republic. Under many difficulties, particularly the antagonism which such institutions in present political conditions are bound to have with the Roman Catholic religion, this new formation of French women has made its way slowly. Solemn Melchior de Vogüé answered Madame Réval's first book in one of his own novels. Even now "well-thinking" families look askance at the bachelor-ess who issues from the "lay" instruction of the state, although girls from church schools go up for examination on state programmes by state examiners. The present novel leaves all such social conflict aside for thoroughgoing romance.

"Le Hasard et l'Amour" (Calmann-Lévy; 3.50 francs), by Guy Chantepleure, is a volume of short stories by this very feminine writer. Like all her books, it is easy reading about well-bred people who undergo touching chances and changes in good French and with kindly sentiment and refinement. It is not without merit as literature and reaches a high level of story-telling. It belongs with Georges Ohnet, but from the woman's side of the hearth.

"Sur l'aile des Moulins" (A. Colin; 3.50 francs), by Lya Berger, is a domestic novel with a French heroine among good people of Holland, where the windmills are situate. The descriptions of men and things are excellently done. Two of the books of this writer have been adopted by the authorities of public instruction in France.

"Au Pair" (A. Colin), by Mademoiselle H. Célarié, is the story of a French lady who goes into a German family to teach; it is enough to say that it is written with more refinement and insight than the more pretentious "Monsieur et Madame Moloch" of Marcel Prévost, dealing with the same matter—and it is more interesting. "Le Chrysanthème Rose" (A. Colin), from the Italian of Yolanda, belongs to the same "blue" collection for *la jeune personne*, which includes naturally many innocuous translations from the English.

S. D.

NEWS FOR BIBLIOPHILES.

The first portion of the library formed by the late Henry Huth will be sold by Sotheby, Wilkinson & Hodge in London, November 15 to 17 and 20 to 24. This portion includes only A and B of the large privately printed catalogue and the Shakespeares, which, though only forty-two lots, alone form the last day's sale.

The Sykes-Perkins copy of the forty-two line Gutenberg Bible has a manuscript note by the elder Quaritch: "This is the finest copy I ever beheld, or anybody else." It has many untrimmed leaves and is without much doubt the finest and most desirable of existing copies printed on paper. It will be remembered that the Hoe copy of the book printed on vellum was bought by Henry E. Huntington at auction in this city last spring, for $50,000, the highest price ever paid for a book at auction.

The Huth library contains two copies of the Latin Bible of 1462, the first edition of the Bible with a date, one on vellum and the other on paper, both being very fine copies. Among many other important editions of the Bible are the first German Bible (Nuremberg, 1483); the first Bible in Low German (Lubeck, 1494); the first Bible in Icelandic (Holm, 1534); and the first Bible in Irish (London, 1681-85). Among many important English Bibles are Tyndale's Pentateuch (1530), the first printing of any portion of the Bible in the English language; the first Coverdale Bible, first edition of the complete Bible in English (1535); the first edition of the "Great" or Cranmer Bible (1539); the first edition of the Genevan or so-called "Breeches" version (1560); the first edition of the "Bishops'" version (1568), and the first edition of the King James or "Authorized" version (1611).

This portion of the library includes two important Block-Books, one the second edition of the "Ars Moriendi," the other one of the several editions of the "Apocalypsis Sancti Johannis." A manuscript Boethius of the fifteenth century, an English "Antiphonarium" with miniatures, a finely illuminated "Apocalypse" made for Margaret of York, sister of Edward IV, and a Flemish "Biblia Pauperum" done about 1430, with fifty-three remarkable designs in pen and ink, are among the most important early manuscripts included.

While the collection includes many early editions of the classics and books in foreign languages it is chiefly notable for its rare early English books. And among English books some curious volumes unknown to the ordinary reader of English literature are likely to bring the highest prices. Among these are a long series of the works of Nicholas Breton with attractive titles, such as the following: "A Floorish upon Fancie" (1582); "Melancholike Humours, in Verses of Diverse Natures" (1600); "Wits Trenchmour, in a Conference had betwixt a Scholler and an Angler" (1597); "A Divine Poem, divided into two parts, the Ravisht Soul and the Blessed Weeper" (1601); "An Olde Man's Lesson and a Young Man's Love" (1605); "Cornu-Copiæ, Pasquil's Night-Cap, or Antidot for the Headache" (1612), and others. A series of the writings of Richard Brathwait offers equally attractive titles: "A New Spring Shadowed in Sundry Pithie Poems" (1619); "Ar't Asleepe Husband? A Boulster Lecture" (1640); "Whimzies, or a New Cast of Characters" (1631), etc.

The list of Bacon's works shows the exceedingly rare first edition of the "Essayes" (1597), as well as the second edition (1598), a pirated edition of 1606, the third authorized edition (1612), and an unauthorized edition of the same date, as well as the more common edition of 1625, the last published during the author's lifetime.

The Bunyans include the fifth, sixth, and ninth editions of "The Pilgrim's Progress" and first editions of "The Life and Death of Mr. Badman" (1680), "The Holy War" (1682), and "A Discourse upon the Pharisee and the Publicane" (1685).

A collection of the works of Lord Byron, including the excessively rare "Curse of Minerva" (1812) and "Waltz, an Apostrophic Hymn" (1813), will first be offered as a lot, but if the reserved price be not realized they will be sold separately.

Among the Americana in this first portion there may be noted: Acuña's "Descubrimiento del gran Rio de las Amazonas" (1641), a book no longer as rare as it was formerly supposed to be; Archdale's "New Description of Carolina" (1707); Bullock's "Virginia Impartially Examined" (1649); Francis Bugg's "News from Pennsylvania" (1703); Gersham Bulkley's "People's Right to Election or Alteration of Government in Connecticut" (1689), an exceedingly rare piece printed by William Bradford; "Beschrijvinghe Van Virginia, Nieuw Nederlandt, Nieuw Englandt, etc. (1651), the book which contains the earliest engraved view of the city of New York, though this important fact is not mentioned in the catalogue; and an interesting manuscript "Histoire Naturelle des Indes," supposed to have been writtten by a Frenchman who accompanied Drake in one of his voyages.

Some of the Huth books which are supposed to be unique, no other copies being known, are: Henry Austin's "Scourge of Venus" (1613), "The Academy of Complements" (1658), "The Goodly History of the Lady Lucres and her Lover Eurialus" (1560), "An Interlocucyon with an Argument betwyxt Man and Woman" (Wynken de Worde, about 1530), Robert Armin's "Foole upon Foole, or, Sixe sortes of Sottes" (1605), William Baldwin's "Marvellous History, intituled, Beware the Cât" (1584), Ballard's "History of Susanna" (1638), "The Honour of Chivalrie, set downe in the most famous historie of Prince Don Bellianis" (1598), John Bradford's "Complaint of Veritie" (1599), and Thomas Brewer's "The Merry Jests of Smug the Smith" (1657).

Other books of which only one or two other copies can be traced, are: "A Report of the Truth of the Fight about the Iles of Açores, this Last Summer" (1591), "The Actor's Remonstrance" (1643), Thomas Bancroft's "The Glutton's Feaver" (1633), "Maroccus Extaticus, or Bankes Bay Horse in a Trance" (1595), and "Adam Bell, Clim of the Clough and William of Cloudesle," two editions (1648 and 1668). William Browne's "Britannia's Pastorals" (1613-16), John Milton's copy, with manuscript annotations by him, is the most interesting "association book" in the sale.

The Shakespeares, at the end of the catalogue, are the most important collection offered at auction in recent years. The first folio is a fine copy, not large but sound and clean. The third folio

Digitized by Google

is the rare form of the earliest issue, title dated 1663, without the seven spurious plays and with the portrait printed on the title. In most copies of this issue the space on the title intended for the portrait is blank. The second edition of "Venus and Adonis" (1594), the first edition of "Lucreece" (1594), and the first edition of the "Sonnets" (1609) are rarities that seldom come upon the market. Among the early quartos are "Romeo and Juliet," the second edition (1599); "Richard the Second," third edition (1608); "Henry the Fourth, Part I," two editions (1599 and 1613); "Troilus and Cresseid," the first edition (1609); "Othello," the first edition (1622); "Hamlet," the second edition (1604), the fourth edition (1611), and the undated edition printed for John Smethwicke; "Titus Andronicus," third edition (1611); "Henry the Fifth," first edition (1600); "Much Adoe about Nothing," first edition (1600), and "Pericles," the first edition (1609). The falsely dated quartos are also included, and it is a curious fact that Sotheby's cataloguer, in the case of both "A Midsummer Night's Dream" and "The Merchant of Venice" gives precedence to the spurious editions with James Roberts's name in the imprint. Of Thomas Fisher's edition of "A Midsummer Night's Dream" he says: "This is regarded as the second edition," and of Thomas Hayes's edition of "The Merchant of Venice" he says, "doubtless the second edition." Since the studies of Messrs. Pollard and Greg there can, however, be no doubt that these two were actually printed years before the corresponding Roberts editions.

Correspondence

SCIENTIFIC MANAGEMENT AND ACADEMIC EFFICIENCY.

To the Editor of The Nation:

Sir: Recognizing the great public interest in the question of scientific management and its effect in the increase of industrial efficiency, the authorities of the Amos Tuck School of Administration and Finance of Dartmouth College held a conference on that subject on October 12, 13, 14. The writer was delegated by Clark University to attend the conference with the view of learning what he could relating to the increase of academic efficiency, and in the belief that this will not be without interest to your readers takes the liberty of presenting some observations on the subject. The conference as a whole was extremely interesting. It consisted of two long and serious evening addresses at sessions presided over by ex-Gov. Henry B. Quinby and by Gov. Robert P. Bass, respectively, the first on the Principles of Scientific Management by the chief authority on the subject, Mr. Frederick W. Taylor of Philadelphia, and the second on the Application of Business Methods to the Government of a Municipality by Dr. Frederick A. Cleveland, advisory director of the Bureaus of Municipal Research of New York and Philadelphia, together with morning and afternoon sessions at which a number of papers were read and informal discussions on various aspects of the subject were held.

It was immediately evident that the leading men connected with scientific management were present. All the papers were very carefully prepared and showed very remarkable results. A point on which all participants seemed to be agreed was that business men in this country to-day do not know their own business, a point on which the present writer has animadverted in your issue of September 14. At the same time, it was remarkable how sure each of the speakers was of his ability to give advice upon and improve any business whatever, not excepting that of carrying on a college or university. No doubt the very great success which these gentlemen have had in improving business methods, as evidenced by examples as diverse as machine shops, printing houses, bleacheries, concrete construction, and the unloading or loading of cars or barges, has given good ground for this apparent cocksureness. At the same time, it seems plain that their methods are simply those of common sense, and the wonder is that this sort of common sense was not introduced into business long ago. For instance, the methods of a very successful razor manufacturer were described in getting the sort of steel fit to make his razor blades, and it was stated that previously to this, no razor manufacturer had ever standardized a razor. Whenever this manufacturer found an extra good razor in a barber shop, he bought it at any price whatever, had the steel chemically analyzed and micrographically studied, until he found all the physical and chemical qualities that such steel must have. Certainly there is nothing wonderful in this, except that it should be new. Many other such examples were given.

The discussion upon academic management unfortunately occupied only an hour, late on Friday afternoon, and was participated in by six persons under the leadership of Prof. Edwin F. Gay, dean of the Harvard Graduate School of Business Administration. The speakers took as a text the celebrated report of Mr. Morris Llewellyn Cooke, to the Carnegie Foundation. Mr. Cooke did not himself take part in the discussion, being occupied at the time in the discussion of another topic. Most of the speakers agreed that in certain parts of its work, such as administration, accounting, the care of buildings, and the provision of food, a university carries on a business which may be helped by the adoption of business methods. But in the most essential point, a university differs totally from an industrial plant. It is impossible to standardize its product. If a shop produces a definite article such as a typewriter or a watch, each one like all the others, or at any rate, belonging to a recognized standard type, there is no difficulty in measuring the success of its output. No such standard article is produced by a university, although many of our scientific managers seem to assume that the contrary is the case. It seemed to the writer that these gentlemen were always thinking of an engineering college, and that the idea of a college for liberal culture, or a university for the advancement of learning, was not in their minds. Mr. Taylor, for instance, stated that the first case of careful time study known to him was that of his old teacher, the late Mr. Wentworth of Exeter Academy, who always in the geometry class kept his watch upon his desk, and turned out to be making a careful study of the time required by the various boys to do each particular problem. No doubt the subject of elementary geometry is one in which such a would-be accurate assignment of time is possible, and no doubt Mr. Wentworth was a very skilful drill-master and teacher. It is well-known that by his skilfully arranged text-books he made a large fortune, but it should not be overlooked that in all his life, Mr. Wentworth never enlarged our knowledge of mathematics, and the encouragement of such a type of teacher in colleges is hardly to be looked for. The writer asked Mr. Cooke how he would investigate and standardize a department of Latin, and was told that he would not undertake it. Fancy the attempt to standardize the output of a course, the object of which should be to implant in the student an appreciation of the beauties of Shakespeare or Chaucer. Take a more concrete case in which the task idea may conceivably apply, say the learning of a lesson in physics. Suppose it is on the laws of vapors, the statement of which is tolerably simple and which may be put upon four or five ordinary pages, yet these simple laws may require several years of soaking-in to the student's mind before he really appreciates them. Is this appreciation to be gauged with a stop-watch by measuring the time it takes the student to recite the words in which these laws are stated in the book? A second point in which a university differs from an industrial establishment is in the matter of cost and output. Most of the speakers at the conference spoke of the necessity of the manager having his eye continually upon the balance-sheet, and this remark was always applauded. Now the object of a university is not to produce a profit in dollars and cents, but the cost of the student's education is generally more than double what the student pays for it, and a university is properly an eleemosynary institution carried on because of its advantage to the community.

In the matter of selection of the worker the colleges have much to learn, and the student at present may be fairly compared with the worker trying to do the least possible amount and still appear to be working at all. One member of the conference produced a motto found hanging upon the wall of a student's room, to this effect: "There is just this advantage about study, that it shows by contrast the value of those things for which we really come to college." As long as the material with which the colleges deal is of this sort, no great efficiency may be expected. For this, however, we must blame public opinion, rather than the professors. In the matter of selection, the elective system was an attempt to make the man fit the work. But it has undoubtedly been much improved upon by the more modern and more scientific method of giving each student a faculty adviser or manager to plan for him or help him plan. It was brought out by Mr. Taylor that the results of scientific management had been to require a managing staff of about one-third the number of the workers. Here is a direct suggestion for the colleges. When there is one professor or instructor or assistant to each three students, there will be a marked increase in the efficiency, as has been shown by the example of Princeton, in the introduction of a large number of preceptors who attack the student in detail with excellent results. It is a matter of general knowledge that those of our

Digitized by Google

graduate departments devoted to research, and having the smallest relative numbers of students, get the best results. Unfortunately, the adoption of the scientific system which in the business world more than pays for the managerial staff, by the increased output, does not in the university work produce any corresponding inflow of money, but here, fortunately, as in other places, virtue is its own reward. Probably every professor is aware of how much more and better work he could do if he had a competent stenographer, and did not have to bother over keeping accounts, making both ends meet in his department, and doing various menial duties, but there is equally no doubt that presidents are at present totally unable to supply such desiderata, even to their oldest and best-tried workers. In the long run, the American professorate is composed of high-minded, able, and self-sacrificing men whose heart is in their work. The writer does not for a moment believe that the best brains of the country are occupied in business. At the same time, our professors do not reach—in character, yes, but not in training and productive ability—up to the standard of professors in Germany, France, or Italy. What would be said by the efficiency engineer to the statement that a professor of mathematics in the University of Paris, paid a salary equal to one of the highest in America, has to lecture twice a week for fifteen weeks in the year and has no other duties? What would the cost of such a professor figure out per student hour? And yet, such are the greatest scientists in the world, and of such is the Kingdom of Science.

ARTHUR GORDON WEBSTER.

Worcester, Mass., October 26.

CORRECT ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: For years Professor Lounsbury of Yale has been advocating the general proposition that any possible error in grammar or diction is defensible if it can be proved that the same mistake has crept into the work of a writer of standing. Now, in fifteen prolix pages, in the current number of *Harper's Magazine*, he makes one more effort to attract attention by contending that the present methods of "Compulsory Composition in Colleges" do not make literary artists. One is tempted to quote Holmes to him:

> Thou say'st an undisputed thing
> In such a solemn way.

Nobody ever contended that they did. The limitations of college instruction are perfectly well recognized, and by nobody more regretted than by the men who administer them. "There are certain results, largely mechanical in their nature," writes Professor Lounsbury, "which can be achieved in the class-room." This is exactly the ground taken by every intelligent teacher of composition, and the only ground. Greatly offended as he is by the idea of compulsory composition, a slight sense of humor would have made him reflect upon what would be the probable result on the modern boy if composition were to be made voluntary. The student at least learns something under the present system, and that on the whole seems better than nothing.

It is a pity to see a man of Professor Lounsbury's position treating an important matter so superficially. The causes for the lack of great writers at the present time do not lie in the compulsory composition of our colleges. It is possible that in these damp attempts at fireworks he is intending to rebuke formalism and incompetent instruction, both of which are fair game. In this case, little as his performance can be regarded as successful, he is to be commended for his purpose. What he has really been accomplishing, however, is to use the reputation of the title he holds to support the slovenly use of English and to discredit honest effort to make it better. The multitudinous illiteracies of current periodicals hardly need his aid in this direction.

ARLO BATES.

Boston, October 24.

SPELLING REFORM AND PRONUNCIATION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of October 19, a correspondent, "M.," calls Simplified Spelling to account for the pronunciations *progrum* and *thott*. Now it happens that *progrum* flourishes especially in England, where the old spelling with *mme* is generally retained, while in America, where the form with *m* at present prevails, the *a* almost always has its full value. *Progrum*, in this country, appears to be an importation from Great Britain. We all spell *telegram*, yet no one, apparently, is tempted to call it *telegrum*. As to *thought*, that is one of the words which the Simplifiers have expressly left untouched. The occasional pronunciation *thot* seems to be a by-product of the reaction against *dawg, Gawd, lawg, lawng*, etc.; at any rate, it cannot be laid at the door of the Simple Spellers. In reality, both slovenly utterance and offences against orthography are due, in great measure, to the lack of proper connection between our spoken and our written language. The printed forms cannot be trusted to convey a correct message to the ear, and the sequences of sounds by no means suggest to the mental eye the accepted combinations of letters. Hence pronunciation is largely deprived of the conservative influence of orthography, and spelling has to do without trustworthy guidance from speech.

"COMMENCEMENT."

TO THE EDITOR OF THE NATION:

SIR: Your reviewer of Dexter's "Graduates of Yale College" (*Nation*, October 12) has made a natural and quite misleading mistake. He remarks: "Commencement was really the commencement of studies and occurred in the autumn instead of in June." Matriculation books are indeed open now in the autumn and commencements are in June, but the modern practice is not simply a reversal of the earlier. Our colleges, that is to say, held two vacations until about 1840, the one in May and the other in October, approximately [See, *American Almanac*, 1830-1850, under Colleges]. There was often some kind of academic celebration at the end of the winter term in April (such as the Dartmouth "Quarter Day"); the commencement proper being held in September, at the close of the summer term. Has our climate changed, have the students themselves managed this business, or did "committees of efficiency" impose the new order?

Prince Edward Co., Va., October 23.

Literature

A RECENT VIEW OF URUGUAY.

Uruguay. By W. H. Koebel, Author of "Argentina Past and Present," "Portugal: Its Land and People," etc., etc. With a map and 55 illustrations. New York: Charles Scribner's Sons. $3 net.

The numerous writers who during the last few years have given us so many books on the South American republics, their economic prospects, as well as their history and politics, have mostly passed by Uruguay, or, as it calls itself, the Banda Oriental. It is small, the smallest of all the republican states in the Continent. It has neither the immense material resources of Argentina and Brazil, nor the antiquarian interest and the striking scenery of Peru and Bolivia. It has not played a part in the general history of South America comparable to that of Chili. Nevertheless, it is in many ways an attractive country, a land which evidently makes an agreeable impression upon travellers, while it inspires its own children with an unusually ardent patriotism. We are glad, therefore, to receive a work which undertakes to present to the American reader a complete account of both country and people.

Mr. Koebel has published several other books on other Spanish American countries and gives evidence all through of a familiarity with their conditions and ways of life. He writes easily and pleasantly, evidently liking the people and desiring to take the most favorable view of their character which loyalty to facts will permit. This is a condition it is necessary to remember, for both investors and immigrants have been sometimes beguiled and misled by roseate pictures. His account falls into three sections. There is a sketch of the history of Uruguay from the first Spanish settlements on the Rio de la Plata down to the present day, a sketch which is pretty full for the period of the War of Independence, but much more brief when he approaches our own time and has to mention living politicians. There is a description of the principal cities and centres of commerce, with some remarks on the scenery and agricultural conditions of different regions; and there are also nine general chapters, in some of which the manners and customs and character of the people are touched upon, while in others the resources of the country are considered, and estimates of its probable financial, industrial, and commercial progress are made. Some useful

Digitized by Google

figures bearing on these last-mentioned topics are collected in an appendix. The numerous illustrations taken from photographs help to give a good impression of the aspect of the towns and the features of the life of the people.

Few countries have so large a part of their surface available for productive industries. In Uruguay there are neither deserts like those of Peru, Bolivia, and parts of northern Chili and northern Argentina, nor lofty ranges like those which fill large districts in all the above named countries, as well as in Brazil and the republics which lie to the south of the Caribbean Sea. As the land is mostly undulating and comparatively clear of large wood, it is available both for stock raising and for agriculture. The former industry has been up till now the mainstay of the country. Immense quantities of meat and meat products are exported, the recent introduction of *frigorificos*, or cold storage processes, having much enlarged the business. Tillage has advanced relatively less than in Argentina, but the soil is well fitted for nearly all the cereals. Both wheat and maize are crops of increasing importance, while the culture of the vine has been introduced in some districts and promises well, Brazil being rather too hot for vineyards, and most of Argentina unsuitable, as too flat or too dry. Thus Uruguay, which is behind the other republics in mineral wealth, has an assured and indeed more permanently promising industrial future in her agricultural resources. The increase, both in stock raising and in tillage, has been much accelerated by the construction of a railway system which is, for so new a country, remarkably complete and efficient. The capital which has gone to the making of the railway lines and to the establishment of the great ranching and meat packing establishments has been mostly European, but, in recent years, the American Beef Trust is said to have entered the field, and according to Mr. Koebel, who devotes a useful chapter to the cattle business, new developments may now be expected in this line of business.

Nature has favored the country no less in climate than in soil. The heat is seldom excessive, even in the sub-tropical northern border, for the proximity of the sea and the easterly breezes give coolness, even in middle summer. The extremes of temperature are much less marked than in Argentina, and in summer large numbers of rich people flock from Buenos Ayres to bathing places on the Uruguayan coast. Locusts, the scourge of the Argentine farmer, occasionally appear, but as the welfare of the land depends more on cattle than on tillage their ravages are here less destructive.

With a fine soil and a healthy bracing air, the people of Uruguay have two of the chief requisites for well being. A third is found in the fact that they are of predominantly European stock, with an almost imperceptible infusion either of native Indian or of negro blood. Mr. Koebel is less clear upon this subject than we could have wished; but we gather, both from his book and from other sources of information, that there was comparatively little inter-marriage between the early Spanish settlers and the aboriginal tribes. The latter were not numerous, and the most vigorous among them, the Charruas, seem to have been almost exterminated in their wars with the colonists. The Gaucho, both in Argentina and in Uruguay, seems to be a product rather of conditions than of race mixture. Like the mountaineers of east Kentucky in the United States, he is a European who has reverted to a wild, rude way of life, under the influence of an environment which belongs to a semi-civilized time, and which the progress of civilization is now destroying in South America, just as it is destroying the less marked type of Western cowboy in this country. The Gaucho is, in fact, something like a Canadian trapper, or a Wyoming cowboy, though somewhat rougher, having ranged the Pampas for a longer time, and in a more complete independence. He is now, though still rude and illiterate, beginning to subside into a peon or laborer of the civilized order, but he retains his love of fighting and his readiness to take part in a revolution at the shortest notice.

This taste has frequently opportunities of gratifying itself in Uruguay. No part of South America has had a more continuous record of wars and revolutions. Mr. Koebel has enumerated one hundred and four battles. During the first two centuries after its settlement, its possession was disputed by the Spaniards settled on the rivers Parana and Uruguay and the Portuguese established on the coast of Brazil. The troops employed were few, but the fighting was obstinate, and though more than once the Kings of Spain ceded the land to Portugal by treaty, whenever hostilities broke out afresh, the first effort of each Governor of Buenos Ayres was to recover this northeastern province. Even when the War of Independence of the early part of the last century had ended by the defeat and expulsion of the Spanish forces in 1814, and it was clear that they could not recover the country, the Portuguese of Brazil renewed their efforts to keep a hold on Uruguay. A fresh and fiercely contested struggle ultimately compelled Brazil to recognize, in 1827, the independence of the Uruguayan Republic. But so far from bringing peace, this was the beginning of a long series of intestine wars between various military leaders who had come into prominence in the previous years of strife, wars which lasted down into our own time. Thus the Uruguayan, so long accustomed to fighting, has come to regard it as the normal state of things, and quickly responds to an appeal to take up arms for his party. Since 1835 there have been two parties in the country, the Blancos and Colorados (whites and reds). They are so called because in a battle fought in that year the adherents of one general carried white pennons on their lances (then the favorite weapon of the country), and those of the other red pennons. These parties were at first merely personal, the generals standing for nothing but themselves. Like other parties, however, they have from time to time picked up principles, or at least tenets, on their way; so that of late years the Colorados have come to be the party of the townsfolk and of "advanced ideas," while the Blancos are friendly to the Church and find their chief support in the rural districts. So lately as November, 1910, the Blancos, apprehending, not without reason, that the Government was going to manipulate the elections to the Legislature in such a way as to procure a majority which would then proceed to elect as President a particular Colorado leader, organized a rising which lasted for some weeks, and was attended with considerable bloodshed. Where, as in not a few South American republics, the Administration "takes care" of the voting, revolution is the natural recourse of an Opposition, and as the Opposition, if and when it becomes the Government, pursues the same method, the habit of making revolutions perpetuates itself. The remarkable thing is that these very unsettled political conditions have had comparatively little effect on the prosperity of the country. Public credit is no doubt affected, and bonds are, for the time being, sent down in the market, but ranching and wheat-raising go on much as usual, except that traffic on those roads and railways which traverse the disturbed districts is stopped. It may, however, be remarked that revolutions have tended to be less and less formidable in recent times. The Colorados have now held power continuously for more than forty years, and the extension of railways, enabling the Government to move its troops quickly to threatened points, puts insurgents at a disadvantage. Though political assassinations have been pretty frequent, and party bitterness remains intense, war is conducted with less ferocity than in the old days. The Uruguayan has many fine qualities, like those fighting races of the East, the Albanians in Europe and the Afghans in Asia, of whom he reminds us. When the energy he has shown in war is turned to the arts of peace, he may prove to be one of the most progressive among the South American peoples. Mr. Koebel is not the only traveller to whom he appears

Digitized by Google

more attractive than either of his neighbors, the Argentine on the west and the Brazilian on the east. And though he is of virtually the same racial stock as the Argentine, neither nation having absorbed much of that aboriginal Indian blood which has affected the Peruvian and the Chilian, and which predominates in the Paraguayan, he has acquired a national character of his own, which seems likely to become rather more than less distinctive in the years to come. Its influence is shown in the fact that the children of Americans and Englishmen settled in the country are proud to call themselves and feel themselves Uruguayans.

CURRENT FICTION.

The Fruitful Vine. By Robert Hichens. New York: Frederick A. Stokes Co.

If Mr. Hichens would only learn to let well enough alone! He knows his own range, which is confined to problems of sex, and he is seldom busied with an unreal problem. But he can never deal directly and simply with it. Or rather his instinct is to conceal the essential simplicity, not to say ingenuousness, of his mental process. He always has the portentous air of the oracle, or of the medium. With him, we breathe an air of mystery, however commonplace the topography of our surroundings. And one listens to a voice consciously rotund, rolling on and on, around and about and before and behind the subject, until one fairly wishes the subject had been left alone. But there are readers who enjoy fiction as an interminable meandering in a moonlit grove—such readers as could enjoy every word of "The Garden of Allah" and presently found "The Old Wives' Tale" stupid and long-drawn-out. The fact is, Mr. Hichens has the knack of providing mildly voluptuous entertainment for readers of lethargically amatory temperament. Such readers do not care to be hurried over their pleasures. Nothing which attracts the languid palate can be too long-drawn-out.

And, indeed, prolixity is the chief fault which the undevoted reader will find in this book. Mr. Hichens has never written anything with so little taint of mawkishness, with so large a measure of spontaneity. His theme is of burning interest to thousands of human beings, and fiction has hardly more than touched upon it. It is the problem of the childless wife and husband who long for children. We ought to bear in mind, when we are making up our tables of "race-suicide," that there are many such wives and husbands, especially among the finer-bred races and classes. The hapless pair in question are an Englishman, Sir Theodore Cannynge, and his wife, Dolores. They have been married eight years, are childless, and with both of them the desire for parenthood has reached the point of obsession. The woman dislikes all children because they are not her own, while the man devotes himself to the children of his friends, the Denzils. Francis Denzil is councillor of the British Embassy at Rome, where the action takes place, and Sir Theodore has really settled in Rome to be near his friend. The Denzils have children, and Sir Theodore's heart is gradually seduced by them. Eventually, he becomes so shameless as to prefer romping with the Denzil infants to his wife's tea-parties. Then Denzil dies, and Sir Theodore becomes guardian of the children and is finally lost to Dolores. Meanwhile from background to foreground steadily moves the figure of an Italian noble who has set himself to win the love of Lady Cannynge. He does not succeed, but wins her body, which she yields to him that she may become fruitful. She dies in child-birth, but the child lives to be demanded by the ruthless Italian, and Sir Theodore is left, doubly frustrated, alone upon the unhappy scene. Mr. Hichens, as usual, patiently labors to extract every drop of emotion from his theme—a process which betrays deficiency in humor. Yet his detail is often witty.

The Innocency of Father Brown. By Gilbert K. Chesterton. New York: John Lane Co.

Mr. Chesterton has conceived the clev-erest variant of Sherlock Holmes we have yet seen. The miraculous analysist in these stories of mysterious crimes is a humble priest who has been made wise in the ways of wickedness through the confessions of criminals. For friend he has a superhuman virtuoso in crime from Paris, who, being converted and becoming a detective, seems suddenly to lose all his versatile faculties and so furnishes the necessary foil and confidant of Father Brown. The situations are in the highest degree original—to say that Mr. Chesterton is their author is to say as much. But we are not led through the steps of detection as skilfully as we were with Conan Doyle, and there is little or no excitement of the chase. Mr. Chesterton has succeeded, however, by his virtuosity in words in creating an enveloping air of evil and invisible forces working through the human brain, which grows darker as the book advances to a kind of gruesome and ghostly climax.

The Price. By Francis Lynde. New York: Chas. Scribner's Sons.

Like the exhorter who insisted that he had been "called" to preach, but was thought by his auditors to have heard some other noise, Mr. Lynde appears to have mistaken the nature of his inspiration. On the solemn pretext of proving that he errs who robs a bank, be his motives ne'er so lofty, Mr. Lynde has worked up a "rattling" story of a spectacular crime, a clean get-away, and the slow hunting down of the fugitive—the kind of story that is its own best excuse for being. Whether the *dramatis personæ* be fox and hound, or criminal and detective, a chase, full of the hazards of flight and the tactics of pursuit, in which hunter and hunted alternately baffle each other, is the most widely acceptable of all themes. If the actors be human, and there be included in the caste with the sleuth and the law-breaker a self-possessed, virtuous blonde and an inscrutable brunette adventuress, we shall not greatly care whether the motives and the costumes are those of darkest Russia or our own dear Middle West. A good working knowledge of localities, types, and manners from New Orleans to southern Minnesota, and a smattering of the psychology of crime, have helped in this case to subdue the native hue of melodrama. As to this gentlemanly hero *en mal* who was "one of the finest fellows in the world, gone a fraction morbid over the economic side of the social problem," we are inclined to regard him as merely very good bait for the serious-minded reader.

OLD TESTAMENT STUDIES.

The Old Testament in the Light of the Ancient East: Manual of Biblical Archæology. By Alfred Jeremias. English edition, translated by C. L. Beaumont, edited by C. H. W. Johns. New York: G. P. Putnam's Sons. Two volumes. $7 net.

This English edition is translated from the second German edition, but with such revision and additions by the author that it may be regarded, he says, as a third edition; his general position, however, remains the same as in the former issues. The work has been much discussed by specialists; the translation will doubtless bring it to the notice of a wide circle of general readers. To estimate its value it is necessary to distinguish between its illustrative material and the author's theoretical explanations and constructions. There is a great wealth of citations from Babylonian and other sources bearing on the Pentateuch (particularly on the stories of creation and the flood) and on passages in the prophetical and historical books. Much of this material, of course, is not new—the ground has been gone over before—and not all of it is distinctly relevant; still, taken all together, the citations may be said to be useful. The chapter on the political history of the States of Israel and Judah is illumining; it brings out the relations between those little states and their neighbors clearly and fully. Unfortunately, the greater part of the citations and parallels are so mingled with

Digitized by Google

mythological fancies that the general reader may often be at a loss to know what is historical and what is fanciful. The author is under the dominion of the astral mythological theory—one might almost say that he is obsessed by it.

This theory, adopted by Jeremias from Winckler and by Winckler largely from Stucken, affirms that there existed in the ancient world as early as the third millennium B. C. a body of teaching concerning the origin and development of the world which, having its first home in Babylonia, or receiving there its best formulation, spread over Asia, Egypt, eastern Europe, and ancient America and was known to and used by historical writers in those lands. The "teaching," as expounded by Dr. Jeremias in the present volumes, is in brief as follows:

> There is a preëstablished harmony between the terrestrial and the celestial worlds, so that the former of these corresponds to the latter in its entirety and in all its parts; the divine will is recorded in the constellations, and it is from these that the organization of religion (as, for example, the sacred numbers) has been taken; the history of the world proceeds by Ages, and these are designated by the Zodiacal signs in which the equinoctial point is situated—the present Age is that of Pisces, it was preceded by that of Aries and that of Taurus (in this last the astral teaching was formulated), and they by the Gemini Age to which our earliest historical notices belong; the religious teaching of the stars is embodied in myths—all myths are astral in origin—and historical writing is shaped by this conception; such writing in ancient times is dominated by the employment of motifs which are derived from astral phenomena and are thus connected with the gods, who also are astral; the motifs are such as combat and victory over enemies (the dragon or Marduk motif), secret birth, twins or Dioscuri, deliverance, and certain facts connected with the moon; in Biblical and other narratives the events described may be historical, but their setting is mythical, shaped by astral motifs; the Teaching is identical with religion and shows signs of a latent monotheism, and its characteristic feature is the expectation of a Redeemer, proceeding from the Deity, who in course of the ages overcomes the Powers of Darkness.

It is along these lines that Dr. Jeremias conducts his exposition of the early Biblical narratives. The stories of the post-diluvian patriarchs he regards as historical in their general scope, mainly on the ground that the social customs therein described accord with those that appear in the code of Hammurabi and other ancient documents; but his argument is defective by reason of his not recognizing the persistence of popular customs. His chief purpose, however, is the application of his theory, the astralistic, which he holds to have been in the minds of the Biblical writers. Every great personage is accounted to be the representative of an astral divine figure, and every incident to represent an astral event. The exegetical method is simple—it requires no great ingenuity to discover in the tradition allusions to Babylonian and other myths, just as the early Christian writers found therein records of profound Christian doctrines. The citation of supposed astralistic hints is carried through the Old Testament with wearisome iteration, and it may suffice to give the treatment of Abraham as a specimen of the method pursued. The stories of the patriarchs, it must be premised, are regarded by Jeremias as historical, but in a modified sense—in their present form they are incomplete and idealized and must be filled out and interpreted from late Jewish and non-Jewish sources and by the insight of the critic. In ancient history the family is not an ethnological division; Abraham was father of the family not in an ethnological but in a spiritual sense. He was a warrior and a Mahdi (a man divinely guided), a reformer whose migration from Babylonia was connected with a protest against existing religious error, perhaps against degeneration in moon-worship, perhaps against the cult of Marduk introduced by the Hammurabi dynasty—in any case merely a protest against polytheism, not a rejection of the astral system, as is evident from the astral mythological motifs introduced into the narrative of his life. These are specially prominent because he (with Lot) is the founder of a new era. His earlier name, Abram ("the [divine] father is exalted"), points to the moon-god, Sin, who is often styled "father"; the other name also, Abraham, "father of tumult," would correspond to Sin's title, "warrior of the gods"; add that the name Sarai, "princess," agrees with the title of the moon-goddess of Harran, and the name Milka (Abram's sister-in-law) with an epithet of Ishtar; and "Laban" signifies "moon." In the stories of Abraham there are moon-motifs: the number 318 (Gen. xiv, 14) is not historic, but a mythological construction—it is the number of days in the lunar year when the moon is visible and its light wars against darkness—so Abram has 318 companions in his battle with enemies: further, in Gen. xiv, the Canaanite kings serve the King of Elam twelve years and in the thirteenth year rebel—now, twelve days must be added to equalize the lunar year with the solar, the thirteenth day begins the new year, and Abram begins a new age; and he, like the moon, is a wanderer.

If the astral theory were accepted it would add nothing to our knowledge of the real history of religion. It throws no light on the origin and nature of religious customs, the characters and functions of deities, and the course of religious progress, and it solves no historical problems. If the questions be asked whether Abram went down into Egypt, or Joseph ruled in that land, or the Hebrew tribes migrated thence to Canaan, we must look elsewhere for answers, as, in fact, Dr. Jeremias himself in certain points appeals to non-astralistic considerations. The "Teaching" gives merely the astrological and mythological setting of narratives—the details are regarded as inventions, though the tradition is assumed to be trustworthy. For the existence of the "Teaching" proof is not forthcoming. It is true that Babylonian astronomy and astrology passed beyond the bounds of Babylonia, and that there were in Western Asia, as in all the world, cosmogonic myths in which the gods and the heavenly bodies figured, and mythical stories of heroes in which the real and the imaginary were sometimes mingled. But for a system of historical writing in which persons and events were described after the norm of astral occurrences, there is no evidence in the Babylonian or the Hebrew or any other literature. Since the Babylonians made careful records of celestial phenomena and constructed an elaborate science of divination by the liver of sacrificed animals, it would be hardly too much to expect, if such a system existed, to find references to it in the inscriptions, or at least some hint or recognition of it; but nothing of the sort is known in Babylonian or Hebrew records. Cosmic myths there are in the Old Testament (the combat of Yahweh with Rahab, for example, as in Isa. li. 9, and elsewhere), and certain favorite numbers (7, 12, 40) may have been suggested by astral phenomena, though the origin of such numbers is obscure; but the existence of these conceptions is far from warranting the assumptions of the theory under consideration. So as to the alleged expectation of a divinely guided redeemer. All over the world saviours of society have arisen from time to time, natural products of their times, and naturally were thought to have been raised up by some deity, but there is no sign that the expectation of such deliverers was a dogma of an ancient universal creed. Here, as in other points, Dr. Jeremias has taken some simple facts of ordinary human terrestrial experience, invested them with celestial clothing, and forcibly made them into a symmetrical, all-embracing, all-explaining, and universally accepted system of the world. It is obvious that he thus does violence to the proper method of historical investigation and misrepresents the course of religious development.

Canon Johns in his introduction mingles warnings judiciously with praise. He goes as far as possible in the recognition of the merits of these volumes, sometimes, indeed, too far, but repeatedly cautions the reader against accepting the author's astral theory at present. He appears to think it possible that additional discoveries may favor the theory; he might have pointed out its fundamental vice, if such crit-

Digitized by Google

icism would have been proper in an introduction meant to commend the work. The proofreading of the volumes is not good: there are the spellings "sybil" (I, 119) and "sybilline" (I, 131), and "Götterherrin" (which is a correct translation of the Babylonian *belit ilani*) is rendered by "divine lady" instead of by "mistress of the gods" (I, 9).

The History and Problems of Organized Labor. By Frank Tracy Carlton, Ph.D., Professor of Economics and History in Albion College. New York: D. C. Heath & Co.

Professor Carlton has produced in compact and readable form a useful summary of a large amount of literature dealing with many important labor questions. The title of the volume will doubtless seem to many to be somewhat misleading. Four chapters, constituting about one-sixth of the book, do undertake to present the history of labor organizations, but in the United States only. Among the "problems of organized labor" discussed are the following, to each of which a separate chapter is devoted: Immigration, The Sweated Industries, Child Labor, Woman Labor, Protective Legislation for Employees, Industrial Remuneration, and Trade Education. These are topics not to be confined to a treatise on trade-unionism. They are, indeed, the chief social and economic questions which confront modern industrial society; they may be called labor problems, but they are not problems peculiar to organized labor. The volume is designed primarily to serve as a text-book for college classes and is similar in scope to Adams and Sumner's "Labor Problems," which has hitherto enjoyed the advantage of having no competitor.

It is to be frankly conceded that labor unions are not, and probably should not be, mere ethical culture societies. That militant unionism which is so odious to the employing class aims above everything else at improving the economic condition of the working class, and no apology need be demanded or offered on that account, for employers and organizations of employers are equally concerned with their own narrow interests. So much the opponent of unionism may grant, but still protest that it is the *methods*, not the aims, of the unions that are anti-social and wholly objectionable. Professor Carlton attempts to answer such charges by making counter-charges of like nature against employers. Restriction of output, for instance, is shown to be a practice common to both employers and employees. Both are actuated by selfish motives; both, of course, may be pursuing a shortsighted policy. The closed shop, also, is not exclusively a trade-union method. "The anti-union shop is closed to the union man. . . . Many bitter opponents of the other forms of the closed shop are ardent advocates of the anti-union form of the closed shop." The demand for a collective bargain in making the wage contract is not a demand for a privilege, but only for equality. "The refusal on the part of a superintendent of a large factory to bargain with representatives of his employees is as absurd and unreasonable as would be the demand on the part of the employees for direct negotiations with the stockholders of the company represented by the superintendent." And as to coercive methods, "it must not be forgotten . . . that employers are often as brutal as union 'sluggers'; but in a less conspicuous and more impersonal manner."

The question of the validity of law, upon which democracy itself must ultimately depend, is quite neglected in such a balancing of charges and countercharges. Indeed, Professor Carlton simply assumes that democracy and trade-unionism are identical. Thus, his view of the significance of the labor movement is revealed by the following sentences from his closing chapter on Recent Tendencies:

> The industrial world is the last stronghold of the despotic principle. . . . The captains of industry are the industrial analogues of the enlightened despots in the political world of the eighteenth century. . . . Exactly as our forefathers sought to break down absolutism in government, the labor unions of to-day seek through governmental interference and organized strength to break down absolutism in the industrial sphere. The significance of the present struggles between labor and capital is only clearly seen when looked at from this point of view.

Henry II: His Life and Times. By H. Noel Williams. New York: Charles Scribner's Sons. $3.75 net.

It was a real service thus to vulgarize the life and reign of this monarch whose personality seems thus far to have appealed but slightly to either French or English biographical historians. Studies on Henry II are rare. Mr. Williams devotes the opening chapters of his book to a careful review of the vicissitudinary career of Francis in Italy and Spain, with its consequent bearing upon his young son's future life, namely, the Madrilene captivity and the alliance with the great Florentine family. The long rivalry of Francis with Charles V is elaborately exposed, as is the treason of the Constable of Bourbon and the responsibility of Louise of Savoy for his desperate decision.

It may well be objected that Mr. Williams is wont to be lenient with the women he describes, perhaps too much so, and that other experts in the minutiæ of that epoch would show these women in darker tones than he. This is undoubtedly true. Yet he may be quite right in not accepting the dicta of all those who have written before him, and we probably do well in accepting his discrimination. Be this as it may, his women are shown as it were in a sort of composite historical photograph deduced from the works of those whose authority may be best accepted: in particular, the youthful Catherine de' Medici, the plain, unpopular, submissive Italian girl who was to out-think them all, and her famous rival, Diane de Poitiers, whose name forever is to be linked first with Henry's to the exclusion of her own, as we still see the H and D woven together on the escutcheons of many a Renaissance château in the valley of the Loire.

The great judicial duel of Jarnac and La Chataigneraie, with its famous "coup"—for all of which Henry and Diane were primarily responsible—illumined by full citations from contemporary documents, is here related in such fashion that we know much better who was infamous and who was not. The present rehabilitation of Jarnac—though by no means new—may go far toward correcting an opinion only too prevalent.

But Mr. Williams's reputation is so well established by his many earlier works that it is unnecessary to expatiate upon the present volume. The epoch treated is one in which he has previously shown himself thoroughly at home, but never has he borne himself with more self-control, yet with easy confidence, than in his "Henry II." One feels throughout a certain balance and moderation, a breadth of knowledge and a sympathy which perforce commend it.

John Dennis; His Life and Criticism. By H. G. Paul, Ph.D. New York: Columbia University Press, Lemcke & Buechner. $1.25.

Dennis is chiefly remembered in English literature—so far as he is remembered at all—as one of the enemies and victims of Pope; also in connection with the origin of a well-known phrase, as the man who invented a new kind of stage-thunder and then complained that it had been stolen from him. Perhaps Dennis's best claim to remembrance is that he was one of the first Englishmen to set up as a professional critic. In his "Philosophical Dictionary" Voltaire, after speaking with withering contempt of professional critics in general, says that there was "*un nommé* Dennis, who followed this trade for sixty years at London and got a living out of it, too." (A very thin living, indeed, toward the end.) In the "Tale of a Tub" Dennis appears as a type of the snarling critic descended in straight line from Zoilus. In short, as Dr. Paul admits, Dennis has been mainly cited as a horrible example of a tribe that, as a whole, was under suspicion. In the past twenty years, however, Dr. Paul adds, something of a reaction has begun in Den-

Digitized by Google

nis's favor. Let us hope that the reaction will not go too far. It should stop well short of the exaggerated and rather eccentric praise of Swinburne, who set Dennis as a critic above Addison, or of Landor, who set him above Dryden. On the very face of it, a man who allied himself with writers like Gildon and Blackmore, against writers like Pope and Swift and Steele, was lacking in critical tact and perceptiveness. The best thing about Dennis is a certain bluff English honesty and downrightness that contrast agreeably with the duplicities of Pope.

In the first half of his book, which is devoted to the life of Dennis, Dr. Paul is, as he says, breaking new ground. His careful investigation adds not only to our knowledge of Dennis, but throws light on the literary manners of the time. The account of the endless squabbles in which Dennis engaged confirms the impression one gets from other sources that these manners were uncommonly bad. In fact, if England has had a truly Augustan age, an age on which the imagination can dwell with some satisfaction, it is the age of Johnson and Reynolds and Goldsmith rather than that of Pope.

The second half of Dr. Paul's book is devoted to Dennis as a critic. In his analysis of the main critical currents of the time and of the general background, Dr. Paul has followed closely, too closely in the reviewer's opinion, Dr. Spingarn. For example, he has, like Dr. Spingarn, failed to distinguish between logic and common sense. An element of confusion is thus introduced into the whole subject, especially into the treatment of Rymer. Common sense, as Dr. Johnson says, is intuitive, whereas Rymer, though he lays claim on several occasions to common sense, is extraordinarily lacking in every kind of intuition. What Rymer really stands for is logical thoroughness; he is the one consistent Aristotelian formalist in English criticism. He applies unflinchingly to the English drama the Aristotelian ideas about the all-importance of the plot and the closely allied notions of rational probability and poetic justice. Next to Dryden, he is the most important figure in English criticism at the end of the seventeenth century, not only in himself but by his actual influence. Dr. Paul errs in assigning this superior position to Dennis.

Dennis is very far from being like Rymer, consistent with himself. His criticism shows many of the same contradictions as that of Dryden, from which, as Dr. Paul says, it is largely derived. The main points of view that conflict more or less with one another in Dryden are evidently three: first, an admiration for the older English writers —"the giant race before the flood"—and their unfettered imaginative activity; second, respect for the French formalists and literary casuists, for what one may term the school of rules; third, regard for the school of wit and taste and good sense (Molière, La Bruyère, Boileau, etc.) that had succeeded the school of rules in France and was attacking its surviving representatives (Chapelain, etc.) as pedants.

Now the same contradictory elements are found in the criticism of Dennis, except that as he grew older he became more of a formalist than Dryden had ever been. Dennis is really a survival of the age of Dryden into the age of Pope and the quarrels in which he became involved, so far as they have other than personal or political grounds, illustrate the divergent points of view of two literary generations. The Queen Anne wits, like the great French wits whom they imitated, waged war, above all, on pedantry (why, by the way, does Dr. Paul say "pedanticism"?). Like the French wits also they had a faith in the unaided tact and intuitions of the man of the world that was a menace to sound learning. And so in the crusade of the wits against the pedants and the "dunces" better men than Dennis had to suffer—Bentley, for example. Pope's attitude toward Dennis was similar to that of Molière toward Vadius. At least as good a case could be made out for the Abbé Ménage, the original of Vadius, as Dr. Paul has made out for Dennis.

Dryden could on occasion defend the somewhat romantic spontaneity of the English imagination against both the wits and the formalists, and Dennis at least aimed to follow him in this particular. For his contemporaries Dennis was, above all, the apostle of poetic rage. We may doubt, however, whether Dennis hearkens back very effectively to the "giant race," or, as Dr. Paul contends, anticipates the modern romanticists. The normal neo-classical attitude toward inspiration is well expressed in the passage that Dr. Paul quotes from Rapin: the poet's "mind must always be serene that he may discern when to *let his muse run mad* and when to govern his transports." This ridiculous neo-classical notion of madness with a string attached to it, of fury that is governed by rule, of raging in cold blood, is not sufficiently discountenanced by Dennis's theory, and is certainly illustrated in his practice:

> What divine Rapture shakes my Soul?
> What Fury rages in my Blood,
> And drives about the stormy Flood?
> What makes my sparkling Eyeballs rowl?
> See, see the Goddess of the Lyre
> Descending in Tempestuous fire;
> Hence ye Profane, be gone, retire.

The poet, according to Dennis, is to be enthusiastic, but under eight heads. The excess of talk about fire over fire itself was so evident in his writings that he was accused by one of his satirists of being "by Inspiration furiously dull." He is certainly less readable than Rymer, with whom one most naturally compares him. One of the sources of Dennis's ideas about the afflatus is indicated by his nickname—Sir Tremendous Longinus. However, the generous and appreciative temper that Longinus recommends in criticism is less conspicuous in Dennis than in Addison.

Dr. Paul's book, like nearly all books in English, is not sufficiently careful in its printing of French words (*e. g.*, "les bons sens," p. 119; "la quarrelle," p. 151; "Desmaretes" for Desmarets, p. 121). Dr. Paul also misquotes an important sentence of Milton: "What decorum is, what are the great masterpieces to observe," instead of "which is the grand masterpiece to observe." The book has an index and a careful chronological list of Dennis's writings, but no table of contents.

Notes

The Scribners have just begun the publication of the Viking edition of Ibsen in thirteen volumes. It is edited by William Archer and the translations are mostly by him also. The volumes will be bound in sateen cloth and printed on paper specially prepared. The first two appear this month. Volume I containing "Lady Inger of Ostrat," "The Feast at Solhoug," and "Love's Comedy"; Volume II containing the "Vikings at Helgeland" and "The Pretenders."

In early November the same house will have ready: "Arctic Prairies," by Ernest Thompson Seton; "Memories of Two Wars," by Brig.-Gen. Frederick Funston; a handsomely illustrated "Little Lord Fauntleroy"; "The Common People of Ancient Rome," by Frank Abbott, and a new, enlarged edition of Ellis Paxson Oberholtzer's "Referendum in America," to be called "The Referendum, Initiative, and Recall in America."

Henry Holt expects to publish on November 4: "India Under Curzon and After," by Lovat Fraser; "The Empresses of Rome," by Joseph McCabe, and two new volumes for young folk, being a fourth book by Mrs. Carroll Watson Rankin, "The Castaways of Pete's Patch," and Marryat's "Children of the New Forest," illustrated by Boyd Smith.

Bishop Charles H. Brent's new book, "The Sixth Sense," the publication of which has been several times postponed, is now promised by Huebsch for this month.

Under the title, "Unemployment: A Social Study," Macmillan will shortly issue the results of an investigation carried on by B. Seebohm Rowntree and Bruno Lasker.

Longmans, Green & Co. are bringing out the autobiography of the widow of the Grand Shareef of Wazan.

George Macaulay Trevelyan intends soon to publish, through Longmans, Green & Co., "English Songs of Italian Freedom," for which he has written an introduction and notes.

"Obil, Keeper of Camels," by Lucia Chase Bell; "The Potato Child and Others," by Mrs. Charles J. Woodbury, and "The Tahquitch Maiden," by Phebe Estelle Spald-

Digitized by Google

ing, will be put forth by Paul Elder & Co. as small gift-books.

The Current Literature Publishing Company has in hand a reproduction of the German classics of the nineteenth and twentieth centuries in twenty royal octavo volumes, with about a thousand illustrations. The firm will be assisted by a large advisory board of scholars.

"An American in Germany" is the title of a German conversation book, by E. E. Pattou, which is about to be issued by D. C. Heath & Co.

The following books are published this week by Houghton Mifflin Company: "The Spell of the Rockies," by Enos A. Mills; "The Singing Man," by Josephine Preston Peabody; "Emerson's Journals," Volumes V and VI, edited by Edward W. Emerson and Waldo E. Forbes; "Social Value," by Benjamin M. Anderson, jr., and "Harvard Chapel Series," by Francis G. Peabody.

Arthur Lloyd is publishing, this week, through Smith & Elder, the first volume of his work, "The Creed of Half Japan: Historical Sketches of Japanese Buddhism."

"The Oxford Book of German Verse from the Twelfth to the Twentieth Century," edited by Prof. H. G. Fiedler, with notes and preface by Gerhart Hauptmann, both in German, is one of the announcements of the Clarendon Press.

Snowden Ward, one of the vice-presidents of the Dickens Fellowship, is coming to this country to form branches of the fellowship here. On February 7, the centenary of Dickens's birth, he will lecture in Boston on "Charles Dickens and America."

Nelson & Sons of London have in preparation a complete edition of Victor Hugo's works in fifty-one volumes, two volumes to appear every month; the edition will begin with "Les Misérables" in four volumes.

We have received "Webster's New Standard American Dictionary," encyclopedic edition, issued by Laird & Lee of Chicago. The volume, which of course has no connection with "Webster's International Dictionary," produced at Springfield, Mass., has several features which, according to its publishers, bring it strictly up to date. By excluding obsolete words they offer "a practically unabridged dictionary" in portable compass. So in place of *rathe* we have *rubbernecck* and for *ferly, fan* (a baseball enthusiast). Here, as might be expected, there is inconsistency. *Busk* (to prepare one's self and *buss* (to kiss) have retained their places, while certain slang almost as old as that cited is lacking. Mythological and geographical words are conveniently put in the general vocabulary.

"The Paracelsus of Robert Browning," by Christina Pollock Denison (Baker & Taylor), is designed to facilitate the initiation of students into the twin mysteries of poetry and alchemy. The book is composed of the following parts: pp. 3-34, a sketch of the life and character of Paracelsus; 37-57, a summary of the philosophy of Paracelsus; 61-64, a note on the composition and form of the poem; 67-190, the poem *in extenso;* 193-231, general review of the poem, consisting of excerpts united by prose shortcuts or paraphrases; 225-239, notes and glossary—inconsiderable.

The collection of Lecky's "Historical and Political Essays," first issued by his widow in 1908 (Longmans), has appeared in a new edition. The essays will all repay reading, though of a varying degree of interest and value. The book notices, on the whole, like those of Lady Blennerhassett's "Madame de Staël" and Leroy-Beaulieu's "Among the Nations," appear perfunctory (some errors in the latter article ought not to have been retained), while the essays on "Thoughts on History" and "Ireland in the Light of History" were, perhaps, best worth preserving. But Lecky was not preëminently an essayist. His "Carlyle's Message to His Age" (Sunday afternoon lecture to working men) inevitably recalls Lowell's brilliant and acute pages on the same subject (in his review of "Frederick the Great"), greatly to the disadvantage of the English historian.

"Siberia: A Record of Travel, Climbing, and Exploration" (Scribner), by Samuel Turner, which originally appeared in 1905, has reached a second edition. As the record of a winter journey, mainly undertaken for business purposes, but resulting in a daring exploration of the Altai Mountains, and the ascent of the Belukha to the height of 14,000 feet, this volume is quite unique. Mr. Turner describes minutely Siberia's dairy industry, in which he is chiefly interested, and the development of which he holds to be of great importance alike to Siberia and to Great Britain. His modesty, fairmindedness, and keenness of observation are conspicuous throughout the book, which will retain its place in the literature of travel. It is, therefore, to be regretted that his statistics, which relate to the year 1903, were not brought up to date in the new edition.

The French alone, apparently, can write on mysterious subjects without adding to them a fog of their own. Una Birch, in her "Secret Societies and the French Revolution" (Lane), certainly shows that, as Lowell says, "to be misty is not to be mystic." It is impossible to get a coherent story or a clear picture from her pages, in spite of her learning, genuine or doubtful. Her touch-and-go method may not be out of place in dealing with such shadowy characters as Saint-Germain and Cagliostro, but it becomes irritating when substantial historical and literary celebrities appear upon the scene. Francis Bacon is gravely classed among the Rosicrucians, and "altar and throne" are held as fully responsible for the death of Cagliostro in the Inquisitor's prison as for the guillotining of the writer Cazotte and the persecution of the Perfectibilist Weishaupt. The author moves in a world of conjectures and surmises. The criminal procedure embodied in the Code Napoléon "seems" to her "to have been evolved out of the conclaves" of the lodge of the "Neuf Soeurs"; and "is it incredible," she asks (her questions are many and comprehensive), "that Madame de Staël, in her many interviews with men of letters, such as Goethe, Schiller, and Schlegel, . . . should have influenced foreign views of Napoleon?" She evidently takes the "many" interviews with Goethe and Schiller and their serious import for granted, just as she seems not to doubt that the Comte de Saint-Germain made a "judicious bestowal" to Louis XV of "pictures by Velasquez and Murillo." But, after all, what is true in history? Perhaps some day, the author hopes, we shall know whether Saint-Germain was, "as men have so often called him, a charlatan, or whether he was, as some believe him to have been, a political genius of unrivalled ambition and great accomplishment." When she descends to solid ground, we ought to add, as in the essay on "Religious Liberty and the French Revolution," she becomes clearer and more restrained.

The "American Political Ideas" of John Fiske are reprinted by Houghton Mifflin Co. The "Story of a New England Town" has been included, and the whole is prefaced by an introduction of seventy-five pages by John Spencer Clark. The three chapters which make up the "American Political Ideas" were originally delivered as lectures before the Royal Institution of Great Britain in 1880. The introduction gives us some interesting letters written by Fiske to his wife in June of the preceding year, when he delivered six lectures at University College, London, on the subject of America's place in history. It was the success of these lectures that led Huxley to engage Fiske for the Royal Institution. Aside from these letters, the introduction is mainly devoted to a discussion of the lectures as "an embodiment of style in literary art." It is shown at somewhat too great length how they exemplify all the textbook rules of Economy, Simplicity, Sequence, Climax, and Variety. Mr. Clark yields to no one in admiration of Fiske, and clearly regards him as one of America's greatest historians, as well as a literary genius of the first water. Fiske was certainly a writer of excellent English, and he must have been a fascinating lecturer. Being something of a philosopher, he was partial to those "large general ideas" which it is now the fashion to cry down. He knew a good deal about all periods of history, and the title of the lectures here printed was exactly suited to him—"American Political Ideas Viewed from the Standpoint of Universal History." Hence, he was suggestive rather than profound, striking rather than original or subtile in his thinking, apt at hitting upon analogies rather than penetrating in his insight. One suspects that Fiske was often guilty of the terrible crime of getting an idea first and then finding the facts to support it. He charged his subject without ever fully realizing its hidden difficulties, and had always the air of coming through at top speed, triumphant, with colors flying. Certainly, his work was immensely worth while. His books will be read when those of many more erudite historians are forgotten; and, after all, it is not easy to point out the value of histories that nobody reads. Fiske's faith in the ultimate federation of Europe gives his book an additional interest at the present time.

Wall Street has been put into a little volume of less than seventy pages by Garet Garrett, who has drawn upon material contributed by him to the columns of the *Evening Post*. In "Where the Money Grows" (Harpers), Wall Street types, manners, and superstitions are sketched with a rapid, incisive stroke by one who is evidently familiar with his subject and has learned the art of easy narrative. Wall Street is largely a tenebrous region, and not alone to the outsider. The men who have their life and being there are apparently the creatures of queer theories,

Digitized by Google

traditions, fears, and habits to which they subscribe without understanding, and so go on making or losing money without very well knowing how or why. As an antidote to popular conceptions of Wall Street routine based on the revelations of Thomas W. Lawson and Charles Klein, such a delightful bit as Mr. Garrett's sketch of a bank president at work is extremely effective. It would be interesting to see the writer's graceful wit applied to broader themes.

Miss Mary White Ovington's monograph on the negro in New York ("Half a Man"; Longmans) is marked by frankness and thorough knowledge. It was feared that, as one of the founders of the National Association for the Advancement of Colored People and long a worker among the colored people of New York, she might let her sympathies override her judgment. This proves not to be the case. She in no wise glosses over the negro's weaknesses, but, after stating them, dwells on the conditions which make for immorality among the women, for laziness and inefficiency or crime among the men. The picture is the drama of a worthy race struggling upward under most difficult conditions. Economically so handicapped that comparatively few men can earn enough to support their families without aid from their wives, discriminated against at every turn by the labor unions, and barred from most places of resort for harmless amusement, those of slight moral stamina fall readily. When one considers also that there was virtually no marriage relation any one was bound to respect among the race until after emancipation, it is not surprising that the colored women as yet fall short of the standards of virtue of the white. The high percentage of improper guardianship among the negroes, and the grave number of depraved negro girls which Miss Ovington records, show where the work must be done in the immediate future if the race is to be helped. As for the labor question, Miss Ovington rightly points out that "North or South the negro gets an opportunity to work where he is imperatively needed." But just as soon as he can the white man pushes the black man toward jobs for which he himself does not care to compete. Hence many honest places are closed to the negro, but the avenues to vice and crime never. But despite this, Miss Ovington finds that the bulk of the negroes who struggle for life in the great city have procured regular work and a fairly steady, if poor, pay. To the majority of them the North, in Miss Ovington's words, "seems to have brought something of liberty and happiness." Particularly the colored musicians and entertainers seem to get on well, and the extraordinary success of actors of the high standard of Williams and Walker, and Cole and Johnson, is here set forth.

Where many despond about the future for the city-bred negro, Miss Ovington is optimistic. She records that his prospect "begins to be bright." Through the vast streams of Jewish and Latin immigrants she feels that New York may be helped beyond its provincialism that now spells bitter prejudice. "If New York really becomes a cosmopolitan city, let us believe," she writes, "the negro will bring to it his highest genius and will walk through it simply and quietly unnoticed, a man among men." To many this will seem the wish which is father to the thought; they will fear that the antipathy of race manifested lately in Coatesville and almost every section of the country will more readily affect the newcomers to New York than be [illegible]ed by the views of foreigners. But [illegible]emocracy is on trial in New York city, [illegible] as the country over, more than the colored man. The question is simply whether those of white skin who are rising in the social and industrial scale shall be permitted to thrust back those who are toiling up after them. That is the issue, and we fancy its solution will come even a little more slowly in our cities than in our rural districts. But that it will be solved no one ought to doubt. Such sane, wise, and sympathetic studies as Miss Ovington's contribute not a little thereto.

"Erinnerungen: von Ernst Freiherrn von Plener" (Stuttgart: Deutsche Verlagsanstalt) is the exceedingly interesting autobiography of a prominent Austrian politician, political economist, and diplomatist. He was born in 1841, the son of the distinguished Austrian statesman Ignaz von Plener, from whom he not only inherited excellent qualities, but also received a careful and in every respect commendable training. The first volume, just issued, contains reminiscences of his youth and early education and a record of his connection with the Austrian Embassies in Paris and London from 1865 to 1873. During this period he associated intimately with the most eminent persons in both countries, and his characterizations of these representatives of French and English literature, science, and national culture constitute the most attractive and instructive part of the memoirs.

Lady Elizabeth Herbert of Lea, biographer, author of many short stories, and of books of travel, is dead at her home in London. She was the mother of the late Sir Michael Herbert, who was ambassador to Washington, and widow of Sidney Herbert, war minister at the time of the Crimean war. Among her books we note: "Rambles Round the World," "Wayside Tales," and Lives of Monsignor Dupanloup, Garcia Moreno, St. John Baptist de Rossi, and Mother Teresa Dubouché.

Harper's Magazine for November has the opening chapters of a Life of Mark Twain by Albert Bigelow Paine, whom Mr. Clemens designated as his official biographer. Mr. Paine, like his predecessors in the same field, labors under the disadvantage of being forced to compete against the vast amount of biographical matter supplied by Mark Twain himself in his novels, travel volume and separate sketches, numberless public addresses, and the long series of uncoördinated reminiscences published in the *North American Review*. There is little left for the formal biographer except to systematize and elaborate. Mr. Paine gives a pleasing account of the boyhood of Mark Twain. It is the story of a lad of ordinary promise, with more than ordinary capacities for mischief, and a decided gift for leadership. The origins of "Tom Sawyer" and "Huckleberry Finn" are traced. Two characteristic stories of Mark Twain are quoted. On page 492 of an edition of Suetonius, which Mr. Clemens was fond of reading, there is reference to a certain Flavius Clemens, who was notorious "for his want of energy." In the margin Mark Twain wrote: "I guess this is where our line starts." Speaking of the family's migrations, Mark Twain once said: "In 1843 my father caught me in a lie. It is not this fact that gives me the date, but the house we lived in. We were there only a year."

In the same number of *Harper's*, Professor Lounsbury announces his profound aversion and contempt for theme-writing as a means of instruction in English composition, and for the underlying theory that it is necessary to make every college man into a writer. He makes the classic argument that the sense of style is inborn and that it is developed, as far as it can be developed, by the study and contemplation of the great masters of literature. Setting undergraduates to write badly, and then having their errors corrected by incompetent instructors, strikes Professor Lounsbury as a very futile business. The writer begins with the statement that he expects nobody to agree with him. We hasten to be among the first to realize this expectation. The case is sadly overstated. There is no ground for assuming that it is the aim of the college to turn every undergraduate into a "writer" in the professional sense. "There is no more reason or necessity for it," says Professor Lounsbury, "than there is for every man to become a mathematician or a musician or an architect or an engineer or a painter." But as it happens, our letters to our wives, our children, and our business associates are not couched in simple equations or in water-colors, but in words; and that is true of our Ph.D. theses, our applications for a job, and our announcements of an intention to run for the Legislature. Writers of this kind the world needs and the colleges can help to make.

The *Century* has a one-act play by the late W. S. Gilbert, of a type we do not readily associate with the author of "Pinafore" and "The Mikado." It is entitled "The Hooligan," and deals with the last hours of a murderer condemned to be hanged. Aside from the emotional clutch inherent in the subject, we find no special qualities of observation, instruction, or dramatic impetus in this little piece.

Mary Austin's article in the *American Magazine*, on why the New Theatre failed, is the most thoughtful discussion we have seen on this vexed subject. Mrs. Austin contends that the management of the New Theatre made a fatal mistake when it tried to be practical. "The business of the New Theatre was to lose money." To realize the aims of its founders and the best aspirations to which it gave birth, it should have searched out and fostered the kind of art that the commercial manager was either too timid or too uneducated to encourage. "It should stand on its subsidy as on a watch-tower to catch from afar off intimations of dawning genius, of new appreciations, to serve as a mark for the perplexed and doubtful private manager." But instead of being a guide, the New Theatre became an imitator. It produced plays whose popularity had been proved in private theatres or new plays which promised to be popular because they were like the plays being produced by the private managers.

The sub-title chosen by Louise Collier Willcox for her paper on Nietzsche, in the *North American Review*, "A Doctor for Sick Souls," is not a happy description of

Digitized by Google

one who by the author's own account was a physician who failed to cure himself, and whose methods were those of Christian Science. To those of us who are not Christian Scientists, the implication is not as laudatory as the writer may imagine. We have here no attempt at a formal estimate of Nietzsche, but a chapter of casual comment, from which emerges the rather interesting point that in his asseveration of the triumph of life over death and joy over pain, Nietzsche was at one with the great religions that he attacked.

In this number of the *North American Review* Arthur Benington, vice-president of the New York branch of the Dante Alighieri Society announces the forthcoming publication of a book on Dante which promises to work a revolution in its field. The author is Professor Paolo Amaducci of Rovigo, and his theory is, in few words, that Dante's journey, "from its beginning in the dark wood to its end in the Empyrean," is an image of the journey of the children of Israel from Egypt to the Promised Land as allegorically interpreted in a work of St. Peter Damian, "De quadragesima et quadraginta duabus Hebræorum mansionibus." The "Divina Commedia" to be properly understood must be divided into forty-two marches and stopping places (mansions), "each march and resting place having the same allegorical meaning that St. Peter Damian assigns to those of the Israelites."

Science

"A Handbook of Health," by Dr. Woods Hutchinson, and "The Teaching of High School Mathematics," by George W. Evans, are in the list of Houghton Mifflin Co.

The eighteenth session of the International Congress of Americanists will be held in London from May 27 to June 1.

Recent progress in agricultural research and its effect in increasing the wealth of this country through the introduction of new plant industries is admirably shown in the *National Geographic Magazine* for October, by David Fairchild, agricultural explorer of the Department of Agriculture. Our plant immigrants are 31,000, and those on which he lays the most stress are the mango, date, and bamboo. The various stages in the cultivation, harvesting, and preparation for market of coffee are described by Prof. R. DeC. Ward of Harvard, who visited the famous coffee district of São Paulo for the purpose of obtaining this information. Some interesting facts about old Württemberg are given by B. H. Buxton, and an account of excursions in the interior of Tahiti, by Prof. H. W. Smith of the Massachusetts Institute of Technology.

"Animal Intelligence," experimental studies (Macmillan), by Edward L. Thorndike, is a reprint of material which has appeared before, with the exception of two essays, "Laws and Hypotheses of Behavior," and "The Evolution of the Human Instinct." In the former essay, Professor Thorndike enunciates laws governing response to a given situation. In themselves they are not novel, as they may be deduced from the law of association; his application of them, however, to genetic psychology is interesting. It is his belief that the child learns to speak rather by connecting certain sounds with pleasant results, than by direct imitation of a teacher. Certain sounds, such as "th," cannot be learned by imitation. From among the great number of responses with which the infant replies to a stimulus, it sooner or later hits upon the correct one by accident, and in the course of time selects it, being impelled to do so by no other force than its previous association with a pleasant result. The great majority of responses are instinctive or habitual, and are not caused by the ideas of them. The latter part of the argument requires no comment; as regards voluntary acts, psychologists have never held that the idea, apart from the particular volition, was capable of causing itself to be carried into effect, while with reactions which are more or less distinctly reflex the truth of the author's statement is beyond question. The second essay deals with accidental production and conscious selection of fit responses in the higher sphere of intellectual action, where habit has in a large degree replaced instinct.

Nearly five hundred years ago the Italian physician Mercurialis categorically affirmed that flies carried secretions from diseased bodies to food, and that persons were thus infected. Since that time it has often been suggested that contagion may be transmitted in this way, but it is only within the past decade that the theory has been seriously entertained by a large proportion of medical men. One of the most active among those who have accumulated data in recent years to prove the case against the house fly is our government entomologist, Dr. L. O. Howard. In "The House Fly—Disease Carrier" (Stokes), Dr. Howard has brought together, in a volume of above three hundred pages, not only the results of his own investigations and those of his colleagues, but also critical reviews of all the important work bearing upon his subject. The five chapters treat the zoölogical position, life history, and habits of the house fly, its natural enemies, its agency in the carriage of disease, remedies and preventive measures, and other flies frequenting houses. A bibliography of 136 titles includes the more important papers and is the more useful for not attempting to list the multitudinous popular compilations. Since the chief danger from the house fly is that it may develop in and feed on human excrement, and thus convey pathogenic organisms, an important feature of the book is the inclusion of two appendices summarizing the valuable recent papers of Dr. Stiles on disposal of night soil. The illustrations throughout are excellent, many of them being new. The author ranks high not only as an investigator but as a popularizer of scientific results, but unfortunately the present volume is not as readable and concise as, for instance, his "Mosquito Book," and the opening chapter will probably seem to the general reader appallingly technical. The medical man and the entomologist will overlook this feature, for the book is a veritable mine of authoritative information.

"The Lore of the Honey Bee" (Dutton), by Tickner Edwardes, unites the science and poetry of bee-keeping to an unusual degree. On the practical side there has been no want of treatises, such as Cook's "Manual of the Apiary" and A. I. Root's "A, B, C of Bee-Keeping," which set forth the facts of bee life as they bear upon the production of honey and the principles of scientific apiculture. Each generation has also its romance of the hive, such as Maeterlinck's "Life of the Bee," which is pleasing literature and delicately disguised advocacy of radical social theory, but which sins on almost every page against the facts known to every practical worker among bees. Mr. Edwardes, on the contrary, is both scientist and man of letters, and his little book is fitted to delight the lover of the simple, quiet things of gardens and small fields. His pages give no offence to the most thoroughly trained apiculturist, and, indeed, abound with suggestions which are not likely to be superfluous to many who know how to make an apiary profitable. The book is written for English beekeepers, and many of the practical suggestions need modification for our American seasons, but apiculturists of any climate who have caught the real spirit of the calling will be grateful to one who knows alike the methods which have followed Huber's observation hives and the more subtle lessons which gentle Virgil caught when he sought "the ways of lowly quiet, while great Cæsar hurled war's lightnings by high Euphrates."

The "Aéro-Manuel" of Ch. Faroux and Et. Bernard (Paris: Dunod & Pinat) will appeal to every one interested in aviation. The first part is devoted to an aeronautic chronology from the fourth century B. C. to the present day, and contains cuts of dirigibles and aeroplanes. A record of the aviation year, from May, 1909, to April, 1910, follows, and after that comes a list of events, with prizes and winners, times, distances, and elevations for the same year. Records follow of airmen, who have stayed up longer than an hour, then a list of victims, of new inventions to 1910. Part ii will attract the general amateur, because it contains first, a dictionary (illustrated) of aviation terms, in reality a compact encyclopædia; and next a chapter of technical notes and tables. But these notes call for a very considerable equipment of mechanics for their proper digestion. Part iii is nothing more nor less than a sort of "Who's Who" of the world of aviation, giving as it does a general alphabetical list of all constructors, merchants, agents, professionals, amateurs, societies, publications, etc., from the earliest days of ballooning to our own times, with portraits of notabilities. The organic and social side is represented by a list of clubs, the names and addresses of the members of the French clubs being given in full.

Harvard College Observatory has just issued a pamphlet in memoriam of Williamina Paton Fleming, curator of astronomical photographs in the Observatory. At the time of her death last May, she had completed thirty years of service, constant and unwearying. Beginning with ordinary computing, she advanced by great patience and talent to one of the most important positions in the Observatory. One of her remarkable pieces of work was the great Draper Catalogue, which gave the class of spectra of above 10,000 brightest stars, with measures of their photographic light. From her examination of these plates, taken

Digitized by Google

at Cambridge and at the Harvard Southern station at Arequipa, Peru, she discovered ten of the seventeen new stars known to have appeared within the last quarter century, as well as above 300 variable stars. The list of her achievements would fill many pages, in addition to an immense amount of tedious administrative routine work, necessarily unrecorded, and proofreading of the *Annals* as they went through the press. Even the titles of the work she had nearly but not quite completed make an astonishing list.

John P. Waring, the author of many inventions, died on Monday in New York city. During the civil war, in which he saw much service, he discovered an improved method of spiking cannon. Later, he devised an economical system of separating silk from the cocoon, and invented a rock-drill and an air compressor. He was the holder of seventy-seven patents.

James Hoban Sands, rear-admiral United States navy, who died at his home in Washington on Friday of last week, distinguished himself in the civil war and in much service since that time. He was retired in 1907. From 1905 to 1907 he was superintendent of the Naval Academy.

Drama

The Plays and Poems of George Chapman. The Tragedies. Edited with Introduction and Notes by Thomas Marc Parrott. New York: E. P. Dutton & Co. $2 net.

This is the first volume of the three which Professor Parrott has planned; the second will have the comedies, and the third the poems, together with a general introduction, a glossary, and a bibliography. The plan, as outlined, has the compass and workings of a definitive edition; and, indeed, to produce at this day anything far short of that would merit reproach from all sides. For the past quarter of a century and more an army of scholars, fledged and fledgling, have grubbed to the very dregs of this famous period and have placed within an editor's reach materials for thoroughgoing generalizations. The grubbing will doubtless go on, but if Mr. Parrott's book may be taken to indicate that there is also to be an in-gathering and sifting of researches in the form of large but convenient and accurate studies, then the time has come to rejoice.

Few more stimulating figures of that age could have been chosen for a study of this sort than that of George Chapman. For, while falling behind the greatest of his day, he has considerably more than historic value. The point is: Chapman had ideas and a philosophy of life. His pages are encrusted with Bacon-like nuggets of his own thinking. He presents at the same time the tragedy of such other strongly individual men as Ben Jonson and John Donne; if all three had been less themselves and more Elizabethan, or even still less Elizabethan and more themselves, they would have achieved a larger success in literature. In none was there that balance of forces and sympathies which reflects and grasps the manysidedness of one's age; and yet, oddly, each had sufficient versatility to crave expression in a variety of forms. Whether, like Jonson especially, Chapman was too learned to adapt himself to immediate conditions is one aspect of the problem. The learning of Shakespeare, we may assume, was of the traditional sort which runs easily into the moulds of art; Jonson's and Chapman's excess may have pushed their personalities inartistically to the front. Whether, again like Jonson, literary fashions lured him into mediums for which he was not quite suited, is another important but doubtful point. At one moment it is hard not to feel that if Chapman had written "The Revenge of Bussy d'Ambois." let us say, not as drama but as formal treatises in ethics and metaphysics, he might to-day be a monument in the history of philosophic thought. One can never be sure. In other instances, notably in the first of the Bussy plays, his grasp of dramatic situation, and his ability to present certain intangible ironies which only that form will express, are unmistakable. Or was his best talent epic? Chapman gives one constantly the impression of being bigger than his works and of being ruined by a cursed inarticulacy not so much of his own making as imposed by the genius of his age. Such a figure makes a strong human appeal and piques one's desire to gather up his true greatness securely from amid the ruin of his many half-successes.

The plan which Mr. Parrott has set before himself leaves little to be desired. He has wisely deferred the general introduction until he shall have gone over critically the entire body of Chapman's works. In so doing, he has not slighted the apparatus for the preceding volumes, if we may judge by the one volume which has appeared. In nearly two hundred finely-printed pages of notes are found, in connection with each play, an introduction, chiefly historical, but with a bit of more general appreciation, too; an elaborate commentary, and a special section giving the evidence for the editor's choice of numerous textual readings. The need of a trustworthy text is indicated by the fact that not since 1875 has a complete edition of Chapman appeared, and that upon this careless text was based the well-known Mermaid selections. Under the circumstances, the present editor may well regret, as he does, the large number of errata which have crept into his own text and have had to be corrected on a preliminary page. The commentaries reveal a vast amount of industry in running down the allusions of Chapman's widely-ranging mind; but to do this was far easier than to disentangle his often crabbed thought. The editor has frankly given up certain cases, and in many others, for all his ingenuity, has fallen short of the truth. In general, however, his explanations are helpful and precise. We note in the introductions a praiseworthy attempt to consider the material not only in its relation to Chapman, but to other European writers who have handled it. The following instance illustrates Professor Parrott's occasional tendency to be rigid in inference:

Chapman, the reader of the play will have noticed, has departed in one material incident from the historic account of Bussy's death. Curiously enough, Dumas makes the same alteration of facts. Both the English poet and the French novelist make Monsieur, not the King, the direct informant of Monsoreau, and both attribute Monsieur's wrath against his old favorite to his discovery of the fact that Bussy had outstripped him in the race for the favors of Monsoreau's wife. It is most unlikely that this common departure from history should be a mere coincidence, and it is quite incredible that Dumas, or the collaborator who supplied him with the materials for *La Dame de Monsoreau,* should have been acquainted with Chapman's play. It seems probable, therefore, that there should have been some common source as yet unknown.

In point of fact, the advantage derived from making this slight change is obvious; and though it may, of course, have been made before Chapman's day, we fail to see the need of assuming that to Dumas it should not have occurred independently.

A sixth, revised and enlarged edition of Edward Everett Hale, jr.'s, "Dramatists of To-day" is announced by Holt.

"An Actor's Note-Books: being some Memoirs, Friendships, Criticisms, and Experiences of Frank Archer" contains, according to Stanley Paul, the publisher, who announces it, memories of Tennyson, Tom Taylor, Wilkie Collins, Salvini, Mary Anderson, Irving, and others.

Sir Herbert Tree has appointed Wednesday, November 8, for the production of Israel Zangwill's new play, "The God of War," which is understood to be an appeal for the application of Christian principles to international relations.

Cyril Maude has procured for the London Haymarket Theatre, the "Papa" of Messrs. de Flers and de Caillavet, a three-act comedy which has had a long run in Paris. The plot is founded on the rivalry between father and son for the hand of an heiress, and the success of the older man. The boy, however, is provided with a suitable sweetheart, and the ending is happy as usual. The piece will require some modification, it is said, for the English stage.

For the purposes of copyright, Justin Huntly McCarthy recently gave, in London, a performance of a play just finished by him, entitled "The Fair Irish Maid." It is founded upon his novel of the same name. The scene is laid first in Ireland, and then in London, in the years 1814-15. The hero-

Digitized by Google

ine, the last of an old and ruined family, suddenly finds herself the heiress to almost unlimited wealth. This unexpected good fortune makes her for a season the Queen of London, and brings her many experiences, humorous and pathetic. It is wholly a love-story, and the historical events of the year of Waterloo have no direct influence upon the characters.

Here is an indication of the magnitude of Professor Reinhardt's spectacle to be produced in the London Olympia at Christmas. The scene represents the interior of a huge Gothic cathedral. During the intermezzo the doors are opened and the spectator sees a band of huntsmen, with their horses and dogs, traversing a lofty mountain. But to give due effect to the picture it has become clear that the mountain must be in the middle of the arena. To accomplish this Reinhardt and the scenic designer have arranged to build up a huge mountain capable of supporting hundreds of persons, and larger in circumference than almost any stage in London. This is to be equipped with motor power, so that it may be easily moved from one end of the building to the other.

The death is announced of Ernst Hartmann, a leading member of the Burgtheater, at the age of sixty-seven. His death is a severe loss for Viennese theatregoers and for the Imperial House of Comedy, since he was, after the death of Sonnenthal, the only surviving representative of the classical traditions of the Austrian stage. Among the characters in which he excelled was that of Petruchio in "The Taming of the Shrew" and of Benedick in "Much Ado About Nothing."

Music

Family Letters of Richard Wagner. Translated by William Ashton Ellis. New York: The Macmillan Co. $1.35 net.

More Mastersingers. By Filson Young. New York: Henry Holt & Co. $1.35 net.

In Germany there are many singers and other musicians whose specialty is the interpretation of Wagner's music. In England there is an author who seems to be devoting his whole life to writing an exhaustive biography of Wagner and translating his essays and the thousands of letters he wrote. Six volumes have already been published of William Ashton Ellis's "Life of Richard Wagner," and the work is still announced as being "in progress." Then there are eight volumes of prose works which Mr. Ellis has turned into English, with prefaces and annotations. Of the letters, he has translated those addressed by Wagner to his first wife, those to Mathilde Wesendonck, to her husband, and to Emil Heckel (this includes a brief history of the Bayreuth festivals). Doubtless he would have also Englished the letters to Liszt, Uhlig, and so on, had not others preceded him.

Two years ago, in the preface to his version of Wagner's letters to his first wife, Mr. Ellis expressed the hope that the demand for them would be sufficiently great to encourage him to supplement that volume by "an English rendering of the delightful 'Familienbriefe.'" Evidently this wish was gratified; and to make the family letters accessible to a still larger number he persuaded the publisher to issue this collection at a price within the means of all who crowd the cheaper sections of the house at performances of Wagner's works, or take the most modest of parts in their representation. It has been said that these family letters may be regarded as a supplement to the autobiography, but that is true of all the letters of Wagner, for he is always in them talking about himself and his works. Being written while the incidents were fresh and his nerves still vibrating, the letters present his experiences and his individuality more vividly than the reminiscences dictated in after years. In those to members of his family, in particular, as the translator justly remarks, "no possible suspicion of attitudinizing can arise in the mind of the most inveterate carper." Their writer appears in them true to life, and on the whole the picture they present will please those who love Wagner the man, with all his faults, as much as they love his music and his poems, with all their weaknesses.

Goethe's "himmelhoch jauchzend, zum Tode betrübt" might be put as a motto on the title-page of this volume of letters. Half the time the writer of them seems to be in a condition which he describes in these words: "My nerves are so terribly sensitive, they are always vibrating, either engendering the acme of pleasure or the deepest depression and pain." The pleasure is rare and fleeting; "the feeling of pain, anxiety, prostration, harassment, is the *constantly* abiding state." At times, as when he was writing his Nibelung poems, he could work only two hours a day, and even that, he writes, he could "only accomplish by lying down for another two after my work and trying to sleep a bit; if sleep doesn't come, that day is done for." "A whole night's sleep is the heavenliest blessing I know; I often take a deal of pains preparing it." But he is getting on in years, and consoles himself for all his troubles by reflecting that "the most passionate natures have often first learned comfort in old age." If the diagnosis of his troubles made by the eminent American oculist, Dr. George M. Gould, is correct a pair of spectacles would have ended his sufferings, for the mysterious affliction which he tried in so many different ways to cure was simply eye-strain.

That Mr. Ellis's translation is accurate and retains much of the individuality of the original it is hardly necessary to say. His index also is, as usual, a model. Under Wagner he classifies the allusions made to childhood and youth, to his regret at having no children (Siegfried was born later), to copyrights, dogs, exile, and amnesty, hack-work, health, marriage, pianoforte, politics, reading, women, etc., the largest number of entries being under abode, money-matters, and self-analysis. The appendix contains Glasenapp's notes on the recipients of the family letters—his mother, two brothers, four sisters. one half-sister, and several nieces. Glasenapp believes that a considerable number of family letters, written before Wagner had become famous, were not preserved. The first letter is dated 1832, the last 1874. The translator has added biographic notes where they help to elucidate the contents of the letters. Those who believe that Wagner was the son of his mother's second husband will find confirmation of their view in this sentence, on p. 279, written to his "half-sister," Cäcilie: "To me it seems as if our father Geyer believed he was atoning for a trespass by his sacrifice for the whole family," which is preceded by the sentence: "I believe I see perfectly clear now, even though I feel it extremely difficult to express my view of that relation."

The Old Age of Richard Wagner is the title of a chapter in Filson Young's latest collection of essays, "More Mastersingers." Mr. Young is familiar with this subject, having previously written a whole book on Wagner's operas. In the new chapter he does not discuss the composer's last years, but pleads for an improved staging of his works at Bayreuth and elsewhere, and for excisions. He holds that Wagner's music is for all time, that his influence on the world is still growing, but that the operas will age unless they are presented in new garb worthy of their beauty. In a chapter on The Art of the Conductor Mr. Young gives a vivid account of the revolution in orchestral and operatic interpretation effected by Wagner; but he forgets to add that this change was due quite as much to Liszt's example as to Wagner's. Some of the "new-style" conductors, including two Englishmen, Landon Ronald and Henry Wood, are considered in detail as to their methods. Other chapters, all of them worth reading, are entitled Debussy, The Two Westminsters, the Music of the Salon (an expression he uses in a much wider and more exalted sense than is customary), The Place of Music in Modern Life, which he thinks is not so much to be a child of the time—to stimulate the strenuousness and emotional fever of modern life—as to be a haven of refuge from it, into which we may escape in hours of heaviness or oppression.

Fritz Kreisler, all violin players will be

Digitized by Google

delighted to hear, has recently brought out an edition, edited by himself, of Beethoven's sonatas for piano and violin.

On the anniversary of the birthday of the late Edward MacDowell, December 18, there will be held at Carnegie Hall a MacDowell Festival Concert, in honor of America's greatest composer. E. S. Brown, who is managing the concert, has engaged the Volpe Symphony Orchestra, Arnold Volpe conducting, to assist, and among the soloists will be Augustus Cottlow, the eminent pianist, long recognized as MacDowell's most enthusiastic interpreter; Gardner Lamson, bass baritone, an American singer who has been for many years in opera in Germany; Rosa Linde, a well-known contralto; Nellie Wright, soprano, and Paul Dufault, tenor.

Wagner lowered his orchestra in Bayreuth, whereas in "Parsifal" he put his chorus up into the cupola for a celestial effect. Acting on this latter hint, they are preparing, in Berlin, for production at Christmas, a huge pantomime, with chorus and acting, for which Humperdinck is writing the music, and which is to be a sort of modern adaptation of the mediæval miracle plays or mysteries. There will be seven pictures, in presenting which several thousand persons will be employed. A unique feature will be the orchestra of two hundred players, who will be placed on a platform high above the stage to heighten the effect of mystery, while a group of bells will chime from a Gothic church which is to be built in the arena of the huge Olympia Theatre.

Charles-Théodore Malherbe, whose death, at the age of fifty-eight, has been reported from Cormeilles, France, became principal archivist of the Paris Opéra in 1899. Among his works may be mentioned "L'Œuvre dramatique de Richard Wagner," "Mélanges sur Richard Wagner," etc. He had a remarkable private collection of musical autographs.

Art

Canova. By Vittorio Malamani. Milan: Ulrico Hoepli.

This volume, published without date, is a noteworthy production of the year 1911. Though somewhat heavy to handle, it is by no means heavy in style, but is enlivened by graphic descriptions, by personal incidents, and a great abundance of photographic illustration. Signor Malamani has spared no pains in garnering his materials. Letters, published and unpublished, old engravings, newspapers, periodicals, and books have been carefully scanned, and he has travelled far and to many lands to see for himself works which have been concealed in private collections. The photographic reproductions alone are a source for Canova study to which scholars will turn for many years to come. Signor Malamani is not a critic of the modern school, but rather a genial and sympathetic biographer—in fact, a Vasari of the twentieth century. His descriptions of Canova's youth, of his emotional experiences, and, later, of his triumphant return to his native town are delightful bits of narrative.

Canova was an enthusiastic reviver of classic themes in sculpture, but his interest went further. When the opportunity offered, he promptly purchased from a French architect eighty Roman inscriptions, which formerly belonged to the Giustiniani family, and presented them to the Vatican, thus establishing a Museo Lapidario, which afterward developed into the Museo Chiaramonti. Nor did he hesitate to plead with Napoleon himself for the restoration of classic treasures to Italy. This enthusiasm was perhaps somewhat undiscriminating. When he went to London in 1815 and saw the sculptures from the Parthenon he wrote:

> The works of Pheidias, then, are true flesh and blood, that is to say, to be classed with the beauties of nature; flesh and blood is the armless Mercury of the Belvidere, also the Torso of Hercules; flesh and blood are the dying gladiator and the oft repeated Satyr of Praxiteles; flesh and blood the Cupid of which fragments are found everywhere; also the Venus of Praxiteles; and, furthermore, a Venus of the British Museum is altogether flesh and blood; as are also two small satyrs, etc.

Thus, works of quite varied styles from different periods appear to him equally beautiful, equally successful as reflections of nature. It seems strange to us as we survey the reproductions of his works—works for the most part characterized by excessive formality—that he should have been thus impressed by the realism of classic art. One of his earliest works, the Icarus and Dædalus, shows a touch of realism that he seldom even approximated in his later work. It has a vigor and a charm of naturalism that is missing even in his portrait sculptures. Could he have developed in this direction, could he have remained away from Rome and addressed himself to nature, rather than to archæology, he might have produced works more vigorous and more original. As it was, he became a master of outline and of form, and lost the very quality he most admired in the works of the classic sculptors.

Occasionally, we find him open to influences of post-classic art. Thus, the model for a relief for the tomb of the Marchese Berio, with its emotional expression of grief, recalls well-known compositions of Donatello, and a Pietà, the model for which is preserved at Possagno, seems to have been inspired by the works of Begarelli. And in his large sepulchral monuments we are sometimes reminded of Bernini. But none of these influences was permanent with him. It was the classic types which controlled his art. In spite of the great abundance of his works, the types he preferred—or rather those which appealed to his clientèle—were comparatively few, and we find frequent repetitions of the same theme with very slight variations of treatment. In all, there is the charm of refinement, and this may explain why his works were for the most part produced in response to aristocratic demand. His funerary stelæ, in spite of a certain formality, are beautiful embodiments of refined grief. But his Hebes and Dancing Girls and his Venuses are for the most part sentimental in conception and artificial in character, and hence do not make a strong appeal to the sculpture loving public of to-day.

A work embodying the results of Lord Carnarvon's long explorations at Thebes is announced by Henry Frowde, with the title "Four Years' Excavations at Thebes"; chapters in the volumes are contributed also by Howard Carter, F. L. Griffith, George Legrain, Dr. Moller, Professor Newberry, and Professor Spiegelburg.

In "Famous Castles and Palaces of Italy" (Scribner), Edmund B. d'Auvergne has had primarily to write a text for pictures—there are eight color-plates, after sketches by C. E. Dawson—but he has acquitted himself of the task with spirit and with sufficient learning. He carries the story down selectively from Castel Sant' Angelo to the ducal palace of Mantua, with which we reach the Renaissance. The survey runs from Apulia, with its Norman strongholds, to the sub-Alpine vale of Aosta. Bracciano, Poppi, Ferrara, Urbino, and the castles of Naples are included. In the embarrassment of choice offered by Italy, one cannot quarrel with Mr. d'Auvergne's selections. Possibly the Saracenic villa at Ravello should have been treated, in view of its exceptional architectural character and historic interest. This is an example of the better sort of professional bookmaking.

Prof. C. Baldwin Brown of the University of Edinburgh has recast his Rhind lectures of 1909 into a handsomely printed book, "The Arts and Crafts of Our Teutonic Forefathers" (McClurg). The book is a model of clear exposition, and except that the illustrations are of too small scale to be very useful, the work of author and printer may be warmly commended. The presentation is popular, and Professor Brown necessarily dispatches in a clause problems that have inspired volumes. He gives the facts clearly, with maps of the Teutonic migrations, and explains the nature of the finds. We have brooches and buckles in abundance, swords, dirks, axes; more rarely helmets and large vessels. It is a metal worker's art, and most of the objects in iron or more precious metals have plated or inlaid designs or are effectively set with stones. It has been maintained that all these so-called Teutonic objects were of Roman manufacture—export goods like the output of modern Birmingham or Tokio. Against this theory the idiomatic quality of Germanic ornamentation seems to speak conclusively.

Louis A. Ehrich, who died in London, October 23, at the age of sixty-one, had of late years made an enviable reputation as a connoisseur and dealer in old paintings. He was a graduate of Yale and began active life as a merchant. During a period

Digitized by Google

of invalidism he turned, on the one hand, to political reform, and on the other, to picture collecting. This avocation led to what was ultimately to be his calling. In scholarship he easily surpassed his colleagues in the trade, and he had in an unusual degree the confidence of museum officials and private collectors. For many years he was president of the Free Trade League. He was prominent also in the Gold Democratic and in the Anti-imperialist movements. A man of vivid and varied intellectual interests, he will be greatly missed.

Among the works of Constant Moyaux, the French architect who died recently at the age of seventy-six, may be mentioned the tomb of Léon Cogniet at Père Lachaise, the monument to Laplace, the astronomer, at St. Martin-de-Mailloc, the Meudon observatory, and the restoration of the dome of the Institute in 1874. In 1890, he was made professor at the Ecole des Beaux Arts.

The death is reported from Paris, in his fifty-seventh year, of Eugène-Henri Cauchois, who was noted for his pictures of still life, especially of flowers.

Finance

THE MARKET AND THE STEEL SUIT.

When the announcement was suddenly made, after the close of the Stock Exchange last Thursday, that the Government had entered suit to dissolve the Steel Corporation, it was received by individual readers or listeners in various ways. Stock Exchange people who were still lingering in Wall Street said at once that the market would have to go down. The Steel Trust's lawyers declared that it ought to be a relief to have the uncertainty about a suit removed. Other people insisted that the uncertainty was now worse than ever.

At the clubs and the various evening conferences, it was next rather generally concluded that the market's instinctive feeling that a suit was coming—especially after Attorney-General Wickersham's curious newspaper interview of last month—had been behind Steel common's break from 80 at the end of July to 51⅝ last month. But the average man-in-the-street merely wondered what sort of overwhelming crash would seize the Stock Exchange next day. He reasoned from his knowledge that the "billion-dollar Trust" has 120,000 shareholders, that all sorts of people among his own acquaintance "held a little Steel," and that here was potential liquidation on a startling scale.

Next morning, Steel common opened 3½ points down; that was the London selling. It fell 5 points further, then recovered 2 points or so of its earlier 8½-point loss. On Saturday, it opened a fraction lower and advanced a point; on Monday (when many people looked for a large supply of selling orders by mail from the outside public), the stock rose 1½ points further; on Tuesday, 1¾. Clearly, the 120,000 separate holders of the stock were keeping their heads.

So far as concerns the problem as to how the stock's market value would be affected pending the suit thus suddenly initiated, there is some interesting precedent. Northern Securities was the first great corporate combination ordered to be dissolved; its stock was selling around 102 when Attorney-General Knox, in February, 1902, began the Government's dissolution suit. From that price the shares declined to 81⅝ in 1903. When the final decision of the Supreme Court was handed down in March, 1904, Northern Securities was back at 90, and two weeks later the price again crossed par. Standard Oil was quoted at 630 on May 4, 1906, the day when President Roosevelt sent his special message to Congress announcing that the Department of Justice would take action. After the suit was actually started, the stock sold down to 390, but on the 31st of last August, the day when the company's books were closed, and the corporation, as it had been known, passed out of existence, the price was 630—exactly what it was in May, 1906.

The price of American Tobacco stock, just before the Government's suit was started in March, 1906, was 513. The price subsequently declined to 174½; but last May, two weeks after the Supreme Court had handed down its decision against the company, the price was back at 520. And even as regards the intervening break in the two industrial stocks, it must be remembered that the Oil and Tobacco suits were instituted in the boom year 1906, when all the market was on a very high level, and that the low prices mentioned came in the panic of 1907, and represented a relatively not more severe decline than occurred in many other stocks.

Such was the story in stocks of companies which the Supreme Court eventually ordered to be dissolved. They received their dividends regularly, until the final decree of dissolution. In the case of Northern Securities—the only combination where the longer history subsequent to its dissolution is as yet in evidence—the component companies, whose stock was allotted *pro rata* to the holders of Northern Securities shares, were more prosperous after the dissolution than before, and paid larger dividends.

It is impossible, however, not to feel regret that a position so full of possible anxieties and worries should have been forced upon this great body of investors—many of them people of small means. If the Steel suit is nothing but "playing politics" by an administration anxious for winning popular support for next year's election, then no denunciation of the attorney-general and the President could be too severe. A considerable part of the community is taking the major premise in that argument for granted.

But there are some other considerations which must also be kept in mind. The law being what it is, it was either right that the corporation should be brought into court, or it was wrong; and that question cannot be determined by the number of investors in the property. The statement issued by the Steel management, last week, washing its hands of responsibility and blaming the Government for whatever loss an investor may hereafter incur, was in somewhat questionable taste. If the Steel Corporation is hereafter adjudged by the court not to have violated the Anti-Trust law, and not to have broken down the conditions of equal competition and legitimate trade, then there is not the slightest reason why the investor in the shares will be any worse off hereafter than he is today. More than that, a harassing uncertainty, which must always have operated against the value of his stock, would be permanently removed.

And if the Government were to win the suit and the Trust were to be dissolved, it is quite as true as it was before that the property is there, and that the courts which dissolved the holding company would protect the investor in his rights to it. There is no question of confiscation in the matter, and there is infinitely less question of shattered market valuations than there would have been if the suit had been brought when Steel Common was at 94⅞, two years ago, or when it was squeezing its working capital to pay dividends, in the first years of its history.

But even this does not touch the core of the matter. What few people yet appear to realize is that the movement to break up such combinations as may be adjudged in restraint of trade, is a movement not to embark on untried and uncharted industrial seas, but to restore conditions with which the world had been familiar during many generations, and with which it achieved all its previous eras of prosperity. It is these immense trade combinations which are themselves the experiments, and some of them have been glaringly unsuccessful ones. Even in Germany, so often cited for our admonishment in the matter, there are signs of the similar experiment breaking down. Two arguments are constantly produced by people who contend that the whole attempt to restrain our huge trade combinations is senseless and malicious, and both of the arguments are unfounded. One is, that the so-called "Trust movement" of 1899 and 1901 was the only means of saving the various industrial enterprises from a hopeless situation. The other is, that the Anti-Trust law undertakes to forbid the conducting of any business on a large scale.

Digitized by Google

The first is wrong in its history, the second wrong in its facts. Instead of being in a state of ruin, the separate plants which were taken into the huge amalgamations of that period were highly prosperous—so much so that, in the Steel Trust's case, one reason for its paying the 4 per cent. dividend on its inflated common stock in 1901 was that half of the companies bought up by it had been paying 4 per cent. on similarly watered capital of their own. Some of them had come to grief in the money market, a few years before, and some of them, if left to themselves, would probably have done so a few years later, when the Steel Trust itself skated over some unpleasantly thin ice. But that was no novel discovery of that day.

Going concerns, with proper management and capitalization, were so flourishing that, except for the constitutional cripples already mentioned, the Steel Corporation had hard work to get them in. As for the notion that the proscribing of the Oil and Tobacco Trusts meant that no great business, and no reasonable combination, would be allowed again, that idea was doubtless encouraged by one unhappy *obiter dictum* of the Circuit Court; but the Supreme Court opinions of last spring made very short work of it.

It remains for the Department of Justice to prove that the Steel Trust violates the Anti-Trust law and threatens the free exchange of trade. It has not proved that yet; the Corporation's own side is still to be heard. Some allegations in the attorney-general's petition (notably its references to the motives and actions of the Trust in 1907) will be pretty hard to prove, and are believed to be quite unfounded by people who were on the spot at the time and who had reason to know what was being done and why. And even the prosecuting officers can hardly doubt that the Steel Corporation has a vastly better case, in the light of the recent opinions of the Supreme Court in the Anti-Trust law litigation, than was possessed by the Standard Oil or the American Tobacco.

THE CANON IN RESIDENCE. This novel of life in a Cathedral town will recall Trollope's Barchester series, and will satisfy discriminating readers. 12mo. 247 pages. $1.20 net; postage, 10 cents.

The Baker & Taylor Co., 33 E. 17th St., N.Y.

A STUDY OF WORDS

By E. M. BLACKBURN, M.A., Crown 8vo. pp. viii+224. $1.25 *net.*

This book is an introduction to the study of the English language, and incidentally furnishes a vocabulary of common words in other languages. The writer takes the root-idea of a word or its first recorded meaning, and points out the connection between its origin in the past and its uses in the present. To take the simplest possible instances, bacon is described as the "back" of a pig, flour as the "flower" of the wheat, and sherry is wine from Xeres or "Cæsar's" town. As an example of more difficult cases, the various uses of the word "pitch" are referred to their root idea of "pecking" or thrusting in. For the sake of easy reference, the words are arranged alphabetically, in the form of a dictionary.

LONGMANS, GREEN, & CO., New York

AMERICANS: An Impression

By Alexander Francis.

NEW BOOKS OF SPECIAL INTEREST

THE LURE OF THE GARDEN

By HILDEGARDE HAWTHORNE.

An alluring and fascinating outdoor book. The text is by the granddaughter of the great Nathaniel Hawthorne, herself a writer of rare charm of style. There are sixteen full pages in the colors of the original paintings by Jules Guérin, Maxfield Parrish, Anna Whelan Betts, and Ivanowski, and thirty-two full-page reproductions in black and white of choice photographs. A garden classic, and a volume of rare and satisfying beauty in every detail of the making. *End papers in tint. Quarto, 259 pages. Price, $4.50 net, postage 28 cents.*

THE STORY OF FRENCH PAINTING

By CHARLES H. CAFFIN, author of "How to Study Pictures," "The Story of Spanish Painting," etc.

The ideal handbook on French art, illuminating and instructive in its criticism, and an invaluable book both for the student of art and the cultured general reader. It is the third volume in that admirable series, begun in "The Story of Dutch Painting" and continued in "The Story of Spanish Painting." *Forty reproductions of famous French paintings. Square 8vo, 200 pages. Price, $1.20 net, postage 12 cents.*

ÆSOP'S FABLES A Gift Book Edition

Here is an attractive new edition of an unfailingly popular classic. There are forty quaint drawings by E. Boyd Smith in black, and every page has a border in tint. *8vo, 167 pages. Price, $2.00 net, postage 14 cents.*

THE WOMEN OF THE CÆSARS

By GUGLIELMO FERRERO, author of "The Greatness and Decline of Rome."

A brilliant and scholarly presentation of the most dramatic period of Roman history, and of the imperial women who helped to make Rome, and to make and unmake Roman history. A historical work of rarely picturesque conception and treatment. *The forty illustrations are from drawings by Castaigne and Alma Tadema, and from photographs. 8vo, 335 pages. Price, $2.00 net, postage 18 cents.*

THE CHANGING CHINESE

By EDWARD ALSWORTH ROSS, Ph.D., LL.D., Professor of Sociology in the University of Wisconsin, and author of "Social Control," etc.

This is the first presentation of the conflict of Oriental and Western cultures in China by a sociologist of adequate, modern equipment. A work of great significance and value for the student of sociology, it is also of extraordinary interest to the general reader—a vivid and entertaining picture of Chinese life and customs. *There are over one hundred illustrations from unusual photographs. 8vo, 350 pages. Price, $2.40 net, postage 18 cents.*

MARTIN LUTHER: THE MAN AND HIS WORK

By ARTHUR C. McGIFFERT, Professor of Church History in Union Theological Seminary.

A notable biography, through which that stern old monk, whose rebellion against the Church of Rome changed the religious history of the world, moves, a very real, human figure. A modern, authoritative and vividly interesting life, the ripe work of a distinguished scholar and enthusiastic student of Luther's life and times. *Forty-eight illustrations from photographs of historical places and persons. 8vo. 450 pages. Price, $3.00 net, postage 19 cents.*

AMERICAN ADDRESSES

By HON. JOSEPH H. CHOATE, author of "Abraham Lincoln and Other Addresses in England."

A scholarly volume gathering into permanent form some of Mr. Choate's most notable addresses on men and events of enduring interest to American history. Dignified, wise, witty. *Frontispiece portrait of the author. Octavo, 360 pages. Price, $2.00 net, postage 14 cents.*

FOUR MONTHS AFOOT IN SPAIN

By HARRY A. FRANCK, author of "A Vagabond Journey Around the World."

A vivid, unfailingly humorous record of the author's experiences and adventures during a care-free summer in unfamiliar byways. Whoever did not read that now famous book, "A Vagabond Journey Around the World," missed the most fascinating travel book of a decade. With all its difference, the new book is as delightful as the earlier one. *Sixty illustrations from photographs with map showing itinerary. 8vo, 400 pages. Price, $2.00 net; postage 16 cents.*

THE MAN WHO LIKES MEXICO

By WALLACE GILLPATRICK.

The story of the author's six years' wanderings and experiences in a sunny land of fascinating romance. It has all the charm a personal narrative should have, together with a good bird's-eye view of the country, geographically, historically, and socially. *The sixty-eight illustrations are reproduced from unusually interesting photographs. 8vo, 400 pages. Price, $2.00 net, postage 15 cents.*

THE SPELL OF EGYPT

By ROBERT HICHENS, author of "The Garden of Allah," etc.

An unillustrated edition of that notable volume, "Egypt and Its Monuments," intended for guide-book use. "Rich in the unusual information every actual and would-be traveller to Egypt wants, set down most fascinatingly." *12mo, 272 pages. Price, $1.25 net, postage 11 cents.*

HERE ARE TWO BOOKS WHICH EVERY BOY SHOULD HAVE:

THE SECOND BOYS' BOOK OF MODEL AEROPLANES

By Francis Arnold Collins

Author of "The Boys' Book of Model Aeroplanes."

The book of books for every lad, and every grown-up too, who has been caught in the fascination of model aeroplane experimentation, covering up to date the science and sport of model aeroplane building and flying, both in this country and abroad.

There are detailed instructions for building fifteen of the newest models, with a special chapter devoted to parlor aviation, full instructions for building small paper gliders, and rules for conducting model aeroplane contests.

The illustrations are from interesting photographs and helpful working drawings of over one hundred new models. The price, $1.20 net, postage 11 cents.

STORIES OF USEFUL INVENTIONS

By S. E. Forman,

Author of "A History of the Uinted States," "Advanced Civics," etc.

A more profitably interesting book has not been written. It tells simply and entertainingly of the beginings of every-day things, making the most of the history and humanity wrapped up in their invention. A regular picture book of useful inventions, too.

12mo, 248 pages. Price $1.00 net, postage 11 cents.

Send for our new Holiday Catalogue, full of helpful suggestions for Christmas buying. It contains a splendid "Classified List of Books for Young People."

The Nation

NEW YORK, THURSDAY, NOVEMBER 9, 1911.

The Week

High-tariffites got but cold comfort in Tuesday's elections. Aside from their bitter disappointment in Massachusetts, they have to contemplate significant losses in the three Congressional districts where Representatives were elected to fill vacancies. One of these was the First District of New Jersey, where the late Congressman Loudenslager had in 1910 a plurality of 10,000. His successor, Browning, is a Republican, but the latter's majority was cut to very low figures. In the Second District of Kansas, which has been heavily Republican for years, a Democratic Representative was elected by about 1,000 majority. Even more notable was the result in the Third District of Nebraska. Here the Republicans made special efforts, sending in money and speakers from the outside. The district was won in 1910 by a Democrat, the late Representative Latta, but his majority of 2,000 was explained as largely due to personal popularity. However, another Democrat, Daniel Stephens, was elected on Tuesday by a majority of 5,000. There could be no clearer proof of general dissatisfaction with the Administration, especially in the matter of its tariff policy, nor a sharper rebuke to President Taft for his veto of the wool bill, with a warning that he must strike hard for tariff reductions, this winter, or give up next year's election in advance.

The triumph of Gov. Foss in Massachusetts, if nothing else, is a sound and merited rebuke to those who would inject the tariff issue into State politics. It would hardly have been thought possible a few weeks ago that in any State in the Union a campaign could be waged by men of intelligence in which the welfare of its great industries would be made to hinge upon the political label of its Governor. It was at least believed that we had progressed far beyond that familiar political condition of the eighties. But Mr. Taft, in his Beverly speech, injected national issues into the campaign, and Mr. Frothingham took the cue. Thereafter, to elect Foss was to cause all Bay State industries to go to wrack and ruin. The silliness of the argument ought to have defeated its object, and probably did. Moreover, Gov. Foss was charged with being a voluble demagogue in arrears in some of his work, notably in his appointments to office. But a majority of the people seem to have liked both the man and his industry in office, and have decided to retain him another year, while again choosing a Republican Lieutenant-Governor and Legislature. Thus Gov. Foss has the distinction of being the first Democrat since William E. Russell to govern Massachusetts two years in succession. Finally, it must not be forgotten that Gov. Foss ran on an extremely radical platform favoring the submission of the woman-suffrage issue to the people, the initiative and referendum, a Federal income tax amendment, direct election of United States Senators, the creation of a Public Utilities Commission, etc.

No one can read the returns from Cincinnati, Philadelphia, and Cleveland, to say nothing of New York, without a feeling of rare satisfaction and of jubilation. The awakening of our American cities is coming on apace. Who would have thought a couple of years ago that, without any particular revelations of machine wrongdoing, or any specially sensational causes, Philadelphia and Cincinnati should rise up and drive out the boodlers and gangsters? "Corrupt and contented" was the phrase applied to Philadelphia a few years ago, which was made wholly out of date on Tuesday. Its discontent is plain enough, for the victory is a second one within a few weeks. First, Republican voters defeated the Vare brothers, contractors, in the primary election. Next they assayed at their full value Senator Penrose's assurances of repentance and reform and his sudden and hypocritical favoring of the commission form of government, and defeated his candidate, Mr. Earle, despite the fact that he was the ablest man ever put forward for the Mayoralty in Philadelphia.

It is a thousand pities that Champ Clark and William J. Bryan cannot be rolled into one and put up against Mr. Taft in the Presidential campaign next year. The President has barely had time to recover his equilibrium after being bowled over by Bryan's unanswerable challenge to publish the recommendations that gave Justice Hughes his job on the bench and got Chief Justice White his promotion, when along comes Speaker Clark and sends the poor man another challenge equally terrifying. "I am willing," says Champ, "to make this proposition: You let me run for President on a platform calling for annexation of Canada, in so far as this country can accomplish that end, and let President Taft run against me, opposing annexation, and I would carry every State in the nation." On the whole, seeing that we can't have a duumvirate, with both Bryan and Clark in the White House, the country should be grateful for the possibility of being governed by even one man of the Speaker's transcendent powers as a statesman. But the Democratic party has recently been showing such an unaccustomed and deplorable amount of mere plodding common sense that its national convention next year will in all probability not rise to the brilliant opportunity presented by Champ's candidacy.

The decision of the Secretary of War to install efficiency methods in the ordnance shops of the army shows administrative courage, for the scientific management at the Watertown, Mass., arsenal has aroused the anger of the labor unions. As will be remembered, a committee of Congress has been in session in Boston, New York, and other cities investigating this very matter because of a small strike at Watertown. Before this committee appeared many of the workmen at Watertown to testify their satisfaction with the new system. It commends itself to all unprejudiced observers because it has resulted in great economies, while actually bettering the condition and pay of the workmen. Yet both Mr. Stimson and President Taft deserve especial recognition for their pluck in taking so determined a stand on the eve of a Presidential campaign, for many labor leaders will roar—at least those who believe in limiting the number of workmen and in creating all the needless jobs possible.

Digitized by Google

Still other movements in the direction of economy in the army expenditures are foreshadowed by Gen. Wood's study of the stations of the army with a view to abandoning needless posts, and the Quartermaster-General's advocacy in his annual report of a consolidation of his own, the Subsistence, and the Paymaster-General's Departments. The latter plan was originally urged by Secretary Root. At that time these three supply departments were so hostile to the proposed amalgamation that it was impossible to obtain any legislation. Now all three heads of these departments have directly or indirectly approved the legislation now pending before Congress for this purpose. The estimated savings from this source alone will be two million dollars a year. But this is only a first estimate, and if better business methods can be installed after these three departments are unified, the saving should be far greater. As for the abandonment of unnecessary posts, the chief obstacles here will be political. Many of the existing barracks have no other reason for existence save that a Senator or Congressman wished to repair his political fences. Abandonment of one of the wasteful big posts could only take place in the face of a great deal of clamor on the part of those interested in the profits which come from selling supplies. But even if the unnecessary posts can be abandoned, economic management of the remainder would save large sums to the Government. The newest posts are far too luxurious for the housing of troops who are supposed to be preparing themselves for the hardships of campaigning.

It is certainly all up with Gov. Wilson now. He has been discovered, and the horrible truth is at last out that he is a free-trader. This damning announcement was made by ex-Gov. Stokes of New Jersey in a speech at Trenton. He had been reading Wilson's addresses and writings, and at more than one point in them had found traces of the free-trade poison. This will be final to every Jerseyman who forgets, as Mr. Stokes apparently does, that the same charge was made against Grover Cleveland, who nevertheless carried New Jersey three times for the Presidency. In 1892, for example, Democratic banners in Jersey openly flaunted the legend, "Protection is a Fraud," yet the State went for Cleveland. To suppose that New Jersey to-day, after the immense increase in the residents of her cities and towns in the northern part, so many of whom are independent in politics and nearly all of whom desire to see tariff duties reduced, will be frightened or anything but amused at this particular form of attack on Gov. Wilson, is too absurd for anybody except a former Republican Governor.

The inquest now going on at Austin, Pa., gives special point to the comprehensive article on the recent disaster at that place, by Graham Romeyn Taylor in the *Survey*. The contrast between the splendid helpfulness displayed by public and private agencies after the calamity and the lamentable failure to do anything to prevent it, in spite of abundant warning, is well brought out by the writer. This inertia, so far as the townspeople were concerned, is ascribed essentially to the fear of doing anything supposed to be contrary to the desires of the Bayless Company, on the continuance and extent of whose operations the prosperity of the place was dependent. But the State Government is not absolved from blame for inaction, and of course its failure to take cognizance of the menace to life and property cannot be accounted for in any such way. There is force in what Mr. Taylor says about the relation between the town and the industrial corporation; but it is always well to remember that a large factor in all our dangers from fire and flood and explosion is a certain laxity in the habitual American attitude of mind.

The detailed population bulletins for Ohio and Wisconsin repeat the familiar tale of contrast between urban and rural growth in numbers. In the case of Wisconsin, the rate of increase of the entire population, for the decade 1900-1910, is strikingly low, all things considered, being only 12.8, as against 21.0 per cent. for continental United States as a whole; whereas the three preceding decades gave 22.2, 28.7, and 24.7 per cent., respectively. Wisconsin's rural population —the population outside of cities and towns having 2,500 inhabitants or more in 1910—shows a growth of only 5.7 per cent., though the corresponding figure for the whole country is 11.2 per cent. In Ohio, the increase for the whole State has been more rapid, owing to the great increase in the cities, especially Cleveland; but at the same time the rural population makes a showing even less favorable than that of Wisconsin. Ohio's increase has been 14.7 per cent.—still far below that of the Union—but her rural territory has actually lost in number of inhabitants, the figures showing a decrease of 1.3 per cent. This result is made even more striking by the statement that out of the 88 counties of the State, no fewer than 39 show a falling off in numbers; and if we note that among the other 49 counties there are seven which show an increase of less than 3 per cent. for the decade, it may be said that a clear majority—46 as against 42—of the counties of Ohio present the phenomenon of either a declining or an almost stationary population. In several of the cases, too, the decline is by no means slight—Pike County, for example, went down from 18,172 to 15,723, and some did worse than that. The whole story is one very unlike anything we were accustomed to think of as possible in that section of the country a generation ago.

The cure for the evils of college athletics, according to the authorities of the University of Wisconsin, is more athletics. But this does not mean greater attention to the members of the varsity teams. The Wisconsin idea is that the entire student body should be trained in outdoor and indoor competitions, instead of being left to the dull routine of exercises in the gymnasium. Coaches are, accordingly, no longer mere specialists for the small groups of men who are able to "make" the big teams, but they are general instructors for the whole mass of undergraduates. By the end of his sophomore year, one must be able to swim a distance of fifty yards, and credits may be obtained for skating and dancing. Special courses have been established for those desiring to fit themselves to become teachers of physical training, for whom there is a growing demand. This widening of athletic activity is said to be having a good effect upon the teams which represent the university in its intercollegiate contests. This, if true, will be a sufficient justification for it in the mind of any one who has heretofore been doubtful.

Although the introduction of a Home Rule bill in Parliament is not to come

Digitized by Google

till next March, the main outlines of such a measure must be fairly clear in the minds of the Liberal Government, to judge from a recent speech by Augustine Birrell, Chief Secretary for Ireland. It is settled that the Irish people is to have a Parliament consisting of two chambers with a responsible Cabinet. To this Parliament are to be conceded full representative powers and control over purely Irish affairs. In delimiting the powers of the Irish Parliament, the Liberal Government will be found to entertain "a wide view," the object being to satisfy the national demand for national responsibility consistent with the maintenance of the supreme authority of the Imperial Parliament at Westminster.

The financial aspects of Home Rule are bound to constitute one of the most complicated problems in the proposed bill. At present, it is the Unionist contention that Ireland costs the British Empire more than it contributes and that the institution of new and elaborate political machinery is bound to increase the drain upon the Imperial revenue. To this one answer is that there must be something intrinsically wrong with the system of Irish administration at present, in view of the fact that while the cost of civil government in England is less than five dollars per head of the population, and in Scotland about six dollars, the cost in Ireland is about eleven dollars, or just double the rate for the United Kingdom. When Ireland is ruled by its own representatives in Parliament instead of being ruled from London, the presumption is that a fuller knowledge of the nation's needs and resources can be made the basis of broad economies. Whatever the financial arguments against Home Rule may be, Mr. Birrell points out that they fail of their effect in the mouths of Unionists. If the latter are determined to resist Home Rule to the last, it is an anti-climax to argue that Home Rule is expensive.

The difficulties of combining politics and literature are brought out by the announcement of the postponement of the publication of Lord Charles Beresford's "The Betrayal." This industrious author, it is understood, has ready for the press an undoubted best-seller, full of pungent attacks upon men and measures of note, laments over continued losses of great opportunities by Cabinet Ministers, and patriotic and rhetorical appeals for a navy that will not go to pieces at the first sound of a hostile gun. And yet he cannot publish his book, owing to the circumstance that the new First Lord of the Admiralty agrees with what he says in it! One can understand the author's readiness to spoil his work, including a stunning title, rather than risk injury to the navy, which he loves above all books, but the puzzling feature of the incident is its disclosure of a sad lack of enterprise upon the part of the publishers. Winston Churchill's untimely appointment to the Admiralty ought to be turned into a means of advancing the sale of the book, instead of retarding its publication. What is there to prevent the insertion of a new preface and a new concluding chapter, the alteration of the title to, say, "The Halted Betrayal," and the advertisement of the volume as "The Book that Saved the Empire"? Evidently, what England needs is not more Dreadnoughts, but bolder advertising methods.

At the ninth annual meeting of the German Aeronautical Society no less than 250 delegates were present, representing 71 local associations or clubs. Representatives of the Imperial Government, the Departments of War and Public Works, were there, and the reports of the various committees were read by such distinguished men as Major von Parseval, whose military dirigibles are performing such excellent service; Capt. von Abercron, whose record in ballooning is well known, and Professor Stade, who discussed aviation from the purely scientific standpoint. As is usual in Germany, the theoretical scientists are called in to aid the practical men. The noteworthy enthusiasm and harmony of the meeting are reported by the German press as illustrations of the intense popular interest in the whole question. While in this country every one's attention is centred on aeroplane developments, in Germany the spectacle of a huge dirigible floating over a city no longer rouses any particular interest. The great Zeppelin airship, the Schwaben, which went into active commercial service last spring, completed on October 8 its one hundredth successful voyage with passengers. There were twelve of these on this "century run."

To the professional airman and the General Staffs of the European armies, the war in Tripoli has probably come as a welcome opportunity for trying out the military usefulness of the aeroplane. The two aeroplanes employed for scouting forces in Tripoli are said to have given such satisfaction that a larger number of machines are to be dispatched to the front. The test, to be sure, is not of the severest kind, even if conducted under conditions of actual warfare. The continental armies are already provided with guns for aerial defence, whereas the Turkish forces opposed to Italy are, of course, helpless against any assault from on high. Nor would a European trained army be driven into panic by a couple of hand grenades dropped from a flying machine, as is said to have occurred around Tripoli. That this new phase of warfare is seriously considered appears from the elaborate tests and manœuvres that have been carried on for weeks by the French military authorities at Rheims.

The political situation in Peking appears to be improving or not, according as one studies the reports from Northern China or from the revolutionary South. In the North, things undoubtedly have changed for the better. The National Assembly professes itself satisfied with the concessions wrested from the throne. Yuan Shih Kai has been appointed constitutional Prime Minister. The rebellious troops have accepted the promised reforms, and are now said to be ready to march against the revolutionists in the Yangtse provinces. The latter are supposed to be still unreconciled and to be holding to their original plan of expelling the Manchus and establishing a republic. But that is either pretence or self-delusion. The South by itself can do little. Even if the insurrectionary forces were to establish themselves in the South, they would have the modern-trained army from the North to reckon with. But, as a matter of fact, even now the tide is turning against the revolutionists. It seems probable that they will be driven from Hankow in the course of a few days, and while they may be able to carry on a sporadic warfare, they can expect little else. It is to be remembered that the surrender by the throne was brought about not by the revolutionists of the South, but by mutiny among the troops around Peking.

THE FRANCO-GERMAN AGREEMENT.

With the formal announcement of the principal terms in the settlement between France and Germany concerning Morocco and the Congo, a momentous chapter has been closed in the history of European international relations and colonial expansion. There can be very little doubt that the agreement will stand in its present form. The action of the German Government in the matter of foreign affairs is final. The French Parliament has still to speak, but France has so patently come out ahead in the negotiations that an upset of the treaty is unimaginable. The effects of the settlement are far-reaching. It makes radical changes in the map of Africa. Taken in conjunction with Italy's adventure in Tripoli, it indicates a notable step forward in the Latin reconquest of the southern shore of the Mediterranean. It puts a new face on the international situation in Europe. The relations between France and Germany, between France and Great Britain, between Great Britain and Germany, between the Triple Alliance and the Triple Entente that binds England, France, and Russia, are different to-day from what they were six months ago.

German public opinion loses no time in admitting that the Imperial Government emerges with little prestige from the long controversy. The Morocco question has always had two phases. Ever since William II's dramatic speech at Tangier half a dozen years ago, it has been pretty generally recognized that the German Government has been using Morocco either as a test of Anglo-French friendship or as a wedge for splitting up that friendship. On that count, Germany has been completely defeated. In 1911, as in 1905, the British Government has shown that it would back up France to the utmost. In 1905, France did not feel strong enough, even with the assurance of British aid, to face the test of war. That was why Théophile Delcassé, the Foreign Minister, who for years had been spinning a web of alliances and ententes with a view to an ultimate trial of strength with Germany, was forced to resign at the demand of the Kaiser. Time, which brings its revenges, has brought his to M. Delcassé. In the present French Cabinet he is Minister of the Navy, and not Minister of Foreign Affairs; but there is no reason for doubting that his hand has been felt in the late negotiations with Germany. What made this diplomatic victory possible was a significant change in the morale of the French nation. In some degree this was due to the feeling that the country was in a much better military position than it was six years ago. But the great reason for the remarkable stiffening of the French backbone consisted in the general recognition of the fact that if France yielded now, she might as well abdicate all pretensions to a place among the Powers, and accept a German hegemony.

On the purely colonial phase of the controversy, Germany has likewise been beaten. She receives 150,000 square miles of French territory in Central Africa adjoining her colony of the Cameroons, with an outlet on the Congo River. She consents in return to a French protectorate over Morocco, with its larger area, larger population, and much greater natural resources, and having the enormous advantage, above all, of giving France the solid north coast of Africa from beyond the Straits of Gibraltar to Tripoli. To France the question of proximity is an important factor in colonial policy. The French are a colonial but not a colonizing Power. The Frenchman will not emigrate too far over-seas. He will go to Algeria and Tunis, which are only across the Mediterranean, and he will go to Morocco. From this point of view, as well as from the administrative, military, and commercial point of view, it is evident that distance from the metropolis constitutes a highly important factor. It is true that France cedes absolute sovereignty in the Congo and consents to certain limitations upon her authority in Morocco, where a number of special rights are guaranteed to German subjects. The possibility of future controversy has not been totally eliminated. Nevertheless, this main source of contention having been removed, there is no reason to suppose that matters of detail will be allowed to bring up the problem in dangerous form again.

Diplomatic prestige in Europe is an exceedingly fluctuating quality, and frequently receives more attention than it deserves. But tracing out the problem in broader lines, we find to-day a serious decline in German prestige from what it was three years ago, when Austria took to herself Bosnia and Herzegovina, while the Kaiser stood by to repel intruders. Now the friendship between England and France is an alliance in fact, and Russian diplomacy is in close relations with the two. The Triple Alliance, on the other hand, is at the present moment put very roughly to the test. Italy is outraged by the attitude of her allies toward the raid upon Tripoli. Italian hatred for Austria has never disappeared, and what Rome regards as the provocative behavior of the Vienna Government might very well prove the deciding factor in Italy's long vacillation between the Triple Alliance and the advantages of an understanding with France. German prestige has suffered also at Constantinople, where the Kaiser has been regarded as a friend; this is the second occasion on which the Kaiser's friendship has failed to stand in the way of spoliation by one of his allies. The Triple Alliance may survive the present crisis as it has done before, but plainly it is not the picture of a happy family which it offers to-day.

In this peaceful end of a long and bitter controversy, the nations of Europe have reason to congratulate themselves on something more than their immediate escape from a devastating war. Every time that Governments avoid a resort to arms, we have a permanent gain for the growing habit of peace. It was not military hesitations or financial hesitations alone that kept Germany from going to war with France. In both countries, there was unmistakable evidence that the masses had no desire to take up arms over a question of colonies or diplomatic prestige. Even the splendid German army is not the absolute automaton it has been represented to be; it consists of men to whom it makes a difference whether they are fighting for a cause they have at heart, or are fighting only at the behest of their officers. Italy's raid upon Turkey prevents us from entertaining excessive illusions with regard to the present strength of the peace conscience among the peoples of Europe. But that the growth is there is undeniable. We need only recall that great mass meetings in protest against war have become a regular feature of international crises.

BIG-NAVY LOGIC.

Col. Roosevelt has made a distinguished convert to his doctrine that a powerful navy is the great guarantor of peace and righteousness. Mr. Oscar Straus, our former Ambassador to Turkey, confessed in a speech the other night that the seizure of Tripoli by Italy has led him sorrowfully to change his mind and to go over to Mr. Roosevelt's view. Ardent advocate as Mr. Straus is of all-inclusive arbitration treaties, he declared that the "high-handed buccaneering methods" of the Italian Government had shaken his faith. His words were, as reported:

> I decided that Mr. Roosevelt was right; that there are certain lines beyond which we should not go in our efforts to maintain peace, and that the surest means of guaranteeing peace is to have as strong a navy as possible to maintain it. Italy would never have dared to strike as she did if Turkey had had a navy worthy of the name.

This is wholly in line with what Mr. Roosevelt himself writes in the current *Outlook*. The "ethical justification" of the attack upon Turkey by Italy he does not undertake. There are, it appears, some matters in which even he hesitates to set himself against the moral consensus of the civilized world. The press and people of Europe, as of the United States, have been almost unanimous in condemning Italy's course, and Col. Roosevelt does not venture to defend it, though he thinks, "personally," that it will be for "the interest of humanity" if Tripoli falls under "European control." But it is not this "civilizade," as John Stuart Mill called what could not be justified, that at present concerns Mr. Roosevelt. He desires to point out the fact that the plight of Turkey proves how futile treaties are compared with guns. "If Turkey had had a fleet which, relatively to other fleets, was even approximately as strong as her army, no man of any sense believes that war would ever have occurred."

Such an argument has a very neat and compact look. It appears as clear as arithmetic. It is the favorite big-navy logic. But will it bear examination? "Relatively to other fleets," writes Mr. Roosevelt guardedly. Yes; but what other? Presumably the Italian, in this instance. Turkey has a fleet, but it is old and feeble and the Italian navy far outclasses it. But Italy was not Turkey's only possible enemy. She has been subject to age-long aggression from Russia. Her relations with Germany have been of a sort that might easily lead to rupture; a quarrel might any day arise over German concessions and ambitions in Asia Minor. According to the argument, then, Turkey ought to provide herself with a navy relatively as strong as Germany's. But that would at once give her a greater strength at sea than Italy, and it would then be the latter's turn to take alarm and to begin to build battleships like mad! We are thus in the same old vicious circle in which the big-navy logic has ever travelled. Make the Turkish fleet strong enough to resist Italy's and it instantly becomes strong enough to attack Italy's, and then *da capo* for Italy, and what becomes of your peace of the world as forever established by naval armaments?

There is more in Mr. Roosevelt's "relatively" than he seems to have intended. The truth is that, in all this matter of fighting strength, the question of margin of superiority is the vital thing. It was so between Prussia and Austria in 1866, and again between Germany and France in 1870. Bismarck simply put the question to Moltke and Von Roon: "Are you sure that our armies surpass theirs?" The possession of an army or a navy is not a national defence in itself. It may be merely an international provocation. It is known that Moltke watched with jealous eye the strengthening of the French army in 1874 and 1875, and actually declared it to be the true German policy, as a question of stark militarism, to strike again before France got too strong. This margin of strength which one nation may have over another is the constant study of military strategists. The idea is as old as the Bible. "What king going to make war against another king sitteth not down first and consulteth whether he be able with ten thousand to meet him that cometh against him with twenty thousand?" The more closely we look at the problem, as one purely of military might, the more clearly we see that Mr. Roosevelt's "relatively" has all the uncertainties and difficulties covered up in it. Navies that have to be continuously "relative" must be continuously growing all round, and there is no logical end in sight except the whole world thinking of nothing but guns and armor and going bankrupt in the insane shipbuilding competition.

The time has come for a fuller recognition of international good faith and conscience; and when we are compelled to face such a wanton act as Italy's attack upon Turkey, the inference should not be the hasty one of saying that all nations must arm themselves to the teeth, but rather that everything possible should be done to strengthen the moral and peaceful forces in the modern world.

CIRCUMSTANTIAL EVIDENCE.

In two trials now conspicuous in the public eye, the question of the attitude of jurors on the subject of circumstantial evidence is destined to play an important part, and in the Beattie case in Virginia the prisoner was convicted of the murder of his wife upon circumstantial evidence. In the long process of obtaining a jury to try J. B. McNamara at Los Angeles, one of the tests of eligibility applied to talesmen by the prosecution refers to their having or not having conscientious objections to conviction on such evidence in cases in which the punishment is death. And whenever the young minister Richeson, charged with the murder of Miss Linnell, is brought to trial, he will, if convicted at all, be convicted upon circumstantial evidence; nor can there be any doubt that in this case and in the McNamara case alike the resources of able counsel will be directed, with all possible energy, to discrediting the authority of such evidence, and exploiting to the utmost every scruple or prejudice against it that may lurk in the mind of any juror.

That the great majority of intelligent persons are superior to such prejudice, we have little doubt; but there is a not inconsiderable minority over whom it has sway. And the great difficulty in clearing their minds lies in the fact that it is almost impossible to fasten on anything tangible at the basis of their error. The only clear reason they can offer is the mere truism that cases have occurred in which a conviction has been obtained upon circumstantial evidence and in which the innocence of the man convicted has afterwards been established. But precisely the same thing has happened, again and again, in cases where the evidence was not at all what is called circumstantial, but was

Digitized by Google

from direct witnesses. If the fact that circumstantial evidence has sometimes led to unjust convictions was accepted as proving its insufficiency, we should have to drop all attempts to convict of capital offences by any kind of evidence whatsoever. Alleged eye-witnesses have sworn, either through error or intentionally, to the commission of murder by persons whose innocence was afterwards absolutely demonstrated; are we, then, to conclude that no person should ever be convicted of murder upon the testimony of eye-witnesses? It would be precisely as logical to do this as to refuse to convict upon circumstantial evidence. Of course, the true test of conclusiveness is of a wholly different nature. The real question is not what kind of evidence has been adduced, but how strong the evidence is of its kind. And that is the test which the common sense of any competent jury, as well as the rule of law laid down by the courts, actually does apply. The question that the jury must answer is one, and only one—is there reasonable doubt of the guilt of the accused? If there is, he must be acquitted; if there is not, he must be convicted. Evidence that is called circumstantial may remove all reasonable doubt, and evidence that is called direct may fail to do so.

A large part of what takes the outward form of scruples concerning circumstantial evidence has, we are sure, in reality nothing to do with the question of circumstantial evidence at all. It is not based on any estimate, however crude, of the conclusiveness of one kind of evidence rather than another, but is merely an uncritical application of the doctrine that it is better for ninety and nine guilty men to escape than for one innocent man to suffer. With the spirit underlying that doctrine no one will quarrel; but if it were to be understood as demanding absolute certainty as the indispensable condition of conviction, society might as well throw overboard the whole machinery of criminal justice. There is no way known to man for avoiding possibility of error in any of the affairs of life. If society is to be protected against murder and arson and burglary and kidnapping, it must hold forth to those who think of committing these crimes a real and adequate peril. Were it to become an accepted doctrine that circumstantial evidence cannot establish their guilt, immunity would virtually be granted them on the mere condition of exercising a moderate amount of care in committing their crime. Once in a long, long time some innocent man might be saved from unintentional injustice at the hands of the courts; but every year hundreds of innocent persons would suffer death at the hands of criminals who are now held in check by terror of the law. The man who will not convict on circumstantial evidence simply fails—whether owing to mawkish sentiment or to a conscientious scruple based on a cloudiness of thought—to do a duty that is as clearly necessary as any of those upon the performance of which the maintenance of the fabric of practical justice rests.

THE LOEB CLASSICAL LIBRARY.

The rumor of a great library of the classics, to be published by the munificence of Mr. James Loeb, has now been authoritatively confirmed. The editors are Mr. T. E. Page of Charterhouse and Dr. W. H. D. Rouse, headmaster of the Perse Grammar Echool, Cambridge, Eng., with whom is associated an advisory board composed of eminent American and European scholars. The following statement from a printed circular gives the main features of the plan:

> Mr. Heinemann and the Macmillan Company, New York, have pleasure in announcing the publication of a new series of Greek and Latin texts, with English translations upon the opposite page. Each volume will have a brief biographical and bibliographical preface and an index. The volumes will be issued at intervals—twenty in the first year—and will range from the time of Homer to the fall of Constantinople.

This we do not hesitate to pronounce a publication of magnificent promise for the higher things of the mind. Mr. Loeb will have raised to his name a monument more memorable than any pile of stone. The very importance of the project leads us to scan it narrowly.

Now, for use in the classroom such editions may not be of much service; the authors studied there are already printed in abundance and with every sort of editorial help. Nor is it clear that these books will appeal to a wide circle of readers who have no knowledge of the languages. For such readers the Greek or Latin text on alternate pages will simply be a bother, and most if not all of the authors they will care to look at are already available in translations. There remains a third class of readers—a dwindling class, it may be, and for that very reason to be tenderly considered. We mean those who, without being scholars, take some memory of the classics with them into the world and still at moments turn to a page of Horace or Cicero, and who would travel further in those realms of gold but for the difficulties of the way. They know that a translation can never give an equivalent joy for the original—can, for instance, any most cunning paraphrase carry the bitter and sweet savor of words so simple as these:

> Jam nec spes animi credula mutui?

But a translation on the opposite page will serve them for dictionary and grammar and tide them over dry and hard places. They need also brief and decisive notes. These ought to give the kind of simple information, biographical and other, for which the schoolboy is properly sent to books of reference. And they ought, imperatively, to be at the bottom of the page and not relegated to an appendix.

To strengthen and multiply such readers as these will in the end best promote the plan of Mr. Loeb's library "to revive interest in classical literature in an age when the humanities are being neglected more perhaps than at any time since the Middle Ages, and when men's minds are turning more than ever before to the practical and the material." Long ago Philip Freneau in one of his satires vowed

> That Latin and Hebrew, Chaldaic and Greek,
> To the shades of oblivion must certainly sneak;
> Too much of our time is employed on such trash
> When we ought to be taught to accumulate cash.

We have been well taught in that lesson. It is said that the classics are a lost cause, that Greek is dead and Latin is dying. But they are not dead and will not die.

Attention may be asked to an aspect of the classics which is too often overlooked. They may rouse us from the baser forms of materialism and teach us, as Marcus Aurelius says, to look on beauty with a chaste eye; but they are needed also to protect us against the very excess of our own virtues, and in this office no modern literature can help us in anything like the same way. They may open our minds to the difference between humanism and humanitarian-

Digitized by Google

ism, between perception of the values of life in themselves and active sympathy for those who have missed these values. Without the former our sympathies are, after all, but treading in a blind circle, helping others to help others to we know not just what. And it is well to remember sometimes that the individual soul has its own claims. How much better shall we be if the nations are all at peace with one another, but there is no peace in our own hearts? How much happier shall we be if we settle all the grave questions of labor and capital, but ourselves lose the gracious art of living? There is a distinct danger in the harsh division within society, sometimes within the individual man, between a grasping materialism and a loose sympathy. And just because the classics are strong in humanism and relatively weak in humanitarianism they may bring us to a better balance and a surer purpose. We need the principle of sympathy, but we need also to learn once more the values of life and to be saved from unconscious hypocrisies. There lies before us a little volume, printed at the Elm Tree Press, in which Mr. Charles Loomis Dana and Mr. John Cotton Dana present "The Letters of Horace" to modern readers. The book is designed for the "gentleman" reader who knows even less Latin than Shakespeare knew, and by its form and spirit well fulfils its end. Turning the pages we have been stopped by this neat translation of the famous epistle to Horace's brother-poet:

> Tibullus, fair-minded critic of my Satires that you are, tell me what you are doing now at your country seat near Pedum? Are you writing things which will surpass the small works of Cassius? Or sauntering quietly among your peaceful groves, intent on whatever pleases a wise and upright man? You were never one who lacked a soul. The gods have given you beauty, wealth, and the skill to enjoy it. What more could a kind nurse ask for her dear child than that he have wisdom; that he be able to speak what he feels; that a good name and good health be his, together with a good table and no lack of money?
>
> Amid hopes and cares, amid fears and keen regrets, think that each new day which dawns will be your last; then the hour for which we do not hope will come as a glad surprise.

The letter finds its complement in the close of another in which Horace gives his own creed:

> Sed satis est orare Jovem quæ donat et aufert;
> Det vitam, det opes, æquum mi animum ipse parabo.

Whatever shape the volumes of the Loeb Library may take, we hope and believe they will perform a large service in spreading the "everlasting consolation of the classics" and in keeping alive through forgetful times the true humanism as Horace expressed it to his friends and to himself.

THE VANITY OF EDUCATION.

It is impossible not to admire the courage of Mr. R. T. Crane of Chicago in bringing a railing accusation against all our higher education. He makes thorough work of it. First he disposed of the universities. Next he exposed higher schooling in general. His "Demoralization of College Life" followed, but this was only a side-investigation, a by-product, as it were, of his factory. Now, he returns to the main line of his attack, and issues in pamphlet form an address on "The Futility of Technical Schools." This is plainly to assault higher education in its last bastion. Doubts about the value of high schools and colleges and universities have crept into the minds of many "practical" Americans, but most of them have been ready until now to swear by technical education. It is, indeed, the growing zeal for that which has made inroads into the old courses of study, brought in all the new ideas about "vocational" training of our boys and girls, and broken down the classical curriculum by the forcing in of so much science. In fact, the way of salvation for the modern world has been said by many authorities to lie in the development of technical education. German superiority in that line has affrighted England and led her to bestir herself. American efforts in the same direction have been notable in recent years. We have had many new foundations for technical education and seen old ones greatly enlarged. But now comes Mr. Crane to tell us that all this is vanity and vexation of spirit.

His specifications are advanced with great confidence and with what he admits to be "harshness." The popularity of technical schools is due to the fact that they "afford educators opportunity to humbug you and the public, . . . all of which is a part of the whole higher educational scheme to fleece you and the public." Boys in such schools are there "simply through the grossest deception." Mr. Crane challenges the "heads of these institutions" to show "any substantial results of such training." Indeed, he went to headquarters, and wrote to a dozen institutes of technology to demand the names and addresses of firms that employed their graduates. Most of them "either refused to give the information or dodged the question." Naturally, Mr. Crane's worst fears were confirmed. After that it was hardly necessary for him to press home the argument that "this country was immensely successful before the technical schools were established."

Let it not be thought that Mr. Crane is simply a destructive critic. He has his alternative to propose. It is "experience." Instead of wasting six or eight years in technical schools, let the bright boys of sixteen or seventeen be put at once into the shop. Shift them about from one machine to another, let the employers and foremen keep a sharp eye upon them and help and advance them as occasion offers, and then, with an attendance on night schools "as much as is necessary," and with the reading of useful books, you would turn out engineers "likely to make their mark." At most, they would need only about six months in a technical school to get "further information." Thus it appears that Mr. Crane would not entirely abolish institutes of technology. He would preserve them for the purpose of giving six-month courses to young fellows from the factories.

It would be easy to ridicule this address of the Chicago manufacturer, of which we have sought to give a fair summary, but to us it seems more pathetic than amusing. Seldom can the fallacy of "experience" have been exhibited more glaringly. Yet Mr. Crane argues with great sincerity straight from his own life. "For the past fifty-seven years," he says, "I have been engaged actively in the manufacturing business"; and if success such as his could be won without ever having seen the inside of a technical school, what possible need is there of that kind of training? He does not put it so baldly as that, but the inference runs all through his pamphlet. It is one long glorification of the rule of thumb. We have had great engineers who were largely self-educated, so why not insist that everybody shall educate himself in the dear school of experience?

Now, it is pretty obvious that Mr. Crane

Digitized by Google

has very little first-hand and accurate knowledge of the work of the technical schools upon whose "futility" he descants. He fails by his own test of "experience"; he would have scant patience with anybody who should submit a business proposal about which he knew as little directly as Mr. Crane knows about the institutions he so rudely assails. He cannot be aware how intensely practical is the discipline of these schools; how in their laboratories and shops they seek to give their students a vivid sense of scientific truth in actual application, thus affording them a controlled and concentrated "experience" certainly worth as much as anything to be gained in the routine of a factory. Nor can Mr. Crane be familiar with the fact that technical students are regularly and frequently sent to inspect the great engineering and manufacturing plants, so that their knowledge of modern processes may be kept up to date. Severe mathematical and mechanical studies are, of course, made compulsory, but the aim is throughout to show how they impinge on practice. At bottom, there is no such antithesis between experience and education as Mr. Crane imagines. A sound technical education gives the student the garnered experience of the whole world. It saves him from wasting time and strength in lines of inquiry or invention that have again and again been shown to lead nowhither. Futility for futility, what can be greater than that of the untrained man, even if of marked natural ability, blundering painfully along for lack of the special knowledge which the schools exist to give him?

THE ITALIAN POINT OF VIEW.

ROME, October 20, 1911.

Giuseppe Mazzini, the great apostle of liberty and the hater of oppression in every form, was the first Italian statesman to assert the natural rights of his country in Northern Africa. "Northern Africa," he said in 1838, "is Italy's business." The first to give effect to the doctrine of the theoretical statesman was the practical statesman, Francesco Crispi, who is chiefly noted in the superficial knowledge of the general public as the author of the Abyssinian disaster. It is very doubtful, however, if he can justly be held responsible for this, and it is certain that for many years he was almost alone in the assertion of the policy that has finally become national. He was, as is well known, the great promoter of the Triple Alliance, and, at a time when Italy was weak, France openly hostile, and Austria still smarting under the loss of her rich Italian provinces, saw clearly that the true line of policy for his country lay in a good understanding with Germany, for which Bismarck, apparently with more sincerity than he usually showed in his foreign negotiations, had declared himself quite ready. As early as 1877 Crispi, though at that time in the Home and not in the Foreign Office, strongly urged this policy upon the Prime Minister, Depretis, who, then as always, cowardly and temporizing, took no decisive action. Depretis was succeeded as Prime Minister by Cairoli, who was strongly opposed to the whole African policy. The result was that at the Congress of Berlin in 1878 Tripoli was not given to Italy outright, but she was to be allowed to "penetrate" it commercially and industrially. France, on the contrary, got a free hand in Tunis, which she was not slow to use. Not only for its intrinsic value, but also for strengthening France's position in Algeria, French statesmen, especially Ferry, Hanotaux, and Delcassé, realized the importance of acquiring that country, which in 1881 became a French protectorate. Italians were naturally preoccupied and discontented, but again Crispi was almost the only one of their statesmen to see what would be the enormous loss to Italy in commercial, political, and military prestige if more of the North African coast, especially that part of it directly opposite to Italy, should come into the possession of any other European Power. Even then it could be foreseen that it could not long remain under the control of Turkey.

In 1882 Italy had another chance. England offered her a share in the protectorate of Egypt, which Crispi again strongly urged the Government to accept, but again without success. In the same year the Triple Alliance was formed including Germany, Austria, and Italy; and Italy's object in forming a part of it was not only to secure herself on the Continent against the hostility of France, but also to safeguard her interests in the Mediterranean. Germany had already offered to support Italy in Tunis against France, of course with the object of embroiling the two countries, but when the Triple Alliance was first formed in 1882, and also when it was renewed in 1886, refused to give Italy a guarantee for Tripoli. Germany was not, to be sure, at that time a great naval power, and would have had some difficulty in making a demonstration of force in the Mediterranean. At any rate, from 1886 to 1896, Italy's policy toward France was one of steady and consistent hostility, which was due chiefly to conflict of interests in the Mediterranean, and was signalized by such incidents as the denunciation of the Franco-Italian commercial treaty in 1886, by the sending of an English fleet to Italian waters in 1888, caused by the rumor of a French attack upon Spezia, by the massacre of Aigues Mortes in 1893, and finally by French aid given to the Abyssinians in the African war.

It was because of the bitter disillusions of this African war, and because the Triple Alliance gave no support in the Mediterranean, that Italian policy turned squarely about and tended toward a reconciliation with France. The able diplomacy of the Marquis Visconti-Venosta, Minister for Foreign Affairs from 1896 to 1898, had already gone far in this direction, when the Fashoda affair between France and England, and Visconti-Venosta's unfortunate retirement from the Foreign Office, dealt another blow to Italy's ambitions in North Africa. The vast *hinterland* attributed to Tripoli, which was determined largely by the caravan-routes that give an outlet to her trade and extended far beyond Tibesti to the region determined in an indefinite way by Lake Chad, was for the most part shorn away by the French-English compacts of 1899 that grew out of the Fashoda incident. Turkey, of course, could offer no resistance, though she had publicly asserted her right to the whole territory involved. Italy was so badly served by her Foreign Minister, Admiral Canevaro, that he entered not even a protest, though the Italian consul at London had given him a plain intimation of what was going forward.

Visconti-Venosta, having returned to the Foreign Office in 1899, immediately set about saving what he could from the wreck, and the next year came to an agreement with France that recognized the paramount rights and interests of Italy in the Tripolitania and Cyrenaica and that afterwards was confirmed by England. Germany, though temporarily estranged by Italy's attitude at the Algeciras Conference, had no objections to offer. Thus there was left only one power to be feared, Austria namely, which, though Italy's ally, was notoriously not her friend. And this one remaining obstacle was ably removed by Tittoni, Minister for Foreign Affairs in 1908, at the time of the annexation of Bosnia and Herzegovina. He acquiesced in this annexation in return for a free hand in Tripoli. Since he could not publish this compact at the time, a great outcry was raised against him for weakly yielding to a hostile power two rich provinces that made her still stronger in the Mediterranean. In matter of fact, Bosnia and Herzegovina had been placed under an Austrian protectorate and administration by the Congress of Berlin, and Tittoni, merely by agreeing that a *de facto* should be changed to a *de jure* condition, procured a highly important concession from Italy's most dangerous and jealous neighbor.

All these negotiations, on the whole,

Digitized by Google

need no explanation or gloss, but they involve one implication that cannot be too strongly emphasized, that Turkey has never been consulted. The European doctrine in regard to Africa is the complete reverse of the Monroe Doctrine in regard to America: that is to say, Europe maintains that the African continent *is* still open to colonization. The Powers have pledged themselves to preserve the integrity of the Ottoman Empire, but this applies only to Turkey in Europe and Asia.

During the whole of the period with which I have dealt, Turkey has treated Italy quite differently from the other nations with which she has had to do. The Porte knew, of course, that Italy was the weakest of them all, and that in the first years of the African negotiations France was openly her foe. And it is well known how, for a long time, Turkish diplomacy was ably directed to sowing dissension among the Powers that were waiting to profit by her dismemberment, and yet wished to keep her good will for the gaining of concessions in the Balkans and Asia Minor. But here enters another consideration to which enough importance has not been attributed: the large Italian population throughout the entire Turkish domain in Europe, Asia, and Africa. Italian industrial and commercial enterprise is no new thing in the eastern Mediterranean region. It began long before the union of the kingdom, in fact, much of it is left over from the commercial enterprise of Venice, Genoa, and other Italian republics in the East. Italian is the language of education and commerce in Albania, the Venetian dialect is still understood on the Armenian coast, while in cities like Constantinople and Smyrna the Italian population is numerous and wealthy. At Smyrna, the rug industry is almost entirely in their hands, and they have lately organized a rug Trust capitalized at $50.000,000.

Such being the historical and actual conditions, it is not hard to find reasons for a hostility of the Turks against the Italians such as they have against no other European nation. The Italians were their first enemies in the Mediterranean, and contributed largely to the arresting of their westward march. As the two peoples have so long lived locally together, but separated by race, language, and religion, there has naturally been much cause for attrition between them. Finally, since the Turk in the bottom of his heart hates all the Europeans who have invaded and dismembered his empire, but fears the other nations more and knows them less, he has naturally vented most of his spite against the Italians.

Since the Young Turks' revolution in 1908, which at first won the sympathy of the Italians as of most other Europeans, this anti-Italian feeling has become violent. In fact, under the old régime, it was no more than could be endured, and the Italian attitude toward Tripoli was one of expectancy. But in the very year 1908 occurred the murder of two Italian subjects for which no satisfaction was ever given, though it is well known who the assassins were. All kinds of injury, from slights to open outrage, have been inflicted on Italian authorities and subjects; Italian industries and commerce in the whole of Turkey, and especially in Tripoli, have been hindered in every possible way, until all Europe has regarded with amazement, and not without contempt, the weak-spirited endurance on the part of the nation, which is so little characteristic of individual Italians. The Turks came to believe that all protests and intimations of an almost exhausted patience could be passed by unheeded. They were fatally mistaken. The fact was that during almost the whole of the three years since 1908 the Italian Premier, Minister for Foreign Affairs, and Ambassador to Turkey have been pusillanimous and cowardly. The indignation of the people grew until its ministers were forced to act. In this way is to be explained the abruptness of the Italian ultimatum, which the foreign press has so liberally criticised for its diplomatic incorrectness. A weak foreign minister, who should have assumed a firm tone long before, when he finally did act was pushed to extremes by the will of the nation; and the Turks were not ready to treat until they knew that the Italian warships were under way.

The Turkish government in Tripoli has been nothing but a military occupation and a levying of taxes. The effects of its incompetence and misrule politically, economically, and morally are simply a scandal and an affront to civilization. The right of the Turks to the country is a right of conquest that dates back only to 1835, and this they have long since forfeited by reducing a naturally rich territory to utter misery and degradation. Fortunately, on this subject it is not necessary to depend on the interested opinions of the Italians themselves. In 1894 Crispi commissioned the celebrated German explorer, Gerhard Rohlfs, the only European who had a thorough and competent knowledge of Tripolitania and Cyrenaica, to submit an exhaustive report on their actual condition and possible resources. This document has recently come to light and has been printed in full by the *Ragione* of Milan. I cite a few eloquent figures.

In the years 1900-1903, in fourteen out of twenty administrative districts, the Arabs had cut down 15,651 palm, olive, and lemon trees to avoid the payment of the taxes which were almost always greater than the income from the crops. In twenty-seven districts, during the same period, 1,812 natives had been imprisoned and 127 sent into exile. From 1887 to 1893 there had been 14,656 confiscations of property, 11,252 cases of unpaid taxes had been tried in the administrative courts, and 7,927 similar cases were pending. The natives with property who were not despoiled by the government usually fell a prey to the usurers. From Rohlfs's investigation it appeared that in the decade from 1884 to 1893 two-thirds of the property acquired by Greeks, Maltese, and Jews came from the spoliation of the Arabs. The report further describes the almost incredible moral turpitude of the Turkish rulers, and the vices not only practised but encouraged by them, in terms that had better not be transcribed. For public instruction the Turkish Government is now spending $6,600 a year, for sanitation $55.60. The only good schools in the country have been founded and administered by Italians.

The commerce of Tripolitania and Cyrenaica put together now amounts to about $10,000,000 annually, a small showing as compared with $120,000,000 for Algeria and more than $50,000,000 for Tunis. But it must be borne in mind that Tunis before the French occupation was commercially in no better condition than Tripoli is now. France has moreover used every effort to attract the caravan traffic from the direction of Benghazi and Tripoli to the oasis of Gadames and from thence to Tunis. As to natural resources, the Italian consul Medana has affirmed that of the million square kilometres in Tripolitania, 388,620 are at present capable of cultivation, as against 287,000 square kilometres in Italy. And much more of the land that is now unproductive could be redeemed by irrigation. The deposits of sulphur and phosphates are very rich, and Rohlfs had no doubt that iron, argentiferous lead, and zinc would also be found. His opinion, in short, was that Tunis is not worth the tenth part of Tripoli.

An article by the Hon. Luigi Luzzatti, the eminent economist and late prime minister, in the Milan *Corriere della Sera* for October 16, should allay the fears that have been expressed, more or less sincerely, in the foreign press that Italy cannot find the money to conduct the war and exploit the country. This vast North African region will also serve as an outlet for Italian emigration. North and South America are not the paradise for Italian workmen that many Americans suppose. From the large sums sent back by Italian emigrants should be deducted the money borrowed and the property sold at a ruinous loss to pay the expenses of the journey. The emigrant who returns well-to-do has often permanently injured his health by hardship, privation, and vice, and in many communities that

Digitized by Google

have been improved by the money brought back from America diseases like syphilis and tuberculosis are rife, where they were unknown before. Add to this that so many strong sons of Italy are forever lost to their country, and it is not hard to see why many Italian publicists, among them Professor Villari of Florence, believe that Italy suffers more than she gains from emigration to America. With commerce, industry, and agriculture developing in Tripoli, at a distance of only thirty-six hours from Sicily, it is certain that much emigration will be diverted from the Americas to a more hospitable climate and country, to the great advantage of Italy and probably of the emigrants themselves. H. E.

NEWS FOR BIBLIOPHILES.

Book collectors seem to be taking a new interest in the first editions of Robert Louis Stevenson, and the rarer items are bringing increasingly higher prices. Among little-known books to which he was a contributor is that amusing "Ouida-romance" of which mention is made in one or two of the Vailima letters: "An Object of Pity; or, The Man Haggard, a Romance, by Many Competent Hands," "Imprinted at Amsterdam."

It was in August, 1892, while Lady Jersey, the wife of the Governor of New South Wales, and her daughter were in Samoa, visiting Bazett Michael Haggard, the British land commissioner, that "a joint stock novel, in which each author was to introduce his or her own portrait, while all were to imitate the style of Ouida," was planned and carried out. Stevenson's own contribution consists, besides the Dedication, of chapter iv, "Late, Ever Late," containing his own description of himself, and an extract from "Tusitala's Samoid, Canto XII." The other contributors were the Countess of Jersey, her brother, Capt. Rupert Leigh, Mrs. Stevenson, her daughter, Isobel Strong, and Stevenson's cousin, Graham Balfour. On Lady Jersey's return to Sydney, the story was printed, a few copies only, with the bogus "Imprinted at Amsterdam."

In 1898 it was again printed, this time in Edinburgh, by T. & A. Constable, twenty-five copies only (of which Nos. 1 to 6 were on Japanese paper), for presentation "to the writers and a few of their personal friends." This edition, which is even rarer than the first, contains an interesting Introductory Note by Lady Jersey, and three illustrations, reproduced in color from drawings by Mrs. Strong. These illustrations are accompanied by descriptive verses from the pen of "Tusitala" (Stevenson's Samoan name), making this also a first edition of Stevenson. No copy of this second edition has, so far as we know, come upon the auction market.

In Col. W. F. Prideaux's admirable "Bibliography of Stevenson" he describes a single sheet, containing a sonnet by Stevenson, beginning:

> We found him first as in the Dells of May
> The Dreaming Damsel finds the Earliest Flower.

This, he explains, is one of a series of sonnets written by Stevenson in memory of Peter Brash, an Edinburgh tavern-keeper, whose place was a favorite resort in Stevenson's university days. These sonnets are referred to once or twice in the letters as "Brashiana," and it has been supposed that the one indicated above was the only one printed. Another impression of this was sold at Sotheby's last spring, and accompanying it, on the same sheet, was a second sonnet:

> We found him and we lost. The glorious Brash
> Fell like the cedar on the mountain side.

The sheet upon which these two sonnets were printed formed four quarto pages, of which pages 2 and 4 were blank. Several additional "Brashiana" sonnets exist in manuscript.

The Bibliophile had the great pleasure of seeing, in September, in Col. Prideaux's library, on the Isle of Thanet, two of the rarest Stevenson leaflets, the two poems written for "The Thompson Class Club," one in 1883 and the other in 1885. At the Edinburgh Academy, which Stevenson attended from 1861 to 1865, it was the custom for each class to have the same master during the four years in the school. The teacher of Stevenson's class was D'Arcy Wentworth Thompson, the class being known as the "Thompson class," and the members dining together once a year afterwards. Stevenson is known to have written verses for these gatherings, and the two poems which were printed are, perhaps, the rarest of Stevenson items. In fact, we know of no copy of either in America. The first of these, printed in 1883, is an octavo of four pages, with heading, "To the Thompson Class Club from Their Stammering Laureate." There are fourteen stanzas, signed at end "R. L. S. For Christmas, 1883." This poem has not been reprinted. The second, written and printed in 1885, is a similar four-page leaflet, with heading, "The Laureat Ste'enson to the Thamson Class." This poem, of ten stanzas, in broad Scotch, was included in "Underwoods," in 1887, with the altered title, "Their Laureate to an Academy Class Dinner Club."

Correspondence

CRIMINAL APPEAL IN ENGLAND.

To the Editor of The Nation:

Sir: In an editorial in the *Nation* of October 19 it is stated that "the first capital case was recently passed upon" by the English Court of Criminal Appeal, and that this case revealed the "surprising" fact that "the court is not able, under the law, to order a new trial." The case referred to is evidently Rex v. Ellson, reported in the London *Times* of September 29. The judgment of the court was rendered by Mr. Justice Darling, who stated that this was "the first capital case in which the court has felt it necessary to set aside the conviction." The first appeal in a capital case was heard by the court on July 17, 1908, and since then twenty such cases have been decided.

It is difficult to see why the fact that the Court of Criminal Appeal has not the power to grant a new trial should be deemed surprising. The judgment of Mr. Justice Darling furnishes no ground for such surprise, for he said:

> The case before them made it obligatory upon them to repeat what the Lord Chief Justice had said before, that it appeared to the court, with the experience which it had had, that it was greatly to be regretted that they had no power in such a case to order a new trial.

At the third sitting of the court on May 25, 1908, Lord Chief Justice Alverstone said:

> It was much to be regretted that Parliament had not given the court power to order a new trial.

Section 20 of the Criminal Appeal act expressly abolishes the practice of granting new trials in criminal cases, and section 4 provides that "if an appeal against conviction is allowed the court shall quash the conviction and direct a verdict and judgment of acquittal to be entered."

Twenty-seven bills giving a right of appeal to defendants in criminal cases were introduced in Parliament from 1843 to 1906. Twenty-three of these bills provided that new trials should be allowed in certain cases. The Council of Judges, held in 1894, strongly opposed the granting of new trials, and urged that "if the first conviction is wrong the accused ought not to be put in jeopardy again." In 1906 Lord Chancellor Loreburn introduced in the House of Lords a bill providing for the establishment of a court of criminal appeal. The bill, as originally drawn, did not provide for the granting of a new trial, but this provision was later inserted by amendment. The House of Lords passed the amended bill, but before it came to a second reading in the House of Commons it was withdrawn because of opposition directed partially against the provision for the granting of new trials. A bill, introduced in 1907, denying to the court the right to grant a new trial was enacted into the present law. Thus it will be seen that Parliament did intend that a defendant who had been improperly convicted should not be subjected to a second trial.

E. R. K.

Chicago, October 30.

[We were obviously in error about "the first capital case." But the openly expressed "regret" of the court, with its hope that the law would be amended, bore out our general comment.—Ed. The Nation.]

ENGLISH RHYTHM.

To the Editor of The Nation:

Sir: In your issue of October 12, discussing Professor Matthews's scansion of certain lines of Browning's, Professor Goodell objects to the indication of a pause after "Byng" in the verse,

> Kentish Sir Byng stood for his king—

asking, "Do our ears really report any period of silence?" Since such a question invites testimony, I beg to depose that my ears *do* report a period of silence in the line quoted, and still more emphatically do they report the pause after "troop" in—

> And pressing a troop unable to stoop.

This difference of judgment would be of small moment, so far as these two lines are concerned, if it did not raise important allied questions regarding the compromises or contradictions which are involved in any system of verse notation.

Digitized by Google

While I greatly prefer Mr. Matthews's notation to Mr. Goodell's, for such "equivalences" as have just been exemplified, I should be the last to admit that there is no compensatory lengthening of the syllables in question—that it is all a matter of a pause or silence. It seems clear to me that a little of each method of compensation is involved, here and in all such cases, and that no single practical system of notation can represent the complex facts involved in the actual reading of these metrical feet. I prefer the caret indicating the pause, even if the pause is not the whole story, because I believe it to be a very important and characteristic story, which the student should be trained to observe.

And this leads to a still more significant matter involved in Mr. Goodell's article—the divergent conceptions of the true boundaries of individual feet. We are here, also, I think, in the presence of two logically irreconcilable but actually co-existent phenomena: the feeling of the English reader that the foot is a fixed unit of time, and the feeling that it is (in iambic verse) made up of a pair of syllables. Why is it that the unsophisticated reader, and Mr. Saintsbury, and the present writer, all naturally look at the first foot of the line,

And never from this palace of dim night,

as consisting of the first two syllables thereof, although no one of us would, I suppose, fail to hurry over the first syllable of "never" as Mr. Goodell wishes us to do? It may, of course, be argued that it is only because we have been trained to a false system of nomenclature and notation. But the point I wish to make is that the fact that we constantly think of the feet of iambic blank verse in terms of two-syllable pairs, that we continue to think so even when presented with so unpromising a pair of "shorts" as "and nev—," and that we constantly make some effort to fit these pairs to the time of the rhythmical unit-foot, is as significant as the fact that our actual utterance of the verse is often inconsistent with that concept. And we have very important support in the practice of the poets, since they commonly keep to multiples of two syllables with extraordinary regularity, despite variations in the natural length of the syllables. To put the same matter more concretely, if Tennyson could conceive of a line of blank verse as divided into such feet as Mr. Goodell indicates for this one,—

Long | lines of | cliff | breaking have | left a | chasm,

why did he never introduce a monosyllabic foot into this metre without an accompanying trisyllabic? The answer seems to me to be certain: He did not think of any such monosyllabic foot; as with most writers and readers of English verse, the concept of the two-syllable foot was as real to him as that of the time-unit foot.

It is important, then, to recognize the fact that (especially in our blank verse, and to a somewhat slighter degree in the other forms of iambic pentameter) we may and do *think* dissyllabic feet while actually throwing them into inconsistent time-periods. This, after all, is, perhaps, no stranger than our ability to *think* an accent on the last syllable of "liberty," when it happens to rhyme with "free,"—an accent to which no one ever gives utterance—or, for that matter, to think, as some do, that "gray" and "grey" are quite different colors, and that a ghost which through the triumph of spelling reform had lost its "h" would also have lost its terrors.

RAYMOND MACDONALD ALDEN.

The University of Illinois, October 30.

OLD HYMNS AND NEW CREEDS.

To the Editor of The Nation:

Sir: It is encouraging to read in an article on "Weeding Out the Hymn Books," the *Nation* of October 19, that "there is a movement in several churches to revise their hymn books."

The other day, while searching through the book shelves in the attic for a strayed copy of Jerome's "Editio Vulgata," I came across an old hymn book, which by its looks invited me to open. I am old enough to be familiar with many of these hymns, which I heard in my childhood, and which live in my memory still.

The prevailing note seemed to be "individualism," so to speak, and "otherworldliness," the desire to save one's own precious soul in another world, with no hint of the altruistic spirit that pervades our modern conceptions of religion. The burden of the hymns I looked over seems to be a longing for freedom from all activity except playing on a harp, an intense longing for rest, eternal rest.

In those easy-going days, as I recall them, there was nothing of

The weariness, the fever, and the fret

of modern life, and I am at a loss to account for that tired feeling which the hymns express. I think that most of us in this athletic age would decline a harp, and to many of us the idea of everlasting rest is as repugnant as to the ancients, who regarded it as one of the punishments of Hades.

The contrast between the religious sentiment expressed in these hymns and that of to-day is strikingly shown by a report, in a Sunday paper, of the Interchurch Conservation Congress which lately held a session in Decatur, Ill. According to press dispatches, the congress, "believing that the country church is failing in its purpose because it does not minister to the needs of its people in social and physical ways, as well as spiritual, adopted resolutions endorsing the idea of installing tennis courts, baseball diamonds, and providing gymnasium apparatus for its members. It was the consensus of opinion that the preacher who is unable to further the interests of his congregation by supervising their play, participating in their athletic contests, and entering into the work of improving their physical as well as mental being should be asked to quit."

This leaves no doubt that we are truly living in an athletic age. A part of the editorial comments on these resolutions is here quoted:

The letter of the future candidate will doubtless read somewhat as follows: "The Reverend Boanerges Biceps desires to present himself as a candidate for the pulpit of the Woody Dell Church in Pioneer Township. Weighs in at 176 pounds; batting record in the Interseminary Alliance, .326; tennis championship (singles) in his middle year; has a record on St. Andrew Carnegie's golf course of 93; fair fencer; excellent man on parallel bars and vaulting horse; sings comic songs well; some experience in amateur dramatics; plays the banjo and duplicate whist acceptably on week days except in Lent.

Here in the West the ranks of evangelists have been occasionally recruited from retired baseball and football players who have "lost out." In an Illinois town, so the papers report, one such evangelist, after a three weeks' exhibition, left with five thousand dollars in his pocket. Hence the rush.

EDWARD A. ALLEN.

Columbia, Mo., October 29.

NOT NEWS AND NEWS.

To the Editor of The Nation:

Sir: In a recent editorial of the *Nation* (September 28) I find quoted a saying of Charles A. Dana; "When a dog bites a man, that's not news; when a man bites a dog, that's news." It may interest some of your readers to be reminded that this is a variant of an apothegm which appears in the classical literatures in more than one form. Plutarch, in his "Apophthegmata Laconica" (p. 224E), says that Leotychides, son of Ariston, when certain diviners announced as a portent the fact that a snake had coiled itself around the bolt of a door, replied, "It doesn't seem so to me, but if the bolt had coiled itself around the snake that would be a portent." Clement of Alexandria ("Stromata," vii, 25) attributes this same remark to Diogenes, and Cicero ("De Divinatione," ii, 62) recounts it without naming its author. In the lines just before those cited from the "Stromata" (vii, 24) Clement says that Bion the Borysthenite remarked: "What wonder if the mouse, not finding anything to eat, has eaten the meal sack? For this would be the thing worthy of note, if the meal sack had eaten the mouse," and that Bion ascribed this saying to Arcesilaus. Finally, Augustine ("De Doctrina Christiana," ii, 20) quotes Cato, when consulted by a man whose boots had been eaten by mice, as replying that there might have been real reason for wonder if the reverse had been the case.

Is the similarity between the ancient and the modern in these stories fortuitous, is it due to a reminiscence on Mr. Dana's part of the classics, of which he was a careful student, or is his remark based upon some intermediate form perhaps better known to him than was any one of the originals? ARTHUR STANLEY PEASE.

Urbana, Ill., October 24.

TAXING SOUVENIRS.

To the Editor of The Nation:

Sir: An almost pathetic side of the tariff question is seen in connection with the rule excluding trifling souvenirs from the $100 exemption of returning travellers. From our normal schools and teachers' colleges are sent out annually hundreds of young women to teach in public schools at salaries of $400 and up—and not very far up. Filled with interest in their history, art, etc., they start to save for a European trip. Wonderful as it may seem, they *do* save the five or six hundred dollars that will pay the necessary travelling expenses and allow a few dollars to "spend." They do not want to buy clothing. They do want, as gifts or as treasures in memory of the great event, a bit of Dresden china or Venetian glass, a Roman lamp, a Nuremberg

THE MYSTIC LIFE.

Mysticism: A Study in the Nature and Development of Man's Spiritual Consciousness. By Evelyn Underhill, New York: E. P. Dutton & Co. $5 net.

With the modest title of An Introduction to Mysticism, we are here offered an unusually complete guide to the interior or hidden life, admirable alike for its restrained style and for its balanced treatment of a subject which has been so often associated with quite the opposite qualities. After the vagaries of the so-called New Thought one is relieved to find so sane a study of what has been the old thought upon the transcendental order.

The distinction between the sensible and the supersensible furnishes that valid double interpretation which is generally characteristic of this book. Any experience in the mystic way, we are told, may be looked at from two points of view: we may see it, with the psychologist, as a moment in the history of mental development, governed by the more or less mechanical laws which so conveniently explain to him the psychic life of man; or, with the mystic himself, we may see it as a step toward that goal of mystical activity where there is "everywhere one Being, one Life." Taking, then, as her point of departure the assumption that the supersensible is somehow important, and can be influenced by the activities of man, the author makes an ingenious approach to the heights of transcendentalism by an appeal to that half-way house inhabited by the Vitalists. Vitalism is called the first contribution of the twentieth century to the history of man's quest of "reality," and is rightly described as being in its theory of knowledge close to that of the mystics. It is, moreover, a brilliant stroke to describe Driesch and Bergson and Eucken as having turned materialism inside out in that they present to us the universe as an expression of life, not life as an expression and by-product of the universe.

It is true that the Vitalists in their theory of knowledge are close to the mystics, but it will not do to over-emphasize that fact. Driesch, indeed, revives the doctrine of the entelechy, or spiritual principle, but does not lose sight of the physical organism; Bergson employs intuition but bases it upon biology; and Eucken calls upon the life of the spirit but does not forget the lower of the two levels—the natural. In their theory of knowledge these men may be idealists, in their theory of being they are realists, and would scarcely agree with the statement that the only escape from skepticism is by recourse to man's innate but strictly irrational instinct for that "Real above all reason, beyond all thought." This is only one side, even of mysticism, for elsewhere the author herself acknowledges that there is a dual character to the spiritual consciousness: first, there is the union with Life, with the World of Becoming; and parallel with it the illumination by which the mystic "gazes upon a more veritable world." Here, as generally throughout the book, the writer uses a consistent parallelism: the transcendental is her quest, but the temperamental is that necessary instrument whereby the sensuous symbol is so traced as to make it known that all mystics come from the same country.

It is a safe road that has two straight sides, fixed lines that lie in strict parallelism. Hence in the succeeding chapter on mysticism and psychology it is unfortunate that the description of the former in the terms of the latter is so strongly disparaged. We may agree in deploring the tendency of popular psychology to personify and exalt the subconscious; Americans know too well how the subliminal self has been turned into a waste-basket for all sorts of rubbish. Yet it seems going too far to say, after using the works of Cutten and Starbuck and James, that, when science attempts to lift the veil of Isis, she leaves only her dirty finger-marks behind. But such disparagement is perhaps more strictly directed against the French school and the researches of Murisier, Janet, and Ribot, who strive to find a pathological taint in all mystic experiences. The sanity of true mysticism may be shown, as here, by the comparative method. If the French have had representatives of the feminine hysterical type, such as Madame Guyon, the Germans have had the more virile representatives, such as Suso and Tauler.

In the chapter on the characteristics of mysticism an interesting attempt is made to substitute for William James's celebrated four marks of the mystic state another set of four, less inclusive, but possibly more precise. True mysticism is declared to be active and practical, not passive and theoretical; its aims wholly transcendental and spiritual; its object one of love, not of exploration; its goal, not intellectual realization, but a form of enhanced life. In general, the mark of the real practitioner is not to *know about* but to *be*, and, it is illogically added, it is the art of establishing one's *conscious* relation with the Absolute. But how can one be in conscious relation and yet, as is said earlier, deny that possible knowledge is to be limited to any process of "intellectation"? As Benjamin Franklin would say—"This is a kind of light about which I am much in the dark." The denial of any intellectual element in the mystic process is a pitfall: besides causing a neglect of the historic stage of illumination it does not fully agree with what is offered as one of the best modern definitions of mysticism as "in essence the concentration of *all* the forces of the soul upon a supernatural object"; it also compels the author to push from the mystic ladder the Christian Platonists and mystical philosophers, who are described as being no more mystics than the milestones on the Dover road are travellers to Calais.

Pointing out the confusing fact of an initial similarity of expression between many of the proceedings of the mystic and of the occultist, the author passes from the spurious to the genuine phenomena of the movement. In this second part of the book on the Mystic Way, the main strength of this study is shown in its thorough familiarity with the literature of Western mysticism from the beginnings of the Christian era to the death of William Blake. The dry facts of that period are given in a valuable appendix and bibliography, a sympathetic interpretation in minute descriptions of the Awakening, the Purification, and the Illumination of the self as drawn from the classic sources. Here, besides previously untranslated fragments from Meister Eckhart and Mechtild of Magdeburg, there are copious extracts from such exquisite "tasters of supreme experience" as Julian of Norwich and St. John of the Cross. But these chapters as well as those on the Dark Night of the Soul and the Unitive Life might well have been supplemented by extracts from certain of the genuine American mystics—among the Puritans Jonathan Edwards, among the Pennsylvania Pietists Conrad Beissel, among the moderns Upham, author of "The Interior or Hidden Life." We have an unbroken strain of the mystic ichor in our veins; Miss Underhill discovers it in Professor Royce, she might be interested to know that it is to be found in other academic circles besides Harvard, and that even from Columbia University there has come a mystic manual worthy to be ranked among the classics of the contemplative way.

CURRENT FICTION.

The Outcry. By Henry James. New York: Charles Scribner's Sons.

Did Mr. James first sketch this in dramatic form, and virtually "novelize" it as an afterthought? Or is it an experiment in the direction of a new composite medium? In effect and almost in substance, it is a social comedy in three acts. Its machinery is of the stage—and of a stage totally indifferent

Digitized by Google

to the new cry against coincidence. Each of the "Books" is an act in one scene; and the exits and entrances manage themselves as conveniently as in "Box and Cox." The persons are Lord Theign, heir to a very ancient title and to all that traditionally goes with it; Lady Sandgate, of mature and somewhat pronounced charms, with whom Lord Theign maintains a guardedly romantic relation; Lord John, well-mannered but quite unprincipled son of a rather disreputable old gaming duchess; Lady Grace, daughter to Lord Theign and ninety-nine other earls, inexperienced, but ardent and high-spirited; Hugh Crimble, a budding connoisseur; and Mr. Breckenridge Bender, American millionaire and collector.

The scene of the first act is laid in the hall of Dedborough Place, ancestral country estate of Lord Theign. The setting is minutely described in the opening paragraphs. The time is afternoon. Lady Sandgate is a guest. Lord John comes to propose marriage to Lady Grace, Crimble to see the Dedborough pictures for their own sake, and Mr. Bender because he is "after" a great Sir Joshua which is the most precious of all the Dedborough treasures. There is a Lady Kitty in the background, youngest and favorite daughter of Lord Theign, a fast young beauty who has lost immense sums at bridge to Lord John's mother. Consequently, Lord Theign, displaying that quaint sense of honor which (according to all traditions of fiction and drama) governs the British aristocracy, bargains to give Lady Grace to Lord John in payment of Lady Kitty's debt. The opportunity for an effective series of situations in this scene is obvious. In the course of it Lord John is discomfited and Crimble attains the foreground. Mr. Bender is unshaken in his expectation of bagging a prize; and both Lord Theign and Lady Sandgate (who has a great-grandmother by Lawrence to dispose of), though full of noble sentiments, are apparently at his mercy.

The second and third acts are set in the drawing-room of Lady Sandgate's London house, at intervals of a few weeks. Lady Grace has fled there from the anger of her father; and either her presence or the intimacy between her hostess and Lord Theign, or the natural activities of Crimble and Bender afford sufficient theatrical excuse for the assembling of the entire cast, first of a morning and later for a conclusive afternoon. It is all excessively "well-built"; in fact, we suspect (without too narrow examination) that with scenery substituted for description, and commentary cut out, the thing actually is a play—the lines complete in themselves. The "outcry" is the sound made by the British public upon the rumor that Lord Theign is likely to let one of his masterpieces go to America. For the public believes with Crimble that the treasures of art are a national possession. Lord Theign and Lady Sandgate affect contempt for this theory, but in the end it prevails, and the great Bender retires frustrate. Bender, like the other persons, is in outline a conventional stage figure, but Mr. James has breathed the breath of life into him as into no other of these still sufficiently amusing figures.

Victor Olnee's Discipline. By Hamlin Garland. New York: Harper & Bros.

Not long ago, it will be recalled, in a series of papers grouped under the title "The Shadow World," Mr. Garland showed himself a close and interested student of the history of psychic phenomena. Here he reduces some of his experiences and speculations in this field to the form of fiction—or shall we say that he dresses them in the garb of fiction? His Victor Olnee and the other human figures in the book do not strongly take hold of the reader's imagination. The "love-interest" is labored, the plot as a whole is of little importance, and the whole performance is a bit of commentary rather than of creation. Victor Olnee is supposed to be the son of a "medium," who (not quite credibly) brings him up without knowledge of her professional life. He knows that she has a "ghost-room," and dislikes its atmosphere and that of the persons who frequent it. But when the opening scene of the story shows him a popular athlete and fraternity man at "Winona University," he is still unaware that the ghost-room pays for his pleasant college years. Then comes a newspaper exposure of Mrs. Olnee. Victor hastens to her, determined to cut her off from her way of life. He does not believe that she is deliberately a fakir, but he wishes to wrest her roughly from her self-delusions. As she sincerely believes in her "guides," this is impossible. He is somewhat consoled by the discovery that, though living in a shabby neighborhood, she numbers persons of wealth and fashion among her clients. Among other things, she tells these people how to invest their money. Presently there is a crash, the investments have gone wrong, and Mrs. Olnee is arrested for fraud. Her only defence is that certain "lying devils" must have taken the places of her guides. The question of her criminality turns upon her possession of unusual powers. Her defence is undertaken by a great lawyer, who is absolutely a disbeliever in psychic phenomena. With the aid of a skilful electrician he devises a series of tests which unmistakably prove Mrs. Olnee's power of moving bodies from which she is physically separated, and of producing apparitions which can be photographed. But the strain of the test results in the death of the medium. In the opinion of the electrician, these phenomena all attest the exertion of a force not understood by science. In some way the medium's mind or spirit causes the physical manipulation of tables, slates, and musical instruments. As for the "spirit pictures," they are "mental images" or "etheric selves" "transferred by some unknown mental power to the plates." This would seem to be Mr. Garland's own door of solution: we do not see that any better has been found.

Track's End. By Hayden Carruth. New York: Harper & Bros.

This is a boys' book of adventure, compounded after the most familiar and well-tried recipe. Left alone through a Dakota winter in a brand-new town at the "track's end," the hero has a series of experiences which should satisfy the most exacting reader of the *Youth's Companion*. He endures hunger, blizzards, and wounds; single-handed he meets and repels timber-wolves, marauding bands of Sioux, and a gang of desperate outlaws. He saves from fire and pillage the town, including a bank with a safe containing $20 000, and is rewarded by the benevolent old banker with a gold watch and chain. It is a pleasure to add that though the hero sheds a good deal of blood—his own and others'—he takes no lives except those of rabbits, wolves, and buffaloes. Like many others of its class, the story is told in a manner singularly business-like and unimaginative.

The Indiscretions of Maister Redhorn. By J. J. Bell. New York: Fleming H. Revell Co.

Here the author of "Wee Macgreegor" has provided a diverting series of experiences centring upon the person of as shrewd and kindly a being as one could easily imagine. The sort of quandary Maister Redhorn gets into may be illustrated by his adventure with the cat. Miss Waldie, for whom he is making an estimate for a most desirable job of papering and painting, gives him a commission to end the earthly career of an animal which she foolishly took to oblige a friend, and which has rewarded her kindness by killing and eating two of her canaries. The painter is sadly torn between his desire to please a prospective patron and his aversion to even a humane method of putting an animal to death. In the end he has recourse to an ingenious device which, while somewhat perilous for his reputation as a man of his word, enables him to avoid both Scylla and Charybdis.

A Weaver of Dreams. By Myrtle Reed. New York: G. P. Putnam's Sons.

It is rather pathetic to find in this novel, which follows so closely upon the tragic death of its popular author, more than her usual amount of fun and

Digitized by Google

humor. Its gentle sentiment is familiar; the tender young love affairs, the even more tender middle-aged love affairs, the twittering of birds, the scent of flowers, the glow of sunsets. In and out among the young things move the figures of Aunt Belinda and Uncle Henry in rustic oddity; Miss Cynthia, of Dresden china exquisiteness, dealing out alternately unabashed sentiment and wise cynicism; Martin Chandler, cripple and dream-weaver, with counsels of patience and aspiration for all. Judith, the self-renunciating heroine, stands between the old and the young in a mellow light of serene generosity. And, as noted, over all troubled waters blows a fun-spiced air with salutary grace. It is charming to hear Aunt Belinda's dictum: "Fishin' ain't catchin'—it's just settin' in a boat and holdin' the pole and hopin'."

ITALY TO-DAY.

The New Italy: A Discussion of its Present Political and Social Conditions. Translated from "La Terza Italia: Lettere di un Yankee" of Federico Garlanda by M. E. Wood. New York: G. P. Putnam's Sons. $1.50 net.

This work, by Professor Garlanda of the University of Rome, made a stir in Italy, when first published about ten years ago, and it has run into several editions. The reason is obvious: it presents in readable form a criticism of contemporary Italy. The author is a man of weight, and though he can hardly be held competent to speak on all the topics he takes up, still, he always means to tell the truth, and, in matters of opinion, he may claim to be as well equipped as most of his critics.

The book is written in letters from an imaginary "Yankee" to friends in America—an old device, which allows more scope to the writer and enables him to assume an air of greater impartiality by drawing comparisons between the foreign country and his own. In fact, however, no "Yankee" would for a moment imagine that Professor Garlanda's comments on America were written by an American, and they might all be taken away without impairing the value of his survey of Italian conditions.

Like most Italians he is pessimistic. One of the traits which well-wishers of the New Italy most deplore is the habitual cynicism with which the New Italians have been running themselves down for the past forty years. Unquestionably, they have had cause enough for anxiety if not for gloom. Since Cavour died in 1861, they have had no statesman to guide them, and only one strong man, Crispi, who brought upon them the disastrous rupture with France and the final calamity in Abyssinia. Like ourselves, since the civil war, they have been living through a prosaic period which has seemed disenchanting in comparison with the years of patriotic exaltation which preceded it. They have had much political corruption, much graft, much downright peculation. On them, as on us, rapacious favored interests have fastened a high tariff. They have had also to bear the burden of militarism, which has been matched here by an enormous pension roll, the destroyer of patriotism. They, like us, disbelieve in the integrity of public men and in the honesty of any one who becomes rich. They see deputies go to Rome poor and return home after two or three terms with a fortune; so we are puzzled to understand how scores and scores of Congressmen grow into millionaires after a few years in Washington.

After all, however, it is not these parallels, which could be matched in other countries, which give Professor Garlanda's book its chief interest; it is, on the contrary, the customs and experiences peculiar to Italy. His account of the Mafia, for instance, or his analysis of the various political parties, conveys information of which the ordinary American knows little.

Even more important is the chapter on Church and State—a subject over which, for obvious reasons, Americans who have not been in Italy are perplexed. Since Italy is listed as a Roman Catholic country, they suppose that all Italians are rigid Papalists; but Professor Garlanda shows, and he is indubitably correct, that only a small minority of educated Italians would tolerate Papal interference in affairs that belong to the state, and that not one in ten, whether educated or not, dreams of the restoration of the temporal power of the Pope. As the enlightened classes fall away, Professor Garlanda shows that the Clericals' last resort is to promote superstition and ignorance among the nobles' sons who attend the Jesuit seminaries, and among the peasants. He gives as an example of their desperation, a priest, professor at an episcopal school, who told his young pupils that "whilst the world is raising lying monuments to his [Cavour's] memory, his soul lies burning in the eternal flames of hell!" (p. 285). Compare with this, the author says, the enthusiasm with which in the United States the youngest school-children are taught to reverence Washington, Lincoln, and other national patriots.

Professor Garlanda wrote his diagnosis of ecclesiastical conditions several years before the Modernist upheaval, which fully corroborated him. To-day the Vatican has fewer supporters in Italy than it had ten years ago. The Modernist revolt was hidden under the cloak of the Syllabus; the Modernists no longer speak out, but their numbers increase day by day. Even a cursory reading of these letters will acquaint Americans with the fact that to the ordinary Italian the Roman Question is as dead as the pretensions of the Stuarts in England.

We have no space for referring to the "Yankee's" exhibit of contemporary art and literature, of university instruction, of the influence of the press, and of family life. His remarks on marriage are especially interesting; but even more so is his view that centralization is a great curse—if not the greatest—of modern Italy. Here he starts fundamental problems without solving them.

We regret that so lively a book should have been so badly translated. When we read of a heifer that cast sheep's eyes, and find many similar absurdities, we are reminded of the Portuguese Grammar, and pity Professor Garlanda. *Traduttore, traditore.*

Socialism: A Critical Analysis. By O. D. Skelton, Ph.D. Boston: Houghton Mifflin Co. $1.50 net.

This work is a product of the effort begun several years ago by Hart, Schaffner & Marx of Chicago to encourage, by a series of prize economic essays, "the best thinking of the country to investigate the problems which vitally affect the business world of to-day." A first prize of one thousand dollars has been awarded to Professor Skelton of Queen's University, Kingston, by a committee consisting of Profs. J. Laurence Laughlin, J. B. Clark, Henry C. Adams, and Mr. Horace C. White and Hon. Carroll D. Wright.

Mr. Skelton has certainly produced a highly meritorious work. He has not enlarged the horizon of advanced students of socialism, but he has accomplished what is perhaps an even more serviceable task: he has read, marked, learned, and inwardly digested the best that has been written and said for and against socialism, and has embodied his reflections in a book for which all must be grateful who are conscientiously striving to discover what socialism is all about. By eliminating the wheat from the chaff, by discarding all that is ephemeral and inconclusive, and by bringing a large fund of common sense to the discussion of that residuum of ugly fact that constitutes the starting point of socialism as a science, he has measurably lightened the burden of that constantly increasing number who think it a part of their political duty to familiarize themselves with this subject.

This is an exceptionally readable book of its class. If the chapters devoted to the Marxian analysis are not enlivening, the fault is not Mr. Skelton's. Even Professor Böhm Bawerk, who has no superior among moderns in making light the dark places in economics, does not find it altogether easy to picture Marx's self-contradictions in pellucid terms. "Das Kapital," the so-called

Digitized by Google

bible of scientific socialism, occupies the most curious position in economic literature. The system built upon it cannot be debated without careful consideration of its precepts, and yet the more its precepts are studied the greater the difficulty of rendering them into the ordinary speech of mankind. Marx may have known exactly what he thought, but neither he nor his disciples nor his critics have ever been able to make the rest of us quite clear on that point. Where so many had failed, Mr. Skelton could hardly hope to achieve unqualified success.

Mr. Skelton's treatment of his subject is logical throughout. Socialism is in the first place, he says, an indictment of any and all industrial systems based on private property and competition. In a second aspect it presents an analysis of capitalism. Its origin is accounted for, and its present working described. From a third point of view, socialism presents a substitute for capitalism. Fourthly, socialism involves a campaign against capitalism. In each of these aspects—indictment, analysis, panacea, campaign—socialism is intelligible only as the antithesis of the competitive system. It has followed private property like its shadow. Since it is within the past century or two, the period since what is called preëminently the Industrial Revolution, that the economic motive has most widely dominated men's activities the world over, and that within the economic field the spirit of individualism has had freest play, it is within this same period that socialism has reached fullest and clearest development. It is with post-eighteenth-century systems, therefore, that Professor Skelton chiefly deals, though he gives us a succinct and satisfactory survey of earlier developments.

Lectures on Literature. New York: The Columbia University Press; Lemcke & Buechner. $2 net.

A preliminary note states that these eighteen lectures by Columbia professors were, with one exception, delivered in a series during the academic year 1909-1910. They differ from the collections of essays by various scholars with which the public has grown familiar, that is, memorial volumes, in the fact that none of them is a discussion of a minute subject. Each undertakes to set forth the main traits of a large period, sometimes of a whole literature. So the literatures of ancient Greece, Rome, Spain, Germany, Russia, France, of India and Persia are each handled in a single paper. English literature naturally receives the most attention. Professor Thorndike tries to grasp it in its entirety; Professor Lawrence touches on the Middle Ages; Professor Fletcher on the period of the Renaissance, though he reaches beyond to Italy and France; Professors Erskine and Page take, respectively, the impulses of neo-classicism and romanticism in England. In the large compass of their subjects all of these essays are somewhat new in the domain of scholarly endeavor in America. It has often been felt that some of our most notable scholars would not, because they could not, manipulate ideas and tendencies of any considerable size. While foreign professors continued to hold their "open courses," it was the fashion among scholars here to contend that a discussion broad enough to be popular and generally intelligible was pretty sure to stamp the speaker as a "lightweight." We welcome heartily any sign of a change of front.

Looked at critically, one of the first things that will strike the reader of these essays is their lack of antagonisms. Here is no battle of the books. The classics of Greece and Rome receive their meed without the impression given that with them the best literary work of the world was completed. Classicism and romanticism lie down together, and the expounder of the Renaissance finds some good in the Middle Ages. A single rebellious cry is heard when Professor Trent urges any who have quoted glibly the catch-phrase, "the renascence of wonder," to reflect that the eighteenth century, which just preceded the great reaction thus described, was the one in which the most effective literary vehicle for us to-day—English prose—was first truly fashioned. We should have been glad to have more of such protests, which would have sounded the note of perfect sincerity. For it is inevitable that a scholar who is preoccupied with a given epoch should discover in it greater worth than in any other, and, when duly controlled, the "overbeliefs" of literary judgments are suggestive.

Yet, with but a few exceptions the contributions are real essays, each having some single idea with which to organize the material viewed; this keeps the work from deteriorating into a futile sort of literary history. Professor Thorndike's paper nicely illustrates the method. Starting with the undoubted fact that in English literature "there has been no control by a class, or caste, or profession, no control by one city, not even by London," and "no central authority, but a steady growth from national precedent and tradition, and a distrust of theory or system," he sketches the virtues and shortcomings of our individualism. He finds that it has "carried us farther than any other literature of modern Europe in divergence from classical guides and instruction," with the result that the English people have "tended to regard Literature, as a practical art" in its "revelation and criticism of life and conduct." If they have not excelled in music, painting, or sculpture, "it is, perhaps, because these arts have seemed to them too abstracted from life, too unpractical." Other literatures, he admits, may have achieved a finer art and a nicer precision than English, but "none has equalled it in the abundance, variety, and comprehensiveness of the life which it attempts to interpret."

Professor Brander Matthews's "Approaches to Literature," with which the book opens, gives the impression for a few pages of being criticism in the best French mould—profound, urbane, and lucid—but shortly becomes mechanical. Unmethodically, we will enumerate a few of the more interesting ideas of succeeding writers. A suggestive distinction is made by Professor Fletcher: "In this complete Humanism, this whole-souled absorption in humanity, Shakespeare gives the pure color, marks the precise centre of that band in the historical spectrum of European civilization which we call the Renaissance; as his contemporary Edmund Spenser, on the other hand, illustrates the pervasive tendency away from Humanism, gospel of humanity, toward a new 'divinity,' a new asceticism." Although "The Classical Rule," by Professor Erskine, seems to us an inadequate definition, he makes a real point in stating that the delight of eighteenth century writers in the classics was "almost a Romantic pleasure." As might be expected Professor Trent's paper on "The Cosmopolitan Outlook" contains by the way touches of jocose twitting. For the large utterance which his topic compels he feels himself unfitted. "It is our presidents who fill our sails of thought with the winds of generalizations," quite contrary to the former way: "When Ulysses carried the bags of Æolus, it was his crew that let loose, while he slept, the angry and adverse blasts." There is more than a grain of truth in his paradox that though modern life has grown to be largely objective, the future of literature may lie in the realms of the subjective. He believes that while the peoples of the world are becoming more and more alike, strongly individual minds will continue to exist and will be forced back upon themselves to find comfort and stimulation within. As literature in actual life always precedes criticism, so the paper on criticism itself brings this volume to a pretty close.

The Book of Knowledge: The Children's Encyclopædia. Edited by Arthur Mee and Holland Thompson. Introduction by J. H. Finley. 24 vols. New York: The Grolier Society.

If one were to recast an encyclopædia so as to adapt it to tender minds, and add an anthology of verse suited to them, stories and paraphrases of stories of all grades of seriousness and of all times, sets of directions for making all things that are makable by youthful

Digitized by Google

hands, and a course of instruction in reading, writing, elementary arithmetic, music, and French; if one were then to distribute all this material among two dozen volumes, in such a way that each volume should have its share of every class of the entire subject-matter; and if, finally, one peppered the whole with pictures, one might not unreasonably claim to have produced something new, nothing less, indeed, than a What's What for Children. Such is the character of the imposing array of books Arthur Mee of London and Holland Thompson of New York, together with more than a dozen collaborators, have written, edited, and arranged, and which has taken all knowledge for its province, to be subdued and made inviting for little feet.

The variety of the contents is bewildering, even within the covers of a single volume. In the first volume, for instance, there are fourteen divisions. "The Book of the Earth" contains "The Big Ball We Live On," "The Earth Is Always Moving," and "The Sun and His Family." "The Book of the United States" tells of "The Land Before the White Men Came." In "The Book of Familiar Things" are "Footpaths in the Air," "Peary's Route to the North Pole," and half a dozen other titles. "The Book of Wonder" enables even an older person to answer with confidence the questions "Does the Moon Pull the Sea?" "Can a Train Run on One Rail?" and "Why Can't We See in the Dark?" Then there are "The Book of Nature"; "The Book of Men and Women"; "The Book of Our Own Life," handling such matters as "Living Things Around Us"; "The Book of Golden Deeds," containing such accounts as "The Sacrifice of Father Damien"; "The Story of Famous Books," including "The War for a Stolen Queen," from the Iliad, "The Victory of the Wooden Horse," from the Æneid, etc.; "The Book of Stories," with "Aladdin and the Wonderful Lamp," and others; "The Book of Poetry," from "Wynken, Blynken, and Nod" to "The Wreck of the Hesperus"; "The Book of All Countries"; "Things to Make and Do"; "The Book of School Lessons"; and "Colored Plates." The contents of each of these divisions are scattered through the volume, instead of appearing together—an arrangement that gives the maximum of variety to one turning the leaves in order.

Only experiment can tell certainly whether boys and girls will agree with the projectors of "The Book of Knowledge" in their idea of it as "The Children's Encyclopædia." But it is apparently well planned to win their favor. The pictures alone will commend it in the first instance to the youngest readers, and the large type will add to this recommendation. The topics are treated with inviting brevity and the style of the text is carefully colloquial. The pages have a somewhat crowded appearance, due in part to the double columns, and, in part, to lack of spacing below titles and around pictures; and the volumes, with their thick paper, are heavy. To a child who cares for what is on the pages, however, these will be negligible defects.

Notes

Miss Sara Norton and M. A. DeWolfe Howe are preparing for publication the "Letters and Journals of Charles Eliot Norton." Much material is already in their hands, but they will be grateful to any correspondent of Professor Norton who will permit the consideration of significant letters by him. These may be sent to Mr. Howe at No. 26 Brimmer Street, Boston. Letters which the senders wish to preserve will be copied and carefully returned.

The Harpers bring out immediately: "Bashful Ballads," by Burges Johnson, and "The Ancient Egyptians and Their Influence Upon the Civilization of Europe," by G. Elliot Smith.

Mr. De Morgan's "A Likely Story," which Holt announces for this week, concludes with "An Apology in Confidence"—one of Mr. De Morgan's talks with his readers.

Macmillan's publications for the next few weeks are distributed in several fields of thought. In general literature three volumes of the Tudor Shakespeare.—Biography: "The Life of Ruskin," by Edward Tyas Cook, and the second volume of "The Life of Benjamin Disraeli."—History: "Democratic England," by Percy Alden, and the first volume of the Cambridge Mediæval History, entitled "The Christian Roman Empire and the Foundation of the Teutonic Kingdom"; the history will be complete in eight volumes and has for editors H. M. Gwatkin of the University of Cambridge, and J. P. Whitney of Kings College.—Economics and politics: "The Law of the Employment of Labor," by L. D. Clark of the Department of Commerce and Labor at Washington; "Commission Government in American Cities," by Ernest Bradford; "Increasing Human Efficiency," by Walter Dill Scott, and "The Lowell Social Survey," a description of a New England town in progress, by George Kenngott.—Religion: "The Moral and Religious Challenge of Our Times," by Henry Churchill King, and "Socialism and the Ethics of Jesus," by Henry C. Vedder.

A number of the tales of the Mahâbhârata and of other epics have been translated by W. D. Munro and will be brought out by Crowell with the title "Stories of India's Gods and Heroes."

Other books announced by this house are an elaborate edition of Wagner's "Tannhäuser," embellished with color plates and full-page drawings in black and white by Pogány, and Dr. Amory H. Bradford's essays and sermonettes, entitled "Preludes and Interludes."

G. Waldo Browne will publish in December, through Dana Estes & Co., "China, the Country and Its People," with above three hundred illustrations.

"Selections from Cæsar for Sight Reading," by Harry F. Towle and Paul R. Jenks, and "Cuentos Modernos," a collection of easy Spanish stories, edited with notes and vocabulary by Prof. F. DeHaan and F. W. Morrison, are in the list of D. C. Heath & Co.

A few additional volumes of Longmans French Texts are nearly ready: "La Montre du Doyen," by Erckmann-Chatrian; "La Bruyère d'Yvonne," by Pierre Maël, and Balzac's "Ursule Mirouet."

Mrs. Annie Fellows Johnston's new book, "Travellers Five Along Life's Highway," which is promised by L. C. Page & Co. for Friday, has an introduction by Bliss Carman.

The Cambridge University Press will publish the twenty-ninth, or index volume, of the Encyclopædia Britannica on thick paper and in special binding, to meet the requirements of a large number of readers. Those, however, who wish the index volume to be bound in the form which exactly corresponds with the set in their possession will not be denied. There is no difference in price, whichever form is preferred.

A third edition, revised and enlarged, of Norman Angell's "The Great Illusion" (Putnam) testifies to continued public interest in the propaganda against war. The substantive changes comprise a new chapter, Conqueror or Policeman? in which further use is made of the example of Germany in Alsace and elsewhere; and a recasting of the final chapter on methods and means.

"Clásicos Castellanos" is the title of a large series which is under way in Madrid, and is being imported by Lemcke & Buechner. The enterprise aims to put at the disposal of the general reader in convenient form all the celebrated works of Spanish literature, and a few foreign works in translation. Volumes which have already appeared are "Las Moradas," by Santa Teresa, Vol. I; "Teatro," by Tirso De Molina, Vol. I; the works of Garcilaso, and the first volume of "Don Quijote." In the press are Vol. I of the works of Quevedo; "Vida de Torres Villarroel," and the second volume of "Don Quijote." Less far advanced are the works of Lope de Vega; the remainder of "Don Quijote"; "Novelas ejemplares," by Cervantes; the works of Fray Luis de León; Antonio de Guevara's "Menosprecio de corte y alabanza de aldea"; Santa Teresa, "Vida," Vol. II.; "El Corbacho," by Arcipreste de Talavera; "Guerra de Granada," by Hurtado de Mendoza; Marqués de Santillana, works, Vol. I; "Cantar de Mio Cid," edited by D. Ramón Menéndez Pidal, and the complete works of Shakespeare.

The two volumes of "Miscellaneous Papers," first published in the National Edition of Dickens, are now added to Scribners' Centenary Edition. The contents include the most diversified assortment of letters, articles, sketches, criticisms, etc., printed in various newspapers and magazines; also, poems and plays. As in the other volumes of this edition, the original illustrations are retained, together with reproductions of contemporary prints. Sufficient bibliographical information is given, and, in the case of the poems, the notes of F. G. Kitton are reprinted from his original collection, published in 1903. We have more than once commended the utility, good form, and cheapness of this edition.

There is no doubt about the tasteful printing and binding of the latest Riverside Press Edition of Houghton Mifflin Co., which brings us "Leaves from the Diary of an Impressionist" and other essays of Lafcadio Hearn. But we confess that the publisher's circular and Ferris Greenslet's otherwise admirable Introduction leave us in doubt as to how much of the little book is from literally unpublished MSS. and how much of it is gathered from the columns of the *Times-Democrat*, into which Hearn poured so much of his strange and aromatic writing in his New Orleans days. The question is, however, of little significance, for the essays to virtually all readers of the book will be entirely new material. The title is taken from a collection of papers which Hearn himself began to prepare for the press, but never finished. These papers now printed by Mr. Greenslet present the author in his most impressionistic period, as we know him in his New Orleans letters to Mr. Krehbiel. They tell the story of a strange river journey in Florida, with "A Tropical Intermezzo" on a theme as old as legend, and in a style which superficially bears all the marks of the stalest romantic convention, yet is in effect surprisingly fresh and beautiful—that is, indeed, the mystery of Hearn's style. Other papers are: "Quaint New Orleans and Its Inhabitants," "Creole Women in the French West Indies," "Arabian Women," and "Rabyah's Last Ride." We can recommend the little volume as something rare and precious in its kind.

The "Expert of the New York *Sun*" has published, through Frederick A. Stokes Co., a compendious volume on "Advanced Auction Bridge," with the analysis of a large number of hands and games. In the matter of bidding the Expert holds a middle ground between the system of bidding absolutely on the value of the hand held and of bidding so as to seek information. He believes in combining the two: "Once let an adversary feel sure that he knows what you are bidding from, and you are lost." To which the reply might be: Once deceive your partner as to your method of bidding, and you are lost.

An affectionate tribute to the memory of two noble souls is paid by Gertrude Toynbee in her "Reminiscences and Letters of Joseph and Arnold Toynbee" (London: Henry J. Glaisher). Dr. Toynbee, the father, an eminent aurist, possessed a deeply religious, sunny nature, which shed its radiance over a singularly attractive household. His letters to his family and Miss Toynbee's brief memoir of him are touching in their artless simplicity. Dr. Toynbee impressed himself on many famous contemporaries, as is evidenced by the letters to him of such men as Faraday, Ruskin, and Landseer. Equally interesting are the letters from and about his more distinguished son, who, dying at the age of thirty, bequeathed to the world a permanent legacy of high ideals and wise philanthropy. Miss Toynbee's reminiscences of her brother are a welcome supplement to the memoirs of Jowett and Lord Milner. They reveal his fondness for art, which he shared with all the members of the Toynbee family. He did beautiful pencil work, but in his artistic attempts, as in everything else, he was hampered by constant ill health. In spite of his sufferings, however, he preserved, almost to the hour of his death, his serenity and active benevolence. As Arthur Sidgwick, who knew him at Oxford, wrote to Miss Toynbee, "He was a rare combination of a man who was an absolute master in his own special work, and yet found time not only for a great variety of interests, intellectual and artistic, but for practical sympathy and help in all manner of good causes."

"Uganda to Khartoum" (Scribner), by Albert B. Lloyd, is a pleasantly written record of travel, adventure, and work in the northern part of the Uganda Protectorate. The author describes first his life in Bunyoro, and gives much interesting information about the people and their peculiarities, as well as about the methods, chiefly in caring for the sick, by which the barriers between the white and the black man are broken down. The simple way in which the natives regard their frequent drinking bouts is shown by the answer of a chief when asked by Mr. Lloyd to attend a service on the following day: "I cannot come. I shall be drunk to-morrow." He was much surprised at the displeasure shown, for it had never occurred to him that there was any harm in the practice. Mr. Lloyd found recreation principally in hunting, in which many exciting adventures occurred while in pursuit of big game. Then follows a long, tedious account of work in Acholi, a comparatively little-known country, lying north of the Victoria Nile. When his five years' term of service was ended, he returned to England by tramping through the vast trackless forest to the Nile at Gondokoro. Here he took a steamer, and after six days' imprisonment in the sudd, reached Khartoum. His narrative would have been easier to follow had he furnished his readers with a map.

The translation of Johann David Schoepf's "Travels in the Confederation, 1783-1784," made by Alfred J. Morrison and published by William J. Campbell of Philadelphia, renders available for English readers an important book of travel, of which American historians have thus far made little use. Schoepf, who, though educated for a physician, found his chief interest in geology, mineralogy, and botany, came to America in 1777 as chief surgeon to the Ansbach troops, and served on the British side through the Revolutionary war. The journey he recounts extended from New York to St. Augustine and the Bahamas; but the greater part of his first volume is devoted to Pennsylvania, which State he traversed as far as Pittsburgh. His main purpose was scientific investigation, and in the line of his special studies he was one of the first Europeans whose formal observations still have value. The time, however, was peculiarly favorable for noting the effects of the war in different parts of the country, the state of industry, the tone of society, and the prospects for the immediate future; on all of these points of more general interest, what he has to say is in the highest degree informing. For example, he notes already, before the definitive treaty of peace had been signed, a distinct revival of trade, especially in the Middle States; a revival which was to go far toward insuring the adoption and success of the new Constitution a few years later. There was a growing demand for protection to manufactures, the force of which was presently felt in the tariff debate of 1789. Some fortunes had been made during the war, and although the disordered currency was everywhere a serious hindrance to business, the country was by no means economically prostrate. Particularly interesting are the numerous references to mining and milling, in both of which directions the colonial development had been considerable. The least favorable picture is that of Virginia, where Schoepf found industry stagnant, manufactures disfavored, a low standard of domestic comfort, and negro slavery a blight. The barbarous dialect spoken by most of the Germans whom he met was a source of irritation, and he notes, curiously, a pronounced nasal twang in the speech of the Virginians. The translation, though in a few places awkwardly literal, is in the main as readable as the original. A small part of the preface to Volume II, a paper on the climate of North America, and the descriptive matter of the original appendices, have been omitted. The editorial notes, chiefly bibliographical, show commendable research.

Dr. Henry Christopher McCook, pastor emeritus of the Tabernacle Presbyterian Church of Philadelphia, died a week ago, aged seventy-four. He was born in New Lisbon, O., and graduated from Jefferson (now Washington and Jefferson) College in 1859. He served in the civil war as lieutenant of the Forty-first Illinois Volunteers and was chaplain of the Second Regiment, Pennsylvania Volunteers, in the Spanish-American war. He was an authority on spiders and ants. Besides a number of scientific books of special and popular interest, he wrote treatises on religious subjects, "The Latimers," a Scotch-Irish historical romance of the Western insurrection; "Martial Graves of our Fallen Heroes in Santiago de Cuba," and "The Senator," a threnody in verse and prose, as a memorial of the late Mark Hanna. Dr. McCook was a contributor to the *Nation*.

The death is reported from Washington of William Callyhan Robinson, dean of the Law School of the Catholic University of America, at the age of seventy-seven. For a time he was professor of law at Yale. He was the author of several works on legal subjects, among them "Law of Patents," in three volumes, and "Elements of American Jurisprudence."

Lady Colin Campbell, author and journalist, died in London the first of last week. She adopted several pen names, among them "G. E. Brunfille" and "Q. E. D." She wrote "Darell Blake," "A Book of the Running Brook," "A Miracle in Rabbits," and was the art critic of *A Woman's Walks in the World*, a journal which she created. Always fond of sports, she was expert in fencing.

Urbain Guérin, who is dead at the age of sixty-two, had written and lectured on many subjects, but was chiefly interested in sociology, on which subject he wrote a valuable book, "L'Evolution sociale."

In the *Atlantic Monthly* Mary Antin continues her recollections of child life in a small town of the Jewish Pale in Russia. The story is minute and exhaustive. The author has apparently grasped the secret of successful autobiography, which consists in assuming that nothing in one's experiences is unimportant and that nothing

Digitized by Google

should be passed over in a spirit of mistaken reticence. Miss Antin's picture is veracious if occasionally overcrowded. Only one pauses now and then to wonder how long is a reader's memory in this country or how fast do the generations of readers among us succeed each other. A great deal of what Miss Antin has to tell has been told so often before, and so much of the life in the Russian Pale has been transferred to the ghettoes of our own cities and there studied by the novelist, the short-story writer, and the reporter, that one wonders to find this latest narrative spoken of as though it dealt with an absolutely virgin field. To those, for instance, who have read Zangwill's "Children of the Ghetto," a great deal in Miss Antin's recollections will not be very new. But then Zangwill's book must be at least fifteen years old, and in that time one may forget a great deal.

Do you prefer Oscar Wilde to Shakespeare? In the same number of the *Atlantic* Elizabeth Woodbridge has a charming paper on one phase of modern individualism in art, which she happily describes as "the cult of the second-best." The modern spirit in its revolt against authority and against standards refuses to bow before the accepted Great because they are accepted, and picks out its own particular bloomin' idol to worship and exalt. It is so wretchedly commonplace to say one loves Shakespeare or the Sistine Chapel that the temptation is severe to concentrate one's affections on some object less popular or not at all popular. This is intellectual snobbery, but there is something to be said for it. "The Great of the world do get a good deal of handling. They show it a little. The grass is trodden down all around them; their toes are worn blunt by being kissed, and they are be-starred and be-photographed out of all whooping. . . . We cannot approach them without feeling ourselves one of a rabble. Come along over to my Little-Great-One, that nobody else is paying attention to." The little demi-gods, the little cults and coteries, the Little Theatres and Secessions and Musics of the Future arise in revolt against the obviously Great. But, asks Elizabeth Woodbridge plaintively and wisely, would it not be better, instead of rebelling against the Obvious, to endeavor to reconquer the Obvious?

Science

The Life of Sir Joseph Banks, President of the Royal Society. With some notices of his friends and contemporaries. By Edward Smith, F. R. H. S. New York: John Lane Co. $4 net.

If the title were so transposed as to place the name of Sir Joseph after that of the Friends and Contemporaries, it would more nearly describe the character of the volume. It is a treasury of innocent gossip. The author, in his own words, set himself "the task of making out a case for fuller study of the undercurrents of life during the despised eighteenth century. Besides and beyond the witches' cauldron of frivolity and dishonor which is so often presented to us, there is evidently an unknown background of sterling virtues, of greatness, virility, moral rectitude, and the love of wisdom for its own sake."

Mr. Smith appears to be much impressed by the spirit of scoffing and lampooning toward serious work in every department of activity. He has brought together and finely reproduced a few of the most striking of the caricatures of Banks and others, and he admits that the game was pretty fair. For instance, Banks was an aristocrat, and yet delighted, in an innocent way, in associating with his inferiors. He was the president of the Royal Society at a time when the mathematicians counted it a grievance that a naturalist should rule over them. He was a man of large fortune who could easily have passed his time in the exciting sports of pugilism and the like, but who preferred to give his wealth freely for the support of any enterprise which could advance science or help his nation. Furthermore, he was the personal friend of the King, and this, as Mr. Smith says, "was a circumstance fatal in its relation to the discontented spirits of the day." In short, he was a good mark for all the fair and unfair shots. It is in this part of the volume that the author is at his best. He makes a few curious slips, but they are not very misleading, and they do not at all interrupt the flow of the narrative.

Banks was born in London in 1743 and died there in 1820. From the very first, he had his own way and carried out his own plans. Even in Oxford, where there was no satisfactory instruction in botany, his favorite branch of natural history, he succeeded in obtaining a teacher, almost on his own account, and pursued the science with him. As soon as he came of age and was the manager of the paternal estate, he entered upon London life as a gentleman of fortune. But his tastes led him to seek chiefly the companionship of scientific men who were members of the Royal Society, and he impressed them so favorably that he was admitted to fellowship at the age of twenty-three. At this date, the ship Niger was ordered to the Labrador and Newfoundland coast to investigate the fisheries. One of the officers, who was an Oxford friend of Banks, induced him to accompany the expedition.

Two features characteristic of the whole of Banks's career marked this voyage of exploration, namely, his judicious prodigality in expenditure of funds and strength, and his shyness in publishing results. In 1768, when he was twenty-five years old, he sailed with Capt. James Cook in his first memorable journey around the world. His preparations are said to have been made on an extravagant scale, and his scientific staff was formed without regard to expense. The record of the scientific results obtained by Banks on this first voyage of Capt. Cook were not properly edited until 1896, when the manuscript was published by Sir Joseph Hooker. In other words, with his great modesty, Banks preferred to have the scanty mention in Cook's "Journal" represent the record of his unceasing activity during a long, perilous, and fruitful adventure. It is just at this point that Hooker's edition of Banks's "Journal," a volume of 450 pages, is needed to supplement every biography of Banks. Its pages show that he was patient to the last degree, strong in all work, sharing all hardships without complaint, and anxious to turn everything to good account for the advancement of science and the growth of his country.

On his return, he continued his systematic endeavors in both of these directions. As president of the Royal Society, he favored with tongue and purse all enterprises which seemed worth while, but had no hesitation in turning down wild schemes. He sent natural history collectors to every land to which they could be induced to go, and provided all needed funds for subsequent research and illustration. His principal interest centred, however, in Australia, where he and his explorers had found a new world of plants. And when a committee of the House of Commons, in 1779, consulted him about a fit place for founding a colony, he recommended this southern land as suitable, for he regarded its climate good and its soil fertile. From the first, Banks was a sturdy optimist and saw "the future prospect of empire and dominion which now cannot be disappointed." "Who knows," he asks, "but England may revive in New South Wales when it has sunk in Europe?"

It is surprising that as yet no comprehensive biography of Sir Joseph has been written. Some of the sketches, like the present volume, give prominence to his forty years as president of the Royal Society, and other outlines dwell upon his extraordinary benefactions to scientific men, and his successful work as an explorer in many lands, and as the founder of a colony; but a complete memoir should present these phases of his life symmetrically, and this is still lacking. The present volume is further unsatisfactory on account of its geographical blunders. As a chronicle of the times of King George the Third, it is interesting. And as such we gladly commend it.

D. C. Heath & Co. have in preparation "Introduction to the Lie Theory of One-Parameter Groups," by Dr. Abraham Cohen.

"Chemical Phenomena in Life," by Frederick Czapek, is an announcement of Harpers.

Liberty H. Bailey has entirely rewritten his book, "The Horticulturist's Rule Book," which was published nearly twenty years

ago; the new book, announced by Macmillan, will be called "The Farm and Garden Rule Book."

We learn from the Rockefeller Institute that Dr. Simon Flexner has received from the German government an appointment as honorary member of the Institute for Experimental Therapy at Frankfort-on-the-Main.

The portraits and busts in the possession of the Faculté de Médecine at Paris are described in a catalogue to be published by the librarian, Noë Legrand.

Dr. George C. Freeborn, for many years a teacher in the College of Physicians and Surgeons in New York, died on Monday of last week, at the age of sixty-one. As a writer in his special line, normal histology, he was widely known both in this country and abroad, and he also published a history of the Alumni Association of the College of Physicians and Surgeons. He was a member of many scientific organizations.

Norman Jay Colman, first secretary of agriculture of the United States, died last Friday on a train which was bringing him to his home in St. Louis. Born in 1827, he succeeded in 1885 Dr. George B. Loring as commissioner of agriculture in the days when the incumbent of that position was not a full Cabinet officer. He was editor of the *Rural World* of St. Louis, and on his farm in the suburbs carried on scientific experiments in stock-breeding.

George William Jones, professor emeritus at Cornell University and for thirty-one years an active member of the department of mathematics, died the first of last week, aged seventy-four. He is remembered as the author of several books on logarithms and trigonometry.

News has reached us of the death at Copenhagen of Dr. George Budde Lund, a zoologist of note.

Drama

The Dramatic Museum of Columbia University—the first to be established in this country and the only one in the world except that in the library of the Paris Opéra—contains already a collection of views of theatres, interior and exterior, of masques and carrousels, and of outdoor performances of various kinds. It also has portraits of distinguished actors of various periods in the costumes they wore on the stage and models of a few of the theatres typical of the more important epochs in the development of the drama. Among the other models which it ought to have, according to a statement just issued by the department of English and comparative literature, are (1) the Theatre of Dionysus, at Athens, as investigated by Professor Dörpfeld; (2) the Roman Theatre at Orange, as restored by M. Caristie; (3) a Madrid theatre of the time of Lope de Vega and Calderon; (4) the so-called Antique Theatre, built by Palladio at Vicenza; (5) the stage set used by the performers of the Italian comedy-of-masks, and (6) Drury Lane Theatre in 1775, when Sheridan's "School for Scandal" was produced. Friends of Columbia are urged to contribute toward a sum of $5,000 which is required.

The stock company organized in Chicago by Donald Robertson, for the purpose of producing superior plays of all kinds, made its first appearance in this city in the Lyric Theatre on Monday evening in Ibsen's "The Lady from the Sea." Why independent theatrical organizations should be so apt to waste time and energy in revivals of this kind is a mystery. The selection can scarcely be justified on the score of novelty, for this piece has been abundantly discussed, although very rarely played. It might well be left to oblivion or the library. On the stage its prolixity, its lack of action, its morbidity, and its incomprehensibility make it inexpressibly tedious. Moreover, it is a very poor specimen of Ibsen's technical craft as a playwright, being constructed in loose and arbitrary fashion, differing widely from his usual compact workmanship. But—except in the case of the monomaniacal Ellida—his studies of suburban life are as photographically accurate as ever. And these Chicago players exhibit their artistic sense by representing them in exactly the right method of precise, unconscious naturalism. They furnish a picture without much light or shade, but of well-balanced proportions and much delicacy of finish. A better performance of intimate domestic drama it would be unreasonable to ask for. Particularly good was the fussy Ballested of Edward Emery, the Wangel of Donald Robertson, and the Arnholm of Lionel Bilmore. Hedwig Reicher, an actress of rare capacity, partly failed as Ellida, simply because she put so much more into the part than properly belongs to it. Such a woman as her Ellida could never have acted like Ibsen's. But her performance was highly picturesque and interesting. The representation was successful, but the great majority of Ibsen's characters present no difficulty to the ordinary actor, being essentially commonplace in their composition and calling for no great histrionic capacity. It will not be possible to judge of the true quality of the new company until it has been tried in plays of wider scope.

"The Price," which seems likely to prove a popular success in the Hudson Theatre, marks a decided advance in the art of technical construction on the part of its author, George Broadhurst, one of the most active of American playwrights. In complexity of plot, quick succession of theatrical situations, and compactness of form it is equalled by few modern social melodramas. That it is effective in its extravagant and artificial climaxes and its manifold opportunities for convulsive emotion need not be disputed, and it is superior to many other plays of its class in its employment of the heroine's guilty conscience as a means of precipitating the final catastrophe. But it is too tricky and mechanical to be of much account as serious drama. The character of the heroine is illogical, her conduct being wholly irreconcilable with her supposed attributes, and unsympathetic since she deliberately deceives an honorable man. But the part has the merit of giving wide scope to the abilities of Helen Ware as an emotional actress. The art of this young performer is crude as yet, and is not likely to acquire restraint or finish in such violent exercise, but her natural powers of emotional suggestion and utterance are of a rare kind. She is capable of both passion and pathos, and in the closing scenes of the play she holds her audience in a secure grip. Her besetting danger now is that of falling into mere rant, but if she avoids that peril she may be expected to go very far in her profession.

In her second essay as an English-speaking actress in Daly's Theatre, in a close translation of "The Whirlwind" of Henri Bernstein, Madame Simone to a large extent justified her high French reputation. There can no longer be any doubt either of her polished skill or of her rare powers of emotional expression. Her failure to create a great impression in "The Thief" may be ascribed partly to nervousness arising from new and difficult conditions, partly to the unsympathetic nature of the heroine, and partly to a subtlety of execution which the American audience of to-day, accustomed to the coarser strokes of more strident performers, does not fully appreciate. In her Madame Voysin there was an apparent lack of emotional sincerity, which may have been due to a nice comprehension of the essential selfishness and immorality of the character itself. At all events, it is only fair that she should have the benefit of that possibility. The character of Hélène in "The Whirlwind," although in no way inspiring, is not complicated with any fundamental baseness. She is a foolish, passionate creature, wedded by parental authority to a repellent husband, who is willing to sacrifice anything for the sake of an unworthy lover. She descends to incredible depths—that is due to the morbid conception of her dramatic creator—but the one motive impelling her is that of blind, reckless sexual devotion. And Madame Simone interprets this consuming passion with indisputable eloquence and consistency. Her performance exhibits a remarkable control of varied technical resource. The manifold phases of her emotion, marking her progress through shattered hopes to reckless defiance and final despair, are portrayed in all their gradations, with a variety of utterance and expressive gesture indicative not only of thorough training, but keen dramatic intuition. Her command of simple and significant gesture, in which most of our modern actors are so lamentably deficient, was particularly noteworthy. But the play itself, notwithstanding the cleverness of its theatrical construction and its sensational effectiveness, has no substantial value, and offers no opportunity for really great acting—Madame Simone's true artistic status cannot be determined until it has been established by some more exacting test.

The French Society of Authors keeps a jealous watch on all matters interesting literary men. A rather important law case is in preparation in connection with the recent South American tour of the famous French actor Guitry. It appears that before the company set sail an agreement to pay authors' royalties was arrived at. Plays by various well-known authors, including Paul Bourget, Henri Bernstein, Henri Bataille, Jules Lemaitre, and Alfred Capus, were produced in the Argentine Republic, with which France has recently concluded a convention safeguarding the rights of authors; but M. Guitry's manager has now refused to pay the royalties, and so an action is likely to take place in the South Ameri-

Digitized by Google

can Republic. An offer has been made to pay 7 per cent. instead of the 10 per cent. claimed by the authors, and some of them were willing to settle the matter on these terms. One or two, however, headed by M. Bourget, are standing out against this compromise.

Another theatrical case of a different kind will come before the French courts before very long. The question at issue is the right of an author to put upon the stage characters representing famous people no longer living, when their descendants take objection to this course. M. Le Lasseur has written a piece in verse called "L'Enfant du siècle," which has for its heroine the romantic novelist George Sand. The granddaughter of the author takes strong objection to the proposal that an actress should represent her on the stage, particularly in view of her relations with the poet De Musset. The plaintiff apparently intends this to be something of a test case, for she is not asking for damages except in the event of the piece being actually put upon the stage. The dramatist, however, contends that by this time George Sand has become an historical figure just as much as Napoleon the Great.

Kyrle Bellew died of pneumonia on Thursday of last week at Salt Lake City, where he was playing in "The Mollusc." In his death the English-speaking stage suffers a distinctly heavy loss. He was not one of the great actors—he was not, for instance, a man possessing the intellectual and creative faculty of Charles Coghlan—but he was finely intelligent and thoroughly well-trained, and was versed in all the technical resources of his profession. He belonged to a race which is now, unfortunately, very nearly extinct. In many respects he was a miniature edition of his once famous father, the Rev. J. C. M. H. Bellew, who was for many years one of the most popular preachers and reciters in Great Britain. Kyrle Bellew was born at Prescott, in Lincolnshire, England, somewhere between fifty-five and sixty years ago. About his early youth not very much is known, but some of it was passed in India and Australia, and he had some experience in the British navy. He early exhibited a predilection for the stage, and made a success in England in the character of Romeo as long ago as 1870, and he was one of the best Romeos known to the modern stage, even up to the end of his career. In this country he first engaged public attention as leading man in Lester Wallack's company, with which he was associated for several years. His best performance in those days was Charles Surface, a characterization which had abundance of spirit, true elegance, and especially fine diction. He afterwards played as Belvawney in "Engaged," Raphael in "Moths," and a variety of characters in romance and comedy. In 1879 he played Orlando with considerable success, and in England he acted in "The Corsican Brothers" with great public approbation. During his long association with Mrs. Potter he created the character of Marat in "Charlotte Corday," in which he displayed great ability in eccentric acting of a very vivid and powerful kind. During the latter part of his career Mr. Bellew devoted a large part of his time to such plays as "Raffles," which were altogether unworthy of his abilities.

Music

The Musical Amateur. By Robert Haven Schauffler. Boston: Houghton Mifflin Co. $1.25 net.

Opera Synopses. By J. Walker McSpadden. New York: Thomas Y. Crowell Co. 75 cents net.

Harmonic Part Writing. By William Alfred White. Boston: Silver, Burdett & Co. $1.50.

It is perhaps fortunate for Mr. Schauffler that his Defence of Amateur Whistling is the last chapter in his book instead of the first, as it might in that case repel many a possible reader of the rest of it. Whistling, in the opinion of most music-lovers, is indefensible under any circumstances. Almost all whistlers are entirely unmusical, and the sounds they make surely contribute to what Mr. Schauffler himself, on another page, calls "the common agonies that ordinary musical ears have to endure without respite." Wagner repeatedly referred to the fact that all kinds of things gave him "pain of which people of lesser sensibility are not even conscious"; and Paderewski went so far as to say that any man ought to have the right to shoot a whistler at sight. He meant it, too—at certain moments.

While we thus feel called upon in the interest of universal peace to reprimand Mr. Schauffler for that essay, we admit that he makes amends in the other chapters of his book. The best of these is entitled The Creative Listener, in which he demonstrates that in the making of music an appreciative listener is quite as important as the performer. Svengali did not really hypnotize Trilby. He simply was such a master of the art of listening that "whenever he was in the audience Trilby could not help singing better than she knew how." Theodore Thomas once remarked that few people have any idea how discriminating listeners react on the performers. "A stupid audience kills the orchestra dead in five minutes, as water kills fire, whereas an intelligent and responsive audience will stimulate the musicians at once to their best efforts." The author discourses interestingly of two kinds of listeners, the creative and the destructive, offering valuable hints as to how the one kind may be multiplied, the other made harmless.

Throughout his book, Mr. Schauffler pleads the cause of musical enthusiasm. He stands up particularly for chamber music, giving some striking examples of the almost fanatic devotion it often begets. Liszt, to be sure, said "Kammermusik—Jammermusik," and it cannot be denied that, as a rule, it is more fun to play chamber music than to listen to others playing it. Concerning musical indigestion, we find some suggestive remarks; the author commiserates the critics for having to follow a system which, if adopted by wholesale liquor houses, would compel their tasters to consume at least a gallon of each variety before pronouncing judgment upon it. He might have added, however, that most critics deserve the pangs of musical indigestion inflicted on them because few of them are "creative listeners."

Mr. Schauffler's volume is written in the old-fashioned, rambling essay style which one does not often come across these days, personal reminiscences and confessions being mixed with anecdotes and naïve moral reflections. Among the many amusing anecdotes, there is one which is incorrectly given. Chopin was not so clumsy as to say to the hostess who asked him to play, "Ah, madame, I have just dined. Your hospitality, I see, demands payment." What he did say was: "Madame, I have eaten so little."

Mr. McSpadden thinks that a knowledge of the standard operas is as essential in these days as acquaintance with the classics of literature. However that may be, the abundant supply of books telling the plots of popular operas indicates a surprisingly large demand for them. The latest-comer always has the advantage of reflecting the present taste of opera-goers and of including the most recent successes. In Mr. McSpadden's "Opera Synopses" are included not only novelties of the last season, like "The Girl of the Golden West," "Königskinder," and "Natoma," but even "Mona," which is first to be heard this winter. "Germania" and "Elektra" are here, but not the "Rosenkavalier." "Light" operas are not entirely excluded, "The Chimes of Normandy" and "The Mikado" being in the list. The stories are told very briefly and yet with exceptional clearness, even in the case of so mysterious a tale as that of "Il Trovatore."

Students of harmony cannot be nearly as numerous as readers of librettos, yet there must be a larger number than one would suppose judging by the steady procession of books which publishers seem to find it profitable to print. The latest, by William Alfred White, has a single aim, to give a mastery of the foundation of all composition—four-part writing. Composition for four parts, vocal or instrumental, is its theme. The author gives a substitute for the figured bass, which helps to overcome faults and uncertainties of the older system. In eight chapters, with many illustrations, he considers chords, from common major triads in close harmony to chords of the eleventh and thirteenth, which play so great a rôle in contemporary music. In this book they are disposed of as being "always a result of suspensions, anticipations, etc."

"Vocal Expression," by Katherine Jewell Everts, is in the hands of Harpers.

While the New York Symphony Society opened its season with two Liszt concerts, which attracted crowded audiences, the Philharmonic Society, which has just begun its seventieth season, will not celebrate the Liszt centenary until next month, in order to gain time for rehearsing the difficult "Dante" symphony. Its opening concerts were made notable by the first appearances of its new conductor, Josef Stransky, and the young Russian violinist, Efrem Zimbalist. In engaging Mr. Stransky, the directors of the Philharmonic departed from their traditional policy of procuring one of the most famous of European conductors. Not that Mr. Stransky, who is a countryman and disciple of the great Bohemian, Anton Dvorák, is unknown or inexperienced. He conducted both operas and concerts in Prague for five years and in Hamburg for seven years. During the last two years he built up the Blüthner orchestra in Berlin in a way to arouse the admiration of the leading critics. He is cosmopolitan in taste, and is likely to give Philharmonic audiences more varied and interesting programmes than they have always had in the past. He will be called upon to conduct a number of concerts in other cities besides New York. After his interpretation of Liszt's "Tasso," last Thursday, there was a demonstration of enthusiasm seldom witnessed in a concert hall. It showed that he is a master of climax building. His conducting of the "Euryanthe" overture on Sunday revealed his equal ability to make a pianissimo climax. He obtains from his players precision, careful attention to coloring, and such dynamic variety and subtle modifications of pace as he may desire from bar to bar. He has the true Slavic temperament which is necessary for the interpretation of modern German music in a way to satisfy modern audiences. Mr. Zimbalist, who is, like Kathleen Parlow and Franz Vecsey, a pupil of Auer, also won a pronounced success. He played, on the two occasions, concertos by Glazounoff and Tchaikovsky with astonishing purity of tone, perfect technique, and a thorough understanding of the music.

Miss Maggie Teyte, who has been specially engaged by Andreas Dippel of the Philadelphia Grand Opera Company for the first performance of Massenet's new opera "Cinderella" and for Cherubino in the "Marriage of Figaro," is to make her début here in a recital programme in Carnegie Hall on the afternoon of November 16. Miss Teyte's recitals in London and Paris have been among the most popular given each year. Born in England, she is one of the few English singers who have made a success in Paris, both in opera and in recitals.

"There is no good Indian but a dead Indian" is a motto prevalent in our Western States. In Germany there prevails a universal belief, at least among professional musicians, that "there is no real genius except a dead genius." The latest illustration of this attitude is the case of the Gustav Mahler. While he was living, very little attention was paid to his compositions. His eighth symphony, for instance, was ignored, in spite of its sensational production in Munich two years ago. For the present season, more than a dozen performances of it are already announced in as many German cities. In Vienna, two of his symphonies are to be played at one concert.

Art

EGYPTIAN ANTIQUITIES.

The opening of the new department of Egyptian art, Monday evening, marked an achievement in the management and direction of the Metropolitan Museum. Five years ago or less the collection, as then constituted, was housed in the corridor along the right of the main staircase, and though many of the objects were important, they had not been systematically gathered, were to some extent unrelated, and represented a few only of the periods of Egyptian civilization. In 1906 the trustees organized a department of Egyptian art and appointed as its curator Albert M. Lythgoe, who, in addition to his knowledge of the subject, had the further qualification of seven years' experience in active field work in Egypt.

In its present state the collection, by no means yet completed, illustrates the whole history of Egyptian art from its earliest beginnings in pre-dynastic times to the Coptic period and the Mohammedan conquest in the seventh century A. D. This span of some forty-five centuries is represented almost exclusively with original material, much of it not yet published and virtually unknown.

In order to bring together a collection of this sort it was necessary to dig it up and to study the objects in place as discovered. For this purpose, the curator obtained concessions from the Egyptian Government to excavate at three sites. The pyramid field of Lisht, thirty miles south of Cairo, has yielded important sculptural and other material of the XII dynasty (about 2000 B. C.). The Oasis of Kharga, one hundred miles west of the Nile in the Lybian desert, the site of the great temple of Hibis built by Darius, has provided the Museum with a beautiful polychrome capital and a quantity of Coptic sculptural monuments. The palace of Amenhotep III, where excavations were begun by the Museum in the past season, affords one of the few known examples of the complete plan of a royal dwelling when the power of Thebes was at its height. This field work, for which the institution has no funds which can properly be made available, has been made possible by a friend of the Museum who withholds his name.

In addition to the material obtained by the Museum's own expedition, the presence of its representatives in the field has enabled it to make fortunate purchases from local dealers and to obtain other valuable matter directly from the Egyptian Government, largely through the kind offices of Mr. Maspero, director-general of antiquities in Egypt. All this is over and above the accessions by gift, including the annual gifts from the Egypt Exploration Fund, which began in 1885, and the many gifts from individuals. The long list is reviewed in the current *Bulletin* of the Museum.

The outstanding significance, from the point of view of the administration, in the opening of the collection this week, lies in the fact that now for the first time the public is to enjoy an opportunity of keeping abreast with the advances currently made by special scholarship, and of rounding out that fragmentary notion and correcting those assiduously inculcated false impressions or falsely emphasized half-truths which have too generally been its portion heretofore.

The material now assembled has been systematically arranged by the curator on a plan of chronological progression, so that the visitor, passing through the rooms in order and reviewing in one summary ramble the successive characteristics of the so-called predynastic times, of the old, middle, and new empires, of the Saitic, Græco-Roman, and Coptic periods, should carry away a vivid sense of the continuous flux and unceasing modification, which, despite the long reaches of time and the consequent leisurely character of the graduation, have marked the artistic expression of the Nile region.

To the student, on the other hand, the evidence here displayed as to the conduct and aim of the architecture, the mastery of difficulties in a voluntarily defined range of sculptural expression, and the divergent significance of decoration, will demonstrate afresh that the old conception of the art of the Nile as a quaint, tremendous but hopelessly arrested approximation to the ideal of the Ægean is a fantastic fruit of misinformation.

The vitality of the error may probably be explained in recalling that though the mind of Greece was reopened to Europe in the fifteenth century, the mind of Egypt remained sealed until the nineteenth. When Mr. Maspero, to whose friendly interest today the Museum gladly acknowledges its indebtedness, first began to publish the results of his study, Egyptology was not yet forty years old. The opening of the collection takes on an added significance when we reflect that, as to Egypt, we are still in the midst of the Renaissance and Revival of Learning.

One circumstance which has shaped our view too much is the unavoidable predominance of mortuary relics and monuments. The notion that the Egyptians were a funereally-minded people is hardly to be sustained by a candid examination of such evidence as we have in this representative collection. Even in the decoration of tombs, it is remarkable how little the sense of the tragedy of death asserts itself. When we turn to the temples in which the

Digitized by Google

carefully sustained effect of serious grandeur and unfailing stability have suggested to many the thought of sombreness and gloom, we are again reminded by several excellent examples of polychrome decoration that these buildings in their prime presented a very harlequinade of color. And the coffins! When our own habits are considered in the presence of these gorgeous cases, it is simply amazing that the idea of a gloomy cast of mind ever came to be applied to a people who found such chromatic gayety consonant with the decorum of burial.

A barrier more fundamental than this mistaken prejudice stands between us and a sympathetic comprehension of Egyptian civilization—the sense of discipline. So much a part of us has our individualism become that when we contemplate a people spending lives and generations and centuries, vigorously and industriously, in the service of church and state, we hasten to supply an explanation of compulsion. We can hardly conceive of an art which, of its own free will, could follow a tradition for any length of time. The fallacy in this assumption, that because some characteristic traits were persistent they must have been involuntarily accepted, is challenged by the abounding creative vitality of this panoramic display of Egyptian art and its manifest freedom from inherent elements of rapid decay.

A new edition is announced by the Bruno Hessling Co. of New York of "The Mansions of England in the Olden Time," by Joseph Nash.

Volume XLIV of the *International Studio*, comprising the numbers from July to October, inclusive, offers, amid a variety of shorter articles, appreciation of the work of William Nicholson, accounts of recent Italian, Austrian, Hungarian, and Russian art, and, in the American field, studies of the work of Birge Harrison, Gifford Beal, Edwin A. Abbey, and Mielatz, the etcher. The present volume brings no striking novelty, but maintains the excellent standard of its predecessors in faithfully recording all current movements in the field of art.

An important fresco attributed to Orcagna has been brought to light in the Church of Santa Croce, Florence, through the removal of Andrea del Minga's big canvas, Christ in Gethsemene. The Orcagna fragment represents a group of blind and crippled folk with outstretched arms appealing to death to relieve them. The same motive occurs in the famous Triumph of Death at Pisa, which thus appears to be a repetition of Orcagna's original at Florence. It may then have been with a certain reasonableness that Vasari ascribed the Sienese work at Pisa to Orcagna himself. It is hoped that through the removal of whitewash other portions of the Santa Croce fresco may be recovered.

While investigating the ruins of the Domus Flavia on the Palatine, in Rome, Professor Boni has discovered the pavement of the dining-hall of the Emperor Domitian. It is in Oriental granite with a border of Numidian marble and other African stones, the ancient quarries of which may yet be discovered in Tripoli or Cyrenaica. The pavement, which is almost intact and of extensive area, is the richest yet found in the Imperial palaces of the first century. Of special interest are the pillars, which are so arranged as to raise the pavement from the earth for the introduction of hot air from a heating furnace.

The following telegram, dated Alexandretta, October 19, received by the London *Times* from Professor Garstang, will be of interest to all who are eager for news of Hittite discoveries:

Our expedition is working at a large mound at Salije Geuzi, near Marash, air-driven machinery having been erected. Below a building of Roman date, two periods of Hittite fortifications are traceable at a depth of six and ten metres. Important material in relation to Egypt of the eighteenth dynasty has been discovered. Work will continue for a month.

A polychrome terra-cotta Nativity by Antonio Rossellino and a Giottesque Adoration of the Kings are important new purchases by the Metropolitan Museum. The Rossellino, with its kneeling girlish Virgin and somnolent Joseph, has in a high degree the ingenuous charm of early Florentine sculpture. It is a minor work, but of delicious quality. The little panel depicting the annunciation to the shepherds and the adoration of the magi has a beauty and importance hardly suggested by the modest designation "school of Giotto." The execution is broad, like that of a master accustomed to working in fresco. The massive figures show a combined gravity and sweetness uncommon in Giotto's followers. Moreover, the dimensions of the panel, the types, and the peculiar blonde colors with complimentary iridescences, associate this picture with Mrs. John L. Gardner's Presentation in the Temple. The museum panel undoubtedly belongs to a series of the Life of the Virgin. The Dormition of the Virgin at Chantilly, ascribed to Giotto, is of the same size, and may well be a third member of the series. Mrs. Gardner's panel has been ascribed to Giotto himself by as good critics as Richter, Berenson, and Sirén. In short, this new acquisition falls clearly in a *milieu* where we find the invention and in part the hand of the greatest of Christian painters. It is said that the museum got this rare and beautiful picture for a trifle. If so, double congratulations are in order.

Due to the recent thefts at the Louvre, the French Ministry of Fine Arts has decided upon a new set of regulations for the public. The picture and antique galleries will be open on Tuesdays, Wednesdays, Fridays, Saturdays, and Sundays, from 11 A. M. to 4 P. M. On Tuesdays and Saturdays the public may visit: drawings and pastels, furniture and bronzes, Dieulafoy collection, pottery and stoneware, and antique ceramics. The following galleries will be open on Wednesdays and Fridays: Egyptian antiquities, Renaissance sculpture, modern sculpture, Mastaba Egyptian collection, Pelliot collection of Turkestan antiquities, and the Grandidier and Morgan collections. On the afternoons of Sunday and Thursday the public may see the Thomy-Thierry collection, the Assyrian gallery, and the Musée de la Marine.

Finance

A PARADOXICAL MARKET.

In many respects, the unexpectedly violent recovery in the Steel Trust's shares, after their 8½-point break on the day which followed the news of the Government suit, bids fair to mark an interesting turning-point in the season's finance. Steel common itself, which got down to 50 on that day, has risen so rapidly since then that last Monday it touched 60⅝. But "Steel" was not the only stock to move. Two of the most active speculative shares, Union Pacific and Reading, have risen 10 to 12 points since the break on the Steel prosecution news, and not only so, but the prices touched by them this week were actually the highest since the early days of August, when the mysterious "inside liquidation" began under which the whole market went to pieces. This has excited on the Stock Exchange much discussion of the question whether the Steel suit did not denote the end of the long decline. The "worst news was out." If the market would not stay down on that, then what could put it down?

All this may turn out hereafter to be hasty judgment. But it at least calls for inquiry as to why the market should have risen as it has done in the past twelve days. And that necessitates explanation of the action of "Steel" itself, on which stock the whole market manifestly pivoted.

Why did the "outside public" refuse to sell? Partly, no doubt, for the reason set forth in this column a week ago—that stock of the other prosecuted Trusts, even when it broke on the news of prosecution, got back to its old price in the very face of a court decision against them. Partly because, the stock market having been heavily oversold before the news came in, by Stock Exchange speculators, there was a mass of professional "covering purchases," ready for execution at Friday's lower prices. But largely also for other reasons.

On the evening after the Steel prosecution news, President Taft said in his speech to the Hamilton Club at Chicago that "mere bigness of plant does not constitute a violation of the law," that "I would rather cut off my right hand than disturb business from political motives," that "I am hopeful this period of strain will soon end," and that "I believe a majority of business is already square with the law." On the same evening, at New York, the chairman of the Steel Trust declared:

I believe a disclosure of all the facts applicable to the allegations contained in the Government's bill of complaint as a ground for relief will show that the suit ought to be decided in favor of the corporation on the merits.

Digitized by Google

And he added that this was "a time for every one to keep cool, with a disposition to patiently await results, knowing that in the end justice will be done to all interests."

Nor was this all that happened. When last week opened, the Circuit Court was hearing counsel at New York on the plan for dissolving the Tobacco Trust. The Trust itself had proposed disintegration into fourteen companies, whose stock should be allotted *pro rata* to shareholders of the Trust. The independent tobacco interests, through their able counsel, had urged that the Trust should be split up into far more numerous units; that no corporation thus left in the field should be better equipped than any independent concern, and that to no present holder of Tobacco Trust stock should be allotted, in the distribution, shares in more than one of the new corporations.

This proposal had seemed to many fair-minded men to foreshadow chaos. It suggested that the unlucky investor might be put off with stock which he did not want, or whose particular value had been spoiled in the disintegrating process. No one has had great sympathy for the Tobacco Trust and its owners; even the smaller shareholder knew very well with what sort of high financial thimble-riggers he was associating himself. But as a precedent for all future Trust dissolutions, the thing was most disturbing. Nowhere would its alarming possibilities have had wider scope than in the Steel Trust.

But Attorney-General Wickersham, whose concurrence was necessary to place this outside opposition plan formally before the court, rejected its main proposals. He based his action on the same broad grounds as those which Attorney-General Knox had used, in 1904, in rejecting Harriman's opposition plan for compelling Northern Securities to give back to every shareholder precisely the stock—whether Northern Pacific or Great Northern—which he had originally sold to it.

The Government, in the present case, did indeed ask for strict provisions to prevent the new companies from buying up one another, and to prevent large "insiders" from increasing their control. But it upheld the *pro rata* distribution plan, refused to favor the plan for extreme disintegration, and cited from one of the Standard Oil opinions the remark that "magnitude of business does not alone constitute monopoly, nor effort at magnitude an attempt at monopoly." The citation of this important dictum of the court, its acceptance by the Attorney-General, and its clear endorsement in the speech of President Taft, quoted above, provide an impressive answer to the familiar complaint that the Anti-Trust Law means to throttle large business enterprise.

Taking all these occurrences of the past eight days together, it is possible to say that in a sense the events which have followed last week's news of the Steel Trust prosecution have distinctly cleared the air. If, then, the sequel to the announcement of Thursday, October 26, has in a wholly unexpected way been reassuring, perhaps it is not strange that the Steel shares, and with them all other important corporation stocks, should this week have returned to a higher figure than their price before the Government prosecution had been begun.

BOOKS OF THE WEEK.

Adams, A. H. A Touch of Fantasy. Lane. $1.25 net.
Addison, A. C. The Romantic Story of the Mayflower Pilgrims. Boston: Page. $2 net.

Now Ready

The Book of Buried Treasure

By RALPH D. PAINE.

Author of "Ships and Sailors of Old Salem," etc.

This book—the first of its kind—tells the stories of treasure hoards of gold, jewels, and plate, lost or buried, of searches carried on for them to this hour, and of the failures and successes of treasure-seekers. Entertaining as the most adventurous fiction—and true. (*Crown 8vo, Copious illustrations from photographs and old prints. $2.50 net.*)

Their Majesties as I Knew Them

By XAVIER PAOLI.

The reminiscences of Paoli, in which he tells of emperors and empresses, kings and queens, princes of the blood, grand dukes and other titled and distinguished personages whom he has safeguarded on their visits to France, and whom he came to know intimately. (*Crown 8vo. Profusely illustrated. $2.50 net.*)

STURGIS & WALTON CO.

31-33 East 27th St., New York

The Best New Book on Canada.

THE DOMINION OF CANADA

By W. L. GRIFFITH

In the "All Red" British Empire Series.

The most comprehensive one-volume book that has yet been written.—*Nation*, Aug. 17.

The Nation

NEW YORK, THURSDAY, NOVEMBER 16, 1911.

The Week

"Talk of Roosevelt next year reviving." Of course it is. Republicans who believe that they have an invincible hero cannot help looking his way as they anxiously contemplate 1912. But some of the misapprehensions on the subject are both amusing and pathetic. Thus a Washington dispatch informs us that the friends of the ex-President are confirmed in the hope that he may come forward as a candidate again, by the news they get from New York that he is about to sally forth and attack Boss Barnes, with the purpose of wresting the State leadership from him. If this is true, however, it is the most conclusive evidence that the Colonel has not the slightest idea of allowing his name to go before the National Convention. Last year, it is true, he fought Barnes in the name of decency and righteousness; but now that the latter is in undisputed control of the State organization, and able to name the majority of the New York delegates, he becomes by that very fact decent and righteous. No practical man like Harriman would now dream of attacking him.

The unanimous decision of the Federal Circuit Court as to the manner of dissolving the Tobacco Trust is, we believe, in line with law, precedent, and common sense. It sustains emphatically the lawfulness of the plan of distributing shares in the newly-formed companies *pro rata* to existing shareholders in the Trust. It rejects the contention of the independent tobacco interests that the Trust ought to be broken into a much greater number of separate units, that no single company be left with a more complete equipment than any of the independents now possess, and that no present shareholder in the Trust be allotted shares in more than one of the separate corporations. We have hitherto set forth our own reasons for believing that none of these three proposals is called for by the Anti-Trust Law, and that all of them were contrary to precedent fixed by the Supreme Court in the Northern Securities and Standard Oil reorganizations. That the second of them was economically unwarranted, and that the third was wholly impracticable, has also been our opinion. The court dismisses even the Attorney-General's suggestion that the new corporations be held under special legal surveillance during the next five years, with a view to reopening, if desired, the question whether conditions created by the reorganization were honestly in harmony with the law. The leading opinion sets forth that "it is not apparent that this court has the power to do so," or that the Supreme Court's mandate authorized the Circuit Court "to prescribe the temporary terms of a *modus vivendi*," with the power for the present court, or its successors, to modify the terms of reorganization five years hence, when new investors might have come into the property on the basis of the present plan.

In Maryland, the election of a Republican Governor, for the first time since the civil war with the single exception of the election of 1895, is not the only interesting result of the recent voting. In addition to that, the disfranchising amendment has been snowed under, the vote in Baltimore being 43,671 against it and only 23,120 in its favor. It is to be hoped that common sense exists in sufficient quantity among Maryland Democrats to make this latest verdict on a perennial nuisance suffice for good and all. The negrophobia, real or pretended, which underlies these ever-repeated attempts to get round the Constitution of the United States, is peculiarly indefensible in a State in which the colored population is not much more than one-sixth of the total; but be that as it may, the way in which the attempts have been defeated, time after time, in spite of the most desperate endeavors of legal lights to devise some plan that would go down, ought to suffice to make any sane Anglo-Saxon drop the thing at last, in sheer disgust if for no other reason.

After two years of commission government, Chelsea, Mass., has voted to return to the old system of Mayor and Aldermen. As in the case of Galveston, it was a disaster that led to the adoption of the new form of government, Chelsea having been almost destroyed by fire two years ago. As a result of this, presumably, the census returns for 1910 showed a falling off of 2,000 from the population of 34,000 in 1900. The majority in favor of the old system was not large, but that it should not have been overwhelmingly on the other side will be the wonder to the ardent advocates of the commission form. Chelsea is of the size to which that system is supposed to be well adapted. Whatever the local reasons for its abandonment there, the result, while settling nothing as to the inherent merits or defects of the system, is a reminder that it is not a panacea. Whatever may be its ultimate fate, it is well for its supporters to recognize this in the beginning.

By his inflexible refusal to treat with striking and lawless employees of the city government, Mayor Gaynor has rendered an inestimable service to the community of New York, and to the cause of law and order everywhere. That he has been thoroughly sustained by public sentiment is manifest. Indeed, were it otherwise, there would be reason for grave anxiety in regard to our future; but the hearty support which the city has given to its executive head in this matter is rendered peculiarly significant by the circumstance that a good many persons desire, from the standpoint of their own personal comfort, the change which the mutinous street-cleaners demand. All such considerations drop out of sight when the choice between law and anarchy is presented; in such a situation nothing but unconditional surrender can be considered for a moment. To the Street Cleaning Commissioner and to the police, in their decisive grappling with the difficulties, the hearty thanks of the community are also due.

The granite temple encasing the log cabin at Hodgensville, Kentucky, in which Abraham Lincoln was born, is really a happy piece of symbolism. How better could one commemorate the rise from humblest beginnings to the highest destiny? It is appropriate, too, that the memorial should stand in an out-of-the-way corner of that pioneer West whose qualities and energies and rôle in our history Lincoln so thoroughly

Digitized by Google

embodied. We are not over-rich in national shrines. Mount Vernon alone has that character. Jefferson's Monticello and Jackson's Hermitage carry with them something of a party flavor: we think of them in a somewhat narrow sense as pilgrimage-places of Democracy. That may be the fault of party orators who have shown a tendency to claim the two men for their own. No such attitude is conceivable with regard to Abraham Lincoln. His memorial, because of its geographical situation, will probably never attract the crowds which flock to Mount Vernon, but, on the other hand, the visitor to Hodgensville will be drawn there by something more than tourist curiosity.

It is significant of the steady awakening to the architectural possibilities of our cities that the first important event in Bangor, Me., after its destructive fire of last April, was a mass-meeting which directed the Mayor to appoint a Civic Commission to study the burned district, and to report suggestions for improvement in connection with its rebuilding. Most permits to rebuild were withheld awaiting the report. This was presented within thirty days, but its provisions have received little notice outside of the city affected. As noted in the last number of *Landscape Architecture*, Bangor has certain natural advantages that are unusual in relation to a city plan. That these have not heretofore been utilized to their full extent is shown by the statement that, for four hundred feet up the Kenduskeag stream, the original beauty of the bank has been smothered under thirty feet of trash, the accumulations of many years. Another feature is the number of buildings that form street terminals, visually if not actually. No one will be surprised to learn that this was usually the effect of chance rather than design. Not less important is the progress, again unconscious, that has been made toward a civic centre. Before the fire the buildings were arranged in a haphazard fashion, but the land owned by the public now lends itself easily to interesting treatment. Bangor thus affords one illustration more of the consolation for our lack of harmonious city planning to be found in the opportunity opened by our fire losses.

The award to Mme. Curie of the Nobel prize for chemistry is a signal distinction. Indeed, the assignment of this great honor and emolument to a person who had already been—though jointly with two others, M. Becquerel and M. Curie—the winner of a Nobel prize seemed so extraordinary that one felt a momentary hesitation in accepting it as a fact. That Mme. Curie's work, however, has been of the highest merit and importance in the years that have passed since the discovery of radium by herself and her husband is well known; and the estimate placed upon her researches and upon her ability by fellow-workers in the domain of physics and chemistry has had more than one recent demonstration. In the early part of this year, she missed by only one vote the honor of election as a member of the Paris Academy of Sciences; and at the International Congress of Radiology, held a year ago at Brussels, it was to Mme. Curie that the task was committed of preparing a standard specimen of a pure radium salt, to serve as a basis of reference for all workers in radiology. The discoveries she has made since the death of her husband have been such as to dispose completely of the notion, entertained by some, that in their joint work in the discovery of radium her part was subordinate to that of M. Curie—who himself, of course, always asserted her claim to a full and equal share in the discovery.

Mr. Carnegie's latest magnificent gift of $25,000,000 is proof positive that his numerous benefactions for general and educational purposes are to be continued permanently. He has, as it were, incorporated himself for philanthropic purposes, chiefly of an educational character, and under a charter which leaves abundant discretion to his trustees and does not tie them up in a way to hamper them or their successors years hence, in the carrying out of Mr. Carnegie's purposes. Primarily, it is the "business of founding and aiding libraries" which is to be turned over to them. When before in the world was there ever a *business* of philanthropy conducted on so vast a scale by a single individual? Also it is to be an enterprise to further the advancement and diffusion of knowledge among the people of the United States by aiding universities and technical schools, scientific research, etc. Mr. Carnegie incorporated will, we are confident, continue to give as wisely as Mr. Carnegie *in propria persona*.

In the current number of the *Survey* there appears a letter from Joseph A. Hill, Chief Statistician of the Census Bureau, which gives facts and figures of great importance. Whenever the subject of the wages of saleswomen comes up, the question must arise in every one's mind, how many of them live at home; for their situation, both economically and otherwise, is radically different from that of those who live among strangers. An inquiry by the Census Bureau, covering 27 of the principal cities of the United States, and embracing 65,186 saleswomen "sixteen years of age and over," showed that 60,062 of these were single women, and that of the single women 86 per cent. lived at home. It also appears that of these single women living at home less than 5 per cent. were in families in which there was no other breadwinner, while in 26 per cent. of the cases the family contained one, in 30 per cent. two, and in 39 per cent. of the cases three or more breadwinners besides the girl or woman herself. These circumstances are, of course, in no way conclusive as to the question of what wages should be, or what results from their being what they are, but they are of primary importance, and cannot be ignored in any intelligent discussion.

Moreover, the significance of facts like these does not end with the particular phase of the wage question immediately concerned. We are constantly confronted with statistical announcements to the effect that, on the one hand, x dollars a year are absolutely essential to the maintenance of the average workingman's family, above starvation, and that on the other hand the annual income of the average workingman is only y dollars—a much smaller sum—and we are left to reconcile this with patent facts as best we can. This would, perhaps, do no particular harm but for the circumstance that there are thousands of persons of strong sympathies and weak reasoning powers, to whom such statements suffice as conclusive proof of the utter failure and wickedness of the existing economic system. That a large proportion of the workingmen are single men, that these single men either live with their own family or contribute, as boarders, to the revenue of some other family, that the grown-up girls or single

Digitized by Google

women add to the family income, etc.—these things are lost sight of.

The situation in Canada once more exemplifies how party labels in British politics, both at home and in the colonies, are by no means an infallible guide to party programmes. The frequency with which the British Conservatives have stolen the Liberal thunder is one of the principal things that have kept the Conservative party alive. In Canada we have seen the Laurier Ministry borrow from its opponents the policy of preferential trade with England. We have also seen the same Liberal Ministry go in for the idea of a Canadian navy, a measure so strongly impregnated with British Imperialism that the French element in Quebec took alarm. Thus the late campaign presented the paradox of the Liberals defending and the Conservatives attacking an imperialistic policy. Nor is that all. In the Cabinet organized by Premier Borden, a place has been found for Mr. Monk, the chief lieutenant of Mr. Henri Bourassa. Mr. Monk's appointment is now denounced by the Liberal press as a "fatal concession to Quebec nationalism." Of Mr. Borden himself it is stated that he is a reformer rather than a Tory, and that possibly, "if his whole mind could be revealed, he has much sympathy with the social programme of the British Liberals." Thus party government tends more and more toward denoting a difference in mere methods, rather than in fundamental policy.

Winston Churchill's first speech as First Lord of the Admiralty ought to produce a fairly good impression in Germany, for he went out of his way to pay a tribute to the truthfulness of the German Government in its statements about the German naval programme. When it is remembered how, only two or three years ago, British Ministers were outdoing one another in raucous assertions that Germany had a secret battleship or two up her sleeve, it is apparent that Mr. Churchill finds frank confession good for the soul. As for the rest, Mr. Churchill speaks, as all First Lords must, of the necessity of having a big, strong fleet ready for instant action and far superior to any possible rival. This sop to the big-navy boomers was, of course, inevitable. He also frankly admitted, as others have before him, that the growth of the navy was determined by Germany's attitude and fleet. After expressing a desire for a cessation of this mad competition, Mr. Churchill stated that the navy estimates will be decreased slightly, "provided that the national security is not in the slightest degree compromised by such reduction." This is vague enough, Heaven knows, to please all hands and offend nobody.

The German Chancellor's assertion in the Reichstag that he neither "expects praise nor fears blame," evidences a philosophical turn of mind which he will much need in the next few months. For no one in all Germany seems satisfied with his achievements in the Morocco negotiations. There is a universal belief that, after carrying the country to the verge of war, he backed down completely. Members of every party have openly criticised him, from the Socialists to the Centre, and in addition colonial ministers have resigned in protest, and the Crown Prince openly signified his disapproval in the royal box in the Reichstag. Both of the latter happenings are unheard of demonstrations. Childish though the Crown Prince's behavior seems to have been, it may yet compel the Chancellor to tender his resignation; it has already earned for the Crown Prince a week's arrest and a sound scolding at the hands of his royal father. The very nature of the official statement to the effect that the Crown Prince and his brothers are not conspiring for the overthrow of Von Bethmann-Hollweg, is unprecedented in German politics, while the whole incident smacks of something pretty close to mutiny among the Hohenzollerns. Certainly, the Crown Prince's début in politics, if this be it, does not argue that he possesses either wisdom or self-restraint.

On the whole question of the effect on public opinion of the reported atrocities of Italian soldiers in Tripoli, no one is better fitted to speak than Mr. G. M. Trevelyan. A proved lover of Italy and a most sympathetic historian of her struggles for freedom and unity, two letters of his in the London *Times* show into what doubt and pain he has been plunged by the acts performed in the name of "military exigency." He declares that he has received too much kindness from Italians, and has "seen too much of Italian officers, to believe that cruelty will be allowed to become systematic in their army." Yet the evidence, in the face of all the denials made, compels him to believe that a "spirit of savage reprisals" entered into the Italian troops, and that they committed deeds shocking to humanity. Mr. Trevelyan does not deny that the same thing has happened with soldiers of other countries, "not excluding the British," but his point is that Italy cannot afford to let her war against the Turks get the reputation of being cruel. To apply to Arabs the devastating treatment that the Austrians applied in Brescia is, affirms Mr. Trevelyan, simply to bring out the fact that "the Arabs have much more *legal* right to resist them than the Italians had to resist the Austrians."

The revolution in China harks directly back to the struggle of 1894-95 with Japan. In that war the prestige of the old Manchu army, which for two hundred and fifty years had sufficed to keep the Chinese in subjection, was completely destroyed. The Throne faced the alternative of a revolution or the creation of a modern army capable of defending the national honor abroad. The first task was to procure a body of trained officers, and within a few years no less than nineteen military schools were established. These schools were manned by Japanese army officers, and later by Chinese graduates from the military schools of Japan. To officer an army of a size commensurate with China's needs, it was not enough to draw upon the Manchu clans. The door had perforce to be thrown open to the Chinese. The latter embraced the new profession with an ardor that seems to belie the traditional aversion of the Chinese for war. But, as one authority has explained, the Chinese hated military service so long as it was the exclusive privilege of their Manchu conquerors. To-day it is estimated that there are five thousand students enrolled in the officers' schools in China and Japan. As events have shown, it was, with the Manchus, only a postponement of the evil day. In fear of a popular uprising, they allowed the Chinese to acquire gradual control of the army, and the latter have lost little time in making use of their opportunities.

A MULTITUDE OF COUNSELLORS.

The Interstate Commerce Committee of the United States Senate begins this week its hearings on the general subject of anti-Trust laws. But the country has already begun hearings, on an enormous scale. Everybody has his complaint; everybody his remedy. No lawyer so insignificant, no business man so humble, but he can tell you all about the mischiefs of the Sherman law; and no citizen is deterred by previous lack of acquaintance with the matter from offering drafts of new statutes which would at once undo the evils of the old one and make us all rich and happy. As every resident of Boston used to be said to carry a complete new system of the universe under his hat, so every American to-day is ready to stand and deliver, when called upon (too often, alas, before anybody calls upon him), the plan of a perfect anti-Trust law. The authors of these plans do indeed confess frequently that their outline is "crude" or merely "tentative," but that does not prevent them from urging their relief-measures with the greatest confidence. Never was the nation's multitude of counsellors so great, whether wisdom resides in them or not.

Byron woke up to find himself famous, but the Sherman law woke up from its long sleep to find itself infamous. Abuse and dread of it when in effect are far greater than the contempt which was expressed for it while it was "dormant." From being a thing to point to with pride as the work of great lawyer-Senators like Edmunds and Hoar, and as evidence of party good faith, it has come to be spoken of as something not merely imbecile but well-nigh criminal. It was "prompted by something of a revengeful spirit," "terror is its keynote," it "seeks to imprison people for keeping out of debt," it "belongs to the period of blood-letting in medicine"—such are a few of the phrases about it to be culled from a single address recently given on the Sherman law. That statute is certainly no longer in danger of the curse of being spoken of well by all men. It is the most belabored of acts of Congress, and its speedy repeal or radical amendment is confidently predicted. Congress, it is hopefully said, will not deny the petition of the suffering millions of business men.

For our part, we would not say one word against all this agitation. If it means the active entrance of business men into politics, for public ends and in the use of honorable methods, we can but hail it. But the real business intellect must deal with facts, not wild imaginings, and the fact that bulks largest before the business world to-day, in connection with this whole affair, is that any Congressional action looking to the amendment of the Sherman law, except possibly to render it more drastic, is entirely out of the question for at least a year to come. There will be hearings, and we presume that a flood of bills will be introduced. It is possible that the President may recommend some measure to supplement the Sherman law—not to shear it of power—in the way of Federal incorporation or a Federal license for large corporations doing an interstate business. But no one who knows the state of mind whether of Congress or of the country, no one who considers the party deadlock and jealousy between the two houses, no one who duly weighs the imminence and significance of the Presidential election, can give to the most despairing business men—"too quick despairers," we are tempted to call them—the slightest hope that any legislation of the kind they desire can possibly be enacted in the coming session.

Let the agitation for repeal or amendment go on by all means, but let it be clear-sighted enough to see how long and difficult is the path to actual legislative accomplishment. Against such a mental condition of the nation as now exists on the subject of anti-Trust laws, it is idle to rail, except for the purpose of affording relief to those who are suffering from retained expletives. We may set out to convert the people, but that takes a lot of time, and meanwhile what is there to do but to conform to the will of the people as already expressed in existing law? Business men are supposed to be nothing if not matter of fact; lawyers are our great realists, looking at the thing as it is; but neither class will live up to its reputation if it does not conclude that, for the present, there is nothing for the Federal authorities to do but to enforce the Sherman law, and nothing for captains of industry and chiefs of great business to do except to adjust themselves to the judicial interpretations of that law as best they can.

We do not deny that there is some ground for the lingering complaint of big corporations and their counsel that they do not yet know clearly what they can do under the Sherman law. But the debatable territory has been greatly narrowed by the recent decisions. It was of them that President Taft said in Iowa: "The business community now knows, or ought to know, where it stands." A citizen of Indiana has written a pamphlet in which he says that if the high-priced lawyers of New York cannot tell corporations what powers they have left, they had better consult a country lawyer who for a fee of $100 would give them all the advice they need—which is simply to obey the law. This is Indiana humor. But there can be no suspicion of jesting in the circular letter which the Civic Federation is sending out to 20,000 representative men in business and the professions. This starts off with the blunt assertion that the Sherman law, as now interpreted by the Supreme Court, means that "any combination in restraint of trade with the purpose of controlling prices and stifling competition is unlawful." Such a lay statement shows at least what combinations can *not* do. This negative part of the anti-Trust law, at any rate, is now understood; and it is beyond all the wits of all the differing doctors of that law to change those prohibitions into permissions.

CITY GOVERNMENT AND SOCIALISM.

The municipal victories of the Socialist party in New York, Ohio, Wisconsin, and other States have been universally regarded as striking. While estimates may vary widely in attempting an appraisal, no open-minded person can doubt that these Socialist votes indicate a rapid growth both in Socialistic sentiment proper and in that feeling of profound dissatisfaction with our existing municipal régimes which has nothing in it that can in any permissible sense be designated as Socialism. In Schenectady, in Milwaukee, in the Ohio towns carried by the Socialists, thousands of votes were cast for their ticket by men who have no idea of attempting to overthrow the existing economic system. But it would be a mistake to suppose that the absence of such intention insures the sterilization of these votes as part of that general socialistic ferment with which, in this country, we shall probably have to reckon more

Digitized by Google

and more seriously year after year. To all the other heavy penalties, therefore, that we have been paying for our notorious failure to master the problem of municipal government there must now be added the strengthening, in a purely adventitious and unnecessary way, of the forces making toward economic revolution.

What those penalties have been everybody realizes in detail; but we do not see the forest for the trees. Every great American city has been familiar, year after year for generations, with the particular evils which the system of government either by alternating or continuous party machines brings with it. At almost every municipal election the question in which "the better element" is concerned is how to cut down peculation and incompetence and favoritism and neglect. Everybody knows what it means to have a public-building theft, or padded registrations, or a horde of needless henchmen paid out of the city treasury, or venal and ruffianly police magistrates, or stolen franchises; and, indeed, it may be said with entire truth that during the past three decades great and most gratifying progress has been made in regard to all such abuses. But few people comprehend the terrible price we have been paying for the necessity of devoting to the fight against these evils that energy which would otherwise have been free for the procuring of great positive benefits. In the face of tremendous difficulties, a comparatively small number of voters determined on reform have compelled a gradual but steady advance in our municipal standards; nevertheless to any detached observer, to any person not hardened by use to the spectacle, the public history of our municipalities would make the impression of something very like a nightmare. Instead of turning on large and substantial questions of city policy or city advantage, our municipal campaigns have been in the main fights between opposing party organizations for the possession of the spoils of office; and the highest ambition of the independent voter has been to reduce the evils of this situation to a minimum.

The time seems at last to have come when the number of those American citizens who are tired of "marking time" in this way has reached formidable dimensions. They are helping the Socialists to elect their Mayors and Councilmen because the Socialists, whatever else they may be after, do look upon the possession of the city government as an opportunity for doing things of real importance to the community. Whether they will make good use of their opportunity may be doubtful; but certainly this is what the voters expect who, without being Socialists, have put Socialists in power. They vote John Smith, Socialist, into the Mayoralty not because they want him to get the salary or the patronage, but because they want to get better streets, more economical government, more equitable expenditure of the taxes. It may be that some of the things that they are after have in them a certain suggestion of Socialistic feeling. But, principally, they are tired of seeing the poorer parts of the city dirty or ill-paved or insufficiently lighted, or the health laws not properly enforced, and simply demand a fair, honest, and enlightened government.

A single illustration of the way in which our absorption in fighting abuses has blocked the larger possibilities of municipal life may suffice instead of many. Amendment Number Four, which was voted on by the people of New York last week, proposes to give the municipalities of the State larger powers than they now possess in making condemnations for public improvements. Nearly a hundred years ago, when the government of New York city attempted in a small way to exercise such powers, it was barred by a court decision, declaring the proposed action to be unconstitutional. In the century that has passed since then there has grown up on this island and its adjacent territory, in place of a small provincial town, a vast city, of dazzling wealth and far outstripping in population every city in the world except London. In the course of this stupendous development many things have been done upon which we can look with pride and satisfaction, but many more things have been done, and left undone, the thought of which must fill any reflecting person with profound regret. But in the whole course of that hundred years the question whether it was or was not best for the city to obtain by Constitutional amendment the power which was denied it by that one court decision of long, long ago did not so much as make its appearance.

Men were too busy thinking about Fernando Wood, or Tweed, or Platt, or Croker, or Murphy, to take a moment's thought for so "academic" a question as whether it would be well to strengthen the hands of the city government in dealing with the problems presented in the opening of streets, the creation and enlargement of parks, the clearing up of slums, and the like. The principle of "excess condemnation" may be good or bad; we think it is good, many respectable people think it is bad. That is not now the point. The point is that this policy, whose importance has long been recognized in European cities, and whose application is obviously of peculiar range and significance in a city of such rapid growth and swift change as New York, has hardly had a moment's attention at the hands of the community. And what is true of this question is almost equally true of nearly every other of the great questions that ought to be issues in municipal politics. Through men and women in private life, many great public benefits have been pressed to accomplishment; but who can point to a single one of them—tenement-house reform, modern pavements, improved fire and factory inspection, et cetera—that has formed the centre of interest in our governmental contests? In the diversion of civic energy from the real interests of the community our monstrous bi-partisan system of city government has inflicted upon American municipalities its deepest wounds.

MR. BALFOUR'S RETIREMENT.

"I wonder," wrote Arthur Balfour to the Duke of Devonshire, a dozen years ago, "whether if I should live to the age of seventy-two I should still care for a Cabinet office. I like it so little at fifty-two that I don't think I should." Something of that spirit of detachment, and of doing a work against the greater inclination, has marked Mr. Balfour's leadership of the Conservative party, which he on Wednesday of last week laid down. In his very speech announcing his determination to retire, there appears the attitude of an introspective philosopher, analyzing his own consciousness and his own powers as well as the political situation, and making his decision on grounds of pure reason fully as much as for the good of the party. One seems to detect in his remarks a certain zest as of a born student and metaphysician at last permitted to

Digitized by Google

escape from the crushing routine of political life and to return to his books and brooding studies. In the last number of the *Hibbert Journal* Mr. Balfour had an acute critique of some of M. Bergson's philosophical positions, in which he expressed the regret that he had been unable to keep up with the progress of metaphysical speculation in America and in Germany as he had wished. Now one can fancy him happy again, far from the madding crowd and in the still air of delightful studies. Mr. Balfour has the air of a man shaking off the garb of the politician, which he has been forced to wear for so many years, and going back joyfully to the philosopher's robe and academe.

His resignation we take to be sincere, and not a matter of tactics. His instincts are those of the high-bred gentleman, not of a political manœuvrer. He bases his retirement, moreover, partly upon uncertain health, from which it is known he has suffered in recent years, and which has compelled him to frequent absences from the House of Commons. There has been, of course, a noisy movement to depose him from the Conservative leadership. But by this it is improbable that he has been greatly moved. Even his bitterest enemies admitted that he could not be forced out. The writer of an article in the last *Fortnightly*, which was strongly averse to Balfour's continuing as leader, concluded that his retirement must be voluntary. Possibly, the clamor which has been raised against him may have had the effect of making him feel more irked by the duties of his position, but he had no reason to be afraid of his antagonists within the party. They could annoy him, doubtless, but they could not intimidate him and certainly could not oust him. The resulting party situation would have been awkward, but it could not have been nearly so critical or cruel as that which Mr. Balfour had to face in 1903 and 1904, after Chamberlain had left the Cabinet and was keeping up his galling fire from the outside. Yet in those difficult and even humiliating circumstances Balfour preserved his equanimity and his courage, and kept up a losing fight with extraordinary spirit and an unfailing dialectical resource.

Upon his political career, this is not the time to pass a formal verdict. His record is very long, for a man of his years, and has been distinguished in the important sense that great intellectual distinction has always marked him. As a figure in Parliament, he has won the respect and often the affection of even his opponents. Lloyd George is at the antipodes of Balfour, both in spirit and methods, and the two have had many rude encounters in the Commons; but when Mr. George introduced Balfour to a great meeting of Welshmen, some months ago, he paid a warm tribute to his abilities and his character, and said that in the House of Commons "we are all proud of him." Too much, in fact, cannot be said for the grace and magnanimity of Mr. Balfour's manner, or for the intellectual quality which he has displayed in debate. With a mind so subtle as his and a temperament not easily kindled, he has been unable to rise to the highest and most inspiring kind of political leadership; but he has built up a personal tradition which will not soon be forgotten, and we get a fair measure of the place he has made for himself in the public life of England when we see how hard it is to find anybody to take up his work.

In selecting Mr. Bonar Law as leader in his place, the English Conservatives have, in fact, made public confession of the low estate into which their party has fallen. Mr. Law is, no doubt, a man of parts, who has made a specialty of finance, but he has not even been in the Cabinet, and his accession now to the vacant leadership can be thought of as only a makeshift, until he or somebody else develops undisputed ability to head the party. What makes this Conservative dearth of talent the more notable is that the party has long claimed to be, and has been in large degree, the party of "the intellectuals." With the Parliamentary representatives of most of the universities in its ranks, and with an undoubted majority of highly cultivated Englishmen on its side, it yet seems to have gone stale. By contrast the position of the despised Liberals appears markedly advantageous. If Mr. Asquith were to retire next week, he could be succeeded by Lloyd George or Mr. Birrell or Sir Edward Grey or Winston Churchill. If the last, by the way, had not crossed the floor of the House of Commons, he would probably by this time have made such a place for himself in the Conservative party, by his dash and popular qualities, that he would have first been turned to when Balfour resigned.

"WHAT TO EXPECT OF SHAKESPEARE."

It was a happy choice when the British Academy asked M. Jusserand to deliver its first annual Shakespeare lecture, the printed form of which has just reached us. This is, of course, not the first time that the French Ambassador to Washington has expressed his view of the English dramatist. But the special occasion seems to have sharpened his ideas to what we would gladly believe is something like prophetic utterance. If it were not that his lecture shows the profound understanding to be expected of him, one would be tempted to call it a *tour de force*. The fate of Shakespeare at the hands of other distinguished French critics has too often been disastrous. While recognizing his superb poetry, men steeped in the tradition of Corneille and Racine have naturally found Shakespeare's art sadly lacking. M. Jusserand, by a supreme act of sympathy, avoids such comparisons as futile, and enters directly into the conditions from which the plays freshly sprang, grasping at the same time the perennial urgency of Shakespeare's appeal.

In M. Jusserand are combined and tempered the two tendencies which comprise the main body of Shakespearean criticism to-day. One forces critics into the attitude of inarticulate wonder. Swinburne was affected in this way, though Mr. Watts-Dunton is perhaps the most notable example. It is not strange that by reaction unscholarly minds have pronounced Shakespeare archaic and remote from actual life. The other tendency has the greater number of thoughtful followers. Busied with stage technique in Elizabethan days, with the sources of material, with social and political gossip, and with all the other odds and ends which form the background of a period, they find it easy to explain their master as a natural product of his time. They concede, of course, that he was a genius, but urge little or nothing save the verdict of continued performances to prove that his work is bound to last. Considering the upheaval with which literary standards are threatened, we welcome M. Jusserand's more penetrating method. He does not accept every line of Shakespeare as inspired. He deprecates his indecencies, haste, and certain scandalous inaccuracies of fact, but discovers in this very

Digitized by Google

method of composition a token of human interest. In addition, he nicely appraises the quality of Shakespeare's genius and predicts that popular regard for Shakespeare is almost sure to increase with the years.

The question of Shakespeare's moral intent has given even his stanch admirers a deal of bother. The fate of Desdemona, of Cordelia, and of Ophelia has seemed to them to transgress a principle essential in drama—that virtue shall be rewarded. One helpless critic professes to believe that Desdemona was not spared because of her lie about the handkerchief. Emerson also had his misgivings. Yet M. Jusserand places Shakespeare in this matter much nearer Aristotle than many of Aristotle's learned followers. "The great philosopher did nothing but sum up the teachings of good sense and adapt them to Greek manners. The great poet did nothing but follow the same teachings, as given him by his own sound nature, and adapt them to English wants. As both were men of genius and both were excellent observers, the one taught and the other acted in similar fashion." Aristotle had insisted that the rational end of dramatic poetry was not to moralize, but to give pleasure; and Shakespeare's attitude was precisely that. The story of innocent victims in the plays is written, says M. Jusserand, without any moral purpose, but not without moral effect. "It obliges human hearts to melt, it teaches them pity." "For breaking the crust of inborn egoism, Shakespeare has, among playwrights, no equal." The fact that his moral effect is got by the way and without conscious striving, places him in that respect with the believers in "art for art's sake," yet his almost constant regard for his audience has kept his productions rooted in realities.

For convincing skeptics that reality in the plays is thoroughgoing, M. Jusserand is well equipped. It is not merely the fooling which seems real to him, but the vivid portraits as well. The point is worth dwelling on in these days when the principle of artistic emphasis is generally so little understood. Sticklers for realism fail to discern that their own works do not entirely square with their creed. A play, for all its modern stage devices, can never be a literal transcript of what it represents. Time flies, but not so fast as it is made to fly on the stage; entrances and exits jump with the proper occasion; and in many other ways it could be shown that a playwright can never escape from the need of illusion. Dialogue itself is never starkly natural: the clever sally within a person's capability he would often not make at just the given juncture. Hence the proper rule for a writer becomes a question of degree. M. Jusserand brings out the truth, not by stating, as many have done, that Shakespeare creates characters not as they are, but as they ought to be; but by insisting that he catches them at their most distinctive moments, and, like the artist at the psychological instant, says, "Look!" "There are moments when we do not look like ourselves: such moments are often selected by photographers." The true artist knows how to bring out that which makes individuals distinct.

Because Shakespeare saw deeper into men and women than most writers, his language must be far removed from what constitutes ordinary conversation. It strives to report and sustain the scattered instances in a man's life when he would admit that he had done himself justice before others. Now, this is not saying that young dramatists should at once begin to practise exalted utterance. At times Shakespeare's influence on mediocrity has produced unmeaning bombast, from which he himself was not wholly free. But there is room for a better understanding of the artistic principle for which he stood. The serious drama of to-day lacks spiritual values, without which life can never appear complete or true. It is reassuring to get from a man like M. Jusserand the prediction that these higher beauties in Shakespeare will be more and more appreciated, even by the masses.

PROFESSORIAL WRATH.

There is one indictment against our colleges which Mr. Crane of Chicago might have brought forward with real effect: our college professors have forgotten, or never learned, how to quarrel. Outside of politics and baseball we have no art of controversy. We speak glibly enough of the battlefield of ideas, but how often does an abstract idea or a theoretical proposition make an American college professor lose his temper and his manners? And yet, if we look abroad, and back into time, we find that scholarship has never been able to dispense with a certain amount of vituperation. There is a story of a German professor who prayed: "Oh, thou Jehovah, whom that blockhead at Leipzig insists upon calling Jahveh." He was a true descendant of the age when John Milton and Salmasius showed what extraordinary effects may be obtained by mixing equal portions of Ciceronian Latin and billingsgate. The joy with which the men of the Renaissance seized upon the rediscovered classic literature must have been due in part to the large number of new words that were rendered available for defamatory purposes. Ideas were very real to men at that time, and were therefore worth fighting for. The scholar and gentleman is a modern development.

We speak with satisfaction of the growing amenities of life. But it is always necessary to distinguish between true self-restraint and mere indifference. In the days when theology was concerned with the awful problems of salvation, quarrelling theologians found it quite natural to consign each other to perdition. But it would be absurd to-day for two ministers who differ in their views on boys' clubs and model employment bureaus to devote each other to a hell in which neither one believes. The parents of the little boy in Heine's Göttingen, who was forbidden to play with the other little boy who did not know the genitive of *mensa*, were not snobs, because they thought an elementary knowledge of Latin as important as the proper way of using one's knife and fork. In the final scheme of things it is as important that men should quarrel over the use of "It is me" as that they should over the gold standard or the commission form of government. And it is also more justifiable, to the extent that no material interests enter into the problem. When truth itself is at stake, violence ceases to be ignoble. Then it becomes evident that a man who holds erroneous views on the wing structure of the Coleoptera is capable of embezzling other people's money and probably beats his wife. After all, it is one way of honoring truth to refuse to sit down at table with the man who differs from you on the use of the subjunctive in Horace.

The college professor is not alone in his sin. He is only the one most conspicuously identified with the business

Digitized by Google

of ideas and the one who seems to have sunk deepest into the slough of indifference. Literature, drama, art, and criticism show the same lack of the combative spirit. We have humor, of course, and it may be argued that we do hit out and kill with ridicule. But again the question arises, how much of our good-humored way of hitting out is due to good-nature and how much to sheer indifference. Let some one of authority announce that Shakespeare was a second-rate poet. The newspaper paragraphers will have a merry time of it for a day or two, and there the matter will end. But in Germany the professors would rise up against the iconoclast and call him coarse names. And when a lecturer in Paris declared that Racine's "Iphigénie" was poor stuff, the audience stormed the platform and knocked off the lecturer's spectacles with his own silk-hat. And good old Dr. Furnivall believed that any man who differed with him regarding the date of "Titus Andronicus" was a liar and a creature of the devil. Mr. Carnegie propounds a new form of the English tongue; Dr. Eliot publishes his views on the religion of the future; a Chicago professor announces that woman lacks the moral sense; and we have to look hard to find a man who loses his temper in consequence.

If the college professor is sometimes moved to reflect sadly upon the charm that football, compared with ideas, holds for the average undergraduate, he need only think for a moment of what happens in football. Eleven men face eleven other men and knock one another about. But when the men have ceased leaping on one another's prostrate form and reciprocally injecting their elbows into their thoraxes, they part good friends after impressing the spectator with a sense of the tremendous importance of the issue fought out. The injection of a certain amount of controversial venom into the scholastic arena might have the same popularizing effect. If two prominent professors were to call each other names about the use of "were" after "none," the effect on the undergraduate attention would be remarkable. And the headline writers would seize upon the offensive epithets with a joy that could not but redound to the best interests of scholarship.

THE WESTERN ECONOMIC SOCIETY.

CHICAGO, November 13.

The second conference of the society, held in this city, November 11, was devoted to the subject of Currency and Banking Reform. At two general sessions, bankers and economists discussed the outline of monetary legislation submitted to the National Monetary Commission by ex-Senator Aldrich. After a banquet in the evening prominent advocates of the plan were heard. Secretary MacVeagh spoke in warm approval. A. C. Bartlett of Chicago made a brief address in his capacity of president of the organization of business men, which, under the name of the National Citizens' League, is endeavoring to procure the enactment of the proposed legislation. Mr. Aldrich himself, the special guest of the evening, touched upon the work of the Currency Commission, and replied with engaging directness and spirit to the criticisms which had been offered during the day.

The participants in the discussions at this conference for the most part fixed their attention either upon the special services which the projected National Reserve Association could render to the banks and to the public they accommodate, or upon the menace of selfish control, by scheming special interests, which so many persons see lurking in the provisions of the Aldrich measure. The former of these two aspects of the subject was prominent in the first paper of the day, in which John Perrin of Indianapolis set forth lucidly the superior efficacy, during times of financial strain, of larger issues of bank notes, which are but a transmutation of deposit-credits, in place of an outflow of actual gold, coming from bank reserves, and sapping the foundations on which all bank credits rest. Prof. J. Laurence Laughlin of the University of Chicago, sketching the system of credit devices employed in moving the cotton crop in the South, showed the heavy financial burden that is annually laid on Southern bankers through lack of ready facilities for rediscount of bills. Prof. O. M. W. Sprague of Harvard pointed out how easily and appropriately the Reserve Association might afford a simple mechanism for making payments between banks by transfer of credits, and how thus demands for gold would be not only much reduced, but also made more regular.

But if the functions of the Reserve Association are so manifold and so important, assurance that it is to be ably and honestly managed becomes all the more urgently necessary. The association ceases to be merely a "bankers' bank"; it assumes the character of a great trusteeship created for the public good. Such was the position taken by Prof. E. W. Kemmerer of Cornell in one of the most interesting papers of the day. Professor Kemmerer, in particular, questioned whether, as Mr. Aldrich's proposal stands, there is not danger that the board of forty-five directors of the National Reserve Association would be elected almost wholly among the members of the banking fraternity, to the exclusion of that fair representation of "the industrial, commercial, agricultural, and other interests of the country," which is stipulated though hardly assured. A far more radical position was taken by ex-Gov. Folk of Missouri, who insisted that control of finances should remain in the hands of the Government, and that the organization to be worked out should take the form of a Federal Department of Finance. But Mr. Folk seemed to many of his hearers to fall into the error of contrasting private enterprise as it unfortunately sometimes has been, with the unrealized ideal government which might be: abstract government, as some will see it, quite incapable of stupidity or wrong. Other speakers found the prospect of a privately managed reserve association less disquieting. Prof. W. A. Scott of the University of Wisconsin showed reasons for believing that the difficulties in the way of "Wall Street" control of the association would be virtually insurmountable. Professor David Kinley of the University of Illinois declared his confidence in the ability and integrity of the banking profession. Secretary MacVeagh took occasion to remark that the Aldrich plan was much more likely to prevent than to promote the power of special interests over the credit of the nation. In many of the discussions there was observable an inclination to recognize in banking problems the principle of nothing venture, nothing have; to concede that restrictive regulation can never of itself create an efficient banking system; and to look hopefully to the example of such an institution as the Bank of England, privately owned and managed by persons who have accepted a moral responsibility to their great constituency and have acquitted themselves with ability and honor.

A few more pronounced critics of the Aldrich plan were numbered among the speakers. Alexander Wall of Milwaukee was of opinion that a more promising reform of past banking evils could be achieved by a slight adaptation of our established local clearing-house system. E. D. Hulbert of Chicago and A. J. Frame of Waukesha, Wisconsin, opposed the reserve association plan in many details. Yet on the whole the criticism elicited during the conference was essentially constructive criticism, offered, in the spirit in which Mr. Aldrich has asked it, by men almost without exception to be reckoned among the supporters of his general proposal. Indeed, if the opinions expressed at these sessions were representative, the prevailing attitude of bankers and

Digitized by Google

of the students of banking is little in doubt. JAMES A. FIELD.

Correspondence

PROFESSOR LOUNSBURY REPLIES.

TO THE EDITOR OF THE NATION:

SIR: I break for once my resolution of never replying to hostile criticism, in this instance partly because it does not seek the shelter of the anonymous, but mainly because it gives me an opportunity of correcting a misconception of my meaning, into which careless readers, careless critics, and, as it now appears, careless professors have frequently fallen. In the *Nation* of November 2 is an attack by Prof. Arlo Bates on my article in *Harper's Magazine* for this month, on the subject of Compulsory Composition in Colleges. It starts out with the assertion and with it the added implication that in the eagerness for notoriety on my part I have for years been advocating "that any possible error in grammar or diction is defensible if it can be proved that the same mistake has crept into the work of a writer of standing." To any careful reader of what I have said upon the subject it is hardly necessary to remark that I have never uttered or even implied any view of the kind. The furthest I have gone is to assert that while a great writer may and doubtless does at times commit errors, the burden of proving them to be such rests upon the critic and not the burden of defending them upon the one criticised; and furthermore, that in at least nine cases out of ten, it is the former who will turn out to have been in fault and not the latter. But the main point upon which I have steadily insisted is that the agreement of the great body of classic authors in our speech establishes what is correct usage, and not the dicta of grammarians; for it is this very agreement of theirs which constitutes good usage. Were it otherwise one man's opinion would be as good as another's. There is nothing novel in this view, though it is a natural inference that Professor Bates has never heard of it. It is precisely the view taken by Horace and Quintilian nearly two thousand years ago.

If arguments based upon such misapprehensions can be used by instructors, what can be hoped for from the men they instruct? Professor Bates's comments justify the charges I have brought against the present system—that it leads men to write without ascertaining the facts and to criticise the views of others without knowing what they are. He asserts under the existing system students learn something. But what is the benefit to be derived from learning what is not so? Still, any man's views are fair game both for those who comprehend them and, as in this case, for those who do not. What I feel called upon to protest mildly against is the discourtesy, not to call it rudeness, of Professor Bates's personal imputation upon my motives. It seems that in expressing views which have not the good fortune to meet with his approbation I am making "one more effort to attract attention." Professor Bates, we all know, does not need efforts of his own of any sort to attract attention. It hastens to wait upon him of itself. Accordingly, as a dweller upon the heights, he is necessarily out of sympathy with the feelings and aspirations of the humbler denizens of the valleys. Hence this unkind comment. Circumstances beyond my control have regrettably deprived me of the pleasure and profit to be gained from perusing the numerous effusions in prose and verse with which Professor Bates has enriched American literature—grief for that calamity being but slightly alleviated by finding it to be one of general prevalence. I am accordingly in no position to form an opinion as to how far his own doubtless pure and perfect diction has left behind that of his noted predecessors who had not the good fortune to share in the training in composition which he himself received and which he in turn imparts to those under his instruction. It must be imputed to prejudice and the infirmities of age that to the views which Professor Bates honors by holding, I prefer those of Bacon and Milton, as well as of several others whom the limited space of a magazine prevented me from citing.

T. R. LOUNSBURY.

New Haven, September 4.

VICIOUS IMMIGRATION.

TO THE EDITOR OF THE NATION:

SIR: In the general industrial community of Pittsburgh, we have met with another of those murderous attacks on eminent and efficient citizens in the discharge of their duty, to which it is time to put a stop. The shooting of operator David Steen, while on the way with his father to pay the laborers at their mine in Woodville, Pa., was one of the most dastardly crimes ever committed by a foreign immigrant. We are stirred to plead that every citizen of the nation stand with us and see that this thing shall come to an end. I express the common feeling of the community when I plead for a more careful inspection on the part of our Government of the immigrants admitted to the fellowship of our land—notably to this industrial community.

Last year, when in the Balkan States and the South of Italy, where I spent some time endeavoring to examine minutely the environment out of which we receive so vast a population into Allegheny County and the community of Pittsburgh in particular, I was astonished to hear directly from Italians themselves that the very refuse of the population of that region was from time to time swept off the streets of such cities as Salerno, Naples, Perugia, and Sienna (some of them having served in penal institutions, many of them utterly vicious), and embarked for the United States. "We don't want that kind of man here in Italy; we are glad to see him go to America," well-to-do Italians frequently said to me. As I went into the smaller towns and villages of southern Italy and saw the vicious men and women preparing to go to America, I felt the shame of it, the downright shame of exposing our best and most efficient men to the bullet of the assassin, and our homes to the disintegration of the degenerate.

Now it is one of our most capable young business men; four years ago, Ferguson, the coal company paymaster, blown up by a charge of dynamite connected with a battery in the thicket of a Washington County roadside. To-morrow who shall it be?

The worst feature of the affair, next to the inexpressible sorrow of the friends and family, is the fact that the assassins have not been apprehended. Seen by the aged father, who drove half a mile with his dead son in his arms, they have escaped the arm of the law, and probably from their retreat witnessed the sad funeral procession that filed down our beautiful valley.

It is but natural to ask that such a sacrifice be not in vain. When men like Major Steen can be shot on our highways at high noon, and the assassins go off scot free, I submit that the time has come for decisive action.

GEORGE MORGAN DUFF.

Pittsburgh, Pa., October 27.

NATURAL SELECTION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of October 19 (p. 376) I notice some remarks on natural selection which seem possibly misleading without further amplification. It is true, indeed, that naturalists differ greatly in the importance they assign to the Darwinian factor; and just at present biological fashion emphasizes other aspects of evolution. What the public may take for the mature judgment of science is perhaps often no more than a temporary psychological phenomenon, arising from the fact that when the attention is concentrated in one place, it becomes lax in others.

There are nevertheless some well-ascertained facts, not known to Darwin, which necessarily modify the Darwinian idea. We know more to-day than formerly about the different kinds of variation and the manner of inheritance. We know that very much of the commonly observed variation is due to the immediate influence of the environment, and is not inherited. When only this sort of variation is present, neither natural nor artificial selection will bring about any evolution, unless perchance the environment has affected the germ-plasm itself. On the other hand, we know that original variations may occur in the germ-plasm, and are heritable, often furnishing from the start material for selection. We know further that new heritable characters are not necessarily lost by crossing, but may preserve their integrity, and through various combinations give rise to several effectively distinct types. If a species presents no heritable variations, natural selection is not needed to keep it true to type, nor effective in changing its characters. While probably no species for any great length of time literally conforms to this definition, many must nearly do so, as shown by the extraordinary persistence of specific types of protozoa, cryptogamic plants, etc., under different conditions and for enormous periods of time. Nevertheless, even these have to walk in the strait and narrow path; for, as Jennings has shown, though many different forms may live happily in the same medium, if any begin to fail in certain respects, the incidence of selection is terrific. Virtually the same thing has been observed by Tower among his beetles.

Natural selection always acts as a *conservator* of some type; if this type is the prevalent one no evolution results; if it is a new or rare variation that is favored, we speak of evolution. This is all that Darwin asserted, essentially, but he did not know how frequent new variations were,

Digitized by Google

nor did he appreciate how many of those commonly observed were without selective value. It seems to me that the new discoveries actually strengthen the natural selection hypothesis; for they show us, on the one hand, why many types have remained almost stationary or evolved very slowly; and on the other, how effective variations can remain available in a strain for ages, ready at any moment, under new conditions, to be favored by selection. If *all* variations were heritable, natural selection would defeat its own ends, so to speak, by throwing organisms out of gear through too rapid adjustment to transient conditions. Natural selection itself, in the long run, would eliminate such unstable creatures, just as it eliminates others which are highly adjusted to particular conditions and cannot change to meet new ones. Thus natural selection would preserve in different groups the optimum amount and character of germinal plasticity, and in so doing would hide many of her operations from our too impatient gaze. This question regarding the efficiency of natural selection reminds one of the popular controversy over "heredity" and "environment" in regard to human beings. One hears this person boldly say he "does not believe" in heredity; the other that "environment counts for nothing." It is as though two people looking at a stained window should argue, one that the picture was wholly due to the light from without, the other that it was exclusively the effect of the stained glass. Literally, *every* character is developed in response to environmental conditions, *every* one also, excepting mutilations, is a testimony to the character of the germ plasm. T. D. A. COCKERELL.

University of Colorado, October 29.

"PATINES OF BRIGHT GOLD."

TO THE EDITOR OF THE NATION:

SIR: Mr. Moorfield Story and Dr. Edward W. Emerson, in their delightful biography of the late Judge Hoar, just published, cite a letter from him addressed to James Russell Lowell, in which occur these words:

What I wish to call your attention to is the derivation of *chores*—or preferably and before modern corruption *chars*—from the Latin *quid facere, i. e.*, things to do. It came into English at about the time of many Spanish words, and by the same route with *punctilio, bravado*, and the like. The Spanish is *que hacer*, and the Spaniard habitually makes a noun of the phrase, and says that he must go and do, or attend to, his *que-haceres*, which he rapidly pronounces very much like *char-es*. My brother Edward (who, like a cat, knows more than he usually tells) says the Spanish Californians constantly and habitually use the phrase, and that it was scarcely distinguishable by the ear from *char-es*—that he recognized the word *chores* as soon as he heard it.

Judge Hoar was evidently a better judge of legal matters than of philology, for a glance at Skeat's "Etymological Dictionary" shows that *char* (*chore*, "a modern Americanism"), is derived from the Anglo-Saxon *cierr, cyrr*, a turn, space of time, period, allied to the German *kehren*. It would, of course, be etymologically impossible for the Spanish words *que haceres*, pronounced *kay athayress*, to change into *chores*. It is an interesting example, however, of popular etymology, and having criticised it, I am going to expose myself to similar criticism by suggesting that the much-discussed word *patines* (in the line from "The Merchant of Venice"—"The floor of heaven is thick inlaid with patines of bright gold") is derived from the Spanish word *pateña*, which means spangle. Many Spanish words were introduced into England, as Judge Hoar suggested, and by Spanish prisoners, about Shakespeare's time, and what more natural than that the word meaning spangles, so appropriately applied to the glittering stars of the first magnitude seen on a bright moonlight night of a Venetian summer, should have been adopted by him from that source? On the other hand, how far-fetched is the derivation from the word *paten*, meaning "the plate on which is placed the consecrated wafer" in the Catholic service. Such patens would be too large and would be of silver and not of "bright gold." They would be too large to represent stars, and they would be too small if, as some think, Shakespeare referred to the fleecy clouds which drift over the sky, mottling it as with silver.

I once suggested this explanation in a Shakespearean monthly, but I have never seen it discussed.

THE RIPENING OF PINEAPPLES.

TO THE EDITOR OF THE NATION:

SIR: The article on "Governmental Gastronomy" in the *Nation* of September 7 has suggested to me that you might be interested in a recent discovery by Mr. W. P. Kelley, chemist of the United States Experiment Station at Honolulu, which would seem to explain, at least in part, the well-known superiority of the canned Hawaiian pineapple, commented on by you, over the fresh pineapples commonly found in the markets. Mr. Kelley's investigations are briefly summed up in the annual report of the Hawaii Agricultural Experiment Station for 1910 as follows:

A study of the ripening of pineapples has disclosed the fact that the sugar content of the fruit is derived exclusively from the leaves of the plant and does not increase after the fruit has been removed from the plant. If pineapples are picked green and allowed to ripen, the sugar content at complete ripeness is the same as it was when the fruit was removed from the plants. An analysis of the fruit shows that they contain no substance which can be changed into sugar during the ripening process.

Fruits picked too green and allowed to ripen, therefore, lack greatly in sugar content and in flavor. The sugar content of green fruits, or fruits ripened after being picked too green, is about 2 or 3 per cent., while that of fruits ripened on the plants ranges from 9 to 15 per cent. The ripening process in fruits picked green appears to consist largely in a softening of the tissues. A microscopic examination of sections of green pineapples shows that the cell walls in the parenchyma of the fruit are greatly thickened, but become extremely thin in ripening. It is obvious from these facts that, in order to obtain a good flavor in fresh fruit, the fruit should not be picked until the sugar content has become fairly high and the fruits have turned yellow to the extent of about one-fourth their length at the base.

The main point thus brought out is that the pineapple contains no starch or other material that can be converted into sugar during the ripening process, but procures its sweetness by circulation from the leaves or possibly from the starchy plant stalk, and that when once it is picked, it cannot become any sweeter. This is in contrast to the banana, which in its unripe state is composed largely of starch, much of which during the ripening process is converted into sugar; and with the banana, the ripening process seems to proceed almost as satisfactorily after the banana has been cut from the plant as when left to ripen naturally. JAMES D. DOLE.

Literature

A BRITISH STATESMAN.

The Life of Spencer Compton, Eighth Duke of Devonshire. By Bernard Holland. 2 vols. New York: Longmans, Green & Co. $9.

This biography is successful at least in putting the reader in a position to understand why its subject came to be regarded as *the* Duke in England, as no man had been since Wellington's day. His was a strongly marked personality. Perhaps his root quality was that "dogged veracity" which Dr. Johnson noted in one of his Cavendish ancestors. His intellect was more plodding than brilliant, but in his slow though sure-footed way he sought truth and duty and when he had, as he believed, found them, he clung to them with a determination that nothing could shake. Never passionately admired, incapable of awakening intense antagonisms, he was yet a political leader worthy to be named alongside Palmerston for so perfectly embodying "the normal English temperament." People of all classes looked to him, in his later years, at times of crisis, confident that his sturdy common sense would show them the right thing to do. In 1903, when he was hesitating about resigning from the Cabinet as a protest against Mr. Balfour's abandonment of free trade, Winston Churchill wrote the Duke that "two workingmen at different clubs informed me that they would wait to see what you decided"; and Lord Goschen at about the same time told him how some of the greatest in the land were hanging upon "your decision." It was the possession by the Duke of this sort of steadfastness and moral weight which led to his being spoken of by Mr. Balfour as "one of the assets of public life in this country," and by Lord Rosebery as "one of the great reserve forces" of the nation. That Spencer Compton, Lord Hartington, Duke of Devonshire, was entitled to such high regard, the material which Mr. Holland has brought together in these volumes enables us to see.

He was born (in 1833) a creature of hearty out-of-door tastes, whom it might seem like torturing nature to turn into a public official slaving at departmental work, or a political leader forced against the grain to do a great deal of public

Digitized by Google

speaking and to be at the beck and call of countless devastators of his day. His early education gave little promise of literary or oratorical distinction; and in this respect the child was true father of the man. At seventeen we find him with a "mortal hate" of English composition. At Cambridge, he "belonged to the Union Society, by his father's desire, but never spoke in the debates." To the end he loathed making speeches, and groaned at the length and dulness of his own. Said Rosebery: "I do not know any man who spoke with so much previous anguish or so much misery at the time." His course at the university was undistinguished. He was not a reading man, nor ever became one. In all his speeches, he is known but once to have quoted a line of poetry. Unlike his father, who was a recluse and devoured books on science and history, he seldom—except on official compulsion—read anything but newspapers and novels, and for recreation preferred cards to reading. It was said: "Gladstone reads every new book that comes out, Hartington not one." He scarcely knew his way about his great inherited library at Chatsworth. To a gushing American lady who exclaimed to him about his wonderful literary treasures, he merely said: "Yes, it's a rummy old place." But this may have been only his air of "passionless indifference."

In 1862, as Lord Hartington, he made a short visit to the United States and to Canada. He met Seward and Lincoln in Washington. Of the President, he wrote to his father: "I never saw such a specimen of a Yankee in my life. I should think he was a very well-meaning sort of a man, but, almost every one says, about as fit for his position now as a fire-shovel." He reported that Lincoln was "very civil and also told us stories." Apparently there was no reference to Hartington's having worn a secession badge at a party in New York—pinned to his coat by a lady, he all unknowing, according to his biographer. We know what Lowell made of the incident: "One of Mr. Lincoln's neatest strokes of humor was his treatment of this gentleman. Mr. Lincoln persisted in calling him Mr. Hartington. Surely the refinement of good breeding could go no further. Giving the young man his real name would have made his visit almost an insult. Had Henri IV done this it would have been famous." Lord Hartington got to Richmond, having with a party adventurously ridden through the lines without passes. He talked with Davis and his Ministers and "liked them all very well." They "talked in a very moderate and sensible way." Lord Hartington, in fact, was at that time, as he himself wrote, "decidedly very Southern in the main." He even wondered how Englishmen could be "so idiotic as to admire Lincoln," and could not understand "how they can talk such nonsense as they do about emancipation." His own sight of slavery near at hand seemingly made no deep impression upon him. He wrote that "the negroes," on the plantations he visited, "hardly look as well off as I expected to see them, but they are not dirtier or more uncomfortable-looking than Irish laborers." The latter remark came from one who was to be a great Irish landlord and an opponent of Home Rule.

Hartington's going into Parliament and later taking office under Gladstone signified neither ambition nor liking, but rather a sense of public duty. In his family had long been established, as in many another great Whig house, the tradition that large property and high social position constituted an obligation to serve the state. When the Irish Secretaryship was offered him, he at first declined it, and accepted it under pressure from Gladstone most reluctantly. Similarly, the War Office had no attractions for him, though he buckled down to its routine work like a martyr. Little by little, however, his labors in the Administration and in Parliament began to win him respect for his judgment and confidence in his stable character; so that, by the time Gladstone retired in 1874 as Liberal leader, Hartington became the general choice of the party for the succession. But the leadership had fairly to be forced upon him. He doubted his own fitness for the position, and he was positive of his dislike for it. Yet again the feudal doctrine of service compelled this modern man to yield. "How I shall get on, Heaven only knows," he wrote to his father.

What Hartington actually did was to drive the Liberals with a rather loose rein during the first years of their exclusion from power, and then when 1880 rolled round and brought victory, to give way to Gladstone. The Queen sent for Hartington, and many in the party thought that he should try to form a Government, but it was clear to him that the real leader was Gladstone, and he said so to Victoria. Nor does he appear to have cherished the slightest ill-will because of his having been over-slaughed after having borne the heat and burden of the day. He is said to be the only man who three times refused to become Prime Minister of England. But probably he would have said that on no one of the occasions when it was offered him could he discover a sound reason for believing that he could successfully carry on the Government for any length of time. And as there was no overwhelming appeal of duty, he put the matter by without a regret. The honors of public life meant nothing to him; its duties everything. All of the correspondence which is published respecting his surrender of the leadership to Gladstone in 1880 is infinitely to his credit. Through the whole of it we see his large and simple nature, his transparent honesty, and that sort of mental structure which, as it was said of the head of a certain diplomat, "can take in very little of what is not perfectly clear." As a member of the Cabinet, Lord Hartington had sometimes to defend in Parliament measures of which he did not wholly approve, though they were no resigning matter, and on such occasions it was remarked that he made his speeches "so honest" as to allow his opponents to see that he was not heartily for the policy which it was his official duty to advocate. When in 1903 he had a painful doubt that he might have dealt unfairly with Lord George Hamilton, that former colleague wrote to him, "dismiss me from your mind; you have treated me, as you do everybody else, with absolute good faith."

It was this high repute for stanchness and honor, as well as for sagacity and safety, which made Hartington's course in reference to Home Rule in 1886, and in regard to the fiscal question in 1903, of so much consequence. Men looked to him for a steadying policy and for scrupulous conduct. Those two political crises are too near us yet to be treated historically, and we need only remark that the letters referring to them in these volumes give little new light, though they do bring out the massive patience of this political guide in finding which way for himself the path of duty lay. On October 6, 1903, the Duke wrote to Lord James of Hereford, in reference to his final leaving of the Cabinet: "I have made a mess of this business and have come out with severe damage." But the only "mess" was that of an honest, but somewhat floundering man, at first misinformed, but finally seeing the light and pressing toward it at all hazards. There are printed some letters which passed between the Duke and Mr. Joseph Chamberlain. It is instructive to compare the dart and thrust of the latter with the other's slow but ponderous movement. The Duke told the students at Cambridge: "All through life, I have had to work with men who thought three times as quick as I did, and I have found this a great disadvantage." This kind of sluggish but weighty intellect helps one to understand why Lord Hartington complained that he "could not get on with Gladstone in conversation," and how he was mystified by Mr. Balfour's economic legerdemain. Indeed, the Duke observed late in life that it had been his fate to serve under two Scottish Prime Ministers, and he made it evident that he did not find their type of mind congenial. One could as easily imagine Dr. Johnson getting on well with David Hume.

Mr. Holland's editing is, on the whole, praiseworthy, though not ideal. Several misprints have escaped him, he has let

Digitized by Google

in too many letters which only lumber the page, while his comments on world affairs and home politics are needlessly long and too often inept. But he has achieved the main object of giving us a full picture of an extraordinary *caractère uni*. The volumes should not be read for anecdotes though several good stories and sayings are recorded. The Duke once said: "I don't know why it is, but whenever a man is caught cheating at cards, the case is referred to me." This was a recognition of the frequency with which he was called upon to arbitrate in social, as well as political affairs. He was fonder of shooting and fishing than of balls or dinners, and would probably have found a keener joy in winning the Derby than in being Prime Minister. He did not, however, have to give up racing for politics, as Bentinck did, or hear the awful news that a horse he had sold had won the Derby. That shock came to Bentinck, and brought from him, as Disraeli wrote, "a superb groan." The Duke of Devonshire was reasonably fond of society, though he seems to have been a little overpowered by the social gayeties into which he was plunged by his Duchess, whom he married late in life. He once said at a great house-party at Chatsworth: "This is all very well, but I should like to know who my guests are. Do you know the name of that red-faced man over there?" To literature the Duke made no pretensions, and in the theological controversies which raged during his life, he took no interest. It seems almost incredible, but on an occasion when ecclesiastical disputes were invading politics, he said to a private secretary: "Can you explain to me what 'transubstantiation' means that they are talking about?" He was once sent to break the news gently to the Vice-President of the Council that the Cabinet had decided to drop his pet educational bill. The Duke went to Sir John's room, and after standing some time with his back to the fire, said, "Well, Gorst, your d——d bill's dead." Surely, a great character, if not a great man, he was full of what was individual, but also full of what is typical: a bluff, impassive, downright English nobleman of whom it seems perfectly natural to read that he murmured as he lay dying: "Well, the game is over and I am not sorry."

CURRENT FICTION.

The Healer. By Robert Herrick. New York: The Macmillan Co.

Mr. Herrick has two "problems" to deal with here, one of them a fresh one, so far as he is concerned. This is the problem of the modern physician—what sort of skill he shall strive for, and how he shall employ it. Mr. Herrick does not take a rosy view of the present estate of the medical profession. Indeed, if we are right in fancying that we hear him speaking through the lips of his own authentic healer, he leaves it but one precarious leg to stand on. Almost all professed healers of the day, from the lowest dispenser of patent remedies to the loftiest fashionable specialist, are at least part quack and hypocrite. Virtually all make a trade of what should be a mission. The young Doctor Holden of the story is born and bred in Northern Canada. The instinct of the healer is born in him, and fortune gives him the chance of an education in America and Germany. He shows the greatest promise, but suddenly throws up the game—so it must look to his colleagues—and returns to his wilderness, to a casual clientèle of half-breeds and lumber-jacks. His local fame spreads, he is known as "The Healer"; but there is something mysterious in the man and his ways. In fact, he has deserted "civilization," given up a distinguished career, because he had become convinced that such a career must be based on rotten foundations.

"Didn't I see enough of that when I was in the medical school, and in the hospital? The big men using their reputation to bleed their patients who were rich enough to pay, and turning the poor over to boys! . . . And that's what Elport wants me to do here—run what he calls a 'hydropathic establishment'—gull the public with spring water, wheedle the rich out of their money, and coddle a lot of old men and women who ought to die anyway—or get out and work for a living!"

So cries Holden to his bride. Elport is her uncle, and president of a railway which he is pushing into the wilderness. Helen Goodnow is a conventional child of the city, who, straying out into the open, has been captured by the "Wild One." Here appears Mr. Herrick's second and more familiar problem—the problem of "Together." How shall fare the two who are unequally yoked together? It is impossible for Helen to comprehend her Wild One: she can only subdue him. The result is presently a hydropathic establishment and an income of fifty thousand a year; a Helen restored to her world, and a Holden relapsed into slavery to the drug he has conquered for her sake. His final salvation is due to another woman. The episode involved is sure to provoke talk, if not discussion, like a certain memorable episode in "Together," which it rather too closely parallels.

Mr. Herrick's solution of the physician's problem lies in organization and control—an "institutional" system involving the elimination of personal fees, and therefore of personal motive for insincerity. As for the marriage problem, he cannot be said to offer anything beyond a cheerless compromise. We are beyond the squaw era, he admits with a sigh, and must "accord more and ever more rights to these bearers of the sacred seed, however unfitted they may be at present for their liberty and self-direction. Tradition has taught them for generations to work by fraud and wile, and their instinct warns them against the ideal. All prolonged contest with them will end in the deterioration of the man. He must either cut the knot or submit as gracefully as he can to their notion of civilization." The Wild One understands this, and after experimenting with submission, cuts the knot. It is comforting to reflect that even if this Helen of Mr. Herrick's is conceded to be Woman, she is not the woman most of us are enslaved to.

The Song of Renny. By Maurice Hewlett. New York: Charles Scribner's Sons.

After the Senhouse interlude, Mr. Hewlett appears to have returned with gusto to his old theme and manner. No doubt he felt his mediævalism cramped in its modern dress. The famous "Senhusian" sweater was after all an inadequate substitute for doublet and coat of mail. And Mr. Hewlett is happiest when he speaks the tongue of nobody now living. Not that he really speaks the tongue of anybody now dead, for that matter. Examine any one of his pages, and you find his style a medley of current and obsolete idioms. But it is not a hopeless medley—the general effect of quaintness for which he strives is gained without sacrificing the ease of the modern reader. In short, the chief distinction of this writer's somewhat over-lauded style is that it does very cleverly what most historical romances do more or less clumsily.

The scene is the southern land of the troubadours, and the hero is one of those decorative persons. The Song of Renny is his masterpiece—an elaborate celebration of the fortunes of a great and ill-fated house. "Rascally" would be a fairer epithet, since for generations the Rennys have ravaged and murdered not only their neighbors, but one another. At the moment when the tale properly begins, the last male Renny has been slain by the Count of Pikpoyntz, a robber baron; and one surviving daughter, a child of twelve, carried off by that enterprising gentleman. He causes her to be gently reared in his own household, meaning to marry her and her great lands when the time comes. But she runs off with a page, and so ends that chapter. Or, rather, it ends a little later, when Pikpoyntz has her murdered, the Renny next in line being also female and marriageable. This lady, whom he abjectly adores, marries him out of ambition; but she loves the young troubadour, and in the end runs away with him, to be happy ever after. Pikpoyntz is duly hanged, at last, for his sins, and for the novelist's convenience. To tell the

Digitized by Google

truth, the story is as flimsy and absurd in substance as the usual story of its not uncommon kind. Even the blind villain and the black villain of Treasure Islandism are not lacking. It is only Mr. Hewlett's picturesque style—and perhaps a little his pretty bravado in handling the affair of sex—that carries it off.

The Following of the Star. By Florence L. Barclay. New York: G. P. Putnam's Sons.

Here is a slough of sentimentality where none but a web-footed reader may safely venture. Skim lightly if you would avoid the tedium of repeated "good things" and escape being smothered in gush. First, gush pertaining to a pulpit-and-pew romance. Oh, attentive and inspiring "Lady of Mystery" amid a slumbrous and thick-pated congregation! Secondly, gush exuding from the situation of manly-poverty-wooed-by-wealth-and-beauty. Oh, the luxurious motor! Oh, the Parma violets! Oh, the banished chaperon! Thirdly, gush inherent in the plight of the heiress-who-must-marry-within-a-year-or-lose-her-inheritance. Oh, proud Diana (and so felicitously named, too)—"Master of the Hounds; patron of four livings; notorious for her advanced views and fearless independence; a power and a terror in the whole neighborhood," virgin of no illusions and most averse to matrimony! Oh, cruel uncle's will! Fourthly, gush extracted by a too, too fond insistence upon the wording of the marriage service. Oh, forward and strong-minded woman, thinkest thou lightly to forego the meek raptures of obedience? Fie, thus to flout thy natural lord! Must she obey? She must! She will! And, lastly and most abundantly, all the unquenchable gush sacred to the sad case of those fatuous pairs who marry first and love afterward. Oh, deep and secret pangs! Such is the morass to be traversed before these lovers are landed safe in wedded bliss. We have waded, and we know.

The Yellow Letter. By William Johnston. Indianapolis, Ind.: The Bobbs-Merrill Co.

Mr. Johnston has hit upon a novel method of blackmail, and in both the development and the detection of the crime has shown no little ingenuity. The climax, particularly, in which most detective stories fail, is well conceived and executed. Only one false note is sounded, but that is a note which goes far toward destroying the emotional efficiency of the whole book. Mr. Johnston has created a villain of the true type, and his baiting in the lonely country house is a bit of real detective invention. But the interest with which we follow the discovery and thwarting of such criminal machinations as are here described depends mainly on the intensity of our feeling of a maleficent and responsible power in the human brain. Mr. Chesterton relied largely on this feeling to create the proper atmosphere about the adventures of his "Father Brown." Mr. Johnston feels it artistically, but deliberately mars the effect by an irrelevant preachment on the relation of crime to disease, and on the desirability of substituting curative measures for punishment. The result is an ingenious story, which fails to absorb the reader's mind as it should.

Off the Main Road. By Victor L. Whitechurch. New York: The Baker & Taylor Co.

This "village comedy" plays itself in a parish lying comatose somewhere in the interior of England. The old rector, the new rector with his pretty daughter, the young architect who comes to restore the dilapidated church, the solitary mysterious stranger who twenty years before had taken up his abode in Little Marpleton, supply enough of the outside world to satisfy the reader that the story lies within earshot of present-day civilization; not enough to spoil the quality of rustic benightedness which is the feature of the tale. Beside these villagers Dogberry was a citizen of the world. The writer has had the skill to show in an amusing light their clownishnesses without giving pictures of brutality. Their very original ways are made entertaining, and their language is thick-studded with gems of utterance. They revolve around a little story of loves, requited or not, that adequately keeps the whole together.

METHODS OF LEGAL REFORM.

Social Reform and the Constitution. By Frank J. Goodnow. New York: The Macmillan Co. $1.50 net.

The problem of Professor Goodnow in this thoughtful book is concerned with the constitutionality, actual or probable, of various social reforms. Such an inquiry of necessity includes political reforms as well; and while no complete enumeration is attempted, the survey covers most of the projects of social betterment which as yet, in this country, have received any considerable attention. Since, in Professor Goodnow's opinion, the amendment of the Federal Constitution is virtually out of the question, the only guide to a conclusion as to what may be held constitutional in the future is to be found in a study of what has been held constitutional in the past. His method, accordingly, is that of a careful examination of the decisions of the Supreme Court, with a view to discovering what light, if any, they throw on current problems.

It is impossible, within the limits of this review, to do more than summarize the author's main conclusions, since the evidence which sustains them is necessarily elaborate and detailed. In one or two directions in which judicial exposition and delimitation have been abundant, the problem of constitutional forecast is relatively simple. For example, a study of Federal regulation of navigation as interpreted by the Supreme Court, with reference to its bearing on the important subject of uniform commercial regulation, seems to show that there is no longer any distinction to be observed between interstate and intrastate navigation (p. 46); that the Supreme Court has always aimed at "uniform regulation of all commerce, whether by water or by land" (p. 74); and that Congress may even, "through the exercise of its power to prohibit the interstate or foreign transportation of articles made contrary to the provisions of its legislation, exercise an enormous influence in securing uniform regulation of all the conditions of manufacturing in this country" (p. 92). This would mean, of course, a vast extension of Federal power at the expense of the powers hitherto regarded as reserved to the States; but it would also go far toward "making our political system conform to existing economic conditions" (p. 99).

Similarly, a study of decisions regarding Federal control of manufactures points to the conclusion that while the variable intent of the producer, as to the channels through which he will market his product, "is a bar to Federal control and a justification of State control" (p. 128), there are no judicial precedents adverse to the right of the Federal Government to confer upon corporations engaged in interstate commerce the power to manufacture articles for such commerce; and such commerce, if carried on by corporations, may be restricted to Federal corporations or to those which the Federal Government permits to engage in it, and may, of course, be protected from State interference. Radical as such an exercise of power may seem, Professor Goodnow urges that it not only does not imperil private rights, but that it is "absolutely necessary for their protection" (p. 145).

We cannot follow Professor Goodnow in detail in his interesting discussion of the constitutional aspects of labor regulations, the use of private property in urban districts, the control of property "affected with a public interest," taxation, monopoly, and government aid in the form of pensions or the housing of urban workers. Suffice it to say that while the boundary which separates the Federal and State spheres, in such divergent interests, is naturally irregular, the course of judicial decision seems to show in most respects an unmistakable trend toward an enlargement of Federal power, on the one hand, and on

Digitized by Google

the other of support by the State courts of social rather than personal considerations. Even in the domain of the private law of the States, every insistence by the Federal courts upon uniformity of interpretation or practice strengthens the movement, "already in full swing" (p. 193), for the centralization and unification of State law.

In an interesting introductory chapter Professor Goodnow points out that the Supreme Court, in its effort to uphold legislation which a progressive society demands, has gone far toward transforming our constitutional law into a system of political science. In other words, the court has become a political body of supreme importance, since "upon its determination depends the ability of the national legislature to exercise powers whose exercise is believed by many to be absolutely necessary to our existence as a democratic republic" (p. 16). Repeatedly, in his discussion of particular issues, he calls attention to the widening departure from earlier conceptions of State rights and delegated powers, and to the resulting contrariety of decision which, though natural in a time of transition, seems at times to reflect personal opinion or prejudice rather than assured juristic conviction. In a notable final chapter he examines more fully the attitude of the courts toward the new political and social problems that press for solution, defends the propriety of public criticism of judicial decisions, and warns the judiciary that they must take heed to the changes in public opinion if they are themselves to retain their essential powers:

> Those who assert that by criticism of the Supreme Court we are attacking the foundations of our political system, forget that we are living under a practically unamendable Constitution, and that unless it is proper to bring popular opinion to bear upon a governmental authority which has the power absolutely to prevent political change, we may easily be tied up so tight in the bonds of constitutional limitation that either development will cease and political death ensue, or those bonds will be broken by a shock that may at the same time threaten the foundations not merely of our political but even of our social system (p. 358).

These are the weighty words of one of our highest professorial authorities on American law. Doubtless Professor Goodnow will be held by many a special pleader, and his arguments will be used by political partisans to uphold policies both extreme and dangerous. Needless to say, his book has no such purpose and invites no such distortion. While much of what he has to say is, in the nature of the case, prophecy rather than law, his conclusions are constructive. It is, indeed, not to our credit that in a period of fundamental social change we should be making headway so largely by drifting; but the drift seems clearly to be in the direction of a constitutional law under which, in spite of the rigidities of a written Constitution, the reforms which enlightened public opinion demands can somehow be accomplished. We commend Professor Goodnow's volume as the most thoughtful and penetrating discussion of constitutional tendencies in this country that has appeared in many a day.

The Oriental Religions in Roman Paganism. By Franz Cumont. With an Introductory Essay by Grant Showerman. Authorized translation. Chicago: The Open Court Publishing Co. $2 net.

Franz Cumont, professor in the University of Ghent for nearly twenty years past, has been known to the few as one of the most capable of living investigators in his chosen field, the ancient religions of the Orient. In 1896 and 1899, he published an imposing collection of "Textes et monuments figurés relatifs aux mystères de Mithra," in two volumes, a portion of the first of which, his interpretation of the evidence gathered in the remainder of the work, was presented separately in 1902, as "Les Mystères de Mithra." This was translated and published in this country a year later by the Open Court Publishing Company.

In the autumn of 1905, the author delivered the opening series of lectures on the Michonis foundation before the Collège de France, and a few months later served as Hibbert Lecturer at Oxford. The substance of these two courses appeared in Paris in 1906, under the title, "Les Religions orientales dans le paganisme romain." A second edition, 1909, appeared a year ago in German dress, from the Teubner press, and is now presented to the English reader in the volume before us, timed to coincide with the author's presence in this country on a lecture tour, which includes the Lowell Institute and a number of universities and learned societies.

These lectures are intended for the general reader, and outline in a lucid and entertaining manner the successive penetration into Roman life and thought of one Oriental faith after another, there to influence and be influenced, until a fairly unified syncresis of Pagan belief took form, "more unlike the worship that Augustus had attempted to restore than the Christianity that fought it." The traditional Roman religion had not the inherent vigor to resist this inroad. It was too cold and formal, too destitute of any effective relation to man's higher nature and aspirations. Its loss of any genuine hold on the hearts of men had gone too far to be reversed by the extensive rebuilding of temples and other reform measures undertaken by Augustus. Of course this movement brought back many to the pious practice of the ancient rites, but its real intent was to strengthen the chains of the new political order; and "making religion an auxiliary to moral policing is not a means of establishing its empire over souls," in Cumont's opinion. There was a vague longing for something higher, and in spite of the fact that the Eastern faiths were all more or less sullied by vile and atrocious rites, coarse and immodest fables, they did possess something higher. They attached more importance to the inner life and to the value of the individual. They claimed by mysterious rites to cleanse the soul of its impurities, and gave it the assurance that a pious life would be rewarded by a blessed immortality. The acts of self-denial and suffering which they introduced as a means of soul-cleansing took a deeper hold on the imagination than the expiations of the older Roman custom, which consisted merely in the exact performance of certain ceremonies pleasing to the gods and required by a formal code. And the new faiths, too, proved themselves adaptable enough to slough off, during the period of their conquests in Roman territory, a large share of the earlier grossness which constituted their most serious defect.

That these Oriental religions were finally superseded by Christianity, Cumont attributes in no small degree to their very likeness to it. "The two opposed creeds moved in the same intellectual and moral sphere, and one could actually pass from one to the other without shock or interruption." As we turn the pages of the late Latin writers, we may sometimes feel uncertain whether the author is to be classed as pagan or Christian. A few years ago M. Pichon published in Paris a study in which it was shown that the eloquence of the late panegyrists unconsciously changed from paganism to monotheism in its tone. In the days of Symmachus we do not find in those Roman aristocrats who remained faithful to their inherited religion a mental or moral character radically other than that of the Christians who sat beside them in the Senate. "The religious and mystical spirit of the Orient had slowly overcome the whole social organism and had prepared all nations to unite in the bosom of a universal church."

For the reader who would pursue further the lines of thought taken up in these lectures, the eighty pages of notes by which they are followed will form an invaluable guide. The lectures themselves stand virtually as they were originally written, six years ago, but the bibliographies and references in the notes have been extended to cover the more recent literature of the subject. We welcome the work in its English dress, and expect from it, together with the author's presence in our universities as a lecturer, a distinctly stimulating effect on American classical scholarship.

Poetry and Prose. By Adolphus Alfred Jack. London: Constable & Co.

Mr. Jack is a thoughtful and interesting representative of a distinct tradition in English criticism. His present critical attitude he attributes mainly to the influence of A. C. Bradley's Oxford lectures on poetry. He has also constantly in mind the method and purpose of Matthew Arnold. The title of the present book, however, harks back to certain famous distinctions of Coleridge—perhaps to the following passage in the "Biographia Literaria": "I have endeavored to discover what the qualities in a poem are, which may be deemed promises and specific symptoms of poetic power, as distinguished from general talent determined to poetic composition by accidental motives, by an act of the will, rather than by the inspiration of a genial and productive nature." To make clear the essential difference between prose and poetry, to distinguish in a particular author, the varying intensity of the "esemplastic" power by constant comparison of passages and an ultimate appeal to the cultivated taste of the reader—such are the aim and the procedure of the work. The chapter divisions are these: Poetry: A Note; Gray (Social or Prose Poetry); Burns (Natural or Spontaneous Poetry); Wordsworth (Basic or Elemental Poetry); Byron (Oratorical Poetry); Emerson—The Poet as Teacher; Arnold—Critical Poetry; Meredith—Intellectual Poetry; Emerson's Doctrine of the Infinite.

Perhaps the characteristic defect of this school of criticism is a too exclusive attention to masterpieces somewhat arbitrarily selected—an indifference to the variety and detail of general literary history. Thus the impeccable Arnold, "taking the roll of our chief poetical names" from Spenser to Keats, includes Campbell and Moore, but omits Donne and Marlowe; and one is inclined to question rather the extent of his reading than the soundness of his judgment. Mr. Jack's treatment of Gray is unsympathetic, and the unsatisfactory character of his essay is not a mere matter of taste. His choice of the profound and curious scholar, the slender poet with his little bundle of ardent odes and elegies, the melancholy, shy, life-long recluse—his choice of Gray as the best representative of social and prose poetry of the eighteenth century seems to indicate but a sluggish and superficial acquaintance with the men and movements of the age. Gray is entirely of the eighteenth century, says Mr. Jack; he sees the world "from the point of view of his century, the sober, intensely English eighteenth century, from the point of view of a writer of prose." The unsoundness of this statement is increased by the emphasis of its delivery. It would apply fairly well to Pope and admirably to Johnson, but Gray it does not fit at all. Gray comes to us, indeed, trailing shreds of pseudo-classical diction; born in 1716, his feet rested on the age of Anne. But Gray developed; he is one of the most unmistakably "transitional" of poets. He had an open, wide-ranging, forward-looking mind; and before he died in 1771, he had anticipated many of the characteristic interests of the nineteenth century. He had sought to bring into English poetry sublimity and passion, and he had turned for quickening power to primitive and barbaric literatures—to mediæval romance, to whatever was available of Welsh, Gaelic, and Scandinavian poetry. Philologist, antiquary, member of the "black-letter kennel," he had all the isolating and unsocial enthusiasms of modern romantic scholarship; and he could spend an entire evening in an eighteenth century drawing-room without uttering a word.

After all that has been written on this subject in recent years, there is no excuse for the indifference to the origins of nineteenth-century poetry betrayed in the essay on Gray. Mr. Jack's only recognition of the eighteenth-century romantic current is a note referring to Arnold's comparison of Gray's feeling for nature with Obermann's, and to Mr. Hudson's enumeration of Spenserian imitations. Equally dilettanteish is his citation of a passage from Morley's "Rousseau" by way of establishing the novelty of Wordsworth's attitude to nature. We do not object to his availing himself of Lord Morley's translations from the "Confessions," but we should like to feel sure that his acquaintance extends beyond these elegant excerpts, and unhappily we do not. Wordsworth, argues Mr. Jack, was the pioneer lover of solitude and grandeur. Rousseau, on the other hand, was only the pioneer "week-ender": "He loves Nature because she is free, quiet, and full of variety; because, at Les Charmettes or The Hermitage, he can escape from the city. . . . In short, as Lord Morley has pointed out, he is a virtuoso in landscape who likes the confusion, the mixture, a soft smiling foreground with trees leading to a background occupied by hills." Lord Morley is a very able writer, but on this subject Rousseau is a higher authority than Lord Morley. Why not allow Rousseau himself to tell us what he likes in landscape? Why not let this French "week-ender" show himself in a few lines of the "Confessions" (Part I, Book iv) in an ecstasy of dizziness leaning for hours over a parapet near Chambéri, drunk with the foam and bellowing of blue water heard athwart the cry of crows and birds of prey flying from rock to rock hundreds of feet below him?

> Au reste, on sait déjà ce que j'entends par un beau pays. Jamais pays de plaine, quelque beau qu'il fût, ne parut tel à mes yeux. Il me faut des torrents, des rochers, des sapins, des bois noirs, des montagnes, des chemins raboteux à monter et à descendre, des précipices à mes côtés qui me fassent bien peur.

But Mr. Jack's strength does not lie in historical perspective or breadth of sympathy. The virtue of his criticism resides in his intuitions, in his immediate sense of poetical values, in his spiritual tact and discrimination. For him as for Emerson—to whom, by the way, he pays continual tribute—divine ideas are not of an age but for all time; and it is a comparatively insignificant matter whether Chaucer preceded Caxton or Caxton, Chaucer. From point to point through the poetry under consideration he listens for the sound of the "eternal melodies," and summons the reader to participate in the mystical exercise of separating that which was "given" to the poet from that which he has excogitated. It is an exercise which, rightly conducted, directly disciplines the emotions and the judgment, and, perhaps more effectively than any other critical method, resuscitates a flagging interest in poetry. Mr. Jack, like the critics and poets whom he most admires, believes that poetry at its best is truth at its best. This dark saying can probably never be made plain to those whom, in his essay on Meredith, he happily characterizes as "the pedants of perspicuousness." It has commanded the assent, nevertheless, of those who have done most to maintain in poetry the high seriousness of philosophy and religion. It is the central idea throughout this book, and it is illustrated with especial success in the essays on Arnold and Meredith, and in the first essay on Emerson. Amid the spiritual dryness of current historical criticism it is strangely refreshing to come upon interpretation that penetrates to the heart of things like Mr. Jack's comment on Arnold's exquisite lines describing the chastened serenity of Iseult of Brittany in her later life with her children by the northern sea:

> This note of patience is heard in all Arnold's poetry, and it is heard because his poetry is devout. It has more of the cloister in it than is to be found in any other poetry of our time, so much more that there is even some initial difficulty of appreciation; a greater depth of Christian feeling and a fuller understanding of the doctrine of self-surrender than we have capacity properly to realize. If we were to compare it with the finest attitude of a Pagan age or temper, we should see that what we have to deal with here is not the beautiful superiority to life which we find in Marcus Aurelius . . . but submission to life. And so real is this temper that other poets, in their efforts to represent it, seem like boys playing with half-apprehended ideas. Put Tennyson's "St. Agnes' Eve" beside the passage just quoted, and how frail and external becomes that exquisite picture of the emotion of another. Compared with Arnold, Tennyson, the Broad Churchman, is a man who has heard of Christianity, and Browning, the optimist, with his Abt Vogler melodies, a brave citi-

Digitized by Google

zen, with a Sunday mood. . . . But in the inner sanctuary of Arnold we are admitted to a place removed. . . . There is an abnegation of the private will, and this without any parade. "I yielded myself to the perfect whole," says Emerson, but in so saying, he seems merely to be politely waiving resistance to the claims of the universe to absorb the most persistent individuality in literature. It was a voluntary act, and Emerson is the gracious victor in that as in every contest. The tone of Arnold is altogether different. . . . His still music comes from him in response to ideas which shake the forest of men like a reed, to which they owe their life, and which make them distinguishably human. To Arnold, the one thought that through the years comes permanently sweet is that of the life of Jesus, and the one idea that consoles, in permanent opposition to the hurry of the world, the idea of the Everlasting.

Studies in Honor of A. Marshall Elliott. In two volumes. Baltimore: The Johns Hopkins Press. $7.50.

A few months ago we reviewed a volume of "Studies in Language and Literature" in celebration of the seventieth birthday of a distinguished professor (emeritus) of English in Cornell University. We have now to notice a similar volume intended to celebrate the completion of another scholar's thirty-fifth year of service in Johns Hopkins University, as professor of the Romance languages. Alas! the one in whose honor these volumes were prepared did not live to see their completion or quite to round out his thirty-fifth year of service, and so this *Festschrift* became a monument to the memory of a singularly engaging personality, a ripe scholar, and, above all, a devoted and enthusiastic teacher. There is no need to dwell here upon Professor Elliott's scholarly interests or the great debt which the study of the Romance languages in this country owes to him. The volumes before us testify sufficiently to both, and so profusely that we find it difficult to characterize them or to specify the various streams of influence which they represent.

We may begin, however, with a remark or two of a negative nature. The university to which is due the inception of these studies has always been supposed to represent in this country the methods of German study and scholarship. It is pleasant to find in these volumes that the narrow conception of "philology" usually ascribed to Germany has been broadened by the French interest in literature, both comparative and critical. There are, out of twenty-seven contributions, only three relating to Romance philology in the narrowest sense, and one of these is by a foreign lecturer. The other two are: "Notes on the Etymology of 'Bachelier'," by W. O Stowell, and "Etymological Notes" (*cadastre, cerdo, cerda*), by D. S. Blondheim. Even the wider and more neglected field of grammar has but two articles: "The French Shifts in Adjective Position and their English Equivalents," by E. C. Armstrong, and "The Italian Historical Infinitive," by O. M. Johnston, and of these the first is not narrowly grammatical. With the above may be classed the three bibliographical articles: "Problems in Mediæval Fable Literature," by G. C. Keidel; "Notes for a Bibliography of American Spanish," by C. C. Marden; and "The 1527 Philopono," by E. H. Wilkins.

The remaining contributions may be divided roughly into texts and comment, French mediæval literature, and literature, historical, critical, and comparative (storiology). Two of the texts deal with mediæval fable literature, Old-French and Italian, and, with the bibliographical article cited above and some to be mentioned later, represent the work done in the Romance Seminary on a prospective edition of the fables of Marie de France. The Spanish translation (incomplete) of the "Decameron" published in volume II, pp. 1-235, is out of all proportion to its value or interest and to the rest of the work.

Among the articles on French mediæval literature are: "The Roman du Châtelain de Couci and Fauchet's Chronique," by the late Professor Matzke, and "La Légende des 'Enfances' de Charlemagne et l'Histoire de Charles Martel," by Professor Bédier of Paris, another of the foreign lecturers. There are two papers on the French classical drama, one by Professor Lancaster, "A Classic French Tragedy based on an anecdote told of Charles the Bold," in which the writer shows that the use of modern subjects in the French classical tragedy was not so rare as is usually stated; in the other, "French Classical Drama and the Comédie Larmoyante," Professor Warren endeavors to show that the latter is derived from the former, rather than from the French moralists of the late seventeenth century, or the English stage of that period. The two literary articles of a critical nature are: "The Place of Châteaubriand as a Critic of Italian Literature," by B. L. Bowen, and "The Poetry of Sully-Prudhomme," by E. P. Dargan.

Finally, the class of articles relating to comparative literature or storiology is represented by contributions to the sources of two well-known fables, an Irish analogue to the Castle of the Grail, and an article by the third foreign lecturer, Professor Menendez Pidal, on some relations between Moorish and Christian legends.

The above superficial review of the contents of these volumes will at least give some idea of their varied interest and wide range of scholarship. Happy the teacher who has perpetuated his influence by inspiring so large a band of youth with devotion to his own intellectual pursuits!

Notes

"Myths and Legends of Flowers, Trees, Fruits, and Plants, in All Ages and All Climes" (Lippincott) have been gathered in a forthcoming book by Charles M. Skinner.

"Saints and Heroes," in which Dean Hodges has taken examples from the time of Cyprian to the close of the Middle Ages, is announced by Holt for publication this week.

The series of eight lectures which Sir Frederick Pollock delivered recently at Columbia University, on "The Genius of the Common Law," will be brought out late in December by the Columbia University Press.

Little, Brown & Co., the publishers of Francis Parkman's works, announce a pocket edition of the twelve volumes bound in limp morocco and illustrated with photogravure frontispieces and maps.

The life of Thackeray's grandfather is sketched by F. B. Bradley-Birt in a book promised by Smith & Elder—"'Sylhet' Thackeray."

The extension department of the University of the South, Sewanee, Tenn., is offering two prizes, the first of $500, the second of $250, for the best epic poem on the civil war; one of the conditions is that the poem shall show no sectional bias.

Funds are raising for the founding of a Jewish University at Jerusalem, a project of which Israel Abrahams of Cambridge, Eng., the well-known author, is one of the principal promoters There is also to be a liberal endowment of scholarships to be held by students of existing universities, who are to pursue literary or archæological research during a portion of each year at Jerusalem. They are to be elected by an international board of Jewish professors and university teachers.

We have received two more volumes in the edition of Scott's novels which the Oxford University Press (Frowde) is publishing in neat cloth binding with gilt letters: "Redgauntlet" and "The Pirate," the first having thirty-six illustrations, the second forty-five.

Included in "Universities of the World" (Macmillan), by Charles Franklin Thwing, president of Western Reserve University, are sketches of twenty institutions: the universities of Oxford, London, Paris, Leiden, Upsala, Madrid, Geneva, Rome, Athens, Berlin, Vienna, Budapest, St. Petersburg, Bucharest, Cairo, Calcutta, Melbourne, Peking, Tokio, and Robert College on the Bosphorus. Dr. Thwing has visited each of the universities, with the single exception of Melbourne; some of the sketches are reprinted from various magazines.

We recommend R. M. Alden's "English Prose of the Eighteenth Century" (Houghton Mifflin) as an unusually judicious and valuable anthology. One reader, if he had his way, would have differed somewhat from Professor Alden in the matter of choice. Even at the expense, if necessary, of some of the selections from the novelists and critics, he would have included a sermon (from Blair's first volume, perhaps, which Dr. Johnson lauded as "more golden than gold") and extracts from Butler and Wollaston.

Digitized by Google

This to give more backbone to the anthology. To show the lady of that age at her best, he would have added a few letters, say from the gracious and ever lovable Lady Hervey (Molly Lepel). Other readers would have other selections, no doubt; but all will agree that the volume as it stands is wisely, if not completely, representative and furnishes a considerable body of sprightly and noble reading. We like the way in which Dr. Johnson is made the central figure of the book. And as we have turned from author to author we have been peculiarly impressed by the lasting attractiveness of the prose of that century. It may well be that after the shoutings and tramplings of a noisier age have died away we shall go back to those authors with a deepened sense of their wise philosophy and decent charm. Professor Alden's volume gives one much to think about. There is room for an anthology of similar bulk and character to present the poetical work of the eighteenth century; Professor Alden has proved himself the needed editor.

Arnold Bennett republishes, through George H. Doran Company, a little autobiographical book which he first brought out in 1900, when he was successful but far from famous. The book is entitled "The Truth about an Author," and bears all the evidence of being indeed a truthful story of the author's push and good luck in rising to the top as journalist, editor, and miscellaneous hack. Of the good taste displayed in the narrative there may be question. Two things the self-portrayal clearly shows—besides a genius for *réclame*—the enormous and cultivated cleverness of the author, and that lack of deep feeling in literature which deprives his own writing, notwithstanding its knowledge of human nature and its craftsmanship, of the classical qualities of endurance.

In "Business: The Heart of the Nation" (Lane), Charles Edward Russell leaves us the impression that there is none that doeth good, no, not one! If we are not all conscious rascals, we are unconscious; if we are not all actual corruptionists, we are potential. To be sure, he is writing scientifically about those who conduct the business of this land, and of course there is always the implication that a great gulf yawns between the Interests and the People (the capitals are his); yet somehow we get the impression that it is only by a special act of grace that any of us remain honest. He tells us, for example, that it is impossible to conduct a bank of discount within the law:

> The character of the men that conduct banks has nothing to do with the matter. All bankers, of all shades of character, stand here in the same category. Let a man be as pure as the Chevalier Bayard and as disinterested as Washington, and if he conduct a bank he, too, will conduct it upon these lines.

We have here a chapter of horrors—indeed, ten chapters. We are told how the Interests, who appear to include all who are commercially successful, have bought national and municipal government, the courts, the press, the pulpit, have put up the cost of living, created the slums, and taken from the young man in America almost every prospect except that of spending his life as somebody's hired man. But something will be settled in an election not far off, we are told. "Before the next national campaign, the Power will have become too great, the Wealth too menacing, the results too apparent, the failure of the pills and plasters too evident. Then out of the assailed moral sense of the country there will come a movement that will be political, ethical, and economic." Meanwhile, it could be wished that Mr. Russell had been governed a little more by the scientific sense in compiling this book. He might not have been so readable, but he would certainly have been more convincing.

The double section of the "Oxford English Dictionary" *Team-Tezkere* (Frowde) remarkably illustrates the expansion of the language within the last hundred years. Under *Te-* the Anglo-Saxon lexicons list 100 words; Johnson records but 247; Murray, 3,304. The modern increment here is due in large measure to scientific discovery and invention. Since the end of the eighteenth century electrical progress, for example, has called for nearly 130 words in *tele-*. The young person who wishes to tread with impunity among the sesquipedalian newcomers—*telemeteorography, telephotography, testaceology, tetrapodology, tetrakisdodecahedron,* and other geometrical monsters—had better give his days and nights to the study of Greek. Among the more popular late arrivals may be mentioned *terrorism, terrorist,* and *terrorize,* which came in shortly after the French Revolution and have been useful ever since. In the same era of reform, in the early years of the nineteenth century, *temperance,* which for five hundred years had meant moderation in all things, began to mean abstinence from drink. According to the latest edition of the "Encyclopædia Britannica," the first temperance society was organized at Saratoga, N. Y., in 1808, and by 1833 there were 6,000 local societies in the several States. This statement seems to justify Abraham Lincoln's declaration (in his address of 1842 before the Springfield Washingtonian Temperance Society) that America was "the birthplace and the cradle" of the "temperance revolution." It is surprising therefore that the first adjectival use of the word in this sense recorded in the "Oxford Dictionary" is from an English report of 1836. Opening the New York *Observer* of July 6, 1833, we find a column report of the "*temperance* meeting in London," beginning as follows: "Yesterday [May 21, 1833] was the anniversary of the British and Foreign *Temperance* Society at Exeter Hall." This article refers also to the "*temperance* cause" and the "*temperance* movement"; to the reluctance with which Londoners banish the "black decanters" from the dinner-table; and to the great headway made by the "*Temperance* Reformation" in America. These facts are of interest in connection with the rival claims of England and America for the primacy in the use of *teetotal*—"pertaining to total abstinence." The Oxford authorities decidedly favor the claim of Dicky Turner, a workingman of Preston, who is said to have coined the word "about September, 1833"—a deed commemorated on his tombstone. The American claim, set forth in the "Century Dictionary" without contemporary evidence, is that "the word arose in Lansing, N. Y., in January, 1827, from the use on pledge cards of T. to indicate 'total,' and the consequent collocation 'T.—total.'" Against this claim it is urged, on evidence in the Life of Joseph Livesey, "that the total-abstinence movement in the United States, and with it the use of *teetotal,* followed and was greatly influenced by the Preston movement." If such was indeed the case, *teetotalism* must have made giant strides in New England in the three years following 1833; for in a curious tract on "The Influence of Tobacco," printed in Boston in 1836, we find Dr. Mussey of Dartmouth College inquiring, "How can a *temperance* man use tobacco?"—such was the inexorable logic of moral idealism in the northern wilds of New Hampshire!

Concerning three other interesting new words fortunately there is no dispute as to birthplace: *tenderloin* belongs to New York, *tenderfoot* to the Western frontier, and the *teddy-bear* to Mr. Roosevelt. While the origin and history of *tenderloin* in the slang sense lie in the memory of man, some further elucidation of that curious term might well be forthcoming from old residents in the district. The earliest appearance here recorded is in the "Standard Dictionary," 1895. The note, evidently supplied by a New Yorker, runs thus: "Understood to have reference to the large amount of 'graft' said to be got by the police for protecting illegitimate houses in this district, which rendered it the 'juicy part' of the service." Possibly the following passage from O. Henry's "Innocents of Broadway" sheds some light on the problem: "All you have to do anywhere between the North and East Rivers is to stand in the street with an open bag marked 'Drop packages of money here. No checks or loose bills taken.' You have a cop handy to club pikers who try to chip in post-office orders and Canadian money; and that's all there is to New York for a hunter who loves his profession." A native of New York, however, informs the present writer that the word is rapidly going out of use—the old order changeth. One other American contribution of recent years almost as interesting as *teddy-bear* seems to have escaped the Oxford editors: the philosophical term *tender-minded,* apparently coined by William James and described by him in "Pragmatism," 1907, as the temperamental inclination to be rationalistic, intellectualistic, idealistic, optimistic, religous, free-willist, monistic, and dogmatical.

It is interesting to note that two thus far unexploited fields in palæographic science bid fair to owe their first adequate exploration to American scholars. Professor Burnam's "Palæographia Iberica," the publication of which is just beginning, has already been mentioned in these columns. Dr. E. A. Loew of the American School of Classical Studies in Rome has recently issued the first fruits of his long and patient investigations in "Studia Palæographica: A contribution to the history of early Latin minuscule and to the dating of Visigothic MSS." (Munich: König. Bayer. Akademie d. Wissenschaften). He has also in press his monumental "Scriptura Beneventana" (a collection of facsimiles, with accompanying text; Rome: D. Anderson), together with a companion treatise, "The Beneventan Script: A Manual of the South Italian Minuscule," and a wonderfully excellent and cheap series of fifty facsimile plates of early Latin minuscule from the seventh to the ninth century, under the title "Scriptura Latina Minuscula Antiquior" (20 francs; ibid.).

The sketches in "Summer Days at Val-

Digitized by Google

lombrosa" (A. S. Barnes Co.), by Virginia W. Johnson, suggests wide reading and a curious culture. Many are of the rather obsolete order of the "prose pastel" and seem too slight for publication. The author has caught much that is characteristic of this paradise in the Apennines, but your reviewer finds the restless vivacity and deliberate fancifulness of the style difficult at the outset and rasping in the sequel. Surely there should be some serenity in the treatment of the serenest beauty Italy affords.

"Early Spanish Voyages to the Strait of Magellan," Series II, Vol. XXVIII (Hakluyt Society), translated and edited by Sir Clements Markham, contains an interesting narrative of the Loaysa expedition, written by Andres de Urdaneta; detailed sailing directions by the pilot Uriarte; and accounts of the disastrous voyage undertaken by Sayavedra to ascertain the fate of Loaysa's people, and of the voyage of the little pinnace Santiago to the coast of Mexico. With the instructions issued to the Comendador Loaysa, these documents complete the story of the second voyage through the passage discovered by Magellan. Another chapter describes the fate of Alcazaba and his company, and there is a brief record of the expedition of Alonso de Camargo, in 1540, which apparently resulted in the discovery of Staten Island and the Strait of Le Maire by one of his captains. Only fragments of the vessel's log have been preserved. The last narrative concerns the brothers Nodal, distinguished naval officers, and the first to circumnavigate Tierra del Fuego. It was a remarkable expedition, inasmuch as the brothers never parted company, even in the worst weather, and their caravels never lost sight of each other. Moreover, the expedition did not lose a man, either through illness or through accident. The book contains three maps and several illustrations.

"Timothy Flint, Pioneer, Missionary, Author, Editor, 1780-1840," by J E. Kirkpatrick, is published by the Arthur H. Clark Co. Dr. Kirkpatrick has been at great pains in collecting material, but we cannot think that the subject deserves a book of above 300 pages. Timothy Flint was an estimable man, and of some local importance in his day, the writer of many books, some of which, such as the novel "Francis Berrian," were once popular, and some, such as his "Recollections of the Last Ten Years," published in 1826, are still valuable as historical sources. But the author has fallen into the common error of measuring the importance of his subject by his own interest in it; and he has labored to relate the life of Flint as something worthy to be remembered for its own sake. But even the most complacent reader must protest when he is invited to see in Flint's tribute to Massachusetts "the same sustained eloquence" that is to be found in Webster's famous eulogy in his Reply to Hayne. The passage quoted is pure fustian, and, in fact, none of Flint's work rises much above mediocrity. The world has forgotten both the man and his writings, and it has done well. A careful edition of the Recollections, or a collection of the letters of Flint, would have been useful for the historian of the Middle West. Besides, the man himself would have been revealed much more clearly in his writings than he is in the present biography, which, indeed, is at best little more than a paraphrase of those writings.

Among the works of permanent value called forth by Italy's semi-centennial of national existence is "Mezzo Secolo di Vita Italiana, 1861-1911" (Milan: Antonio Vallardi), a folio volume of above 200 pages, containing 26 articles on all phases of development. Each department is described by a specialist. Thus Dr. A. Comandini gives the best résumé of political history to be found anywhere in the same space; ex-Minister Rava writes on legislation, Professor Tajani on railway expansion, and Professor De Johannis on that scabrous topic, finance. Science, art, literature, are treated in a dozen articles. Don Romolo Murri, the Modernist deputy, outlines in a clear, fair-minded essay the relations of Church and State. In general, the papers, although "popular," are accurate, and contain a great deal of reliable information. Those which deal with the theatre, the opera, and journalism have many entertaining personal details. The survey as a whole leaves on one the impression of an alert people, feeling the exhilaration of renascence, but hampered on one side by the clogging habits of its past, and on the other by material and financial needs that cannot be supplied in a generation. Nevertheless, the gains already achieved are amazing. This book has nearly 400 illustrations, including portraits of almost all the celebrities and demi-celebrities, besides maps, views, and statistical diagrams. It is published at only five lire.

John Meigs, who, as its principal, made the Hill School at Pottstown, Pa., one of the best known preparatory schools in this country, died last week, aged fifty-nine; he was a graduate of Lafayette College in the class of 1870.

Martin Ignatius Joseph Griffin, secretary of the American Catholic Historical Society, died in Philadelphia on Friday of last week, aged sixty-nine. Numbered among his works are: "History of Commodore John Barry," "General Stephen Moylan," "Bishop Egan," "Thomas Lloyd," "Thomas Fitz-Simons," and "Catholics and the American Revolution," in two volumes.

William Clark Russell, the popular writer of sea stories, died last week in London, at the age of sixty-seven. Though born in America, he was the son of English parents. His father was Henry Russell, the well-known composer of "A Life on the Ocean Wave," "Cheer, Boys Cheer," and other popular melodies. His mother was a connection of the Wordsworths, and was associated in her childhood with Coleridge, the Lambs, and Southey. As a lad Clark Russell showed a restless and adventurous disposition. When at school in Boulogne he conspired with one of Charles Dickens's sons to run away and make a fortune by shooting eider ducks in Norway; the scheme was frustrated. At thirteen he entered Dunbar's service as a midshipman, and on many long voyages acquired a first-hand knowledge of the sea, of which he later made literary use. After attempting a blank-verse tragedy in five acts, called "Fra Angelo"—which, by the way, was the last play produced by Walter Montgomery—he wrote a three-volume novel, which was not successful. Meanwhile he contributed to the London *Review* and other papers, and for some time was associated with Joseph Cowen, M.P., on the Newcastle *Chronicle*. This accounts for his knowledge of Newcastle and the neighborhood, which are picturesquely caught in the "Sea Queen" and other books. One secret of Mr. Russell's success was his sincerity in trying to expose sailors' secret grievances, and to enlist public sympathy on their behalf. The names of Mr. Russell's other stories would make a long list. We may mention: "The Wreck of the Grosvenor," "John Holdsworth," "The Frozen Pirate," "The Convict Ship," "Rose Island," "The Tale of the Ten," "The Two Captains," "Overdue," and biographies of Lord Nelson, Lord Collingwood, and other naval worthies.

From Berlin comes the report of the death of the Orientalist and Celtic scholar, Dr. Ludwig Stern, at the age of sixty-five. He was connected with the Museum of Egyptian Antiquities in Berlin, and later was made keeper of the department of manuscripts in the Royal Library. With Prof. Kuno Meyer he founded in 1895 the *Zeitschrift für Celtische Philologie*. Among his works are a grammar of Coptic, studies in "Ossian," and contributions on Celtic literature in "Die Kultur der Gegenwart."

In the current number of the *Edinburgh Review* a writer makes a plea for a more general study of biography, and especially of autobiographies, and takes for illustration the accounts of their lives by Cellini, Jean-Jacques Rousseau, Gibbon, Goethe, John Stuart Mill, and Herbert Spencer. His point that to the discerning the philosophy of human conduct is nowhere better revealed, is so well taken that we regret to see a bit of rough-and-ready reasoning in one large section of the article. Finding that "not one of these writers stood in absolutely normal relations with their women," he concludes that a man of intellectual attainments had best choose for a life partner a woman in whom impulse is stronger than reason and whose mind is not above the elementary. Another article sets forth, in an account of Fogazzaro's relation to modernism, the impenetrable logic, its premises being admitted, of which the Roman church stands possessed to disarm and humble Catholics with advanced ideas. There is also a comprehensive review of the circumstances which have created the great political crisis in which the Republican party, and particularly President Taft, now find themselves. The writer adopts the view that the President made a colossal blunder in using the coming report of the Tariff Board as a buffer against popular discontent with the wool schedule.

The recent strikes in Great Britain have been studied by a writer in the *Quarterly Review* in the light of the several discussions of socialism and industrial problems which have appeared in the past three years, "Social history shows that under this system [the existing organization of society], itself the outcome of natural forces, the conditions of labor have steadily and continuously improved; and it is reasonable to believe that, given social stability, the same process will continue, and the economical problem of a fair distribution of wealth will in time be solved." If

Digitized by Google

labor would submit to "collective bargaining," the danger of a great upheaval would be comparatively small; but the impatience of the rank and file over the terms extracted by their leaders from capital furnishes a huge menace to the social order. The most imperative duty for the public to-day, the writer believes, is to work for gradual evolution by insisting upon good faith in the dealings of both parties.

In this number of the *Quarterly Review* is a sketch, by Salomon Reinach, the eminent French scholar, of the growth of mythological study from before Christ to the present day. The two fundamental fallacies with one or the other of which students of mythology are forever suffering entanglement are illustrated by Professor Reinach in connection with the myth of Danaé and the shower of gold. Using the allegorical system, one might say that by the golden rain of Jupiter is typified the sun's rays, with all their fertilizing power; or that the unconquerable might of gold is intended. But, as the writer points out, "drawing a lesson from a myth and explaining a myth are two quite different things." The other method is the historical, or euhemeristic; it would discover in the story an outgrowth of a real adventure, in which "a hero of old had entered the dwelling of Princess Danaé by dint of munificence." To do this, says Mr. Reinach, is to suppress the myth, and not to create history in its stead. His own explanation rests upon a certain amount of historical fact, and yet leaves the story still in the realm of the mythical:

> In many parts of the Balkan Peninsula, and also in Germany, where peasants are afflicted by a long period of drought, they take a girl, strip her naked, and pour water upon her head. It is a ceremony of sympathetic magic, wherewith they hope to obtain good rain by giving a forcible example to the reluctant sky.

The fact that Danaé, in Greek, means dry helps to prove the ancient existence of this custom. But, as it stands, the story has evidently fused with one or another of the many myths, which have long existed, of supernatural births. In short, myths, whatever their historical foundation, are begotten of myths.

Science

Pure Foods. By John C. Olsen. Boston: Ginn & Co. 80 cents.

Paper-Bag Cookery: By Nicholas Soyer. New York: Sturgis & Walton. 60 cents net.

The national outburst of indignation at the recent cabal in Washington against Dr. Wiley showed how thoroughly the American people have become aroused on the question of pure food. Dr. Wiley's own book, "Foods and Their Adulterations," is the most comprehensive treatise on the subject, but there is room for others, and Dr. Olsen's must be welcomed as giving within 210 pages a great deal of accurate information of vital importance. He is professor of analytical chemistry at the Polytechnic Institute of Brooklyn and editor of the *Chemical Annual.* As such, he is naturally interested in the analytical side of the food question, and every chapter is followed by directions for experiments to determine the composition of different articles of food. These directions are, however, not intended for chemists so much as for teachers and students of domestic science and also for housewives. In many cases the ordinary kitchen utensils are the only apparatus required, together with a few simple chemicals that can be purchased at the nearest apothecary's. Suspected meats, bread, candies, milk, butter, oils, etc., may thus be readily tested for traces of borax, alum, copper sulphate, aniline dyes, and other injurious chemicals.

As regards benzoate of soda, Dr. Olsen refers to the decision of the Referee Board of the United States Department of Agriculture, that four grains of it a day may be consumed without harm. The Prussian Government's experts have, however, recently sided with Dr. Wiley in this matter, and Dr. Olsen also adds that, even though the chemical substance itself may be entirely harmless, "foods prepared with it may be unwholesome and inferior to foods prepared without it, so that it might be desirable to prohibit its use." The principal indictment against chemical preservatives is that while they prevent the growth of bacteria which produce the foul odors and taste, they allow other bacteria to grow at a rapid rate, the consequence being that the preserved food can contain about four times as many bacteria as the unpreserved before seeming to be spoiled. It has been shown, too—particularly in the cases of milk and public water supplies—that even in the absence of any specific disease germs, the consumption of foods containing a large number of bacteria increases the death rate.

Dr. Olsen aims not only to make every housewife her own detective, but to provide hints for those who prepare and sell foods, to whom he preaches the good old doctrine that in the long run honesty is the best and most profitable policy. There is also much miscellaneous information, accompanied by pictures, about things good to eat and drink, which will interest the general reader. That bananas have the greatest food value among fruits is a thing well to know, for example; and girls will feel proud to learn that their liking for chocolate creams—the most largely sold of all candies in this country—has a physiological reason, inasmuch as these contain all the elements of a complete diet. The author regrets that in New York and other cities it is illegal to sell skim milk, because skim milk is an excellent food which can be sold at a fairly low price. It is forbidden because the public may be deceived. How easy it is to deceive the public is illustrated by the fact that large quantities of artificial jellies (usually harmless) are sold as currant, raspberry, strawberry jellies, etc., the only difference between them being in the labels!

On the whole, the author admits, no generation has been so well fed as the people of to-day. At the same time it is becoming more difficult every year to find good cooks; wherefore every one who devises a way of making kitchen work less laborious and therefore more attractive must be hailed as a public benefactor. Such a benefactor is Nicolas Soyer, whose system of Paper-Bag Cookery has conquered the world with surprising rapidity. While most families are in culinary matters as conservative as in their religious beliefs, this innovation offers such surprising advantages with such insignificant expense to begin with that thousands have promptly adopted it. Cooking food in paper is by no means a new thing; the classical French cuisine has long had its *en papillote*, but little use was made of it, probably because the food so cooked tasted of paper. Mr. Soyer relates in his little book how this defect frustrated for years his attempts to use paper-bag cookery on a large scale; but finally he found a paper which did not taint the flavor of the dishes, but even improved the flavor by preventing the escape of any gases, and thus also did away with kitchen odors. Further advantages claimed for it are that it prevents shrinkage of food, does away with the necessity of basting roasts, retains all the nutritive qualities, eliminates greasy pans and pots from the task of dish-washing, saves fuel, and prevents contamination of the food. These claims can be substantiated. We have tried various dishes cooked in the paper bags and found them juicy and of excellent flavor. Mr. Soyer's invention is a supplement to, rather than a substitute for, the fireless cookery.

A committee chosen from the teachers of biology in the high schools of Chicago has prepared a "Guide to the Study of Animals"; the book will be issued by D. C. Heath & Co.

"The King's Evil," by Dr. Raymond Crawfurd (Clarendon Press), is an amplification of the author's recent lectures on the subject at the Royal College of Physicians—lectures in which the endeavor was to produce "a living part of the general history of England" rather than a medical treatise. Beginning with a discussion of the origin of the custom, in which contemporary writers are quoted at ample length, Dr. Crawfurd proceeds through an account of its growth, popularity, and lapses from popularity, to its last manifestations (in France) in the early nineteenth century. Although the purely medical discussion occupies but a few pages, the old accounts of cures are subjected to strict and skeptical analysis. All of the extant Offices of Healing of the English sovereigns are printed in full. Dr. Crawfurd writes in an easy style, and shows an appreciation of the quaint and humorous

Digitized by Google

incidents connected with the long history of the custom. The book is illustrated with plates of many of the touch pieces (coins given to the sufferers, for talismans) and with reproductions of contemporary prints of the healing ceremonies. The one hundred and fifty-odd pages of text lack chapter division and index; it is unfortunate the results of so thorough research as this were not presented in such a manner as to have made it readily available for reference. A copious but unclassified bibliography, and an appendix containing a number of royal proclamations concerning audiences for touching complete the book.

Capt. E. Caslant's "Passé et avenir de la navigation aérienne" (Paris, Chapelot), is a treatise on the art, not too elaborate for the general reader if acquainted with mechanics. The author proceeds in an orderly fashion. He first treats of ballooning proper, past and present, and concludes in respect of the future that the spherical balloon will never go out of fashion, because it is cheap, safe, and, in a sporting point of view, enjoyable. Naturally, however, modern attention fixes itself upon aviation proper, and this part of the subject accordingly receives great extension. It is astonishing to read that the multiplane may not unreasonably be expected to serve in the transport of merchandise, a weight of fifteen tons being mentioned as a possibility without unduly exaggerating the machine. But to carry passengers on long journeys, under trustworthy conditions of safety, the helicoplane is marked as the machine of the future. It is interesting to note that the experiments of the Wright brothers, now in hand, are probably looking to the development of this sort of machine. If they succeed, aviation may be less a French art than it unquestionably is at the present day.

Edouard-François André, whose death is reported at the age of seventy-one, was for several years editor-in-chief of *La Revue Horticole*. Besides designing several notable parks, he wrote: "Le Mouvement horticole," three volumes, "Traité des plantes à feuillage ornemental," "Les Fougères," and "Traité général des parcs et jardins."

Prof. Bernhard Fränkel, the throat specialist, died in Berlin on Monday, in his seventy-fifth year. For many years he had been prominent in the crusade against tuberculosis. He was for a long period professor of diseases of the throat and nose in the University of Berlin. He wrote much on his subject.

Drama

The American Dramatist. By Montrose J. Moses. Boston: Little, Brown & Co. $2.50 net.

This is a book notable for the labor bestowed upon the making of it, for the mass and general accuracy of its details, and for its convenience as a volume of ready reference. As an explanatory catalogue of all the native writers who have contributed plays to the stage in America since the middle of the eighteenth century to the present time, it has a positive value. The conscientious stage student, of course, will prefer to consult the original sources from which much of the matter has been obtained, rather than content himself with summaries, fortified by extracted opinions of all kinds, though Mr. Moses, already well-known as a frequent writter on theatrical subjects, displays a wide acquaintance with accepted authorities. His facts are much more trustworthy than his theatrical philosophy is sound, or deep. The book lacks chiefly breadth of judgment and catholicity of taste, it is wanting in the sense of proportion—being especially reckless in its estimates and comparisons—and, in its very glibness, betrays frequent signs of undue haste, especially in the inconsequence of many of its arguments. It is weak also on the side of prolonged personal experience, which is indispensable in any attempt to compare the acting of the past with that of the present.

Having conceded the skill and the industry of Mr. Moses as a compiler of recorded facts, it is only necessary here to refer to his individual theories and opinions. These, as a rule, are conceived from the point of view of the modern realist. He believes the day of the poetic and romantic drama to be over, arguing that the public has outgrown it and that the genius of poets is not dramatic. He cites especially the cases of Browning and Tennyson, whereas what they lacked was not the dramatic, but the theatrical sense. Moreover, Irving made a great financial success of "Becket." It is true that "Ulysses" and "Sapho and Phaon" were distressing failures here in spite of their poetic merit, but this was largely if not wholly due to their abominably incapable performance. Only Shakespeare can survive treatment of that kind. Mr. Moses says that every poet who has written a play intended it for the stage—which is surely a pretty rash statement. In discussing this question he seems to put Edwin Forrest in the same category with Macready and Irving, which no competent critic ever did before.

As to Henry Arthur Jones's dictum—which he quotes approvingly—that a play which is truly alive must be literature, that is only true, if it is true at all, in the narrowest literal sense. Elsewhere Mr. Moses declares that real drama must comply with the practical demands of the playhouse. But who is to decide what those "practical demands" are? Shakespeare, or Sir Herbert Tree? Speaking of the pernicious influences of European traditions he complains that American playwrights are still trying to explain American conditions by a technique which is not native. The question immediately suggests itself whether such a thing as a native technique is conceivable. All dramatic technique is founded upon the same elemental laws. The climax must always come before the catastrophe. In his admiration of stark realism, Mr. Moses, like so many other young writers, is apt to mistake the merely bald and obvious for great and universal truth. Thus he vastly overrates the indisputable talent of the late James C. Herne. No exact reproduction of the particular can be the reflection of life as a whole. The broad, not the narrow, vision marks the great dramatist. Therein lies the weakness of Ibsen.

There is an interesting chapter on the stage methods of Mr. Belasco, one of the most gifted of modern producers. As a manager he has rarely had a failure. But his triumphs have always been due to the merit of the stage-craft rather than of the play. Actually, by the subordination of the dramatic to the pictorial, he, like Sir Herbert Tree, is setting up false standards in dramatic art. Nothing that he has yet written has permanent value. Yet Mr. Moses ranks him high as a dramatist. And he puts Clyde Fitch in the same class as Pinero. Fitch was extraordinarily clever and facile, an expert photographer and carpenter, but not an inventor, while his work exhibited neither high purpose and definite plan nor conviction. In a chapter on the poetic drama he rehearses all the familiar arguments of the modern realists and impressionists, without perceiving, apparently, that these, instead of being in favor of growth and progress as they profess to be, really propose to keep the theatre within narrow bounds and shut it off altogether from the wider fields of beauty, thought, and imagination. Realism has its place in the theatre, of course, as romance has. Nobody ever pretended that the theatre ought to be devoted wholly to the poetic and ideal. Its scope should be that of universal art. But the imaginative theatre demands special training and capacity, while the realistic stage does not. Mr. Moses says that Americans do not care for tragedy. Where is the proof? They used to care in the days of Booth. They flock now to Marlowe and Sothern.

In a long article upon the Theatrical Trusts he states the facts clearly enough, but apparently does not realize the enormous, perhaps irreparable, harm they have done by killing all wholesome competition and the art of acting. Only those old enough to have lived under another theatrical system can appreciate this fact fully. Mr. Moses appears to think the so-called "stock companies" of to-day useful. On this, as on many other points, it is difficult to agree with him, but his book is so full of biographical and other facts that it will find a place in most theatrical libraries as a ready aid to memory.

Sardou's clever comedy, "Les Pattes de Mouches," is about to be published by D. C. Heath & Co., with notes and vocabulary by W. O. Farnsworth.

Digitized by Google

For their second performance in the Lyric Theatre the Drama Players of Chicago, under the direction of Donald Robertson, selected "Les Femmes savantes" of Molière, using the English version of Prof. Curtis Hidden Page, entitled somewhat ambiguously "The Learned Ladies." In this, as might have been expected, they won much more popular approval than rewarded their really excellent interpretation of Ibsen's lugubrious and insignificant "Lady from the Sea," simply because of the vital humor and still pregnant satire of the French comedy; but their own executive part of the work left much to be desired. Beyond question the company contains good raw histrionic material, but it needs much intelligent training before it can hope to reach that condition of general proficiency to which it aspires—which, indeed, it virtually now assumes to possess. The scheme of an independent theatrical organization for the performance of the best drama of all kinds is so admirable in itself that its failure for lack of a little foresight would be deplorable. Mr. Robertson and his associates have avoided some of the most conspicuous errors of the New Theatre, but seem to be in danger of adopting others equally perilous. With the whole body of American actors to pick from, it would be impossible at this time to form at a moment's notice a really good stock company, capable of playing tragedy, high comedy, or modern drama in satisfactory fashion. To-day only veteran players, survivors of an earlier generation, have had any training in the older poetic or literary drama. Without such training, which has been made almost impossible by the existing theatrical system, romantic and literary plays, including the comedy of artificial manners, cannot be produced properly. And unless they can be produced properly, nobody who can appreciate their peculiar excellences wishes to see them upon the stage. Nothing is more fatal to the best interests of the theatre than the gross abuse of masterpieces by incompetent performers. Ibsen, Bernstein, Fitch, and their contemporaries demand no such interpretative skill as Shakespeare or Molière.

This is a fact that should be borne in mind by the directors of the Drama Players. In Ibsen Mr. Robertson and his companions acquitted themselves admirably. All of them were experienced in what is known as the modern school of acting, the art of doing commonplace things in a perfectly natural way. But in Molière they were confronted with a problem of a totally different kind—the character types, the situations, and the fundamental humor, indeed, are common to all the ages of civilization, but the manners depicted are those of a special period, while the dialogue is of a highly artificial kind, for all its essential verities, and demands a special nicety of emphasis and diction. Professor Page's English, inevitably, differs widely in form, quality, and rhythm from the French, but is more or less patterned upon it, and is designedly literary and artificial. Plainly, therefore, the representation, to be of any particular artistic value, ought to have reflected Molièresque methods in speech and action. But it was precisely in these respects—formal, graceful, artificial action and smooth, rhythmical, emphatic utterance—that it conspicuously failed. It was a brisk and tolerably effective performance of an ancient farcical comedy according to contemporaneous theatrical methods, but, apart from the costumes and furniture, it offered little that was characteristic of the seventeenth cenpany. This was because the actors, with only one or two exceptions, had never been trained in the school of old-English comedy which is closely akin to the French. In short, the Drama Players committed a similar mistake to that of the New Theatre in trying to improve "The School for Scandal" by giving it a more modern atmosphere. It is no small proof of Molière's genius that he suffered less from the experiment than did Sheridan. It is pretty safe to say that Mr. Robertson's company, whatever distinction it may achieve in the modern drama, will do nothing worth while in the classics of the stage, until it has been well drilled in the rudiments of elocution and gesture. The comparative success won by "The Learned Ladies" was due to its own intrinsic theatrical merits, which were only partly obscured by inadequate interpetation. The capacity of the Drama Players in good modern drama will be tested more effectually in "The Thunderbolt" of Pinero, which they are to play next.

Cyril Maude's experiment with "Rip Van Winkle" at the London Playhouse proved vain, as might have been expected. His stage version of the legend did not differ much—if printed reports can be trusted—from that with which Jefferson made the English-speaking world familiar, and a worse play it would be difficult to find anywhere. The glamour which the genius of a single actor has thrown about this piece is extraordinary. In the popular eye it has long been regarded as a dramatic masterpiece, while confiding pastors of many denominations used to recommend it to their flocks as one of the few entertainments provided by the theatre which could not justly be accounted pernicious. As a matter of fact, it is not only one of the flimsiest, but one of the most immoral plays that have ever flourished behind the footlights. It demands sympathy with a lazy, drunken vagabond, who reduces himself and his family to beggary and in the end regains prosperity by using a lawyer's trick to evade the claims of his creditors. But Jefferson so glorified the shabby theatrical fabric with his humor and pathos that few playgoers ever thought of its true character or cared about it if they did. The play, in this case, was not the thing at all. Rip died with Joseph Jefferson, and it is not at all likely that any future actor will succeed in resuscitating him. Such a miracle could be wrought only by a comedian of the rarest artistic insight and capacity, and he could put his gifts to much better purpose. Mr. Maude has now returned to his legitimate sphere in "Dad," an English adaptation by Capt. John Kendall from the "Papa" of Robert de Flers and G. A. de Caillavet. This is an essentially Gallic tale of a gay father who enters against his son in the lists of love, and proves the successful suitor.

A new play which Frederick Lonsdale has written for Cyril Maude tells the story of a trial engagement, in which the principals agree to a formal betrothal with the understanding that either is at liberty to renounce it at any time before a certain date, after which, if there has been no breach, matrimony shall follow.

The Viennese actor, Max Pallenberg, who is credited with the possession of both tragic and comic power, has been engaged, after much negotiation, to play the part of the Troubadour in Professor Reinhardt's forthcoming spectacle at the London Olympia. The part seems to offer great opportunities to a versatile actor, as it is supposed to symbolize all the trials and temptations to which a nun might be exposed upon leaving the cloister for the outer world.

For the first production of its thirteenth season the Incorporated Stage Society of London has selected a dramatization of George Moore's novel, "Esther Waters," made by the author himself. It is many years since a play from his pen has been seen in a West End theatre.

Music

Thirty Songs by Franz Liszt. Edited by Carl Armbruster. Boston: Oliver Ditson Co. $1.50.

A Century of Russian Song. Collected and Edited by Kurt Schindler. New York: G. Schirmer. $2 net.

Jewish Folk Songs. Collected, Harmonized and Arranged by Platon Brounoff. New York: Chas. K. Harris. $2.

The assertion of an eminent Frenchman that "musicians do not love masterworks" is borne out particularly by the average song recital programme. Robert Franz, in a letter to Mr. Apthorp, referred to "the boundless vanity of professional singers," adding that "these gentry never care for the thing itself, but only for their own personal success." The historian Ambros commented on the custom of concert singers of searching the volumes of songs for those ending with loud high notes, which, like the old Roman *vos plaudite*, are an appeal for applause. Adding to these traits the natural indolence of most vocalists, which made Liszt remark sarcastically that it would be too much to ask them to enlarge their repertory by learning new songs, we can understand why so many mastersongs are neglected in our concert halls. Liszt himself was one of those who suffered most from such neglect. In his case there was a further impediment in the difficulty and expressiveness of his piano parts, which made it necessary, in order to obtain the best results, to have a player of the same rank as the singer. And thus it has come about that of his sixty or more *lieder* only half a dozen have been adopted by professional singers.

In this centenary year it may perhaps be hoped that some, at any rate, of the singers will take the trouble to bring forward a few of his neglected mastersongs. They will find a good selection of them in the volume just issued by the Ditson Co. The editor, Mr. Armbruster, may be commended for the

Digitized by Google

choice he has made; also for the footnotes to many of the songs, which will aid both singer and pianist in matters of expression. The introductory pages are concerned mostly with a sketch of Liszt's career. Of eleven columns, only two are concerned with the songs themselves and those two are not particularly valuable or discriminating. We read that Liszt's "Hungarian descent and French education prevented him from quite becoming a German." As a matter of fact, it is in his songs that the cosmopolitan Liszt is peculiarly German. Goethe, Heine, and Schiller are the poets most favored by him, and in his settings of their songs, he is like the best Teuton composers in depth of feeling, spontaneity, tenderness, and dreamy pathos. Mr. Armbruster is particularly impressed in these songs with their composer's "Titan-like command of musical expression." Liszt, he adds, "has produced gems, the charm of which is absolutely irresistible to an unprejudiced hearer." The bibliography is far from complete. In particular, it is surprising that under the head of Essays and Sketches, the only two volumes in the English language that have special chapters on Liszt's songs are not mentioned. One is "Songs and Song Writers"; the other, Hueffer's "Wagner and the Music of the Future."

Until recently, the public and the singers who entertain it at recitals knew little of Russian songs, excepting those of Rubinstein and Tchaikovsky. A few months ago, Breitkopf & Härtel issued a collection of nineteen, seven of which are by Moussorgsky, the others by Rachmaninov. To this the Schirmers have now added a clearly printed and beautifully bound collection of fifty, by a dozen Russians. The list includes, besides the two just mentioned, Glinka, Dargomijsky, Rubinstein, Borodine, Cui, Balakirev, Rimsky-Korsakov, Arensky, Glazunov, Tchaikovsky. In making his selections, Mr. Schindler was guided, as he admits, not so much by the beauty of the songs or by his personal preferences, as by the desire to place before the English-speaking public those songs that are "the most direct expression of the Russian national character."

Years ago we expressed the opinion that Rubinstein and Tchaikovsky differed from other Russian composers, in having real creative genius, especially from the melodic point of view. A perusal of this volume of songs does not modify that verdict. The best twelve songs in it are the six by Rubinstein and the six by Tchaikovsky, although they are not the best written by those composers. How Mr. Schindler can call Moussorgsky "Russia's greatest musician" is incomprehensible. His opera "Boris Godounov" we have not yet heard (it is to be produced this season at the Metropolitan), but in his songs he certainly does not reveal the divine faculty of creating new melodic ideas. Rosa Newmarch, whose articles on the Russian composers in the new edition of Grove are the best by far ever written on them, says that, "had the realistic schools of painting and fiction never come into being, we might still reconstruct from Moussorgsky's songs the whole psychology of Russian life." That may be true; Mr. Schindler in his preface gives some very interesting details corroborating that assertion, and from this point of view, in particular, the songs of all these Russians are worthy of attention. But, after all, psychology, poetic realism, sympathy with peasants, and national melancholy are not in themselves music, and from the purely musical point of view Rubinstein and Tchaikovsky remain, even if they are not "nationalists," Russia's greatest composers. Melodically the songs of the other ten Russians in this collection are of interest when they copy or recall the folk music of their country.

Not a few Russian songs, notably Rubinstein's, are colored by quaintly fascinating Oriental melodic intervals. This, as a matter of course, is true also of the "Jewish Folk Songs" issued by Platon Brounoff. Mr. Brounoff is musically a descendant of Rubinstein, whom he also strikingly resembles in appearance. He has composed works that are superior to most of the novelties produced in our concert halls and which some day will be produced there. His collection of Jewish songs appeals not only to those of his race but to all lovers of good music. They are the best of about 250 he has written down after hearing them sung by Hebrews who have preserved the traditions. Possibly some were borrowed by them—it is as impossible to tell as it is difficult to make a distinction between Semitic traits in music and Oriental coloring in general; but the main thing is that these Jewish songs have melodic charm and that Mr. Brounoff has set them to piano parts that are not only musicianly, but preserve and emphasize their spirit.

A new biography of Richard Strauss will soon be published in Berlin by Schuster & Loeffler. It will have sixty portraits of the composer, and analyses of his compositions, including eighty that have never been published.

The lately discovered Beethoven symphony will shortly be published by Breitkopf & Härtel. That it is a juvenile work by the great symphonist Prof. Fritz Stein of Jena gives good reasons to believe in a forty-six-page brochure, entitled "Eine Jugendsymphonie Beethovens?"

New operas, in the days of Grau and Conried, were usually produced near the end of the season, as it was taken for granted that they would not be given more than two or three times. The lesson taught by Oscar Hammerstein, and recent experiences at the Metropolitan, where two of last season's novelties, Humperdinck's "Königskinder" and Puccini's "Girl of the Golden West," led in the number of performances, have changed all that. This year not only are these two operas in the first week's repertory, but an actual novelty, Thuille's "Lobetanz." is to be produced on Saturday afternoon. The $10,000 prize-opera "Mona," by Professor Parker, has been postponed until January, owing to the temporary absence of the prima donna who is to create the principal rôle. In the meantime we are to hear one or more of several other novelties promised, probably Moussorgsky's "Boris Godounov" and Wolf-Ferrari's "Le Donne Curiose." Whether Franchetti's "Cristoforo Colombo," Goldmark's "Cricket on the Hearth," and Nevin's "Twilight" also will be staged remains to be seen. Among the revivals promised it is pleasant to see Mozart's "Don Giovanni," Boïto's "Mefistofele," and Rossini's "William Tell." The list of singers is as strong as ever in the past so far as sopranos, tenors, and baritones are concerned. Why great contraltos and basses are so scarce no one can explain. Among this year's newcomers the most noted are Luisa Tetrazzini (not heretofore a regular member of the company), the famous Munich contralto, Margarete Matzenauer, who won a great success as Amneris in "Aïda" on Monday, and two other Germans, both of them Wagner specialists, the tenor Heinrich Hensel and the baritone Herman Weil.

Lillian Nordica's appearances with the Philharmonic Orchestra will be on November 27, 28, 29. Her Western tour, which began on September 28, has been a series of triumphs. From February 5 to 17 she will sing at the Boston Opera House with the Symphony Orchestra in German rôles. It was due to her that the noted conductor, Felix Weingartner, consented to come to this country and take charge of the ten performances. After that, until she again goes upon a short road tour with Mr. Shipman, the diva will be heard in New York at several charitable entertainments. She expects to give some attention to the singing class she organized last winter in connection with the Political Equality Association.

No opera holds its own better than Gounod's "Faust." Recently it had its 1,400th performance in Paris. Yet, when it was first produced, in 1859, it was not a success. The critics condemned it almost unreservedly, and nobody seemed to believe in the opera's future. The composer actually experienced difficulty in finding a publisher. One, however, more discriminating than the rest, by name Choudens, bought the opera for 8,000 francs, and in so doing laid the foundations of a great business. When Frederick Gye heard "Faust" in Paris he confidently asserted that it contained only two really good numbers, the "Soldiers' Chorus" being one of them. Nor did Tom Chappell form a much higher opinion of the music, but, as a speculation, undertook to pay £160 for the English performing rights. The 300th performance of the work at Covent Garden occurred two years ago. Lately it was given for the 800th time at the Brussels Monnaie, where, in the last half-century, there have been 78 representatives of Marguerite.

Edmund Schuecker, the harpist, known both in this country and Europe, died a week ago in Kreuznach, Germany. He was

the harpist for the Metropolitan Opera Company in 1910, and in 1888 he received the title of "court harpist" from the Grand Duke Ernest of Saxony.

Art

G. Griffin Lewis has prepared a "Practical Book of Oriental Rugs," which will soon be brought out by J. B. Lippincott.

"Architecture and Environment" is the promising title of a book by L. March Phillips, which Holt announces.

In his book, "History of English Ironwork of the Seventeenth and Eighteenth Centuries," announced by B. T. Batsford, J. Starkie Gardner describes such features as gates, balconies, fanlights, vanes, and signs.

Botticelli's Miracles of St. Zenobius, which has been bought by the Metropolitan Museum, is the fourth of a series of *cassone* panels of which the Dresden Gallery owns one, and the Mond Collection two. In the panel acquired by the Metropolitan Museum three scenes are represented. Possibly it is a shade less fine than the other three, the architecture being less fine and less ingeniously disposed. But a Botticelli is now so difficult to come by that the museum is to be congratulated warmly on this acquisition. Curator Bryson Burroughs, in the *Bulletin* of the Museum, describes and discusses the panel and suggests a date near the Calumny (1490-95). This is a compromise between the views of Dr. Richter, who dates it early, and Mr. Horne, who sets it very late. We incline strongly to Mr. Horne's view. The considerable difference between these four St. Zenobius panels and the mystical Nativity (dated 1500) in the National Gallery is due to the fact that the Nativity is painted on canvas and is a nocturne. Such minor but desirable accessions as a Mars and Venus by Sodoma and a *cassone* front by Matteo da Siena attest an intelligent activity with which the press endeavors in vain to cope. J. P. Morgan has lent to the Museum a very fine Annunciation by that rare master, Rogier de la Pasture. It was formerly one of the show pieces, first of the Ashburnham, then of the Kann collection.

In connection with the loan exhibition of early American silver now open at the Metropolitan Museum, there has been issued a "Catalogue of an Exhibition of Silver used in New York, New Jersey, and the South." Somewhat less elaborate than the catalogue published some years ago at Boston, covering New England silver, the present pamphlet is beautiful in its typographical clarity and simplicity—a worthy product of the Gilliss press. There are many half-tone illustrations, and R. T. Haines Halsey, the well-known authority on Colonial antiquities, has contributed valuable notes on the early New York silversmiths. Apart from their immediate purpose, these notes have interesting and varied historical and personal bearings. Thus the catalogue is a model of its kind, being not merely a guide, but also a permanent contribution to the study of the subject. We may add that the plate of the Middle States has not the uniformly English quality of New England silver; Dutch and even Swedish makers have to be reckoned with.

William Rothenstein's show of lithographs, drawings, and paintings at the galleries of the Berlin Photographic Company is of quite exceptional interest and significance. In every class of design this young English artist shows an unflinching energy of draughtsmanship. We cannot dwell upon his famous sketch portraits, in lithographic transfers, of British and Continental celebrities. Obscure folk of taste might well be glad to be portrayed in a fashion at once so convenient, unpretentious, and characterful. In this brief notice it is impossible to praise aright Mr. Rothenstein's recent pencil sketches of Indian types. The expression is of amazing terseness. Only a great draughtsman can imply so much as to mass and character with means so sparse. Often a generation or two passes without producing work of such tonic excellence. These Hindu subjects are so exemplary that it is a pity they should be dispersed. A museum is the place for them.

A collection of old Chinese paintings, bronzes, and potteries at the Montross Galleries is well worth a visit. The finest type of Sung painting is unrepresented, but there are many admirable panels and scrolls of Yuan and Ming periods. Generally speaking, the smaller paintings are of the finer quality. The bronzes include some magnificent archaic examples, and the Sung stone ware with its delicate blue glaze is as fascinating as it is rare.

Howard Pyle died in Florence a week ago of heart failure. He was born in Wilmington, Del., in 1853, and after leaving preparatory school turned to the study of art, three years being spent in Philadelphia. Partially discouraged, he went into business, but was soon reclaimed for the career of his choice by the success attending his early drawings in the magazines. He has described in an amusing fashion how his first assignment in illustration, a picture called Wreck in the Offing, brought him steady employment and set him shortly afterward in the way of making friends of such men, then working in New York, as the late Edwin Abbey, Reinhart, A. B. Frost, Chase, Dielman, and Duveneck, the latter members of the group having lately returned from Europe. He declined an opportunity which came to him at this time for visiting Europe; and throughout his career held pronounced views as to the disadvantages of foreign training and associations. In this respect his ideas approached those of the late Frederic Remington. Howard Pyle did his most important work in periodical illustration. He had no patience with the attitude of distaste which illustrators of the higher rank too often assume toward their work designed for reproduction. He liked to draw for the accompaniment of text, and did much to dignify the practice. He felt that modern reproductive processes had freed the illustrator from former hindrances by allowing him the widest latitude in his manner of work. No doubt the results he has given us bear him out in this point so far as work in line or in black and white is concerned. But as yet reproduction in colors has left some qualities to be desired. It is worth while to recall this, because he must have recognized it himself. His plates, rich and often gorgeous in color as they were, pictorial in intent and spirited in movement, showed the hand that was acquainted with the shortcomings as well as the successes of the reproductive process. His children's books, with his own text, have taken a place of their own. And the Buccaneers of the Spanish Main rise to thought at the mention of his name. It is a pity that we have not more of his mural work, such as the recent decorations in the Essex County Court House and elsewhere. In the work of younger painters he took an unusually gracious interest, and at Wilmington gathered about him a little band of associates and pupils without ever maintaining an outright school. He threw his influence against dependence on earlier schools of art in the wider sense of the term. He was a member of the National Institute of Arts and Letters, and became a full member of the National Academy in 1907. His principal publications are: "The Merry Adventures of Robin Hood," "Pepper and Salt," "Within the Capes," "The Wonder Clock," "The Rose of Paradise," "Otto of the Silver Hand," "A Modern Aladdin," "Men of Iron," "Jack Ballister's Fortunes," "Twilight Land," "The Garden Behind the Moon," "Semper Idem," "Rejected of Men," "The Story of King Arthur and His Knights," "The Story of the Champions of the Round Table," "The Story of Launcelot and His Companions," and "Stolen Treasure."

The death is reported from Italy of Madame Marie Collart, in her sixty-ninth year. She was well known for her landscape and animal pictures, examples of which are to be found especially in Brussels (her native town) and Antwerp.

Charles A. Reed of the firm of Reed & Stem, executive head of the New York Central and Hudson River Railroad Company architects, and designer of the new Grand Central Terminal in New York, died Sunday evening, at the age of fifty-four. With his partner, he had built no less than one hundred railway stations.

Félix Ziem, one of the last of the romantic school of painters, died in Paris on Friday of last week, at the age of ninety. The Venetian scenes on which his reputation rested are to be found chiefly in the Petit Palais at Paris and in the United States.

Finance

LOOKING AHEAD.

When the prolonged decline on the Stock Exchange occurred last year, and again when prices were swept down in the ten weeks' break which began last July and was hardly checked until the last days of September, it was commonly taken for granted that the investment market's action foreshadowed bad times in trade. And business has certainly been unsatisfactory enough to conform to such a forecast. But the events on the Stock Exchange since the last week of October—the market's action, not only in refusing to get demoralized, for more than two or three hours, over the Steel Corporation suit, but in actually rushing into a rapid 10 or 15-point advance—has naturally invit-

Digitized by Google

ed prediction of another sort. Turn about is fair play, even in prophecy; and if the Wall Street break of August and September meant increasing trade reaction, then why should not the November recovery in stocks mean trade revival?

There were voices in plenty to interpret it so. Indeed, nothing is more characteristic in American finance than the promptness with which a sharp rise in stocks will brush away arguments for discouragement and disaster which were lately on every one's lips. Even the conclusive reasoning that nothing good could happen in business while the Government was pursuing Trusts and a Presidential election was impending, was thrown hastily overboard when "Steel common" had risen 15 points from the price of October 27. We were to have prosperity at once.

Prosperity will doubtless return at no very distant period, and it is better in any case that the community should have been induced to shake off its recent mood of sullen pessimism. There is nothing unreasonable in assuming that the stock market action, during the past three weeks, has foreshadowed better things in trade. But people who do not want to incur disappointment will be wise in not expecting too much overnight.

The whole Stock Exchange episode, since the announcement of the Government suit against the Steel Trust has a singular resemblance to another incident on the Stock Exchange, in connection with a Government suit against another Trust. It was a good while ago. In March of 1904, the stock market had been declining almost uninterruptedly for nine months. Alarming announcements had crowded on one another. Prices in the great metal industries had been swept into seemingly endless demoralization. The $100,000,000 Lake Superior combination had gone bankrupt, the Shipbuilding Trust had collapsed, three or four other trade amalgamations had assessed their shareholders to maintain solvency. The Steel Trust had stopped dividends on its common stock.

The country's cotton crop had fallen disastrously short of trade requirements. Stock market values had been breaking almost uninterruptedly for the nine preceding months, and the price of Steel common had got down nearly to 8 cents on the dollar. Japan had declared war against Russia; there had been a panic on the Paris Bourse. On top of all this, and in rapid sequence to it, came the Supreme Court's decision against the Northern Securities combination, and the order for dissolution. In the eyes of Wall Street and its outside clients, there was absolutely nothing in the outlook of that day to encourage hope. The entire financial world watched the Stock Exchange on Monday, March 14, when the Northern Securities announcement came, to see what sort of financial catastrophe would ensue.

But there was no catastrophe. Bulls and bears, speculators and investors, stared dumbly in one another's faces, waiting for somebody to begin the selling. Nothing happened, until at length some alert financial leaders jumped to the conclusion that, since nobody would sell on the culmination of bad news, it must be because there were no more stocks for sale. The market was "sold out"; the event was not only discounted, but overdiscounted; and in early sequence to the news from Washington, the New York stock market began to rise. It was up 5 to 10 points within a week, Northern Securities stock rising with it, and the reputed largest buyer on the rise was no less a personage than Harriman—one of the most conspicuous defendants in the very law suit just decided against the railways.

Now the rather close points of resemblance between March, 1904, and November, 1911, hardly need to be pointed out. But possibly the longer results in 1904 are worth recalling. The pace of recovery soon turned out to have been altogether too fast. The trade revival, which people began to say was foreshadowed by the advance in stocks, was very much more deliberate. Things grew considerably worse in the domain of industry before they grew any better; it was some months later before even the derangement of prices in the steel trade was arrested. A week or two after the March advance in stocks had reached its climax, the Stock Exchange itself was confronted with a severe and discouraging reaction. Judged by the longer future, the prophecy of the March market of 1904, in regard to trade revival, was correct; the late autumn witnessed signs of genuine recovery, and 1905 was a year of great industrial prosperity. But the process took enough time to dishearten the most enthusiastic believers. If the sequel on the present occasion were to be the same, it would not be mere coincidence, but a repetition of events, under the working-out of the same normal economic law.

Politics we shall have with us, of course—though stock markets and business conditions have been known to "discount" even Presidential elections months in advance. We shall have the "trust problem" also, and whatever actually happens in that field, controversy will rage and the timid business man be frightened by the violence of the argument. But it does not often occur, either to the denouncers of the law or to the frightened investors who listen to them, that the firm yet judicious hand with which the Government has called before the courts these huge trade combinations—even the greatest of them—is the surest guarantee that both the wilder opponents of the court and the wilder opponents of the trusts will be disarmed, if not silenced. Beyond that certainty stands the other important fact that long strides have been made, these past eight months, in the sound and sane application of a national policy which every intelligent man is aware has come to stay.

FROM DUTTON'S HOLIDAY LIST

THE PICKWICK PAPERS

By CHARLES DICKENS

2 volumes. With 24 full page illustrations in color. by **CECIL ALDIN,** and many in black and white. **$7.50 *net.***

Cecil Aldin's inimitable illustrations are wonderfully well fitted to accompany the adventures of Mr. Pickwick. No more cheering holiday gift can be had this year.

MARIA THERESA

By MARY MAXWELL MOFFATT

8vo. Illustrated. $3.50 *net.*

The remarkable personality of the woman who came to be known as the Empress-Queen has been somewhat obscured by the historical importance of the wars in which she was involved. This volume is an endeavor to tell the story of Maria Theresa herself—and diplomatic and military events are dealt with only in so far as they directly influence her life and serve to illustrate her character. It is based more particularly on a study of contemporary letters, memoirs, and other publications, as well as of manuscript documents in the libraries of Great Britain and in the Imperial Archives at Vienna.

TOLSTOY

By ROMAIN ROLLAND, Author of "Jean-Christophe"

$1.50 *net.*

This sympathetic study of TOLSTOY by his distinguished friend and admirer is, perhaps, the most searching criticism that has been made.

In a volume of splendid insight and wonderful description, M. Rolland has flashed the man TOLSTOY on the canvas for us in a series of rapid, brilliant impressions. Every admirer of the late story-writer and philosopher will feel grateful to M. Rolland on reading this remarkable book, which is at once a personal tribute and a powerful biographical study.

THE ROADMENDER

By MICHAEL FAIRLESS

Holiday Edition. With colored illustrations by E. W. Waite. In box. $2.50 *net.*

THE ROADMENDER has become almost a classic since its publication several years ago. No writer has expressed more beautifully a deep love for nature and a constant faith in humanity than the writer of those papers.

NEW AND SUCCESSFUL FICTION

HILDA LESSWAYS

By ARNOLD BENNETT

$1.50 *net.*

The HILDA seen so tantalizingly through CLAYHANGER'S eyes in the first volume of the great Five Towns trilogy. "An unusual but not an inconceivable woman," who dominates Mr. Bennett's latest novel with power and distinction.

CLAYHANGER

By ARNOLD BENNETT

$1.50 *net.*

The story of a sensitive boy's development into the stature and responsibilities of manhood. "A significant book, marvelous in its minute detail and brilliant in the general effect of its execution."

DENRY THE AUDACIOUS

By ARNOLD BENNETT

$1.35 *net.*

A book in Mr. Bennett's less serious vein, the history of the adventures of a resolute social climber. "Calculated to enliven the most jaded novel reader."

MASTER CHRISTOPHER

By Mrs. HENRY DE LA PASTURE (Lady Clifford)

$1.35 *net.*

More ambitious than her previous books, MASTER CHRISTOPHER has the same atmosphere of wholesome reality, the same delicate humor, and the likable gentle folk as its predecessors.

ON THE BRANCH

By PIERRE DE COULEVAIN

Translated by Alys Hallard

$1.25 *net.*

The intimate story of a woman's life, told with "Uncommon distinction of style and a rare maturity of thought." The most popular novel in France ever written by a woman.

THE LARGER GROWTH

By CONSTANCE SMEDLEY ARMFIELD

$1.35 *net.*

A vital story, full of picturesque depiction of character, written by an author with humor and a broad sympathy for the makers of to-morrow.

Any of these books can be bought from your dealer or can be had from the publishers. Send for illustrated holiday catalogue.

The Nation

NEW YORK, THURSDAY, NOVEMBER 23, 1911.

The Week

All the talk about the forthcoming report of the Tariff Board, and the lowering of duties which the President will recommend on the strength of it, serves to point one moral. This is the misfortune and political mistake of Mr. Taft's tariff vetoes, particularly of the wool bill. He may now have to urge a measure very nearly the same as the one he disapproved. Such a step would be awkward in itself, and would be doubly embarrassing from the fact of the small likelihood that Congress can be got to do now what it had already done last summer. That was the great risk which the President ran. In seeking to avoid the possibility that a slight injustice might be done in seeking to relieve the tax-burdens of the public, he made it highly probable that a gross injustice would long be continued. As was pointed out at the time, the President would have been on much stronger ground if he had signed the wool bill and then prepared to make an urgent plea for its correction, if needed in some details, on the strength of the sifted facts gathered by the Tariff Board. But he preferred to take chances, and, as is now apparent, took them on the side of tariff favoritism.

We require no subsidies. These could not be fairly distributed any more than other special favors. All that is needed is to give American enterprise a fair chance by changing our antiquated navigation laws, which have driven our commerce from the seas.

In these words Gov. Harmon has just reiterated the historic plea of Grover Cleveland, whose Attorney-General he was. This sound position cannot be controverted. Subsidies are nothing more or less than governmental graft to the favored few—taxing all the people that a comparative handful of persons may profit thereby; that an industry may be artificially stimulated, often for sentimental reasons. Our fleets have disappeared from the seas because we have crippled and throttled American enterprise, as Gov. Harmon points out. Grover Cleveland's words were: "The ancient provision of our law denying American registry to ships built abroad and owned by Americans, appears, in the light of present conditions, not only to be a failure for good at every point, but to be nearer a relic of barbarism than anything that exists under the permission of a statute of the United States." But year after year the Republicans have refused to alter this law—it has not even interested Mr. Taft.

What the Philippines have cost the United States has been a much-mooted question. When Gen. Wood, the Chief of Staff, was testifying before the House Committee on Military Affairs last spring as to the military cost of the occupation, he dodged the issue on the ground that it was difficult to furnish the required statement because of the accounting methods of the War Department. The bureau chiefs were then directed to show the cost on the assumption that if the army had not been in the Philippines, an equal number of American troops would have been maintained in the United States proper. According to press dispatches, the computation is now complete, and the cost of our military occupation since December 8, 1898, the date of the signing of the peace treaty with Spain, has reached the enormous figure of $167,486,403. This is the price we have paid for Mr. McKinley's fearful error of judgment in taking over the islands—to say nothing of the waste of American and Filipino lives. What sensible man will dare to assert that, putting it on the lowest ground, this country has obtained $167,486,403 worth of advantage out of our subjugation of the islands?

The recent report of the Commissioner of Pensions brings out the startling fact that within thirteen years of the close of the war with Spain, and eleven after the subsidence of the Philippine insurrection, there are no less than 23,383 invalid soldiers of these wars on the pension rolls, in addition to 3,032 dependent mothers, 522 fathers, 9 brothers and sisters, 1,217 widows, and 327 children. In all, there are 28,490 pensioners as a result of these wars—actually a larger number than there were soldiers in the regular army at the outbreak of the war with Spain, and probably 10,000 more than there were troops before Santiago. In addition, there were 8,386 Spanish war claims pending on June 30, 1911. Already we have paid out $34,142,976.37 in pensions for services against the Spanish and Filipinos, as against a total of $45,853,024.19 paid for pensions to the warriors of 1812, and $45,279,686.83 expended in the support of veterans of the Mexican war during a period of sixty-five years. To-day there are still 1,639 pensioned survivors of the Mexican War. As there were perhaps ten times as many soldiers enlisted in 1898-1900 as during the war with Mexico, and they were mostly very young men, we may confidently look forward to paying pensions to at least 15,000 persons fifty-two years hence for services in Cuba and the Philippines. And then people wonder why the United States must tax them so heavily, directly and indirectly.

The spectacle of Gov. Blease violating his oath of office and counselling the sheriffs of his State to violate theirs, has produced a profound impression throughout South Carolina. Men who have hitherto passed over a lynching with the comment that it removed a worthless person, have come to see what such unchecked barbarism leads to. The ministers have spoken out with vigor, only to be vilified in return by the Governor. Best of all, the influential press has roused itself to a vigorous campaign against lawlessness. First and foremost is the Columbia, S. C., *State*, the candor and vigor of whose utterances put most of the Northern press in a poor light by comparison. It has been particularly indignant over the acquittal of a white man who killed a negro "by mistake" while lying in wait for a white offender against his home. Undeterred by Gov. Blease's threats, it has spoken its mind freely about him and the Honea Path lynching of which he approved. In two towns, Union and Dillon, citizens' meetings have been called to repress lawlessness. And in the face of all this the Governor of the State glorifies the lynchers and promises them a pardon in advance!

How deeply the spirit of defiance of authority has seized upon Pennsylvania

Digitized by Google

is shown by the refusal of the Catlin Committee to give up its Philadelphia investigation at Senator Penrose's request. Just why the Senator wants to halt his promised housecleaning is not wholly clear. He argues that the election of Blankenburg makes it unnecessary, and that, in addition, "the well" from which funds were obtained to carry on the work is now dry. But Senator Catlin seems to feel that an attempt has been made to use the commission as a political tool, the taxpayers' committee declares that it has important evidence to present, and, as for the money needed, the committee offers to pay its own expenses. Attorney-General Bell, however, adds his dissent to those of the man whom he still evidently regards as his real chief—Senator Penrose. The committee, nevertheless, is issuing subpœnas for councilmen and prominent corporation officers as if it really had been created to accomplish something more than the temporary awing of Penrose's political foes.

The one man tentatively accepted for the McNamara jury, on Wednesday of last week, is described as a farmer of English birth who expressed great respect for institutions and laws. His examination was of the briefest. Whether he is later to be dismissed by a peremptory challenge or not, the incident is the bright spot in the case. One can imagine the relief with which judge, counsel, prisoner, court officers, and spectators alike must have heard his avowal. Scores of talesmen have professed admiration for labor unions or capitalistic enterprise, or doubt concerning the desirability of the death penalty or circumstantial evidence, but it has been left for an English-born farmer to confess esteem for the whole system of law under which capital and labor exist.

The *Harvard Alumni Bulletin* declares that football injuries this season "have been more serious than in any other year since the rules were revised; this statement applies not only to Cambridge, but also to New Haven and other places where football is played." There is, it insists, no satisfactory explanation for the increase in the hospital list. "It may be merely luck." But the ill-luck was very plain in the Princeton game, where the Harvard team was literally smashed up. Its best player, probably the best tackle in the country, had his arm broken near the shoulder. Two quarterbacks were disabled, one by a kick in the head which temporarily deranged him. As another quarterback had previously had his leg broken, the fourth quarterback in order of merit finished the game. Naturally, people ask what kind of game this is in which physical injuries in one contest can wreck a team's chances. The Harvard eleven has not played together since the Princeton game two weeks ago. All of this recalls President Eliot's parting fling at the game, as he sailed for Europe, that it is "worse than pugilism." At West Point there is a growing belief that the game injures seriously too many valuable men. Among the spectators there is a very common feeling that the matches are less interesting than ever, despite the forward pass and the increased kicking.

Yale has proved that indifference to the higher intellectual values can no longer be charged against the American undergraduate. When college men riot in the theatre, it means that the drama among us has ceased to be mere entertainment, and has become a part of life. At one stroke, Yale has undone the mischief built up by generations of tired business men, and given notice to the world that the playgoer will no longer meekly accept what the managers have decided is good for him. Like the first night of "Hernani," Saturday night in New Haven marked an epoch. The extraordinary popular appeal exercised by the theatre was never completely demonstrated until two lines of fire hose had to be trained upon an audience to persuade it to go home after the final curtain.

A writer in the *Southern Workman* reports that the total number of reindeer in Arctic Alaska is now nearly 23,000, a remarkable showing when one remembers how short a time has elapsed since the Government established the first herds in that territory. Not only is the reindeer of enormous value for transportation purposes—the superintendent of the service travelled last winter more than 2,500 miles with a reindeer sled over the frozen tundra and ice-bound rivers of the lower Bering Sea region—but the natives are beginning to obtain a handsome revenue from traffic in reindeer products. This amounted to more than $18,000 for the last fiscal year, a figure which does not, of course, include the value of the skins used for clothing or the meat used as food. The reindeer are distributed among twenty-eight stations, eighteen owned by the Government and ten by church missions, and the Government's herders are compelled to serve as apprentices for five years before they can qualify to take care of the herds or to set up for themselves. The Government does not sell any of its animals, but loans one hundred at a time for the same period of five years, when the one hundred must be returned and the mission or native borrower keeps the surplus.

The arrest of Gen. Bernardo Reyes on the charge of conspiring against the Madero Government will work both for and against the maintenance of peace in Mexico. To the extent that it advertises to the world the existence of serious danger on the northern frontier of the republic, the action of our Government will be seized upon with satisfaction by the enemies of Madero. On the other hand, the enforced removal of Reyes from the scene of possible conflict should go far toward giving a quietus to the insurrectionary movement in the north. To attempt a parallel between the rôle Reyes has endeavored to play and the rôle Madero played not very long ago, is ridiculous. Madero's uprising was unmistakably a national movement against a system that had been on trial for almost fifty years and had been found wanting. The new régime has manifestly had no opportunity to show what it can do, and any uprising against it must be regarded as factious. For a "man on horseback" and the supposed idol of the masses, Gen. Reyes has cut an extremely sorry figure throughout the disturbed conditions of the last two years. Looked upon at one time as the man to make headway against Diaz, he showed neither courage nor resolution, and as a result, as events proved, missed a great prize. When another man had demonstrated that the nation was tired of Diaz and stood designated as his successor, Gen. Reyes returned from Europe to lead the opposition. And now that peaceful means have failed, this man, who was once regarded as the "moderate"

Digitized by Google

man whom Mexico needed, does not hesitate to plot insurrection and civil war.

From Washington it is reported that the arrival of a new Russian Ambassador at the capital will be followed by the active resumption of negotiations concerning the treaty of 1832 between the two countries, with special reference to the passport question. Russia's discrimination against American citizens of the Jewish faith has long ceased to be a matter that affects the interests of only one section of our population. From President Taft down, it has been generally recognized that the refusal of the Czar's Government to honor an American passport in the hands of a Jewish-born American citizen bears directly against the dignity and prestige of our Government and against the spirit of our treaty relations. For years the State Department has been engaged in *pourparlers* with the Russian authorities without any visible result. Hence it is to be hoped that the reported renewal of negotiations will show something less of the professional diplomat's concern for conventionalities and more of an earnest desire to bring the matter to an issue. The State Department's regard for Russian susceptibilities would be justified only by evidence of a desire on the part of the Russian Government to deal manfully with the problem.

An interesting sidelight is thrown on the succession of Mr. Bonar Law to the leadership of the Conservative party by a speech which he made at a party gathering in York, only two days before Mr. Balfour's sudden announcement of his own retirement. Mr. Law's speech was a striking personal tribute to the distinguished leader against whom so much criticism and complaint had recently been directed, and a reminder of the remarkable qualities which Mr. Balfour has exhibited during a long and difficult political career. Attention was called to his double achievement as Secretary for Ireland, which certainly deserves Mr. Law's encomium:

> With a courage which never faltered, with a steadiness which never flagged, he put down anarchy and asserted the supremacy of the law. But that was not all. Even then, when he carried his life in his hands, he had the sagacity to see that force, as John Bright said, is no remedy, and he had the statesmanship to begin that course of improvement in her social conditions which has made a new Ireland.

But, far from permitting this to have the character of an apology for defects in Mr. Balfour's later record, Mr. Law protested that his admiration of the strength and courage of his leader was never so great as "in the hour when his fortunes and those of his party were at their lowest ebb." Whether or not Mr. Law had any inkling of the coming withdrawal of Mr. Balfour, this ardent expression of admiration and loyalty indicates that his succession to the leadership was calculated to promote good feeling among those by whom the murmurings against Mr. Balfour were most resented.

Britain's comic excitement at realizing how near she was to war with Germany two months ago is another illustration of how people will awaken with a tremendous shock to something they have known all the time. It is like Wall Street's habit of getting panic-stricken over a court decision that has been anticipated by every one in Wall Street. Several British M.P.'s have been discussing the momentous fact that last September the Admiralty was awaiting an attack by the German fleet, and that it was quite unprepared for such an attack. Of this revelation the really interesting part, relating to England's unpreparedness, is generally declared to be quite untrue. So there remains the startling disclosure that the British Admiralty took into consideration the possibility of a conflict with Germany. But inasmuch as the Admiralty's business is precisely to give its attention to such a possibility, this latest bit of news is almost as astonishing as if we were told that the French General Staff had all its plans worked out for an offensive or defensive campaign against Germany. When the British Government delegated Mr. Lloyd George to address a solemn warning to Germany, it is reasonable to suppose that the heavy guns on the Dreadnoughts were not dismantled and that the crews were not all sent away on shore leave.

Scarcely had France's differences with Germany about Morocco been put in the way of final settlement when the French press began a campaign against Spain in reference to the same subject. The alleged Spanish "pretensions" to Larache have been angrily commented upon, and are said to have really caused the whole trouble. This is rather coolly and absurdly to ignore the evidence that what suddenly roused Germany to activity was the march of French troops to Fez. Irrespectively of that, it can hardly be denied that Spain has good warrant under the Algeciras agreement for all that she has thus far done or attempted in Morocco. What the French newspapers apparently fear is that the Spanish Government is entering into negotiations with Germany for the alienation of Spain's territorial holdings in Africa. This has been specifically denied by Prime Minister Canalejas. All this will tend to confirm the opinion that another international conference on Morocco will be necessary.

Within a short time Parliamentary government in Germany has made two important strides toward what can no longer be described as a far-off event—the acceptance of the responsibility of the Emperor's Ministers to the Reichstag. As a result of the widespread indignation aroused by the Kaiser's famous "calculated indiscretion" of two years ago, the principle has been conceded that henceforth the Emperor, in pronouncing on grave matters of public policy, must speak only through the mouth of his Chancellor. Recently the Imperial Government expressed its adhesion to a bill brought forward in the Reichstag, providing that treaties involving a change in the boundaries of a German colony must receive the assent of the Reichstag and the Bundesrath. The late agreement with France concerning Morocco and the Congo is excepted specifically on the *ex post facto* principle. It is not quite correct to speak of the new statute as involving a curtailment of the Kaiser's power. The Imperial Constitution declares that the consent of the Reichstag is necessary in the case of treaties involving alterations in the territory of the Empire. To have argued that a colony was not a part of the Empire would have been a quibble. Furthermore, the German Constitution provides that treaties dependent for their execution upon measures within the competency of the Reichstag must receive the assent of that body. That the Government could take over 150,000 square miles of territory without going to the Reichstag for appropriations to cover the cost of administration seems most irregular.

CONSERVATIVE RADICALS.

In the midst of all the alarums and excursions connected with Government suits and with the outgivings of Mr. Roosevelt, one notes a certain embarrassment on the point of those who insist upon having all public men accurately labelled and carefully pigeon-holed. A is "dangerous," B is "safe," C is a radical, D a conservative, E is an anarchist. This sort of ready-made and hard-and-fast classification has been so high in favor that it is not surprising to find some confusion among those who are suddenly obliged to give up their conveniently fixed definitions. They had, for example, rightly set down President Taft as a conservative. He is such by inheritance, temperament, and choice. Yet he has been doing what most people look upon as very radical things. On the other hand, Wall Street woke up on Friday to the discovery that the alarmingly radical Col. Roosevelt had turned conservative over-night. That at least was the first hurried inference which the stock market drew when it saw him standing arm in arm with Mr. Morgan or snugly ensconced in bed alongside Judge Gary. We fancy that further study of the *Outlook* article has shown interested financiers that advancing years are not as yet making a crusted Tory of the Colonel. But the whole incident suggests the need of more discrimination in all such judgments of men and their attitude.

In the purely personal aspect, it seems to be easier for a conservative to get the reputation of a radical than the reverse process. It is probably true that nothing which Mr. Roosevelt could now do or say would suffice to change the popular conviction respecting his essential radicalism. His wonderful feat of 1904 in driving Wall Street and the Western extremists tandem, it is not to be presumed that he could repeat. On the other hand, thousands of people are ready to believe that Mr. Taft has in the Presidency completely changed his character. The Government prosecutions which he has ordered, the speeches which he has made, are said to have disillusioned many. They sorrowfully shake their heads and say: "Of course, if it had been Roosevelt! But we never could have dreamed it of Taft." That is, however, no real reason for thinking that the President has changed his point of view in any important particular. At bottom, he is just as conservative as he ever was. He has merely ceased to appear so to some, and they hastily read realities in appearances.

On the political side, it is doubtless easier to get radical things done quietly by a conservative, but let him not hope to reap the advantage from it that would fall to a successful radical. The former may awaken a certain amount of enthusiasm among the lukewarm, but this will not be so noteworthy or so politically important as the disquietude which he will cause his grieving friends. The great difference lies in the fact that a conservative President cannot advertise and glory in his temporary radicalism. He cannot use the hot words of popular passion; cannot pose and gesticulate in public; cannot inspire the newspaper correspondents to write thrilling accounts of his heroic attitude in private; cannot give out lurid stories of gigantic conspiracies to crush the people's champion. All those things have to be reserved for a radical leader who feels the impulse of the masses behind him, and who thinks of himself as at the head of a flaming movement. The conservative may do the same things, or similar, but he cannot carry them off in the same explosive manner, and must not expect to fire the popular heart in any such degree. Lord Salisbury, as Conservative leader, permitted an extension of the suffrage in England, and also land legislation in Ireland, which made many members of his own party aghast at his radicalism, yet he never deceived himself into thinking that his course would cause the working classes to warm to him or to desire to give him their votes.

Turning from leaders to political organizations, it surely does seem at times as if the best way to procure radical measures were to obtain them from conservative parties. It is this feeling which has led so many Irishmen, like Sir Charles Russell, to say that Home Rule will really be given to Ireland in the end by the Tories who have fought it, rather than by the Liberals who have favored it. Under Liberal auspices Home Rule will always be pictured as the disruption of the British Empire; but if the Conservatives were finally forced to grant it, they could be depended upon to argue that it was a healing measure designed to consolidate and strengthen true Imperial sentiment. In the same way, there are still free-traders among Republicans who insist that it is to their party that the country must look for a rational and permanent settlement of the tariff question. This may look like believing a thing because it is impossible, yet there is a truth underlying it—namely, that a nation will submit to radical action by a conservative Administration, which it would angrily resist if undertaken by radical authorities. It often appears as if the true function of a radical party were to stir up mighty agitations and generate political forces that would lead to the doing by its opponents of what it had itself vainly striven to do.

The principle of human nature involved in classifying and judging men as either entirely conservative or wholly radical, was hinted at by Pascal. When a statement by M. Arnauld was quoted to his Monsieur Distinguo, that astute theologian replied: "This proposition would be orthodox in another mouth; it is only in M. Arnauld that the Sorbonne has condemned it." Thus it is that what was radical in Bryan became conservative in "another mouth."

GENERAL LAWS.

It is evident that a deluge of bills amending or repealing the Sherman law will mark the opening of Congress. Any Congressman who does not introduce one or two will be thought a lazy fellow. Indeed, some Representatives have not been able to restrain their impatience to get to work and have given to the newspapers copies of the bills which they are straining at the leash to present on December 4. There will be all sorts of measures, radical, conservative, and wishy-washy; but we are very confident that, after all of them have been printed and referred to committees, not one will be found to be the equal of the Sherman law in one vital particular. We mean its wide scope and careful use of legal terms. Senator Edmunds, who was the author of the final form of the Anti-Trust act, wrote of it only last year: "The act was not intended to be an administrative act in any sense, but it was intended to provide, in broad and all-embracing language, for the prevention and punishment of restraint of trade."

This quality of breadth in application is one of the highest recommendations of any statute. We do not question the value of precise definition in legislation;

Digitized by Google

and it may well be that the Sherman law could now be amended to advantage by more sharply defining some of the abuses aimed at; but we can never escape from the truth that the best general laws are those which are truly *general*. It will not do to proceed upon the theory of a recent New Zealand bill aimed at Chinese laundrymen, whom it sought to bring under a previous statute by declaring that "for the purpose of this act a Chinaman shall be defined to be a girl under eighteen." Yet it is precisely that kind of strained interpretation, and wresting of general language so as either to exempt or include particular offences, that a great many of the proposed new enactments against Trusts unconsciously illustrate. Their framers seem to desire to draft a law so that it will miss a cow, but kill a bear. If we could, for example, look into the minds of some of the extremists from the South who are particularly busy devising amendments of the Sherman law, or substitutes for it, we should find their real wish would be to make the act read something like this: "Every combination in restraint of trade is hereby defined to mean J. P. Morgan, Thomas Ryan, Philip Armour, and John D. Rockefeller, and it shall never be held to apply to Governors of Southern States meeting to devise ways of raising the price of cotton."

Even when there is no such attempt to put private glosses upon a public law, the mischief of introducing terms which are not well settled in law is often met with. Thus the president of the University of Wisconsin, in an address at Cambridge last week, proposed as the test of lawlessness in great combinations that they do "not result in economic advantage." In a formal way, as if framing a law, President Van Hise set forth that "when a combination . . . is found to have marked economic advantage, it should not be broken up." One can but dimly imagine the confusion and endless law-suits which would result if any such phrase were actually written into a statute. The conception of "economic advantage" is one that is not only hedged about with great difficulties in itself, but is not a legal conception at all. To introduce anything of the kind into an act of Congress would only mix things up. Aiming at precision, it would really launch us into new vagueness, and would seek to establish by law a distinction which there would be no legal way of maintaining.

Another error into which the proposers of novel Trust statutes fall is that of supposing that they can be drafted in such clear and certain form that no suits at law will follow. "Law-suits" are just now under a sudden condemnation. Nevertheless, by means of the judicial decisions in cases some of which were begun by President Roosevelt, we have come to a much clearer notion of what the Sherman law means and can accomplish, and we have come to it through despised law-suits. Indeed, we shall never entirely avoid them. If the proposal is to give up criminal statutes and their enforcement, and to go over to "regulation" by an administrative body, the act creating such a body will itself be thrown into the courts. Let one recall the immense mass of litigation respecting the powers of the Interstate Commerce Commission. It is impossible to throw all these things out of court. Under our system, the courts exist not only to vindicate the rights of the citizen, but to be the strong arm of the Government in making the law a terror to evil-doers. And when we have an anti-Trust law, "broad and all-embracing," as Senator Edmunds said, and interpreted and enforced in a series of judicial decisions, it would be the acme of folly to throw it all away and resort to happy-thought statutes, under which we should have to begin all over again. Fortunately there is no prospect that anything of the kind will be done.

MR. BRYCE'S OPTIMISM.

Words of satisfaction and confidence, coming from the lips of an observer like Mr. Bryce, are always pleasant to hear. The man who, of all Europeans since De Tocqueville, has been recognized by common consent as the most intelligent and comprehensive student of American institutions, bids us be of good cheer, because our overcoming of great difficulties in the past gives ample assurance of successful grappling with the troubles and trials now looming big before our vision. And in his speech before the New York Chamber of Commerce, as is his custom, Mr. Bryce did not content himself with a mere oracular dictum, but gave reasons for his faith. Of two evils which looked portentous when he first visited our shores two-score years ago, one, he reminds us, has completely disappeared and the other has passed into a far less acute stage. Sectional antagonism between North and South, which, for a number of years after 1870, was a most serious source of national anxiety, has now long been a thing of the past; and while only too much still survives of corruption and spoliation in city governments—witness the Philadelphia of yesterday and the San Francisco of the day before—no one can doubt that, as Mr. Bryce said, "in the large majority of cities, and especially and most conspicuously in the City of New York, there has been steady progress."

Both of these instances of progress were cited by Mr. Bryce as encouraging evidence of the capacity of the American people to overcome grave national difficulties. But it is well to observe that the two belong to quite different types. Nobody regarded the friction between North and South after the war as distinctively American; everybody counted on the healing effect of time upon such a situation. It was another thing with the problem of municipal corruption and misgovernment. Many persons of high intelligence sincerely believed that the dominance of the Tweed ring in New York was only the most abominable excrescence of a system which was an inevitable accompaniment of democratic institutions in a nation like ours. Nobody, probably, was so hopelessly given over to this view as to believe that no good was accomplished by an uprising like that which destroyed Tweed and Sweeny and Connolly and put an end to the infamies of the Barnard and Cardozo régime in the courts; but many felt that we could not look beyond tempering a normal régime of municipal rascality through occasional abnormal excesses of virtue. And, indeed, a view not very different from this has been widely current until within a very recent period. The most conclusive proof, perhaps, that we have really made signal progress in the practice of municipal government is afforded by the disappearance, within the past ten or fifteen years, of the notion that our country must be content with a standard which no other of the foremost civilized nations would think of tolerating.

Two other struggles with deep-seated evils have run their course in similarly successful fashion in the period covered by Mr. Bryce's reminiscences. From the

Digitized by Google

time when the spoils system began its lusty growth, in the days of Andrew Jackson, until after the close of the Civil War, hardly a voice was raised to stay its advance. And far more universally than our peculiarity in municipal government, it was regarded as an inseparable part of the American system. It is needless now to recall the growth of civil service reform from small and despised beginnings to an almost complete conquest in the domain of the national government. What the present generation is more apt to forget is the long and wearing fight against debasement of the currency. The silver craze, which, through a combination of circumstances, became a more formidable menace than any preceding phase of the cheap-money agitation, was but the last manifestation of a danger which had from time to time been serious throughout the thirty years preceding the sound money victory of 1896. And in truth it must be acknowledged that, whatever its excesses, the free silver movement was intrinsically vastly more respectable than the greenbackism which it supplanted, and with which the Democratic party at one time became seriously entangled. That we came out safe and sound through this long-threatening danger must ever be a strengthener of faith in democracy and in the saving power of public discussion.

But to infer from these things, as the British Ambassador did, in his graceful way, both for his nation and our own, that we English-speaking peoples are over-modest in the estimate of our own powers, is to draw a dangerous conclusion. Because forebodings that we have entertained from time to time have not been realized in actual disaster, it does not follow that the fears were baseless. If in some sense there has been among us on both sides of the water this overmodesty that Mr. Bryce speaks of, it has gone hand in hand with a complacent confidence that we shall "muddle through" in the end, which in England at least has become proverbial. And if we have muddled through, who shall say to what extent this more or less satisfactory outcome has been due to the very fact that the nation has contained an adequate minority of persons possessed with a sober fear that the process may not always avail to save us? It is by no means certain for example—on the contrary, it is in the highest degree improbable—that any part of the effort expended upon the fighting of the fiat money peril could have been spared. The danger was not only real, but so extensive and so deeply imbedded in the habits of thought of a large portion of our people that nothing short of extreme vigor and vigilance could have availed for its extinction. Dangers no less real confront us to-day, and a spirit no less sober and determined is necessary to meet them. But, of course, Mr. Bryce, while appropriately presenting in an after-dinner speech the sunny side of the case, would be the last to deny the need of constant and aggressive vigilance to protect a vast and complex democracy like ours from the dangers, near and remote, by which, in the nature of things, it is perennially menaced.

JOHN BRIGHT.

In contemplating the career of John Bright, the one hundredth anniversary of whose birth was celebrated last week, perhaps our first thought is of the remarkable influence exerted by a few great personalities in the memorable events in which he was a leader. There is nothing in our own time which quite corresponds to the part played either by Bright or by his two illustrious compeers, Cobden and Gladstone, in those decades of political and social progress which were ushered in by the passage of the Reform Bill of 1832. But especially is this true of Bright himself. For it was not through any expectation of his future rôle in shaping governmental policies that John Bright exercised over the people of England an influence rarely matched in the history of politics. His hold was due solely to the fervor of his convictions and the capacity to present them in oratory, impassioned and restrained, whose sincerity was as unmistakable as its eloquence. "He was the greatest master of English oratory," said Lord Salisbury, "that this generation—I may say, several generations—has seen. . . . At a time when much speaking has depressed, has almost exterminated eloquence, he maintained that robust, powerful, and vigorous style in which he gave fitting expression to the burning and noble thoughts he desired to utter."

The causes in which these noble powers were enlisted from the beginning, and to which, with a rare and perfect constancy, they were devoted to the end, are easily named. Freedom of trade, freedom and equality in religion, the extension of democracy and of popular education, and, last but not least, peace among the nations—these were the objects which he served without variation or shadow of turning. That he was an ardent foe of human slavery, and consequently one of that small but illustrious group of great Englishmen who stood out as friends of the Union in the days of its trial by fire, no American need be reminded. But indeed, instead of speaking of three or four causes, it would be quite as correct to say that one cause furnished the motive and the inspiration of all his efforts. In his mind the fight for free trade, the spread of democracy and education, the pursuit of peace, were all but parts of one and the same endeavor to procure the benefits of civilization for the struggling masses of mankind. The Corn Laws were to him not chiefly offences against economic doctrine, but violations of the rights of the poor workingman for the benefit of the landholding aristocracy. And thus it was that, without artificiality or bathos, he was able to give to a speech on the abolition of protectionist duties something of the same moving quality that marked his wonderful speech of February 23, 1855, appealing to Lord Palmerston to bring the Crimean War to a close.

The course of events since the days of Bright and Cobden has brought out in a signal manner that connection between the struggle for free trade and the aspiration for international peace which was pointed to in the Cobden Club's motto—"Free Trade, Peace, Good Will among Nations." Whatever benefits may be claimed by protectionists for that reaction against free trade, on the Continent and especially in Germany, which has so disappointed the sanguine hopes of half a century ago, there is one thing that stands out conspicuous and undeniable on the adverse side of the account. That tension between the modern European nations of which the suspicious jealousy and armed rivalry between England and Germany mark the culminating point could not possibly have arisen had the principles of free trade accomplished the triumphal march through the civilized world which Cobden and his followers so confidently expected. Whatever other factors may have helped to foster Anglo-German un-

Digitized by Google

friendliness, no one can doubt that the fears and hostilities connected with that view of trade which regards the gain of one nation as the loss of another have been the preponderating element. And among the injuries that have been wrought by the surrendering of our own country to the spirit of protectionism, over and above the economic burdens and the political corruptions for which it is responsible here at home, must be set down the mighty reinforcement it has supplied to the protectionist spirit in Europe, with its consequences in the shape of multiplied Dreadnoughts and of international ill-will.

One of the cheap defences of latter-day protectionism has consisted in the application to the Victorian free-traders of opprobrious epithets, suggesting their domination by a narrow and calculating commercialism. The name "Manchester School" has become, in the mouths of many, a convenient term of reproach and contempt, connoting littleness of soul, a sordid absorption in the immediate profits of the factory or the counting-house. No better corrective of such a notion could be found than a reference to the life of John Bright. Sturdy practical Englishman that he was, never losing sight of the concrete realities of his time and country, he was at bottom animated in his championship of free trade by a profound and even tender sentiment. The story of his ideal friendship with Cobden might show this sufficiently, even if we did not have the record of the touching incident that marked a crucial moment in its history and in Bright's public career. In the fall of 1841, when he was in the depths of grief and despair upon the death of his young wife, Cobden came to see him, and after speaking some words of condolence, looked up and said, "There are thousands of homes in England at this moment where wives, mothers, and children are dying of hunger. Now, when the first paroxysm of your grief is past, I would advise you to come with me and we will never rest till the Corn Laws are repealed." "And from that time," adds Bright, who tells the story himself, "we never ceased to labor hard on behalf of the resolution which we had made." Perhaps there was, in the spirit that animated these two crusaders for free trade, quite as much breadth, and quite as much humanity, as in that of the most ambitious dreamer of empire founded on force and of commercial aggrandizement built up by tariff restrictions.

THE EGOTISM OF AUTHORS.

Macaulay in his essay on Lord Byron declared that he "never could clearly understand how it is that egotism, so unpopular in conversation, should be so popular in writing." But in such matters a good deal depends upon the definition of egotism. Montaigne, for example, is always talking about himself, and we enjoy it; should we have enjoyed it less if we could have met him at table and heard the same matter pour from his lips? Rousseau was one of the great egotists of literature. He did the sort of thing which Carlyle asserted to be always acceptable to the public, "going off in self-conflagration, for the amusement of the parish." It may be doubted, however, if his confessions by word of mouth would have seemed a bore. There is, of course, a kind of personal vanity which is offensive whether met with in conversation or in a book. It has been said of Charles Sumner that his egotism, in his later years, was so insufferable as to be an affront to every person he met. Yet if a man is an interesting character and his experience of life has been varied and entertaining, the unlocking of his heart whether in sonnet or in speech would seem to be all one. Everything hangs upon the manner.

A particular form of egotism of authors has to do with their feeling about their own works. Recently in England there has been a great deal of gossip concerning Thomas Hardy, and his alleged pains to place his original manuscripts where posterity might gaze at them, and to edit his novels so that they might reach the next century in the polished form that he would prefer. But this appears to have been largely unfounded. The positive announcement that Mr. Hardy was shortly to produce a drama has been declared by the *Athenæum* to be "wholly fictitious." And he himself, when interrogated about the story that he was busying himself in filing a new edition of his Wessex tales, said that he was no longer interested in them to take any trouble about their reprinting. Hardy is seemingly of the mind of Anatole France, who makes a sculptor say, in "Le Lys rouge": "Do you imagine that it would be a pleasure to me to live among my own works? I know them far too well; they bore me."

It would be easy to cite instances of the opposite temperament. There are many stories of Wordsworth's unaffected delight in re-reading his own poems. Tennyson had a weakness for reciting "Maud." As to the particular point of an author's anxiety about the precise literary form in which his works shall reach future generations, it seems to be a case of many men and many minds. The slow producers, the men of the labored line and the carefully sought phrase, like Flaubert, naturally are fastidious to the last degree in seeing to it that posterity shall get their final version. This is with some the last infirmity of noble minds. Copious writers are apt to be less careful. The sublime indifference of Shakespeare to what became of his plays has lately been dwelt upon again by M. Jusserand as one of the wonders in connection with that wonder-worker. On the other hand, we have Henry James, both prolific and an artist in words, who assiduously looked after a revised re-issue of his books. In that edition he did a good deal of what, in one of his short stories, he called "pricking in lights" in an author's proof, but what the ungodly would describe as one more illustration of the method of *obscurum per obscurius*.

It is not only the readers among posterity, if he is lucky enough to have any, that an author's course in this matter may affect, but the collectors. If there are to be no variants, no revisions, what becomes of the joy of owning that rare first edition with the misprints in it, or the youthful indiscretions which the writer would have fain recalled or expunged later? John Hay would not reprint "Little Breeches," yet he could not escape it during all his life-time. It pursued him to England, when he went there as Ambassador, and the line about "loafing round the throne" it was thought a capital joke to cite about him. In such a case we see the egotism of the author in reverse, as it were, and taking on the guise of mortification.

In the common opinion, one of the most frequent manifestations of literary vanity consists in a writer's concern about the public reception of his book, its critical reviews, its sales, what people say about it, how the publisher is satisfied, and so on. But this, when it

Digitized by Google

exists—no doubt it often does exist—is modified by circumstances which the outsider is not always in a position to appreciate. There is, for instance, the lapse of time which must come between the completion of the manuscript, or even the reading of the proof, and the actual publication of the book. During that period the author's interest may have passed entirely to another theme. When one book is published he may be half way through the writing of another. Imagine the uncertainty which would arise in the mind of Arnold Bennett if anybody congratulated him on his latest novel! It might be the third or fourth back from his really latest. And we presume that he and most other successful writers are more indifferent to felicitations by friends, and praise or blame by critics, than most of us non-bookmaking folk suspect. If an author has done a really fine thing, he does not need outside voices to tell him so. As M. Bergson has explained, it is only when we are doubtful about our success that we look eagerly about for recognition and encouragement. And if self-assurance of the writer as respects his own work is a form of egotism, it may at least be of the silent and inoffensive kind. After Carlyle had finisned his "French Revolution," he muttered to himself as he passed the crowds in the park, "There isn't one of you that could have done it." But he left it for Froude to reveal that scornful vanity to us after his death.

NEWS FOR BIBLIOPHILES.

The Burning Bush is usually identified with the Thorn Acacia. The Hebrew word in the Pentateuch is *Seneh,* which is allied to the Coptic *Sheno.* The word is found in papyri of the Nineteenth Dynasty.

At least one author has a different theory, and, if he were living, might contend that his own hypothesis was entitled to the precedence of time. There are many even of the enthusiastic foragers in old libraries and old bookshops who have never heard of the name of Francis Hoffman, and of those who remember him at all the majority would think of him only as the heroic spirit who put Bunyan's "Pilgrim's Progress" into rhyme. But he wrote other pamphlets, and one of these now lies before me, an octavo tract of sixteen pages, showing increasing grayness, wrought by nearly two centuries of unread existence:

A
CHRISTMASS CAROL
on
PEKO-TEA;
or,
A SACRED CAROL, which like
Tea that is Perfect Good and Fine, will be most grateful and useful all the Year round from Christmas to Christmas for ever.
Humbly addressed to
Queen CAROLINE
and the
Princess CAROLINA,
and
All the ROYAL FAMILY.

.....

By *FRANCIS HOFFMAN.*

.....

Great Caroline *to raise the* Carol's *Fame,*
Carol *the Prime Part of Your Royal Name,*
Does first Your most August Acceptance Claim,
And next at Princess Carolina's *Aim,*
Whose Names give Sovereign Sanction to the same,
And Carol *sacred thro' the World proclaim.*

.....

LONDON: Printed in the Year, 1729.

The poet may have been a preacher, for he takes a text for his rhymes, and bases his "poem" of nearly six hundred lines on Deut. xxxiii, 16: "For the Good Will of Him that dwelt in the Bush." His theme he thus explains:

How Christ was in a Manger born
And God dwelt in a Bush of Thorn:
Which Bush of Thorn appears to me,
The same that yields best Peko Tea.

His views on the divinity of Christ are of the most pronounced character:

The God of Glory this Day Born
Did once an humble Bush adorn;
Which Blooming forth with Rays Divine
Did fairer than the Morning Shine:
No doubt the Godhead's shining Powers,
Impregnated its Leaves and Flowers,
With all those Fragrant Balms that flow
From Leaves and Flowers of the Peko:
Whose Flowry Blooming Face appears,
Like Charming as the Heavenly Spheres,
Its leaves Bright Blue, its Flow'rs like Stars.

The closing triplet shows that the poet was not bound by any rigid rules as to the exactitude of his rhymes. Nor does he adhere very strictly to his theory, but apparently has an alternative one, for he writes:

This Bush that fragrant Thorn may be,
Which we in April Blooming see,
Whose Bloom does Roses Sweet out smell;
And Lillies Whiteness far excell.
Abundant such in Berks, I've seen
Near Newb'ry at my Native Speen;
Speen which its Name from Thorns did bear,
When Julius Ceasar's Camp was there;
Still in his Commentaries seen,
Who calls it Spinae, that is Speen.

From this we learn that Hoffman, notwithstanding his German name, claimed to be a "true born Englishman." The mention of Julius Cæsar reminds him that the great Emperor's initials were the same as those of Jesus Christ and that his wounds were as many as the years of the life of the Son of Mary. He has other "excursions and alarums" concerning the men of Succoth, Gideon's fleece—

An emblem too how Peko tea
Comes safe Dry Balmy thro' the Sea—

and other topics. There are many compliments to Queen Caroline and King George, and he expresses the wish or hope that tea would grow in Carolina.

He observes:

That China's Clime and China's Sun,
Direct to Carolina run,
That Tea grows there most choice and good,
In Carolina's Latitude.
Now if the Thorn and God's Bush be,
The self same Kind with the Tea-Tree?
It would be worthy of a Queen,
To raise that Bush which God shin'd in:
And cholcely cultivate the same,
In Lands that bear her Royal Name;
Purchased by Her Great Spouse of late,
For Royal Pow'r to Cultivate.

References follow to Gibraltar, Port Mahon, and Minorca, and the name of Prince Frederick is joined to that of "Great George" as though the poet had no inkling of the lack of sympathy between *that* father and *that* son:

God in the Bush in Fire Divine,
Did chuse on Christmass Day to shine,
I do believe, because my Tea
Put me in mind on Christmass Day,
Or Heav'n did on't suggest to me,
God's Bush might yield, the first best Tea.
. . . . . .
Thus we that God-like Fire in't feel,
Which God did in the Bush reveal:
Which shews God's Bush, that Bush may be,
Which yields the choicest Peko-Tea.

Notwithstanding his extreme orthodoxy on the dogma of the incarnation, Hoffman has some odd speculations on other points, and hints not only that

Moses might the first man be
That e'er did treat his wife with Tea,

but also that he might be identical with Zoroaster or Confucius. He cites I Esdras xiv, 39, to show that Ezra drank "a Cup of Empyrean-Tea":

On its Infusion we are told
'Twas Water like transparent Gold;
In Colour of a Fire-like Hue
Of Peko-Tea, the colour true.

He looks forward to seeing the tea-plant in heaven, with leaves for the healing of the nations. And this is his emphatic conclusion of his great argument:

And thus on Christmass Day I sing,
Of Tea the Subject, Christ the King.
Have rank'd the Tea-Bush with the Vine,
And Tea compared with choicest Wine,
Which Balm and Flavour bles'd contains,
Like that on Gilead's Hills or Plains;
More than Lucinaes or Champaigns,
And makes my Soul more Grand and Gay,
Than Burgundy, or than Tokay.
May all who do these Truths condemn,
Ne'er taste one single Drop of them,
Here or in New Jerusalem.

This tea-poet may at least claim to have added an item to the curiosities of literature.

Manchester, England.

Correspondence

THE TRAINING OF TEACHERS.

TO THE EDITOR OF THE NATION:

SIR: Mr. Fite's constructive suggestion for the training of teachers, published in the *Nation* September 7, has already been answered in your pages (October 12), but should be further disentangled from the innuendos of his preface.

He attacks indiscriminately the staffs of about 300 departments of education in colleges and universities, and of about 275 in normal schools in the United States alone. These men, according to his accusations, pretend to exude mystically a specific prepcsterous "quality," attract an undesirable type of student to the university, make deplorable school legislation, offer snap courses without content, contribute nothing to productive scholarship, read banal and inane literature, and make themselves ridiculous by resort to anti-pedagogical methods of teaching instead of adopting the *correct pedagogical treatment,* which the author himself proposes in his cited illustration. The subject matter of educational branches of study is either wanting or thin. Educational psychology has no distinctive field, despite the views and works of James, Hall, Ribot, Sanford, Meumann,

Digitized by Google

Whipple, Thorndike, Judd, Witmer, Bagley, Huey, Colvin, etc., despite also the numerous investigating contributors to important and flourishing foreign and American journals of educational psychology.

The statement is made that there is a large Herbartian following. I find from an examination of the work at Harvard, Columbia, Michigan, Wisconsin, Illinois, Texas, California, and Missouri that this is strikingly in opposition to the whole trend of emphasis. In regard to the training of the professors in education I find that in these eight institutions the instructional staff in 1907 included twenty-eight Ph.D. men, as against four for 1897, when education courses were given by the departments of philosophy, toward whom Mr. Fite evidently thinks these professors have become ungrateful offspring. These Ph.D. men may be "mill products," as Mr. Fite suggests. The majority of them happen to have been turned out by large philosophical departments. I may add that now graduate students of education are supplementing their educational training largely by taking minors in economics, sociology, history, political science, and psychology.

The author, caricaturing experiments in educational psychology, happens to cite experiments which were carried on in what he would call laboratories of pure psychology. In fact, studies in attention, in imagery, in memory processes, in individual differences, in learning, in skill acquisitions of all sorts, in habit forming and breaking, in reading, in number, in language, and even in the ordinary thinking processes—all pedagogical problems, are yielding increasingly practical results. In lamenting the fact that educational treatises on formal discipline have failed to see the crucial point of the controversy, our critic appears not to realize that Münsterberg's most recent pedagogical book, "Psychology and the Teacher," and monographs by Meumann, Colvin, Judd, and others have stated and elaborated the relation of the problem to "conceptual activities." He fails to concede that educational psychology with reference to this one question in general points (contrary to his assumption) toward the possibility of transfer of training, and that it alone has launched an era in experimentation, especially under actual schoolroom conditions, and has enormously stimulated in teachers an inquiry into and a professional desire to possess scientifically grounded educational convictions. Laymen refer to Thorndike's and Woodworth's first experiment with surprising ignorance of the general character of later experimentation. Prof. Paul Shorey (in the *School Review*, November, 1910), whose chief contention is in the main I believe correct, shows the same lack of information in this particular.

Now for the constructive programme of the author himself, after having told us that "college pedagogy is unfamiliar with any noble ideas." It is this: education is "a subject whose problems are so complex and so broadly involved in all the problems of social order, civilization, and of life itself——" that we should hold it off for the graduate school, and not broach it to any undergraduates, virtually all of whom in nearly every State must teach before they can afford to pursue graduate work. How would this definition and this policy do for philosophy? Why not?

As to the author's estimate that nine out of ten of our colleagues would vote us out of their ranks, I hope and believe it is not true. However the same thing might have been said, in fairly recent educational history, of the modern language professors, the teachers of the vernacular itself, the scientists, the historians, the economists, or the sociologists. The protective tariff argument of Mr. Fite points definitely in quite a different direction. I respectfully refer the readers to an admirable pedagogical study, "The Administration of the College Curriculum," by President W. T. Foster. No one more sensitively than the writer realizes that we are as yet feebly grappling with the great problems which Mr. Fite himself well suggests. We welcome all, including the Carnegie Foundation for Teaching, who are seriously and constructively bent upon clarifying the conception of professional equipment for teachers. We desire the Socratic not the Aristophanic attitude.

CHAS. HUGHES JOHNSTON.

University of Kansas, November 1.

DR. JOHN BASCOM.

TO THE EDITOR OF THE NATION:

SIR: Kindly permit a few words respecting the life and work of one whose name has often appeared in your columns, and to whose penetrating judgments of men and things your readers have frequently been indebted. The death of Dr. John Bascom, which was noted in your issue of October 5, removes a great teacher. Dr. Bascom began his work as a professor of rhetoric in Williams College nearly fifty-six years ago; after nineteen years of work in that college he was called to the presidency of the University of Wisconsin; for fourteen years he occupied that responsible position, making a notable contribution to the life of the university, and through that to the life of the State; then he returned, in 1887, to his home in Williamstown, where the remaining years of his life were spent. A lectureship in sociology in the old college occupied a few of those years; but for the most part the period was serenely spent among his books, with the companionship of the noble trees planted by his own hand, the wild flowers, whose haunts he knew so well, and the Berkshire Hills, whose beauty had always "haunted him like a passion," and to whose conservation from the hands of the spoiler he devoted the last years of his life.

I am permitted to quote the following discriminating words of Dean E. A. Birge of the University of Wisconsin, who was associated with Dr. Bascom during the entire period of the latter's presidency:

Dr. Bascom came as president to the University of Wisconsin in 1874 and continued in that position until 1887. He brought to a new institution the best traditions of the New England college, embodied in a powerful and inspiring personality. He had an intellect exceptionally broad and incisive; a high and pure character; unusually direct and vigorous speech. His thought and his teaching were addressed to philosophy, by which he understood the rational structure of the world and of society as a basis for conduct. He had an intuitive grasp of the mental and moral attitude of the undergraduate, and he understood how to call into life that which was best in him and to make it able to control his future. In those days there was needed as president not so much an administrator, or even an organizer, as one whose personal power fitted him to take the lead in class-room, faculty, and State—one who would be regarded as the spiritual head of an institution whose functions were regarded as primarily spiritual. This position Dr. Bascom filled with exceptional success.

After his return from the West his leisure was employed in philosophical and sociological studies, and several volumes appeared, among which a treatise on the philosophical basis of sociology, another, "The Words of Christ," and another, "The New Theology," are most important. His last is a treatise on "The Goodness of God," of slender dimensions, but of great breadth and insight. Dr. Bascom's life in the old New England town was full of good fruit. Philosopher and prophet as he was, the farmers all knew him and believed in him; in all local affairs he took an intelligent interest; he was never absent from town meeting and his word was most influential. The Greylock State Reservation Commission, under whose care one thousand acres on the crown of that noble mountain have been placed, for the perpetual use of the people of the State, was largely his project; until a few months ago he remained at the head of the commission.

To the day of his death he was physically and mentally alert; he was on horseback two days before he died; several reviews and articles for the newspapers were waiting to be finished on his table.

WASHINGTON GLADDEN.

Columbus, O., November 14.

DECORATIVE VERSE.

TO THE EDITOR OF THE NATION:

SIR: A teacher of literature, in this part of the country at least, has constantly to fight against the popular impression that poetry is a gentle, decorative, and feminine art like "fancy work," unworthy of serious attention from a practical man. This is especially true in a coeducational college, where the girl students, especially those incapable of thought, tend to flock into the literature courses. There they expect to be agreeably entertained, or at least to avoid the necessity of the slightest intellectual exertion. As I read the review of recent verse in the *Nation* of October 26, I thought how perfectly most of the verse quoted fits in with this popular impression. Fourteen volumes by different authors are noticed in the review, and there is a short quotation from each. I am impressed with the sameness of these bits of verse, with their graceful decorative quality, and with their almost total lack of vital interest.

With the exception of perhaps three pieces, one of which is an echo from an older poetic school, I think all these poems might easily have been written by a single author. They all have a gentle elegiac-idyllic strain, where very often "pure description takes the place of sense." Smoothly turned lines, vague classical reminiscences, more or less pretty nature descriptions—these recur in poem after poem. Even into Mr. Palmer's ode on Marcus Aurelius the "nature" note intrudes in the remarkable comparison of the stoic Emperor to an "unvexed oriole."

To what do we owe this surfeit of sugar candy? Is it not true that the verses quoted in your review are representative of a prevailing tendency? Why is it that our poets are concerned chiefly with things that are pretty and decorative, but not vital; with feelings that are soothing and

Digitized by Google

becoming, but not passionate? Ford Madox Hueffer, in his reminiscences, expresses the opinion that the divorce of poetry from life is due to the influence of the Pre-Raphaelites, and that Rossetti sounded the knell of English poetry when he wrote "The Blessed Damozel." The Pre-Raphaelite influence is perhaps responsible to some degree; but should we not look further back? I suspect that Keats, more than any other poet, is the source of this flood of decorative verse. We are suffering from a degenerate form of his worship of outward beauty, which takes for its creed and misinterprets the famous text about beauty and truth.

HOMER E. WOODBRIDGE.

Colorado Springs, October 29.

QUARREL OF THE CONSONANTS.

TO THE EDITOR OF THE NATION:

SIR: The "Old Spelling Reformer," Thomas Edwards, whose memory Professor Havens has recently revived (the *Nation*, October 26), must forfeit his title to originality in favor of no more modern a person than Lucian of Samosata. The "Account of the Trial of the Letter Υ, *alias* Υ" is an ingenious adaptation to English of the ancient's "Trial in the Court of the Vowels," wherein the letter sigma brings suit against the letter tau for usurping the former's rightful place. "I am driven from Thessaly (Thettaly, forsooth!)," cries the irate consonant. "Θάλασσα is now *mare clausum* to me. . . . I have never a πάσσαλος to hang myself on." (The Clarendon Press translation, Vol. I. p. 26). The Greek document, like the English, is a plea for conservatism in orthography.

JAMES HOLLY HANFORD.

Simmons College, November 13.

NOT NEWS AND NEWS.

TO THE EDITOR OF THE NATION:

SIR: A parallel which may have been present in Dana's mind when he drew his distinction between "not news and news" is that afforded by a passage in Thomas Paine's "Age of Reason," Part I, chapter xvii:

> The story of the whale swallowing Jonah, though a whale is large enough to do it, borders greatly on the marvellous; but it would have approached nearer to the idea of a miracle if Jonah had swallowed the whale.

The same question suggests itself in Paine's case. Was it consciously or unconsciously that he reproduced the form of the ancient apothegm? S.

November 10.

LETTERS OF JOHN BRIGHT.

TO THE EDITOR OF THE NATION:

SIR: A life of my father, John Bright, is shortly to be written by Mr. George Macaulay Trevelyan. There must be a large number of letters, written by my father, to Charles Sumner, Charles Francis Adams, and W. H. Seward, during the American war. I should much like to have the opportunity of seeing whether some of them are worth quoting in the biography, but I do not know who has them. Perhaps this letter, if printed in the *Nation*, may come to the notice of those who have them.

J. A. BRIGHT.

Literature

PERUVIAN TRAVEL.

Following the Conquistadores: Along the Andes and down the Amazon. By H. J. Mozans, A.M., Ph.D., Author of "Up the Orinoco and Down the Magdalena." With an Introduction by Col. Theodore Roosevelt. Illustrated. New York: D. Appleton & Co. $3 net.

The increasing number of books that issue from the press relating to South America is both a tribute to the growth of the countries in that continent and a sign of the keener interest which the rest of the world begins to feel in them. As this interest, which used to be stimulated by the aspects of nature and the remains of primitive culture, is now chiefly roused by an appreciation of the material progress of these countries and of the promise of increased trade which that progress holds out, recent writers have occupied themselves more with Argentina, Brazil, and Chili than with the other less advanced republics, and have dealt chiefly with the agricultural and mineral resources which are being there developed. About such resources the present work has not very much to say, though the author is not indifferent to their importance. He describes in Peru and Bolivia a region in which much remains to be done to make its natural wealth available, and expresses hopes for the future rather than records advances already made.

The journey here described begins at Panama, where the achievements of American engineers and the not less creditable work of American scientific physicians in banishing tropical diseases from one of their haunts are dwelt upon with well-deserved emphasis. Thence Dr. Mozans proceeds south to Guayaquil, a nest of fever and malaria which sadly needs American science and energy to deal with it; and from Guayaquil he climbs the Ecuadorean Andes by the recently opened railway to Riobamba and Quito. Returning to the coast, he sails to Callao, visits Lima and the famous Oroya railroad, which after reaching a height of 15,665 feet above sea level, sends off a branch to the great mining centre of Cerro de Pasco. Then he sails further down the coast to Mollendo, the terminus of the Peruvian Southern Railroad, and by this line, which also crosses the western chain of the Andes, finds his way to Arequipa, Lake Titicaca, La Paz, and ultimately Cuzco, the ancient capital of the Incas. Finally, having gone back to Lima and thence to Truxillo, some way north of Lima, he enters on by far the most fatiguing part of his wanderings in a long journey across the Cordilleras from the Pacific into the valley of the Paranapura, and thence along the Huallaga into the great Amazon, which he follows down to Iquitos, the principal centre of trade in that region, and thence to Para in Brazil.

The book is agreeably and intelligently written in a flowing style. We are told something about the scenes and the aspects of nature generally, something about the inhabitants, something about the author's own personal experiences, yet not enough to make us tire of him. There is a good deal of moralizing, and a vast deal of quotation (not always illuminative) from poets, English, Italian, and above all Spanish, especially South American Spanish. These citations witness to the extent of Dr. Mozans's reading and bring to the reader's notice many names of minor Spanish colonial poets, whose fame has never before reached him. Verse-making seems to be assiduously cultivated in Lima, and Arequipa, and even in plague-stricken Guayaquil. In the interesting Introduction, which Col. Roosevelt has written for the book, a deserved tribute is paid to the sympathy of Dr. Mozans with the people among whom he went and his appreciation of their good qualities. It is altogether desirable that a traveller should have this disposition to see the bright side of things and to look for merits rather than defects. Such a disposition is one of the pleasing features of this book. But it is carried too far when the weak points are ignored and a general tint of rose is thrown over the whole moral and intellectual landscape. Dr. Mozans is not merely a persistent optimist, but what one may call, if the expression be permissible, a confirmed "booster." He sees little but what is elevated in the qualities of the Peruvians, he has no doubt of the splendid future that awaits the country, he is hopeful of the prospects of railways across the Andes which it must cost untold millions of dollars to construct and the profitable traffic possibilities of which appear to the unpoetical mind to be in a somewhat remote future. He has little but praise for the Roman Catholic Church in South America, differing therein from most of the competent judges on the spot who, while acknowledging the virtues and efforts of some of its noble figures, including many of the Jesuit missionaries, recognized how little it has done for the people. And this determination to extenuate faults goes beyond all bounds when it makes attempt to palliate the hideous crimes of the Spanish conquerors. Pizarro and many of his captains were doubtless men of amazing energy and courage. Never in any age or country were there exploits more extraordinary. But to gloss over their rapacity and their cruelty

Digitized by Google

and their treachery is to strike at all moral distinctions. These crimes have been crimes and sins in all nations and at all times. If they are to be excused because they were perpetrated upon heathen Indians, whom Spanish religion held to be outside the pale of moral obligation, or justified because they were part of an attempt to bring the natives to a knowledge of the true faith, then the individual men can be defended only at the expense of the sort of religion they held. There were happily other Spaniards in those days who had retained more of the real spirit of Christianity than the infamous friar Vicente de Valverde over whom Dr. Mozans tries to throw a cloak of indulgence.

Regarded as a contribution to our knowledge of the regions which he has here described, the book of Dr. Mozans does not stand in the front rank. It is, for instance, far less thorough and exact than that of the late Edward G. Squier, the first American traveller, who, while he investigated Peruvian antiquities with care, was also exact in his descriptions of the life he saw around him. He was a practised archæologist, while our author does not claim to be. But apart from archæological details, Dr. Mozans is not very exact or thorough in his descriptions. He is loose, for instance, in his estimates of the heights he crosses, and is generally vague, although often picturesque, in his remarks on the character of Andean scenery. And he often surprises us by the uncritical way in which he treats ridiculous fables or fantastic ethnological theories.

The most interesting part of the book is the account it gives of the part of Peru least known to the outside world, viz., the region which lies between the Pacific Coast and the Amazon at Iquitos. The pictures of the surroundings of the towns of Moyobamba and Balsapuerto and the sort of life the people were leading in those far recesses of a mountain and forest land are well given. The story of the perils encountered on the journey across the great ranges is fresh and lively, and the description of the vast tropical forests of the upper Amazon and its tributaries quite impressive. Dr. Mozans observes with truth that one may travel through these wildernesses for days or weeks together without seeing any of the larger wild creatures that inhabit them; and he confirms what Alfred Russell Wallace told us long ago in his remarks on the woods of the East Indian archipelago, that the notion we are apt to form of the brilliance of the flowers in the woods of the tropics is unfounded. He tells us also, and this we are more surprised to hear, that the trees of the Amazonian forests are not generally lofty, only one of them exceeding one hundred feet; and he makes the just observation that the number of trees of different species which one finds on any given piece of ground is much greater than in the wooded tracts of temperate countries. This fact very largely affects the cost of lumbering operations. In order to get a certain number of trees of the same species, it is necessary to cover a disproportionately large space of ground, and either to cut down many other trees which are not wanted or to drag out from among the others, perhaps with great difficulty, those which it is desired to have. The great industry now pursued along the upper Amazon is, as everybody knows, that of getting rubber. Dr. Mozans does not mention, and we assume had not heard of, the shocking cruelties recently perpetrated by some of the agents of rubber companies along the Putumayo River, on the frontier of Peru, which have created so painful a sensation in Europe. His account of the various adventures connected with the exploration of the course of the great river by early Spanish discoverers will be new to most readers, and gives a touch of human interest to a stream which has so far figured less in history than any other water artery of the world.

Our author's eagerness to put upon men and things in Peru the best face they can be made to wear may be explained or defended by the argument that, as these have been often scornfully treated by European travellers, it is proper to redress the balance. But when his enthusiasm carries him in his "Foreword" to claim for "the Iberian race," under which he includes the Portuguese of Brazil, that it is growing and spreading and advancing so as to outstrip every other race except that which he calls "the Anglo-Saxon" he destroys our confidence in his judgment. Those who know South America will be rather inclined to deplore the fate which gave these vast and naturally rich territories to nations which so neglected or threw away their opportunities as Spain and Portugal did. We may be indulgent to the defects of the present generation which is suffering from the crimes and blunders of the past, but we must recognize how slow will be the progress upward in communities only one of which has yet learned to respect both order and liberty, and several of which have by intermixture with Indian and (in Brazil) with negro blood lowered the quality of the European stock. There is no use in blinking these facts; the best men in Spanish America recognize them, and are aware of the immense difficulties they have to confront. Political unrest is not the greatest of the evils that have to be overcome.

CURRENT FICTION.

Sixes and Sevens. By O. Henry. New York: Doubleday, Page & Co.

This last volume of short stories from the hand of a writer whose premature death has been regarded as a loss to American letters offers an excellent opportunity both for tracing the development of a talent and for pointing out at least one notable trait which differentiates O. Henry's work, more than that of any other American, from the short story as it is written abroad. Of the twenty-five tales included in the present volume, two at least were published after the writer's death, while some go back as far as 1903, if not further. The reader will find no difficulty in distinguishing between the earlier and the later work, between comparatively crude performances like "New York by Campfire Light" or "October and June," and the accomplished cleverness of "Makes the Whole World Kin," "The Day We Celebrate," and "Ulysses and the Dogman." What is common to both is only the characteristic flow of high spirits which gives to most of O. Henry's work the ease and speed of the spoken anecdote.

In "Makes the Whole World Kin," a burglar breaks into a New York residence one night when every one but the master of the house is away. The man wakes, sits up in bed, and in compliance with a curt request uttered behind a levelled revolver, holds up his right hand. He cannot lift his left hand because, as he explains, his arm is crippled with rheumatism. But the intruder, too, is a victim of rheumatism, and one neuralgic twinge makes the two men kin. The burglar sits down on the bed, and for several pages they discuss the comparative merits of various antirheumatism remedies, a subject on which both men display an extraordinary amplitude of information. They decide that there is really one remedy known to science—"little old sanitary, ameliorating, lest-we-forget booze." And when our rheumatic citizen has got on his clothes with the other's assistance, the two go out into the stillness of the night to test the validity of their conclusions. Now, this is a story which we can imagine being told, in his lighter moods, by the European writer to whom O. Henry has so frequently been compared. But whereas Maupassant, relying on the innate humor of the idea, would have told his story soberly, we have in O. Henry the "rapid-fire" manner of a newer day. Almost every line has its grip, and every sentence has its surprise. In other words, manner strives to be more extravagant even than matter. It is in this mingling of verity with extravagance, in this inability to resist the temptation to make a joke at the tragic moment, that our newer art, in the short story or the

theatre, swerves so remarkably from the accepted standards.

Pandora's Box. By John Ames Mitchell. New York: Frederick A. Stokes Co.

All the graceful humor, the vivacity, and the charm which characterize Mr. Mitchell's editorials are found in "Pandora's Box." But these are not in themselves sufficient for the making of a novel. A plot is needed, and of this commodity the author has little to offer. The venerable theme of the suitor of low degree who wins the high-born lady requires more skilful treatment than Mr. Mitchell can give to prove fresh and attractive in these sophisticated days. The characters are for the most part mere figure-heads. The villanous old Earl of Drumworth is weary from service in many Victorian shilling-shockers. Even the scene of the story, Drumworth Castle, seems an old acquaintance. The democracy of the book is so very enthusiastic that it fails to be convincing, and for the American hero, who has won the sympathy of the reader and the love of the aristocratic English heroine in the guise of a humble architect, to become suddenly a man of wealth, owner of Drumworth Castle, is much in the nature of an anti-climax. When a book proves pleasant reading in spite of such defects as these just noted, it is evident that its writer deserves congratulations on the score of style and craftsmanship. The dialogue is sprightly and entertaining and the atmosphere of the story is wholesome and agreeable. By far the most interesting and real character is the delightful dog, Baseborn. The book is worth reading if only for the sake of enjoying the acquaintance of this excellent beast.

A Person of Some Importance. By Lloyd Osborne. Indianapolis: The Bobbs-Merrill Co.

A Stevenson romance with a slight flavor of E. Phillips Oppenheim, that is, a good "yarn" told for its own sake with exceptional skill—of such is this tale. The action hinges on the identity of the man called John Mort, who appears for only a short time at the beginning of the story. This mysterious person of uncertain nationality and apparently boundless wealth, lives in luxury with a beautiful woman on a South Sea island, and governs the peaceful natives. After six years spent in doing Mort's errands round the coasts and islands of the Pacific, the hero, anxious to revisit his boyhood home, leaves his master's service under the strictest pledge of secrecy as to their whole connection. This pledge is the cause of all his troubles. The scenes range from the hero's home in Connecticut, where he elopes with the fascinating daughter of an old general, and where he is persecuted by powerful agencies determined to discover the whereabouts of John Mort, to Lotoalofa, the coral-girt island of the South Seas. The plot is handled with remarkable dexterity, so that it is seldom possible to guess even the next turn of its devious road. The book will be heartily enjoyed by readers who like plenty of variety and surprise, and have a proper contempt for probability.

Find the Woman. By Gelett Burgess. Indianapolis: The Bobbs-Merrill Co.

Mr. Burgess should have added the name of Robert Louis Stevenson to the list of five individuals beginning with Scheherazade, to whom he has dedicated his book. The method of "Find the Woman" is the method of the "New Arabian Nights," but the manner is Mr. Burgess's own. Upon a thread of mystery and adventure he has strung a dozen short stories, some of them more frankly impossible than others, but most of them funny and nearly all of them cleverly done. The story of the Great Yale Funeral, which seems to be built around a kernel of fact, is altogether delightful. Another chapter is evidently intended as a tribute to the memory of Richard Mansfield. There are two pages in the book on which the smile develops into a roar. They have to do with the sanctimonious Dr. Hopbottom, with whom profane utterance takes the form of an orgy in technical and scientific terminology. Dr. Hopbottom addresses an Irish truck-driver as follows:

> What diacritical right has a binomial oxypendactile advoutrous holoblastic rhizopod like you, got with your trinoctial ustilaginous Westphalian holocaust blocking up the teleostean way for, anyway! If you give me any more of your lunarian, snorto-maniac hyperbolic pylorectomy, I'll skive you into a megalopteric diatomoriferous auxospore!

This is not very subtle humor, but the reviewer, while copying out the foregoing sentences, laughed anew.

The Texican. By Dane Coolidge. Chicago: A. C. McClurg & Co.
